The list of writers for "Maga" during John Blackwood's thirty years of editorship proves that he possessed the correct literary instinct and the gift of diplomacy which had secured his father's success, while the extracts from his correspondence with Burton, L. Oliphant, Lever, Reade, Kinglake, Lytton, and the rest show that he wrote excellent letters, and that his criticisms were received with patience and profit by his contributors. John Blackwood was an agreeable mixture of the editor and the country gentleman; he was an ardent golfer, and his country-house at St. Andrew's was thronged in the season by his golfing friends. He was proud of "Maga's" military contingent, which included the Hamleys, Chesney, and Lord Wolseley. Lord Kitchener is the last man in the world whom one would suspect of writing for the magazines; yet in 1878 we find him writing of a "Visit to Sofia," and the following year he proposes a paper on Cyprus, where he was engaged in surveying. He says: "We are getting on well, and my baseline came in to $\frac{3}{4}$ inch in four miles. I have had no fever in my party, and am exceptional in that respect." This is "the Sirdar's luck" foreshadowed in the Lieutenant. His "Notes on Cyprus" appeared in *Blackwood's Magazine* in 1879. Some further light is thrown on the elusive personality of "Larrie" Oliphant by his lively letters to the editor. In 1866 he wrote that he "never met with a born American of any shade of politics who did not curse universal suffrage, and he did not believe a native-born Yankee existed who was in favor of it, but their blessed Constitution ties them up" (p. 154). Oliphant was, perhaps, the first to exploit the American girl in fiction. "Irene Macgillicuddy" was her formidable name, and Oliphant found the society that harbored the type "ridiculously sensitive." "Irene has kicked up such a rumpus in New York society that we had better leave them a few months to recover their tranquillity before firing our second shot. My clever correspondent, who is herself a 'bouncer' turned traitor, and gave me the points, is in an agony of alarm" (p. 139). It is amusing to find Sir Richard Burton "preparing an account of Mormonism, which, however, is an indelicate subject, requiring to simmer in the mind. Its flavor would evaporate in a decoction."

The Blackwoods published an "Agricultural Journal," and when an inquiry was made into the cause of the potato disease, a number of farmers were asked to give their views. One farmer wrote: "I thoct at first it was a dispensation of Almighty God, but

now I believe it is an insect." John Blackwood, in 1867, attended one of "Jowett's Jumbles," which he politely calls "an intellectual reception—there were ladies, but it was rather slow work."

Throughout this third volume the personality of the genial editor is presented as that of one who was never stiffened by experience. We miss Mrs. Oliphant's hand, of course, but Mrs. Porter has carried on the work creditably enough. On p. 232 we read, "To any one desirous. . . we recommend them to the volume." And "These correspondents . . . was a branch" (p. 315) is another slip that betrays the unpractised hand.

Leibniz: The Monadology and Other Philosophical Writings. Translated, with introduction and notes, by Robert Latta. Oxford: Clarendon Press; New York: Henry Frowde. 1898. 8vo, pp. 457.

That a thorough and critical acquaintance with the philosophy of Leibniz is an indispensable preliminary to a successful study of Kant and to a just appreciation of German philosophy, does not, perhaps, render this publication particularly opportune; for the endeavors that have been made to resuscitate Hegel in English-speaking countries seem for the present to have failed. But, at any rate, it may be considered as opportune on account of the number of ideas, now universally esteemed as highly fruitful, which trace their origin to the Hanoverian philosopher. The Columbus of the subconscience mind, the discoverer of mechanical energy, the joint inventor of the differential calculus, and, more than all these, the great promulgator of the law of continuity (understood by himself to include historical continuity, and, as he was dimly aware, supposing an evolution of all things and all laws from a primal chaos), is a figure to excite the curiosity of thinking men of the present day.

One might, at first blush, wonder that so big a book—though the light Oxford paper makes it easy to hold—should be devoted to a writing which in Erdmann's edition does not fill eight pages. There is, however, ample justification for that. Leibniz is not yet a convenient author to study. Before the completion of Gerhardt's edition of the Philosophical Works in 1890, the state of things was calculated to daunt a pusillanimous student. Even now the philosophical writings are contained in seven volumes; the mathematical works (which furnish the only key to Leibniz's thought) fill seven more by the same editor, and the mathematical correspondence has yet to be printed. The historical and political writings, which ought not to be neglected, are in ten other volumes edited by Klopp; and in order to possess all of Leibniz that has seen the light, the student must procure fourteen additional volumes (seven edited by Foucher de Careil, six by Dutens, and one by Mollat), besides those which are now in course of publication. It was, therefore, a praiseworthy act, as well as a bright idea, to take that unnamed paper known as the *Monadologie*, which compresses the metaphysical system of Leibniz into the smallest possible compass, and make it the subject of a full exposition by means of parallel extracts from other writings of the same author. For Leibniz, as a writer of papers and not of books, often repeats his thought in more

and more developed forms. A true scientific man, he never held to any opinion as final and irrevocable, and he never ceased to learn and to grow.

Dr. Latta's work has been performed with erudition and good judgment. The plan once settled, the only ground of complaint with the manner in which it has been carried out is that the original French and Latin ought everywhere to have been given in place of English versions. As for the plan itself, the chief fault of it is, that, in consequence of the whole commentary being made to refer to an exceedingly compressed statement of Leibniz's metaphysical system, it hardly presents a broad view of his whole thought; and, in particular, it is a pity that the logic of so eminent and original a logician—life and soul, as it is, of his whole philosophy—should not have been more completely illustrated.

The first hundred and fifty pages of the volume are occupied with a general exposition of the philosophy, correct and full, but not deeply critical. An "estimate" thereof fills the next sixty. There will be found historical information concerning the relation of Leibniz to the scholastics and to Descartes, and concerning the relation to him of Kant, Fichte, Schopenhauer, and Hegel. Nothing is said of later German thinkers who, down to Ernst Mach, inclusive, have been influenced in no inconsiderable degree by this philosopher—at any rate, indirectly, whether directly, too, or not. What of criticism this "estimate" contains regards the subject from a Hegelian point of view; for Dr. Latta seems to be one of those Britons who clean forget the thought which is their patrimony, in their admiration for the "profundity" of philosophers who attack the most difficult problems without having had the courage to go through the tedious investigations which should have come first. But it will hardly be thought by anybody that Dr. Latta's criticism of Leibniz is particularly strong or helpful. This is unfortunate, because, while the reasoning of Leibniz was nearly, if not quite, of the highest order, being far more accurate than that of Kant or almost any metaphysician that can be named, and abounding in luminous, simplifying, and fecund methods, yet he seems to have had a sort of blind spot on his logical retina that rendered him capable of accepting tremendous inconsistencies and absurdities. Witness his works upon the "Great Art" of Raymond Lully—a sort of Keely motor for churning knowledge out of ignorance—in which the man who swayed German thought so long maintains that all truths, theoretical and practical, can be mathematically demonstrated from two premises, one that he expresses thus: "Quod est (tale) id est, seu non (tale) vel contra," while the other is, "Aliquid existit."

He is a declared nominalist, and his theory of monads breathes nominalistic individualism. But he strangely fails to see how contrary to all this is his law of continuity; and it is still more curious that he found himself, at last, forced to revive the substantial forms of the mediæval realists. It will occur to almost every mind that for each Leibnizian monad all the rest are superfluous and non-existent—a manifest absurdity; and that so great a reasoner should not have seen the inconsistency of supposing God to be one of those monads, is quite astonishing.

In his fourth letter to Clarke, he offers, as an argument in favor of his logical "prin-

ciple of the identity of indiscernibles," the fact that a nobleman of his acquaintance, on hearing it enunciated, long searched in vain to find two leaves of trees exactly alike—not seeing that this was a much better argument against the principle than for it. For the proposition is that things precisely alike could not conceivably be two. Now, the very fact that one may spend a long time in trying to find such a case proves that it is quite conceivable. Here lies one of the capital errors upon which the Leibnizian metaphysics comes to wreck; namely, that he does not see that existence is no general predicate or intellectual conception, but is an affair of brute fact. Was it not Carlyle who said that the very hyssop that grows on the wall is there only because the whole universe has not been strong enough to hinder it? This falsifies, too, the other principle which Leibniz in the same letter lays down as fundamental, the law of sufficient reason. There is no proving existence, as he himself once remarked; for though a thing be in itself possible, it may not, in his phrase, be "compossible" with other things which have forestalled it in the struggle for existence. Leibniz fancies he answers this objection by saying that God has created the best of all possible worlds; but that this proves itself upon discussion to be a quite meaningless proposition has long been apparent. Nor is this the only such objection to the law of sufficient reason, for nobody has answered the old question what reason there can be why red and blue light should not excite each the sensation that the other does excite. But though the doctrine that everything has a sufficient reason is thus untenable, yet it still may be true that reasons ("raisons"), that is, final causes, should be really operative in the universe. Only, this cannot consistently be maintained by a philosopher who insists upon denying the reality of all generals; unless, indeed, he resorts to the device of supposing a Deity in whose mind those reasons and purposes should reside—his nominalism probably passing to the conceptualistic variety. But what, after all, is such a theological nominalism but the attribution to the system of generals, not only of reality, but also of life?

Such weaknesses of the logic of Leibniz are quite overlooked by Dr. Latta; although it is not easy to comprehend how they can fail to suggest themselves to any mind trained in British strictness of reasoning.

Next in the volume comes the *Monadology*, which copious and pertinent notes, chiefly expository by parallel passages, expand to some sixty pages. The remaining hundred and fifty pages are given to sundry papers of Leibniz allied to the *Monadology*, together with the introduction to the 'Nouveaux Essais.' But we believe we need say nothing of these, since, if our views are at all correct, it must already sufficiently appear what praise and what blame are to be adjudged to this work.

A History of English Romanticism in the Eighteenth Century. By Henry A. Beers. Henry Holt & Co. 1899. Pp. 456.

Professor Beers is always an interesting writer, and his latest volume is a thoroughly readable collection of essays on eighteenth-century literature. We call it a collection of essays, for, in spite of the unity implied in the title, the effect of the book on the reader

is rather that of a series of studies than of an organic history of the subject. The author conceives "Romanticism" in the stricter sense as "the mediæval revival," and to this he confines his attention, with the result of making his work more valuable, perhaps, as a description of materials, but less so as a philosophical account of movements and forces. Such an account could be given only by considering also the general reaction against the spirit of the eighteenth century which for most of us is summed up, vaguely, perhaps, and inaccurately, but conveniently, in the phrase "the Romantic Movement." To most of us, therefore, it will be somewhat disconcerting to read a history of English Romanticism in the eighteenth century and find in it no consideration of Burns or Blake or Cowper. Still, Prof. Beers is quite within his rights, and we shall not further quarrel with him on the score of his self-imposed limitations.

The author commands most, but not all, of the materials of previous workers in the field, from much of which he generously quotes; and he has new material of his own to present. He is felicitous in the use of illustrative matter and of literary gossip. Chapter viii. gives an interesting popular account of the ballad-question and a good history of the eighteenth-century ballad revival; the résumé of the Ossian controversy in chapter x. will be serviceable to a puzzled public; and the chapters on Chatterton, and on the inter-relations of English and German literature in the period, are convenient summaries. The latter, perhaps, is rather more original than any of the other chapters in the book. The work as a whole may be commended as an excellent popular treatment of the special subject of the literary revival of mediævalism in the eighteenth century in England.

The author's uncertainty as to the spelling of the name "Warton" ("Wharton" at pp. 179, 207, etc.) will cause confusion to readers who do not know that the two are variant writings of the same name.

Campaigning in Cuba. By George Kennan, author of 'Siberia and the Exile System.' The Century Co. 8vo, pp. 269.

Mr. Kennan's letters, now collected and republished, are thoroughly trustworthy descriptions of what he saw, told in a characteristically effective way. They will be permanently valuable and authoritative materials for the history of the Spanish war, as well as most entertaining notes of travel and adventure. His picture of Tampa, the camp there, the hopeless overwhelming of the administrative officers, and the insufficiency of the railway facilities for a great military depot, is vivid and carries conviction of its truth in every line. He tells us of Key West what every one will wish to know, and makes us see the harbor and the town, its lazy, tropical sleepiness caught in the rush of the warlike turmoil of a base for fleets and a rendezvous for transports and prizes. So of Santiago when he gets there; we feel the climate, see the unsanitary fever-breeding conditions of the town, and share his relief when he emerges from a nasty alley into the patio of the Anglo-American Club, with its marble pavement, its fountain, and its palms. The actual condition of the camps, the life of the soldiers, the means of supply, the poor apologies for hospitals in the field, the port-no-port of

Siboney which was only an open coast, surf-beaten, without docks or anchorage—all these are shown with photographic sharpness.

The judgments which Mr. Kennan renders are honest, but there is room here for differences of opinion, and we may well receive his conclusions with reserve, till fuller investigation and knowledge may make us more sure we know how to distinguish between the faults of commanders and the necessary hardships of an invasion under extraordinary circumstances. Siboney was evidently no base for continued operations of an army, but might yet be well chosen for a descent upon the coast to be followed by a quick stroke at Santiago. The actual success, even at the cost of great hardship, is not to be ignored in judging the campaign. It would have been more in the line of regular operations to have established a base in Guantánamo Bay, waited for the landing of wagon-trains and of supplies of all sorts, and then to have advanced upon Santiago by the longer route inland. But what was thus gained in one way might have been lost in another, if it was probable that an unacclimated army must soon be depleted by the calenture, to say nothing of the dreaded "yellow jack."

It is not yet easy to discriminate satisfactorily between faults of administration for which the authorities at Washington were responsible, and those for which the general in command of the expedition must himself answer. Mr. Kennan's facts will be an essential part of the whole case upon which judgment must finally be reached, but we can now afford to wait for more light.

The Workers: The West. By Walter A. Wyckoff. Charles Scribner's Sons. 1898.

The author of this book is described as a professor of political economy, and certainly no one will question the propriety of the epithet "dismal" if such matter as is here collected forms the subject of that science. That it does not is easily established. There can be no science without accurate observation, concentrated and directed by theory. There can be no accurate observation under the influence of emotion, and no profitable observation without scientific hypothesis. People say that they tell what they have seen and all that they have seen; but every trial in court proves that witnesses do not tell all that they have seen, nor even what they have seen, even when they try. They attend to a very small part of what they see, and they remember only that to which they paid attention. So in Mr. Wyckoff's case: he is so drenched in the misery of his lot, so inevitably compelled to attend to its doleful features by the recollection of the comfortable life that he has relinquished, that he can see nothing but the wretched side of the laborer's position. From time to time he rouses himself, and protests that there is another side; but these efforts are spasmodic, and rather interrupt than correct the general impression.

The chief reason for distrusting the scientific character of these notes is to be found in the doubt which it is impossible not to feel concerning the genuineness of the writer's emotion. Here is a man, able to live comfortably, who deliberately takes up the life of a tramp, and then moans piteously over its woes. We do not deny its woes, but we deny that anyone can feel them whose circumstances make him independent of his daily

waged. Mr. Wyckoff could at any moment have relieved himself from the agonies of suffering which he describes, and his walls of anguish cannot arouse deep sympathy. We do not feel for sorrows which are sought for and which can be escaped from; even our friend who howls with the pain of an aching tooth, but will not go to the dentist, gets scant condolence.

As to the descriptions of tramp-life here given, they have been so widely read in the magazine in which they appeared as to require no explanation from us. We must protest, however, against the application of the title "The Workers" to the class of people with whom Mr. Wyckoff associated. So far as they are workers at all, most of them are the refuse of the labor market, the men who have been discharged for drunkenness, dishonesty, inefficiency, laziness, and similar reasons. There is a sprinkling of deserving men; but the really deserving men are not often compelled to tramp for work. The existence of such a mass of undeserving men as Mr. Wyckoff describes is one of the difficulties of our civilization; but we cannot say that his observations suggest any means of escaping from this difficulty.

The Last Link: Our Present Knowledge of the Descent of Man. By Ernst Haeckel. With Notes and Biographical Sketches by Hans Gadow, F.R.S. London: A. & C. Black; New York: Macmillan. 1898. 8vo, pp. vi, 156, cuts.

The renowned Jena professor was a great white light among the luminaries of the Fourth International Congress of Zoölogy at Cambridge last August, and this book consists mainly of the address which he delivered on the 26th, on our present knowledge of the descent of man. This confession of faith of a man of science sounds no uncertain note; we hear the conclusion of the whole matter as it appears to the lifelong and foremost champion of transformism in Germany, who early made Darwinism his starting-point in evolutionary studies, not his goal. The "last link" is what has commonly been called the "missing link" between man and apes, requiring the new name because it is now believed to have been found in *Pithecanthropus erectus*, the semi-simian or semi-human fossil discovered in Java by Dr. Eugène Dubois in 1894. Haeckel had long before proposed the hypothetical genus and species *Pithecanthropus alalus* for some supposed speechless ape-man, and his delight at the discovery of an actual organism answering the requirements of this genus may be imagined. His italicised pronouncement is now: "The descent of man from an extinct Tertiary series of Primates is not a vague hypothesis, but an historical fact" (p. 76). The address hits off the whole subject of evolution "from moner to man" in a free-handed, masterly manner, with technical precision where possible, elsewhere with glittering generalities, as in attempts to compute the chronology of 5,375,000 generations of animals from Laurentian times to Adam and Eve. The address will be caviare to the general, but any one can appreciate, for example, the neat score made off "Darwin's point" of the folded rim of the ear. The Greeks were zoologically correct in their representations of the pointed ears of satyrs, and Hawthorne's Donatello, in the 'Marble Faun,' is a modern instance.

Dr. Gadow supplements the volume with brief portraiture of some famous scientists,

as Lamarck, Cuvier, Von Baer, Johannes Mueller, Virchow (who is Haeckel's protagonist), Koelliker, Gegenbaur, Cope, and especially Haeckel himself.

Book Auctions in England in the Seventeenth Century. By John Lawler. A. O. Armstrong & Son.

The present reviewer confesses frankly that he belongs to the hopelessly Philistine class of people who buy books simply because they want to read them, and not because they are old or curious or rare. Having confessed this much, he also confesses that he has read this little book with great interest, and with some stirrings within as of an undeveloped germ of bibliomania.

Long as the method of sale by auction had been known to the world, it was not, it seems, till the beginning of the seventeenth century that this method was applied to book-sales by the Elzevirs at Leyden and Amsterdam, and not until 1676 was it introduced into England, by the bookseller William Cooper. His first catalogue is a curiosity, and so are some of the prices brought. Fancy an Elliot Indian Bible going for 19 shillings, the Homer of 1488 for 9 shillings, and the first edition of Bacon's 'Advancement of Learning' for 1 shilling! The first appearance of the first folio of

Shakespeare in any auction catalogue was at Cooper's sale in 1687, when it brought 14 shillings, and a second folio in 1678 brought 16 shillings. At the sale of Sir Kenelm Digby's books in 1680, the second folio brought 14 shillings; the 'Paradise Lost' of 1633, 2s. 1d.; Lydgate's 'Fall of Princes' (1554), 3s. 6d. Caxtons seem to have been little in demand, his 'History of Troy' bringing 3s.; his 'Morte Arthur,' 2s. 10d.; his 'Book of Chace Moralised,' 1s. 6d.; and many other rarities of the earliest presses of Italy, France, and Germany, which would now bring more than their weight in gold, going at less than their weight in copper at the sale of Dr. Bernard's great library in 1836.

Some of the prefaces to the catalogues are very curious, but for these we must refer the reader to the book itself.

The New York Tribune headed its reviews of fiction last Sunday with one of Stacpoole's novels, "The Rapin" (Henry Holt & Co., \$1.25), in which the reviewer said, "It is a captivating book. It is an odd production, freakish in tone, spasmodic in movement, but its very freakishness gives it charm. . . . A book which it would be folly to attempt to remember, but almost folly to leave unread."

CAMBRIDGE EDITION of Great Poets.

Including the Poetic and Dramatic Works of

Whittier, Browning,
Longfellow, Burns,
Holmes, Tennyson,
Lowell, Milton.

Each in a single volume, large crown 8vo. Edited with great care, furnished with Notes, Indexes, Portraits, and Engraved Title-Pages; printed in large type, on opaque paper, handsomely bound. Each (except Browning) \$2.00. Browning, \$3.00.

Sold by all Booksellers. Sent, postpaid, by
HOUGHTON, MIFFLIN & CO., Boston,
11 East 17th Street, New York.

The Novels, Romances, and Memoirs of Alphonse Daudet, translated by Katharine Prescott Wormeley and others, with 80 photographs by Goupil from new designs by French artists. 24 volumes. Editions sold only by subscription. Send for circulars to
LITTLE, BROWN & CO., Boston, or
CROSCUP & STERLING CO., New York

AUTHORS ALL BOOK manuscript reviewed, criticised, and commented upon without charge. Published if worthy.
EASTERN PUBLISHING CO.,
61 Court St., BOSTON, MASS.

LIVING AGE INDEX, 1844-1896.—Subscribers increasing, price considerably reduced.

Crystal Maple Sugar

FROM

Adirondack Virgin Forest.

Pure Maple Sugar and Maple Syrup, unexcelled in Quality, Flavor and Freshness.

SUPPLY LIMITED.

Write for prices and order blank, season of 1898.

Orders booked as received. Address.

HORSE SHOE FORESTRY CO.,
Horse Shoe, St. Lawrence Co., N. Y.

Just Published. In Five Volumes.

A History of British India.

By Sir WILLIAM WILSON HUNTER, K.C.S.I., M.A., LL.D., Vice-President of the Royal Asiatic Society. Volume I, introductory to the Overthrow of the English in the Spice Archipelago. 8vo, pp. viii-476. With four colored Maps and full Index, \$5.00.

LONGMANS, GREEN, & CO.,
91-93 Fifth Ave., New York.

BOOKS.—All Out-of-print Books supplied, no matter on what subject. Acknowledged the world over as the most expert book finders extant. Please state wants. **BAKER'S GREAT BOOKSHOP,** 14-16 John Bright Street, Birmingham, England.

C. A. KOEHLER & CO., FOREIGN BOOKS
149a Tremont St. (Lawrence Building, corner West St.), Boston, Mass. Importations from Europe. Catalogues on application.

CONVERSATIONAL FRENCH FOR
School, Home, Private Instruction, and especially young American Teachers. **Premiere Leçon, 24 pp.** Mailed for 10 cts. E. BORN, 1185 Pine St., Philada.

Nearly Ready.

Story of the People of England in the 19th Century

By JUSTIN MCCARTHY, M.P., author of "Life of Sir Robert Peel," "The Story of Gladstone's Life," etc. In 2 vols., Nos. 53 and 54 in *The Story of the Nations Series*. Fully illustrated. Large 12mo, each \$1.50; half leather, gilt tops, each \$1.75.

"The Story of England's Nineteenth Century" is a picture, rather than a record, of England's development in all the arts of peace since the close of the great war with Napoleon. Since that time a complete revolution has taken place in all that relates to applied and industrial science. Railways, ocean steamships, the electric telegraph, the submarine cable, the telephone—all these are the growth of this wonderful century, which has done more for the practical movement of civilization than all the centuries that went before. The portraits of the great men who led all these different movements are carefully and vividly drawn, and the object is to impress the mind of the reader with a clear idea of each man and of each man's work in that period of English history.

G. P. PUTNAM'S SONS, NEW YORK & LONDON.

Old Books. Choice Books. Rare Books. Quaint Books. Typography. Topography.

BOOKS ON ALL SUBJECTS.

FIRST EDITIONS, ETC.

ILLUSTRATED CATALOGUE, pronounced to be the most original and interesting list issued. 204 pages, 8vo. With 870 Reproductions of Plates, Portraits, and Title-pages, post free, 6s. (which sum is deducted from the first purchase of 50s.).

The Week.

Formal peace with Spain is brought within reach by the act of the Queen-Regent of Spain on Friday in signing the treaty, and real peace in the Philippines was thought at Washington to be, in the light of Gen. Otis's dispatches, only a matter of hours. What the exact situation at Manila is, and by what means Gen. Otis expects to bring about the submission of the natives, can only be guessed. It is certainly to be hoped, for every reason, that the Philippine Commission, whose membership is now complete with the arrival of Mr. Denby, may speedily be able to secure peace. It is no time to stand on punctilio if there is any chance at all of ending these daily massacres, which shock and shame even the most glory-drunk Americans.

Our Cuban problem grows harder instead of simpler with the advance of the season. The War Department is of course anxious to get the volunteers out of the island before the yellow fever appears. This is a matter of great importance to all our Southern cities, with quarantine in its present disorganized state. If troops are all the while to be coming and going, the danger of a yellow-fever epidemic in the South will be greater than ever before. Yet it would seem that the very first withdrawals of our soldiers from Cuba excite evil-minded Cubans to all kinds of disorder. Brigandage breaks out in Santiago, and the civil authorities in Havana are unable to cope with rioters. That we shall ultimately dominate the situation we do not doubt, but there is no danger that the men in charge will stagnate for lack of difficulties. Gen. Ludlow has already asked for a transfer, which we take to be a sign of breaking health, or else of a feeling that he is not given adequate support.

The conduct of the officers and soldiers of our Cuban war army in regard to the question of bad beef must be extremely annoying to McKinley, Alger, and Egan. At every opportunity they have persisted in saying that the beef which they got in the field was so vile that burial was the only disposition possible to be made of it. When the Court of Inquiry was sitting in Washington, some very nice canned beef was opened and served up in various forms for the soldiers to taste. They tasted, and when asked to say which variety was like what they had in the field, they all said none of it was like what they had. They went on the witness-stand and swore that

what they had in the field was simply loathsome. Then the Court went to Chicago and made an inspection of the canning business, being shown how carefully the beef was canned and how nice it tasted. But more obstinate soldiers went on the stand and said that what they had received in the field was not nice, that it not only smelled to heaven, but had maggots in it. Then the Court adjourned to Omaha, and inspected the canning processes there, finding them agreeable in every way, and the beef itself most delightful eating. Then they called some more soldiers, and these said the same things about the beef they had been supplied with by Egan and Alger that all the other soldiers had said. The Omaha canning methods might be perfect, but the kind of canned beef turned out was not the kind that reached the soldiers in the field. Did anybody ever see such irritating perversity! The President ought to rebuke them in a special proclamation.

It is not only in the United States that anger is aroused "in military circles" by the courageous truth-telling of an honest officer. The last Governor-General of Cuba, Gen. Castellanos, who is now Captain-General of Madrid, spoke last week in high praise of the Spanish private soldier, but intimated that many officers ought to be sent to the galleys. The resulting uproar is naturally tremendous. And yet Castellanos has only said what has been charged openly in the Cortes. One bold Senator declared that many Spanish generals, instead of flaunting their way back to Spain and taking their seats in the Senate, ought to be hung in their own ashes. We believe this heroic man is still fighting duels in consequence of his utterances, but he stands by all he has said. A still more sinister attack on the officers of the Spanish army was made by a Deputy, who demanded that the Bank of Spain be required to publish the accounts of all the generals of the army who had deposits with that institution. The Prime Minister, however, discovered a fatal objection to such a course. One of the rules of the Bank of Spain forbade the publication of private accounts, and the Government could never think of ordering the bank to violate one of its by-laws.

Admiral Walker's testimony before the River and Harbor Committee, in "executive session," throws a weird light on the Nicaragua Canal project. Only by the most desperate efforts was Congress prevented from voting millions and millions for a scheme which, its most ardent promoters were forced to confess, had scarcely got beyond the

stage of guesswork. Routes, levels, number of locks, location and number of dams—all were in the air, while the cost was evidently something of which Admiral Walker had only the vaguest notion. Then there was the highly important matter of diplomatic negotiations. They, too, were all at loose ends. Congress was going full tilt over the Clayton-Bulwer treaty. That is, no doubt, a minor matter. England would, we suppose, cancel that treaty for the asking. In this happy time of good feeling, Lord Salisbury would say to his adored and very useful Columbia, "Do what you will; I can refuse you nothing." But that would be by no means the end of the diplomacy necessary. It is admitted that Costa Rica has rights along the route of the Nicaragua Canal, and that her consent to its construction must be secured. It never has been secured. The concessionaires have always contemptuously assumed that they could get what they wanted by means of bribery, when the time came. When the President of Costa Rica was in Washington last winter, there was much chuckling over his apparent willingness to be corrupted by the Nicaragua Canal promoters. But they were doing their corrupting in other quarters just then, and left President Iglesias severely alone, much to that statesman's surprise, it is said. Still, an arrangement of some kind with Costa Rica is necessary before the canal can be built; but Congress was eager to leap into the dark as respects that difficulty, just as it was in the case of all others.

What Congress finally did, mainly through Speaker Reed's efforts, was to pass a bill calling for the appointment of a new commission, to examine the whole question of an isthmian canal, and especially the comparative merits of the Nicaragua and Panama routes. The President has not yet announced his appointments to this important commission. It is to be hoped that he will see the necessity of securing men of high ability and impartiality, and will not, as it has been reported that he would do, choose a commission packed against the Panama route. At any rate, the thing has now got to such a pass that entire publicity is essential. The new report to Congress cannot be drawn up in a corner. Already it is announced that a large party of Senators and Representatives are to visit the isthmus, to see with their own eyes what is the state of the works. What they will find at the Nicaragua route may be inferred from Admiral Walker's admissions. At Panama they will find a canal one-third done; they will find 4,000 or 5,000 men at work; they will find complete plans

worked out to the minutest details by the most eminent engineers in the world; they will find a company ready to give a bond to complete the canal in ten years without asking the United States for a dollar, while yet giving our Government all the political control of it that is either desirable or possible. We are not committed to the Panama route, or to any other. All that we want, and all that we believe the country wants, is to see a canal built across the isthmus in the best way and at the best place, and with the least cost and embarrassment to the Government.

The undoubted intention of Congress will be carried out by the decision of the Adjutant-General that the sale of intoxicating drinks shall not be permitted in any post-exchange or canteen of the army. The proceedings in each branch make it perfectly plain that the clause on the subject inserted in the army reorganization act was designed to reach this end, and it would have been a strained interpretation of the language employed if the War Department had assumed that some evasion of the intended prohibition was still possible, through the engagement of civilians, instead of soldiers, as liquor-sellers. Gen. Corbin is quite right in saying that "the plain intent and spirit of the law are that intoxicants shall not be sold on a military reservation," and he enunciates the only sound principle when he says that "there shall be no 'monkeying' with 'liberal construction' or other forms of evasion; it is our business to see that the laws are enforced in their spirit as well as their letter, and that ends it." There will consequently be a thorough trial of the abolition of the sale of liquor under the patronage of the Government in the army under the new law; while the same experiment will also be made in the navy, under the order recently issued by Secretary Long, forbidding the sale or issue to enlisted men of malt, or other alcoholic liquors on board ships of the navy or within the limits of naval stations.

It is refreshing to find that six years of Addickism have not demoralized public sentiment in Delaware so much as was to have been feared. On the last day of the legislative session in that State, three Democrats voted to elect Addicks United States Senator under circumstances which left no moral doubt that they had been bribed. From the moment that they responded to their names on the roll-call they have been treated by all with whom they came in contact as men previously supposed to be honest should be treated when they have sold themselves. The President *pro tem.* of the Senate immediately struck off the name of Senator Farlow from the committee of finance, of which he was the

chairman, and also from the other committees of which he was a member, and notified him of the reasons for the action. Farlow is a holding-over Senator, but all his associates, Democrats and Republicans alike, except the few Republicans in that branch who are owned by Addicks, have agreed that, if he shall appear in the next Legislature, they will have no association whatever with him. The two Democratic members of the lower branch who sold out to Addicks were bitterly denounced to their faces on the floor of the House the moment that their associates and outsiders could get at them, and they were advised by the authorities to delay their departure from the capitol until the mob outside should cool off, for fear of violence.

Mr. Bryan's insistence that all banquets which he attends must be strictly "Jeffersonian," has its humorous as well as its politic side, but there is no doubt that he is giving Croker a good deal of trouble. If the Boss's Lucullus feast is to be only the signal for a Democratic war on the banqueters, where will he find even an apparently respectable man to sit down along with him and his fellow-blackmailers? We can imagine a shame-faced aspirant for office consenting to sit down with Croker's pigs in the parlor, but not if he knows that he will diminish his chances for office as well as incur the contempt of honest men. Mr. Bryan, we see, is coming out strong just now on those parts of the Chicago platform which declare for the income tax and other forms of assault on "accumulated wealth." This is the tremendous reaction which Mr. McKinley and his syndicate are preparing for us.

The sensible men and women of this State feel a sense of deep obligation to Gov. Roosevelt for his admirable course throughout the incident which ended in the execution of Mrs. Place on Monday. When clemency was asked for the murderess, he made a thorough investigation of the case, going carefully over the evidence and consulting the District Attorney and the judge who were engaged in the trial. When the question of sanity was raised, he appointed two doctors of the highest standing to examine the convict and determine whether there was any ground for the suspicion that she was not in her right mind at the time of the tragedy. When the judicial authorities confirmed the Executive's own conclusion that the conviction was just, and the medical experts decided that the woman had been sane all along, no question remained except that of interference with the course of the law on the ground of the criminal's sex. This Gov. Roosevelt refused, and in the refusal he has been sustained by the thoughtful people of the State, without regard to sex.

Having done his own duty as regarded interference with the sentence, Gov. Roosevelt went a step further, and took measures to secure the decent and orderly execution of that sentence. He instructed the Warden of Sing Sing prison to have a woman attendant and a woman physician with Mrs. Place at the last moment, to allow the representatives of the two press associations, but no other correspondents of newspapers, to be present, and in every way to carry out the Governor's "desire that this solemn and painful act of justice shall not be made an excuse for that species of hideous sensationalism which is more demoralizing than anything else to the public mind." The result was the most orderly and seemly infliction of the death penalty ever known in the case of a woman in the history of the country. The superiority of the electric chair to the gallows as a means of executing criminals may now be considered thoroughly established. Massachusetts is the first State to recognize the wisdom of New York's example by the passage of a law making this change in the administration of the death penalty, and it cannot be long before the same change will be made throughout the country.

An attempt has been made to discover the attitude of bankers in a Western State towards the question of currency reform, and the results are worthy of national attention. Representative Babcock of Wisconsin is a member of the committee appointed by a Republican Congressional caucus last winter to consider this subject during the recess and report a bill next winter, and he recently addressed a series of inquiries to about 300 representative financial men in his State. Something over 100 replies have thus far been received. There was a close approach to unanimity in the answers to the first question, "Do you favor the increase of national bank circulation to the par value of bonds deposited in the United States Treasury?" 110 saying yes, and only 10 no. There was more division of opinion than was to have been expected regarding the repeal of the tax on national bank circulation, only 63 favoring it, while 33 opposed it, and 16 expressed doubts or favored reduction rather than repeal. So, too, regarding another matter about which it had been assumed that there was little difference of opinion, the question of authorizing national banks with a capital of only \$25,000, so as to increase the banking facilities of small towns; while 88 favored this, 28 were opposed. The next question on the list was, "Do you favor the payment of all the demand obligations of the Government in gold?" A greater percentage of the replies received omitted the opinion of the correspondent on this question than on any other in the list, and a number of the replies were evasive; of

the rest, 70 favored the proposition, while 26 were either directly against it, or qualified by statements like this, "Only when made for gold," or "When demanded."

Eastern people will be most interested to learn the feeling of financiers in a Western State regarding the greenback question. One of the inquiries was this: "Do you favor the President's suggestion that a greenback once redeemed in gold shall not be paid out again except for gold?" There were 113 replies, of which 104 were in the affirmative. The next question, very properly, was as to the disposition which should be made of the greenbacks, and particularly whether they should be retired. It is not surprising to learn that a considerable proportion "approach this proposition rather gingerly." Of the 84 who expressed positive opinions, 47 favored retirement, 25 opposed it, and 12 were for eventual retirement, or for retirement only after a sufficient quantity of national-bank circulation, or other money, has been provided to fill the room of the greenbacks to be retired. There were other questions regarding less important points, one at least of which was too vaguely stated to render the replies of any value. The most valuable information brought out is the almost unanimous opinion among Wisconsin bankers that greenbacks once redeemed in gold should never be paid out again except for gold, and the Milwaukee *Sentinel* considers it "safe to say that a great majority of the business men of the State agree with the bankers in this belief."

The most important development since the war on the baggage abuse began is found in a special dispatch to the *Boston Journal*, from its Washington correspondent. He asserts that the annoyances to which returning travellers are subjected "are making any amount of trouble for the Administration"; and that information brought to Washington by leading Republicans indicates that the complaints which are pouring in on the Treasury Department only partly represent the bitter feeling which has been aroused. There is a very practical side to this bitter feeling which has been brought to light by a Republican high-tariff Senator, who has been making investigations in this city and in Boston. He finds that men who have made large contributions to Republican campaign funds in the past, announce that they will not only never make such contributions in the future, but will do all that they can to defeat the party. The importance of all this can be seen when we learn that the Senator told of one such man who has in the past given \$40,000 to the managers of the Republican campaign. In the light of such a fact, it is

not strange that the senatorial investigator should have warned the Treasury Department that the prospects of the party next fall will be seriously imperilled unless the inquisitorial regulations be revoked.

There was a long and interesting letter in the *Tribune* on Monday, from Dean Lefroy of Norwich, England, on the church crisis in that country. Most of it is historical, and, therefore, only of minor interest to this public. Its importance is mainly in the latter portion, which deals with the remedy. The remedy which Dean Lefroy suggests is the one which for some time past has been suggesting itself to every truly Protestant minister in England; namely, the admission of the laity to their ancient place in church government. This remedy has been staring the English church in the face ever since the Revolution in America, and ever since 1870 in Ireland. The experience of Ireland has been even more remarkable than ours. What the Irish Anglican Church has been to the Irish everybody knows. As Shell once described it, "always the church of the state, never the church of the people; a church which had cost England her millions of treasure, and Ireland her torrents of blood." As to the character of the clergy in the last century, it will be remembered that Swift maintained that the bishops, who were generally Englishmen sent from England, were highwaymen who had met the bishops on their way over and had changed clothes with them and personated them in their dioceses. The church was property in Ireland as well as England. As property it belonged to the landlords, while as church it was governed by Parliament through the clergy. As property the lay owner of the living put anybody he pleased, not openly immoral, in the pulpit. The congregation had nothing to do with the matter, had no power to call the minister to account about anything, not even if he were a persistent absentee. We know the rest.

The effect of the disestablishment in Ireland has been magical. The church government has been reorganized on the American model—government by the clergy and the laity. The liturgy has been revised on the same lines. The result has been, after thirty-five years' trial, we are informed on good authority, a very great revival of religious feeling, which, under the old régime, was nearly dead; a great increase in the amount of money voluntarily contributed for ecclesiastical purposes, and a sense of strength the church has never had since it was established. It is only by a similar process that the English church can be saved, and that the laity can be got to care whether it lives or dies, now that the power of the landlords in the country

districts has waned. Disestablishment is something from which even ardent dissenters shrink. The church must have something to rest on except silly young "priests" or lethargic old ones. We have heard a good deal of the Romanizing movement ascribed by a very competent observer to the want of more work by lusty young ministers in country parishes. In default of full occupation, they invent new ceremonies and new powers and duties for the "priest," and the laity have no legal right to interfere with their antics.

Sir William Harcourt's latest warning to the English bishops is that if they do not put down the Ritualists' "open insurrection against the law of the Church, the insurrection will put down the bishops." Yet he deprecates, or appears to deprecate, the one clear solution—disestablishment. He writes, in reference to the asserted readiness of the Ritualists to accept disestablishment: "When it comes to the pinch, the great body of the clergy will prefer, as they did at the Reformation, submission to the law rather than rebellion with its consequences." But a consequence already realized is the shame and scandal brought on religion, not only by clergy defying their dioceses and the law, but by the unseemly disturbances which are repeatedly occurring at church services. There seems to be a sort of organized band of "Kensit boys," who go about to interrupt ritualistic services. The *London Truth* prints some verses which show how the ungodly grow mirthful over the incessant rows. The lines describe the holy evangelical zeal with which ritualistic practices are put down.

How to finance imperialism is beginning to exercise the English. The estimates of expenditure for the coming year show an increase of nearly \$30,000,000, nearly all of which is chargeable to the growing responsibilities of empire. All authorities agree that there will be a large deficit unless resort be had to new taxation. There will be new taxation, undoubtedly, for English finance pays as it goes, not having learned from us the art of borrowing to cover up deficits. The Conservatives, however, are putting on a bold face, and are saying that the Chancellor of the Exchequer will have a fine chance to show his constructive genius by devising new taxes to meet the enlarged expenditure. Yet it is a maxim, as old, at least, as Burke, that it is impossible to tax and to please. The people who have to pay Sir Michael Hicks-Beach's clever taxes cannot be expected to be lost in admiration of his great talents for finance. Labouchere put the case with inelegant bluntness when he said in Parliament that the British workman would rather have an untaxed pot of beer than all the glory to be got out of all the wars on earth.

THE SITUATION.

On the 27th of June, 1898, Admiral Dewey sent a telegram to Secretary Long, in which, after speaking kindly of Aguinaldo, he said:

"My relations with him are cordial, but I am not in his confidence. The United States has not been bound in any way to assist insurgents by any act or promises, and he is not, to my knowledge, committed to assist us. I believe he expects to capture Manila without my assistance, but doubt ability, they not yet having many guns. *In my opinion these people are far superior in their intelligence, and more capable of self-government, than the natives of Cuba; and I am familiar with both races.*"

Admiral Dewey was then and has been ever since considered our best authority on the condition and capacity of the Filipinos. There was correspondence during the subsequent half-year from several other officials, but from none whose word concerning our new possessions in the East was as much respected as Dewey's, for no other who was consulted had been as long in that region and had had as much opportunity for observation. This is not saying that, in our own opinion, an Admiral who has served off the coast is, as a general rule, the best adviser about the condition and capacity of a people. But concerning the Philippines Dewey has been, since he won his battle, a veritable pope for all American politicians. Any one of them who set himself up against him, would have been visited with popular reprobation.

Six months later—that is, on the 21st of December—before the treaty was ratified by the Senate, before he had any authority under it, except what he derived under the protocol, from his place as a military commander, President McKinley issued a proclamation announcing the cession of the "future control, disposition, and government" of the Philippine Islands to the United States by Spain, knowing well at the time that the Filipinos did not acknowledge Spain's right to cede them, knowing well also that Spain did not possess them *de facto*, knowing from Admiral Dewey's account of Aguinaldo and his countrymen that they were persons worthy to be consulted, and knowing that the step he was taking was important enough to need some formal sign of public assent which it had not received. He then made the comical announcement that though he came to take possession by force, and would kill anybody who resisted him, he came "not as an invader or as a conqueror, but as a friend," well knowing that a man who lands on foreign soil with an armed force against the will of the inhabitants or without the consent of the *de-facto* government, is, in the eye of the international lawyer, and in every other eye, both a "conqueror and invader," and cannot by any sort of proclamation rid himself of that character and take on any other.

After a few days' waiting to see whether he really meant what he had said,

open resistance began. We had to fight for our "cession," and are now daily fighting. We have "victories" every day, and the enemy is being "driven back" in fine style, but he rarely, from the beginning, shows much disinclination to be "driven," and when we capture a "city," he burns it. In short, he gives every sign which a feeble people can give, that he is determined to be free; he despises the great McKinley's proclamation, and imitates fairly well our own performances when we were struggling to be free and George III. was telling us he was no "conqueror," and, though he would kill anybody who resisted him, he would be a father to any one who was obedient to him.

The resemblance goes further. It appears that there was exactly the same sort of people at home in England 100 years ago, hallooing George on to his "victories," that we have here to-day encouraging the great McKinley in his wars. We know it because we have exact descriptions of them from Burke. One was of the Griggs kind, who were sick of an honest, industrious life, and wanted to rule somebody and make somebody unhappy, and strut about as a "sovereign" and "superior," and loaf and cackle on "glory-crowned heights." There was another kind which we have also among us. Here is Burke's account of it. It cannot be printed too often:

"But I cannot conceive any existence under Heaven (which in the depths of its wisdom tolerates all sorts of things) that is more truly odious and disgusting than an impotent, helpless creature, without civil wisdom or military skill, without a consciousness of any other qualification for power but his servility to it, bloated with pride and arrogance, calling for battles which he is not to fight, contending for a violent dominion which he can never exercise, and satisfied to be himself mean and miserable in order to render others contemptible and wretched."

We hate to think it, but this seems to us to recall the Hon. Whitelaw Reid, the "Peace Commissioner," and his young men, exactly. Their attitude towards the poor Filipinos is dreadfully haughty. To their great minds the Filipinos are nothing but "children." Their appetite for "victories" over them is insatiable, and they help our troops by calling Aguinaldo scurrilous names, and yet all the inquiries we have been able to make satisfy us that his career is at least as respectable as that of the Hon. Whitelaw Reid. So the world goes on. From age to age men practise the old rascalities and croon the old fallacies. But, though we have no proof on the subject, we cannot help thinking that George's idiots were more susceptible of shame than ours, probably because they generally read more and knew more, though Burke accuses them of "dull uniformity in mischief."

MR. MCKINLEY AND CONGRESS.

Mr. McKinley has now got his first Congress off his hands, and it is a good

time to ask how his theory of the proper relation between President and Congress has stood the two years' wear and tear. What his theory is he has left us in no doubt. By private and public utterance, by acts which speak louder than words, he has made it clear to all the world. First of all, there was to be, while he was President, none of that incessant disagreement and quarrelling between the Executive and Congress which marked and marred the second administration of Mr. Cleveland. Instead of an irritable and pig-headed President, we were to have one all suavity and of infinite tact; and instead of an Executive and Congress at perpetual loggerheads, we were to see the two moving on in spheric harmony. Distinct notice of the change to come was served in Mr. McKinley's inaugural, when he said: "I do not sympathize with the sentiment that Congress in session is dangerous to our business interests." And there was a veritable cry, "I'm wid ye, me byes!" in his first annual message to Congress, of which the opening sentence was: "It gives me pleasure to extend greeting to the Fifty-fifth Congress, . . . with many of whose Senators and Representatives I have been associated in the legislative service."

There spoke tact personified, but let us ask how much better has tact fared than scolding in persuading Congress to cooperate with the President. People used to point shudderingly to the list of things which Mr. Cleveland asked Congress to do but which it refused to do. That was all to end with the advent of sweet reasonableness in the White House. But did it end? Has not Mr. McKinley as long a list of measures contemptuously flung back at him by Congress as Mr. Cleveland had in the same length of time? To begin with the extraordinary session of the Fifty-fifth Congress, the President was twice rebuffed by Congress in the lamentable Cleveland style. He strongly urged the Senate to ratify the arbitration treaty, but that instrument was as contumeliously killed as if the request had been made by a sour and headstrong Executive, instead of one all compact of sweetness and light. But the most cruel fate befell Mr. McKinley's special message to Congress, sent in on July 24, 1897. In it he appeared to rise to the full height of his constitutional prerogative of recommending legislation, and solemnly said to Congress: "This subject [currency reform] should receive the attention of Congress at its special session. It ought not to be postponed until the regular session." But did Congress heed these words of the oily voice any more than it did the raucous cries which used to reach it from the other end of Pennsylvania Avenue? Not at all; it made haste to adjourn with mocking comments both on the measure and the man who had

urged it. Cross old Cleveland could not have fared worse.

One has but to turn to President McKinley's second annual message to find a long record of measures pressed by him upon Congress only to be ignored or defeated. He confidently called on Congress to pass the War Department's army bill, but had to see it torn to pieces as by wolves. He urged the passage of the Nicaragua Canal bill, but pass it did not. He advocated shipping subsidies, but neither house did him the courtesy to advance the bill as far as third reading. He solemnly adjured Congress to pass a bill for the government of Hawaii, but neither House nor Senate paid any more attention than as if it had been only the sound of the wind blowing over the Capitol. In a last despairing appeal, he besought Congress, in a special message, to lay a cable to the Hawaiian Islands, which he said there was "a paramount necessity" it should do before the close of the session. Again a Republican House told a Republican President go hang, as far as the bill was concerned. We repeat: blundering, irascible Mr. Cleveland did not fall more ludicrously to get Congress to do what he wanted.

But if suavity and gracious blandishments did not wheedle Congress into doing what it was bound not to do, how did Congress succeed in dealing with tact and yielding grace in the White House? Alack, here is a different tale to tell! The first thing Congress extorted from a tactful Executive was a war. This is conceded on all hands. Mr. McKinley's apologists and panegyrists alike have declared that but for Congress there would have been no war with Spain. Congress, as Mr. Boutelle has explained, "held a stop-watch" on the President. It gave him just so many hours to produce a war. It was deal to his entreaties. He might be very suave with Congress, but Congress was inexorable with him. A war in forty-eight hours, was the ultimatum, or we make war not only on Spain, but on you. Never was a tactful President in such distress; but he duly produced the necessary war before the time was up. Since then, Congress has gone on conquering and to conquer. It now knows its man, and knows that it has got him down. Having dictated a war, it is a small thing to dictate all appointments, to make a civil-service-reform President sign a law throwing the census to the spoilsmen, to take everything it wants, and give nothing in return, even burking, in one final kick at the Executive, his whole list of promotions in the army and navy. A tactful President flat on his back, with Congress dancing gayly on his stomach—that is the spectacle we have at the end of the first two years of the new régime. But Mr. McKinley likes it. He boasts himself the "servant" of Congress, and he will not even

insist on having one afternoon a week or on receiving callers in the kitchen.

The simple truth is, of course, that Congress has been engaged for years in an insidious attack upon the Constitutional prerogatives of the President. Just as it tried to break down judicial independence by impeaching federal judges, early in the century, so it began the assault upon the independence of the President by the impeachment of Johnson in 1868. Since then subtler methods have been resorted to. Under Grant and his Republican successors, the contest went on with various ups and downs until finally, under Harrison, Congress had got the Executive about where it wanted him. The veto power was practically abandoned, and the appointing power was practically surrendered. Because Mr. Cleveland reasserted Presidential prerogatives, Congress pursued and vilified him as it did, though it could not bend him. At last he retired, and a man after its own heart came into office. Mr. McKinley and Congress are at one, but Congress is the one. The record we have cited, and the facts open to the knowledge of all, make that plain. By the time President McKinley has got his buffeting from another Congress, even he may begin to perceive that the only safe course for the President is to follow the clear directions of the Constitution; to insist upon his own rights and powers, and to respect those of Congress; very sure all the while that the only result of trying to make the Congressional lion lie down in peace with the Presidential lamb is to place the latter snugly in the stomach of the former.

GET THE BEEF CONTRACTS.

Every day's results in the beef inquiry make it imperative that the court should not cease its investigations till it obtains the contracts which Alger and Eagan made with the beef-packers and canners. Let us see what these contracts contain and what the dates of them are. As to the quality of much of the beef, there is no longer any doubt. The testimony taken on Saturday and Sunday greatly strengthened all that had preceded it. A former employee of one of the canning firms testified that he had seen two carloads of canned beef which had been returned some time in May as unfit for use. "When the cans were opened," he said "many of the cans were found to have burst. Maggots were crawling everywhere. The stench was so bad that ammonia had to be used to kill it." The same witness also testified that no Government inspectors had ever examined the canned beef, but that he and other employees had themselves put on inspection-labels. Other witnesses in the employ of the packing company corroborated this testimony.

At Sunday's session of the court, at

Leavenworth, Kan., the first direct testimony was given that chemicals were used in preparing some of the canned beef. Sergeant Edward Mason of Troop A, First United States Cavalry, who served as regimental commissary-sergeant in Florida and Cuba during the war, testified that some of the refrigerated meat which he drew for rations looked "as if it had been painted over with something like paraffine wax; had a light coating on the outside"; that he objected to the color of the meat, and refused to accept it; and that the agent of the packing company told him that it had been treated with "preservatine," a chemical which the company used to preserve its meat. He testified further that the meat smelled bad, had a bad appearance, and was undoubtedly spoiled; and that the agent assured him that the "preservatine" did not hurt it, and advised him to cut off the outside, since the inside, near the bone, would be all right.

No one who has followed the testimony to the present point can question the accuracy of the statement by a prominent army officer, cited in the *Tribune's* Washington correspondence on Sunday: "I think the people of the country are satisfied that the truth of every one of Gen. Miles's allegations has been more than proved." If the President or Secretary Alger has any doubts on this point, he need only to sound public sentiment a little to have them removed. So far as the quality of the beef which our soldiers received is concerned, there is little need of further testimony. That part of the case is proved. But there are other points upon which light is needed and should be forthcoming. The prominent army officer quoted by the *Tribune* makes other statements in its columns which are more serious than any which have yet been published. He declares that in May and June last "a number of contractors proposed to the Commissary Department to furnish beef on the hoof in Cuba and Porto Rico, the same as every other army had received"; that one contractor had been in Cuba and Porto Rico, and had learned that beef on the hoof could be supplied without difficulty; that he went to the Commissary-General with this information, and was informed by him that "he had to give the contract to Swift & Co.—mark this, had to give the contract to the Western firm"; that he told the Commissary-General that refrigerated beef could not be used in Cuba unless it was artificially preserved, and the latter replied that a way had been found by the Chicago contractors to preserve it so that it would keep for seventy-two hours.

Here are several points which should be thoroughly investigated. Why was it that Eagan "had to give the contract to Swift & Co."? Who was it that assured him that the contractors had dis-

covered a process which would preserve the meat for seventy-two hours? Why was it that the contracts said only twenty-four hours? We are glad to see that Eagan has changed his mind about going to Hawaii, and has stopped at San Francisco. He should be summoned again by the Court of Inquiry and given an opportunity to tell all he knows about these matters. The identity of the *Tribune's* prominent army officer should be disclosed, and the witnesses he mentions should be summoned. Eagan swore that the twenty-four-hour limit was an "error" in the contracts, but the packing firm has sworn that this was not the truth; that seventy-two hours was never thought of. Let us get the two parties together and see which is telling the truth. Let us also have the contracts produced and all the correspondence between the contracting parties. It is very plain that only the surface of this infamous business has been disturbed. The country will be satisfied with nothing except the whole truth.

It should be noted that the Court of Inquiry is confining its attention to the beef supply only. It does not investigate any other branch of the commissary service during the war. It does not go into the question of transportation, of camp location and equipment, or into the quality of other provisions than beef. We are assured that if the quality of the flour which Alger and Eagan furnished were to be investigated, results not unlike those obtained in the beef matter would be achieved. As to camp location and equipment, nobody has any doubt about a great mass of scandal existing there. We are able to understand now why the President did not wish to have Congress conduct an investigation, and why he appointed his absurd War Investigating Commission. He did not desire to reveal the truth, but to smother it, and he would have succeeded but for Gen. Miles. Had Miles not collected evidence on the beef question, and had he not forced its publication in spite of army etiquette, we should not have known what we know to-day about that outrage upon our soldiers. But is not the truth about Alger's and Eagan's operations in other directions to be brought out? Does the President still think that the truth can be concealed; that his treatment of Alger and Eagan is a sufficient answer to all evidence that can be brought against them? What he ought to do is to call for a court of inquiry upon Eagan's whole conduct by a body which should command the confidence of the country. Will he do this? Will he stop thinking about delegates long enough to think about the soldiers to whom Eagan and Alger caused suffering and death by their foul and poisoned beef? Delegates are all well enough, but they can only give a nomination, and a nomination which does not

receive votes on election day is a worthless thing.

THE CUSTOM-HOUSE VEXATION.

Shayne, the furrier, delivered an address on Thursday afternoon in which, among his numerous admissions, he confessed that he had put detectives on the docks to see how his "regulation" was enforced, and that his recommendation to the Treasury to provide a decent place for the examination of his victims was not attended to. He says:

"The matter of proper facilities for examining the baggage has received the attention of the committee, and it recommends that a system similar to the one in operation at Liverpool be inaugurated, and that a room be set aside upon the steamship dock where trunks may be examined without danger of injury to their contents and for the comfort of the passengers."

To this, probably the only civilized, rational remedy Shayne has ever suggested, the Treasury, we know, pays not the slightest attention. The examination continues with the increased stringency recommended by Shayne, but in the old place and in the old way. Shayne knew well that it was not attended to, but that the examination had been made more exasperating—that is, that the Treasury promptly altered its regulation to oblige Shayne, but made no alteration to oblige the passengers; and the brave Shayne, knowing well what was going on at the wharves on the arrival of every steamer, and what influence he seemed to have with the Treasury, said never a word.

Now what kind of place is it on which American ladies are obliged to submit lists of their gowns and underclothing to Shayne's detectives and to custom-house inspectors? It is an open wharf, swept by the prevailing winds, traversed from end to end incessantly by furious trucks wheeled by the stevedores unloading baggage and freight from the ship by which these passengers have arrived, with a floor whose only cleansing, after a hundred cargoes have been discharged on it, consists in a sweeping by a 'longshoreman. The greatest confusion prevails on it after the arrival of a passenger steamer, owing to the long detention of the passengers by the custom-house. There are rarely enough inspectors after one of the crowded ships comes in. They not only examine baggage, but they find contraband or dutiable articles, "declared" or not "declared." They value them, and accompany the passenger to the office on the lower end of the wharf to see that he pays the duty. This all takes a great deal of time. To find his baggage, to see that it is got together, to find an officer to examine it, to have it examined, requires an able-bodied man in rude health. For a lone or delicate woman it is almost as terrible an ordeal as landing on a piratical Moorish coast. We have known a case

in which a passenger reaching the wharf with an ordinary amount of personal baggage at eight o'clock in the evening, did not get to his bed until 2 A. M., and he was a vigorous man.

And how is the work of examination done? Some of the inspectors are, of course, men of natural politeness, who dislike their work and make it as little disagreeable as possible, but the proverb, "Like master like man," applies to the custom-house as well as to other places. We doubt if any officer is ever exhorted by his superior to be polite or considerate, or to consult the sex or character or place of a passenger in the community. The whole tone of the service is rude and barbarous and uncivilized. The lesson the officers are taught is constantly to be rigid, to be suspicious, to see in every passenger a possible smuggler, and treat him or her accordingly, in manner and action. The spirit of the custom-house is the most "un-American" we know. If we wanted to give a foreigner a good idea of what is meant by the word, we should advise him to frequent the wharves on the arrival of steamers. It is not surprising that this is the way of the inspectors. They know perfectly well that Shayne and his tailors are more influential with the Treasury than any number of travelling American citizens, and last year they found that this man had actually succeeded in getting the law altered for his own benefit, and they found his detectives on the wharf seeing that it was enforced with vigor; in other words, he had had a share in the government handed over to him. Mr. Howell's denial that the Treasury had framed the regulation for the benefit of a class was plainly not as veracious as the average custom-house oath.

It must be borne in mind that the law nowhere hints that it is a criminal or even immoral thing to go to Paris or London, and while there to make purchases. Both the McKinley and the Dingley tariffs are meant simply to collect revenue, not to reform manners. Therefore, it is not an offence in law or morals, as Shayne not unnaturally tries to believe, to purchase things abroad as long as you pay the legal duty on them when you bring them home. If large numbers of people, including the "merchants and manufacturers," did not buy things abroad, neither McKinley nor Dingley would have any revenue at all. Therefore all treatment of decent people who travel as in any sense bad citizens because Shayne and his gang do not make more money out of them, is simply ludicrous. The proposition that his neighbors owe Shayne a living in the way he chooses himself, may do for a Shayne lecture, but Mr. Dooley is the only proper person to deal with it.

Another feature of the examination must not be passed without notice. Things purchased abroad continue to be

property in the eye of the law, even if Shayne does not like them. In collecting taxes on them, therefore, the infliction of damage on them that can be avoided is illegal, besides being Turkish or Moorish. It is from these great principles a fair inference that when ladies arrive at our wharves with expensive dresses purchased in Paris or London, packed carefully by a professional packer, a functionary whom Shayne probably thinks a vicious person, to let a man plunge his hands into them, and possibly turn them out on the dirty wharf under the feet of the stevedores, although the owner may still have to take them to Chicago or San Francisco, surely should be a thing to be avoided somehow by an honest Treasury. And yet the occurrence of this sort of thing nearly every day does not seem to attract any attention. No civilized building is provided for the examination, no counter to put the baggage on, no numbered compartments to assist the passengers to find the baggage, no privacy for those whose underclothing is turned out, no protection from draughts or observation. Every alteration or change is to please Shayne, the furrier, although he would doubtless be just as well satisfied if a collection for him was taken up from the passengers.

REMBRANDT AT THE BRITISH MUSEUM.

LONDON, March 3, 1899.

In writing of the two recent Rembrandt exhibitions, I pointed out that at Amsterdam and in the Royal Academy the etchings were not included, and that, therefore, the collections could not be considered completely representative. Rembrandt had his rivals among painters in his own day, but never among etchers until the present century, so that to omit his prints is to leave out perhaps his most important work. Now, however, Mr. Sidney Colvin of the British Museum has supplied this omission by a special show of all the etchings, and the drawings, too, belonging to the print room.

When a special show is held at the Museum, it is usually many long months in the preparation, and, that the care and pains bestowed upon it may not be wasted, it remains open for a still longer time. I believe the Rembrandts will be on view in the white room where they have been arranged for a couple of years. Consequently, many an American, forced to miss the paintings in Amsterdam and London, will still have an opportunity to see the prints. And it is an opportunity not to be lost. It is one thing to dive into portfolios and volumes of etchings, quite another to find the work you want to study excellently hung, according to dates and periods and states, on the wall before you, where, if you are an artist, you can really look at it at your ease and leisure; if you are a collector, you are furnished with all possible and available information. Besides, nowhere is there a more complete series of these prints than in the British Museum, and nowhere, perhaps, so many fine impressions. In the notes to the

catalogue, Mr. Colvin explains that the collections at Amsterdam and the National Library in Paris are as complete, and that "those of the Albertina and the Royal Library of Vienna, taken together, may be regarded as constituting a fourth public collection of equal rank; while scarcely less rich than any of them is the private cabinet of Baron Edmond de Rothschild in Paris. Both Amsterdam and the Paris Library possess a few unique prints, or states of prints, which are not in London; but on the whole the British Museum stands probably first of all in the quality and high preservation of the specimens which compose it."

This, really, is what strikes you above all else, the wonderful beauty of by far the greater number of impressions. Indeed, it is impossible to quote any examples in particular where such a high average is maintained, and, unless you happen to be a collector, the quality of a print will be of more importance to you than its rarity. But in studying a certain master's work, it is interesting to be able to follow the gradual development of his genius and the accompanying changes and modifications in his method and technique. And Mr. Colvin has adopted the one arrangement that can help you to do so. He has grouped the prints in three divisions, corresponding to the three periods usually accepted; the first, when Rembrandt depended chiefly upon the acid; the second, when he worked more and more in dry point; and the third, when the acid was given up almost entirely for dry point. Each group is hung chronologically, as well as can be, when dates are not always known. States and impressions are placed side by side. And you have put to turn to the catalogue for every fact, authority, and reference in connection with each. Altogether, the arrangement and the catalogue could not easily be better, and I am sure Mr. Colvin will not be disappointed in his hope that the present opportunities for examination and comparison "may enable students to come nearer to a complete agreement than has hitherto been possible."

But the agreement of students, after all, means less to the artist than the actual work before him, upon the merit and perfection of which he decides for himself without the aid of catalogues and compilers. And to follow the series from the first little heads, mainly of historic interest, to the last incomparable portraits, is to feel, with something of exultation, the greatness of the master who, in his etching as in his painting, steadily progressed, steadily developed and strengthened his powers, reserving his masterpieces for his old age, when lesser men would be content to think their life's task done—for the years during which Fate was most cruel to him, and he was all but forgotten and his work no longer in demand save with the few. It is to learn, too, that it was by the same means as in his painting that he achieved perfection: by the same tireless work and industry, the same close study of the life about him, of the *thing seen*, the same restless experiment. He began by etching the old, familiar sitters for his early portraits; his father, his mother, sometimes Saskia, himself again and again and ever again, under every aspect and in every costume or disguise; little plates that are often dry and cold and tight, with not a suggestion of the flame, the ardor, Fromentin thought he had always difficulty in suppress-

ing, but that led him to the knowledge, the freedom, the distinction of the great plates of this period—the "Good Samaritan," the "Raising of Lazarus," the "Descent from the Cross." Then came the period when, just as he was becoming keener and keener about dry point, he turned oftener and oftener to the country, with its windmills and canals and old farmhouses and little towns, for motives, and produced the larger number of his landscapes—the "Three Trees" among them—landscapes in which you see all Holland, and for which some authorities account by imagining a flight to the country as a refuge from the sorrows and troubles that crowded upon him after the death of Saskia. This was the period of the portraits of Jan Six and Ephraim Bonus and Cornelis Anslu and Jan Asselyn, the period of the "Hundred Guilder Print," of which the British Museum boasts two unrivalled impressions in its two early states. And then come the perfect plates of his later years, the marvellous group of portraits of Jan Lutma, of Arnold Tholinx, of Thomas Jacobsz Haaring, and, supreme even among these, of Jacob Haaring; and also the large religious subjects, the "Christ Presented to the People," in no less than six states (one of the plates, it seems to me, he did not improve by working on it), and the "Christ Crucified between the Two Thieves," in four states, showing the differences that have been such a source of discussion among the authorities. I think most artists must agree with Sir Seymour Haden that the later states, with the mystery and gloom and tragedy of the deeper shadows—of the darkness that fell upon the earth with the consummation of the great sacrifice—represent the true and ultimate effect which Rembrandt had in view from the first, and were not the result of caprice or of the interference of another and inferior hand. The series ends with those final studies from the nude which rely upon even nobler qualities than realistic truth for their beauty.

The collection alone would be sufficient to establish Rembrandt's preëminence as an etcher. But, to emphasize his supremacy, Mr. Colvin is also showing, in the same room, the work of his contemporaries, and some of his immediate predecessors—a series which is notable enough in itself. There are the "Beggars," the "Nobility of Lorraine," and the "Miseries of War," by Callot; the classical landscapes by Claude, the portraits by Van Dyck. There are the prints of the Dutchmen who were more or less under his influence, Livens, Van Vliet, Ferdinand Bol, and of the Dutchmen who reveal small trace of having studied him, Ruysdael and Albert Cuyp, Paul Potter and Van der Velde—prints of unquestioned interest: some too well known to need detailed description, others not so well known, but curious historically. For instance, the color prints of Hercules Seghers, who was the first to experiment in color-printing from a copper plate, using, however, but one color in the printing, and tinting the paper either before or after the impression was taken, with sometimes delightful effect; and whose etchings were not only studied by Rembrandt, but, in one case certainly, altered and worked upon by him. Rich in interest as this collection is, however, there is not one of the artists who can stand the test of comparison with Rembrandt. The elegance of Van Dyck is overshadowed by the simplicity and dignity of the "Lutma" and the two Haarings; the stateliness of Claude

seems stilted and artificial by the side of the spontaneous little impressions of quiet Dutch waters and pastures; the animals of Cuyt and Paul Potter are wooden and lifeless when you come to them from Rembrandt's amazing rendering of "The Hog." I think Mr. Colvin would have given a still more useful comparative study had he hung one or two modern masters instead of Rembrandt's contemporaries.

Of the drawings I have said nothing, because I have already written of those exhibited at Amsterdam and the Royal Academy. Of course, the British Museum collection is quite distinct, and if, in certain single examples, it cannot compete with the treasures of Mr. Heseltine and M. Bonnat, in others it far surpasses them. But the main characteristics are always the same. Here, again, you find Rembrandt working in all sorts of mediums—in chalk, pen-and-ink, pencil, sepia; and here again you find the drawings falling, naturally, into two divisions: the studies from life and nature, the sketches of preliminary notes for his etchings and paintings. They also follow a chronological order as far as is possible, for he seldom dated his drawings, and they also point to continual progress, and explain the means by which he achieved it. In them, perhaps more than in his paintings and prints, you are conscious of his indefatigable, his ceaseless habit of work, his constant observation, his uninterrupted concern with the life about him, and his quenchless love for the beauty of the commonplace. You have once more a series of portraits; once more his renderings of animals—for one, that incomparable elephant with all its clumsiness, its modelling, its loose, flapping hide, expressed in a few lines in black chalk; once more his landscapes, a whole countryside in its infinite variety put down with a few strokes of the pen. And, when he was not going direct to nature, he was learning all he could from other masters, as is explained by his copy of Mantegna and his facsimiles, you might say, of the designs of Persian artists. Of all men, Rembrandt seems most to prove the disputed truth that genius is but the genius for industry.

I have given a mere outline of the exhibition, but you cannot in one short letter dispose of work that offers really a study for a lifetime. I have, therefore, endeavored merely to give some slight idea of the completeness of the British Museum collection, and the admirable manner in which it is now arranged for the benefit of the public, and to remind the American coming to London within the next year or so of the pleasure and the unparalleled opportunity for the study of Rembrandt that await him. As for the catalogue prepared by Mr. Colvin, it will be in its way as indispensable to future students of the etchings as the works of the authorities whom it so freely and appropriately quotes.

N. N.

ONE LETTER MORE FROM "ROBERT."

FLORENCE, March 2, 1899.

My letters! all dead paper, . . . mute and white! And yet they seem alive and quivering Against my tremulous hands which loose the string And let them drop down on my knee to-night. This said, . . . he wished to have me in his sight

Once, as a friend: this fixed a day in spring To come and touch my hand . . . a simple thing, Yet I wept for it! this, . . . the paper's light, Said, *Dear, I love thee*; and I sank and quailed As if God's future thundered on my past. This said, *I am thine*—and so its ink has paled With lying at my heart that beat too fast.

And this . . . O Love, thy words have ill availed If, what this said, I dared repeat at last!

Thus wrote and felt Elizabeth Barrett in those "finest sonnets ever penned," which only long after they were married did she ever show to Robert Browning, such being the intense reticence of her love that all of it could not be told, even in her letters to him—those letters which we, and you too, of course, have now all in full—not "dead paper," but alive with burning words; not mute, but assuring every heart that can rise upwards for a moment, that love is a holy, perfect, lasting thing, "the beginning," the doing, the being, the end of life. The first feeling on taking up the volume was an irresistible shudder at what she would feel—if those lonely ashes, weighted with that pompous marble cenotaph of Leighton's, protected by the cypresses, sheltered by the soft, watching hills, could feel aught of earth's toil and turmoil—to see their two hearts turned inside out for the public gaze. Very bitterly, indeed, I fear, if she were mortal still; and Robert would be bitterer and more savage, for he distinctly forbade all friends to publish a line of her letters, even to themselves, and I for one have strictly obeyed him, even to the point of burning many which he wished to be burnt, and of never printing one and more intrusted to me by the dear, good, noble niece of Mrs. Jameson, "Geddie" Macpherson, to whom, when publishing her aunt's life, Robert refused permission to give the letters written after his beloved became his own.

One of his, at least, I shall give you now, for certainly the United States is worthy of everything that belongs to the Brownings. There she was loved and appreciated far more than in England; and as for Robert, it does not seem to me that he was ever appreciated at all in England, save by a chosen few—Miss Barrett among the first—until after her death. After the first horrified feeling of what seemed a desecration and a sacrilege, and a fearful hunger to possess the volumes and a quiet place and time to savor them, came a more reasonable feeling. If, as they both so intensely believed, there is a world beyond the grave where lovers reunite, and if they knew how many hearts are and will be gladdened by their words to one another, would they, indeed, be vexed? No, they would be—are too happy to grudge such joy to mortal misery. So we may read and enjoy, I think, without remorse. To those who knew the Brownings intimately, in their own loved home here in Florence, or even during their sojourns in London or in Paris (it was always home, for they were never divided save in death), these letters will teach little as to their mutual relations one to the other; but to those to whom this rare privilege has been denied, the letters, read together with their scant biographies, will teach that where great, pure, and noble souls do find their "other half," their lives and works run harmoniously, and rise soaring towards the sun on love-sustaining wings.

The marriage took place at Marylebone Church, on the 12th of September, 1846. The bride returns alone; they are not to meet except at the railway station. Every hour comes a new fear lest the newspapers may publish the marriage and she be yet carried off. Robert has made a mistake in her name; he, who never made any mistakes afterwards, made several then, in trains and steamer time-tables. Finally, the last day but one

comes: "September 19th. By to-morrow at this time I shall have you only to love me, my beloved!—you only, as if one said *God* only. And we shall have Him beside, I pray of him!" And the prayer was answered. They met, started, and Mrs. Jameson, in Paris with her niece, "who had left the invalid in London satisfied with the sofa and silence," receives a note to say that they are in Paris en route for Italy. They stay in Paris a fortnight, then travel all together to Pisa, where BA, "not only better but transformed," is to spend the winter alone with her beloved. And now I think all readers of the entrancing correspondence will like to have Robert's first letter to Mrs. Jameson, the kind soul who so rejoiced in their union:

PISA, November 30, 1846.

DEAR, GOOD AUNT NINA: Your note properly ushered in the sunny day, this morning. I fully meant to have written to you, but this is better fortune, to get an answer first (hibernal!); so on the strength of the continued gladnesses of the weather and the letter, we have just been driving for *due ore* round the city and suburbs, and BA comes in with an appetite for dinner, *she* says, and I am not so inclined to doubt it as usually. Did she tell you that I discovered the famous walk on the dyke, and that it is really worth its fame, being very pretty and characteristic, and extending quite to the foot of the mountain? We got out of the carriage and climbed on to it just now, but were too far from a curious old church and tower I wanted to reach. Well, you seem to be enjoying Florence, which is quite right—we and everybody shall have our share of whatever you get there; but if we are the more happy that you remember us in the midst of your especial good, we are not at all surprised, I beg you to know, for we have long since made up our minds about the nature of your attachment to us, and having taken up BA, and me on account of her a little (I go with her, observe, as a serious makeweight), we feel more, that you will not let us go, now, after these travels and trials—no, not for ever so much; but even if you tried to do so, you would find it a hard job, so tightly we will cling!

The day before yesterday we got the kindest of notes from Mr. Kenyon, in which he speaks with great satisfaction and delight of the letter he received from you. He was, at the time of writing, engaged in all sorts of good offices on our account. I also was favored with a letter from Procter. We have been found out here by one or two people, but by Providence's help they don't much disturb us; one of them informed us that Pisa had never been so void of strangers as at the present time, at least within his recollection, while the two last seasons were "prosperous of English" beyond example; hence the additional numbers of apartments to let, and the increased price of them. It is very soothing on a rainy day, when one happens to suffer from bile, to see every blessed board about *appigionarsi*, etc., etc., still dangling in the wind. Here we go on very well, certainly very quietly, although Wilson [the maid] makes from time to time a discovery that sets one's hair on end—about ways of living and sleeping, *e sopra tutto* cooking; all very new and dreadful. M. Verrucci called once and means to call again. These are our events! or no! for another event is the opening of the completed railway to Lucca from this place, so that one may go without any trouble whatever, and had the weather been less outrageous on Monday or Saturday, now I think of it, we meant to go and assist at the exposition of the "volto sacro." Next week perhaps we may manage a trip there. Meantime, we shall wait your letters with a modified impatience (don't you know that a professor in the quadrant issued prospectuses engaging to teach people, at so much per head, "dancing, deportment, and a modified gallantry to the fair sex"?). Seemingly the list you promise will be of the greatest service to us, and pray let me know when you mean to leave Florence for Rome, as you must do, must! I spoke at the post-office about your letters (one was forwarded to you a week ago or a little more), and shall continue to speak.

Dear Geddle is the best, most affectionate girl in the world. BA tells me to say she thanks and loves her heartily, and I put my love into the parcel whether she notices or no. Have I told you in all these words, directly and not by implication, that BA is admirably well, and more and more inclined to sleep after dinner? She desires me to give, first, her whole love, and, next, the good news that your strap is found in Wilson's baggage. I am sure I shall not object to such an article being got quietly out of the house, for there are certain uses to which BA might turn a strap; but I need not tell you she shall not see this letter. God bless you and your dear Geddle, on account of BA and your ever affectionate R. B.

Mrs. MacPherson, the "Geddle" of her aunt and friends, spent the last year of her checkered life with me in Rome, and died in my arms on the 24th of June, 1878. She had just completed the life of her aunt, Mrs. Jameson, and was much disappointed that Mr. Browning would not allow her to publish his wife's letters to Mrs. J. She gave them to me, with his, and this is the first to see the light. J. W. M.

Correspondence.

THE PRESIDENT AND HIS "ORDERS."

TO THE EDITOR OF THE NATION:

SIR: It is to be hoped that President McKinley will, as soon as he is rested, take prompt steps to have his "order" respecting removals from the classified service complied with by his subordinates. They have shown their admiration for his foreign policy, and extolled his wisdom and courage in general as an administrator, but they have not hesitated to ignore the proclamation of policy made by him in July, 1897, that "no removal shall be made from any position subject to competitive examination except for just cause, and upon written charges filed with the head of the department or other appointing officer, and of which the accused shall have full notice and an opportunity to make defence." The last report of the Civil-Service Commission shows that employees turned out of their places in spite of this order have been importuning the courts of the country—but generally in vain—for "injunctive relief."

Their remedy, as the judges have been obliged to tell them, can be obtained only at the White House. "I have no doubt," said one of them, "that the President may lay down rules for the internal policy of his administration, and may require his chief executive officers, dependent upon his pleasure for their tenure of office, to conform to them, or else to sever their official relations with him. . . . But the enforcement of such rules is a matter between the President and his cabinet, and not a matter for the courts."

The "disciplinary" method of enforcing such a rule is, of course, the only method, and President McKinley must have known this when he issued the order in question. If he did not intend to enforce it, the pity is that he promulgated it, for its frequent violation has brought reproach upon the act itself which every one supposed it was meant to render more efficacious. The Civil-Service Commission print in full case after case of the arbitrary dismissal of those who were protected by the terms of this rule. With most commendable courage they have promptly and earnestly protested against

these illegal acts, and have brought their complaints, and ample evidence sustaining them, to the Secretaries in whose departments the outrages were committed, but in not a single case has punishment been administered, the wrong righted, or even the protest answered. Instead of resigning in a body, as they might with great propriety have done, the Commissioners have printed the whole correspondence, showing an invariable ignoring by the departments of their requests and protests, thereby in effect appealing to a sound public sentiment for their support.

It is not necessary to discuss here the legality of the executive orders placing restrictions upon the right of heads of departments to remove subordinates whom they are authorized by law to appoint. That point may be made by the cabinet officer himself when the promulgation of such orders is in contemplation. Courts, too, must necessarily consider it when they are asked to enforce such orders. But the refusal of bureau officers to require compliance with an order of the President of this character, because not convinced of its constitutionality, is so grossly impertinent and destructive of all order and discipline that one cannot understand how it can be endured for a moment. The Civil-Service Commission show in their report that this high ground is taken in the Treasury Department.

The Grosvenors in Congress have raged because President Cleveland waited until May, 1896, before he extended the classified service so as to include as subject to competitive examination the great bulk of Federal employees, inside and outside of Washington. But that genuine friend of civil-service reform, as is well known to many, was ready for this enlargement long before 1896. He was, above all things, however, regardful of the law, and had no intention of imposing upon the heads of the Washington departments restrictions which they were not inclined to accept. It was in 1896 that, by their coöperation, the various employees were classified who had not been classified by the civil-service act. In this revision that act requires their agency.

It was naturally supposed that President McKinley had in the same way secured the concurrence of his cabinet when, in the following year, he extended to all those embraced in his predecessor's classification a solemn exemption from the menaces of arbitrary power. But though Secretary Gage—to mention but one case—repeated this order to the various bureaus and branches of his service, it is almost an every-day occurrence that his collectors of revenue impudently thrust out Democrats and replace them with men of their own choice, in utter disregard of rules, orders, and department regulations. And when the Commission run to him with a full account of the violation, he remains silent and smiling. I. E.

March 15, 1899.

VIRTUE ENOUGH FOR ALL.

TO THE EDITOR OF THE NATION:

SIR: Of "the revered McKinley" and his Philippine policy, may it not be said, as Warburton, Bishop of Gloucester, said of George the Third: "Let us private men preserve and improve the little we have left of private virtue; and, if one of those infected with the influenza of politics should ask me, 'What

then becomes of your public virtue?' I would answer him with an old Spanish proverb: 'The King has enough for us all'?"

Respectfully,
ALFALES YOUNG.
SALT LAKE CITY, March 15, 1899.

JUDGE KOHLSAAT.

TO THE EDITOR OF THE NATION:

SIR: I regret to find in your columns of March 9 a statement to the effect that Judge C. C. Kohlsaas would not have been heard of in connection with the United States district judgeship had it not been that Mr. H. H. Kohlsaas had insisted on his brother being recognized.

You do a wrong to two men. No man on the local bench has stood higher in public esteem than Judge Kohlsaas of the Probate Court. This was recognized by the way he ran ahead of his ticket when reflected last fall. Mr. H. H. Kohlsaas has consistently refused to ask any favors or patronage of the President. This I know.

Judge Kohlsaas was recommended, and his appointment urged, by many leading members of the Chicago bar. He is a man who would do honor to any position of trust and to any man appointing him. His appointment must have been a pleasure to the President, because of his personal and professional fitness. No rival for the position had the combined experience and character that were possessed by the appointee.

As a rabid civil-service-reform advocate and an anti-expansionist "to the limit," I hope you will correct your editorial.

Yours truly, WM. KENT.

MUNICIPAL VOTERS' LEAGUE,
CHICAGO, March 12, 1899.

"LEST WE FORGET."

TO THE EDITOR OF THE NATION:

SIR: That the new revelation as to our manifest destiny is but little in accord with the second sober thought of a majority of our people, is hardly to be questioned. Our late wholly exceptional conjuncture being past, we naturally incline to return to our normal condition, without sacrifice of substantial principles, the inheritance of an Anglo-Saxon race. These principles are not so modern as may be supposed. They found voice at a very early period of our history, when Spain was civilizing with slaughter and under the emblem of the cross the territories of northern South America (Guiana); and this is what Sir Walter Raleigh announced as the English Christian method of dealing with the people and territories of uncivilized regions. (The extract is from Hakluyt.)

"This much of subduing the Guianians: the means of procuring this come next to be considered, which ought to be just before God, according to our Christian profession and honorable among men according to the proceedings of our English nation. For it were far better with the help of our confederates under the defence of the Almighty to strengthen in our own countries, than to purchase our security by such practices as the Spaniards used in the conquest of the Indies. Therefore the president [precedent] of their dishonorable actions may not serve for our instructions.

"For which purpose I lay down this as a maxime (which yet upon better advice I am ready to retract). That no Christians may lawfully invade with hostility any heathenish people not under their allegiance, to kill, spoil, and conquer them, only upon pretence of their

[In]fidelity. My prores and reasons be these. In the beginning God, having made the World—reserving the heavens for his throne of Majesty, gave the earth and all therein, with the benefit yessuing from the sunne, the moone, and all the stars, to the sonnes of men as is manifest by the blessing of God upon Adam afterwards renewed unto Noah and his descendants, confirmed in part by God, himselfe to the posterity of wicked Ishmael afterwards to Nebuchadneser in these words. I have made the earth, man and beast upon the ground by my great power, and have given it to whom it pleaseth me: But now I have given all these lands into the hands of Nebuchadneser the King of Babel my servant, etc. To the like effect sayeth Daniel to Nebuchadneser: O King Thou arte King of Kings, for the Lord of Heaven hath given the a Kingdom power strength glory &c. By all of which it seemeth to me very liquid and clear that by Gods ordinance the *belevers* are not the only lords of the World, as being not able to people the 20th part of it, but that by the gift of God, Idolators, pagans and Godlesse persons bee intituled to the possession, and have a capacity to take, and an ability to hold a property in lands and goods as well as they, which being manifested by the former allegacions, it is against the rules of Justice (which giveth to every man his own) to deprive them of their goods, lands, libertyes or lives without just title thereunto. When Jepthe by his ambassadors showed to the King of Amon the righte that the Israelites had of invading the possessions of Amon he maketh not the pretence of their idolatry or Gentileisme, but because the God of Israel had given those lands unto them. The God of Israel (sayeth he) hath cast out the Amorites before his people of Israel, and wouldst thou possess it? Wouldst not thou possess that which Chemaath thy God giveth the to possess? So whomsoever the Lord God driveth out before us, them will we possess. But God hath given no Christians any such warrant, therefore thei may not do the like: as nether the good Kings of Israel or Juda unless just cause of wrongs from the Idolators received.

"Christians are commanded to doo good unto all men, and to have peace with all men, and to do as they would be done unto: To give none offense to one or other: And lastly Christ willed the disciples to pay tribute unto Ceasar, an infidell. He refused a Worldly Kingdom as not pertaining unto him—he reproved his disciples when they desired that fire might come down from heaven and destroy the Samaritans who refused to entertain him—Saying you know not what spirit you are of. The Son of Man is not come to destroy mens lives but to save them.

"Therefore no Christian prince under pretence of Christianity only, and of forcing of men to receive the gospel or renounce their impieties may attempt the invasion of any free people not under their vassalage. For Christ gave not that power to Christians as Christians, which he himself as sovereign of all Christians neither had or would take.

"By the Law of Nature and nations we agree that prescription or priority of possession only giveth right unto lands or goods against all strangers, indefeasibly by any but the true owners.

"This mugh to confirm that opinion before delivered that Christians may not warrantably conquer Infidels upon pretence of their infidelity. But I hold it very reasonable and charitable to send preachers safely guarded it may bee to offer Infidels the gladd tidings of the gospel, which being refused by them (or peradventure the Infidels giving hard measure to the Preachers), this can ground no sufficient quarrel to overrun their countries."

Are the American people to accept the conclusion, now apparently just discovered, that we had not reached national completeness until the finishing stroke was to be accomplished by uniting the ship of state to a

flotilla of Malay dependencies whose crew were resisting the encroachment?

C. H. MINER.

NEW LONDON, CONN., March 14, 1899.

"THE LAW OF THE ROAD."

TO THE EDITOR OF THE NATION:

SIR: Had your correspondent, in the issue of March 9, 1899, writing on "The Law of the Road," consulted a file of *Notes and Queries*, he would have found two discussions of the question, the first in vols. 9, 11, and 12 of series 3, and the second in vols. 3, 4, and 5 of series 6. In one of the first will be found the original and best version of the rhyme your correspondent quotes, which is there credited to Henry Erskine.

The encyclopædias merely state the fact that the rule is to keep to the right in nearly all civilized countries, except Great Britain and its colonies, without explanation. While the writers in *Notes and Queries*, curiously enough, are diametrically opposed to each other. One writer (series 6, vol. 4, page 34) suggests that the English rule is due to the fact that the wagoner, walking on the left of his horses, does not want to be caught between the wheels, and, therefore, pulls his horses towards him, thus turning to the left; while in other countries persons driving with reins are indifferent in the matter, and follow their "natural preference" for the right hand.

This view, however, is opposed by a subsequent writer (page 154 of the same volume), who is of the opinion that coachmen, and not wagoners, made the rule, and the advantage in turning to the left for the coachman is obvious. This agrees with an earlier and more complete explanation (series 3, vol. 11, page 531), which accounts for the English rule in the same way, and for the French rule by the fact that their stages were driven by postillions sitting on the left horse. It also agrees in principle with the explanation which I have heard assigned for the rule adopted in America, viz., that the convenience of the drivers of ox-teams (that being the chief mode of transportation) decided the question. It seems reasonable that they should wish to pass, especially on narrow roads, to the right in order that they might better judge the distance between wagons, that they might avoid being crushed out into the gutter or into deep snow, and that they might greet each other most conveniently.—Yours truly,

C. W. A.

THE JOHN CREEAR LIBRARY,
CHICAGO, March 16, 1899.

TO THE EDITOR OF THE NATION:

SIR: A correspondent of your paper, last week, in writing about "The Law of the Road," seeks to find a reason why, in New England, it is the custom, as well as the law, to turn to the right in passing. I can tell him what my father, more than sixty years ago, gave me as the reason. At that time nearly all the teaming was done by oxen. They could not be as accurately guided as horses, and turning to the right brought the drivers, who usually walked beside the team, on the inside, so that they could be sure not to come in collision.

As I drove, when a boy, a great deal, and could not see over the oxen to know how near the wagons were together, I could realize the reason, as well as advantage, of the

practice, and I have no doubt that was the cause of turning to the right.

Respectfully yours, H. A. STEARNS.

PAWTUCKET, R. I., March 14, 1899.

TO THE EDITOR OF THE NATION:

SIR: The origin of our different custom, I believe, is to be found in the almost universal use of oxen for draught purposes throughout this country in the earliest days of its settlement. With them no reins were employed; the guiding was by voice and whip. The right hand being the natural whip hand, it was most convenient that the driver should walk on the left of his oxen, the better to guide them by the whip; and, being on that side, he naturally turned his team to the right, as the English reinsman had turned to the left, in order that he might more surely avoid the danger of collision. The men on horseback, who would otherwise have continued to turn to the left if they had been free to follow their own convenience and their inherited English custom, could readily turn their horses to either side of the road, and thus adapted themselves to the requirement of the primitive American ox-team.

This rule of turning to the right became more firmly fixed when, later in the development of our country, especially in the South and West, the custom arose of driving several pairs of mules or horses to one vehicle or train of vehicles, by means of a single "jerk-line," as it was called, leading from the nigh horse of the front pair of mules to the driver, who rode the nigh wheel-horse. From his position he, like the ox-team driver, could best avoid accident by turning to the right. The very terms "nigh" and "off" horse which still prevail are the survivals of the same early ox-driving period, and designate the position of the horse with reference to the ox-team driver. Now that ox-teams and single-rein mule teams have for the most part disappeared in the United States, our custom of turning to the right might well be replaced by the safer and more convenient English rule, "Keep to the left."

IRVING ELTING.

POUGHKEEPSIE, N. Y., March 14, 1899.

TO THE EDITOR OF THE NATION:

SIR: I have heard my father say that the change from the English custom of turning to the left was one of necessity, on account of the difficulty of turning out in the deep snows. In the early days, when America was first settled (and even now one sees it in farm sleighs in the country), the horse was harnessed to the sleigh a little to the right and directly in front of the right runner—in front of the right in preference to the left, because it brought the horse in front of the driver, who sat on the right. Harnessed in this manner, the horse broke the way through the deep snow for one of the runners, and in meeting another vehicle, by turning to the right the horse could break the way for the runner that had to be turned into the deep untrodden snow at the roadside.

Different customs prevail in different parts of Germany and Austria. When I was driving from Salzburg to Berchtesgaden, we had to change at the frontier from left to right.

W.

BOSTON, March 20, 1899.

TO THE EDITOR OF THE NATION:

SIR: Judge Nott's explanation of the change

in the rule of the road, in the *Nation* of March 16, agrees in part with tradition. His one difficulty may perhaps be solved by substituting bank for snow. When a boy in Massachusetts, I once asked why people turned out to the right. After telling me that there had been a change in the custom, my father said: "I, too, once asked my father this, and it is a question all boys must put, I think, for he told me what he said his own father had told him. In old days, he said, one seldom met another wagon on the road, but one always had to look out for the bank; and even when one met another it was more important to look to the lift of the wheel than to the passer-by." A drive through the woods of eastern Long Island or Cape Cod will illustrate the verisimilitude of this explanation, which, on account of the odd expression, "look to the lift" (instead of look to the left!), has always remained in my memory in its original verbal form. Trees are felled and then the wagons make the road deeper and deeper, grinding down sandy soil till high banks are left on either side. In passing, one's chief care is not to avoid wheels, but to keep balanced one's own wheels, as the road is narrow, being half on the bank.

The explanation given would date from about 1750. WASHBURN HOPKINS.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, Mr. H. M. Doak of Nashville, Tenn., in writing on this subject in your paper of March 9, seems not to be aware that in Canada the English custom of keeping to the left is retained. In towns separated by an imaginary line only, but belonging in Canada and in the United States, drivers change their practice at once on crossing the boundary.

It has occurred to me that if the English custom of passing to the left of the road arose from the desire to keep the weapon-hand next a possible enemy, the custom may have been reversed in our earlier settlements because of the fact that the enemies to be guarded against were found, not in persons met on the road, but in savages lurking in the forests on either side of the way. If this supposition is correct, the custom of passing to the right arose from the same source as our peculiar custom of the head of the family sitting at the foot of the pew in churches. Our forefathers sat next to the aisle, with musket in hand, during service, to be in readiness to repel sudden attacks from the Indians.

The persistence in these practices so long after the perils which caused them have passed away, is a curious illustration of that unreason which lies at the bottom of many of our customs. E. F. MERRIAM.

SHARON, MASS., March 14, 1899.

Notes.

William R. Jenkins, New York, announces for publication in September 'The American Cicero,' a guide to the Paris Exposition of 1900, compiled under the direction of Vicomte de Kératry.

Cassell & Co. are about to reissue their National Library, the older volumes from new plates, and to extend it. The price will still remain at ten cents.

Benj. R. Tucker, New York, has nearly ready 'The Ballad of Reading Gaol,' by Os-

car Wilde (*alias* C. 3. 3, his prison number).

Doubleday & McClure Co. will publish at once 'The United States of Europe,' by W. T. Stead.

'Contemporary Spain, as Shown by Her Novelists,' edited by Miss Mary W. Plummer of Pratt Institute, Brooklyn, will presently be issued by Truslove, Hanson & Combs.

Preston & Rounds, Providence, R. I., will make a limited edition, from type, of 'The Diary of Col. Israel Angell, of the Continental Line,' 1778-1781, with annotations by Edward Field, a map and two plates.

The Dominion Co., Chicago, will publish a 'Full Official History of the War with Spain,' by Murat Halstead.

Herbert S. Stone & Co., Chicago, include among their spring publications 'A Short History of the United States,' by Justin Huntly McCarthy; 'The Spanish-American War,' by eye-witnesses; 'Can We Disarm?' by Joseph McCabe and George Darien; 'The History of Gambling in England,' by John Ashton; 'Robert, Earl Nugent,' by Claud Nugent, with many family portraits; 'Successful Houses,' by Oliver Coleman; 'The Perfect Wagnerite,' by G. Bernard Shaw; 'Lucifer: A Theological Tragedy,' by George Santayana; 'After-Supper Songs,' by Elizabeth Coolidge; 'Dross,' by Henry Seton Merriman; 'The Wolf's Long Howl,' by Stanley Waterloo; 'The Cougar-Tamer, and Other Stories of Adventure,' by Frank Welles Calkins; 'The Awakening,' by Kate Chopin; and 'Stories from the Old Testament, for Children,' by Harriet S. B. Beale.

In the press of Macmillan Co. are 'Old Cambridge,' by Thomas Wentworth Higginson, first of a series of "National Studies in American Letters," to be edited by Prof. George E. Woodberry of Columbia University, who, by right, reserves for himself 'The Flower of Essex'; and 'Letters from Japan,' by Mrs. Hugh Fraser, in two volumes, with plentiful illustrations.

Gen. M. F. Force's 'General Sherman,' in the "Great Commanders Series"; 'The Story of Geographical Discovery,' by Joseph Jacobs; 'Letters to a Mother,' by Susan E. Blow; 'Love among the Lions,' by F. Anstey; 'A Duet,' with an Occasional Chorus,' by A. Conan Doyle; and 'The Mormon Prophet,' by Lily Dougall, are some of the March issues of D. Appleton & Co.

Notable among the undertakings of the Oxford Clarendon Press (New York: Henry Frowde) is the "British Anthologies," edited by that veteran reprinter, Prof. Edward Arber. Ten volumes are already projected, bearing, respectively, the title of the leading poet in each, as, The Dunbar Anthology, 1401-1508; The Cowper Anthology, 1775-1800. Shakspeare, Jonson, and Milton lead off. The collection will be distinguished for consisting almost exclusively of entire poems, and for its cheap price, 2s. 6d. per volume. The editor has taken extraordinary pains to verify at the sources.

Among the works announced for publication next year by the Hakluyt Society are 'The Journeys to Tartary of John of Plano Carpini and William of Rubruk,' translated and edited by W. W. Rockhill, United States Minister at Athens.

Somewhat more than three years ago we welcomed the advent of a singularly original and charming book of impressions of Italy by Maurice Hewlett, under the title, 'Earthwork Out of Tuscany.' The author has since become known by other writings, and

won a fresh audience who will be glad to make acquaintance with this work in a second, revised edition (London: Dent; New York: Putnams). The typographical elegance of the first edition is repeated, but wholly new are eighteen rather unsubstantial illustrations by James Kerr-Lawson, amateurish by turns and clever, but only occasionally answering to the praise which Mr. Hewlett bestows upon them. They serve sometimes, in copying statue or painting, to explain the author's allusiveness; but is this not rather to mar our enjoyment than to increase it?

In 'The Emperor Hadrian: A Picture of the Græco-Roman World in his Time' (Macmillan), Miss Mary E. Robinson gives us a translation of the well-known work by Gregorovius, and the University Press of Glasgow furnishes a beautiful specimen of what it can do with the types. The book itself (as Gregorovius seems to have recognized in adding the sub-title, when, in 1883, he recast it from one which he had written in 1851) is really less valuable as an account of Hadrian than as a description of the literary and religious movements and the general culture of the day. As such, it was worth while for Miss Robinson to dress it up in its present attractive English form; but for a proper appreciation of the Emperor, and for satisfactory treatment of the politics of his time, one must look elsewhere.

Dr. T. Stanley Simonds, now assistant professor in the classical department of Hobart College, has published, at the Ld. Baltimore Press, Baltimore, Md., his thesis for the doctorate in philosophy (J. H. U., 1896) on "The Themes Treated by the Elder Seneca." After sketching, in a careful and scholar-like way, the history of Rhetoric and the Rhetorical Schools of Greece and Rome, the life of the elder Seneca and the character of his extant works, he discusses more fully the nature and origin of the subjects used as themes in those schools. The ultimate sources of those themes are shown to be, in most cases, extremely difficult to trace; but they have been sought with great diligence, and when they have not been found, the question is left in a state not likely to tempt any one to a further search. Dr. Simonds has produced a work which cannot fail to interest classical scholars everywhere, blending, as it does, the analytical research of the German student with the freer, broader, and more pleasing manner of modern English scholarship.

The latest volume issued by the Selden Society (vol. xii., for 1898), is entitled 'Select Cases in the Court of Requests.' Its editor is J. S. Leadam, who prefixes an interesting introduction dealing with the history of the court and commenting on the more significant cases.

The latest issue in the "Land und Leute" monographs is 'Cuba,' by E. Deckert (Leipzig: Velhagen & Klasing; New York: Lemcke & Buechner). Its most attractive feature is a profusion of illustrations—sketches and manners in city and country, after photographs and sketches. With it goes an account of the island based on thorough historical research and on travels of the author. A condensed sketch of the colonial development, down to 1850, is followed by a chapter on the successive native struggles for independence, and another on the steps leading to outside interference. As to the predominant motive of our war to free Cuba, Dr. Deckert charitably leaves it open to the reader to judge whether the result was

more due to "the great sugar and tobacco speculators and the professional politicians," or to "the class of upright idealists who believe in the educational mission of their great republic." Detailed descriptions of the various regions of the island help to make up an agreeable and timely number of this interesting series.

The defence of Boston in the war of 1812, a paper by Mr. W. K. Watkins, published in the Proceedings of the Bostonian Society, is of more than local interest. It is devoted largely to an account of the measures taken in 1814 on occasion of the alarm felt by the presence of British vessels on the coast. It includes a list of the troops from the neighboring towns, a statement of voluntary labor performed on the fortifications, a roster of the militia officers engaged, and a partial bibliography of the literature of the war.

The Bulletin of the Boston Public Library for March contains some useful lists of works, articles and documents on water supply, civic architecture and passenger transportation, compiled for use in connection with the free municipal lectures given in Boston.

In the January Bulletin of the New York Public Library will be found the generous letter of gift from Messrs. Worthington Chauncey Ford and Paul Leicester Ford for the splendid library of Americana amassed by their father, numbering about 100,000 pieces. Even the autographs and manuscripts of this collection will partly revert to the Public Library as the gift of their purchaser, Mr. J. Pierpont Morgan.

The interest of the March number of the *Harvard Graduates' Magazine* is, as usual, above all personal, and reaches its climax in obituary notices, with portraits, of "Three Worthies," namely, Henry Lee, by President Eliot; David A. Wells, by E. L. Godkin; and Henry Clarke Warren, by Prof. Lanman. These three characters happily represent in as many generations the influence of a great university on public spirit. Of innovations in the University régime none is more striking than the vote of the Board of Overseers on December 7, 1898, that "it is desirable" to place women on the committees "to visit the departments and courses of instruction"; and the consequent appointment of Mrs. Henry Draper for the Observatory, Mrs. Potter for the Veterinary Department, and Miss Ware for the Botanical Gardens and Museum. Significant in another way is a new course in military and naval science, propounded as tending to preserve the peace. The late war has, for the practical-minded, turned attention away from the Italian to the Spanish courses, in the proportion of 150 to 40.

Africa holds the chief place in the *Scottish Geographical Magazine* for February, which opens with a description of the Egyptian Sudan, its geography, climate, fauna, flora, and tribes, together with a brief sketch of its exploration, accompanied by a valuable and beautiful map. Mr. H. C. Angus describes a recent trip to northern Angoniland in British Central Africa, a region settled a comparatively few years ago by an offshoot of the Zulu race, who have made astonishing progress in agriculture. "Village after village," says the writer, "surrounded by waving cornfields and green plains dotted with herds of cattle, stretched away into the distance. . . . The cornfields seemed unending, and the size and number of the

villages fairly astonished me." There is also the first part of an article which aims to show the limits of the Egyptian, and hence English, claims to the territory west of the Equatorial Province in the basin of the upper Ubangi, a branch of the Congo and for a long distance the boundary between the French and Belgian possessions.

The *Geographical Journal* for March contains a paper on "The Plan of the Earth, and its Causes," by J. W. Gregory, in which he supports the theory "that there is a hidden continental symmetry which, when discovered, will explain the law that has determined the distribution of land and water on the globe." This distribution, he holds, "has been determined by the tetrahedral arrangement of the elevations and depressions in the surface of the lithosphere." There is also a summary of the results of seventeen years of exploration and study in Iceland by Dr. Th. Thoroddsen, and an abstract of a paper on the sub-oceanic physical features of the coast of western Europe, by Prof. Edward Hull, together with the discussion upon it by Sir A. Geikie, Admiral Wharton, and others.

The last *Bulletin de la Société de Géographie* for 1898 contains an account of the French expedition, 150 strong, which, starting from Abyssinia, was intended to meet, at the Nile, that of Major Marchand coming from the west. For a month it struggled amid the swamps through which the Baro, a tributary of the Sobat, flows, and then was obliged to return with a loss of nearly half its numbers. The leader, M. de Bonchamps, closes his narrative with a characteristic "pin-prick": "Although unable to reach our goal, . . . our attempt was not in vain [useful]. It opened to the Abyssinian army that unknown and mysterious western route which had hitherto been veiled to them." A general summary of the scientific results of his explorations in Somaliland is prefaced, by the Vicomte E. de Poncins, by a most interesting description of the natives, whom he regards as among the best of the African races, and "incomparably superior to the Abyssinians."

Petermann's Mitteilungen, number one, contains notes with a map of a journey in the western part of German East Africa, and a brief discussion of the physiographic problems, the salinity and temperature of the Pacific Ocean, by A. Lindenkohl of the United States Coast Survey. A relation of extensive journeys in eastern and northern China, by E. von Chelnoky, closes with some arguments for the theory that Chinese architecture is derived, not, as is commonly held, from the hut, but from the bamboo. There is also a summary of the work of the International Glacier Commission appointed at the geological congress held at Zurich in 1894.

The *Consular Reports* for March contains valuable and suggestive information in regard to our trade with Mexico, Turkey, and Russia. What is told of an institution in Odessa for the training of young men in the theory and practice of navigation, will interest all who would encourage the growth of our merchant marine. The consul at Liverpool calls attention to the great decrease in the trade of that port since 1891, amounting to over \$150,000,000. In some statistics in regard to the use of telephones throughout the world published by the Swedish Government, it appears that this country leads, with three-fifths of the total of one and a

quarter millions, and Germany follows, at a long distance. Next to her are Great Britain, with nearly 70,000, and Sweden with 56,500. Switzerland has more than France.

A relative on the mother's side contributes to the *Rundschau* for March an account of Carl Schurz's life, of which the portion covering his public career in this country is no doubt familiar to most American readers. But the story of his childhood, from his birth "in a castle," and of the earlier years of boyhood, has, as far as we know, never before been told, and will be read with affectionate interest by the friends of the septuagenarian, who has just been fêted in this city. The writer has evidently had access to memoirs the time for whose publication has not yet arrived.

The conservative spirit of the medical State authorities in Germany shows itself again in certain conclusions, as announced by the press, of a conference recently convened in Berlin for a revision of the medical examinations. The representatives of the principal States of the Empire at this meeting did not deem the question of admitting women to medical studies sufficiently ripe for decision (*spruchreif*). The admission of real-gymnasium *Abiturienten* to the study of medicine was, for the present, denied. Both of these measures have for some years been advocated by many of the foremost university professors. On the other hand, it is proposed to extend the regular university course in medicine to ten semesters, and in regard to foreign students it was decided that the same conditions shall hold for them as for native students. The attitude of the conference towards these questions is very likely due in part to recent statistics, which show a continued rapid increase in the number of practitioners, especially in the larger cities. In the year 1897-'98 this growth amounted in the Empire to 785, or 3 per cent. of the whole number. Meanwhile, the Secretary of State, Count Posadowsky, has announced in the Reichstag that the Imperial Government intends to admit women to the medical examinations on the same conditions as men, and the prospect is that the several State governments will give their consent to this measure, notwithstanding the opposition of the majority of medical practitioners and professors.

Mr. Jacques Reich, whose progress from admirable thumb-nail portraiture in pen-and-ink to etching on a grand scale has been very interesting, sends us from his studio at No. 2 West Fourteenth Street proofs of his large etchings after Collins's oil-painting of Judge Van Brunt and a photograph from life of the late Mrs. Stowe. In the case of the Judge, the original was none too good, but the print will, we think, give general satisfaction as a representation of the man. In the case of Mrs. Stowe, one is perforce led to compare this copper with the wood of Gustav Kruehl, whose portrait of the author of 'Uncle Tom' is one of his masterpieces. Mr. Reich has not reached that high level in his technique or in his interpretation, but he gives rather austere the external character at least of the novelist of freedom, and offers the collector one more option. It were worth an essay to explain why, hitherto, there has been so little demand for the likeness of one whose readers are still to be reckoned by the thousands if no longer by the millions.

Mr. F. Gutekunst, Philadelphia, upon the sad occasion of the death of the late Lord Herschell of the High Joint Commission,

publishes an imperial panel-photograph likeness of characteristic excellence.

It is announced that there remain in the hands of the heirs of the late George Brinley some copies of all the parts of the Brinley Catalogue, with the exception of the first; also, some copies of the index and of the price-lists. So long as they last, these will be sent gratuitously to any public library making application for them, specifying the parts required, and enclosing fifteen cents for each part (five cents for price-lists), to cover postage and mailing expenses. Applications should be addressed to W. I. Fletcher, Librarian of Amherst College, Mass.

—The Annual Reports of the President and Treasurer of Harvard University lack none of their customary distinction as the most interesting educational exhibit in the country. Pioneer innovation and invention go hand in hand with readjustment of old conditions, with dogged persistence in old ways. New statistics are still laboriously devised for practical guidance or philosophic conclusions. President Eliot toys with the subject of the war, among other topics peculiar to the past academic year. As the spiritual head of the University, he finds "at least 82 per cent. of all Harvard College students and young graduates physically fit for the service of the country in time of war," and "the men who take part in the highly competitive athletic sports" not on that account "more inclined to enlist as soldiers or sailors than the ordinary student who is physically sound enough to pass the medical examination." He denies that football is a special training for actual fighting, in which bodily collisions are nowadays anything but the rule. On the other hand, he seems to look back complacently on the Harvard enlistment when generalizing that "so long as there are wars, it will be expedient, especially in democracies, that the best-educated young men bear their full share in war's hardships and dangers." Dean Briggs, on his part, would—even in the hypothetical character of "the most resolute opponent of the war, the most cautious counsellor of young men"—"have felt some shame had there been in the front ranks [i. e., in a bad war] no son of Harvard College." He admits that "it was one thing to offer a life for the Union in 1861, and another to offer it for a war with Spain in 1898; yet if offering life seemed a duty, the very absence of a cause that every man could recognize as great enhanced the self-sacrifice." Surely this is the very bathos of extenuation of faulty action.

—The publication of records of births, deaths, and marriages from official records, which originated in New England some five and twenty years ago, has reached Old England and is growing in favor there. The Harleian Society began the good work by printing the records of London churches, and local societies are springing up in the counties. The Lancashire Parish Register Society, formed for local purposes, reports that in that county there are 106 parishes whose records begin not later than A. D. 1700. Of course none are earlier than A. D. 1538, four years after the Reformation, when, by a royal injunction published by Cromwell, the Vicar-General under Henry VIII., the parochial clergy were ordered to keep registers of all christenings, burials, and weddings. This act was not generally obeyed, and in 1597 the Convocation of Canterbury made an ordinance, approved by Queen Elizabeth,

that every minister should agree to keep the register, that every parish should provide a parchment book, and that a copy of entries should be sent annually to the bishop of the diocese. It is distressing to find that, despite these wise laws, not a tithe of these registers now exist. The last century was, indeed, the Dark Age of local history, and not until the reign of Victoria has there been any revival of interest in the preservation of these invaluable records. We hope now that the interest, once aroused, will not subside.

—The Lancashire Society has selected for its first publication the records of the old parish of Bury, a place of 25,000 acres, whose records, beginning in 1590, are in fine condition. This book of 247 pages covers the period from 1590 to 1616, being about one-half of the first volume of records. It is edited by Rev. W. J. Löwenberg and Henry Brierley, and is a plain transcript without notes. For the benefit of genealogists we make a list of the names most frequently occurring on the records, and also of those unusual names which will add to our knowledge of English nomenclature. The latter list we especially commend to the attention of our novelists and dramatists: (1.) Commoner names—Ainsworth, Allen, Anderton, Ashworth, Asmall, Bamforde, Barlow, Battersby, Birch, Blakeley, Booth, Bridge, Brook, Bury, Butterworth, Byrome, Chadwick, Cowpe, Cowper, Crossley, Dawson, Duckworth, Dunster, Fenton, Fieldes, Fletcher, Garside, Greenhalgh, Grime, Hamar, Hardman, Harper, Haslame, Haworth, Halliwell, Hey, Heywood, Hinde, Holliley, Holt, Hopwood, Hunt, Hutchinson, Kay, Kirkman, Leach, Livesey, Lomax, Longworth, Makin, Marcroft, Mather, Meadowcroft, Nabb, Nuttall, Openshaw, Peacock, Ramsbotham, Ridings, Rothwell, Scholfelde, Seddon, Shaw, Shepard, Shipbotham, Siddall, Smethurst, Steele, Symons, Tattersall, Taylor, Unsworth, Wallwark, Warberton, Watmough, Whitaker, Whitehead, Whittle, Whitworth, Wild, Wolfenden, Wolstenholme, Wood, Wrigley, Yate, and Usherwood. (2.) Of unusual names we cite—Accroyd, Amfidsy, Amon, Barres, Baule, Beawick, Bicrofte, Brindle, Bromhead, Brercliff, Bruntliffe, Brusame, Butson, Casson, Cheesden, Clegg, Cokahot, Cowburne, Cowdrell, Croichlawe, Dewherste, Digle, Ekernall, Elcock, Emott, Gabbit, Garstange, Gie, Gillibrand, Gollitey, Gorrell, Grundy, Habergam, Haddocke, Hallowes, Halton, Hambage, Haneworth, Heape, Hiptrotte, Hobken, Hoyle, Hyndleye, Janian, Jollie, Kelshaw, Kenion, Kirshaw, Kitchyn, Lenisel, Lightollers, Linney, Loynes, Magnalles, Mankenols, Marcroft, Meller, Moreleye, Oldame, Openhard, Orred, Partington, Pats, Pêche, Piccop, Pillinge, Rawnsleye, Redferne, Redforthe, Roileye, Ryves, Saxonn, Scholes, Shakleton, Shorrok, Shriglay, Skarington, Smither, Soar, Stanneringe, Staulman, Stopporte, Stranguishe, Strikeland, Styne, Tilsey, Tonge, Top, Turnaghe, Twyste, Tyttertton, Wardle, Waules, Wawan, Wrennoughe, and Wroe.

—A new French review was established in Paris in January, 1897, under the name of *Revue du Palais*, changed last November to *La Grande Revue*. Unlike most of the leading French reviews, it is published monthly. It has achieved a rapid success under the management of M. Labori, who became famous as Zola's defender, and who has proved to be an able editor as well as an eloquent advocate. Each number contains 250 large

octavo pages, embracing not more than eight or nine articles, thus affording opportunity for fuller treatment than is possible in most of the periodicals familiar to American readers. Thus, the number for last June contained an article of forty-two pages, by Georg Brandes, on Björnstjerne Björnson; in the November and December numbers M. Émile Faguet, who is almost as industrious and as ubiquitous as Andrew Lang, had an article on "Socialism in 1898," covering altogether 110 pages; in the January number "The Ideas of M. Brunetière" were discussed in 50 pages; in the February number, 55 pages are occupied by part one of a review of Tolstol's book, 'What Is Art,' by a number of French critics, whom M. Halperine-Kaminsky, the translator of Tolstol, inveigled into giving their opinions. Each number also contains a large instalment of one or more new novels. Among the contributors are many well-known names. In addition to those already referred to, it will suffice to mention Jules Claretie, Ernest Daudet, Gaston Paris, Joseph Reinach. The last-named contributes to the February number an account of Gambetta's first case, giving his speech first as written out and committed to memory, and secondly as actually delivered.

—The last number of the *Zeitschrift* of the German Oriental Society completes the fifty-second annual volume of this oldest medium of Oriental scholarship and research. It is a notable issue, largely an account of the abundant details it furnishes concerning the present status of the Society, its membership, the additions to its library, as well as a complete list of the publications toward the preparation and issuing of which the Society has, during the last half-century, furnished financial aid. These particulars fill fifty-eight pages. The *Zeitschrift* was the first learned journal in the Fatherland to admit articles in other tongues than the German. It is a rather remarkable phenomenon that while the whole department of Oriental research has developed to an extraordinary degree in recent decades, the sphere of the *Zeitschrift* has constantly become more and more limited, and it is a question whether the day will not come when there will no longer be any room for a general journal of its kind. One need not be elderly to remember the time when this journal covered practically the entire field of Orientalia, both Semitic and Indo-European. Presently, keeping step with the specializing tendencies of the age, journals narrowly devoted to Egyptology, to Assyriology, to Old Testament criticism and kindred subjects began to appear, thereby depriving the *Zeitschrift* of its position as the chief depository of all these researches as it had been in the beginning of its career. Now there is little left to it except the researches in fields not covered by the specialist periodicals. Only in those lines in which pioneer work is still being done, as, e. g., in reference to the Hittite and the Sabaean inscriptions, is the *Zeitschrift* still in the nature of the case the great organ. This newest issue is fairly indicative of the present sphere and province of the journal. The leading subjects of discussion are the Theological Movements in Islam; Contributions in Explanation of the Persian Inscriptions of Susa; Buddhistic Studies; Grammar of the Vulgar Turkish; and Veda Studies. The

present editor is Prof. Dr. E. Windisch of the University of Leipzig.

—The Mexican State of Oajaca, on the isthmus of Tehuantepec, harbors many populous Indian tribes, as Zapotecs, Mixtecs, Zoques, Mijes, and others, all differing largely in race, language, and customs. Both of the last named occupy mountain tracts, the Zoques also extending over parts of Chiapas and Tabasco, with their main seat in Oajaca at San Juan de Guichicovi. The Zoque and the Mije Indians speak languages related to each other, and, to judge from the grammars and other material recently published of them by Raoul de la Grasserie, their structure is rather simple and easy of comprehension. The oldest writings in Zoque date from the latter part of the seventeenth century, whereas Mije was not studied by the missionaries till during the eighteenth. From these crude and unscientific attempts we may gather that where both idioms meet, Zoque has the more complete, longer, and more archaic forms, whereas Mije has a strong tendency to contraction and abbreviation. As a rule, the noun is not inflected for number and case, but a substitute for our cases is formed by postpositions. All the inflection is done in the verb, and here polysynthesis reigns supreme; particles of material significance being brought into the body of the verb in profusion, while the root itself is monosyllabic. An objective pronominal conjugation does not exist, but personal subject-pronouns are in Mije placed before, in Zoque after, the verb. In the first person of the verbal plural there is an exclusive as well as an inclusive form, which points to an archaic condition of the language. No relative pronoun exists, but there is a relative particle, *p'hec*, which is placed after its verb, and it is remarkable that the verb *pots*, 'to be,' figures in many verbs as a suffix. In Zoque the personal pronoun resembles closely the possessive pronoun, but is not identical with it as in the Algonquin languages. The numeral system is the quinary one, and in Mije all numerals from one to ten appear to be dissyllabic. The able editor has been at great pains to elucidate the verbal forms by hyphenizing their component parts, but in the devotional pieces appended as texts this has not been done so extensively. The Zoque vocabulary is more copious than that of Mije, and contains several thousand terms of the language. The book is entitled 'Langue Zoque et Langue Mije; Grammaire, Dictionnaire et Textes, traduits et analysés par Raoul de la Grasserie, lauréat de l'Institut,' etc. It forms the twenty-second volume of Maisonneuve's well-known "Bibliothèque Linguistique Américaine."

—The post-office of India has to contend with difficulties of which we have no conception. The matter-of-fact *Report* of the working of this magnificent establishment for 1897-98 is not without its touches, now of humor, now almost of romance or of tragedy. The postal-runners climb the lofty Himalayan snow-passes and traverse the dangerous jungle. River squalls, cyclones, and earthquakes bring destruction to mail-boats and offices, and death to the messengers. A swinging bridge over the Chenab gives way, and down falls the village postman, never to emerge alive. Yet, in spite of all, the department handled in the year some 460 million pieces of matter, an average of 1.63 pieces per head for the general population, or of 39.58 for the literate population.

Human nature vies with inanimate nature to increase the tribulations of the Director-General. A tremendous pother was raised by a local magnate in Bengal over the behavior of a village postman. The ponderous machinery of investigation was set agoing, and it transpired that the humble offender had handed the big man a letter with the left hand instead of the right! The post-card is becoming exceedingly popular, and, strangest of all, telegraphic money orders are coming widely into vogue in Burmah, being used by the emigrant laborers there, who often wire money to their distressed kindred at home during the famine. The "value-payable post" is an institution which we Americans might well adopt from India.

LONGFELLOW'S COLUMN AND THE ARCH.

The Column and the Arch: Essays on Architectural History. With illustrations. By William P. P. Longfellow. Charles Scribner's Sons, 1899. \$2.

The author of this book is known to scholars better than to the large general public which is in need of this volume, and which should be ready to buy it. He is the editor of the 'Cyclopædia of Architecture' in course of publication by the Messrs. Scribner, one part of which is already on sale—a large quarto volume devoted to Italy, Greece, and the Levant. He has been a contributor to the *Atlantic Monthly* and other journals, to the *American Architect* of Boston and the *Architectural Record* of New York, as well as to our own columns. He is one of the small band of writers in the English language who devote themselves to architecture and its correlative subjects, and who write more or less frequently as there seems something important to be said in print upon those subjects. Mr. Longfellow has had less opportunity or less occasion to go far afield in travel or in study. He offers no new discoveries; his work is rather conservative than radical, and he is rather the careful man who holds by the traditional beliefs until they must be abandoned, than the eager student who finds himself unable to believe that which is general belief, and seeks energetically for new theories which will account for all the phenomena.

This book, therefore, which contains eight of his essays gathered from periodicals and reshaped, is trustworthy in a very peculiar sense of the word. If the reader finds a popular belief ignored, or mentioned and quietly contradicted, or else, as in a few cases, examined and shown to be false, he can be sure that this is a safe, and, in a sense, a final disposing of it. Even of his negative and destructive criticism the author is not too free; he is not too bold even in denial, nor will any one find himself led astray by accepting any such rejection of any proposition or any theory as Mr. Longfellow has thought it necessary to put into words.

If this is peculiarly true of the chapters on the "Age of Constantine" and "Early Christian Architecture," it is only because there are more disputed questions concerning the long succession of years from about the year 375 onward. Almost every writer has his theory of the Christian basilica—the more conventional one, that it was the Roman civic basilica taken possession of by the Christian church, or the more complex and curious one, that it is a modification of the

Roman domestic interior, as of a large mansion turned gradually to the purposes of Christian worship; but it seems to have been left for Mr. Longfellow to state these theories in sequence, as he does on pages 93 and 94, and then to begin the more usual and less bewildering inquiry, What was a Christian basilica? The reader may regret that his author has this time refused to state the arguments. "This is not the place to enter into such controversies," is what we find stated on page 94, but this seems to be unfortunate, for it is exactly this place and exactly this hand which might be thought most fitted for the discussion. It is said that such discussion would "demand the compass of a volume, and a long array of arguments and citations." But that does not appear evident. At the foot of page 95 begins a series of statements which go far towards putting the case for and against the more important of the theories which have been broached. It seems a pity that ten pages more could not have been given to this discussion, as they would certainly have been enough to settle the question for all unprofessional readers. The author's conclusion is that the basilican church followed the rule of other systems of building which "have become fixed and exemplary," resulted from experiment, gradual modification, improvements slowly added and always retained—in short, that there was an evolution of the basilica, as there was of Gothic architecture or of the Greek temple; and it is pointed out that Christianity was not an insignificant or altogether unsuccessful institution when Constantine declared himself a Christian, but that already it was a powerful party in the state, although it had of late been denounced and persecuted, and although it had been so far a minority. There is a very excellent expression of the as yet unexplained relation between Byzantine architecture and the basilican type of church. The longing which every archaeologist feels for some vigorous and consecutive exploration of the land of the East, of Asia Minor, and of Syria, with its deserts, is well expressed on pages 102 and those which follow. Moreover, the conclusion which the author is almost ready to reach, as he states on page 104, is one that every ardent student has felt, viz.: the conclusion that it was "the inexhaustible Greek" who, apart from all his other achievements in the world of artistic and constructional thought, was occupied also in the fourth, fifth, and sixth centuries in developing at the same time Byzantine architecture and the Romanesque of the West.

The first essay in this volume is devoted to the Lotus column, and deals with the earliest columnar architecture, viz., that which recent discoveries have shown as existing in Egypt under the Fifth Dynasty. The capital found in 1894 in the tomb at Abusir is given in photography, and is described, and the remarks upon it are based in part upon Mr. George Foucart's monograph. This chapter is an essay on columnar architecture as illustrated by the earlier and later Egyptian practice. The break between this and the subject of the next chapter has been inevitable, because as yet no one has established the chronological or other sequence which may be found to lead from Egypt into Greece. The second chapter is devoted to Greco-Roman architecture, and in this the author treats the subject, as he has always loved to treat it, as one, the

him the architecture of Trajan is almost a necessary evolution from the architecture of the fifth century B. C. This opinion will not meet with universal acceptance; but it is of extreme interest, and the general proposition that the Roman Empire, whose mission it was to Hellenize the European world, carried out its mission as frankly in architecture as in literature and in philosophy, is a proposition which can perfectly well be defended. If the purpose of this book were especially the proving of this theory, the reviewer might now find much to say in opposition to the theory and in confutation of the arguments which support it; but this is one of the instances of that suspension of opinion, of that arrest of judgment, and agreement among scholars to hold different ideas until a clearer agreement may become possible, which abound in the world of reasonable thought. Following this are the two chapters named above, and which between them seem to cover the earliest Christian ages.

The fifth chapter is devoted to the great basilica of S. Maria Maggiore, to its checked history and the curious incidents which accompany that history; the sixth chapter is devoted to Romanesque architecture, and some of the best writing, the most careful and patient examination, and the wisest conclusions of the book are to be found within it. The consideration of scale which is carried far in the pages from 177 on, is extremely suggestive and intelligent, and the distinction between the Romanesque as it took its permanent shape, and that Imperial Roman style from which it had been slowly developed, is marked with almost perfect clearness in the paragraphs beginning on page 179. Allusion is here made to the natural result of the Romanesque styles, the great Gothic movement; but the Gothic style is in itself made the subject of no chapter in the book, and the preface explains the reason for this, namely, that it seems to Mr. Longfellow that the Gothic, like the Byzantine, was out of the line of such growth. To him the Romanesque architecture followed the Roman and led to, let us say, the Renaissance, while the Byzantine architecture was a thing on one side, growing out separately and having no result, and the Gothic architecture, if we read our author aright, was another manifestation of the same sort. Now this may seem to the reader a very great heresy, indeed. It may be urged with equal safety that the Byzantine architecture had all the possibilities in it, and that nothing checked it but simple brutal conquest—the violence of nearly barbarous warriors without any sympathy for the style which they overthrew, and who, though they allowed that style to influence their own later buildings, had meanwhile destroyed and utterly stamped into the mud the civilization from which that style had arisen. The true lover of Byzantine architecture feels that here was one of the world's great disappointments, and it is not a consolation to him to be told, or to see it implied, that the lack of fruition of the Eastern style was inevitable. So with the Gothic style; it is quite clear that we could not build to-day with modern requirements, modern materials, modern appliances of different sorts, in the way which was used by the French masons of the time of St. Louis; but no one who is greatly interested in mediæval building and who loves sincerely even the latest developments of what we call roughly the Gothic

style, can fail to regret that he never can know what would have sprung from it if the whim for introducing classical details into a system of building which did not admit of them had never invaded northern Europe. That would have been the real delight—to have seen Italy returning, as it had every right to return, to its Roman tendencies, to the round arch, the engaged and the free column, and the delicately sculptured design of scrolls, while France and the north struggled on through centuries of experiment, starting at the point best marked, perhaps, by a dozen nearly contemporaneous buildings of the reign of Louis XI. Let us see things as they are, and not try to believe, nor yet make believe, that the development of art was followed in the only possible path. This is so far from being true that the history of architecture is crowded with wretched disappointments, with miserable non-results where great things might have been hoped for, and ruin and confusion as marked and as hopeless as that of societies and policies.

The last two chapters of the book are devoted to the Renaissance in general, and to St. Peter's at Rome. The intelligent handling of the architectural problem in the former of these two chapters is most marked. To many readers it will prove the most attractive chapter of all. The balanced judgment—for it is much more than mere unprejudiced fairness—which points out the tendencies both ways in each of the different changes made by Brunelleschi, by Bramante, by Alberti, and their followers is worth the most careful notice. And, finally, the study of the revived classic, which has been admirably classified in a hundred words on page 260, is carried to its natural results in the analysis of the great Roman church. It is curious, by the way, that this church, so faulty in its general result—so great a disappointment, as it must be, to each one of its great designers, its series of fifteen architects, could they see it now—yet retains its hold upon the student, no matter how great a devotee of purity and of refinement. Characteristically enough for a writer so simple and practical as Mr. Longfellow, the account of the church ends with a hint to the student as to the good way of seeing the church without losing the true sense of its vast size. It is wisely pointed out that the great length of the nave, which has ruined the outside of the church as a design, has improved the interior. This nave, leading to the "glory of the central space," is rightly praised. "The gradual expansion from east to west gains slowly upon one as he moves towards the choir; its fulfilment as he reaches the centre is stupendous; there is nothing of its kind like it in the world."

RECENT BOOKS ON MUSICAL TOPICS.

By the Way—About Music. By W. F. Apthorp. Boston: Copeland & Day. 2 vols.

Great Composers and their Work. By Louis C. Elson. Boston: L. C. Page Co.

Music and Poetry. By Sidney Lanier. Chas. Scribner's Sons.

How Music Developed. By W. J. Henderson. F. A. Stokes Co.

Geschichte des Theaters und der Musik am Kurfürstlichen Hofe. Von F. Walter. Breitkopf & Härtel.

Das Klavierspiel. Von Alfred Richter. Breitkopf & Härtel.

New musical books follow one another so

rapidly that it is difficult to keep pace with them. Their quality, at the same time, is steadily improving. The first on our list to-day, while ostensibly written chiefly to entertain, incidentally conveys much valuable information. Mr. Apthorp has solved the problem of making erudition palatable and tempting to the general reader. His 'Musicians and Music-Lovers' (1894), with its splendid chapters on Bach and Franz, is on the whole for serious students, while the two neat little volumes entitled 'By the Way—About Music' would strike any one as being just the thing to carry in the overcoat pocket to read between the acts at the opera or in the concert hall. The papers making up these volumes were, indeed, written for that very purpose. They appeared originally as "interludes" between the analyses of the symphonies and overtures in the programmes of the Boston Symphony Orchestra, from 1892 to 1897.

It is lucky for the patrons of the Boston Orchestra that Mr. Apthorp thus condescends to entertain them, for his technical analyses are as a rule not edifying to any one but students of composition. The eminent Boston critic seems to think that anatomy is the essence of music, and form its alpha and omega. Holding this creed, he naturally feels hurt by Wagner's sneer that if there were no form there would be no critics, and that "the critics see this so plainly that they clamor for form in the anguish of their souls." In revenge he tries, without success, to disprove Wagner's dictum that Liszt's symphonic poems are based on nobler principles of form than those which are provided by the marches and dances out of which the symphony grew. He also raises a smile when he declares that "it was for some time a legend that the intellectual element largely preponderated over the emotional in Brahms's writing." But, apart from a few such cases as these, there are no opinions in these volumes that cannot be cordially endorsed, whether the author be writing about impressionism, naturalism, habit, fashion, the influence of surroundings, music and the eye, plagiarism, some points in modern orchestration, brains, the non-musician's enjoyment of music, people who hate music, some popular fallacies, musical reminiscences of Boston thirty years ago, or artists in general, etc. There are few books in which anecdotes and thoughts are so happily blended, few in which all kinds of music are so fairly and luminously discussed.

Nothing could be better than the way Mr. Apthorp disposes of the pedants who want to hear Handel's music "just as he wrote it"; or the explanation he gives of the infrequent use of trombones in the concert scores of Mozart and Haydn; or his remarks on Lilli Lehmann's revival of the good old way of singing coloratura arias; or his characterization of Tchaikovsky as a conductor, closing with these lines: "It soon became evident that the man was positively an electric battery, launching electric flashes right and left from that terrible bâton of his, egging his men on to the utmost fury of fiery intensity. . . . Tchaikovsky and his chatelet audience were like two logs, mutually keeping each other hot!" Another specimen may be quoted. Hans von Bülow once played the so-called "Moonlight Sonata" in Boston Music Hall with all the gas turned down to a bead. "At first it seemed rather a cheap device, unworthy of both sonata and pianist; but it was sufficiently known that Von Bü-

low's reputation as a musician was untainted by even a suspicion of charlatanism, and most of us were quite willing to humor him in his whim. I think that, before long, we found in our heart of hearts that the half-darkness was really an admirable *cadre* for the composition—notably for the last movement." Personal recollections like these illumine most of Mr. Apthorp's pages, and to them his new volumes owe much of their interest.

Mr. Louis C. Elson is another Boston critic whose contributions to musical literature are always welcome. In his new volume on the great composers he has, with much literary skill, condensed into 300 pages an enormous amount of up-to-date biographic information, flavored with terse critical estimates. He begins even before Bach and Handel, with the old Flemish school, while his last four chapters relate to Wagner, Brahms, Verdi, and "other influences in modern music." Living in Boston, Mr. Elson of course underrated Liszt and overrates Brahms. He makes the amusing assertion that Liszt's ambition "was to be considered as a composer rather than as a pianist; this reputation, however, will probably be denied him"; whereas "posterity will do more unanimous homage than the present to the Browning of music"—Brahms. It would be foolish to argue against a prophecy, but Mr. Elson errs in berating the critics for underrating Brahms. As a matter of fact, the vast majority of critics took to Brahms at once as to a kindred spirit and champion of "form"; whereas the creative minds, like Wagner, Liszt, Tchaikovsky, Paderewski, have looked askance at him. With Liszt it is just the other way: It is the creators just named, besides Dvorák, Grieg, Saint-Saëns, who have expressed admiration of him, while the critics, and the critics alone, have failed to "catch up with the procession." It is in the chapter on Liszt, not in that on Brahms, that Mr. Elson should have put Liszt's aphorism, that the musical critics are "the rear-guard of the musical army in its march of progress." Surely, also, Mr. Elson erred in regard to proportion in giving Brahms eight pages, and to an infinitely more original mind, Tchaikovsky, only one. Another creator who stands far above Brahms—Grieg—receives still less justice.

Mr. Elson gives, in thirty pages, a remarkably lucid explanation of Wagner's principles of the music-drama. He calls Wagner's pamphlet on Judaism in Music "an impeachment of the most musical race of the world as being unmusical." He has the courage to write (in Boston!): "If musicians were asked the question, 'Who is the greatest of all the masters?' most of them would reply, 'Beethoven.' Yet this is a statement not entirely true; judged from the purely intellectual standpoint, Bach is, probably, the greatest musician that ever lived; weighed by the standard of emotional expression, Chopin might be accorded the leadership." He might have added that Wagner, Weber, Bizet, wrote greater operas, and Schubert, Schumann, Franz, and several others, greater songs; which reduces Beethoven's supremacy to the symphony. The time is indeed approaching when the musical values established by German professionals must receive a thorough readjustment.

The late Sidney Lanier's book has several suggestive chapters relating to poets and poetry, but the bulk of the volume appeals

to musical readers. In the first chapter he makes a brilliant defence of programme music, culminating in the assertion that "if programme music is absurd, all songs are nonsense"; and he asks pertinently, "Why not hint a storm with stormy tones, as well as describe a storm in stormy words?" The author was intensely patriotic. He believed that "one finds more talent for music among the Americans, especially among American women, than among any other people." He looked forward to seeing America the home of the orchestra, and held that orchestral playing would prove a field which women will cultivate as a specialty in the future. One of his assertions regarding the orchestra—"The time is not far distant when the twenty violins of a good orchestra will be balanced by twenty flutes"—is calculated to make a musician smile; but it is not so absurd as it seems, in view of Lanier's remarks (35-38) regarding the Boehm flute's capacity for varied coloring, which may be commended to the attention of composers.

Mr. Henderson's book is a critical and explanatory account of the growth of modern music. Some of its chapters are on the evolution of the piano and piano-playing, the sonata, evolution of the orchestra, chamber music, oratorio, Handel and Bach, Italian, French, and German opera, etc. There is little original research, but a vast amount of traditional information presented in a much more lucid and direct style than is usually to be found in books on musical form and history. One of the strange opinions advanced is that "Rossini was not a musical genius." The author of "William Tell" was certainly a genius, but he usually squandered his gift in an unworthy manner, a victim of fashion. Probably the best chapter in the book is that on Wagner, and here the discussion of the device of leading motives is particularly worth reading. It is a common error to suppose that a listener cannot appreciate Wagner's music-dramas without committing to memory all the names of the leading motives devised by Hans von Wolzogen. Mr. Henderson shows, on the contrary, that "it does not even matter whether he knows that there are any leading motives at all."

Of the two books published by Breitkopf & Härtel which complete our list, the first is an elegantly printed history of the theatre and music of the Palatinate Court, issued by the Antiquarian Society of Mannheim. Mannheim was famous for its opera in the eighteenth century, and many things have happened in Heidelberg of interest to students of musical history. The most entertaining chapter is that which describes Mozart's adventures during the year he spent at Mannheim; it contains characteristic details regarding the influences that developed his musical genius. One of these was a young girl to whom he gave lessons. The day after seeing her, he wrote the allegro of a sonata in her honor, and when asked what the next movement was to be, he answered "an andante reflecting the character of Miss Rose."

Alfred Richter's book on piano-playing is a welcome indication that educators are gradually beginning to realize that the old method of teaching young pianists nothing but technique is quite "played out" and leads to disastrous results. Herr Richter does, indeed, devote the greater part of his volume to finger exercises, fingering, trills, and other matters of mechanical execution, but he also has much of value to say regard-

ing touch, tone-color, and expression. His remarks on rhythm and tempo—particularly tempo rubato—may be specially commended to the attention of students of music. The absence of an index is unpardonable.

West African Studies. By Mary H. Kingsley. The Macmillan Co. 1899.

Miss Kingsley's style is certainly vivacious. It is impossible to read what she has written without a constant ripple of amusement, breaking occasionally into open laughter. There is some straining after effect; the author from time to time aims to be smart, with indifferent success, falling into colloquy, even into vulgarity, and almost profanity. Nevertheless, she is never tedious, and her eye is so keen, her appreciation so sympathetic, and her intelligence so broad, as to make her book a genuine contribution to our knowledge of West Africa and its inhabitants. A large part of it is taken up with appendices and historical summaries, which are generally instructive and valuable. It is abundantly illustrated, but the illustrations are more numerous than interesting. The author's own observations and comments form the best part, and furnish ample material for the reviewer.

We must pass over the narrative portions of the work, which are, of course, precisely those portions which the reader in search of entertainment will not skip; nor can we do justice to the particulars given by Miss Kingsley concerning the climate of the West Coast, its geography, its different tribes, and the generations of traders, adventurers, and soldiers who have had dealings with them. We may note, by the way, that she is no believer in the repatriation of Africans. In the first place, there is a plenty of Africans in Africa already; and, in the second place, the descendants of the exported Africans seem to have lost their power of resistance to the malarial climate. In fact, the mortality among the imported Africans is as great as among the white settlers; and that is saying enough to condemn the scheme of the Colonization Society.

Concerning animism, or fetishism, which is essentially the religion of the whole of this region, and which Miss Kingsley has studied with great care, we remark one important generalization: there is no love in it. Everything is personified; there is no motion or natural force that is not caused by a soul, but these spirits are regarded with fear and not with affection. Whatever good is done to men by a fetish is not a cause for gratitude, because it was bought by propitiatory gifts; as Dr. Nassau has said, there is "no praise, no love, no thanks, no confession of sin." The spirits of ancestors, it is true, if properly treated, are well disposed towards their posterity; but they are apt to be malevolent to those not of their kin. This boundless polytheism develops a fascinating mythology; but there seems little recognition of any supreme deity except under missionary influence. Nor does Miss Kingsley consider that there is any proper deification of human beings, or hero-worship, among the people whom she has known.

The great importance of recognizing the fact that the Africans are beings of a completely different nature from the Europeans, having minds and institutions that are peculiar to themselves, is most emphatically brought out by Miss Kingsley. We need not say that information of this kind is at pre-

sent of special interest to American readers. If we are to govern the Philippine Islands, it must be by a system resembling the government of the crown colonies of Great Britain. That system meets with severe condemnation from Miss Kingsley. She goes to the root of the matter in demanding what reason Europeans have for interfering with Africa at all. She answers that there may be two reasons—the religious reason and the “pressure” reason. The former justifies the missionary movement; the latter reason would arise if the Africans threatened to invade Europe, which they do not, or if the Europeans were driven to settle in Africa for lack of living-room elsewhere, which there is not. Climate, in short, forbids it, and hence European meddling is nothing but exploitation of Africa for purposes of greed, for which “commercial purposes” is a euphemism. Miss Kingsley, it is true, thinks that the English manufacturers ought to be allowed to barter their wares for the raw materials of Africa, but not to the harm of the Africans.

In the more unhealthy parts of the world, Miss Kingsley declares, English administration has failed, and failed because of the crown-colony system. Such parts are the West Indies, Guiana, and Honduras. They are unprosperous, and the West African colonies are in a way to be like them. The Governor, under this system, is a King Log or a King Stork; as Miss Kingsley says, the English policy is “a coma, accompanied by fits.” “It destroys the native form of society, and thereby disorganizes labor. It has no power of reorganizing it.” Moreover, the policy of England towards the protected tribes has changed. It was formerly a friendly and peaceable policy; it has become a policy of conquest. There have been wars for the suppression of peculiarly barbarous practices, such as human sacrifices, but there are now wars to enforce systems of taxation which the natives regard as confiscation. Hence the feeling that the English are friendly allies has given place, Miss Kingsley says, to something approaching a panicky terror of white civilization. Quoting Mr. H. Clifford on the Malays, she agrees that the boot of the white man

“kicks down native institutions, . . . reducing all things to that dead level of conventionality which we call civilization. Incidentally it stamps out much of what is best in the customs and characteristics of the native races against which it brushes; and though it relieves him of many things which hurt or oppressed him ere it came, it injures him morally almost as much as it benefits him materially. . . . What we are really attempting, however, is nothing less than to crush into twenty years the revolution in facts and ideas which, even in energetic Europe, six long centuries have been needed to accomplish. . . . Forced plants we know suffer in the process; and the Malay, whose proper place is amidst the conditions of the thirteenth century, is apt to become morally weak and seedy, and lose something of his robust self-respect, when he is forced to bear nineteenth-century fruit.”

The Africans, Miss Kingsley eloquently contends, are to be regarded as different beings from the Europeans, but not therefore as inferior beings, and her arguments are forcible and philosophical. She says:

“There are many who hold murder the most awful crime a man can commit, saying that thereby he destroys the image of his Maker; I hold that one of the most awful crimes one nation can commit on another is destroying the image of Justice, which in an institution is represented more truly to

the people by whom the institution has been developed, than in any alien institution of justice; it is a thing adapted to its environment. This form of murder by a nation I see being done in the destruction of what is good in the laws and institutions of native races. In some parts of the world, this murder, judged from certain reasonable standpoints, gives you an advantage; in West Africa, judged from any standpoint you choose to take, it gives you no advantage. By destroying native institutions there, you merely lower the morals of the African race, stop trade and the culture advantages it brings both to England and West Africa. . . . West Africa to-day is just a quarry of paving-stones for Hell, and those stones were cemented in place with men's blood mixed with wasted gold.”

We forbear comment on these assertions, merely remarking that they are amply supported by the evidence which Miss Kingsley so brilliantly presents. Those of our people who imagine that our Government can wisely undertake the task of substituting our institutions for those of alien races, will do well to read, ponder, and digest these West African Studies; and, as we have said, the book will be found in other respects entertaining and profitable.

A Short History of Astronomy. By Arthur Berry, M.A., Fellow of University College, London. Scribners. 1899. 12mo, pp. xxvii, 440.

The study of the beginnings of astronomy has a wider interest than that which commonly attaches to the development of a special branch of knowledge. When we speak of this as the oldest of the sciences, whose origin is lost in the mists of antiquity, we fail to convey the whole truth. A large body of folk-lore relates to the varying aspects and motions of the heavenly bodies, the relations of which to every-day life were as close as now. Comets and eclipses were a source of fear or perplexity to monarchs through much the greater part of history. Astrologers and soothsayers read the fate of men in the stars centuries before Ramees was born. If the body of knowledge thus acquired could not be called science in the modern sense, it still served as a stimulus for the beginning of a science. Not only would any history of thought be incomplete that did not include the progress of thought about astronomy, but there are modes of thinking which we might never discover but for the light thrown on them by that science.

A curious instance is found in the work of Copernicus. Instead of emphasizing the revelation which he made in setting forth the true system of the world, he made every effort to belittle it by attributing his ideas to the ancients, and by professing to build his entire structure on the traditional ideas of natural philosophy. Instead of claiming the heliocentric system as his own, he threw it over the shoulders of Pythagoras and Philolaus. He took the ‘Almagest’ of Ptolemy as his model because an authority thirteen centuries old was not to be lightly set aside. The condition of thought in which the construction of a new system of nature was looked upon as an act to be condemned for its temerity, rather than applauded for the genius it showed, has been so little understood that it is even now the fashion to follow Copernicus by attributing his system to the ancients.

We should have been better pleased with Mr. Berry's well-written and entertaining book if he had brought out in a stronger light the features of astronomical history

thus suggested. While he does not entirely ignore them, he fails to see their real importance. He seems to see fairly well the groundlessness of the current view which attributes the heliocentric theory to Pythagoras or his school; yet he cites the authority of Copernicus in favor of this view, in seeming unconsciousness of the real motive that inspired the Canon of Fraunberg. The fact is, that there is no great idea recorded in the history of thought which is so completely the work of one man as the heliocentric theory is the work of Copernicus. Newton himself was not the first to form the conception of gravitation among the celestial bodies, or even to see that it varied inversely as the square of the distance. What he did was to collect the more or less vague and unproved ideas of others and weld them into a consistent and harmonious whole, with a skill and mathematical power that were, at the time, unequalled. In the case of Copernicus, we have plenty of evidence that the idea of the earth's rotation on its axis had been entertained in ancient times; but there is no real evidence that any one ever doubted the conclusiveness of Ptolemy's demonstration that the earth did not move away from the centre of the celestial sphere.

Mr. Berry's book is to be cordially commended to the reader who is interested in the study of astronomy in detail. It is designed for the general reader rather than for the investigator, and therefore gives brief developments on such points as the former may not have at command. The writer has evidently based his conclusions on a painstaking study of the best authorities, both ancient and modern. The main stricture to which the work is liable is that of being too exclusively a work of detail, and, therefore, failing to convey a correct apprehension either of the relative importance of the various topics, or of the relation of each to the whole. This feature is evident even in the indexes, which are guides to words and phrases rather than to subjects, and, therefore, from their very fulness, give scant help to the reader who wants to find where a special subject is treated. We fancy that the spelling of Copernicus with a double p (Coppernicus) which the author does, as he says himself, “at the risk of appearing pedantic,” grows out of undue attention to minutiae. If universal English practice for three centuries does not suffice to settle this point, the fact that only one p is used in ‘De Revolutionibus’ ought to suffice.

The Butterfly Book: A Popular Guide to a Knowledge of the Butterflies of North America. By W. J. Holland, Ph.D., D.D., LL.D. With 48 plates in color-photography, reproductions of butterflies in the Author's collection, and many text illustrations presenting most of the species found in the United States. Doubleday & McClure Co. 1898.

This book, of 383 pages of text and 48 colored plates, makes it possible at last to recommend to the amateur a work by means of which he can identify the butterflies that he has taken in the course of a summer's collecting. It is literally what it professes to be—a butterfly book; and while by no means all the species that occur in North America north of Mexico are figured, such as are omitted are not likely to be taken by one who collects butterflies merely as a pastime. It is also “popular,” for in no

The Nation.

NEW YORK, THURSDAY, MARCH 30, 1899.

The Week.

President McKinley, so the Thomasville dispatches say, has not yet decided upon a Philippine policy, as he "feels that our present knowledge of the islands is too indefinite" to base it upon. This is a trifle late. The horse is bought, and whether he is a kicking brute or a perfect model of a family Dobbin, we neglected first to find out. Accounts differ widely, as is inevitable. One observer sees and reports one side of native life and character, and another another. The *Tribune* the other day was getting great comfort out of the frank picture of native habits drawn by one of the *Evening Post's* correspondents in Manila, but in the same issue it printed interesting letters from an officer of Dewey's squadron, which show quite another side of the shield. He speaks of the "cultured men who are running this native government," of their being "thoroughly in earnest in wanting their independence," and so on. Well, we are not going to decide which set of observers is right. Under the seal of confidence, we confess that we do not know. But we do know that the men who, in equal ignorance, went ahead and in the dark committed this country to its present awful responsibilities in the Philippines, have a terrible burden to bear, be they Presidents, Paris Commissioners, editors, kitchen cabinets, Duty men, Destiny men, or even men simply on the make.

Next to Gen. Miles, the most conspicuous witness to date before the Army Commission is Gov. Roosevelt, who was before the Court of Inquiry on Saturday. He was scrupulously careful to leave no chance for doubt as to his verdict on Eagan's beef:

"I regarded the canned roast beef as an utterly unfit ration for troops. I make that statement without reservation and without qualification. I have heard that the cans up here have been examined and found wholesome. But I would state emphatically that my experience of that beef proved to me beyond a shadow of question that the canned roast beef we had with us was at the best unpalatable, and at the worst uneatable and unwholesome. To the majority of men it was not only unpalatable, but sufficiently unwholesome to make many of them sick."

Gov. Roosevelt also testified that before leaving Tampa he had encountered a genuine sample of embalmed beef of the kind the mere mention of which by Gen. Miles threw Eagan into a perfect convulsion of fury. A couple of quarters of beef, the Governor said, were put on board the transport which was to take his men to Cuba. "I was told to put it in the shade because it was chemically treated to last in the tropics. It lasted

one day, and got so offensive that I had it thrown overboard. Since coming back to the United States I have been led to understand that it was an experiment." At last we have conclusive evidence upon the one count in Gen. Miles's indictment of the Eagan beef which has been most bitterly assailed, and which has not hitherto been sustained. Eagan and Alger have denied previously that there was any such thing as chemically treated beef, or that any beef so treated was sent as an experiment.

The Carter scandal is, in its way, as gross as the Eagan scandal. The President, pulled about by the political friends of Capt. Carter, is moving heaven and earth to find some way of setting aside the verdict of a court-martial which the Secretary of War says was long since put in the hands of Mr. McKinley, with the recommendation that it be approved. So far, the favorite trick has been to have the trial "reviewed" by one man after another. It is rumored now that the Attorney-General, the "Glory-crowned" Griggs, is to take a shy at it some time in the summer, if he finds the necessary leisure. Meantime Capt. Carter is on the pay-rolls, and is having as good a time as if he had not been found guilty and sentenced to be cashiered from the army. The *Army and Navy Journal* speaks the disgust of all professional soldiers at this monstrous instance of military favoritism and injustice, when it says:

"It is certainly difficult to understand the occasion for so much delay. Capt. Carter had a perfectly clear trial, he was ably defended, and if there is any reason found why the verdict of the court should not be carried out, it should be made known. As it is, the delay is the occasion of much public scandal, it is an injury to the army, and it is a reflection upon the able and impartial tribunal before which Capt. Carter was arraigned."

The adjournment of the Anglo-American Commission without reaching a final settlement is most unfortunate because of the serious troubles now pending about the boundary line between the British possessions in the far Northwest and Alaska. The situation became threatening some weeks ago, and it would not be surprising if there should be clashes between American and Canadian prospectors in the disputed territory. The trouble, of course, grows out of the gold discoveries. Before the rush of miners into that region, nobody cared much whether a particular district was called American or Canadian, but now it makes a great difference whether the Canadians can collect duties and enforce their regulations. There are charges, which seem to be pretty well sustained, that the Canadian local authorities are aggressive and grasping, and there would

be great risks of bloody collisions if things should be left at loose ends during the approaching season for mining. It ought to be possible, however, to make some temporary arrangement like that which the British Ambassador at Washington is credited with proposing, for the immediate running of a boundary line by the two governments, which should be observed until a final settlement can be made.

Apropos of this news from Washington, a correspondent, who has spent nearly two years in Alaska and the Northwest Territories, sends us his explanation of the movement recently reported among citizens of Fort Wrangel, Alaska, to get from under the American flag and come under Canadian rule. According to our informant, Fort Wrangel was originally only a small Indian trading post, with not over twenty-five white inhabitants, and what is now Dyea was little more than a small trading-store run by one white man; while what is now Skagway, three miles from Dyea, did not exist. When the gold-seekers rushed in, Dyea, Skagway, and Fort Wrangel speedily became places with a population of several thousand apiece, as supply-depots for men who were going into the Klondike. Fort Wrangel was the favorite with Canadians, who established the Stickeen route, with Fort Wrangel as the transfer point. All three towns flourished until last summer, when a railway was built from Skagway over the White pass, and Dyea and Fort Wrangel collapsed. Our correspondent says that Fort Wrangel has now only about fifty inhabitants, and that their sole hope is to have the place ceded to Canada and made the terminus of a Canadian railway to the gold-fields. This is alleged to be the true explanation of the desire for a change of flags, the complaint as to the poor enforcement of the laws of our Government being a mere subterfuge, although our correspondent admits that "the Canadians have many laws which are, perhaps, superior to our own, and in certain parts enforce their laws in a better manner."

The discrimination between passengers is a constant subject of mirth on board the incoming steamers; the foreigners exulting freely over the greater annoyance to which the natives are going to be subjected at the custom-house, and the natives hanging their heads for shame. We know of no civilized country, except our own, in which this distinction is made. In Turkey, Morocco, and China, foreigners live under the jurisdiction of their own consuls, but we believe the distinction in the matter of taxation is not known any-

where but in America, and has not been known since the Middle Ages, when different races, after the fall of the Roman Empire, lived under different laws. That we should have gone back to it—that is, should have subjected our own people to a régime so odious that we acknowledge that we dare not impose it on foreigners—is a striking illustration of the kind of hands into which our fiscal legislation has fallen. The humiliation of it to our own citizens abroad and in our ports is obvious. We used to lead the world in legislation of all kinds, but we are rapidly securing a conspicuous position in the rear.

For a number of weeks Quay has been a boss without prestige, and in this fact has consisted the chief hope of his ultimate defeat. But he has held on in his fight for the Senatorship, and at last there are signs that he may recover lost ground by a fresh display of his power. A State election will be held in Pennsylvania next November, and the Quay machine is already in March choosing delegates to the convention which will nominate the candidates on the Republican ticket. This is a favorite dodge of bosses, to fasten their hold upon what is nominally a gathering that represents the party, by packing it with their own creatures chosen so long before the convention that the general public takes little interest in the matter. Half-a-dozen county conventions have now been held, and the Quay men have carried every one. In two of these counties the Republican opposition to the boss has been very strong, and prevailed last fall, but in each case the machine has just won an easy victory in the primaries.

The most discouraging feature of these developments is the fact that Quay wins even when the Republican voters generally turn out. Lancaster County polled 16,622 votes for the regular Republican candidate for Governor last fall, and 2,186 for the Independent, whom many anti-Quay Republicans supported. The Republican primaries were held on Saturday, and about 16,000 votes were polled. Nobody can assert that this was not a fair test of party sentiment, and the Quay machine swept everything before it by a majority of nearly 5,000, securing every place on the county ticket, as well as all the delegates to the State convention. Ex-State Senator Kauffman has been one of the leaders in the fight against Quay, but his own town, and even his own ward, went against him on Saturday. Such things as these cannot fail to revive the prestige of the boss, and improve his chances of tiring out the opposition at this session of the Legislature, and finally getting a majority in the Legislature that will be chosen next year, when the Presidential contest will make independent voting unpopular.

It is hard lines for a great political party that an absorbing public controversy as to its leadership and principles should be carried on by two such men as Bryan and Croker. These two pose before the country as the chief exponents of opposing principles in the party, and columns of space are given daily to their views about each other and about the immortal Democracy of Jefferson. The only result is to drive everybody of self-respect out of the party. No greater service could be performed for Hanna and his party than this. For several years now there has been a great body of voters in the country who are Republicans under protest. They are forced to vote with Hanna and McKinley, not because they have any sympathy with what they are doing, but because they cannot vote with the party of Croker and Bryan. Nothing is more remarkable in the present political situation than the utter dearth of reputable men in the Democratic party who can be called leaders. Every effort which is made by members of the party who would like to save it from Bryan and Croker to find a Moses to lead them out of the wilderness, merely demonstrates the party's moral poverty. One eager searcher for a statesman is quoted who, after exploring the whole country, is forced to the conclusion that the party may have to drag Mr. Cleveland from his retirement and compel him to stand again. Occasionally one hears of efforts to refurbish David Bennett Hill and try to make him look as if he were capable of giving a moral aspect to the party, but this is a task beyond human capacity to achieve. If the man who made government in this State for seven years a mere annex to Tammany Hall and the liquor trade, be the residuum of moral character left in the Democratic party, its case is indeed forlorn.

Mr. Croker remarks in defence of his \$10 fee for a Jeffersonian dinner: "There is no reason for protesting against the price. We put money in circulation and benefit all classes of the people." Whose money is it that "we" put in circulation? Why, that of the taxpayers, of course. Mr. Croker has the handling of about \$100,000,000 a year of it, and there is no doubt that all his followers who are going to his dinner get direct evidence of its "circulation." Whether all classes are benefited in equal or less degree is another matter, but that is of little consequence. The first object of Tammany government is the sustenance of Mr. Croker. After him come his intimates; after them The Club; and after them the rank and file of the Tammany party. What are these but the "people"? Is anybody who is foolish enough to live outside Tammany Hall worthy of a moment's thought in the circulation of the city's money? And what a confession of

failure it would be for Mr. Croker or any other Tammany man to say that the general prosperity of the organization was not great enough to enable every member of it to pay \$10 for a dinner?

Two noteworthy changes in the matter of Sunday trains occur almost simultaneously in two States. A railroad company which serves many towns in New Jersey has just begun running trains on the first day of the week, and the railroads of Connecticut have been authorized to run such trains, when permitted by the Railroad Commissioners, during all the hours of Sunday. In the former case the passage of a law was not necessary, as Sunday trains had not been run simply because the managers of the railroad company would not put them on; but in Connecticut a statute has absolutely prohibited the running of trains within the limits of the commonwealth between the hours of 10:30 A. M. and 3 P. M. A curious feature of the New England case is the fact that there has been no such restriction upon Sunday trains in the adjoining States of Massachusetts and Rhode Island, and of the New Jersey instance that all the other important roads in the State have long run such trains. Another anomaly of the situation in Connecticut has been the operation of trolley lines without the slightest restriction during all hours of Sunday.

The action of the Connecticut Legislature is significant of the change of sentiment regarding what used to be called "the keeping of the Sabbath" among the descendants of the Puritans. The lower branch of that Legislature is chiefly composed of representatives from small towns, not a few of them off the main lines of railroad traffic; but while the old law prohibiting trains between 10:30 A. M. and 3 P. M. was passed, a dozen years ago, without a dissenting vote, the bill empowering the Railroad Commissioners to authorize such trains went through this week with only 21 nays to 136 ayes. Experience has demolished the chief argument which was to be urged against allowing any Sunday trains, that this would be "the entering wedge" to a breaking down of all distinctions between Sundays and week-days in the matter of railroad traffic. Nearly all of the great lines have for years run some trains on Sunday, but there has nowhere been any approach to week-day conditions. The truth is, that both the managers and the employees are opposed to having anything like the usual amount of work on what all recognize it is best should be, so far as possible, a day of rest; but the necessity to the community of running some trains is also universally recognized, and this demand can be met without the slightest risk of harm to either railroad men or the general public.

Now that the discussion has begun out of doors on the new municipal bill for London prepared by the Government, the number of objections which are springing up and will have to be dealt with by Mr. Balfour, is rather appalling. In the first place, one of the great faults found with the present municipalities by property-holders, the London County Council included, is their tendency to do things for the masses at the expense of the taxpayer, or, as one of its developments is called, "municipal trading." The fact that the London County Council has done a good deal of this sort of thing has, more than anything else, excited the Conservative hostility to it, and it must be admitted that the tendency occupies a large place in the aspirations of all the more ardent civic reformers. They want cheap or gratis carriage for the poor, cheap or gratis gas, cheap or gratis baths, dearer labor, cheap education and gratis lunches for poor children, cheap or gratis music, and so on. The number of things which dwellers in cities are, by reformers, held bound to supply to everybody who chooses to settle in a city for any reason, increases every year. Municipal reform consists more and more in "municipal trading"—that is, the doing by the municipality of things which are now done by private enterprise for market prices. The fact that the municipality means the taxpayers, makes the glowing pictures drawn by the reformers of what beautiful and convenient places cities might become by the expenditure of more city money, when coupled with the fact that those who will most enjoy cities, and who will most eagerly vote for improvements, will not be the persons who will pay the expense of them, makes most programmes of city reform rather melancholy reading for the smaller class of taxpayers. In the meantime the crowding of the poor into all the cities continues.

One of the most foolish incidents of the English government of Ireland besides, and far more important than, the royal abstinence from visiting Ireland or living in it, has been the failure, often commented on, to encourage Irish enlistment in the English army. The Irish Catholic peasant, though known to be a fighting man, was not allowed to enlist until 1800, thirty years before Catholic emancipation. Yet such numbers did enlist during the next fourteen years of the peninsular war, that the Duke of Wellington declared in the House of Lords that he could not have carried on that war without them. Napier pays the highest tribute to their military qualities. The Connaught Rangers, an Irish regiment, repulsed the French Guard in the streets of Fuentes de Oñoro. Now, after the rebellion of 1745, the Scotch Highlanders, who were in exactly the same position as the Irish, that of disaffected Catholics, were enlisted in

two or three regiments, in which they did splendid service during the next half century, and are still relied upon for desperate enterprises. The curious thing is, that every pains was taken to bring the Highlanders' national feeling into play as a stimulant to military valor, though it was known not to be a whit greater than that of the Irish. They were allowed to wear their national dress when it was forbidden to the rest of their countrymen. They were allowed their national music for use, on the march and in battle. According to Byron, the "Cameron's gathering" "rose wild and high" at Waterloo. The Irish, on the other hand, were allowed neither national colors, nor uniforms, nor music. Within twenty years men have been punished for wearing a shamrock in their hats on St. Patrick's day. They are merged as far as possible in every way in English regiments, so that none of the glory of their exploits may redound to their unfortunate country. There is a story of a poor fellow of Fenian proclivities, who fell in one of the Sikh wars, wishing with his dying breath that his death had been for Ireland. There is a call in London to-day for an Irish regiment of Guards, but it comes rather late after a century of insult and coercion. Still it may succeed.

A medical school for the study of tropical diseases is to be established in England as an incident of colonizing in West Africa. Mr. Chamberlain explained to the House of Commons that the constant deaths of promising officers, civil and military, in the West African colonies, had determined the Colonial Office to do all in its power to combat the little-understood diseases of the African coast. What had been done in Calcutta and Hong-Kong and in Jamaica, to take away their ancient reproach of being a graveyard of British officers, he thought might be done for West Africa. The scheme contemplates special training for nurses and physicians, none of whom shall hereafter be appointed to stations in West Africa until after taking a post-graduate course in the hospital selected for the detailed study and treatment of the various forms of African fever. The initial expense to the Government will not be large, as existing hospitals will be utilized, and the Royal Society has made a grant of funds to assist in the work. The project was cordially approved by Parliament, even Mr. Labouchere joining in with the wish that West Africa might be made so salubrious that the Colonial Secretary would go there in person.

The admission made by the French Ministry that no further increase in the army is possible, is the first exact confession that has been made in any of the great nations that the conscription has reached its limits. The race has

gone on steadily until now, and, up to the present, France has held her own with Germany; but she confesses that the end has come. France has 14,000,000 less population than Germany, yet has maintained till now a stronger army, but Germany has determined to remain no longer in the rear in the matter of numbers. The bill now pending in the Reichstag raises the strength of the German cavalry from 472 to 482 squadrons and the infantry on a peace footing to 495,500 men, to be completed in 1903. France cannot, M. Freycinet confesses, respond as Mr. Goschen has done to Russia with the British fleet. The stop will probably be reached everywhere else eventually in the same way. British sailors will in the same way give out before the British money for building ships gives out, and Russia will continue to increase her armaments as fast as she can get money, which she finds scarce. But she is very far from the limit of her resources. With such enormous tracts of unoccupied land, an enormous increase of population is sure to come. The Russian future is probably still remote, but it is certain. There can hardly be a worse foreign policy, therefore, than that which ridicules her efforts or proposals for peace, which does not grasp at any offer she makes to limit her armament, or start on a more peaceful path. She can probably go on increasing her armament for generations, and to bind her not to increase it even for one, would be a great gain for humanity.

The question is, however, beginning to be asked more and more who is to command these hosts if they ever take the field. Only two generals have, in this century, given any reason to believe that they were capable of it, Napoleon and Moltke; and not more than two such men are to be looked for in a century, if two. This is a thought constantly present in every European cabinet. There is no general living to-day who would be willing to take any such responsibility. There are plenty of fair corps commanders, but there is not a single corps commander who is thought capable of bringing the full strength of any great Power to bear on an enemy of the same rank. They can put enormous armies in the field, and, perhaps, provide the beef, canned or on the hoof, for the troops; but to get them in a fighting line is a different matter. The French generals have all been ruled out of the competition by general consent. About the new generation of Germans and Russians we know little or nothing, though probably every writer on military affairs professes to know some secret genius who "is sure to make his mark" when the time comes. The British do not lay claim to one such on land. They rely on admirals, but the others make no sea professions at all.

GETTING OUR EYES OPEN.

The English General who said to his troops, "I have led you into a devil of a scrape, and now you've got to fight like hell to get me out of it," displayed a frankness which it would become the Great Father at Washington and his counsellors to imitate. The one feeling on this Philippine business throughout the land is that an enormous blunder has been made. We do not speak now of the wisdom or folly of taking the islands from Spain, but of the way in which this bloody conflict with the natives was brought about. Our soldiers are fighting gallantly, as, of course, we knew they would; but why did they have to fight at all? Whose was the misconception in policy, whose the mismanagement in execution, that led to the extraordinary plight in which we now find ourselves? Day by day news comes which leaves the emotions of Americans strangely confused—their pride in their courageous troops struggles with mortification that they should have to fight the very natives whom they went to free; their sorrow at the loss of so many brave lives alternates with shame for the cause and indignation for the blunderers who brought this misery on us. That things have turned out wofully different from the roseate plans of Mr. McKinley is not denied even by his adulators. What is the reason?

Summarily, we may say that the reason is the comprehensive one Dr. Johnson gave for his own blunder, "Pure ignorance!" We took a leap into the dark, and this time our luck failed us, and we got badly bruised. The knowledge on the strength of which our Peace Commissioners decided to buy the Philippines from Spain, was not great enough or accurate enough to warrant them in buying a house and lot. The one thing they felt sure of was that the natives would submit without fighting. All through the testimony taken at Paris runs this positive assurance—the Filipinos would fight the Spaniards to the death, but they would never think of resisting Americans. That was taken for granted by all the great minds of the Commission, and we see now how correct their information was. In our good-natured, vain-glorious American way we embarked on this ill-studied enterprise, sure that it would somehow "all come out right in the end." But we are wiser now, if sadder. We see that many elements of the situation were egregiously misunderstood by the men who led us into this Philippine muddle. How many more disagreeable revelations await us we do not know; but as far as we have gone we have seen only too much reason to believe that the whole affair was entered into with inconceivable light-heartedness, upon assumptions entirely mistaken.

One of the greatest mistakes, it is now evident, was the initial treatment of the

insurgents. We undoubtedly owed much to their coöperation: the officers of both army and navy admit it. But for Aguinaldo's army, and its success in sweeping the Spanish out of their outlying garrisons and penning them up in Manila, our capture of that city would not have been the easy and comparatively bloodless affair it turned out to be. Yet from the first the whole official attitude of our Government towards Aguinaldo and the insurgents was one of indifference verging on hostility. And it is important to observe that this was directly inspired from Washington. As early as June 16 of last year, Secretary Day ordered Consul Pratt at Singapore not to countenance the Filipinos in any way; he said that "this Government has known the Philippine insurgents only as discontented and rebellious subjects of Spain, and is not acquainted with their purposes." He went on to observe that the United States, "in entering upon the military occupancy of the islands," expected from the inhabitants only "that obedience which will be lawfully due from them." This high and mighty tone was insisted upon all through. Gen. Merritt adopted it in his correspondence with Aguinaldo, both before and after the surrender of Manila, and said in one letter that he was thereby acting on "recent instructions" from Washington. Now this, it is clear, was grossly to misconceive as well as to exasperate the natives. They have at least leaders who are men of education and ability, and presumably have a sense of personal dignity, and thus to be thrust aside contemptuously must have been galling to them in the extreme. If the aim was to goad them into fighting, the method could not have been more skilful; but we supposed that our aim was to conciliate and co-operate. Surely, somebody blundered grievously in this whole matter of understanding the natives and dealing with them.

The military equipment and fighting quality of the natives, their money resources, and the degree of popular support which they enjoy, have also come as a surprise to our authorities. Aguinaldo got a supply of arms from the captured Spanish arsenal at Cavité. Dewey did not give Aguinaldo arms—he was too shrewd to entangle himself in that way; he just looked the other way while Aguinaldo helped himself. Then the insurgents were undoubtedly importing ammunition and military supplies from Hong Kong and Yokohama during all those months of waiting. We winked at the process as long as we supposed that the weapons would be used only against the Spaniards; now they are employed against us. Aguinaldo raises money by a kind of forced taxation, levying contributions on interior trade and agriculture. This is the sort of taxes the people have been used to under Spanish rule, and they seem to pay their own

chiefs with alacrity. Indeed, so far as appears, the inhabitants of Luzon, outside of Manila, are united in support of the war on Americans. Thus, we have found that the native soldiers are better armed than we thought, that they fight with much greater courage and skill than we expected, and that they are beaten and driven off, after great and heroic exertions by our army, without any idea of surrendering. The present campaign may be entirely successful. Malolos, the seat of the native Government, may be captured in a day or two. Yet, if the natives choose to go on fighting in their swamps and mountain fastnesses, the problems of reducing Luzon to order will have been only begun. But we are at least getting our eyes open to the size of the job we have on our hands.

THE DEMORALIZED OPPOSITION.

Now that we are within a year of the time when the canvass for delegates to the national conventions of 1900 will be under way, the most striking feature of the situation is the utter demoralization of the opposition. There have been times in our history when the dominant organization was quite as strong as the Republicans are now, but it would be hard to name any period when the other party was as weak, both in leadership and in hold upon the people, as is the so-called Democracy to-day.

"Democratic principles" is a term which has become a laughing-stock. The party came into power the last time upon the platform of tariff reform. But even the leader in that contest could not carry into effect through Congressional legislation the principles which he represented, and the misshapen act which finally went upon the statute-book got there without President Cleveland's signature. So far back as 1894 the forces of disintegration were thus at work.

The lurch towards Populism which was taken in 1896 carried the process still further. The Bryanite platform adopted at Chicago in that year drove out of the party, almost in a mass, both its character and its brains. There has never been a Presidential candidate of either of the old parties who received so little support from the intelligence of the party which had nominated him as the "boy orator" in the last Presidential campaign.

Defeat did not teach wisdom. The minority in Congress during the past two years has been little better than a leaderless mob. The new issues growing out of the war with Spain leave the opposition without coherence of organization or unity of policy. There are so-called Democrats who earnestly favored the ratification of the treaty of peace, and others who zealously opposed it; some who regard the expansion policy

as destructive to our national ideals, and others who consider the acquisition of the Philippines as only the logical sequence to Jefferson's purchase of Louisiana.

An opposition party in the year before a Presidential election usually has three or four hopeful aspirants for the nomination. It seldom happens that one man has gained such a hold as Cleveland possessed eight years ago, and Jackson during John Quincy Adams's term in the White House; and in those cases the leaders who dominated the party were men of great personal strength. To-day there is nobody in sight for the next nomination of Populized Democracy but the man whose last nomination involved it in overwhelming defeat. Worse still, the interval has served only to confirm the original impression of Bryan's monumental egotism, shallowness, and weakness. Nothing disgusts the people so much as the open pursuit of the highest office, and this silly politician makes no concealment of his intense eagerness for a renomination. The spectacle of a wordy orator, professing to be the champion of the downtrodden masses, and ready to sacrifice himself for the public good, who charges his audiences "all the traffic will stand" for the privilege of hearing him denounce monopolies, is sickening.

There is an uneasiness in Bryan's demeanor which indicates that some consciousness of his undignified course must occasionally penetrate even his dense egotism, and arouse apprehension as to his real hold upon the people. But this is a very different thing from hold upon the party organization. The strength of Bryan as a candidate is based upon the fact that the men who consider him an orator and a statesman control the machinery in the Southern and Western States, as well as in some at the East. If the delegates were to be chosen tomorrow, the bulk of them would undoubtedly be for Bryan. His hope is that the situation will be the same next winter and spring, and as the weak men whom Bryanism has invested with the running of the party machinery would generally rather see the party beaten than lose their hold upon that machinery, the hope is not so unreasonable as it should be.

The whole nation suffers from the present demoralization of the minority. It is essential to the successful working of party government that there shall be a strong opposition, always ready with the criticism which is sure to be needed by the dominant organization, and prepared with at least a definite policy to urge as an alternative. A majority which has no reason to fear the minority is always dangerous. An opposition too weak to inspire apprehension deprives the country of a needed bulwark against the aggressions of power. Seldom in our his-

tory has the nation needed a strong opposition wisely led so much as now. It is a real misfortune to the republic that in such a crisis the minority is nothing but a weak aggregation of helpless voters, without either effective organization or judicious counsellors. Party government is at a low ebb when millions of men have no other representative than a conceited orator who runs solely for his own aggrandizement the organization which has fallen under his control.

CHANGES IN PUBLIC ORATORY.

Several collections of political orations in France, during the last seventy years, have lately been published; and M. Emile Faguet, in some remarks about them in the *Revue des Deux Mondes*, shows what has been the rise and course of this species of eloquence in his native land. Parliamentary, as distinguished from forensic and pulpit, oratory has, of course, but a short history in France. It scarcely antedates the Revolution. Its golden age was reached at about the same time as the golden age of American oratory—that is, roughly, 1830-1850. Those were the days when Guizot and Thiers and Berryer launched their argosies with portly sail; when the Assembly would not only endure but enjoy a philosophical exposition of political principles from the tribune, a leisurely, historical oration, full-freighted eloquence like that our own Senate delighted in at the same period. But in France, as in this country, as in England, too, great changes have taken place of recent years in the standards and practice of public oratory. What M. Faguet writes of the French Parliament might be said with equal truth of the House of Commons or of the American Congress—"always pressed for time and impatient, it demands short speeches, and simply will not listen to theoretical or historical discourses."

Increasing business to transact, and the increase of the business spirit in transacting it, have, in fact, necessarily done to death old-style oratory in modern legislative assemblies. The change in English Parliamentary oratory during the last generation has been as notable as that in our own, and along the same general lines. It is not simply that the fashion of rhetoric has altered. Nobody now brings in a long Greek quotation in a speech in the House of Commons, in the ancient resounding way; if he did he would be in danger of being laughed at. But there is more in it than simply the passing away of a once popular taste. The House of Commons sits to dispatch the business of a great empire, and the men it wants to hear are the men who can best discuss the business in hand. No other man has to-day the ear of the Commons as Mr. Chamberlain has it, and he speaks very much as would a business man from Birmingham. He is perfectly

lucid, mercilessly trenchant, and mercifully brief. He rarely speaks more than half an hour in the House. Yet was it not Franklin who said that Washington and Jefferson were the two most effective speakers he ever heard, though neither of them ever spoke more than thirty minutes?

Cobden is commonly thought to have had great influence in bringing about the change in tone of public speaking in England. His great cause was practically a business proposition, and he argued it with the simple directness of a banker or mill-owner. Yet his grasp of fact and logic was powerful. Absolutely without flowers or furbelows, his speaking went straight to the heart of the matter, with so wide and full a knowledge that even its dry and unadorned brevity did not prevent a master of the old bow-wow style like Peel from admiring it greatly. Cobden had not a quick sense of humor, and once set the House roaring at an unintentional pun which he is said to have been unable to understand, even when it was explained to him. He was discussing some points in cotton manufacture, and said, by way of illustration, "Now take my friend from Lancashire [John Bright]; he is a spinner of long yarns."

Webster's are the only American speeches of his generation that the modern man can read. We are willing to take the word of contemporaries for it that Clay was a great orator, but his speeches we will not read. Who but historians ever waded through Calhoun's? Who can read even Benton's without nodding, or hoping that at least on the next page he may hear one of "Old Bullion's" rare but delightful roars to waken him? Webster lives by sheer weight and force. We still feel ready to match him, as Carlyle did, against all the logic-choppers in existence. As Benton said of his reply to Hayne, one felt that he could have taken the other side and been just as triumphant. There was such a grip and mastery in the man, such a march of victorious argument, lit here and there by passion, that virtue went out of him into his speeches, and the smell of the grave is scarcely on them. Yet even Webster sometimes indulged in circumlocutions and slow approaches which would not be tolerated now. We venture to say that the elaborate and rather florid figure with which he began his reply to Hayne could not now be produced in the Senate without exciting a snicker. It could be in some parts of the South, however, where orators still love to discourse for an hour or two on nature and history and the human intellect, before coming to the subject.

"There are only three or four reasons," said a Frenchman, in explaining his fondness for short speeches, "which can be given for or against a particular proposition, and all that can be said in addition is just so much stupidity." It is this

eagerness to get at the gist of the matter, and to get to voting, which tends to make parliamentary speeches more and more brief and businesslike. Give us your heads of discourse, says the modern legislator to the modern orator, and let your elaborations go. Unlimited "leave to print" may be had on condition that leave not to hear or to read go with it. In the pulpit, "Twenty minutes, with a leaning to the side of mercy," has judicial authority as the proper length of a sermon. Judges will take all the briefs a lawyer can hand up, but are growingly impatient of much speaking in court. Here, again, we see what the pressure of work and the application of business methods are doing to clip the periods of oratory. Yet this is not saying that the love of eloquence has disappeared. Fustian we cannot put up with, and gusts of wind strike infinite weariness to our hearts; but when a child of genius like Bourke Cockran comes along to take a theme under which other men are breaking their backs and chilling the audience, and to soar with it like one of the young-eyed cherubim, to the rapt delight of his hearers, the old spell reasserts itself, and we know again the true power of popular eloquence.

THE BREAKING UP OF CHINA.

"Every time the dry bones of China have been shaken up," said an English trade journal, "an increase of commerce has followed." It was in the same sense that the Italian Minister for Foreign Affairs said the other day that China was now the "most promising" of the territories which industrial Europe was contemplating. He meant that it was the most promising opening for the overflow of the glutted markets of Europe. The exploitation of a vast empire solely in the interests of trade is something new in the world's history. The Roman Empire was eaten off bit by bit, and finally consumed, by barbarians bent on plunder. Turkey has seen province after province shorn away more by the pressure of civilization, and the uprising of her oppressed subjects in the demand for a better government, than by purely commercial attack. But China has been invaded and will be broken up, if broken up she is to be, by the commercial traveller.

How rapid this invasion has been, and how extensive the conquests in the name of trade already are, we are apt to forget. The haste and eagerness of Italy and Belgium and Japan to get a "base" on the Chinese coast, are really a sign of fear that the coast will be all taken up unless they move quickly. It is less than two years since Germany made her dramatic coup in seizing Kiao-Chou, but what has happened since? Why, England has seized Wei-hai-wei, and laid claim to the Yang-tse valley—a claim which, if enforced, would cut the empire almost in

two. France has demanded fresh concessions in Sze-chuen. Italy now declares she must have the port of Sanmun, and the bay and hinterland going with it. Meanwhile, on the north, Russia pushes on her secular and irresistible advance.

It is, indeed, the Russian power which dominates the Chinese situation. As Anatole Leroy-Beaulieu writes in the last *Revue des Deux Mondes*, compared with the immense advantages Russia has obtained in China, the acquisitions of all the other nations seem poor. The vast province of Manchuria, an empire in itself, is now practically a Russian possession. The Chinese Government admits it; the English recognize it. The dispute over the Niu-Chang Railroad grant turned largely on the question whether an English company could mortgage land north of the Great Wall. Russia protested that it could not, and England finally agreed that it would not. Russian influence is now confessed to be predominant in Corea, which country she can take over whenever she thinks she could do it without leading the other Powers to fight her. The whole Liao-Tong peninsula is at Russia's mercy; and the speedy completion of the trans-Siberian railway, with its branch line to Port Arthur, will give her facilities for holding and extending her position greater than anything within the reach of any other nation. Russia's absorption of North China has been the dream and goal of her statesmen for a hundred years. With that mystic strain which Leroy-Beaulieu says is to be found in Slavic blood, they have pursued their object, unhesitating, unrelenting, sure that time is on their side and that they can afford to wait longer than any other. Russian control of so large a part of Chinese territory, and apparently of the entire machinery of the Chinese Government, is, in a way, a fulfilment of the prophecy of a Russian statesman, made to John Quincy Adams in 1812: "Monsieur, la Russie, bien gouvernée, est faite pour commander à l'Europe."

But what has China been doing all this while? Where is the Chinese Government? Lord Salisbury answered the question a couple of weeks ago when he said that the future of China depended not so much upon diplomacy, as upon what went on in a secluded palace and an island in a garden. He meant, of course, the intrigues near the Emperor's person. That unhappy young man of twenty-five, feeble in body and spirit, appears to be under the complete domination of the Empress Dowager. She is supposed to be a woman of great force, principally, we believe, because she cuts off the heads of those who disagree with her. But she is hand in glove with Russia. There is no possibility that she, or any Emperor likely to arise, will be able to rally the natives against foreign aggression. An enormous preliminary dif-

ficulty is that the reigning dynasty is itself a foreign one, cordially hated by millions of the people. It would have been overthrown in the Taiping rebellion of the '60s, had it not been for outside assistance. Then, too, the myth of a Chinese army of terrible fighting power has been dissipated by Japan. It was always a silly superstition, for Gordon found out and declared that the Chinese absolutely would not do aggressive fighting. The net result is that China has no power of resistance. Every time a foreign nation comes to shake the skeleton again, there is only a clashing of teeth in the fleshless jaws.

There is no doubt that the proper policy of the United States, in the face of this fated disintegration of China, will soon become an urgent political question. The attitude of our State Department has so far been that of studied neutrality, insisting upon our treaty rights, but keeping hands off. But powerful influences are now at work to bring about a change. An American Asiatic Association has been formed, composed of leading manufacturers and exporters, and its representatives, says the Washington correspondent of the *Evening Post*, have been urging the Government to take a more pronounced position. Senator Fry is greatly stirred up on the subject, and would have the United States get a "base" on the Chinese coast without loss of time necessary to prevent the impairment of American trade in China. That trade is great and growing, and it is the obvious duty of the Government to safeguard it in every possible way. But a feasible method, short of going into the scramble for Chinese territory, would be a tacit, if not formal, alliance with England for the purpose of keeping the Orient open to the trade of all nations on equal terms. Interest and honor alike prompt us to such a course, and, for our part, we should heartily applaud our great protectionist and erstwhile English-hating President if he would vigorously urge joint action with England to promote free trade.

"AMERICANISM," OR THE CATHOLIC CHURCH IN AMERICA.

ROME, March 3, 1899.

The chief interest for those who are watching public affairs in Italy at this moment is the action taken by the Vatican in regard to those liberal doctrines, embraced in the term "Americanism," which, starting in the United States, are now firmly rooted in France and Germany. The story is by no means old, but its details are not generally known.

In 1894 there was published in New York the 'Life of Father Hecker,' the founder of the Paulist order. But little notice was taken of the book until, having been translated into French, it gave rise to bitter discussions in Europe. The liberal party of the Church, in both France and Germany, found much to be pleased with in the doctrines of Father Hecker, while the Jesuits realized that if the influence of the book were to spread to any

large extent, the supremacy of orthodox doctrines would be jeopardized. They are perfectly right, for, simple though the ideas of Father Hecker seem, they are the antithesis of those which have heretofore governed the Catholic body. They are in brief as follows: That the absolutely uncoupled condition of Church and State as seen in the United States is the ideal to be sought everywhere; that more latitude should be given to the untrammelled workings of the individual conscience, and that more stress should be laid on *active* than on *passive* (or monastic) virtues.

Father Hecker was not alone in his ideas. Cardinal Gibbons, Archbishop Ireland, Mgr. Keane, and Mgr. D. J. O'Connell all expressed in one way or another their approval of them. Archbishop Ireland even wrote an introduction to the 'Life,' in which he gave expression to the highest admiration for Father Hecker, and said he considered him a model to be followed by the priesthood. Cardinal Gibbons, in an autograph letter, bade god-speed to the French translation of the book; and Mgr. O'Connell, at the International Catholic Scientific Congress held at Fribourg in August, 1897, read a paper entitled "A New Idea in the Life of Father Hecker," in which he showed the real nature of "Americanism," and affirmed that

"from what has been said in the foregoing, it must appear evident to every candid inquirer that it involves no conflict with either Catholic faith or morals; that, in spite of repeated statements to the contrary, it is no new form of heresy or liberalism or separatism; and that, fairly considered, 'Americanism' is nothing else than that loyal devotion which Catholics in America bear to the principles on which their government is founded, and their conscientious conviction that these principles afford Catholics the best opportunities for promoting the glory of God, the growth of the Church, and the salvation of souls in America."

The second chapter of the story began when, a few months ago, a French priest, Charles Maignen, wrote a book entitled 'Le Père Hecker est-il un Saint?' According to the rules which govern the Index Expurgatorius, this book, published in Paris, must bear the imprimatur of the Archbishop of Paris, Cardinal Richard. The Cardinal, however, refused to grant it, on the ground that the book was a libel on a prince and eminent prelates of the Church—Gibbons, Ireland, and Keane. A rebuff so slight as this was not enough to quell the spirit of a Jesuit. The author took his book to Rome, although such action is distinctly forbidden by the Rules of the Index, put the name of a Roman publisher on the title, in addition to the French one, and applied for the Roman imprimatur. This was granted by Father Lepidi, the Master of the Sacred Palaces, and the book was issued. It is a curious mixture of fanaticism, reasonableness, and bad faith. The author's bad faith is shown by his constantly repeated assumption that those leaders in the American Church who share Hecker's doctrines maintain him to be a *saint*. The character of the book was such that the men attacked in it could not submit unheard, and, furthermore, certain of the liberal papers in Rome were asking ugly questions as to the granting of the imprimatur. Mgr. Keane interviewed Cardinal Rampolla on the matter, and was assured that both he, the Cardinal (who is the Pope's Secretary of State), and his Holiness felt deeply grieved at the turn of affairs, and had been completely ignorant of the questions concerning the publication of the book. This seemed to sim-

plify matters; but almost immediately appeared a letter from Father Lepidi, stating that, when he first saw the book, its importance seemed to him so great that he put the matter in the hands of the Pope himself, and that it was with the Pope's sanction that the imprimatur was granted.

Chapter third now begins. During our war with Spain, Archbishop Ireland, owing to his being a personal friend of President McKinley, was given charge of the varied affairs connected with the Church that were affected by the war. The chief of these was the status of the Church in the islands that came under our control. The desire of the Papacy and the Jesuits was that no alteration should be made in the legal status of religious orders and their property acquired by action of mortmain. This, however, could not be arranged, but, instead, the American Government decided that so long as we controlled the islands, the status of the Church should be the same in them as in the United States. This was a hard blow to the Jesuits. It was bad enough to have liberalism spreading in the United States, and marked signs of its progress in France and Germany, without having Cuba and the Philippines given over to its invincible influence. Moreover, Cuba is but the stepping-stone to South America, and, before long, liberalism will be flourishing there as in more civilized portions of the world.

It was time for the Jesuits to strain every nerve. In January of this year Archbishop Ireland was called to Rome to explain matters, and now occurred an extraordinary event. On the 4th of February appeared the first number of a paper published by the Jesuits called *The True American Catholic*, the "Organ for the Roman Committee for the Anti-American Campaign." The articles are printed in both Italian and English. The leading article, under the heading "Our Aim," is worth quoting extensively. The style and punctuation are unusual:

"The object we have in view in commencing the publication of *The True American Catholic* is to protect the true Catholic faith, from the infernal machinations of a sect; who under the name of 'Americanism' attacks and attempts to destroy the real foundations of Christianity. But the attacks of the above sect made to forward the interests of the enemies of Christ and of His Catholic Church; namely Jews, Masons, and International Protestants will be thoroughly frustrated by our daily constant intervention.

"We shall fight our enemies and their allies in fair fight . . . even if some of them may happen to wear the Episcopal mitre. . . .

"These new American Catholics have raised the banner of rebellion and treason, and in the name of Christ and of Paul, with the protection of the millionaire bishop without conscience and without religion, attack the true Church of Jesus Christ and the Papacy which is to-day the only bulwark of Religion and the only conservative power of social justice.

"We are decided then to wage a fierce war against this sect evidently inspired by Satan, against this so-called American Catholicism which possesses less Christian faith and charity than was possessed by the Mahomedan slaughterers of Armenians.

"We tell you at once, oh Monsignor Ireland, that your sacerdotal garb of Archbishop of the Holy Roman Catholic Church will never allow you to become unfaithful to that pure faith that shines brilliant on the brow of the shepherds intrusted by God with the mission of leading the flock of Jesus Christ.

"The mitre that you wear renders you incompatible with the place of combat you have taken against the whole organization of the Church of Rome.

"Be honest, then, and let your position be clearly defined. Either throw aside the sa-

cerdotal vestment, like it was done by Father Gavazzi, or loyally submit to the duties to which the position you hold in the Roman gerarchy compels you to obey.

"Put the mask aside, oh Monsignor Ireland! For acting as you do is utterly unbecoming of a gentleman and a priest.

"In any case let us remind you that here in Rome; apostolic seat of Peter and Paul, on this soil rendered sacred, and venerated by the blood spilled by the first Christian martyrs, you would bring in vain the sacrilegious echo of an American schism. Here in Rome, where Christ himself is Roman, where the old and the new world centres, rises sublime and makes itself felt the only true holy spirit of the Man of Nazareth. And the mighty voice of the sublime spirit enjoins to you, through the medium of his poor humble followers, in the name of the Almighty God and of the Archangel Michael, to bow down before the Vicar of Jesus Christ and deny the blasphemous theories of the heretical sect styled with the name of 'American Catholicism,' which is embodied by you"—and so on.

Though Archbishop Ireland was called to Rome ostensibly to explain certain events connected with the war, it might be thought that the Pope, before setting his foot down, would have seized the opportunity to question him in regard to Americanism. As a matter of fact, the Pope's letter on this subject was written before Archbishop Ireland had been received by him. The letter to which I refer is from the Pope to Cardinal Gibbons. It was published in the *Voce della Verità* of February 22, bears the date of January 22, and was posted from Rome on or about February 10. It is an interesting document. To appreciate it we must bear in mind that the Paulist Order, founded by Father Hecker, was sanctioned by Pius IX., and that Father Hecker's doctrines were thoroughly understood at that time. But his liberalism seemed of little importance until it had taken root in France, where the Abbé Charbonnel was forced to leave the Church owing to his eager approbation of the doctrine; until the Parliament of Religions at Chicago, participation in which by Cardinal Gibbons and others was considered by the conservative Catholics as the action of renegades; and until the speech of Mgr. Keane at Brussels in 1894, when he approved in the strongest terms the meeting at Chicago. Since these events the Jesuits and conservatives have realized the strength of the party of common sense that is opposed to them.

The Pope's Encyclical Letter begins with certain platitudes of friendship, after which, warming to his work, his Holiness says that he desires to warn his beloved son of certain dangers to the Church, dangers that find their expression in the 'Life of Father Hecker.' He then considers in detail the leading features of Hecker's principles, and undertakes to refute all the liberal contentions. It is, he writes, a mistake to believe in the satisfactory working of the Holy Spirit in the individual who lacks external guidance; Hecker's distinction of natural and supernatural, of active and passive virtues is declared erroneous. These passive virtues were, according to Hecker, of great value at the time of the Reformation, because of the character of the absolute governments then existing, and as a defence against Protestant attacks on the Church. Now, on the contrary, in democratic times, when the citizen rule, and to do so have to develop their intelligence, the active virtues are those to be cultivated. This, says the Pope, is an entire mistake. As for the formation of religious Orders the members of which shall

not be bound by vows (one of the features of the Paulist Order), the Pontifical letter states that while these are permissible, they are in no way to be compared with Orders subject to vows, whose members have given up their all to follow Christ. Familiar discourses and discussions with Protestants may be allowed only if the local bishop sees fit to sanction them. Having thus condemned the liberal doctrines, his Holiness continues, at the end of the letter: "Thus, from what we have said up to this point, it is clear, O dearly beloved Son, that we cannot approve of those opinions which, taken as a whole, are entitled 'Americanism';" but he states that by this term he means the doctrines that have been mentioned, and not the intellectual or material conditions of America. Unquestionably, he suggests, American bishops themselves will repudiate the name of Americanism as supremely insulting to themselves and to their nation.

This letter has been replied to by both Archbishop Ireland and Mgr. Keane. They disclaim all sympathy with any who may believe or teach such heresies as are mentioned in the Encyclical. Both letters are couched in much the same terms. Archbishop Ireland (see the *Voce della Verità* of February 25) hastens to thank his Holiness for the love he displays towards the Catholics in America. At last everything is clear, and those errors which "certain persons" have desired to hide behind the name of Americanism are manifest. Considering the discussions aroused by the 'Life of Father Hecker' it was time, says the Archbishop, for the First Shepherd to speak and to restore quiet.

"Assuredly, with all the strength of my soul, I repudiate and condemn all those opinions which the Apostolic Letter repudiates and condemns—all those false and dangerous opinions to which, as the Letter says, 'certain persons give the name of Americanism,' . . . and I repudiate and condemn them with all the greater eagerness and heartfelt joy since never, for a single instant, has my Catholic faith and my understanding of the teachings and practices of the Holy Church permitted me to open my spirit to like extravagances. . . . Most Holy Father, those are enemies of the Church in America and infidel interpreters of the faith who 'imagine' that there exists, or that any one desires to form in the United States, a church differing in even an iota from the Holy and Universal Church which other nations acknowledge, which Rome herself, the infallible guardian of the revelation of Jesus Christ, now or hereafter acknowledges."

Mgr. Keane says (*Voce della Verità*, February 28):

"As for myself, I declare that I accept and admit completely and unreservedly everything that Your Holiness sets forth in this letter. I declare that I repudiate and condemn everything therein condemned by Your Holiness, and I declare to Your Holiness, calling God to witness, that I have never in my life taught or maintained any part of what is therein reproved by Your Holiness."

To sum up: the liberal doctrines of Father Hecker, tacitly approved by Pius IX., and advocated by the most intelligent American prelates and priests as well as by a large party in Europe, are now by Leo XIII. said to be heretical and untenable.

RICHARD NORTON.

THE LAST OF THE CONDES.

PARIS, March 8, 1899.

Princesses who remain unmarried are the

sacrificed figures in history. Sometimes a writer becomes attracted by the name of one, but it is rare if the consequent biography be not written in a banal and purely apologetic style, and, therefore, very uninteresting. This can, however, not be said of a biography of 'La Dernière des Condé,' which has just been written by M. Pierre de Ségur. This author not long ago wrote his first work, on Madame Geoffrin, under the title of 'Le Royaume de la Rue St.-Honoré'; he drew a good picture of the interesting "Mother of the Philosophers" and of her circle. What took him from the Rue St.-Honoré to Chantilly, where lived the last of the Condés? It was probably the knowledge that he would find some inedited documents in the archives of the château, which now belongs to the Institute. In a room in one of the towers, which was called by the Duke d'Aumale "La salle des gemmes," is a most charming miniature of Louise-Adélaïde de Condé, as a girl, with her hair flowing naturally, a very thin black ribbon around her neck, and a sort of white flowing gown, as easy, almost, as a night-gown. This is the only portrait of Louise-Adélaïde de Condé known to me; it is really a gem.

She was born in Paris, at the Hôtel de Condé, the 6th of October, 1757. Her father, Louis-Joseph de Bourbon Condé, was the son of the Duke de Bourbon, who had been the chief of the Council of Regency during the minority of Louis XV., and who died in 1740, leaving only a son. The Duchess de Bourbon died the year after, and Louis-Joseph was married at the age of seventeen to Charlotte Godfried de Rohan-Soubise, daughter of the Marshal de Soubise. Charlotte de Soubise was handsome, and the Prince de Condé fell in love with her, and was allowed to marry her, though she was not of royal blood. The first child was a boy, who took the name of Duke de Bourbon; the second was Louise-Adélaïde, the heroine of M. Pierre de Ségur. The two children became orphans at a very early age, as their mother died on the 7th of March, 1760, only twenty-three years old.

Louise-Adélaïde was educated in the abbey of Beaumont-les-Tours, near Tours, the abbess of which was her great-aunt, Henriette de Bourbon-Condé, who bore the name of Madame de Vermandois (she had refused in her youth to be married to Louis XV.). Louise-Adélaïde remained seven years under the stern direction of this abbess. She left Beaumont to enter the abbey of Pauthémont in Paris, where unmarried princesses, according to the fashion of the time, remained until they were twenty-five years old. She found there, in an establishment which was at once worldly and religious, more worldly than religious, her cousin Bathilde d'Orléans, who became afterwards her sister-in-law. "The two girls had their private apartment, their separate establishment, their table, to which they admitted in turn some of their companions, or even their mistresses, such as were fortunate enough to please them. A lady in waiting for each of them, several servants, completed the appearance of a miniature court, where some happy few, inscribed on a special list, were authorized to offer their homage and to bring news from the outside world." The Princess of Condé lost her companion when, at the age of fourteen and a half, Bathilde d'Orléans married the young Duke of Bourbon. It had been agreed that the young bride should go back to the convent after the ceremony, but she eloped literally with her young husband—an

incident which gave much amusement to the court. At the age of thirteen, Mademoiselle de Condé was presented, and from that day she was merely called Mademoiselle (at the age of twenty-one she resumed the name of Mademoiselle de Condé).

She was allowed to go from time to time to Versailles, to Chantilly, to Vanves, where her brother had a house, which he offered his sister for her own use. When she was sixteen years old, she had a great disappointment. The young Count d'Artois had manifested an interest in her for some time, and it was thought that he would marry her. It was the wish of the Prince de Condé. The Prince and his son had fallen from grace by the part which they had taken in the quarrel between the Court and the parlements; but the Prince de Condé had become reconciled with Chancellor Maupeou, and the projected marriage of the Princess with the Count d'Artois was one of the motives which induced the Prince de Condé to abandon the cause of the parlements. Negotiations had, however, been entered into in another direction, and the Count d'Artois was affianced to a Princess of Savoy, Marie-Thérèse. This event disgusted the Princess Louise not only with the Court but with the world, and with the idea of contracting a marriage. Her disappointment was so great that she systematically rejected all the offers made to her, by the Duke of Aosta, the Prince de Carignan, the Prince des Deux-Ponts, Stanislas-Auguste Poniatowski, King of Poland; she was determined not to give her hand if she could not give her heart at the same time.

Her father tried to console her, and asked her to come to Chantilly. On the 1st of June, 1777, she made her first visit since her infancy to this house, and promised to make a visit every year. She was now twenty years old. Her father could not keep her at his own house in Paris, where he lived openly with the Princess of Monaco, who played the part of a wife for him, though she was only his mistress. "This liaison," says M. de Ségur, "which a duration of nearly half a century was to make almost respectable, did not hinder love affairs de passage. Madame de Monaco, jealous and bad-tempered, took things tragically, and there were, in this sad union, sometimes scenes of violence and sometimes sermons on morality in which, according to an eyewitness (Madame de Bombelles), the Prince de Condé seemed very uneasy and *petit garçon*." The rest of the family were not more edifying; neither the brother of the Princess, the Duke de Bourbon, nor her grandfather, the Marshal de Soubise, was a model of scrupulous morality.

"I find," writes M. de Ségur, "in the letters of the Princess an anecdote which shows this well enough. One day the Duke de Bourbon, who had been married several years, had a child by his mistress, Mademoiselle Michelin, called Mimi, a dancer at the Opéra. He had the strange idea of choosing his young sister to be godmother to the child, and it was the Prince de Soubise who came, dying of laughter, to insist that his grandchild should accept this title and this function. Feeling that there was something suspicious in the offer made to her, she declined it, and she applauded herself for this when she afterwards knew the whole truth."

The Prince de Condé gave his sister at Chantilly a separate apartment, and built for her in Paris a charming hôtel in the neighborhood of the Invalides. (The last proprietor of this hôtel, which is in the Rue de

Monsieur, was the Marquis of Chambrun.) Mademoiselle de Condé divided her existence between Chantilly and the Rue de Monsieur.

The Dukes of Bourbon had in the thirteenth century their principal stronghold near Bourges; not far from it is the little town of Bourbon-d'Archambault, a thermal residence. The waters of this little place were much the fashion in old times. During the season of 1786, Mademoiselle de Condé became acquainted there with a gentleman of Brittany, Louis-Marc Magon, Marquis de la Gervaisais. He was an officer, twenty-one years old, and was taking the waters in order to cure completely a wound he had received. He was not handsome, nor brilliant; was timid, even shy; fond of literature, and himself a writer. Louise de Condé found him "very different from the others" whom she used to see at the suppers at Chantilly. She felt for him a growing interest, which by degrees ended in love. She never thought of marrying him; it did not enter her mind for an instant that she could do so. They spent several weeks together, in the liberty of a watering-place, exchanging ideas on every subject. They made together dreams which they knew could never be realized. They played comedy together on an amateur stage of the Prince de Condé's. The young officer himself wrote a comedy for the occasion: "L'Impromptu de Village." He veiled in it his own sentiments and those of the Princess. The Prince de Condé easily discovered the nature of his daughter's sentiments. When they returned to Paris, and La Gervaisais had returned to his garrison, they wrote to each other. He obtained permission to go to Paris, but he did not stay long. People were beginning to talk; the reputation of the Princess was in question; she would not marry Gervaisais, and she felt that she must renounce the pleasure of seeing him. She wrote him a letter which was a supreme adieu; he made no reproaches; the rupture was complete. He left the army, travelled, and married. (He died as late as 1838.)

Louise de Condé was named abbess of the noble chapter of Saint-Peter of Remiremont. The thirty-two nuns of this old abbey had a very mundane life; all that was required to enter it were proofs of a very ancient nobility. The Princess made a solemn entry in 1787; she was to be the last abbess. She was with her father at Chantilly on the 14th of July, 1789, when the news of the fall of the Bastille was announced to them; on the 17th, the Condés, with some retainers on horseback, and the Princess de Condé in a carriage, left Chantilly for Péronne. The Princess had to take in her carriage Mme. de Monaco. "Natural antipathy and legitimate prejudices disappeared in this situation, in the presence of imminent danger and a common devotion." On the road beyond Péronne, the Condés met the two young sons of the Count d'Artois, the Duke de Berri and the Duke d'Angoulême, accompanied by their governor. "They thought that they were going to a review, and were very gay, while they were conducted out of France to join their parents, who had fled. All along the road, as far as the frontier, cries were heard of 'Vive le Tiers!' and 'À bas la noblesse!'"

We will not follow the Princess de Condé in her numerous peregrinations during the emigration. M. de Ségur enters into minute details on this rather checkered part of her existence, spent in so many different places, finally a little more tranquil in Eng-

land. After the Restoration, she was allowed to found an order on the site of the Temple, which had been the prison of Louis XVI. and his family, the "Order of Perpetual Adoration." She kept her name of Sœur Marie Joseph de Miséricorde. Her life becomes completely veiled; she sees little even of her family; she is the Prioreess of the Temple, and is occupied solely with her little flock. She fell ill in the beginning of 1824, and died peacefully, without great suffering, on the 10th of March.

Correspondence.

THE FILIPINO'S PASSION FOR LIBERTY.

TO THE EDITOR OF THE NATION:

SIR: This note from Guyau's 'Education and Heredity,' p. 101, seems worth reprinting:

"What has always distinguished the savages of the Philippines from the other Polynesian races is their indomitable passion for liberty. In a massacre on the island of Luzon, made by native soldiers under the order of a Spanish officer, a little black, of about three years old, was seized by the troops and brought to Manila. An American obtained permission from the Government to adopt him, and he was baptized under the name of Pedrito. As soon as he was old enough, efforts were made to give him all the instruction that could be obtained in that remote land. The old residents of the island, knowing the character of the Negritos, laughed in their sleeves at the attempts made to civilize the lad, and predicted that sooner or later the youth would return to his native mountains. Thereupon his adopted father announced that he would take Pedrito to Europe. He took him to Paris and London, and only returned after two years of travel. On his return, Pedrito spoke Spanish, French, and English with all the facility with which the black races are gifted; he wore thin patent-leather boots, and everybody in Manila still remembers the grave manner, worthy of any gentleman, with which he received the first advances of those who had not been introduced to him."

"Two years had scarcely elapsed after his return from Europe when he disappeared from the house of his patron. Those who had laughed now had their hour of triumph. It would probably never have been known what had become of the adopted child of the philanthropic Yankee, if a European had not come across him in a remarkable way. A Prussian naturalist, a relative of the celebrated Humboldt, resolved to make the ascent of Mount Marivella, a mountain not far from Manila. He had almost reached the summit of the peak when he suddenly saw before him a swarm of little blacks. The Prussian prepared to sketch a few faces, when one of the savages came forward and smiled, and asked him in English if he knew an American in Manila of the name of Graham. It was our Pedrito. He told his whole story, and when he had ended, the naturalist in vain endeavored to persuade him to return with him to Manila.—Vide *Revue des Deux Mondes*, June 15th, 1869."

If to catch them in infancy and tenderly nurture them to years of discretion, if to baptize them, teach them French and English, and put them into thin patent-leather shoes, is not going to tame them, how can we hope that our Gatlings in a brief month or two will quell their "indomitable passion for liberty"? Verily it is a strange burden the white man has taken upon himself.

S. M. ILSLEY.

SANTA BARBARA, CAL., March 20, 1899.

THE GREEK FOR "JINGO."

TO THE EDITOR OF THE NATION:

SIR: The following passage from Isocrates

(*De Pace*, §12) is not inappropriate in these days:

"I am surprised that the older men no longer remember, and that the younger ones have not heard from anybody, that we never yet suffered any evil from following those who advised us to maintain peace; whereas, because of those who lightly [or 'recklessly,' as *peblon* may be translated] choose war we have before now found ourselves involved in many and serious disasters."

Respectfully, ADDISON HOGUE.
WASHINGTON AND LEE UNIVERSITY,
LEXINGTON, VA.

FACSIMILES OF GREEK AND LATIN MSS.

TO THE EDITOR OF THE NATION:

SIR: At the meeting of librarians held in Chicago in 1893, it was proposed by Dr. Hartung of Halle that an association be formed for the publication of photographic reproductions of important Greek and Latin manuscripts. The plan of an association fell through, chiefly for financial reasons; but at the suggestion of the late Dr. Du Rieu of the University Library at Leyden, Mr. A. W. Sijthoff undertook to publish, at his own risk and expense, twelve important manuscripts. Since the death of Dr. Du Rieu his successor in the directorship of the University Library, Dr. S. G. De Vries, is acting as editor-in-chief of the series. Two volumes have appeared ('*Vetus Testamentum Graece*, codicis Sarraviani-Colbertini quae supersunt,' with preface by Henri Omont, and '*Codex Bernensis 363*,' with preface by Hermann Hagen), and the third volume ('*Plato: Codex Oxoniensis Clarkianus 39*,' with preface by Thomas W. Allen) is nearly ready.

The publication of the series of manuscripts was undertaken with the hope that those libraries and institutions of learning which could not expect to possess important manuscripts in the original, would be glad to obtain accurate reproductions. Certainly nothing could be of greater advantage to palaeographical and text-critical studies in America than the possession by our libraries and universities of such reproductions as those published by Mr. Sijthoff. The expense of publication is so great that the series cannot be continued without loss unless the sale of the volumes is increased. Each volume costs from \$40 to \$50, but the purchase of one volume does not bind the purchaser to subscribe for the series. Orders may be sent to Mr. A. W. Sijthoff, Leyden.

Believing that it is of special importance to American scholars that the reproduction of important manuscripts be continued, I venture to ask you to publish this letter.

Yours truly, HAROLD N. FOWLER.

WESTERN RESERVE UNIVERSITY,
CLEVELAND, O., March 24, 1899.

"THE LAW OF THE ROAD."

TO THE EDITOR OF THE NATION:

SIR: In connection with the interesting correspondence in your columns as to "the law of the road," I notice a couple of references to Canada that are not altogether accurate. The law in Ontario is, and always has been, "Turn to the right on meeting, and pass on the left when overtaking." The first statute to that effect was passed in 1853 and has remained practically unchanged to the present day. A report on early town meetings is in preparation in this department.

and the following entries taken therefrom may be of interest:

"Newark (Niagara) 5th March, 1797: Resolved, That all teams, carriages, etc., coming to town should keep the road, and those going from town to turn out for them."

"Niagara, 7th March, 1808: Resolved, That carriages on meeting should give half the road, keeping the right-hand side."

It will be seen, therefore, that the practice in Ontario is that of the Northern States, whence the first settlers came. In Nova Scotia, I believe, the English custom was adopted, and is still followed.

It may be of interest also to know that, on double-tracking its line, the Grand Trunk Railroad adopted the English practice of running on the left-hand track.

C. C. JAMES.

DEPARTMENT OF AGRICULTURE,
TORONTO, March 25, 1899.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent Mr. E. F. Merriam is certainly at least partially in error when he says in your issue of March 23, "In Canada the English custom of keeping to the left is retained." Born and raised in the province of Ontario, I never heard of such a custom being in vogue there, and I know that it is not in the province of Quebec. I do not dispute the observance of the rule in St. John, N. B., but I learned of it only from the editorial note in a recent number of your paper.—Respectfully,

A. M. DONOVAN.

DETROIT, MICH., March 25, 1899.

TO THE EDITOR OF THE NATION:

SIR: The universal rule of the road in Halifax and throughout this province, the rule recognized by law, is to turn to the left on meeting. It is one of the first things the visitor notices. Here the English tradition has been unbroken. The same rule is very strictly enforced in Jamaica.

Yours, etc.,

A. MACMECHAN.

DALHOUSIE COLLEGE,
HALIFAX, N. S., March 18, 1899.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: In your review of my 'Romanticism' (March 16), you say: "The author's uncertainty as to the spelling of the name 'Wharton' ('Wharton' at pp. 179, 307, etc.) will cause confusion to readers who do not know that the two are variant writings of the same name."

But they are not variant writings of the same name. The Wharton mentioned on pp. 179 and 307 was Dr. Thomas Wharton of Old Park, near Durham, Gray's lifelong friend and correspondent.

If your reviewer catches me anywhere bestowing the aspirate upon Joseph or Thomas Wharton, I shall beg him to lay the blame upon the printer.

HENRY A. BEERS.

NEW HAVEN, March 20, 1899.

[The error is ours. The fact that Prof. Beers refers to Dr. Wharton (p. 179) as the "Rev. Thomas Wharton," assisted in misleading us. Thomas Wharton was an M.D.; Thomas Wharton a B.D. Moreover, the name "Wharton" does not appear in the index to the work under review.—ED. NATION.]

Notes.

Macmillan Co. have nearly ready 'Electricity in Town and Country Houses,' by Percy E. Scrutton, with illustrations; and 'The American Art Annual,' edited by Florence N. Levy, and including a complete record of painters, their works for 1898, directories of art dealers, etc., etc.

M. F. Mansfield & A. Wessels have in preparation 'A Glossary to Accompany Departmental Ditties as Written by Rudyard Kipling,' and 'The Religion of Mr. Kipling,' by W. B. Parker.

A new edition of Maupassant's 'Pierre and Jean,' translated by Hugh Craig and illustrated, is forthcoming from Brentano's.

'Early Chapters in Science,' by Mrs. Awary, will shortly be published by E. P. Dutton & Co.

A. C. McClurg & Co. have in press 'The Bee People,' by Margaret Warner Morley.

A 'Handbook of Labor Literature,' compiled by Miss Helen Marot of the Free Library of Economics and Political Science, Philadelphia, and 'Pauperizing the Rich,' by Alfred J. Ferris, are to be issued by T. S. Leach & Co., Philadelphia.

The bound volumes for 1898 of *Harper's Round Table, Magazine, Weekly*, and *Bazar* make comprehensively a solid library of pictorial chronicle and entertainment. The *Magazine* we have epitomized from month to month. The *Weekly* opened at peace with all the world, with a cartoon showing a pretty legacy to the new year of Dingley deficit, Hawaii, and Cuba (as an object of sympathy). To the cartoonist our fraudulent pensions seemed next the most inviting butt in the following five weeks. The sending of the *Maïne* to Havana was recorded as a wise and friendly measure for the support of Blanco. Its destruction in February did not make the *Weekly* Jingoish. By the middle of March the cartoonist found his cue in "fifty millions for defence"; towards the end of April in "Cuba Libre." From that date, Mr. Carl Schurz's signed weekly article disappeared, and then the war and "expansion" perforce took outward possession of the paper, and the cartoonist ends with the white elephant of our Eastern Problem as 1898's legacy to 1899. The vicious circle of the year's politics is complete.

The *Bazar* increasingly shows that its woman's world is not so remote from man's as it once was. Mr. T. W. Higginson continues to hyphen them with his "Women and Men" articles; and, of course, the late war involved the sympathies and humane activities of the non-combatant sex. The demise of Gladstone and Bismarck forced attention as surely as that of the Queens of Denmark and Austria; of William Black as of Maria Louise Pool. Then in the great portrait gallery of Red Cross nurses, of the heads of the higher education for women, of officers of women's clubs and federation of clubs, one remarks the little group of women street-car conductors illustrating the experiment made at Chillicothe, Ohio.

With 'Denis Duval' (the volume including also the "Roundabout Papers," "Lovel, the Widower," and "The Wolves and the Lamb"), we come to the twelfth of the thirteen volumes of the Biographical Thackeray (Harpers). Mrs. Ritchie's notes on her father's life apparently end here. A great deal of delightful material, old and new, has been given by her in the several introduc-

tions, and it seems but a reasonable demand on the publishers that the whole should be bound up and sold separately, a formal life of Thackeray being out of the question. In no single introduction of the twelve, we think, has the true personal note of the man and the writer been more clearly sounded than in the present one. Mrs. Ritchie quotes many striking tributes to Thackeray; nothing, perhaps, more satisfactory both as tribute and criticism than this from Cardinal Newman: "His last fugitive pieces ["Roundabout Papers"] in the *Cornhill* were almost sermons." *O si sic omnes!*

All signs fall if the bulky volume, 'Live Questions,' stamped in silver on the back, and comprising the papers, speeches, interviews, messages, and apologia of ex-Gov. Altgeld of Illinois, is not calculated to cause insomnia in Col. Bryan. As McKinley's ambition was foreshadowed in a similar compilation, and Bryan's in yet another, so this anarchistic-minded and looking Illinois politician is apparently setting his cap for a Presidential nomination. Nor is he unmindful of Mrs. Bryan's part in her husband's campaign, for he accompanies his own portrait with that of Mrs. Altgeld. Like the rival "literature" just mentioned, this volume is not readable in any intellectual sense; but it is not to be despised by those who wish to know what way we are drifting.

Under the title of the 'Life and Sayings of Rāmakrishna' (Charles Scribner's Sons), the well-known missionary Vivekānanda has collected what is known of his spiritual master's earthly career and the logia attributed to him. The life is that of the ordinary Hindu visionary and theosophist, one so ignorant that he cannot read Sanskrit, so inspired that he instructs the most learned in the deeper wisdom of Hindu philosophy. He is not a charlatan, he is spiritual, but he is essentially an insane man, credited with divinity in which he himself believes; a mystic of the usual type, who yet speaks in rather clever sayings to the adoring multitude. Vivekānanda gives us a collection of nearly four hundred of these winged words. Many of them are clearly inspired, as, for instance: "The Lord can pass an elephant through the eye of a needle"; for, like all the modern teachers of India, Rāmakrishna drew his inspiration from all sides. Of the longer sayings showing considerable shrewdness there is space to quote only one. The Master said: "Everything that exists is God." The pupil understood it not in the true spirit. While passing through a street he met with an elephant. The driver (on the elephant's head) shouted "Move away!" The pupil said, "I am God, so is the elephant also God. What fear has God of himself?" Thinking thus he did not move. At last the elephant dashed him aside. He was hurt, and going back to the Master he related the adventure. The Master said, "All right, You are God. The elephant is God also; but God in the shape of the elephant-driver was warning you also from above. Why did you not pay heed to his warnings?" The book is edited by Prof. Max Müller, who has contributed an introduction and put his own name on the title-page, though Vivekānanda is the real author.

Those interested in Sanskrit literature will find a trustworthy summary of the 'Rāmāyana' and 'Mahābhārata' in a little book by J. C. Oman, principal of Khalsa College, Amritsar (London: George Bell & Sons; New York: Macmillan). The author writes with temp-

pered admiration and with a knowledge of Hindu character not always possessed by those who criticise Hindu literature. This "sketch of a great picture," as it is modestly called, lies midway between the skeleton analysis that is usually given in books on Hindu literature, and a complete translation. The latter fills several large volumes, but this one little duodecimo, representing very fairly the chief incidents and giving a complete outline of the two great epics of India, may be recommended as useful to all save Sanskrit scholars, for whom, however, the book is not intended.

The sixth volume of Dr. Hans Blum's 'Fürst Bismarck und seine Zeit' (Munich: Beck) ended with the celebration of Bismarck's eightieth birthday in 1895 and was intended to be the conclusion of the work. After the death of the illustrious statesman, the author and publisher deemed it their duty to issue an additional volume describing the events of his life till the time of his decease. The contents of the seventh volume consist chiefly of a record of private and personal incidents, interspersed with expressions of opinion concerning public affairs and questions of internal politics, derived principally from the columns of the *Hamburger Nachrichten*, the mouthpiece of the retired Imperial Chancellor. An excellent index to all seven volumes is especially welcome, and greatly enhances the value of this popular biography.

Dr. Herman Schell, Professor of Apologetics in the University of Würzburg, published two pamphlets entitled 'Der Katholicismus als Prinzip des Fortschrittes' and 'Die Neue Zeit und der Alte Glaube,' which are liberal and progressive in spirit and endorse the tendency known as "Americanism" in the Catholic Church. These writings, after having passed rapidly through several editions, have now been placed on the Index Expurgatorius and are thus officially forbidden to the faithful. This attempt of Italian Jesuits, of whom the Index Congregation is principally composed, to put the works of a German scholar under ban, has created intense excitement in Würzburg, and called forth loud protests of students and prominent citizens against such a measure. On entering his lecture-room, Prof. Schell was the object of enthusiastic ovations on the part of his admirers, who were so numerous that not half of them could gain admittance, so that it was necessary to adjourn to the *auditorium maximum* of the University, which also proved to be too small to receive them. He assured his hearers that he should hold fast to his views as already expressed, and remain "an unswerving champion of the truth," devoting his life to its defence. Three days later, however, Prof. Schell's fortune failed him, and he tamely and unreservedly submitted to the arbitrary decree of the Index Congregation, and promised to bring his teachings into harmony with the decisions of the papal hierarchy.

While the new German civil code, which will enter into force on January 1, 1900, does not in every respect fulfil the wishes of the most advanced advocates of the woman's cause, a perusal of Prof. Dr. Planck's brief comments on some of the more important paragraphs of the new law ('Die rechtliche Stellung der Frau nach dem bürgerlichen Gesetzbuche,' Göttingen) will convince any candid person that, in the main, the new law greatly improves the legal status of women in Germany. Thus, the changes from

older statutes relating to the right of married women to hold property, or engage in business of their own, are all in their favor, and it is gratifying to notice how generally a fair and humane spirit seems to have guided the lawmakers in their difficult task.

The *National Geographic Magazine* (Washington) for March contains an historical sketch of the original territory of the United States, by David J. Hill, Assistant Secretary of State, in which he quotes this characteristic saying of Franklin's to Jay on the Spanish claim to control over the Mississippi: "Poor as we are, yet, as I know we shall be rich, I would rather buy at a great price their right on the Mississippi than sell a drop of its waters. A neighbor might as well ask me to sell my street door." There is also a topographical and geological description of Porto Rico, by R. T. Hill of the United States Geological Survey, with illustrations of scenery.

The natural resources of the Barren Lands of Canada are discussed, in a paper by J. B. Tyrrell, in the *Scottish Geographical Magazine* for March. The territory treated lies to the west of Hudson's Bay and north of the line of the mean summer temperature of 50 degrees F., and occupies an area of about 400,000 square miles. "In its general character the country is a vast undulating plain, underlain by a stony clay, and covered with short grass or deciduous Arctic plants." In it have been discovered large belts of rock containing iron and copper; the latter seeming to extend for about 500 miles along the Arctic coast, both east and west of the Coppermine River. A narrative of zoological explorations last summer in the Barents Sea is by W. S. Bruce. Both papers are illustrated.

The Fifteenth Annual Report of the Geographical Society of Berne contains an account of the changes in the Canton of Zurich since the middle of the seventeenth century observed in the position and extent of lakes and pools, of the forests and of vine-growth. There is, besides, a description of the Danube between Belgrade and the Iron Gates. Some interesting letters written from Algeria in 1840, valuable for their graphic pictures of its condition at that time and of its inhabitants, are published in the Sixteenth Report, for the year 1897. This further contains a paper by Dr. H. Zahler on disease in the popular beliefs of the Simmenthal, in the Bernese Oberland. The material is drawn from oral sources and from ancient manuscripts. It includes a great number of quaint remedies against and methods of treating various diseases, as well as curious receipts and much witch lore and other superstitious formulae. These popular beliefs, the author holds, are the remains of scientific systems, partly derived from the Greek and Roman times and partly from the ancient Germans. They have not been invented or discovered by the people themselves, but are to be traced to a foreign origin.

"Shakspeare's Pericles and Apollonius of Tyre" is the title of a paper contributed to the current number of the Proceedings of the American Philosophical Society by Albert H. Smyth. He gives an historical sketch of the "Apollonius Saga," from which the story is drawn, from its untraced origin in the late sophistic romance of Greece through a long line of translations, imitations, ballads, and plays to its culmination in Shakspeare's "Pericles, Prince of Tyre." He con-

siders it remarkable that a story known to almost every European language should have preserved an almost unaltered integrity for more than a thousand years. Shakspeare is the first narrator to change the name of the hero. A series of correlated stories is discussed, and in an appendix is given in full the 'Gesta Romanorum' text. In the same number are two papers by Dr. Daniel G. Brinton, entitled, "The Linguistic Cartography of the Chaco Region," and "On Two Unclassified Recent Vocabularies from South America."

The *Milan Perseverance* of February 12 contains an article, five columns in length, by Michele Rajna of the Brera Observatory, regarding the vexed question of the exact date of the twentieth century. This learned astronomer, fortifying his position with astronomical and mathematical calculations, with numerous profound chronological citations, affirms that the nineteenth century will close with the year 1900. But he does not cherish the hope that he has definitely settled the prolonged discussion, for he himself reminds his readers that volumes were written in the year 1700 regarding the exact beginning of the change in the century, and again in 1800.

Another new star has been discovered at the Harvard Observatory, again by Mrs. Fleming, to whom we are already indebted for five of the six new stars found since 1886. This latest comer in the stellar family is in the constellation Sagittarius. An examination of the plates shows that a year ago it was of the fifth magnitude, but had sunk a month later, in April, to the eighth. A photograph taken a few days ago, on March 9, shows it as still fainter, having a brightness of only the tenth magnitude. Its spectrum, exhibiting fourteen bright lines, greatly resembles that of other new stars.

Prof. Edward C. Pickering, director of the Harvard Observatory, notifies the discovery, by his brother William, of a new and ninth satellite of the planet Saturn. It adds another to the triumphs of photography in the service of astronomy, the new body having been found on four plates exposed with the Bruce telescope at Arequipa in Peru. This additional moon of Saturn probably does not exceed 300 miles in diameter, and is so faint that but few of the great telescopes at present in existence are powerful enough to disclose it. Japetus, discovered at the Paris Observatory in 1671 by Dominique Cassini, has hitherto been regarded as Saturn's outermost moon, being at a distance of $2\frac{1}{2}$ millions of miles from the planet, and having a period of 79 1-3 days. But the new satellite is three and one-half times more distant than Japetus, and it consumes almost a year and a half in going once completely round Saturn. More than half a century has elapsed since a new satellite was added to the Saturnian system; the seventh moon, Hyperion, having been found by Prof. W. C. Bond at Harvard, on September 16, 1848.

The Franco-American Committee formed in 1896 is preparing, for Americans intending to study in France, a sort of guide which will give information of a general nature on the system and regulations of higher education in France, as well as special practical hints for foreign students. Inquiry may be made of the Corresponding Secretary of the committee, M. Henri Bréal, No. 70 Rue d'Assas, Paris.

Gen. Greeley has had reproduced for the benefit of the Signal Corps a large general

map of the Philippines, dated Manila, 1897, showing telegraphic and cable lines, light-houses, etc., besides the political and, more or less crudely, the physical geography. There are no soundings given.

A monument to the late Mrs. Martha J. Lamb, author of a 'History of New-York,' and editor of the *Magazine of American History*, is contemplated. Subscriptions to the fund may be sent to Mrs. Edward E. Salisbury, New Haven, Conn.

—A work almost appalling in the magnitude of its conception has been undertaken, by subscription, by R. Herndon Co., Boston, under the title, 'Universities and Their Sons.' The initial volume is one of five constituting the first series only, yet it counts, with the indexes, 738 quarto pages. It and the succeeding four deal with Harvard, Yale, Princeton, and Columbia; and if the term "university" is not to be construed rigidly, the vista is colossal. The general editorship has been confided to Gen. Joshua L. Chamberlain, former President of Bowdoin College and Governor of Maine, and the aim of the series is declared to be not merely a summary history and exhibition of each university in its several departments and conscious life, but a demonstration of "the practical influence which these institutions of learning have had . . . in what we call 'business,' extending to industrial and commercial lines, and in fact to all that expresses itself in the character and prosperity of a nation." While the second volume will consist of biographical sketches of the personnel of the several university administrations, the remaining three will be composed of selected biographies of the "Sons"—and in this lies the "Pudels Kern" of the enterprise on its pecuniary side, as in similar cases. Needless to add that portraits will accompany the sketches when practicable. Of these portions no one can speak now. What is before us has been well planned and handsomely carried out. The characterization of Harvard has been executed by Mr. W. R. Thayer, editor of the *Harvard Graduates' Magazine*; of Yale, by Prof. Charles Henry Smith; of Princeton, by Prof. John DeWitt and Mr. J. L. Williams; of Columbia, by Dean Van Amringe. With a natural difference in bulk as in literary quality, it may be said that the letter-press is altogether good, convenient for reference, and trustworthy. The illustrations are excellent and most abundant, and generally run parallel in the four divisions. The start, therefore, is all that could be desired.

—Mary Antin, a young Russian Jewess, emigrated to this country at the age of eleven, accompanying her mother, two sisters, and a brother, to rejoin the father already here. The child's story has just been published with a foreword from the pen of I. Zangwill, who disclaims any credit for having discovered an infant phenomenon; but he does consider the record as saved from the emptiness of embryonic thinking by being a spontaneous account of a real experience, the greatest in the child's life. Written in Yiddish as she travelled "From Plotzk to Boston," it was, two years later, or when Mary Antin was thirteen, translated into English remarkable in quality for any child, but particularly for one to whom the intricacies of the new tongue were so extremely novel. Two years still later, being now but fifteen, the young girl has written a prefatory note to the journal, which is publish-

ed, under the above title, by W. B. Clarke of Boston. The profits, if any, are to be devoted to her farther education. Plotzk is in the central western portion of Russia, on the Duna River, and the fever of emigration to America had struck the whole region. The father of Mary Antin set out three years ahead of his family, and, during that time, hope and doubt and suspense were the portion of those left behind. At last the welcome summons came; and very soon the crowd of emigrants started forth upon their travels, all unknowing what lay before, and with the innocence of children as to how the coming experiences were to be met. The crowded, uncomfortable cars, the woes of quarantine detention when leaving the Russian frontier, amazement at the size and noise of Berlin, the drive across Hamburg, the days of enforced waiting before embarkation, the coming of Passover and the trembling doubt as to whether the emigrants would be allowed to keep the feast as its strict rules enjoined; the glad reception of the summons to go on board the *Polynesia*, and the first night at sea—all are set down with the enthusiasm of a child, and with much more than a child's power to express great experiences. Her narrative of the long voyage, her own emotions, what the ocean said to her, the first sight of land after seventeen days, the noise and confusion, the joy when "papa" was distinguished upon the wharf in Boston, after years of longing for his face, the official delays in landing, and then the rush, as six wild beings clung together, "bound by a common bond of tender joy"—all this is certainly what Mr. Zangwill calls it, "the raw stuff of art."

—Not unwarned, but unterrified, by the failures of a long line of hardy experimenters, Mr. W. J. Stone of King's College, Cambridge, essays once again the impossible, in a pamphlet entitled 'On the Use of the Classical Metres in English' (Oxford: Clarendon Press; New York: Henry Frowde). After some fifty pages of discussion and of laying down of rules of quantity—not uninteresting in themselves—he offers, as specimens of the results of his methods, a version of some hundred lines of the *Nausicaa* episode in the 'Odyssey,' and two of famous epigrams. By his fruits let him be known; the beautiful lament for Heracitus appears in the following garb:

"Come hither, Heracitus, a word of thy death, awaking
Me to sorrow, and I thought upon how together
We would see the sun out sweet-counselling: all
That is of thee.
Dear Halicarnassian, long, long ago is ashes;
But thy nightingales will abide with us; on them
Of all things
Else the coming ravisher will not ever set his
hand."

How to scan these 'Elegiacs' will be a pleasant little puzzle for the long winter evenings spent round many a classic lamp. The reader may rest assured that they strictly conform to Mr. Stone's "rules"; and Mr. Stone may haply some day learn that poetry is verse written by poets—not words weighed and measured by any system whatsoever.

—Johnston and Robertson's 'Historical Geography of the Clans of Scotland,' which was originally issued in 1872, has just reached its third edition (Edinburgh: W. & A. K. Johnston) under the care of Mr. William Kirk Dickson. The work has long been out of print, and is reproduced now, with certain changes, "in response to numerous inquiries." A slight glance at the contents will serve to show why the early editions were at once absorbed and why a new one is called

for. Every true Highlander is interested in at least his own family history; and wherever the clan feeling is combined in the slightest degree with the historical sense, this book will be demanded. Its most conspicuous feature is a large folding map (32 inches by 24) which includes the whole of Scotland, and gives the clan territories in their relations both to the Lowlands and to the physical aspects of the Highlands. Following this come seven other clearly executed maps or plans, several full-page reproductions of portraits (Montrose, Dundee, and the two Pretenders), 175 pages of documents, illustrative text, etc., a bibliography of books on the Highland campaigns, and a full index. Such a combination of *utile dulci* cannot fail to capture the Scotchman or the historian. Not only are the clans represented in a state of quiescence, occupying certain districts, but copious notices of their military activity are added to the purely topographical description. Their badges are given both in Gaelic and in English, and also their war-cries. Among documents, Gen. Wade's Report on the Highlands in 1724 and the Disarmament Act in 1746 are cited in full. Finally, we should observe that the period to which the territorial subdivisions of the large map refer is the end of the sixteenth century. "This early date was selected because then most of the Highland tribes were still in occupation of the lands which they had inherited from their forefathers. During the troubles of the following century some of the weaker clans were deprived of their possessions by their stronger neighbors." We shall be much surprised if this atlas, in its improved and supplemented form, does not meet with the same success which attended the earlier editions.

—The Asiatic Society of Japan, which for the past year or two seemed to be in a moribund condition, has recently renewed its life and shows fresh vigor. Excellent papers have been presented on early English intercourse with Japan and on the moral training of the Japanese feudal nobility, especially in Mito. These will be published. The supplement to volume xxiv., now at hand, gives a valuable list of plants from Formosa, by Augustine Henry, who adds preliminary remarks on the geography, flora, and economic botany of the island. Formosa, lying between parallels 22 and 25 of north latitude, has an area of about 15,000 square miles; its length being 235 miles and its greatest width 90 miles. It is a continental island, for in recent geological times it was connected with the mainland of China. Hence the flora, as thus far studied, is mainly Chinese in character. There are no exceptional types of vegetation known, and not a single genus peculiar to the island has as yet been discovered. Westwardly is the Formosa channel, very shallow and nowhere deeper than 100 fathoms. On the Pacific side, however, at a few rods from the shore the lead shows a thousand fathoms, and further out is an abyss of enormous depth. The highest cliffs in the world are on this eastward side, which indeed is a great mountain mass rising in peaks from nine to thirteen thousand feet high. The western half of the island is an alluvial plain, only slightly elevated above the sea. The plants of the plain are those of India and South China, while those on the mountains are near of kin to those in Central Japan and China. There is no marked winter season, and flowers are found in pre-

fusion at Christmas time. Besides the cereals and ordinary crops, which are the same as those in South China, are camphor, tea, indigo, textile fibres in amazing variety, tumeric, dye-yam, rattan, mats, soap-fruits, rice-paper pith, and timber of almost every imaginable sort. Mr. Henry's pamphlet, though mainly a catalogue, with here and there illuminating comment, does but whet our curiosity for more, because the mountainous half of the island is practically unexplored. Indeed, he modestly calculates that only half of the plants of the island are now known. It is interesting to note that at least twenty of the very important Formosan plants known to the materia medica are nearly all of American origin. These have been introduced by the agency of man, and are now indistinguishable, except by their history, from the native flora.

—There is general rejoicing in Washington among the better sort, both within and outside of the Library of Congress, at the appointment of Mr. Putnam to the headship, and general consternation among those of the Library employees who regard the public service as the public trough. Mr. Putnam's acceptance is said to have at once increased the efficiency of the force 10 per cent. It is a melancholy instance of the way of doing things in Washington, and of the public's utter lack of comprehension of a great library's needs, that, until Mr. Barrows was rejected, not one of the candidates supported by Senators and Representatives for the direction of the most important library in the country had any library training, any library experience, or any other proved fitness for the place. Fortunately, the reputation of the country in a bibliothecal way has never depended on the national or the State libraries. It has been firmly established by our city and town libraries. They are ahead, far ahead, of those of any other country. But the National Library lags as far behind. In a building, to be sure—the least important factor in library success—the National Library is in the van. No great library building in the world surpasses it, or perhaps equals it, in adaptation to library purposes. In the other factors, the store of books, the system, the personnel, there has been much to desire. But now a capable head will soon bring the personnel and the system where they should be, and then Congress can hardly fail to place in his hands money enough to make the store of books worthy of a great nation. Within the country one of the best results of the appointment will be its ultimate effect on State libraries. When the head of the National Library is appointed for merit, it must be that in time our States will become ashamed of the way in which the office of State Librarian has been thrown about as a reward for political service.

FUR AND WHISKEY IN THE NORTH-WEST.

Forty Years a Fur-Trader on the Upper Missouri: The Personal Narrative of Charles Larpenteur, 1833-1872. Edited, with many critical notes, by Elliott Coues. In 2 vols. New York: Francis P. Harper. 1898. Pp. xxvii, 473. Maps, views, and portraits.

Fur lay at the first foundation of the United States. The facsimile "May Flower Log," p. 67, relates that, within a year of

the Plymouth landing, a party who "went out altogether unprovided for trade," brought home two hogsheds of beaver bought for a few trifles, and estimated worth nearly £500. Soon afterward there is mention of 3,366 weight of beaver, "much of it coat-beaver which yielded 20s. per pound, and some of it above." But whereas, in the founding of New England, codfish was a fellow-factor with beaver, in the Mississippi valley fur had no such formidable rival. Two young fur-traders founded St. Louis in 1763. A voyage of more than three months up from New Orleans had convinced them that a new base for their industry was needed, nearer the habitat of fur-bearing animals. One of those founders, Auguste Chouteau, lived in St. Louis sixty-six years. He or his kindred established fur stations which were germs of Kansas City, St. Joseph, and other towns on the Missouri-Mississippi all along up to St. Paul and Fort Benton—the latter, 3,500 miles from the dual river mouth. Many of these stations became sites of Government posts; more developed into centres of agriculture, manufactures, or mediterranean thoroughfare and commerce. The history of the great valley thus twining its roots and rootlets amid fur industries, the rise and progress of those industries are some of the most important features in Western annals.

No man has done so much as Dr. Coues to accumulate and popularize knowledge on this subject. His new edition of Lewis and Clark illuminated every page of the old one, either from the original manuscripts or by countless collateral notes. The light thus thrown on the great fur rivers was scarcely greater than that he shed on the fur mountains and prairies by his three volumes on Pike, supplemented by another on Fowler. Similar was his illumination of the upper region where Pike had shown us only dawn-ing rays. Thanks to the Thompson and Henry explorations, Dr. Coues could display the Canadian belt from Lake Superior to the mouth of the Columbia in all its amplitude, and that beginning in the eighteenth century. The work now before us on Larpenteur brings the series up to thirteen volumes, "congruing," a Shaksperian might say, "in a full and natural close, like music."

The six volumes from Larpenteur, Fowler, and Henry were all compiled from the original manuscripts of their authors, and had never before been printed. But for Dr. Coues, it is not likely they would any of them have been published at all. Their hair-breadth escapes before they came into his custody must soon have turned into catastrophes, and our zest in reading the pages is doubled by thinking how long their survival hung on an attenuated thread. The editor's persistence in quest of new material for building up the history of the American West during its infantile decades is noteworthy, and deserved the astonishing success which has crowned his labors. His finds within his chosen fields seem analogous to the recent classical discoveries through Egyptian excavations, and must encourage him to be sanguine of further success where others have despaird.

In our critical era, the narrative of Larpenteur will seem rather incredible to many, but not after reading the confirmations strong as proofs from Holy Writ which Dr. Coues has gleaned in undesigned coincidences of many varieties and from a cloud of witnesses. In this regard his annotations are on the model of Paley's 'Horse Pauline'

—a work we fear he has never read. Dr. Coues's text is made up from brief notes which had been jotted down all along during Larpenteur's active life, and from a large volume covering the same ground and written out by him in his last years. It was, however, a clerical copy of this journal which was first discovered. Rich, racy idioms abound throughout, which readers feel must have come hot from the heart of the adventurous frontiersman; but they are imbedded in matter of quite another style. Hence we are harassed by doubts on many a page how far we are perusing the genuine protevangelium. These doubts are doubled by a remark of the editor that "there was scarcely a sentence in all the original writing that did not need to be recast to some extent" (p. xxvi). The autobiographer may overrate his own exploits, like the fly on a coach-wheel crying, What a dust we kick up! But for such an infirmity we can make allowance, and know the editor has no share in that.

Larpenteur, when a boy of eleven years, was brought from France to Baltimore, and ten years thereafter was carried off by the Western fever to St. Louis. Five years later, in 1833, when twenty-six, he engaged in the fur trade, in which he persevered with little interruption for forty years, mainly on the upper Missouri and its affluents. His first objective point, the mouth of the Yellowstone, eighteen hundred channel miles above St. Louis, was reached by a circuitous route—so much so that at the Continental Divide it touched on waters which flow into the Pacific. In the course of this journey, Larpenteur, who had been reluctantly accepted as a common hand, gave proof of uncommon capacity and so was put in a position from which an incompetent clerk was displaced.

This first grand march of forty-five men on mule-back lasted five months, and glimpses of its nature we catch from pencillings by the way. Each man, nominally master of three mules, was often mastered by them. One was left behind by his trio and could not overtake them till evening; another was bucked off and thrown on a clump of prickly pear, etc. Days of work were followed by guard duty at night. A sleeper bitten by a mad wolf died of hydrophobia. So did a bull. Another bull, who survived, swam the Missouri with Larpenteur, who was a poor swimmer, hanging on his tail. Wages, in name \$16.50 a month, were seldom anything at all, being spent before due, to eke out a ration more starveling than any in our Spanish war. Flour, sugar, salt, coffee, each were charged at a dollar a pint, and whiskey five dollars. Two guests of honor moved in the company—Dr. Harrison, a son of the future first President of the name, who took the tramp, trusting it would prove as efficacious as the Keely cure for drunkenness, and Capt. Stewart, a Waterloo veteran who went along just for fun. Sometimes a day's march ended at noon for building pens horse-high and bull-strong, lest their animals be spirited away in the night, and the men left as helpless as a bird without wings.

At the end of perils in the wilderness, the Journalist (as Larpenteur calls himself) worked at building a fort until his time of service expired. His employers were then bought out by their rivals, the American Fur Company, into which, thanks to his record, he was taken as a clerk. The headquarters of this corporation were at the

mouth of the Yellowstone, the largest branch of the Missouri and not far from midway between its source and mouth. Their name was Fort Union, or The Big Fort. Here Larpen-
teur sat at the table of a master "who was always dressed in the latest London fashions." The truth is, that fur magnates were not a whit behind mediæval feudal barons, either in irresponsible power or in fuss and feathers. The newcomer was tried in divers tasks and rewarded according to his merits. His promotion on the way up had been to take the place of a drunken clerk, and, thanks to his own temperance, he became a chief agent in Indian traffic. His customers, however, chose to trade by night, and this native preference laid on him trials of watchings among hordes whom he must first cheat and treat, and then "drag out doors by arms and legs" (p. 74). His whiskey was for a time supplied from a distillery secretly set up in the fort, and it was concocted of corn bought of squaws. Moreover, in spite of laws, penalties, officials (civil and military), whiskey came up on every boat from first to last. It seemed to fly in on the wings of the wind.

Larpen-
teur's arrival on the Yellowstone was one year after the first steamer had, in 1832, forced the first passage so far up stream. Nor was there in that earliest era more than one boat each year. One of these long-looked-for arrivals brought smallpox, but no vaccine matter. Vaccination being impossible, Indians were inoculated, but from so bad a subject that they nearly all died. Then followed suspicion, war, and re-
venge on the part of the savages. Our French clerk became more and more serviceable. He took an Indian wife and learned her lan-
guage. His power among natives was thus increased, and he was early and often sent on missions to extend his company's sphere of influence. But his most frequent en-
deavor was to recover stolen horses—a species of property which, being able to carry itself off, as well as a thief and his thievery too—was unaccountably missing; not only after native visitors took leave, but while they were believed to be very distant. Whis-
key sufficed for all the missionary's needs, rendering him everywhere and always *persona grata*. It was his credentials, it ex-
cused from the smoking he detested, it brought to light hidden horses and redeemed them. In going to interviews it proved wise to conceal on the way half his liquor in the earth, as a reserve to be brought forth and turn the scale in a doubtful battle.

His services were whole-souled and ef-
fectual. Advances were made in his stand-
ing and salary, and before five years were over he had been granted half a sabbatical year. This vacation he spent in a journey to his father in Baltimore. In March, 1838, as soon as the ice broke, he, with one friend, started down the Missouri in a canoe with two oarsmen. The danger was no trifle, not only from ice-gorges, but because friendly Indians narrowly missed killing them as foes, and hostiles shot at them and pierced their boat with bullets. In returning, he was six weeks in the saddle in nightly perils of horse thieves, and more than once robbed. The next season, 1839, he was sent down to St. Louis, in charge of a fur fleet, a voyage profitable to his firm; yet he was not re-
engaged until his successor had been cash-
iered for drunkenness. The next spring, however, he steamed up triumphant and ex-
ultant to Fort Union, and was put in com-

mand of a party dispatched far from that base to build a new trading post, though soon recalled because "wanted mighty bad in the liquor department" (p. 175).

In 1846 he was sent up the great river from the Big Fort even above the future site of Fort Benton. About forty men were in his detail, and thirty of them on the river bank, each with a rope over his shoulder, cordelled his boat up stream for seventy days. At his northern goal he built a new fort and reached his glorified hour. But here he made what Dante would call the great refusal, for he would not serve under a West Pointer that was promoted over his head, and was thrown out of service. Henceforth the voyage of his life was bound in shallows and in miseries. He was indeed perpetually reengaged, but year by year threw up his posts, or was thrown out of them. His own independent initiatives when he was the first man to drive a wagon from St. Paul to the Missouri, and to essay passing from the Missouri to the Flatheads, were failures. So were several partnerships in which he engaged. There is no room here for details, but no reader can lay down the book in which they are told to the life. Our final feeling is that the Journalist was of that class who, in the midst of failures, still find in a career without circumscription or confine a zest they could never taste did they abandon their un-
housed free condition.

Larpen-
teur's disclosures make nothing more clear than that whiskey was fitly styled by Robert Hall "distilled damnation." Irving's almighty dollar was nothing compared to its pernicious potency in the fur trade. It broke through or crept through all laws and barriers. It turned every fort and fur camp into a saloon. It defrauded Indians of their peltry, crippled their hunting power, aggra-
vated their fightings and diseases. The rank and file in fur companies it beguiled into a maximum of work for a minimum of wages. It so increased the risks of the fur business that the percentage of dealers who made money grew smaller and smaller, till they could all be counted on one's fingers, like the glean-
ing of grapes when the vintage is done.

There is one link wanting in Dr. Coues's bead-roll which we trust he will supply. It is the journal of D. W. Harmon, a Vermon-
ter, "a servant and afterward a partner in the Northwest Fur Company," during the first two decades of our century—a service ended before Larpen-
teur's began. This production, never printed but once, and that, eighty years ago, and not in a way adapted to keep it be-
fore the people, is almost as unknown as if it had remained in manuscript. It needs elu-
cidation, and evinces the earnest endeavor of a New England Puritan to make the trade in furs a double blessing—to him who gives and him who takes. Alas, that the endeavor, however well meant, proved the proverbial twisting of a rope of sand.

SCOTTISH VERNACULAR LITERATURE.

Scottish Vernacular Literature: A Succinct History. By T. F. Henderson. London: David Nutt. 1898.

The want which the present volume is in-
tended to supply has been for some time se-
riously felt by students of literature. A complete history of Scottish vernacular liter-
ature has not before been attempted except in such mere outlines as that of Nichol; and the treatments of parts of the field by Irving and Ross have long been out of date. Prof.

Walker's 'Three Centuries of Scottish Lite-
rature' is the only recent essay in the field, and the period with which he deals falls after the great age of Douglas and Dunbar. What was needed was a survey of the whole ground, in which the author should avail himself of the material made accessible in the publications of the Text Societies, and should test and coördinate the results of the researches embodied in the introductions to these editions. This Mr. Henderson has at-
tempted, and, on the whole, has accomplished satisfactorily.

The volume opens with a severely con-
densed account of the origin and growth of the Lowland Scottish vernacular itself, and in the course of this an outline is given of the history of Scotland down to the reign of David I. Considering the extremely obscure and difficult nature of the history of these early centuries, we could not expect in such a work as the present much fullness of dis-
cussion; but the condensation has been car-
ried so far that readers for whom such a sketch is necessary will find it at points barely intelligible. The account of the dia-
lect itself, however, is adequate, the author following, for the most part, the lines laid down by Dr. Murray. It is to be regretted that, with one exception, no references are given in this chapter to works in which a fuller discussion of the language or the his-
tory is to be found.

Into the main disputed questions connected with the earlier monuments of Scottish poe-
try Mr. Henderson has gone with considera-
ble thoroughness, and in some cases with substantial results. In the matter of the authorship of the Scottish 'Sir Tristrem,' af-
ter a close examination of the passage from Mannyng's Chronicle, he seems to lean to Sir Walter Scott's view that the romance was, after all, written by Thomas of Erce-
lounne. Of the relation of this 'Tristrem' to the Continental versions of the same tale, however, he gives only a vague hint; and when he goes on to describe it as "at least the most elaborate and perfect of the early romances dealing with the story of Tristan and Ysoude," one suspects the thoroughness of his knowledge. This suspicion is con-
firmed more than once as the history pro-
ceeds; for it is precisely where a general knowledge of mediæval literature outside of Britain is required for a satisfactory treat-
ment that the present work is least satisfac-
tory. Thus, the 'Legends of the Saints' and the version of the story of Troy which have been attributed to Barbour, are passed over in a sentence each, no indication being given, save by the phrases "internal evidence" and "insufficient evidence," of the reasons for rejecting them. So, also, the whole question of the sources of Henryson's 'Fables' is dis-
posed of in the parenthesis, "paraphrased from Æsop"—which, if it means anything, is far from a precise indication of the facts of the case. Again, in his account of Dou-
glas's 'Palice of Honour,' Mr. Henderson re-
peats Small's suggestion of a relation be-
tween this poem and Bunyan's 'Pilgrim's Progress,' a suggestion which has absolutely no plausibility in the face of the prevalence of such works as the 'Pèlerinage de la Vie Humaine' of Deguillville. Nor is it clear why he should say that "the distinctive note of 'The Palice of Honour' is the intermixture of Sacred History and the Christian Faith with Heathen Mythology" (p. 193), when a glance through the French literature of the centuries immediately preceding the date of

that poem shows that this intermixture is a constant characteristic of that long line of allegories from which 'The Palice of Honour' is descended. The fact is that the value of the work of Mr. Henderson's predecessors in the field of early Scottish literature has been lamentably lessened by this very lack of a perception of its relation to preceding and contemporary Continental literature; and it is disappointing that, in this latest attempt, so scholarly in many respects, we should again have grounds for the same criticism.

On the question of the identity of "Huchown of the Awle Ryale," Mr. Henderson inclines to the usual opinion in favor of Sir Hew of Eglington, his chief reason being that "his name could scarce have been omitted from the death-roll of Dunbar's stately 'Lament for the Makaris,'" and that no other name in that poem seems to fit. But James I.'s name does not occur in that roll, and the assumption that Dunbar meant his catalogue to be exhaustive is hardly justified. More satisfactory is the attempt to clear Barbour of the charge of having wilfully confounded his hero with his hero's grandfather, in order to get rid of the awkwardness of the patriot's early allegiance to the English king. It is pointed out that the misleading words, "the Brwa I spak of ayr" do not occur in Wyntoun's copy of Barbour, and so may be due, not to the poet, but to a copyist. Our author's further argument, that the falsification must have been exposed in Barbour's own genealogy of the Stewarts, seems hardly so strong as he believes, for this genealogy is lost, and we have no proof, since the Stewarts were connected with the Bruces on the female side only, that the 'Stewartis Oryginalle' contained anything about the Bruces farther back than Robert I.

The recent attack by Mr. J. T. T. Brown on James I.'s authorship of 'The Kingis Quair' is met and sufficiently answered. A very vigorous attempt is made to prove that 'Pebilis to the Play' and 'Christie Kirk on the Green' are also the work of James I., and what seems an adequate reply is given to Prof. Skeat's objections on the score of language, metre, and inappropriateness to the character of "the moral and sententious James the First." But Mr. Henderson does not deal with the point that the identification of the poem 'At Beltayne,' which Major ascribes to James, with 'Pebilis to the Play'—an identification about which he says "there is almost no doubt"—is made under the assumption that there was only one poem beginning with these words. Now 'At Beltayne' means, of course, "on May-day"; and when we consider how frequent such a beginning is in the contemporary poems in other languages, it seems easy to believe that half-a-dozen such may have disappeared among the mass of lost Scottish poetry. Further, is it easy to believe that a king, however great his sympathy with the commons, was likely to be able to describe, with so intimate a knowledge as these poems display, the rowdiness of a class of whose manners he must have remained, after all, a spectator?

But the most controversial chapter in the book is that dealing with "Traditional Ballads and Songs." Here Mr. Henderson makes a vigorous attack on the communal theory of the origin of ballads as held by Mr. A. Lang and Professor Gummere, maintaining that, "as regards the ballad poetry we actually possess," this theory is "founded rather on general *a priori* considerations than

on minute inquiry into facts; and the more one seeks to have recourse to it for an explanation of individual examples of the literature for which it professes to account, the more unmistakably does it approve itself a mere 'broken reed.'" The value of his discussion is, however, greatly lessened by the fact that he takes his account of the theory he wishes to demolish, not from the most recent statement of it in Prof. Gummere's 'The Ballad and Communal Poetry' (Harvard Studies and Notes, vol. v.), nor even from the same author's introduction to his 'Old English Ballads,' but from Mr. Lang's twenty-year-old article in the 'Encyclopædia Britannica.' Thus he wastes much of his powder in attacking positions which no one now seeks to defend; and at the same time leaves unanswered the two most important of his opponent's arguments, viz. that from the impersonal quality which is the distinctive mark of the traditional ballad, and that from the community of subject-matter among the ballads and folk-tales of all nations.

Having thrown aside the communal theory as useless, at least as regards actually existing ballads, Mr. Henderson turns to the theories of minstrel authorship, professing on the whole an allegiance to that of Mr. Court-hope, with modifications. The modifications are chiefly these: (1) that the later minstrels, who, according to Courthope, made the ballads out of material supplied by *chansons de geste*, romances, lays, or *fabliaux*, were not necessarily degenerate; (2) that "some of the Scots traditional ballads were originally the work of poets other than minstrels." This position he seeks to support by an investigation of the dates of those historical ballads which are supposed to be most ancient, the general tendency of his results being to reduce considerably the usual estimate of their antiquity. The only point we need note here is his suggestion that Sir Patrick Spens was really a Sir Patrick Vane, who was chosen ambassador to negotiate the marriage of James VI. with Anne of Denmark; and that what is perhaps the most famous of Scots ballads is thus only about three hundred years old (not two hundred as he, surely by a slip, says). The chapter closes with an admirably effective reply to the attempts of Chappell and others to deny the Scottish origin of any of the tunes to which the ballads and popular songs were traditionally attached.

The distinctive feature of Mr. Henderson's treatment of the Scottish poets in general is the attention he bestows on metre. His notes on versification in the 'Centenary Burns' had already led us to expect from him some more comprehensive treatment of Scottish metres, and we are not sure that it would not have been a gain had the valuable contributions here made to this subject been published separately. As it is, the amount of space devoted to technical discussion of this kind occasionally forces him to rather summary treatment of other things, as, for instance, when Sir David Lindsay's 'Monarchie' is dismissed in four lines, in which it is spoken of as 'The Dialog,' no mention being made of it under its more usual title.

We have dealt in some detail with those opinions in the present volume which seemed to call for further discussion; but it would be a mistake to allow the consideration of these points, for the most part somewhat minute, to blind us to the general excellence of the work. Throughout, Mr. Henderson gives proof of a first-hand knowledge of

nearly all the monuments he discusses; his appreciation is sympathetic and discriminating; and his style, if not one of much distinction, is clear and serviceable. The publication of the volume marks a step in the advance of Scottish scholarship.

Democracy: A Study of Government. By James H. Hyslop. Charles Scribner's Sons, 1899.

Should all those who have like feelings concerning our politics accept Prof. Hyslop's proposals, we might soon look for better times. Undoubtedly, a very general feeling of distrust and apprehension prevails, which is reflected in a steady stream of criticism and complaint. But of this, Prof. Hyslop thinks, we have had more than enough. It is high time that something positive and constructive should be proposed. Wearied, then, "with the perpetual grumbling which is either unable to see a way out of the confusion, or too cynical and hopeless to try an escape," he has ventured to offer for debate a complete system of government which is neither a reaction towards monarchy nor an acceptance of the *status quo*. It is, of course, an ideal system that is proposed, but it is an ideal to be kept steadily in mind when practical measures of reform are undertaken.

Because of the weariness of criticism to which Prof. Hyslop refers, most readers will turn at once to that part of his book entitled "Practical Remedies," and we can follow their example without inconvenience. This we may do, because the major premise of the argument is simply that reform must come through the honesty and intelligence of the officers of government. The problem is to secure such officers, and the solution is to be found in the limitation of the suffrage. In order to establish the proposition that the possession of property tends to make the citizen demand honesty and intelligence in his rulers, Prof. Hyslop frankly denies the existence of such a demand on the part of the "proletariat," and exposes the fallacy of supposing that any educational test can establish the existence of virtue in those who pass it. Experience has shown that such tests are of no value in determining the political intelligence of an electorate. On the other hand, Prof. Hyslop labors earnestly to prove that the possession of wealth, or the "economic criterion," is a test of such virtue as qualifies for civic rights and duties. His reasoning is clear and strong; but it is unfortunate for his argument that he should not have sought historical confirmation of his contention.

Those who hold that it is vain to attempt any limitation of the suffrage, we may say at once, will find nothing practical in Prof. Hyslop's remedies. Yet we cannot ignore the fact that in several of the States very severe restrictions of the suffrage have recently taken place, and it is not unreasonable to consider that similar restraints may elsewhere be adopted. What is proposed as a qualification for the electorate is not the possession of land, but the possession of an income, to be established by the payment of a tax on it. It is not the mere possession of wealth, but the qualities that are necessary for its acquisition, which constitute the test, and these economic virtues are to be found especially in the middle class. The political excellencies of this class were extolled formerly more than they have been in recent years, and it is refreshing to have

their claims again put forth in Prof. Hyslop's vigorous and uncompromising language. It is not easy to defend the common people against the specific charges of incapacity for self-government which he brings against them, nor to deny that the grossest of our political abuses are connected with the excessive enlargement of the franchise.

To commit the government to the hands of the middle class, however, would not be a complete remedy. There must be an alteration in the machinery of government, which is to consist chiefly in the establishment of two courts, one to confirm the appointments of the Executive, the other to overthrow them. We should apprehend the complete destruction of responsibility under such a system, could we conceive it to operate if it were ever established. The constitution of the court of impeachment and removal especially is so peculiar as to place it outside of political possibility. The members of this court are to be drawn from a college nominated years in advance of their actual service, and it is quite incredible that even the middle class of our people would tolerate a government under which a few men appointed, perhaps, by President Cleveland, should have the absolute power of turning all President McKinley's appointees out of office. The situation in President Johnson's time was grave enough to deter us from further experiments in that direction.

While Prof. Hyslop's devices may be regarded rather as curiosities of speculation than as possible institutions, we cannot refrain from expressing some surprise at his condemnation of "checks and balances." Under the name of "inhibition," he brings in more checks than the writers of the 'Federalist' ever dreamt of, and in the flow of his argument he often employs the term "check" instead of "inhibit." The term appears to be selected on account of its use by physiologists, and although Prof. Hyslop carefully explains why a political state is not an organism, he appears to be at times carried away by the analogy which may be made out between them. The most serious defect in his work, to some readers, will be his assumption that government is an institution which must have more and more to do. It may be contended, on the other hand, that government undertakes now far more than it ought to or than it has ever given signs that it is fitted to. In this view, the only hope of reform consists in reducing the members of the governing class and their opportunities for plunder and oppression, until the emoluments of power shall be insufficient for the support of our two standing armies of politicians. It is hardly disputed that nothing done by government is done so well as similar work is done by private enterprise, and if this is true, it is certainly unnecessary to concede that further extensions of governmental activity are required by political evolution.

Students of political science will probably be more attracted by Prof. Hyslop's broad historical generalizations than by his practical suggestions. He calls attention to the influence of religious beliefs and philosophical theories on the development of civil government, finding in the growth of monism in religion and philosophy the cause or concomitant of the conception of universal empire. We fail to understand how the dominion of the polytheistic and unphilosophical Romans is explained by this theory; but, without arguing that point, we may say that the author's conclusions are extremely pregnant, if not profound. Altogether his book is an exceptionally racy, vigorous, and compact review of political evolution, and it well deserves the attention, not only of students, but also of that conservative middle class whose prosperity implies the general welfare.

The Successors of Homer. By W. C. Lawton. The Macmillan Co. 1898.

The general neglect by students of literature of the fragments of the epic "cycle" is easily accounted for. They have no special beauty, they are too short to convey any definite idea of the original whole; in brief, their interest is due almost wholly to the fact that they show that the epic impulse, though it lasted for some centuries after the completion of the 'Iliad' and the 'Odyssey,' had rapidly lost its early creative force. The 'Cypria,' 'Little Iliad,' and the rest were the work of imitative poets, who, offended in their historical instincts, desired that the 'Wrath of Achilles' and the 'Return of Odysseus,' mere episodes in the tale of Troy, should take their proper rank in a great historical sequence of epic lays. It was inevitable that this ambition should produce chronicles rather than poems. The unity that comes of a limited subject, that had given the 'Iliad' and 'Odyssey' a claim to be considered organic wholes, was not to be attained by poets so embarrassed by their wealth of material.

It is not so easy to explain the scant attention paid by English critics to the Homeric Hymns. It is true that their language has not the sustained beauty of the 'Iliad' and the 'Odyssey,' and that they have many of the marks of a period in which the epic had lost its spontaneity and the digamma was shamelessly neglected. Of the thirty-four that are extant, only five repay careful study; but no review of Greek poetry that does not take into account the Hymns to Apollo and Demeter can be considered complete. They have been ignored by Prof. Jebb in his work on 'Classical Greek Poetry,' and by J. A. Symonds, whose 'Greek Poets' ranks as one of the very few handbooks of literature that can be read without weariness. Walter Pater is perhaps the only English essayist who has done justice to the beauty of the Hymn of Demeter. Mr. Lawton, in the volume before us, makes a praiseworthy if somewhat uninspired attempt to open up for English readers the rather barren field of the cyclic epic; he describes and partly translates the chief Hesiodic poems, the Homeric Hymns, and, lastly, the philosophic treatises in hexameter. The analysis of a long Greek poem can hardly fail to seem flat to the general reader who cannot read the original, unless, indeed, the writer possesses a delicate touch and the gift of imagination. In interest and suggestiveness Mr. Lawton, though his treatment is conscientious, is no match for J. A. Symonds, whose chapter on Hesiod shows an insight and a scholarly temper that make Mr. Lawton's appreciation seem amateurish by contrast. There is more reason for Mr. Lawton's chapter on the Homeric Hymns, because of their previous conspicuous neglect.

We cannot consider his translations happy. The English hexameter, as a medium of

translations, is fatally adapted to bald renderings. Mr. Lawton does not escape the snares that lie about the feet of the translator of epic—snares that might be avoided by any reader of Matthew Arnold who should be endowed with a sense of humor. What would the author of 'The Art of Translating Homer' have said to the description of Zeus (p. 111):

"Who, as he sits with Themis, engages in chat confidential?"

Mr. Lawton is not always as unhappy as this; but any one who compares his verse-rendering of the most beautiful passage of the Demeter Hymn with Pater's prose version will appreciate the superiority of exquisite English prose over the artificial doggerel that translators still offer the "English reader" who desires to understand the fascinations of Greek poetry. The Demeter Hymn was exhumed at Moscow in the Imperial Library as late as 1780, and exists in a single manuscript—facts which Mr. Lawton omits to mention. Of all the Homeric Hymns it is the most beautiful in its imagery and descriptions. The myth of Demeter and Persephone is perhaps the most interesting of all myths, partly because it came to have a strong ethical significance, and partly because in it was symbolized for the Greek mind the mysterious life of the earth. The description of the narcissus that tempted Persephone is worth quoting here:

"She was playing with the deep-breasted daughters of Oceanos, and gathering flowers, roses and crocus and pretty pansies, in a soft meadow, and flags and hyacinth, and that great narcissus that earth sent up for a snare to the rose-faced girl, doing service by God's will to Him of the Many Guests. The blossom of it was wonderful, a marvel for gods immortal and mortal men; from the root of it grew a hundred heads, and the incensed smell of it made all the wide sky laugh, and all the earth laugh, and the salt smell of the sea. The girl wondered and reached out both her hands to take the beautiful plaything. Then yawned the broad-wayed earth by the plain of Nysa, and the deathless horses broke forth, and the Cronos-born king, He of the Many Names, of the Many Guests; and he swept her away on his golden chariot."

Mr. Lawton's discussion of "Hexameter in the Hands of the Philosophers" is very slight. He deals briefly with Xenophanes, Parmenides and Empedocles, and again, in the case of the last two, provokes unfavorable comparisons with Symonds. His little book is unpretentious and painstaking, and will probably be useful to the "English reader," who can take so many short cuts to great authors nowadays that his innate conviction of the futility of consulting the originals is daily nourished. It is to be hoped that others will understand the allusion to the "similar death of Massachusetts's favorite son" (p. 145); we are completely at a loss to explain it. We wish that Mr. Lawton would not refer to Homer as "Poeta Sovrano," but perhaps this is captious. On p. 27 we note the misprint "rurück" for "surück."

Chitral: The Story of a Minor Siege. By Sir George S. Robertson, K.C.S.I., author of 'The Kafirs of the Hindu-Kush.' 8vo, pp. 368, with illustrations. Charles Scribner's Sons.

This very attractive book is the story of the siege of the fort at Chitral, high up among the mountains which separate the tributaries of the Indus from those of the Oxus, close to the "roof of the world." It is the detailed account, from the personal

point of view, of the campaign of the late winter and spring of 1895, which Major Younghusband has sketched in outline in his 'Indian Frontier Warfare,' where the operations for the relief of the beleaguered fort are chosen as illustrations of difficult mountain campaigning.

Sir George Robertson was the civil official of the British Indian Government charged with the political agency for the region north of the Punjab, in which was the independent native principality of Chitral, coextensive with the narrow valley of that name, walled in by mountain ranges covered with perpetual snow, and laterally accessible only by passes high above the snow line, regarded as impracticable in winter. Sir George's headquarters were at Gilgit. The Chitral and Gilgit Rivers rise near each other on opposite sides of a range, the first flowing southwest into the Kabul, close to Jalalabad, and so into the Indus near Peshawar, the other running southeast into the Indus much higher up. The streams named enclose a quadrilateral of terribly rough country, which includes the Swat valley, itself the scene of a recent fierce struggle between the English and the mountaineers.

The outbreak in Chitral began with the assassination of the ruling Mehtar or chieftain by his half-brother, who tried to usurp the throne. But the inheritance was claimed by two others of the family, and the adherents of each gathered to support their leader's claims. Here were all the elements of a petty Oriental convulsion, especially as the neighboring tribes were for various reasons in a powdery condition, ready for an explosion. Robertson's position had much resemblance to that of our officers and Indian agents in the Rocky Mountains when an outbreak occurs there. From Gilgit he had communication with a couple of small posts in the valley above him; then, over the ridge, was a small fort at Mastuj in a valley tributary to Chitral, which was some sixty miles below. When hostilities break out, communication between such posts becomes very precarious, and, like our own, the English officers find their responsibilities greatly increased by the difficulty of getting messengers through from one to another. The petty garrisons were about a hundred men each, generally Sepoys, of which the Sikhs and Gurkhas were the best. The military officers were captains and lieutenants subordinate to the civil agent, with whom lay the responsibility of dealing with the natives. The forts were native strongholds, usually square enclosures with corner towers, all built of timber and masonry in alternate layers, the stones laid in mud mortar. The British troops were regarded merely as escorts for the political agent and his assistants, and did not occupy the forts in time of peace.

At the moment of the murder at Chitral, Robertson had a junior assistant there with a handful of men as an escort, and the assassin demanded of him recognition on the part of the Indian Government. The assistant, Lieut. Gurdon, parried the demand by urging lack of power for so weighty a decision, and the necessity of referring the matter to his superiors. By great coolness, Gurdon managed to postpone hostilities till Robertson could collect three or four hundred men at Gilgit and start to his relief early in January. The latter reached Chitral on the 1st of February, after a most diffi-

cult march, and found that the country down the valley was in arms for another pretender backed by the Khan of Jandol, who, in turn, was supposed to be instigated by the Amir of Kabul, glad to make trouble for the English. By skillfully temporizing, Robertson succeeded in keeping the parties from active war during another month, but by the 1st of March the party about Chitral melted away by desertions, and the pretender in the camp of Umra Khan advanced with a strong force, numbering some thousands, and, after a sharp combat with the English, drove them into the fort and established a siege. Robertson declared for his Government in favor of an innocent boy who was one of the numerous half-brothers of the murdered Mehtar, and who with a number of his headmen was also in the fort.

A close siege was maintained for six weeks, during which time the skillful Pathan riflemen made it almost certain death to show a head above the ramparts. Two smaller bodies of troops trying to open communication with the garrison were surrounded and destroyed. By the end of March the Indian Government had organized two columns of relief, one at Gilgit under Col. Kelly, and the other on the Peshawar frontier, a whole division under Gen. Sir Robert Low. Kelly's was a little quicker in motion and reached Chitral on the 20th of April, but Low's heavier force had gone to the heart of the matter by forcing its way across the Swat Valley into the home country of the Khan of Jandol, bringing him back in haste from the support of the pretender, who was keeping up the siege, but who was unequal to fighting Robertson when reinforced by Kelly.

Sir George has happily made his story a familiar narrative, in which we become personally acquainted with the group of his fine young subordinates and with the native personages with whom he has to deal. By giving us even the minutiae of passing occurrences and the conduct of those about him, we are enabled to understand the native people, their military and social character, the personal traits of the different classes of Sepoy soldiers, and the features of the mountain region which was the romantic theatre of operations. The marches of Low and Kelly are also told with fulness enough to make us feel how formidable a task it is to break over such passes as the Lowari and the Shandur, while they are still blocked by the deep snows of winter. The illustrations include photograph portraits of the men most frequently named in the story, British and native, singly and in groups; a good topographical map; reconnaissance sketches of some of the fortified gorges; and, best of all, a fine series of photographs of the valleys, the mountains, and the forts. In matter and form alike, the result is a most satisfactory book.

Elizabeth, Empress of Austria. A Memoir by A. De Burgh. With eighty illustrations. London: Hutchinson & Co.; Philadelphia: J. B. Lippincott Company. 1899.

The Martyrdom of an Empress. With portraits and photographs. Harper & Bro. 1899.

Of irresponsible gossip concerning the unfortunate Empress of Austria there has been a plenty, both during her lifetime and since her tragic death; but legitimate interest in her history has hardly been satisfied by the

rhaphodic German recollections of her Greek reader, Christomanos, and others who came under her spell, nor will the two English biographies which aim to tell the complete story of her life be accepted as trustworthy accounts. A. De Burgh's attractively illustrated volume, although scarcely more sober in its estimate of the character of Elizabeth, is decidedly less sensational in its treatment than the story of 'The Martyrdom.' It may, however, be briefly dismissed as the product of an unskilled pen. There is neither unity nor proportion nor sound judgment to be found in the book. The chapter on "The Empress as an Architect," and such remarks as, "Of prose-writers she especially admired George Eliot and Lord Byron. . . . She is also reported to have been particularly struck with the imaginative power of Marie Corelli's writings," give us the full measure of the biographer's critical capacity. Countless misprints and misstatements testify to his ignorance of Austrian matters (as well as to the carelessness of the publishers' part in the work); but even after reading of Golukowsky and Tiska and Count Munkácsy, one is rather startled at seeing a portrait of the youngest son of the Archduchess Otto labelled the "direct heir to the throne," the fact being that the child is a nephew of the heir-apparent, Franz Ferdinand, and only very remotely connected with the succession.

"The Martyrdom of an Empress" claims more serious attention only as being ostensibly the work of a lady closely attached for years to the person of the late Empress and her confidante at critical moments. This claim is apparently sustained by the recital of incidents of which only the Empress and her biographer were witnesses, and the disclosure of secrets which have hitherto been considered impenetrable even by those in close relations with the court circles of Vienna. Thus, the story of Elizabeth's estrangement from her imperial husband and of her reconciliation to him, during the first years of their married life, is told with melodramatic force, and the account of the catastrophe at Mayerling is here given with a fulness of particulars such as, to our knowledge, has never before reached the public. More than this, we have a report of a conversation between Crown Prince Rudolph and the writer, on the subject of his conjugal misery, in the course of which she called him "Rudi" and "my dear boy." Where her own personal knowledge is incomplete, old nurses and gypsies, and apparitions, and portents complete a story the dramatic vividness of which Louise Mühlbach might have envied. And yet the same person who knows the inmost secrets of the Austrian court speaks of the Queen-Regent of Spain as the favorite niece of the Emperor Francis Joseph, of Archduke Albrecht as his *wife*; writes as if a *Groschen* were a current Austrian coin to-day (whereas it has been out of date for half a century and more); persistently spells the Empress's birthplace Possenhoffen; and reports a conversation between the Empress and "Professor Rhousopoulos," which in reality took place between her and Dr. Max Falk, as related by him in the *Neue Freie Presse* shortly after her death. In other words, her ignorance of matters which every child in Austria knows—she actually writes, "There was not a more popular man in the Austro-Hungarian army, nor in the length and breadth of the dual empire, than the Archduke" (Albrecht,

the haughtiest and most reactionary of all the Austrian princes)—furnishes the gravest reason for doubting the authenticity of her revelations. At best, her estimate of Elisabeth as a woman "cast in a mould that had not one weak point in its make" shows her unfitness for her task. And her censure of the other actors in the drama which she depicts is as indiscriminating as her praise of her heroine. The *Maisons* of Francis Joseph and the intrigues of his mother may have darkened the early life of the Empress, and the tactlessness of her daughter-in-law embittered her later years; but stronger proof of the facts is required than the wholesale charges contained in these anonymous memoirs, the publishers of which ought to have offered to the public some guarantee of their genuineness. If it is the misfortune of kings, as Johann Jacoby said, that they do not want to hear the truth, it is the peculiar misfortune of Elizabeth of Austria—from all accounts as high-minded and truth-loving, with all her eccentricities, as she was beautiful—that the true story of her strange and sad life is apparently not to be told even after her death.

KERNER'S NATURAL HISTORY OF PLANTS.

4 Parts. Cloth, \$15, net, carriage, \$1.

A beautiful book with over 2,000 original illustrations, 16 of them full-page plates in color.

Nation: "The lucidity of style is remarkable. Almost all the newer developments, even those not yet accepted universally by botanists, are given with a great degree of fulness. . . . A popular work on the phenomena of vegetation which is practically without any rival in a brilliant style."

N. Y. Times: "A magnificent work. . . . Superb illustrations."

Boston Transcript: "A monumental work."

The Critic: "In wonderfully accurate but easily comprehended descriptions, it opens to the ordinary reader the results of botanical research down to the present time."

The Outlook: ". . . For the first time we have in the English language a great work upon the living plant, profound, in a sense exhaustive, thoroughly reliable, but in language simple and beautiful enough to attract a child. The plates are most of them of unusual beauty. Author, translator, illustrators, publishers, have united to make the work a success."

The Week.

If Aguinaldo is the educated and cosmopolitan man he has been represented to be, he will now surrender on the best terms he can get. We have his "capital," and did the Austrian Emperor hold out after Napoleon was in Vienna? Aguinaldo may point out that it cost Napoleon 50,000 men to capture Vienna, while we took Malolos with the loss of only one man killed; but that only shows how irresistible we are. We greatly fear, however, that Aguinaldo has already got another capital one day's march farther in the jungle. Wherever he pitches his tent, there is his capital. Public buildings, the archives, the diplomatic correspondence, can all, we suppose, be carried on the backs of two moderately robust Tagals. So we may yet have to capture a half-dozen more Philippine capitals. But we warn Aguinaldo that, if he does not now yield as a civilized man should when his capital is lost, he will be severely criticised by some of our best minds.

There is no lack of predictions of what Aguinaldo will do now, and what the Filipinos will do, but of positive knowledge the American authorities both at Manila and Washington seem to have very little. It is one of the disadvantages plainly to be foreseen in dealing with Malays and Moros, that their minds do not work like the American mind. They are often governed by motives which appear to us to be the height of absurdity, but which are to them the purest light of reason. We should never think of going on with a war after our "capital" was taken, and a superior force was chasing us through the jungle. But, for all we know, that is the very thing to encourage the Filipinos to go on. Agoncillo says it is, and that they have another capital just as good as Malolos. The fighting may come to an end to-morrow, or it may go on for ten years. Nobody knows. The jauntiest imperialist now confesses his ignorance. But it is that lamentable confession of ignorance which comes after the fact, which makes us sadder and wiser, but does not in the least help us out of our scrape.

We are getting new ideas out of our Philippine experiences on a great many subjects nowadays. For one thing, we are learning what wretchedly inefficient old fogies the managers of our missionary enterprises have always been. The approved modern system, which we are substituting for the slow-going me-

thods of the "back-number" societies, is thus set forth by one of its champions, the Rev. Dr. Wayland Hoyt of Philadelphia:

"Christ is the solution for the difficulty regarding national expansion. There never was a more manifest providence than the waving of Old Glory over the Philippines. The only thing we can do is to thrash the natives until they understand who we are. I believe every bullet sent, every cannon shot, every flag waved means righteousness. When we have conquered anarchy, then is the time to send the Christ there."

A graphic picture of the way we are making the natives "understand who we are" is drawn in the report published on Friday from F. A. Blake of California, who is in charge of the Red Cross work at Manila. He wrote just a week after the fighting actually commenced in February, and he thus describes the scene at the end of the first day's operations:

"I never saw such execution in my life, and hope never to see such sights as met me on all sides as our little corps passed over the field, dressing wounded—legs and arms nearly demolished, total decapitation, horrible wounds in chests and abdomens, showing the determination of our soldiers to kill every native in sight. The Filipinos did stand their ground heroically, contesting every inch, but proved themselves unable to stand the deadly fire of our well-trained and eager boys in blue. I counted seventy-nine dead natives in one small field, and learn that on the other side of the river their bodies were stacked up for breastworks."

The Samoan squabble is a petty affair in itself, and will probably lead to no serious international consequences; but it is a "miserable tangle," as a London paper called it two months ago, and vividly illustrates the difficulties of this new style of long-range government of natives who do not want to be governed, upon which Uncle Sam has vain-gloriously embarked. Such a venture was flatly declared by Mr. Blaine himself in 1889 to be "not in harmony with the established policy of this government"; and the question which Secretary Gresham asked in 1894 seems doubly pertinent to-day, "What have we gained beyond the expenses, the responsibilities, and the entanglements?" Well, an English Tory and Jingo newspaper tells us what we have gained. It says that the only bright spot in the whole miserable business is that the Americans and the British "fought splendidly" together. What canting nonsense! To stay safely on board cruisers lying off shore and to shell the forest where the natives were in hiding, to burn villages, and to reduce to poverty the women and children who may have escaped our fire with their lives—this is the modern *gaudium certaminis*, the crowded hour of glorious life reserved for imperialists and missionaries of civilization! It is an old story for the English. They are familiar with "punitive expeditions," and executions which they call a battle. But it

is a new thing for Americans, and they cannot be blamed for being a little squeamish over the business as yet. In time we may hope to slaughter helpless human beings as nonchalantly as Rosas or Abdul Hamid or the Mahdi.

It seems the Hawaiians are pleased to have got off from the American Congress as well as they did. They got nothing in the way of positive action, except the extension of the American navigation laws to their islands, but negatively they were at least left alone for the present with their own immigration laws. The *Hawaiian Gazette* is jubilant over this fact. It says that, notwithstanding the fact that 11,200 male Japanese laborers were imported between January 1, 1898, and March 1, 1899, "there is still need of about 10,000 more." If Congress had extended American immigration laws to Hawaii it would have produced "a serious crisis in the labor market." As it is, there will be time for a "general stocking-up of the plantations with an abundance of Japanese laborers," so that there will be "an easy labor market for several years to come."

Here is frankly revealed a situation to make the hair of American "labor" stand on end. An "easy labor market" in the Hawaiian islands means, of course, a market flooded with coolies. What becomes, then, of all the talk about the new field for American labor in Hawaii? We were told, labor leaders were told, that there were only 25,000 Japanese in all the islands, yet here we see 21,000 more brought in since annexation to take the bread out of the mouths of Americans. If the laboring people of the Pacific Coast dreaded the free competition of 50,000 Chinese and Japanese in Hawaii, how will they like it to see that number increased by one-half before it is possible for our restrictive laws to be applied? Perhaps it will not increase their pleasure at the situation to know whom they have to thank for it. It is Senator Morgan. Our immigration laws would have been extended to Hawaii by Congress but for his objection. He said he would force an extra session rather than see the prospects of the Hawaiian planters blasted by cutting off their labor supply. In the slaveholder's language of the *Hawaiian Gazette*, he wanted to see a "general stocking-up" with Japanese labor. This was natural enough in an Alabama Senator, left over from slavery days. But what do New Englanders think of it? What does Senator Hoar think of it, with his known aversion to going to "foreign soil" and ruling "subject races"? Doesn't he wish now that

he had withstood the evil in its beginnings, and voted against Hawaiian annexation, as his present avowed principles would require him to have done?

Eagan appeared before the beef court of inquiry last week in subdued frame. Some furious profanity of his, directed against the soldiers who would not eat his rotten beef, was reported by another witness, but he himself did not emit one single curse, even when under Major Lee's very suggestive cross-examination. Eagan's famous "clerical error" in the beef contracts he now admits to have been his own. He had forgotten it. It will cost the Government thousands of dollars when the contractors prosecute their claims, but let that pass. Eagan was so overwhelmed with work at the time that really he couldn't remember what he did. His memory, in fact, was very bad about the details of many of his transactions. He fended rather clumsily when asked if he let any contracts under direction of the Secretary of War, but finally admitted that "on one occasion" the Secretary sent for him to "ask about the contracts." There were two other gentlemen in the room at the time.

Why does not the Court of Inquiry put Gen. Eagan on the stand once more and ask him why it was he was obliged to give the beef contracts to the canning and refrigerating firms? Another witness was before the Court on Saturday who testified that Eagan had said that he was not a free agent in the matter. This was the contractor who is at present supplying beef on the hoof to the army in Cuba, with excellent results. He testified that he was a personal acquaintance of Eagan's, and that in June last Eagan had telegraphed to him to come to Washington; that he saw Eagan and told him he considered it impossible to use refrigerated beef in Cuba, and that Eagan replied that he "must purchase it, but did not indicate that this position was taken at the instance of any superior official." At whose instance was it taken? Eagan should be given a chance to answer that question.

There is one matter connected with the baggage abuse concerning which we think the new Assistant Secretary of the Treasury, Mr. Spaulding, might still further amend the regulations, without in any way disregarding the statute, and that is changing the mode of appraising the articles of personal clothing purchased abroad by Americans under the \$100 clause. In a vast number of cases, Americans buy the clothing abroad immediately after going over, and wear it more or less during the summer. If they wear it even one day, it becomes second-hand and loses one-half or two-

thirds of its value. In fact, it would not be salable at all, except to an old-clothes dealer. A fifty-dollar suit worn even once in England would, when it reached the New York custom-house, be worth only twenty dollars at most; the passenger should not, therefore, be called on to pay duty on what it cost him, but on what it is worth. Personal clothing differs in this way from most other articles, china, pictures, furniture, carpets, which lose none of their value in transit, and are sure not to be used until the traveller reaches his destination. We know of a case in which a lady, having bought a hundred-dollar Paris dress, was plunged into mourning before she reached home, and had to sell the dress, but only got twenty-five dollars for it, though it had never been worn. Now, unless we are greatly mistaken, the Assistant Secretary can modify the regulation by ordering that personal clothing shall pay duty only on its actual value on the wharf. Of course, the humiliation of having to pay a tax from which the foreigner is exempt, is for the American citizen returning home very great, and cannot be got rid of, but the pecuniary injury can be lessened in this way, if the Treasury pleases.

There is something refreshing about the directness with which public indignation in Delaware strikes at the mark. One Democratic Senator and two Democratic Representatives voted for Addicks, the gas speculator, for United States Senator, on the last day of the session under circumstances which warranted the belief that they had been bought. The Democratic State central committee on March 29 unanimously adopted resolutions denouncing these three men for their action; calling upon them to resign their offices as State Senator and Representative respectively; declaring that "it is the general opinion that Farlow, King, and Clark were corruptly influenced to vote for J. Edward Addicks"; and tendering the support of the organization, individually and financially, to the State authorities to assist in ferreting out all frauds or bribery in connection with the last session of the Legislature. It is a long time since the "organization" of any party did a better day's work than this.

At Harrisburg, disclosures of attempted bribery have been made before the legislative investigating committee. Laubach, a Representative from Philadelphia, testified that one Jones asked him to support Quay, and, upon his replying that he could not, because the convention which had nominated him instructed him to oppose Quay, the intermediary said that "if I would vote for Senator Quay, I could have a good place, either the chief clerkship in the Mint or in the Custom-house." Representative Brown

of Union County testified that, on the evening before the first vote for Senator, Congressman Kulp, a supporter of Quay, invited him to call upon Quay, and when he refused, offered him first \$200 and then \$300 if he would go away the next day and not attend the joint convention of the two branches of the Legislature. "Finally he said: 'Of course, if you go right in and vote for Quay, the price would be altogether different.'" Brown's testimony is particularly important, because he said that he had known Congressman Kulp for a great many years, and they had always been friends.

The passage by the New York Senate of the bill that puts back into our civil-service laws the "starch" which Gov. Black took out of them, is a triumph for Gov. Roosevelt, though we regret exceedingly that he could not have won it without forming so close an alliance with Platt. If the Assembly passes it, as there seems to be no doubt it will, the most conspicuous and cherished achievement of Black's administration will be undone. He had more interest in this cause than any other, and the only solace which accompanied his precipitate return to private life was the thought that, whatever else he had succeeded in doing, he had dealt "Pharisaical civil service" a deadly blow. It was common sympathy on this point which brought him and the thoughtful Abe Gruber together and induced them to join forces in the practice of law. The grief of the two at seeing not only the old starch restored, but a new amount added, and added also at the instigation of the civil-service reformers themselves, must be entirely unspeakable.

Yellow journalism has been illustrated once more, in the treatment of a murder trial in Connecticut, and has received its deserts at the hands of a court. During the earlier days of this trial at Bridgeport one of our sensational New York newspapers published "spicy" reports of the proceedings, with the name of the writer over each article. The attention of Judge Wheeler was called to the matter, and he summoned the "journalist" before him to answer to a charge of contempt of court. The reporter declared that he was not the author of some of the matter which appeared under his signature, and denied responsibility for the untruthful and offensive illustrations which appeared in connection with his reports. But the Judge took the precaution to get the "copy" of all the fellow's dispatches from the telegraph-office, and found that the parts of the stories which he had denied writing had been written by him, as also that he had sent telegrams to his paper describing what kind of sketches should be made. He was thus shown to have lied, and he followed up

this performance by failing to appear in court as he had agreed to do to answer to any requirement which the Judge might make in regard to him. Judge Wheeler thereupon rendered his decision that "said articles were unfair accounts of said cause on trial, unduly interfered with the administration of justice, and were calculated to prejudice the jury and the public as to the merits of the cause on trial, and that said articles are in whole and in the facts referred to contempt of court, and that said Smith has not purged himself of them."

In fixing the penalty for this journalist's crime, the Judge said that it was not his intention to inflict harsh punishment, all that the court sought to prevent being unfair treatment of a cause on trial, and of those either responsible for the conduct of the trial or compelled by process of law to be present at the trial. He added that the court recognized that the offender was a subordinate and under instructions, writing for pay, and that primarily his superiors were responsible for the character of his work; as also that he was following a practice which has for a few years past prevailed with certain newspapers. But the Judge also perceived and confessed that the courts are responsible for this practice to a great degree by the immunity which they have granted to the offenders. "The reason these abuses in the publication of court proceedings exist," said the Judge, "is largely the fault of the courts themselves in not having long since stopped them." His conclusion was that the lying reporter was "guilty of contempt of court, and that he pay a fine of \$50, and be imprisoned at the county jail at Bridgeport for a term of five days, and that he be committed to said jail and confined therein until this judgment is complied with, or until he is discharged by order of this court or otherwise by due process of law." Of course, the journalist will take pains to keep out of the jurisdiction of the court, and so will escape punishment.

Spain's internal affairs look more promising than for some years past. The Carlists seem to have made themselves ridiculous, and to be out of the running; a military dictatorship appears to have been made unlikely by the fact that each political party has secured its share of the more influential politico-generals; and the new Conservative Government goes on gathering strength and public favor. On March 10, Premier Silvela received the delegates of the United Chambers of Commerce, and told them that their views of the proper policy for the country agreed in all essential points with his own. Their programme includes reforms and reductions in the army and navy; political purification by means of a law forbidding members of the Cortes to be connected with the di-

rectorship of railway companies, Government monopolies, or any undertakings aided by state funds; revision of railway rates and agricultural taxation; reforms in public instruction; and, in financial affairs, a clear statement of the public debt, the reduction of public expenditures, and a currency based on coin. The delegation of merchants were much pleased with Silvela's attitude, and have offered him their hearty support in the work of reorganizing the country. But his task is a hard one. Inveterate evils and political animosities are not to be extinguished in a day. Already a furious outcry has been raised against Gen. Polavieja, the new Secretary of War against whom the somewhat novel charge is brought that he is not a soldier, but a monk.

The confounded taxpayers who have to pay the bills of imperialism are making no end of fuss in France and England as well as in this country. The Taxpayers' League of France has issued a statement showing the enormous increase in public expenditures, year by year, a large part of which is due to disastrous ventures in colonization. In the twenty-five years since 1874 the French budget has been swollen by \$170,000,000, or an average increase of \$7,000,000 a year. One result is a per-capita taxation in France greater by far than that of any other civilized country. Much the same story of expenses mounting ever higher was told by the new Liberal leader in the House, Sir Henry Campbell-Bannerman, in his speech at Hull the other day. His parliamentary experience covers thirty years. In 1868 the expenditure of the country was \$350,000,000. Last year it was \$580,000,000, and the notable thing is that more than half of this great increase has come within the past ten years, when new imperial expenses, including vast outlay on the navy, have made such large demands on the national purse. Sir Henry declared it to be the duty of the Liberals to oppose granting one needless penny, and to remember that though England's resources were immense they were not unlimited.

A leaf has been taken out of our book by the Indian Government, a countervailing sugar-duty having just been put into effect. This duty, our readers will understand, is a tax upon sugar imported from countries which pay a bounty on sugar, the intention being to have a surtax just equal to the bounty. It is, of course, a protectionist measure in essence. It has been urged upon the English Government again and again in the interest of West Indian sugar-growers. One of the favorite contentions of Sir H. Vincent and his indefatigable band of protectionists masquerading under the name of "fair-traders," has long been that England should

adopt the principle of the countervailing sugar-duty. Mr. Chamberlain has been understood to favor it, privately though not officially. But it has been quite impossible to get any government, even a Conservative Ministry, to adopt the doctrine of countervailing duties. Only the other day, Lord Selborne, Under-Secretary for the Colonies, declared that anybody who thought England would ever come over to that protectionist idea was living in a fool's paradise; and he added that "many who supported the present Government would not accept the principle of countervailing duties." Yet suddenly the Secretary for India announces that the principle has been accepted for the Indian Empire. And he bluntly put the case in its most objectionable protectionist form. The object of the measure, he said, was "to prevent a vast indigenous trade in India, based on free enterprise and industry, from being undermined by the subsidized products of foreign countries." Moreover, the measure has been put into force without a pretence of consulting the House of Commons. The thing was done by the naked fiat of the Indian Government and the Secretary of State for India.

We are afraid the people in the Balkan States are going to suffer as the Greeks and Armenians suffered, from the fear of the Powers of a general war. The condition of Macedonia is no worse today than it was twenty years ago, no worse than the condition of a discontented Christian population under Turkish rule must always be. The probabilities are that, for this reason, Bulgaria has of late been steadily warned by the European Powers that it is not to expect support if it begins hostilities. Greece had good reason to look for intervention when she broke out in 1897, but a new factor has appeared in the calculation, in the person of the Emperor William, who undoubtedly had the Turkish trip and the Turkish *entente cordiale* already in his mind, and was determined that nothing should interfere with them. He it was who, with a baseness and heathenism which has had few parallels in European history, dried up the fountains of European pity for the Armenians, and with astounding cynicism gave the right hand of fellowship to the great "Assassin" at Constantinople. He it was who threw the chill over the Cretan interference, and brought about the ridiculous rôle which the fleets so long played at that island. We doubt if they would not be there to-day, playing the same rôle, if the Turks had been able to refrain any longer from their favorite amusement of massacre. In an evil hour for them they took to massacring English soldiers, and this was more than even Lord Salisbury could stand, so the Admiral hanged eight of them, and said the rest must go.

THE PRESIDENT'S POPULARITY.

It is folly to suppose that the President is now restrained from any course by the fear of losing his popularity, when we consider the absolute immunity from criticism which his admirers have hitherto accorded him. A month or two ago, we privately pressed one of his most distinguished eulogists for some account of the facts which instigated or justified the flattery, holding that gratuitous praise of an elective magistrate who was seeking reflection, was a sin against the state. The answer we got was that Mr. McKinley had been in power while great events were occurring, which simply put him in the same category with Croker and Platt. This was another illustration of the bewildering effects of war. In the half-drunken condition into which war plunges about half the population, anybody who has anything to do with the war, if he be only a coal-passer in one of the war-vessels, becomes almost an object of worship, no matter how he may have performed his duties. After nine months of failure in every department of the Government, President McKinley is as bold in his disregard of public opinion as he was before there had been any Alger or Eagan scandals.

We do not believe there is any calm observer of events, in either hemisphere, who does not now at least begin to perceive the impossibility of carrying on a colonial policy and distant wars without the presence at the seat of power of a stable and responsible Executive. The *Boston Herald*, one of the newspapers which in the beginning opposed the expansionist policy, but afterwards went over to it to avoid "getting left," now recognizes the immense difficulty of carrying out such a policy with such a government as ours. There is a large and growing party opposed to our war, but neither it nor the party which believes in it has the slightest control over it, or could stop it if it wished. According to all precedents of constitutional history, the Legislature, as the leading power in the state which alone can settle every issue, ought to be in session, ready to be consulted about every event of the day. In England, for instance, Parliament would now be sitting, open to daily questions about all that was going on, and the ministry would be liable to dismissal from office by an adverse vote if the events of the war had turned public opinion against it, as in the case of Lord North during the American war. The same is true of all the constitutionally governed English colonies, of France, Italy, and Belgium. The people of all these countries can stop a war at once, or make its promoters tell them what they propose to do about it.

We have no such power. William McKinley is telling us every day how diligently he is listening to "the voice of the

people," but he takes every possible care to prevent this voice reaching him through any organized legal channel. He might, had he any proper sense of his responsibility, have called a special session of Congress to advise him, and transmit the voice of the people to him day by day; but he has used all the power he has to prevent any such meeting, so that the voice of the people cannot possibly get to him except through his own family prayers or the chatter of his own cronies.

Some people may think that the press will do for this purpose as well as a legislature, but we must remember that the opinion of newspapers has no legal force, and that the American press has been rendered useless to the executive, as an exponent of public opinion, by the system of corruption begun by Jackson and so vigorously denounced by Daniel Webster; that is, the system of buying the editor's silence or his approval by the bestowal or promise of office. This system is now so firmly established that it excites no remark. The two papers which are to-day most likely to influence Mr. McKinley, are edited by men who are either now in his paid employ or have recently been, or have shared in the transactions which the public might wish to condemn. In short, he is as completely master of events, and may bid as much defiance to public opinion, as the Czar of Russia, for the next half year. Moreover, the public has seen him prepare this very situation for himself, and make arrangements that he shall not be disturbed in it. The two newspapers to which we have just referred, lent him all the aid possible in keeping Congress out of power until next December.

Then consider the question of responsibility. When we remember the number of people who half a year ago were "hollering" for "responsibility" with regard to brown men, and the duty of killing a few so as to save their souls, like the Spanish Inquisition, should we not expect that Congress would be in session to-day, working like beavers over plans of government for these new subjects, that the brave McKinley would be worn to a skeleton reflecting on the problem, and the "glory-crowned" Griggs would be living laborious days about it? Well, what is Mr. McKinley doing? Drafting schemes of colonial government? Not much, as the boys say; his days and nights are given simply to the "getting of, delegates" to the next national convention with a zeal and diligence never surpassed. We have made careful inquiry, but we have not been able to hear of a single human being "in this broad land," as the Congressmen say, who is spending five minutes in preparation of machinery to do anything to the brown men, except kill them and burn their houses. The whole situation is, in fact, unparalleled in the history of

constitutional liberty, and it results from an attempt to use our form of government for a purpose for which it was never intended, and for which an entirely different form would be necessary.

INVESTIGATIONS.

We have always maintained that a genuine investigation of our municipal affairs was a useful and timely proceeding under any Tammany administration. There is no other method by which the inner workings of corrupt government can be brought to light; and until they are brought to light, it is impossible to induce the public generally to take any interest whatever in their existence. We have never succeeded in getting relief from corrupt government until we have made such plain revelation of it as to arouse not only the indignation, but the shame of our citizens. When its utter villainess is held up to the gaze of the world, and we are held up as submitting to the disgrace of it, then we revolt and take sufficient trouble, in one election at least, to overthrow it.

We have no doubt that a genuine investigation at the present time would make startling revelations in more than one of our municipal departments, and especially in that of the police, but the investigation which the Assembly has authorized has no appearance of being anything of this sort. It is the personal invention of Boss Platt, who desires to use it for purposes of his own. The man at the head of it, Assemblyman Mazet, is a mere Platt dummy, with no qualifications for the task, who would conduct the inquiry entirely as the boss directed him to. If it reached a point at which the boss could obtain what he desired from Tammany by "hauling off" the investigation, it would be hauled off, and the only result would be that instead of bad government for the benefit of one boss we should have bad government for the benefit of two. In other words, an investigation of the kind proposed at Albany is nothing but a "strike" for terms. It would lead to no real exposure and no reforms, but it might lead to Boss Platt's obtaining from Boss Croker a more satisfactory share in the spoils of the city which he helped Croker to get possession of by running Gen. Tracy for Mayor in 1897.

It is beside the mark to point to the Lexow inquiry as evidence of what might be secured through a Legislative Committee now. The Lexow inquiry was a flat failure so long as it remained under the control of Platt. He had as "counsel" a lawyer from "up the State" who was finding out nothing about the police that Tammany could object to. It was only when the Chamber of Commerce came to the front with \$25,000 and with Mr. Goff as counsel that the inquiry became an earnest one, and really began to find out something. If it had

remained in Platt's hands, nothing of the hideous mass of corruption, blackmail, and joint-partnership with crime, the disclosure of which drove Tammany from power, would have been revealed. Like the many investigations which preceded it, it would have been "hailed off" just as soon as the basis for a bargain between the two bosses had been reached.

Undoubtedly one of Platt's objects now is to get on the track of the members of his machine in the Senate who have "set up for themselves," and are in a fair way of doing a fine business on their own account with the legislation of the session. If he could scare them into subjection by threatening to reveal their sources of revenue, he would save his machine from serious peril. It is impossible, of course, for a boss to do an exclusive legislation business in return for contributions from corporations, if two or three members of the Legislature can set up in the same business for themselves. The system falls to the ground the minute such breaches of discipline as this become possible. The boss must be the "whole thing," or else how can he collect his revenues? This is the crisis which has summoned Platt to Albany, and it is not surprising that he is aroused to unwonted energy by it. Unless he can demonstrate that his power over the Republican majority in the Legislature is supreme, he cannot hold his machine together for another campaign. Its sources of revenue will be stopped almost completely.

We count it a great public misfortune that in this work of seeking to preserve his infamous system of government from destruction he should be using the Governor's rooms at the Capitol as his base of operations. He has been sitting there daily, apparently in company with the Governor, summoning recalcitrant members before him for persuasion. If the Governor thinks he can appear in the public eye in this company and not suffer contamination, he is very much mistaken. It would be far better for him to have every measure before the Legislature fail than to have even good measures pass under such conditions as these. We do not for a moment believe that personally he will allow Platt's presence to influence his course on any question of legislation, but the fact remains that by admitting Platt to such intimate social and official association with himself at a crisis like this, he recognizes Platt's system of political control as a proper one, and thus makes himself a party to its exercise and continuance. How can he, honest man and upright and fearless defender of good government that he is, fail to see that there has never been in this country a more deadly enemy of popular government than Tom Platt? How can he fail to see what Platt's system rests upon,

and to what it has reduced constitutional government in this State?

THE ALLIANCE IMPERILLED.

Our far-famed *entente* with England grew out of the Spanish war; that war is not yet technically over, but the sudden swearing of eternal friendship with our secular enemy already begins to look as if it were but the prelude to bitter hostility than ever. Some of the attacks on the English alliance are rich in humor—being largely Irish, they could not be otherwise. Last week, for example, that Friendly Son of St. Patrick, Justice Morgan J. O'Brien, was ignominiously cast out of the Irish National Federation of America. The reason alleged in the swingeing "whereas" and "resolved" adopted was that Justice O'Brien had "given currency to the falsehood that England prevented a concert of European Powers against this country at the outbreak of the war with Spain." No Federated Irishman can be caught in such a "covert attempt to mislead public opinion in America" without suffering for it, and a Federated Irishman Justice O'Brien no longer is.

Even more truculent, and unconsciously amusing, were the simultaneous proceedings of the German-American citizens of Chicago. They had the coöperation by telegram of distant but sympathetic Irishmen. The Gaelic Society of New York telegraphed its sympathy in "your protest against English conspiracy and slander." One ardent Irish leader sent his greetings and came directly to the point in the words, "England, not the Continent, is the real enemy of America." Major McCrystal, of the gallant Sixty-ninth, tearfully implored every true-hearted American not to "forget his country for the smiles and pelf of Britain." And the resolutions rose nobly to the height of the great argument, denouncing those who would "drag" this country into an alliance with England; declaring that German Codlin is the true friend, not British Short; and announcing the readiness of the embattled German-Americans at all times, "*especially in political campaigns*," to oppose all who "labor to entangle our country in an alliance with England." Finally, the resolutions record a solemn objection to the American people being called any longer Anglo-Saxons. We must cast out the unclean thing from among us, even when it takes the alluring and apparently harmless form of "Anglo." Teutons we must call ourselves, we suppose, or Jutes—but as for Anglo-Saxon, let it henceforth be not so much as named among us.

Many other signs might be mentioned of the fresh fury against England which has been roused by all this sentimental talk of hands across the sea. There is evidence, too, that the Nationalist leaders of Ireland are taking a deep in-

terest in the revival of American hatred for England. The only hand they wish to see Americans reach across the sea is a hand with a dynamite bomb in it for the English oppressor, or, at any rate, a contribution to the Nationalist party purse. The Irish leaders defeated the arbitration treaty with England two years ago by political threats, and why should they doubt that they can smash the *entente* in a similar way? The conference being held in Dublin as we write, in an attempt to unite Irish factions and start another formidable agrarian agitation in Ireland, will doubtless have some pointed things to say on this subject, destined to fire the Irish-American heart and to set our politicians to vowing again that they always did and always will hate England.

As for the service England did this country at the outbreak of the war with Spain, we think the evidence is conclusive that it was great and vital. If not, why did Mr. McKinley tell the correspondent of the London *Times*, almost tearfully, to cable to England that "America will never forget" her debt to Great Britain? Why should Ambassador Choate have taken the first occasion to speak of the "forbearance and good feeling" which England has shown the United States? The aid rendered by England is not a fiction, not a blown surmise. Mr. Balfour knows, and has broadly intimated in a public speech, what he did for us in our emergency. But if he thinks, or any Englishman thinks, that all this is going to make any difference with our politicians, he is on a most perilous foundation of belief. The whole thing was too sudden, too effusive, too accidental. Habits of a generation, the whole trend of national tradition, are not to be transformed over night, nor are the political watchwords of years to be blotted out in a day. We venture to say that if the Irish-Americans, or the German-Americans, or the Turco-Americans can bring to bear on our party leaders a sufficient political motive to induce them to resume their ululations against England, we shall hear howls which will be all the more dire and firmament-rending for the temporary silence of the last year.

Englishmen have before them at this moment a significant illustration of the hollowness and improvised and unstable character of the much talked-of good understanding between the two countries. Their newspapers are busy reviewing Senator Lodge's 'Story of the Revolution.' The critics are a little puzzled by the book. Through the first nine-tenths of it the author bangs and bethumps the English in the familiar old ward-caucus style. But at the very end he suddenly turns square about, and gushes over England as extravagantly as he had before abused her. Now, does this mean that the great Lodge had been soundly converted? Not at all; it simply means

that he had caught up the trick of utterance common when he was finishing his gigantic historical labors, just as he similarly caught it up at the beginning of them. When he began to write, it was the fashion to curse England, and he cursed her soundly. When he ended, everybody was falling on England's neck, and he fell blubbering with the rest. But was there in him or in the rest a glimmering of an idea of the real reason for a tacit alliance with England—intimate trade relations, common political institutions, joint inheritance of moral and literary standards, and a feeling that past traditions and future destiny knit us together? Nothing of the kind. The whole thing was just a bit of gushing sentiment which may easily be as passing as was the mere accident that set it sillily adrip. The conversion was suspiciously sudden. The repentant sinner was only a "rice-Christian," penitent for value received; and as soon as the heathen crops are good once more, an unblushing and roaring heathen he will be again.

GOOD AMERICANS IN TROUBLE.

We could wish that the Pope's condemnation of "Americanism" had ended the matter. Good Catholics as a general rule promptly made their submission as soon as they heard that his Holiness did not approve of their doctrines. There was one in particular which gave offence to European Catholics, and that was the preference of the Good Americans for the active over the passive virtues. The European Good Catholics, as a general rule, prefer the passive. They have a great fondness for simple meditation, for the quiet of monastic life, in which the day is passed in prayer and reflection on mysteries. A devout writer in the *Revue Diplomatique* has been engaged in a series of articles on "Americanism," which he has just brought to a close, after pointing out in them in a masterly manner the error of the Good Americans on this subject, by means of a sort of running commentary on the Pope's Apostolic Letter. He shows that this contempt for the religious profession "reveals among the Americans, not only a deplorable tendency to rebel against the dearest traditions of the Catholic Church, but also a complete ignorance of the nature and value of vows." The Good Americans have evidently considered vows a mere cover for spiritual indolence, and as affording no place for the tendency to "hustle" which they feel so strongly. "An eminent prelate" shows, on the other hand, that "vows are simply the very best guarantee of individual liberty." How can this be, the Good American will ask, under monastic rule? Nothing simpler. The rule leaves him "free for the constant doing of good." He ought not to desire liberty for any other purpose.

We are extremely sorry to learn that one design of the praises the Americans heap on the Paulist Fathers, according to this writer, is simply to throw discredit on the regular congregations; or, in other words, on the passive Fathers.

We have long felt that this difficulty which the writer sets forth would arise whenever Good Americans took up Catholicism. There is no people in the world less disposed to meditation. In secular life, even, they are unwilling to give to it as much as is needed for the proper transaction of ordinary business. Even war needs meditation, or what the Scripture calls "counting the cost," or, in other words, forecasting what will be needed when the war begins. But this is something which you cannot get the average American to submit to. Yet there is nothing earthly which needs more reflection than war. Last spring it did not receive even one week of reflection. Now Catholicism, and the denominations which most resemble Catholicism, attach enormous importance to meditation, to concentrating the thoughts on other things than action, on simple "mysteries," or, in other words, on things to be believed but not examined. This makes it very unsuited to the American temperament. Americans, even those who are attracted by the Catholic faith, are radically disinclined to throw themselves into the Catholic state of mind. They want to do to the creed, when they embrace it, what some one in Chicago said Chicago would do to "culture" when it took it up, "make it hum." No Good American wants to ponder on verities, or pass much time in silent prayer. He wants to be up and doing something which will test at once the efficacy of the prayer—a little fighting, for instance, or "communication of the blessings of civilization" to heathen. Not only the monastic system, but the ordinary Catholic devotions, are a little unsatisfactory to him. Prayer plays a very important part in Catholic worship—so important that in Italy one must almost carry it on while attending to ordinary secular business. To this the American can with great difficulty reconcile himself. If prayer becomes a spiritual help of this kind to him, he wants to work it somehow into his business, to help his "spring sales," or enable him to get rid of his fall overcoats.

Under these circumstances it is not wonderful that the Good Americans have openly expressed their dissatisfaction with the present mode of converting people to Catholicism. What the cause of their dissatisfaction is, we do not exactly know; but this writer in the *Revue Diplomatique* says that "they say that the means employed up to the present for the conversion of non-Catholics do not meet the exigencies of the times, and that resort must be had to new ones." Think of proposing "up-to-date methods" of conversion to the Pope! The

Sovereign Pontiff is, however, ready for them. He overwhelms them with "the teachings of the fathers," just as Mr. Howell of the Treasury overwhelmed us with the law when we complained of custom-house outrages. In other words, "he demonstrates categorically that, the truth not having changed, dogmas which are the emanation of truth cannot change either, and the mode of teaching them must, therefore, be invariable." This is in our opinion a *coup de grâce* for the Good Americans.

Archbishop Ireland of Minnesota has endeavored to part company with them by prostrating himself in a long letter at the Holy Father's feet; but he has not given complete satisfaction. In the last half of his letter he denounces "the enemies of the Church in America, and the unfaithful interpreters of the faith" who have caused this disturbance, but he does not mention them by name. As our writer says truly, in a matter of such gravity "general terms will not do." We must know who these wretches are. It cannot be that they are "disguised Protestants," or some sort of "sectaries." It would be thoroughly American not to give names in order not to "antagonize" anybody. But this is not the true Roman way of dealing with "malefactors." They deserve to have their barns burnt.

CARDUCCI'S PETRARCH.

FLORENCE, March 16, 1899.

At length, after nine and twenty years of patient labor by Giosuè Carducci, assisted valiantly during the last six by his beloved disciple, Severino Ferrari, we have Petrarch's *Rime* complete, edited and annotated by these two perfect Italian scholars, poets both.* The preface is instructive, and should be laid to heart by all who set themselves to edit works of the old masters:

"Such toilers must seek, not for the version which best pleases themselves or this or that critic, nor the one which presents itself with sudden fascination in a manuscript more or less ancient; but the latest version that issued from the author's pen. To seek and find this must be the task which an editor who is not a mere empirical book-maker should keep in view and secure with the utmost attainable certainty. And surely the best way to come at the truth must be to ascertain which was the latest version left in the author's own handwriting or transcribed under his own eyes, and the earliest edition printed from it."

In forty pages we have the history (1) of Petrarch's manuscripts, (2) of the first printed editions of his poems, (3) the times in which the poet was held in highest honor, or more or less neglected, (4) the commentators who have illustrated his poems and their respective value.

The starting-point for these researches is the announcement by Petrarch, a year and a half before his death, in a letter of January 4, 1373, from Padua, to Pandolfo Malatesta, Lord of Ferrara, "that he sends him *nugellas meas vulgares*, possibly transcribed with errors, as, having too numerous occupations, he trusted their revision to others."

* *Le Rime di Francesco Petrarca* di su gli originali commentate da Giosuè Carducci e Severino Ferrari. Florence: G. C. Sansoni. 1899. [Scholastic Library of Italian Classics.]

He proceeds to show that he had kept by him some of his Italian poems in very old rough drafts, so worn and faded by age as to be hardly legible. Now, we do not know whether those especial rough drafts survived, but the sixteenth century saw and possessed many papers containing the *rime sparse*, just sketched and in process of correction, in Petrarch's own handwriting. Pietro Bembo, in the first edition (1525) of the Italian prose writings, affirms "that he had seen some papers written in the poet's own hand, in which were some of his rhymes; that those sheets showed that he, while composing them, had marked sometimes the whole, sometimes a small portion, sometimes the greater part; that he then erased and made alterations many times." But those papers, at least, in which the noble Venetian tells us that he read the sonnet *Voi ch' ascoltate* as it was first written, and then with the amendments to the second verse, have perished, so far as we know. Ludovico Beccadelli (1502-1572), a Bolognese, who pursued at the same time literary studies and church affairs, saw some other papers, and left tidings of them in his 'Life of Petrarch':

"The sheets which I saw in his own handwriting are of two sorts. The first were shown to me in 1530, when I was a student at Padua, by the Reverendissimo Monsignore Bembo, who kept them with great care, among other treasures, in his study, and they were for the most part sonnets and odes. The others, written in the same hand, were shown to me ten years later in Rome by Mons. Baldassera [Turini] of Pescia, who had obtained them, I know not how, in order to send them to Francis, King of France, to whom they were sent. Most of them, beginning with that on [Laura's] death, belong to the *Trionfi*. The writing was assuredly in Petrarch's hand, because it was exactly the same as other of his writings that remain; then they were corrected and altered in a way that none but the author himself could have done. I remarked, too, that they were written in different ways; some were set down confusedly on all kinds of paper, others were written on better paper, and more carefully—less interlined and annotated; it was evident that the one set were the first sketches, so to say, of his ideas (inventions), the others were the register in which he made the fair copy. One saw the great care that Petrarch took to perfect his poems, changing a word four or five times, and altering whole sentences. Noteworthy is the fact that, with the exception of the corrections, he wrote in Latin, often giving the reasons why he made the alterations, putting down the time in which he returned to his writing and the place in which he wrote. This he did, I am sure, for his own uses, never thinking that such data and memoranda would fall into other hands, and be taken note of. It often happens that people think and talk to themselves, never meaning these little privacies for others. . . ."

The editors tell us that the Petrarchian manuscript possessed by Bembo in 1530 passed in 1581 to Fulvio Orsini, and from him in 1600 to the Vatican Library. Hereon follow minute accounts of all the extant manuscripts, and extracts from the writers on Petrarch who had seen others that have disappeared. We know from Bembo that, at the death of Petrarch, his papers passed to his heirs, or to some friend—possibly the Paduan, Lombardo della Seta, who was so dear to him. The poems were first printed ninety-eight years after Petrarch died (in 1472), and the originals were preserved until the Austrians sacked Padua in 1509; possibly some soldier got those papers and ill-treated them, and then they fell into the hands of some worthy man. Gian Vincenzo Pinelli (1536-1601)—leaves among his other notes:

"Certain pages of Petrarch's poems, corrected and altered in his own hand, quoted by Bembo in his prose, were found in a provision-dealer's shop."

When the papers arrived at the Vatican they lay forgotten, or little cared for, in that splendid dormitory until the end of the seventeenth century, when Federico Baldini [. . . 1657], a man thoroughly versed in the poetry of the first centuries, brought them to light, and, as was his wont, with greater exactitude than was usual in his times. When Baldini published the sheets, called archetypes, they were twenty in number, just as Orsini received them and transmitted them to the Vatican in 1600; after this the seventeenth and eighteenth sheets, containing the second part of the "Triumph of Love" from the forty-sixth line to the end, disappeared from the precious collection, and, thus diminished, they were republished in our day with careful criticism and ample illustrations by C. Appell (Halle: Niemeyer).

The complete original of the poems of Francis Petrarch is the Latin Vatican manuscript No. 3195, traced on fine parchment with accuracy and clearness, without marginal notes. It consists of seventy-four folios: the first two, unnumbered, contain the alphabetical index of the first lines; the seventy-two numbered folios begin with the sonnet *Voi ch' ascoltate* and end with the canzone *Virgine bella*, as does this Carducci Ferrara edition. They are written in two different hands, the first from 1 to 38 and 53 to 62; the second from 38 to 49 and from 62 to 72; this second handwriting is that of the poet, who endorsed and corrected also the part not written by his own hand. The title is 'Francisci Petrarchae laureati poetæ Rerum vulgarium fragmenta.' Here our editors warn us that *fragmenta* does not signify incomplete pieces of poetry, but *rime sparse*, as Petrarch calls them in his first sonnet; meaning that the sonnets and odes do not constitute a continuous whole such as Petrarch from time to time determined on writing. The archetypal papers, those of No. 3196, offer a fresh proof of the autography of the manuscript; the notes often point to transcription from the rough to a clearer copy. The compositions which in No. 3196 have *transcriptum per me* we find again in the Vatican manuscript No. 3195 written by Petrarch himself, whereas those under which is written only *transcriptum* are all copied by another hand. Probably the transcription was not commenced before the poet's letter to Boccaccio in 1366, in which he makes manifest his intention that his best verses shall not be spoilt by ignorant scribes. Certainly it was not commenced later than 1368, in which year, on the 22d of October, as is seen in the 15th sheet of the archetypes when he wrote, on the forty-first page, the canzone *Ben mi credca passer*.

The first of the earliest editions of this manuscript is dated Venice, 1470 (rare), the second Rome, 1471 (very rare), the third Padua, 1472. Up to and throughout the seventeenth century the existence of the manuscript and the belief that it was autographic was cherished. G. F. Tommasini mentions it in 1635. The Cruscan Academy in 1654 justifies a version of the sonnet *Rapido fiume* by an appeal to the autograph manuscript preserved in the Vatican, No. 3195. G. Castiglioni, the biographer of Fulvio Orsini (1657), records in his honor the precious gift. Writers of the eighteenth century either

ignored or disbelieved in its authenticity; Marini, writing to Morelli, who was preparing an edition of Petrarch's poems after examining them in 1799, says that the manuscript is not autographic; and thirty years ago the very memory of this famous manuscript was lost. E. Narducci, in his catalogue (1874) of Petrarchan manuscripts, registers the title without a single note, does not even quote Orsini's original inventory, where it is registered, "Petrarch's canzoni and sonnets, written in his own hand," nor yet the fourth volume of the general inventory of the Vatican, where stands No. 3195, 'Francisci Petrarchae rerum vulgarium opera Manuscripti Auctoris.' So we owe gratitude to foreigners who showed us our stupidity and neglect: to Pietro de Nolhac in 1886, and in 1887 to Dr. Arthur Pakscher, who published his studies on Petrarch in the tenth volume of the *Zeitschrift für die Romanische Philologie*, ten years after which comes Mestica's.

After tracing the vicissitudes of the manuscript, our editors continue: "Thus the basis of our work and the instruments of our labor have been (1) the autographic fragments (archetypes) now in the Vatican registered under number 3196, their appendixes and reproductions; (2) the complete original manuscript in the Vatican, No. 3165; (3) the Paduan edition (1472); (4) the Aldine edition (1501)." From 1860 to 1896 they had to work from the original manuscript, and render thanks to "Mario Menghino for his patient and accurate diligence in comparing their proof-sheets with the original manuscript in the Vatican." Then, in 1896, "Mestica's fine edition was published by Barbèra in Florence, and assisted us with copious and useful notes just as we had reached page 341 and the CLV. sonnet [*Non fur me Giove e Cesare si mossi*], when we had already restored the sonnets as they stand in the original manuscript, as indeed they were given in Marsand's edition" (Padua, 1819).

Then we come to Petrarch's commentators, whose great work begins with 1525, when Vellutello's edition of the *Canzoniere* appeared. Many of the commentaries are quoted in the notes because, "though now tiresome reading, inasmuch as the commentators lived during that Renaissance which dated from Petrarch they help us to understand the meaning of the diction and the spirit of our poet." The commentators of the sixteenth century are often quoted. In the seventeenth century, Petrarchism, even as early as 1609, was at its lowest ebb, so that Tassoni, in his 'Considerations,' "forced a door already open"; but on many points he is an acute critic. A hundred years later, Muratori republished the 'Considerations'; but Muratori, the father of "Italian history, whom we love and admire for his high, varied, serene, weighty intellect, his honest, simple, kindly nature, in trying to infuse 'poetic taste' into his readers, is really a representative of Arcady." In the eighteenth century the commentators were few, Pagello (1718-1795) fairly good; then Alfieri, in his studies of the Italian language and poetry, used to write in his note-books all that pleased him in Petrarch, with fine taste and some acute observations. Much praise and gratitude is due to De Sade, whose 'Mémoires pour la vie de Pétrarque' are full of vital erudition, and form the starting-point for modern Petrarchan criticism; his work is a perpetual and sagacious commentary of the *Canzoniere*, especially from an histo-

rical point of view. Finally, reaching our own century, we have Blagoli, who evinces that toilsome yet impassioned return to the literary traditions of the thirteenth century which distinguished the generations that flourished during the first thirty years of the present century; and Leopardi, who is a scholiast often dry and futile. His intention was to comment the *Canzoniere* in such fashion as to make it intelligible to women and children, even to foreigners.

"As if it was a book to put into the hands of children; as if foreigners could understand it unless they knew more of the Italian language than is required to understand Dante; as if the women of to-day, unless furnished with exquisite and delicate taste and sentiment, together with profound culture, could read Petrarch! . . . The fact is, that that great intellect, condemned to slave at a commentary for women and children, ended by growing weary; in the difficult passages he hesitates and stumbles, and gives interpretations which do not seem his own. Still, we recur to him oftener than to others, because, in his general interpretations, he is without comparison more concise and elegant than the other commentators."

The titles of all the commentaries are given in full. In the headings and notes to the poems care is taken (1) to seek out and determine the time, the occasion, the argument of each sonnet or ode; (2) to define the poet's metaphors and allusions to the events of his own life and age, to the customs, the beliefs, the opinions prevalent, in his own time; (3) to interpret the meaning of the poems; (4) to point out briefly their classical erudition; (5) to note the many thoughts and modes of speech and coloring—whole passages, even—which Petrarch, the father of the Renaissance, derived from Latin poets and prose writers and from ecclesiastical writers, and appropriated and assimilated in his original work with admirable skill. All that previous commentators have done well in these directions is retained and the authors indicated.

It may not be out of place to remark here, in closing, that in the little book of Carducci's latest poems the first is the following sonnet, addressed to Severino Ferrari, and entitled "On the Banks of the Lily":

Close at the mountain's foot whose snow is rose
When morning breaks above in ruddy flame,
Clear, fresh, melodious there gently flows
A stream which from the Lily takes its name.
Ferrari! here I sit and think of those
Fair banks of Arno and thy words again;
And I resolve to quit the paltry prose,
And sing henceforward in a loftier strain.
But now the Lily says, "It wastes to naught,
This song of mine, yet ne'er for this I sigh,
But with a fuller music sweep along."
So then once more, pride banished from my thought,
Unto my heart I turn; to mountain, sky,
And wave, repeating still thy Petrarch's song.

Prof. Ferrari has published a volume of exquisite poems, two of which, with a notice, are translated by G. A. Greene in his *Italian Lyrics of To-day* (p. 93). His prose and poetical anthologies for the public high schools are among the best. J. W. M.

MADAME DE MONACO.

PARIS, March 21, 1899.

Pierre de Ségur's "The Last Princess de Condé" has two parts. In the first he deals only with the Princess; the second part, quite as important, is the biography of Madame de Monaco, followed by many inedited letters of the Prince de Condé. Madame de Monaco played such an important part in the life of the Prince that it is not surprising that M.

Pierre de Ségur has completed his work by this interesting addition.

The Brignole-Sale family was among the most illustrious in the Republic of Genoa. Their palace, the Palazzo Rosso, may be seen in the Via Nuova, now called Via Garibaldi, near the famous palaces of Spinola, Doria, Adorno, Cataldi, and the Municipal Palace of the Doges. Marie-Catherine de Brignole was born there in 1739, the only daughter of the Marquis de Brignole; her mother was Anna Balbi, who belonged also to a family of Doges. She met at Versailles Honoré, Prince of Monaco. This young Prince, like his predecessors, spent his youth at the Court of France. He distinguished himself at Fontenoy, was wounded at Rocoux, and showed so much bravery at Lawfeld that the King made him, at the age of twenty-eight, a field-marshal. His courage seems to have been his principal if not his only virtue; contemporaries describe him as hard, tyrannical, very ambitious, hypocritical; his dissimulation was great. He was on the point of marrying a daughter of the Duke du Maine, hoping by this alliance to obtain at the Court of France the rank which the princes of the preceding dynasty of Monaco had occupied. The negotiation was broken off. The Prince then asked for the hand of the daughter of the Duke de Bouillon; the contract was all ready when, to the general astonishment, he broke the engagement. His father was so angry with him that he induced the King to confine him for a few months in the citadel of Arras.

When he left Arras, he did not attempt to find a wife. He met the Marchioness of Brignole, who was very handsome, and she became his mistress. The young Marie-Catherine grew up between her mother, her mother's lover, and a weak and blind father. She was very much admired, and the Prince of Monaco, who was becoming tired of his liaison with Mme. de Brignole, thought of taking her daughter for a wife. Mme. de la Ferté-Imbault, daughter of Mme. Geoffrin, who was a friend of the Brignoles, says that by this marriage "Honoré de Monaco expected to satisfy three of his vices—his avarice, because of the great fortune of the Brignoles; his gallantry, because the young person was one of the handsomest of her time; his jealousy, because he could keep her in his palace at Monaco, far from Versailles." M. Pierre de Ségur says that he could not find out how Honoré de Monaco, in his singular situation, was able to press his suit. "A rout," he says, "forty years old, bold, and of an easy conscience, has many ways of conquering the soul of a defenceless young lady. The undeniable fact is that I have held in my hand—not without emotion—a brief little yellow note, written by a trembling hand still almost childish: 'I, the undersigned, declare and promise the Prince of Monaco never to marry anybody but him, whatever may happen, and never to give ear to any proposition which might disengage me.—Paris, 29th November, 1755.—Marie-Catherine de Brignole.'" When she signed this declaration she had just attained her sixteenth year."

Madame de Brignole became furious at first when she heard of what she considered the treason of her lover; but her anger subsided by degrees, and, by a strange transformation of feeling, she became the advocate of the Prince de Monaco and undertook to obtain the consent of the Marquis de Brignole. It was not an easy task: six

months were spent in negotiations. Finally, the Marquis gave his consent and the marriage took place at Genoa. A child was born on the 11th of May, 1758, Honoré, Duke de Valentinois. The Prince returned to Paris, leaving his wife and child at Genoa in the midst of her family. In 1760 the Princess joined her husband in France. He found her quite a new person; she was no longer the girl he had known and married; she was now quite sure of herself. She was presented on the 23d of November, 1761, at the waters of Plombières; it was for her a day of triumph. She was very much admired, and her chief admirer was a prince of the blood, Louis-Joseph de Bourbon Condé, who was then only twenty-five years old. He was come from the army, and had shown some talent in the first campaigns of the Seven Years' War.

"Notwithstanding his ambition and his desire to please," says M. de Ségur, "the first impression made by him was not engaging. From childhood he retained, in spite of his efforts, a self-centred disposition, a difficulty in being unreserved, which was long taxed as dissimulation and coldness. . . . He entered public life under the reign of the Pompadour, and believed too easily in the power of petty means, confounding intrigue with politics. Frivolous, at least disposed to treat lightly things reputed grave, he attached too much value to society gossip, to prejudices of caste, to the vanities of the world. On the battle-field he again becomes a Condé. In his eye, his voice, the happy precision of his orders, you can see a spark of his glorious ancestor."

The Prince made love to the Princess de Monaco. He invited her to the festivals at Chantilly, he met her everywhere in society, and his attentions became so public that the Prince became jealous and threatened to shut her up. In July, 1769, the Countess left the conjugal house and retired into a convent—in Paris, first, and afterwards at Le Mans. She took an appeal to the courts of France, and a protracted taking of testimony began before the Parlement of Paris. The Prince, viewing himself as prince-sovereign, refused to accept the jurisdiction of the Parlement, and sent a memorial to Louis XVI. The inquest continued, as the French Government was not sorry to find an opportunity to diminish the prerogatives of the principality of Monaco. The affair suffered a long interruption during the quarrel which sprang up between the parlements and the King. As soon as Choiseul fell from power, and the first time the Parlement sat again, on the 31st of December, 1770, the first case called was that of the Princess of Monaco. The Parlement pronounced unanimously that there should be "separation of body and habitation" between the Prince and the Princess, ordered the restitution of her dowry, and forbade the Prince "to again frequent his wife, or to make any direct or indirect attempt upon her liberty."

Immediately afterwards, the Princess of Monaco threw away the last veil. She returned to Paris, and, in order to be nearer Condé, she had an elegant hôtel built in the Rue St. Dominique, right against the Palais Bourbon. At Chantilly, the liaison was even more public; she remained there for months, in a complete and conjugal intimacy with the Prince. She was then hardly thirty years old; her beauty was in all its brilliancy.

The two years which followed the trial were spent almost wholly in Chantilly. The affair of the parlements kept Condé away from Court; in 1772 he abandoned rather unexpectedly the cause of the parlements, and

surrendered himself unconditionally to the royal cause. He was received again with joy by Louis XV. at Versailles, and the Princess de Monaco could not keep him altogether to herself. The liaison became very stormy, and, from all the memoirs of the time, it appears that Madame de Monaco made for herself the reputation of a very tyrannical and ill-tempered companion. M. de Ségur does not conceal the fact that there were perpetual scenes between Madame de Monaco and the Prince. Her position was a difficult one.

"The Duke de Bourbon and the Princess de Condé bore with disgust their daily contact with the declared mistress of their father. Respect and fear might shut their mouths, but their contempt for *la Madame*, as they called her between themselves, was shown in their whole attitude, in the hostility of their looks, the coldness of their behavior, in the silence which ensued upon her approach."

The young Duchess de Bourbon, who was born Bathilde d'Orléans, was not so patient; she was bold, witty, and knew no other rule than her will and caprice. She became aggressive. One day she took a conceit to have a proverb of her composition played on the stage at Chantilly. The actors were the Prince de Condé, Madame de Monaco, and the Duke de Bourbon. The subject was the story of a light and weak man, unconsciously dominated by an ambitious, intriguing, and jealous woman. Every word, every detail of the play was an allusion. The attitude of the public made the actors conscious that they were exhibiting themselves, and painful explanations and quarrels followed the representation.

Madame de Monaco became disgusted with Chantilly and bought a place, Bets, near Crépy-en-Valois, an old feudal castle which she embellished. She made new buildings and a splendid park; she spent more than four millions on this domain. Her sons came to visit her there—the elder, the Duke of Valentinois, who was married to the only daughter of the Duke d'Aumont, the younger, who was called Prince Joseph of Monaco, and had been married to the daughter of Count de Choiseul-Stainville.

The Revolution interrupted the gay existence at Chantilly and at Bets. Immediately after the storming of the Bastille, the Prince de Condé decided to emigrate. He left Chantilly with the Duke de Bourbon, the Duke d'Enghien, who was seventeen years old, Princess Louise, and Madame de Monaco. "To relate in detail this period of the existence of Madame de Monaco, its peregrinations and accidents, would be to relate the history of the Army of Condé," says M. de Ségur. . . . "In order not to leave the Prince, she sacrificed without regret her comfort, her quiet and easy life; she accepted with joy her new existence as a vagabond Princess." During her Odyssey, Goethe saw her at the house of Baron Stein. "She is," he wrote, "alert and charming. Nothing more graceful could be imagined than this slender *blondine*." This blondine was, at the time, on the eve of fifty-three, but her triumphant beauty had resisted all the efforts of time and the miseries of her new life. She had to sell her jewels, her silver; she found herself after a while as poor as the soldiers of Condé. The domain of Bets had been confiscated and sold.

In 1801 the army of Condé was disbanded. Condé and Madame de Monaco settled in England at Wanstead House. In 1802 he

wrote to Louis XVIII., living in exile like himself, asking permission to marry the Princess of Monaco. The permission was granted, and, on this occasion, Louis XVIII. wrote to the Princess, whom for the first time he called his cousin, an amiable letter, the text of which is given by M. de Ségur. The marriage took place on Christmas Eve, before four witnesses only. In 1803 the Princess was attacked by rheumatism and bronchitis; she died on the 28th of March, and was buried at Wimbledon. The Prince was so poor at the time that he had to appeal to the generosity of the Prince Regent to pay the funeral expenses.

Correspondence.

A FORERUNNER OF AGUINALDO.

TO THE EDITOR OF THE NATION:

SIR: The following sentiments are put in the mouth of the Philippine King Tidore by the well-known Spanish writer Bartolomé Leonardo de Argensola (1566-1631):

"Are we in possession of the most fertile islands of Asia only to purchase with their products infamous bondage and vassalage, converting heaven's generous bounty into a tribute to the ambition of alien tyrants? We know, by experience, how odious our valor has always been to the Christian commanders, whom, for this very reason, we cannot expect to be either more modest or less our enemies. Remember, accordingly, kings as well as subjects, you who promise yourselves glory as well as you who want safety, that neither of these things may be acquired without liberty, nor the latter without war, nor war without valor or concord. The forces of the Spaniards have increased and their glory is at stake. So, the hidden motive and the cause of this tyranny being clear, who is unwilling to venture the utmost in order to earn liberty, the supremest of all good? Other nations, when they hear of our resolution, will call it despair and ferocity, but when they learn the cause of it, they will award us praise and not pardon. Besides, everybody knows what is becoming to his religion, his honor, and his country better than those who judge of these things from a distance; and, finally, what is life without liberty?"

O. T.

April 1, 1899.

OUR MODELS.

TO THE EDITOR OF THE NATION:

SIR: Our people are boasting that in colonizing methods they are following the English, the successful colonizers of modern times. On reading Washington's Journal to the Ohio, printed in 1753, I found an incident which illustrates the French method of that day, and, with a slight alteration, may be made to fit the situation in the Philippines just before our soldiers began to shoot down the natives. The alteration would be in names, not in matter.

The Half-King (Thanacrishon) had been to Montreal to make a protest against the encroachments of the French. "Fathers," he said in his speech, "both you and the English are white, we live in a country between; therefore the land belongs to neither one nor t'other; but the Great Being above allow'd it to be a place of residence for us; so, Fathers, I desire you to withdraw, as I have done our brothers the English: for I will keep you at arm's length."

To this the French commander, the Otis of the day, replied:

"Now, my child, I have heard your speech; you spoke first, but it is my time to speak

now. Where is my wampum that you took away, with the marks of towns in it? This wampum I do not know, which you have discharged me off the land with; but you need not put yourself to the trouble of speaking, for I will not hear you. I am not afraid of flies, or mosquitos, for Indians are such as those. I tell you, down the river I will go, and will build upon it, according to my command. If the river was blocked up, I have forces sufficient to burst it open and tread under my feet all that stand in opposition, together with their alliances; for my force is as the sand upon the seashore; therefore, here is your wampum, I fling it at you. Child, you talk foolish; you say this land belongs to you, but there is not the black of my nail yours. . . . It is my land, and I will have it, let who will stand-up for, or say-against it. I'll buy and sell with the English (*mockingly*). If people will be ruled by me they may expect kindness, but not else."

But the French failed as colonists, and they are to-day practising the same methods in Madagascar towards the Malagasy.

WORTHINGTON C. FORD.

Boston, April 3, 1899.

J. Q. ADAMS ON CUBA'S GRAVITATION.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* of March 9 contains an interesting quotation from John Quincy Adams against imperialism. In this connection it is, perhaps, worthy of note that while Adams was strongly opposed to imperialism, he was enthusiastically in favor of expansion. He may, then, be quoted in opposition to the Government's control of far-away islands like the Philippines, but he cannot be quoted rightfully against the acquisition or retention of Cuba and Porto Rico. Permit the following extract from a letter to the American Minister at Madrid of April 28, 1823, to supplement the speech of 1831. Adams wrote during the downfall of Spain's Western empire, when the transfer of Cuba and Porto Rico to some European Power was a harassing possibility, and the need of impressing on our representative abroad the importance of vigilance was strongly felt:

"These islands, from their local position and [are?] natural appendages to the North American continent, and one of them, Cuba, almost in sight of our shores, from a multitude of considerations, has become an object of transcendent importance to the commercial and political interests of our Union. Its commanding position, with reference to the Gulf of Mexico and the West India seas; the character of its population; its situation midway between our southern coast and the Island of St. Domingo; its safe and capacious harbor of the Havana, fronting a long line of our shores destitute of the same advantage; the nature of its productions and of its wants, furnishing the supplies and needing the returns of a commerce immensely profitable and mutually beneficial, give it an importance in the sum of our national interests with which no other foreign territory can be compared, and little inferior to that which binds the different members of this Union together. . . . In looking forward to the probable course of events, for the short period of half a century, it is scarcely possible to resist the conviction that the annexation of Cuba to our Federal Republic will be indispensable to the continuance and integrity of the Union itself. It is obvious, however, that for this event we are not yet prepared. Numerous and formidable objections to the extension of our territorial dominions beyond seas present themselves, . . . but there are laws of political as well as of physical gravitation; and if an apple, severed by the tempest from its native tree, cannot choose but fall to the ground, Cuba, forcibly de-joined from its own unnatural connexion with Spain, and incapable of self-support, can gravitate only towards the North American Union, which, by the same law of nature, cannot cast her off from its bosom."

The italics are mine. If the words Adams spoke in 1831 were prophetic, how much more so were the words he wrote in 1833.

J. C. WATTS.

MADISON, WIS., March 27, 1899.

[The non-prophetic part is left unitalicized—we mean the unfulfilled half-century forecast as to the indispensability of Cuban annexation. Nobody even now thinks it indispensable “to the continuance and integrity of the Union.” Furthermore, if Cuba’s connection with Spain, its mother country, was unnatural, how much more that which we are now foisting upon the Philippines.—ED. NATION.]

EXPATRIATION.

TO THE EDITOR OF THE NATION:

SIR: Allow me to call your attention to the enclosed extract from a letter written by him whom you call “the learned Day.” Is it not a little hard that we who, for health, or business, or philanthropy, choose to reside out of the country of which we are natives, and where we and our forebears have, in our time, done our duty as citizens, and some of us as soldiers, should, for no other fault, be summarily outlawed? We submit, because we must, to the refusal to give us passports, but *this* is a little too much! Please help us with your protest. One who does not wish to be

A MAN WITHOUT A COUNTRY.

PARIS, March 21, 1899.

DEPARTMENT OF STATE,
WASHINGTON, March 12, 1898.

A person who voluntarily resides abroad permanently, *forfeits his right to claim protection from this government.* He performs none of the duties of citizenship, and cannot expect to receive assistance from a source which he has separated himself from.

(Signed) WILLIAM R. DAY,
Assistant Secretary.

[We have ourselves, acting for a transatlantic American of international repute, been obliged to listen at the custom-house, from one who perhaps owed his place to a “pull,” to a tirade against Americans found living abroad beyond the short term within which our delightful tariff forbears to denationalize them. And yet our friend’s life abroad was determined by a consular appointment made by President Lincoln.—ED. NATION.]

ERRATA BY ATTRACTION.

TO THE EDITOR OF THE NATION:

SIR: In to-day’s *Nation* I observe in the notice of Mr. Lawton’s ‘Successors of Homer’ a rather ludicrous “scribal error” in the translation from the “Hymn to Demeter.” In the words, “and the incensed smell of it made all the wide sky laugh, and all the earth laugh, and the salt *smell* of the sea,” the italicized word should, of course, be “swell” (translating *oîma*).

Something similar to this appears in the following, quoted from the *New Review* in the *New York Tribune* of October 16, 1897: “But until Mr. Le Gallienne’s heroes desist

from battering on ‘the honeycomb of woman,’ they will form a nasty *spectacle* (in every sense of the epithet) to their creator’s accomplishment of anything even respectable in fiction.” The blunder “spectacle” for “obstacle” is obviously due to “respectable,” which stands nearly under it.—I have the honor to be, sir, very truly yours,

MORTIMER LAMSON EARLE.

BARNARD COLLEGE, March 20, 1899.

Notes.

Prof. Angelo Hellprin, whom the pursuit of science leads now to the arctic and now to the tropics, will publish this spring through the Appletons a work on ‘Alaska and the Klondike,’ which can but rank high in the “literature” of that region.

R. H. Russell announces the publication of “English Portraits,” a series of drawings on stone by Will Rothenstein. The portraits are of men and women of to-day, including Mr. Thomas Hardy, Sir F. Seymour Hayden, Sir Frederick Pollock, Mr. Lecky, Mr. W. E. Henley, Miss Ellen Terry, Mr. Sidney Colvin, Mrs. Alice Meynell, Mr. Walter Crane, Mr. George Gissing, Mr. Henry James, etc., etc.

Prof. William Z. Ripley’s ‘The Races of Europe,’ a sociological study, illustrated with 85 maps and 235 portrait types, and provided with a supplementary bibliography issued separately by the Boston Public Library, will be ready about May 1.

Mr. Gollancz, in his ‘Temple Classics’ (London: Dent; New York: Macmillan), has arrived at ‘Tristram Shandy,’ of which he reproduces the edition of 1781, with the aid of Walter Jerrold for marginalia and notes (mostly of proper names). The beauty of these two volumes is of the kind well known from this companionable series, but in the interest of taste we could wish the regulation title-page abolished in favor of something that would better harmonize with the frontispieces and other daintinesses of the printer’s art.

About a year ago our Paris correspondent gave some account of K. Waliszewski’s ‘Marysienka,’ a swift and rather bombastic narrative of the life of the wife of Sobieski (1641-1716). This has now been translated fluently and for the most part idiomatically by Lady Mary Loyd, and is published with a portrait by Dodd, Mead & Co.

The ‘Annual Literary Index’ for 1898, edited by W. I. Fletcher and R. R. Bowker (*Publishers’ Weekly*), makes its customary prompt appearance. The Periodical Index (Poole proper) is followed by the Index to General Literature, *i. e.*, works of a collective nature, like Dobson’s ‘Miscellanies,’ Chapman’s ‘Emerson, and Other Essays,’ Krehbiel’s ‘Music and Manners in the Classical Period,’ Hubbard’s ‘Little Journeys to the Homes of American Statesmen,’ and, most important of all, Warner’s ‘Library of the World’s Best Literature.’ In connection with the foregoing is an author-index. A list of the American and English bibliographies of the year, an authors’ necrology, and an index to dates of principal events in 1898—*e. g.*, under *Santiago* all the main particulars of the siege; and leading obituary notices the world-over—invaluable to journalists, conclude the thesaurus.

There has undoubtedly been a need for an American ‘Year’s Art,’ ever since Mr. Koehler’s ‘Art Directory of the United States’

suspended publication. A woman now takes up the task, Florence N. Levy, and gives us through Macmillan the ‘American Art Annual’ for 1898. It is a volume of 540 pages in three main divisions. The first deals with the year in question, its sales and exhibitions, its necrology, its publications, together with information about tariff and copyright, and some chapters on art in the public schools. Here, too, is a summary account of foreign exhibitions, with special reference to American participation. The second division is of art galleries, private collections, art societies, and art schools, alphabetically treated under their respective cities (with a niche for Mexico hereafter), and embodying the catalogue in each case of a society or club exhibition. Part III. consists of directories, respectively, of painters, sculptors, illustrators (wood-engravers must be sought under this rubric, but are not distinguished from designers), workers in applied arts; art galleries, societies, schools, and dealers. The compiler gives evidence of little literary skill or sense of order, and the typographic appearance of her annual is unartistic to the point of confusion. Nevertheless, she is to be praised for her undertaking, and for the directories in particular, the utility of which has, in other similar cases, outlived the major enterprise.

Part four of ‘The Old Families of Salisbury and Amesbury, Mass.’ (Providence, R. I.: David W. Hoyt) advances this painstaking and trustworthy work to the Somer family, one of whose members, John Somer, a cooper, residing in Boston, was “a Quaker and twice whipped.” Another victim of independent thought and utterance was Major Robert Pike, who especially distinguished himself in the checking of the witchcraft delusion. Here figures also William Morse, whose house was the scene of witchcraft disturbances which nearly cost his wife her life; and Osgoods and Singletary are cited among witnesses against those accused as witches. The Rev. Joseph Rowlandson got into peril of public whipping by posting (while yet a senior at Harvard, class of 1652) a libel against a fellow-townsmen in Ipswich, to wit, “A wet eele’s tayle and his word were something worth ye taking hold of.” Mr. Hoyt announces a conclusion in part five, with indexes and corrections.

Under the title, ‘The Anatomy of the Central Nervous System of Man and of Vertebrates in General,’ the fifth and expanded edition (1896) of Edinger’s well-known ‘Vorlesungen’ has been translated by Prof. W. S. Hall of the Northwestern University Medical School, and published by the F. A. Davis Co. The volume will be welcomed by English-speaking students, teachers, and investigators who do not read German easily, and the fulness of the index is particularly to be commended. There is no evidence that the translation has the sanction of the author. Whether so or not, the apparent effort at literalness has occasioned some misinterpretations that would be amusing were they not misleading. Since there are unspecified omissions, interpolations, and terminologic changes, the translator becomes practically responsible for the whole, and hence for the perpetuation of deficiencies in the original as regards points of morphology and nomenclature. Respecting the latter, indeed, there is manifested either ignorance or disregard of the recommendations of American and German anatomic and neurologic societies. Inconsistencies, too, are likely to confuse the student, and are by no means atoned for by

the uniform rendering of "Anlage" by "fundament."

Nearly a quarter of a century ago Malwida von Meysenbug published her 'Memoiren einer Idealistin,' a charming book of reminiscences in three volumes, which has passed through several editions and taken a prominent and permanent place in German autobiographical literature. She belonged by birth to an aristocratic family of Hesse-Cassel, and her father held a high position in the government of the Elector, but she estranged herself from all her kith and kin by her political liberalism and active participation in the revolution of 1848. The collapse of that movement compelled her to leave her native land; she took refuge in England, where she lived for a long time, chiefly in the circle of her fellow-exiles and their English sympathizers. These German and Russian refugees were men and women of superior culture and remarkable force of character, and in the second volume of the 'Memoirs' she gives a vivid picture of their daily life in London, their struggles, hopes, and aspirations. Among others she mentions Carl Schurz, who was then only twenty-two years of age, and had just given a striking proof of his cleverness and courage and personal devotion in freeing Kinkel from the dungeon in Spandau. "One need not be a prophet," she says, "to foretell for him a great and fruitful future."

'Der Lebensabend einer Idealistin,' just issued by Schuster & Loeffler in Berlin, is a supplement to the 'Memoirs,' and contains the reminiscences and reflections of the authoress during the past twenty years or more. Indeed, they go back digressively to the laying of the corner-stone of the Wagner Theatre at Bayreuth in 1872, where, on account of her long and intimate friendship with Richard and Cosima Wagner, she thought of making her home, but the rude climate defeated this plan and caused her to return to the more congenial air of Italy. The volume is not so much a consecutive autobiography as a series of sketches delineating the most important events of her life, interspersed with thoughts on various topics, mostly of an æsthetic, ethical, and philosophical character. One of the most delightful of these episodes is the sojourn at Sorrento with Friedrich Nietzsche and other friends during the winter of 1876-'77. The report of the evening readings and discussions is exceedingly interesting and instructive, and presents Nietzsche in a very favorable light. The thought of his subsequent mental eclipse leads her to exclaim: "How mild and conciliatory he was then; how his kind and genial nature counterpoised his keenly analytic intellect!" The narration introduces the reader to many other personages prominent in art, literature, science, and politics, in clear outlines; but the most attractive figure of all is Malwida von Meysenbug herself.

Which "great Democratic party" has at last found a quarterly organ in the *Conservative Review* begun last month in Washington (The Neale Co.), it might be difficult to say. Such a relation is not indicated on the title-page, and there is no prospectus or salutatory or naming of editors. Eleven articles are arranged in orthodox quarterly form, and but three are political—"The Constitution on Absolutism," by Isaac Lobe Straus; "American Policy of Expansion," by Hon. Champ Clark; and "The Treaty with Spain," by Hon. A. Leo Knott—all in one

anti-expansionist vein, with more or less good argument and precedent adduced. Among the literary reviews, those on Henderson's Stonewall Jackson, Col. R. M. Johnston, and Chamberlain's John Adams have a pronounced Southern bias. In the last-named ("New England Statesmen") the present material prosperity of the South as a result of the civil war is made a ground of railing against the unstatesmanlike Northern defenders of the Federal Union. Miss Kate Mason Rowland, reviewing several works on Capt. John Smith, falls foul of "America" and of Alexander Brown for calling it "our national hymn," as if the "Land of the pilgrim's [sic] pride" was all America, or "we must all claim the Plymouth Rock 'fathers.'"

Our English cousins should read with satisfaction the latest record of American library ingenuity, "The Blue-print Process for Printing Catalogues," a paper contributed to the *March Library Journal* by Alexander J. Rudolph, assistant librarian of the Newberry (Chicago) Library. What is here described is the reprinting by the above process, and arranging under one alphabet, the British Museum's catalogue of accessions from 1880 to date. The entries number nearly 900,000, and require more than 20,000 sheets of blue-print paper, to form about 40 volumes of the size of the Museum's general catalogue. The cost is \$20 per 1,000 pages, royal octavo. The process has a wide application in library economy.

The March Bulletin of the New York Public Library is notable for a report of the executive committee retracing the history of the foundation and its rapid growth under Dr. Billings's directorship. Congestion is the fate of the institution till its new building brings relief, five miles of additional shelving in the Astor and Lenox Libraries notwithstanding. In the Astor, the seating capacity has been exhausted. The total collection now equals 485,000 volumes and 180,000 pamphlets. The duplicates accruing from reclassification and from gifts are set aside for use in a future circulating department.

An international journal devoted to the study of leprosy is to make its appearance in the near future. Its publication is one of the fruits of the International Leprosy Congress held in Berlin some months ago. The journal will bear the title *Leprosy: Bibliotheca Internationalis*, and the editorial staff embraces Dr. Besnier of Paris, Professor Dehlo of Dorpat, Russia; Dr. Hansen of Bergen, Norway; Dr. Hyde of Chicago, Dr. Hutchinson of London, and Prof. Neisser of Breslau. Dr. Ehlers of Copenhagen is editor in chief. Articles will be printed in various languages.

The German Orient Society (Orientgesellschaft), organized about two years ago for the special purpose of making diggings and excavations in the Tigris and Euphrates valleys, has now fairly entered upon what promises to be successful work. Twelve months ago a preliminary expedition, headed by Prof. Sachau and Dr. Koldewey of Berlin, proceeded to the East to examine into possible sites for the operations of the Society. The report of this committee induced the authorities to undertake excavations on the site of old Babylon itself, and a firman from the Turkish Government granting permission to do so was readily secured. The Society has chosen as the first object of its attack the mound commonly known as El-Kasr, or the Castle, containing the ruins of the magnifi-

cent castle erected by Nebuchadnezzar, about 600 B. C., in which he lived during the greater portion of his reign, and in which Alexander the Great died. For the present, funds have been secured to carry on the diggings for five years; but as the Society has been liberally supported by the contributions of its members and by the German Government, it is more than likely that the work will be continued indefinitely. The Royal Museums in Berlin are coöperating with the Society. The expedition is headed by Dr. Koldewey, an experienced explorer.

The Selden Society reports a very slight increase in 1898 of the number of its members. Volume xiii. of its publications, for 1899, will be a volume of 'Select Pleas of the Forests,' by Mr. G. J. Turner. Volume xiv., for 1900, will be a volume on the 'Municipal Records of Lincoln and Beverley,' by Mr. A. F. Leach. It has not been thought desirable to carry out the scheme of joint publication of the reprint of the Year-Books of Edward II., which was referred to in last year's Report as being then under consideration. The Council accordingly propose to proceed with their own plan, and hope to commence the publication in 1902 and to continue it in alternate years, with the intention that the Year-Books shall take the place of the ordinary publications for those years. The regretted illness of Prof. Maitland will probably make it impossible to commence the publication earlier. On account of the expensiveness of the undertaking, the Council may have to appeal for special contributions.

—The *Atlantic Monthly* for April contains an article, the first of a series by Charles Mulford Robinson, on "Improvement in City Life." The present instalment deals only with Philanthropic Progress. Even those to whom organized charity is repulsive or uninteresting can hardly read a review such as this without perceiving that the new philanthropy is a great advance upon any development of charity hitherto known. At the same time, when we are told that the New York State Board of Charities, in its annual report for 1898, expressed the belief that there were more than four thousand empty beds in the children's institutions in this city, we see that something remains to be done. The great fundamental principle of the new charity, as distinguished from the old, is stated by Mr. Robinson as follows: "That which merely relieves a social condition without attempting to prevent the recurrence of the need of relief, does not lift the city to higher things. Curative work is better than palliative, and preventive is best of all." It is worth noticing, by the way, how the new philanthropy confirms the teaching of the old political economy—that dismal science which warns against indiscriminate charity, and checks our impulse to give to needy knife-grinders at sight. That sort of charity not only covered, but promoted, a multitude of sins. The main object of the modern system is to promote the virtues by which pauperism is checked—cleanliness, temperance, industry, and thrift. The movements for better housing, baths, and playgrounds are all good in their way, but the root of the matter is in arousing the interest of the individual in his or her own improvement; neighborhood settlements and the personal visiting system draw their life from this. Mr. Robinson thinks that the future only can reveal "what is to be the effect of a patronage by politics of the

philanthropic movement—a condition which has lately become marked, notably in the case of the Citizens' Union campaign in New York in 1897," and adds: "Certainly the past gives little encouragement to hope that the result will be an improvement." What he means is apparently that philanthropy had made its advance hitherto chiefly through extra-political work, and that the type of political charity is the old-fashioned work-house and poor-house nurseries of pauperism. To this the young settlement-enthusiast would probably reply that Politics is to have a new birth too, as soon as he comes into control, and that Philanthropy—as Mirabeau said of Equality—is a good weapon with which to get into control.

—One-third of the contents of the *Century* for this month is made up of illustrated war articles ("The Atlantic Fleet in the Spanish War," by Rear-Admiral Sampson, a second instalment of "The Capture of Manila," by Major-General Greene, and "The Surrender of Manila," as seen from Admiral Dewey's flagship, by John T. McCutcheon). The first two derive their main interest from their authorship, and on one or two historic doubts concerning the Spanish war they throw some light. For instance, one question much mooted last year was the precise strategic meaning and force of the bombardment of San Juan, Porto Rico, by Admiral Sampson. The Admiral himself ought to know, and he says here that the "value of the action lay not a little in the practice it gave the men under fire." The orders of the Department were "not to risk needlessly the loss of a vessel until Cervera had been disposed of," the fleet having been dispatched for this purpose. On arriving at San Juan "a glance was sufficient to show that Cervera's ships were not in port"; to destroy the coal supply or occupy the place was impossible, because "no important part of the squadron could be detained there for this purpose, and the date at which an army of occupation could be expected was uncertain." The sum and substance of the Admiral's account is that, for the sake of a day's practice under fire, he took a good deal of risk—in fact, risked his fleet being disabled and prevented from executing the movement in which he was engaged. This confirms the opinion of those critics who contended at the time that the bombardment had no military meaning whatever. General Greene shows curiously how General Merritt made use of the insurgents to get ~~into~~ position before Manila. He sent his chief of staff "with a verbal message directing me [Gen. Greene] to persuade the insurgents, if possible, to evacuate a portion of their trenches; but I was to do this on my own responsibility, and without intimating that I had any instructions to this effect from him." "He was very anxious to avoid any entangling alliances with Aguinaldo, with whom he had no direct communication." General Greene, therefore, sent his orderly to the insurgent General Noriel, commanding the brigade of insurgents nearest to the beach, and negotiated for a surrender of the insurgent trenches to him, promising to make them more effective with superior artillery. Finally, by permission of Aguinaldo—provided that he (General Greene) "would make the request in writing"—the change was effected. General

Greene, of course, so discreet an officer as General Greene would never have published all the details of the story had he not received full permission from General Merritt. It seems, therefore, that, from the outset, the latter's aim was to make use of Aguinaldo in any possible way, but not to become responsible to him or to the insurgents. Was this because they were to be "ceded" to us? In Cuba, where we appeared as humane protectors, we could be more open in our dealings. In the military as in the political art it is necessary for our wisest and bluffest to resort to finesse; it is our highest boast that we publish it all afterwards with illustrations in the magazines.

—*Scribner's* has several noticeable illustrated papers, one of which, by Frederick Palmer, gives curious information about "A Winter Journey to the Klondike." Prof. William James has an article on "The Gospel of Relaxation," in which he makes psychology vindicate the teaching of common sense as to some national peculiarities. Mr. James is always too eloquent to be condensed; his aim is to show that the nervous, tense, American manner, which many admire—the manner which some writer says enabled his heroine to produce in all who beheld her an impression of "bottled lightning"—is a vice, not a charm. Intensity is not the proper goal of expression, either in look, voice, or gesture; it really suggests "irritable weakness," not reserved strength. The thing to study in manner is harmony, dignity, ease, and simplicity—not, however, by "putting on" or simulating them, but by being simple and easy. Mr. James repudiates altogether the theory that the American manner in question is the product of the climate or the physical geography of the continent. He attributes it to bad habits, nothing more or less, bred of "custom and example, born of the imitation of bad models and the cultivation of false personal ideals." The only way to get rid of it is to imitate good models, of which there are still plenty within easy reach. We cannot help thinking that a great deal of the uneasy tenseness of the manner in question is or was connected with the desire to be "American" *ad hoc*—i. e., to have a manner that should be national, and should be correlated with the superior energy, intelligence, and morality which we feel, in contemplating other tribes and nations, to be our portion. To aim at producing a superlatively local impression, however, is not the way to achieve excellence in anything. Educated Americans of the best sort, down to the most recent times, not merely Washington and Franklin and Adams, but men of a totally different strain, like Lincoln, and men even of the specially "irritable" literary breed—Hawthorne, Lowell, Curtis, and many of their still living descendants—have been marked, as to manner, by the "brave old wisdom" of simplicity. Perhaps the worst American manner of all—worse even than the teeth-gnashing, bottled-lightning variety—is that of the "hustler" of the present decade, the manner of the commercial traveller, not commending, but thrusting his wares down your throat. Naval men, literary men, military men, and even clergymen, have adopted it; it tends to make human society unendurable and

—Cromwell was born April 25, 1599, and his "tercentenary" is consequently a convenient magazine topic for the current month. In *Harper's*, Amelia Barr has an illustrated article on "Cromwell and his Court," consisting of incidents and anecdotes gathered from Cromwellian newspapers and tracts. A valuable article of the solid sort, on Sleep, is contributed by Dr. Andrew Wilson of the University of Edinburgh, under the somewhat fantastic title of "The Ape of Death." Among other things, Dr. Wilson discusses the phenomenon—familiar enough to everybody—of the capacity to wake up at an hour fixed upon in the mind before going to sleep. He thinks that there is something in this foreordination akin to the "dominant idea" which a hypnotist may impress on his subject. "The dominant idea in the shape of the necessity of awaking at a certain time is impressed on the brain, and is probably transmitted to those automatic or lower centres which rule our mechanical acts, which are responsible for visions of the night, and which are capable of carrying out, either in the entire absence of consciousness or in the existence of a subconscious condition, many complex actions." But, when we ask how it is that the time is measured, so that the alarm-clock acts at the appointed hour and not at some other, all that can be said is that people may have a "time faculty," just as they have a sense of direction. But is not this merely a restatement of the phenomenon itself? If "time" faculty and "direction" faculty explain such matters as these, why will not our old friends "will" faculty and "memory" faculty explain acts of volition and recollection? Among novel naval "features" in this magazine is an account, by Peter Keller, boatswain's mate on the *Gloucester*, of the "Rescue of Admiral Cervera," dictated to a stenographer, and "told in his own language."

—The "Review of Historical Publications relating to Canada" which Prof. Wrong of Toronto University began in 1897, has been annually continued and now reaches its third issue. Mr. Langton, who before acted as assistant editor, seems now to be fully associated with the work, but no other change strikes the eye upon the title-page of the publication for the current year. On scrutinising the contents, one observes that the marked tendency is towards anonymous contribution. At the outset, twenty-seven articles were acknowledged by their authors, last year the number dropped to fifteen, and now it is only eight. Perhaps, in a country like Canada, where the literary class is comparatively small and nearly all the authors know or know about each other, it becomes rather invidious to make perfectly frank and sincere criticisms in articles which are signed. Whether this be or not the right explanation of the tendency just mentioned, the publication maintains a high level of honesty and thoroughness. The last twelvemonth has been a very light one in Canadian literature, and if it were not for works which introduce a European or American element, the editors would have been hard pressed to find suitable material for their volume of 200 pages. Fortunately, there are enough works on Canada's relation to the empire, the Cabot question, and other records of early colonization to furnish forth several long and in-

whereas the local histories of seignory and township, the minute cartographical study, etc., will not otherwise be competently appraised. Besides calling attention to the general excellence of this review, we must particularly praise the minuteness of its bibliographical research. Even the *Zeitschrift des Deutschen und Oesterreichischen Alpenvereins* has been ransacked for a description of the Illecillewaet Glacier. The volume is published directly by the University of Toronto, and may be procured from the Librarian.

—The transcontinental African railway connecting Cairo and the Cape is no longer the mere visionary scheme of the British expansionist. The Bechuanaland Railway Co., according to a well-informed writer in the *London Times*, has undertaken to build the link, 1,750 miles long, between Buluwayo and the navigable waters of the Nile Valley. It proposes to begin work immediately on the first section of 20 miles through a promising mineral country to some extensive coal-fields. Thence across the Zambesi to the southern end of Lake Tanganyika a route has been roughly surveyed, and no serious engineering difficulties have been discovered. For the greater part of the distance the proposed line follows the backbone of the continent at an average elevation of some 5,000 feet. The land is well watered and suited for both agriculture and grazing, resembling southern Brazil and northern Argentina. The natives are mostly industrious and peaceable cultivators of the soil, and merely need protection from slave and cattle-raiders to become prosperous agricultural communities. In the original plan there was to be a steamboat service on Lake Tanganyika, leaving 450 miles of road to be constructed from the northern end of the lake to Uganda, either through the Free State or German territory. This route has now been abandoned on account of the apparently successful negotiations between the German Emperor and Mr. Rhodes. According to the latest reports, the road is to be continued through German East Africa, intersecting at Tabora, 200 miles east of the lake, with a German line to the coast now in process of construction. This section will probably be financed in Germany, provided there is a Government guarantee of the investment, and the arrangement is welcomed in both countries as a proof of the harmony of German and English interests in Africa. It is estimated that the 900 miles from Buluwayo to the lake can be completed in five years at a cost of \$25,000,000, and it is hoped that the German section will be built simultaneously with this southern part. The material advantages of the railway are that it will develop a vast country rich in agricultural and probably in mineral wealth, and that it will put an end to the atrocious slave-raiding which blights central Africa.

—With the death of Ludwig Bamberger on March 14, in Berlin, a prominent public character has disappeared from the arena of German politics. Bamberger was born at Mainz, July 23, 1823, studied law and practised for a short time, but was soon drawn irresistibly to journalism, and became editor of the leading paper in his native city. He took an active part in the revolution of 1848, was condemned to death, and fled to Switzerland. He subsequently went to Paris, where from 1853 to 1866 he held the responsible position of director of the great banking house of Bischoffsheim & Goldschmidt. The amnesty

of 1866 enabled him to return to his fatherland, where he was elected in 1868 a member of the German Zollparlament, and in 1871 a member of the Reichstag, to which he belonged till 1893. During the first seven years of his parliamentary career he was connected with the National Liberal party, then with the "secession," which he organized, and later with different factions of the so-called Deutschfreisinnige Partei. He was a man of brilliant parts, independent spirit, and honest purpose, but these excellent qualities made him one of the most efficient agents in splitting up the liberal representation into cliques, and thus throwing the law-making power into the hands of the united conservatives and reactionaries. He was a publicist of distinction. His "Gesammelte Schriften," issued in five volumes by Rosenbaum & Hart in Berlin, contain interesting characterizations of eminent persons, but consist chiefly of valuable and very readable essays on economical, financial, and political topics. He rendered good service to Germany and other countries by his vigorous defence of the gold standard against the assaults of the silverites, was an ardent advocate of free trade and keen adversary of socialism. His last important contribution to the press was a series of articles, entitled "Bismarck Posthumus," which appeared originally in the Berlin weekly *Die Nation*, and afterwards in book form. His estimate of the eminent statesman, whose policy, especially as regards colonial expansion, he so often and earnestly opposed in the Imperial Diet, is fair and wholly free from vindictiveness. He pays a high tribute to the great qualities of the Chancellor, and notes at the same time some of the defects of these qualities; he corrects several serious misstatements in the 'Reminiscences,' without impeaching the veracity of their author. The breadth and refinement of his culture, a lively sense of humor, a lucid and attractive style, a thoroughly liberal spirit, sound common sense, and a complete mastery of the subjects which he discusses, give to his writings a permanent value as contributions to contemporary history, more particularly in the kindred provinces of political economy and financial science.

SHAKSPERE IN FRANCE.

Shakespeare en France sous l'ancien régime.
Par J. J. Jusserand. Paris: Armand Colin & Cie. 8vo, pp. 389.

In this admirable volume, packed full of information, as would be expected by those familiar with the former works of its author, are to be found the following facts.

In the sixteenth century, during the period of the French Renaissance, the existence of any English literature was unknown to Frenchmen—that is, any literature written in English. The works of Englishmen writing in Latin, the works of scholars, historians, and thinkers were widely known and duly admired; but the poets, from Chaucer down, were ignored. Yet the relations between the two nations had been continual, and it was not merely statesmen and scholars and divines who had passed back and forth over the Channel. Henry VIII. sent two poets to France as Ambassadors—Sir Thomas Wyatt and another. Ronsard in his boyhood was two years and a half in Scotland and half a year in London; he made the acquaintance of one of the most charming poets of the day, Sir David Lyndsay,

but he seems to have retained no impression of him, and in all his writings it would be difficult to find an allusion to English poetry. A generation later, Du Bartas, author of 'Les Semaines,' was Ambassador in England, and almost at the same moment Sackville, one of the authors of "Gorboduc," was Ambassador at Paris. Brantôme, an excellent observer, was twice at the court of Elizabeth. He notes seeing a picture, a ballet, and some hunting dogs, but he says nothing of "Gorboduc," which was performed at court the year of his first visit, and does not mention the two or three great theatres lately built in London at the time of his second visit (1579), when Paris had but one.

In 1610 a work (the 'Characters' of Hall) written in English was for the first time translated into French; the next year this first translation was followed by the translation of Bacon's Essays. These experiments, however, remained rare, in curious contrast to the numerous French works that were then to be found in translation in England. But before the end of the seventeenth century the works of Shakspeare had themselves, in their native form, crossed the Channel. Two copies (only two) are known to have been in France. One was in the library of Louis XIV. himself (between the years 1675 and 1684); the other was in that of the great *surintendant* Fouquet, and an inventory of his books shows that it was priced at one "sol"; it was perhaps the folio that now sells for 15,000 francs. In the catalogue of the King's library, the Librarian wrote beside the title an appreciation, in four lines, of the author's genius; it was the first French judgment pronounced on Shakspeare, and it saw the light only ten years ago, at the hands of M. Jusserand. It was in 1685 that (as far as is known) Shakspeare's name was first printed in France, and his name only. It appears in a list of thirteen English poets, English writing poets.

Just at this moment, when classic art had reached its highest point in France, serious doubt regarding this form of art had insinuated itself into some minds. From the Academy itself, the stronghold of literary conventions, came one of the most remarkable protests, in the form of dialogues written by Charles Perrault (equally well known as the author of the charming fairy-tales of our childhood). These dialogues were a series entitled 'Parallèle des Anciens et des Modernes,' which appeared in 1683 and the following years, and was the first scene in the first act of the famous so-called "Quarrel of the Ancients and Moderns." At the conclusion of this opening campaign, success perched on the banners of Perrault and his associates, and respect for antiquity and the consequent imitation of it was henceforth not an obligatory virtue in modern literature. This quarrel did not concern itself especially with the drama, and it is probably for that reason that M. Jusserand takes little notice of it; but it can hardly be questioned that the opinions which gave rise to the discussion were connected with the decline at the end of the seventeenth century of the dramatic art in France. After "Athalie" in 1691 it may be said that, throwing out the theatre of Crébillon, there was no French play deserving attention till the "Brutus" of Voltaire, written in England under the influence of Shakspeare, in 1727.

Voltaire went to England in 1728; three

years later he returned, accompanied by Shakspeare. All that was known about Shakspeare in France was of the most trivial importance till Voltaire published in 1734 his 'Lettres sur les Anglais,' better known as 'Lettres Philosophiques.' In these he wrote of the various religious sects in England, of the English government and English commerce, of inoculation, of Bacon and Locke and Newton, and also of tragedy and comedy and of the men of letters of the day. All these subjects had been treated of before in France, but not by Voltaire, not by any voice that gained attention. Yet, unobserved, a veritable Anglomania had taken root which was to reach astonishing proportions. One of the first of the "Anglomanes" was the Abbé Prévost, author of the famous 'Manon Lescaut' and a hundred other romances of more or less merit. In one of these, the 'Mémoires d'un Homme de Qualité,' the 'Impressions de voyage' of the Abbé himself appeared, in 1728. He speaks of England as "not well enough known," and he describes in a very friendly spirit not only London but the cities of the provinces and the English castles and universities; and he becomes enthusiastic about the English drama, and particularly about Shakspeare.

In the Letters, Voltaire says of Shakspeare: "He had a genius full of power and fruitfulness, of naturalness and sublimity, without the least spark of good taste, and without the least knowledge of the rules. . . . The merits of this author have ruined the English theatre." And after high praise of Addison he continues: "Since Addison's day the English stage has become more regular, the spectators more critical, the authors more correct and less bold"; adding, with an accent of regret: "It seems as if the English were as yet capable of producing only irregular beauties. The brilliant monstrosities of Shakspeare are a thousand times more agreeable than the modern perfection"—praise that was heard with patriotic indignation in France. His sense of the nature, the power, and the life to be found in the best parts of the English stage is summed up in a phrase of which, M. Jusserand declares, even the enthusiasts of 1830 would not have desired to change a word: "The poetic genius of the English resembles now a thickly leaved tree, planted by nature, throwing out at haphazard a thousand branches and unequally increasing in size and strength. It dies if you try to bend its nature and to cut it into shape like the trees of the gardens of Marly." But this phrase had not on the lips of Voltaire the same weight of meaning as to the enthusiasts of 1830. The 'Lettres Philosophiques' and their author belong to an age when in matters of art the trees of the gardens of Marly were the ideal.

From this moment the knowledge of Shakspeare spreads in all directions. The voice of Voltaire reaches everywhere and excites interest of one kind or another. Henceforth the public requires of travellers in England that they should speak of the author of "Hamlet." The Abbé Prévost continued to proclaim his ardent admiration, much more ardent and unreserved than that of Voltaire, but which attracted much less attention. The audacious Abbé even dared to maintain that it was not to be regretted that Shakspeare had not been familiar with the ancients. Another abbé, the Abbé Le Blanc, devoted a number of his 'Letters,'

published at The Hague in 1745, to detailed studies of the genius of Shakspeare, but in his eyes ignorance of "the rules" had ruined this admirable genius, "one of the greatest geniuses that have ever perhaps existed," "but who unfortunately has not produced a single work that can be read from beginning to end." But the Abbé Le Blanc deserves to be honored, if for this alone, that he was the first man in France to take into account the incomparable magic of the style of Shakspeare; he recognized that Shakspeare spoke a language which belonged to him alone, and that makes translation of him almost impossible.

The first attempt at translation of the works of the master was made, in the same year with the Letters of the Abbé Le Blanc, by La Place, a dramatic author whose name is scarcely known outside France. It was impossible to think of translating all, and the courage of La Place carried him at first only through two volumes of very weak, dim, attenuated, but still meritorious reproductions. They were prefaced by a well-written discourse on the English theatre, in which the translator asks not so much that his readers should be won to admiration as to knowledge, that they should learn how it is that "Shakspeare has charmed his countrymen by methods that no French author has known how to practise." M. Jusserand gives a careful analysis of this Discourse, which at times has something of eloquence, and which contains a remarkable prediction of the importance that romance-writing was soon to acquire and of the influence this would exert upon the stage. The appeal of La Place to his readers was readily responded to. Two more volumes were asked of him, in which he added to the twelve plays he translated analyses of all the others, thus giving a general review of the whole body of Shakspeare's production.

During the twenty years after his return from England (1730-50), Voltaire, whose work contains almost all that is of importance in the tragic writing of his time, is constantly occupied with Shakspeare and influenced by him. The English dramatist remains a monster in his eyes, but a monster that at one and the same time attracts and terrifies. But when, during the next twenty years, he saw this monster, whose power he had himself revealed to his countrymen, gaining influence over them, the lover of the classical drama, co-lodger in his brain with the revolutionist, sprang to arms. The position acquired by Shakspeare in France was one against which both the selfish vanity and the national pride of Voltaire revolted, as well as, sincerely, his æsthetic taste. It seems absurd in such a connection to speak of selfish vanity, but it is unquestionable that the adulation Voltaire had received, and in large measure deserved, had affected his judgment of his own greatness, and that from an essential lack of generosity he never enjoyed hearing the praises of other great men, whoever they might be—Euripides, Corneille, Petrarch, Milton, or most especially Shakspeare, whom he rightly laid claim to having discovered. He had been the first, in his own words, to exhibit to the French "the few pearls to be found in this enormous dung-heap," and now to see "ce Shakspeare, si sauvage, si bas, si effrené, et si absurde," regarded as the sole model of true tragedy, excited in the fiery octogenarian autocrat a slowly kindling, but presently flaming wrath, which broke forth in 1776 in

an open declaration of war. The immediate occasion was the publication, under the patronage of the court and many notabilities, of the complete translation of Shakspeare by Le Tourneur. The auspices under which it appeared made it a European event, as had also been, three months before, the great Shakspeare Jubilee at Stratford. The first attack was the famous letter of Voltaire to the Academy pleading "the cause of France," and read in solemn session by the beautiful voice of his friend D'Alembert, the Secretary of that august body. The triumph that day of Voltaire was complete. But he considered a second campaign indispensable, and two years afterwards he came himself to Paris to make a final incursion into the enemy's country with a second letter to the Academy. Exceptional honors were bestowed on him, not only by his academic confrères, but by his admirers of the gay world and by the actors of the Comédie-Française, who performed his last work, his classic 'Irene,' to a wildly enthusiastic audience; his adorers seized "la chère idole" in their arms as he entered the theatre, and carried him to his box, where a few moments later he was crowned with laurel. Three months only afterwards he died.

Shakspeare was now known to every Frenchman; he was to be found in every library and every drawing-room; but as yet only in masquerade costume in the theatres. No play of his own was performed, but there was soon an immense series of adaptations of his plays—a "Romeo and Juliet" which ends joyously, a "Hamlet" in which the Prince of Denmark carries about "l'urne redoutable" that contains the ashes of his father. Of these unconscious caricatures the greater number were made by Ducis, well known through Sainte-Beuve's delightful articles about him; Ducis, the most ridiculous of writers and the most charming of men, and the most passionate admirer of Shakspeare. The success of his strange productions was great, and was not wholly dependent on the "mœurs fluettes" of the period. They outlived the Revolution, were acted under the Consulate and the Empire, and even at the Restoration; what was more, they survived the Romantic whirlwind, but from that time their popularity diminished, and they have now disappeared for ever. With the Revolution, everything changed in the real world; nothing changed in the mimic world of the theatre. Under the Consulate, Shakspeare was as displeasing to Chateaubriand as to Voltaire. The classical methods continued under the Restoration, and Stendahl in 1823 found affairs exactly where Voltaire had left them, and took up the quarrel on the opposite side. That year Shakspeare was played in English in Paris and was hissed.

But 1830 was approaching, and arrived. Victor Hugo sent forth his manifestos, Delacroix was at the head of a bevy of excited artists, Théophile Gautier, at once the most brilliant and the most "romantic" of critics, did yeoman service; French verse, and with it French tragedy, were freed from their bonds. It was the end of an epoch, the achievement of complete liberty—or at least all the liberty that was wished for. The enemy, in acknowledging the victory of the barbarians, ascribed the success to Attila-Shakspeare. There can be no question that he contributed to it; nor is it doubtful that he is to-day intelligently appreciated and highly honored by many French men of letters. Within a month Mounet-Sully has

acted "Othello" at the Comédie-Française, in a translation by Jean Alcard; but it has taken twenty years' persistent effort on the part of both actor and translator to obtain the performance, and the success has not been brilliant. Shakspeare is still, and will always remain, entirely a *foreigner* to the French people. His plays are not, and never will be, "popular" on the French stage. The national taste remains always the same, and M. Jussierand's last sentence makes it evident that his own heart beats in sympathy with his countrymen in worship of their own gods.

Memoirs of Pliny Earle, M.D., with Extracts from his Diary and Letters (1830-1892) and Selections from his Professional Writings (1839-1891). Edited, with a general Introduction, by F. B. Sanborn of Concord, former Chairman of the Board of State Charities and Inspector of Charities. Boston: Damrell & Upham. 1898.

Dr. Earle was a distinguished and successful alienist, and his work as such is reported by Mr. Sanborn with generous and intelligent appreciation. If this were all, the book would be mainly interesting to specialists and to those who have friends afflicted with insanity, though, even so conditioned, it would deserve general attention, the treatment of the insane being a matter of such general importance. But this is not all, and if Dr. Earle had been a man of no professional repute, his experience of travel and society, as here set down, would give the book an independent value that would justify its publication. Here are very serviceable memoirs for the future students of manners in the nineteenth century. For one thing they may, so much was Dr. Earle in Washington, do something to relieve the monotony of reference to John Quincy Adams's "Diary."

Mr. Sanborn has not done a better piece of biographical work. If it is somewhat discursive, it is far less so than his "Thoreau," and his subject is entertained more simply than in that or the S. G. Howe and Alcott books. So deeply involved was Mr. Sanborn in the anti-slavery conflict that his references to that are always interesting, though Dr. Earle's anti-slavery sentiment was very weak in proportion to his opportunities for knowing anti-slavery people. The better-informed may resent some of Mr. Sanborn's footnotes as superfluous, as when he gives a sketch of Daniel Webster; but if he errs in this direction, it is on the right side. The ignorance of the general reader is more easily underrated than exaggerated. A very real exaggeration is that where Dr. Samuel G. Howe is spoken of as "the chief philanthropist of a philanthropic age."

Mr. Sanborn's introduction gives a tragical account of the progress of humanity in the treatment of insane persons. Since Pinel, with the consent of Couthon, the French Revolutionist, unchained the inmates of Bicêtre in 1793, the tender mercies of the reformers have been cruel. Some of these, as for example, "the tranquillizing chair," of which we have a description in one of Dr. Earle's chapters on the German asylums, he thought as bad as the chains it had superseded, if not worse than those. Dr. Benjamin Rush of Philadelphia was an alienist reformer in his day, but bleeding was his strong point, and his "moral treatment" supplemental to this consisted of the strait-waistcoat, the "tranquillizing chair," privation of food, pour-

ing cold water into the coat-sleeves, the shower-bath for fifteen or twenty minutes, and "the fear of death." Many of those who followed Dr. Rush owed their partial successes more to the native vigor of their minds than to improved methods. One of the most important of Dr. Earle's services was to disabuse the public mind of the fallacy that insanity is easily cured. Furthermore, "Personal favor and political interests came in to promote the claims of the inexperienced and self-seeking. . . . and the sound principles of the elder alienists, favoring small asylums and greater personal care, were soon set aside, at first on the ground of economy and expediency, and then because great asylums involved larger powers and wider 'patronage' in the hands of politicians, medical or administrative." To combat these tendencies was an important part of Dr. Earle's activity. His ideal asylum would not contain more than 200 or at most 250 patients, and in his later years he had kindly leanings to the Scotch system of isolation in the care of people of trustworthy ability and humanity. Monster asylums and extravagant expenditure (evil fruits in part of Miss Dix's passionate philanthropy) found in Dr. Earle an opponent whose habitual geniality did not prevent his striking hard when there was need of a good stunning blow.

Dr. Earle was born in Leicester, Mass., in 1809, a year extremely rich in much more famous men. The "first citizen" of Leicester, Samuel May, contributes a letter of valuable reminiscences of Dr. Earle and his family. Seeing that Dr. Earle's *magnum opus* was an 'Earle Genealogy,' Mr. Sanborn has shown much self-restraint in referring his readers to that instead of drawing on it freely. The character of Dr. Earle's relatives reminds us of the comment of an English friend, "All you Americans who have done anything seem to be blood-relations." Dr. Earle's mother was Patience Buffum, a sister of Arnold Buffum, one of Garrison's "great allies," whom Thoreau describes, "with his broad face and a great white beard, looking like a pier-head made of the cork-tree with the bark on, and as if he could buffet a considerable wave." Mrs. Elizabeth Buffum Chace, one of the noble company of anti-slavery women, was Dr. Earle's cousin, and it was his brother, Thomas Earle of Pennsylvania, who was candidate for the Vice-Presidency on the first Liberty Party ticket, and who edited the Life of Benjamin Lundy. Pliny's journals and letters are extremely rich in references to people prominent on the anti-slavery stage. The English abolitionists were largely recruited from among the Friends in England. Sixty years ago he saw much of them, the Gurneys, Frys, and Buxtons and their set. Pliny Earle seems never to have been a thorough-going Friend either in his religious or philanthropic interests—his specialty excepted.

Soon after his graduation in Philadelphia in 1837, Dr. Earle went to England, and there enjoyed a vogue much heightened by his anti-slavery associations. He heard with regret that Sarah Grimké had introduced a resolution on the rights of women into an anti-slavery convention. Of Elizabeth Pease, his informant, he wrote that she was "the most beautiful of all the young Quakeresses" he had met in England. Though he never married, he was remarkably susceptible to the beauty of women and often fell in love. Miss Pease seemed to him "no longer a true

Quaker in principle," but "a Tory as regarding the national Church, the peerage, and all the relics of feudal times"—a surprising account of a woman who was already in sympathy with Garrison. Abby Kelley, whose name Mr. Sanborn misspells with some others, "as a practical contender for the rights of woman," arouses our Friend's opposition; but if women "can do more good in this way than otherwise, let them go on; and I bid them godspeed."

From England Dr. Earle went to the Continent, and travelled widely in France, Switzerland, Italy, Greece, and Turkey in the years 1838 and '39, his interest in the insane asylums of these countries foreshadowing the characteristic business of his life. The first indication of his future career is in a letter of September, 1837, written after conversing with Samuel Tuke, manager of a Quaker asylum in Yorkshire, on the predominance of insanity among Friends and the cause of it. His accounts of the reformed methods of the great Paris asylums are sickening. The douche was the great *moral* artifice, one of the managers being a son of the great Pinel. Returning to America, he had hardly established himself as a medical practitioner in Philadelphia when he was invited to take charge of a small Quaker lunatic asylum. This circumstance probably had much to do with his lifelong predilection for small asylums, and it enabled him to experiment with his ideas as he could not have done as a subordinate in a large establishment. His resolve not to deceive his patients was soon formed. At this time he had quite a turn for literature, writing for the *Knickerbocker Magazine*, and being welcomed by Poe to write for another, which never saw the light. He was not a little taken in the snare of the phrenologists, and we have a most amusing account of a patient's mind in the terms of that pseudo-science.

Early in 1844 he took charge of the Bloomingdale Asylum in New York, and remained there five years. At that time there were only 751 patients in all the asylums of the State; now there are nearly 23,000. A statistical history of the institution from 1831 was one of the best proofs of his administration, confirming, as it did, his various theories and methods of treatment. In 1849 he again became a student, going abroad, and in the summer and autumn of that year visiting thirty-five asylums—eight in Great Britain, the others on the Continent. The limits of his visit are not given, and, though we are told that his mother died on the day of his return, no date is written. He remained in Leicester until 1853, when he returned to New York for a year, and published his book on the German asylums. He soon returned to Leicester, and, for ten years, the best-fitted man in America to superintend an asylum waited for his opportunity, which came in 1864, when he was placed in charge of the asylum at Northampton, Mass., where, with some serious qualification, he was able to carry on his work according to the principles which had been steadily maturing in his mind. But he was not idle, either intellectually or socially, in the years of his comparative neglect. He travelled much and saw many places and people, and he writes of them in his journals and letters in a racy fashion. A whole chapter is given to a visit to Cuba, possibly justified by our present interest in that dependency. Much more interesting, however, is a visit to Charleston, S. C., where Dr. Earle's temper was much

that of Thackeray: "Catch me speaking ill of people who have such good claret!"

There is an appendix containing some of Dr. Earle's most interesting papers, and extracts from others.

A History of Rugby School. By W. H. D. Rouse, M.A. Charles Scribner's Sons.

This is a new volume in a series characteristic of the time. Publishers are all nowadays bent on starting some "series" or other, which shall appeal to a particular interest or a particular audience; and, from the money-making point of view, it was a happy idea on the part of the original English publishers of this volume to set going an "English Public Schools" series. But such series have the defects of their qualities. This 'History of Rugby School,' for instance, is addressed primarily to old Rugbeians, who knew all about the daily life of the school as it was in their time; accordingly, it could hardly fail to indulge in scores of allusions unintelligible to the outside world. Moreover, the publishers very naturally seek to add to its attractiveness by intrusting each history to a master in that particular school; and, accordingly, they are likely to secure as their authors men who are doubtless good "scholars" and interested in the great foundations to which they are attached, but who have had little practice in writing and show little skill in narrative or exposition.

The book before us illustrates both these defects. It is more valuable than some others in the series, because the story which it tells of the fortunes of the school for the first two hundred years after its foundation is based upon a certain amount of independent investigation. But even what the author gives us that is new is not told with any lucidity; it would require a good deal of perplexed cogitation over the documents in the appendix to arrive at any more definite impression than this—that the early trustees were careless, and that there were some rogues among them.

The story of Rugby School, as it could be told, might be made an interesting chapter in the social history of England. There is, first, the founder, Lawrence Sheriffe, Queen's Grocer in the reign of Elizabeth, who establishes a free grammar school and an almshouse in close conjunction with it, for the benefit of the people of his birthplace. The faint suspicion of apology for the founder's occupation which haunts us in reading the first chapter shows that Mr. Rouse hardly appreciates what a "grocer" was then, nor what the position was of a Warden of the Grocers' Company, who was also Grocer to the court, in the spacious days of Queen Bess. Then there is the "one-third of the Conduit Close" in Holborn which Sheriffe fortunately put into the codicil of his will instead of a sum of money, and so "made the fortune of Rugby School." When and how this Conduit Close came to be built upon, would form a tale worth telling. The first speculator who saw the capabilities of the neighborhood was that Nicholas Barbon whom some recent writers have found out to have been a great economist. Then there is the village grammar school, with its increasing revenue from London rents, becoming, towards the end of the seventeenth century, a thriving boarding-school for the sons of the neighboring gentry. Here again Mr. Rouse seems just a little ashamed of the school's

humble origin, and a little too eager to reach the time when it ceases to be "merely or chiefly a free school for the boys of the neighborhood." It is apparently with unmixed satisfaction that he arrives at the date when "the names are arranged into two columns, foundationers and non-foundationers being kept apart. Of the twenty-six boys entered in 1675, nearly half lived at a distance from Rugby, and were not foundationers" (p. 88). People can persuade themselves of much, but, with the "Intent" actually printed in the Appendix, it is surprising that Mr. Rouse should hereupon tell us that "the good intent of the religious founder was in a way to be more fully realized" (p. 87). Without maintaining that Sheriffe meant his school to provide elementary education for the agricultural laborers of the parishes around Rugby, it is perfectly clear he did not in the least contemplate what came out of that codicil. Mr. Rouse might well have faced this—might have explained what were the new social needs that justified the change; what continued to be the number and what was the position of the foundationers; and what are the functions of that "subordinate school" which has recently been created out of the trust "to provide for the needs of the town." Finally, there is the great name of Dr. Arnold. Perhaps Rugbeians have been rather overdone with Dr. Arnold; and there is now a tendency, which Mr. Rouse shares, to lay more stress on the merits of his predecessors and successors. But our author hardly realizes that it is Dr. Arnold and 'Tom Brown's School Days' and Matthew Arnold's 'Rugby Chapel' which to most non-Rugbeians give the greater part of its interest to the school.

Of course, in a book like this, as we said in reviewing another of the series, there is much to amuse the careful observer of men and things. The great American public, which has so keen an eye for Anglomaniæ, may be pleased to learn that, in the code of school-boy morals, "however muddy the road, no one but a 'swell'" (i. e., we conjecture, a member of the Sixth) "is supposed to turn up his trousers at the bottom." And that even greater public which discusses the details of football will find the evolution of the Rugby game here set forth with sympathetic touch.

And now a word to the publishers. After they have completed their series, will they not think of a supplementary volume on the English Public Schools in general, and put it into the hands of some one who knows American conditions, and something also of the French and German schools frequented by the children of the "well-to-do"? For it is very probable that schools more or less modelled on the English public school are going to play an increasingly large part in the education of the American youth; and founders, masters, and parents want all the intelligible information they can get. One thing is borne in upon us as we contemplate the great English schools. It is the social position of the headmasters. This has been secured very largely—such is the charming illogicality of England—by the existence of an established church with offices of great dignity and considerable emolument. That a schoolmaster who has edited a hardly decent Greek play should be rewarded with a bishopric, has been a fancy that has delighted many a novelist. But it is the sober fact that for a century the most sure path

to high ecclesiastical preferment in England has been to succeed as a schoolmaster, and the well-to-do classes in England have regarded it as perfectly fitting. That is one problem before us in America if we want to have great schools of the English type. With human nature as it is, we must hold out inducements, consisting not so much in salary as in public honor, which will attract to the profession men of first-class ability. We must somehow or other bring it about that a successful headmaster shall be as respected a personage—by the parents of his boys—as a Senator or a railroad president.

The Structure and Classification of Birds. By Frank E. Beddard, M.A., F.R.S. Longmans, Green & Co. 1898. Large 8vo, pp. xx, 518, figs. 252.

If we were asked to name, among a multitude of ornithologists who have contributed to the general result effectually, four authors who have most satisfactorily brought to book what is now known of the structure and classification of birds, we should cite A. H. Garrod, whose writings were collected in a memorial volume in 1881; Professor Fürbringer, whose 'Untersuchungen zur Morphologie und Systematik der Vogel' was published in 1888; Dr. Hans Gadow, with his contributions to Bronn's 'Thierreich' and to Newton's 'Dictionary'; and Mr. Beddard in the volume now before us. One who should be familiar with these authors would need to undertake special researches of his own to extend his knowledge of avian morphology; and one who now wishes to be set abreast of the subject, by means of the most convenient handbook in the English language, may turn with confidence to his Beddard.

The author has occupied for many years the office of prosector to the Zoological Society of London, immediately succeeding Mr. W. A. Forbes, who was himself the successor of Garrod. In this position his opportunities for the dissection of birds have been exceptionally good, and he has made the most of them, working along the same lines as his two predecessors, whose results were his legitimate inheritance, and whose mantle he now wears. Each of his predecessors, in fact, had planned such a treatise as Mr. Beddard has prepared, when their respective careers were cut short by premature death. "I have," he says, "determined to make an attempt to carry out this plan of my two forerunners, and the present volume is the result."

Like most methodical and systematic treatises, the work is easy to describe and appreciate. It runs to p. 158 with a general sketch of bird structure, avoiding histological detail and elaborate description of anatomical facts not at present of much use in classification. But the main body of the book is an account of the special anatomical characteristics of the several leading groups of birds, now commonly called orders or sub-orders. The bent is thus practically taxonomic, and we get a summary anatomy for purposes of classification, of the greatest utility to the greatest number of ornithologists; for few of this class concern themselves with the internal structure of birds with any other end in view. We are given no formal bibliography of the subject, but the copious footnotes, on almost every page, point out the principal previous treatises on special points, and collectively amount to the required bibliographical references. We are

sorry to see how few American names appear in this showing, and that the only one extensively quoted is a person whose best work is barely mediocre. Though Mr. Beddard's facts of bird structure are largely drawn from published memoirs, most of them have been verified by himself, especially in osteology and myology; and his command of existing materials has been immensely extended by original research. The clear illustrations, indispensable in any anatomical treatise, are very numerous; most of them have appeared before in the Proceedings of the Zoological Society of London, in the *Ibid.*, or elsewhere.

The integrity of any scheme of avian classification based, as are all the schemes which have any vogue nowadays, upon morphology, is a thing apart from the validity of such anatomical facts as may be adduced to support it. Taxonomy is still a matter of expert opinion; the key to evolutionary processes remains at the bottom of the well, and each may draw his own conclusions from indisputable premises. The day of confessedly artificial systems, hardly more than indexes to chaotic facts, is happily long past; but the time is not yet come for ornithologists to agree upon the interpretation of their facts on the theory of evolution they all profess. The steps by which we have progressed from obviously unnatural classifications towards those seeming to be more and more natural, have invariably been marked by too great insistence upon some special set of anatomical characters. Take Huxley's classification for an egregious example of what we mean. He set forth a system based upon the structure of the bony palate, in the most masterly manner, with all the forcefulness of perfect exposition; yet the groups he devised on this basis have stood or have fallen according to their coördination or lack of coördination with groups founded upon less special considerations. Garrod and Forbes both insisted strenuously upon presence or absence of an ambiens, and correlated arrangements of other muscles of the legs; upon colic cæca and plumosity or nudity of the oil-gland; and upon a few other features regarded by them as of prime taxonomic significance. That they went too far in this way, and gave us some bizarre collocations and sequences, no one now doubts.

Mr. Beddard belongs to their "school," as we have said, but he is less extreme and more judicious; he adopts the most reasonable views of his teachers, but also thinks for himself, and has produced on the whole a better system. Not all ornithologists will adopt his thirty-six ordinal groups, nor follow his sequences, especially the intercalation of *Accipitres* between *Ichthyornithes* and *Tinami*; while the appearance of *Stercorornithes* in his system simply perpetuates a blunder. The prime division, *Anomalognathæ* (including *Strigæ*!), for the Passerine and Picarian groups, is duly set forth, but we do not find the antithetical *Homalognathæ*. Our author does not finish the game of battledore and shuttlecock with several disputed forms; lapses on gallinaceous groups, is obscure on saurognathism and at a loss among limicolines, and makes some misstatements regarding cormorants and swifts. But it would obviously take us too far afield to go into detailed criticism on any such points. We believe that most of Beddard's groups will receive the assent of most ornithologists as natural and definable; they are all defined by him, with much additional description of

their anatomical peculiarities, as clearly as and more conveniently than we have found them to be treated elsewhere. This is a boon in itself, enabling us readily to agree or disagree with our author, and form our own conclusions.

It should be observed here that the absolute taxonomic rank of Beddard's ordinal groups is something aside from the naturalness of such divisions. Nothing is more certain than that the so-called class *Aves* is so compact and homogeneous that its extreme members differ less among themselves than do the several orders of reptiles. Birds are therefore no more than an order of a higher class of vertebrates, and their subdivisions have lower taxonomic rank than the so-called orders and families in other vertebrate classes. But if we assume a class *Aves*, as we all do, the division of birds into orders, families, and so on becomes a necessary classificatory device.

Returning, in conclusion, to our main contention above indicated, we venture the assertion that Beddard's groups will stand or fall, not according to the convenience of the definitions he gives of them, based upon the particular characters he employs, but upon their agreement or disagreement with the affinities or genetic relationships which are indicated by the totality of any bird's organization. The possible classification of the future will rest upon a morphological sum of characters, without insistence upon the taxonomic preponderance of any one of the factors in that sum.

The book is ill indexed and well printed. The page has a somewhat glaring effect upon the eye, from the needless printing of all personal names in small capitals, together with the incessantly recurring italics for technical terms. But this is a very small blemish, perhaps offset by some advantage, and we are not looking for smooth literature, but for sound science and ready reference, in a book of this character. Needless it may be to close by saying that the treatise becomes indispensable to every working ornithologist; but we give ourselves the pleasure of making this best of all possible commendations.

Lectures and Essays on Natural Theology and Ethics. By William Wallace. Edited by E. Caird. Oxford: Clarendon Press; New York: Henry Frowde. Pp. xxxix, 566. 1898.

The sad accident which cut short the career of the most literary, and therefore the most widely known, of Oxford's professors of philosophy has naturally inspired his friends with the desire to enshrine in a memorial volume such portions of his manuscripts as seemed to them most suited for publication; and it is as the outcome of such a desire that the present work must be regarded. It contains an excellent portrait of the late professor, a brief sketch of his life from the expert pen of the Master of Balliol, notes which Wallace prepared for the Gifford lectures delivered in Glasgow University in 1894-'95, (undated) essays, presumably connected with his professional lectures, which take their titles from some of the chief problems of moral philosophy, and three or four critical appreciations of modern philosophic writers, of which some appeared as reviews in Wallace's lifetime.

In so much matter there is much that is readable, a good deal that is interesting, not a little that is brilliant; but, on the whole, the importance of the compilation is hardly

commensurate with its bulk, and it will probably prove something of a disappointment to those who expected from Wallace constructive work worthy of his brilliance in criticism and exposition. This result is no doubt mainly due to the difficulties which Wallace's method of work bequeathed to his editor; for while he lectured most admirably from the scantiest of notes, he was yet a most fastidious and painstaking craftsman in working up whatever he deemed worthy of publication. But the manuscripts out of which the present volume has been made up represent, for the most part, neither his finished literary work nor his impromptu lectures; and though the editor vouchsafes us only very scanty information as to their real character, we can easily suppose that Wallace himself would not have regarded them as forming more than the raw material for a book. Hence the sufficiently glaring defects of this volume. The essays on natural theology are avowedly fragments of a larger discussion. The essays on moral philosophy are a torso, of which the parts rarely make an attempt at artistic rounding off. And, throughout, great improvements might have been effected in matters of compression, digression, arrangement, and connection. It would have been well if the editor had exercised a large discretion in these respects, and it would at least have been politic to provide the reader with a more adequate guide through the labyrinth of argument than is supplied by the headings of the chapters. As it is, large tracts of the book present the appearance of having been pieced together in virtue of a general affinity of their subjects rather than of logically belonging together. This effect is, doubtless, mainly due to the conditions of publication, but it is doubly unfortunate in that it suggests an element of self-knowledge in Wallace's complaint, quoted by Dr. Caird (p. xxiv.), about "the wretchedly episodic character" of his mind.

We must not search the present volume for a systematic account of Wallace's philosophic convictions: its tendency is rather to confirm an impression that Wallace was happier in interpreting the thoughts of others than in stating his own. Not that he leaves any doubt as to the character of his predilections—he is constantly repeating the familiar phrases of a Hegelian of "the Right"—with, it may be added, the usual ominous hints at times of the ease with which he could glide over to "the Left," and descend to depths of naturalism which would leave no practical differences between this degenerate "idealism" and the "materialism" which it set out to combat. But all this is introduced by way of comment, suggestion, nay, innuendo. It is almost impossible to pin him down to anything definite, the more so as he allows himself a large license in seeing contrary sides of a subject, and generally follows up a significant statement which appears to commit him by a contrary one which appears to undo its work, and shows little consideration for less nimble-minded mortals who find it hard to follow the leaps of his logic. In so doing he of course only conceives himself to be practising the Hegelian sport of letting thesis meet with antithesis and engender synthesis; and if any one finds it hard to follow and complains, why, then he is to be numbered among "the wiseacres who love to criticise where it is hard to understand" (p. 170). The rebuke is crushing; but, in view of the infirmity of the finite intellect,

it would be well if the process could be rendered somewhat more evident, and the public were, merely as a guarantee of good faith, occasionally permitted to see how the synthesis issues from the conjunction of thesis and antithesis. Wallace's great powers of literary exposition seemed peculiarly to fit him to perform the function of a hierophant in such matters; but unfortunately he also does not avail himself of his opportunities; his synthesis is always performed out of sight and has to be taken on trust; the Hegelian faith remains based on assurances concerning things unseen.

For these reasons the most satisfactory portion of the book will probably be found in its concluding essays, especially in those dealing with Lotze and Nietzsche. Indeed, Wallace seems quite at his best in estimating Lotze, whose character lends itself to appreciation by his critical method. In Nietzsche's case he hardly, perhaps, brings out into sufficiently bold relief the fact that Nietzsche was essentially of the brood of the giants who from time to time are impelled to insane attempts to storm the strongholds of Olympus, and that his philosophy springs from a profound exasperation with the established order of the world, social, natural, and religious. It is perhaps not wholly ill that such revolts should occur; it is well also that they should fail; but the tragic *dénouement* of Nietzsche's actual life possesses at least a dramatic power and propriety which raises its æsthetic value immensely above Wallace's rather commonplace suggestion (p. 539-40) that if he had been able to continue his work, he would have outlived his attitude of revolt.

In conclusion, a word of recognition must be accorded to the literary excellence even of the less elaborate portions of Wallace's writings, and the wealth of literary allusion which illumines his pages. American readers, however, will probably notice one curious slip (p. 163) which ascribes the authorship of the finely progressive sentiment, that "they didn't know everything down in Judea" to John C. Calhoun. The shade of Hosea Biglow must surely rise in protest against this despoliation of John P. Robinson!

The Story of the Railroad. By Cy Warman, author of 'Tales of an Engineer,' etc. [The Story of the West Series.] D. Appleton & Co. 12mo, pp. xix, 280.

One would hardly believe so much romance and adventure of every kind was connected with the seemingly prosaic business of extending railways into the Far West. But Mr. Warman has made the story far more interesting than the average novel, and, when he has told it, we wonder that we had not seen what a wealth of curious and interesting matter was implied in opening transcontinental ways for civilization through the Great American Desert and around its flanks upon the north and the south. The origin of the idea was in the brain of those who passed for dreamers and visionaries, and who were in fact visionaries in so far as they repeated, in a way, the older notion that the wealth and the trade of the Indies were to make rich those who found the shortest track around the world. The truth was not at first apprehended that the local trade, made by rapidly advancing civilization, would be the financial justification of the vast schemes, and that international commerce would prove only a drop in the bucket.

The dissolving views begin with the boundless plains peopled by the scattered Indian tribes following the countless herds of buffalo as they roam north and south along the base of the Rockies. Then come the faintly marked trails of the trappers, feeling the way by the woodsman's instinct to the lower and more practicable passes over the backbone of the continent. The gold discoveries on the Pacific Coast turn the trails into wagon roads, roughly engineering the footpaths into possible routes for loaded wagons over the shoulders of the mountains, or zig-zagging from water to water across the arid and alkali-crusted desert. The engineer with transit and level is not far behind, and the enlightened daring of business enterprise is ready to risk millions in coöperation with broad national policy in penetrating the waste places with the two or three pioneer lines of railway which, in a generation, have already grown to a great network of steel tracks that are rapidly abolishing the desert.

Mr. Warman's volume seizes this wonderful picture in its totality, and makes us feel and hear the rush of modern civilization. It gives us also the human side of the picture—the struggles of the frontiersman and his family, the dismay and cruel wrath of the retreating savage, the heroism of the advance guard of the railway builders, and the cut-throat struggles of competing lines. He does not deal greatly with statistics, but the figures he uses help make up the stunning effect of gigantic enterprise. There is not a dull page in the book.

The Nation.

NEW YORK, THURSDAY, APRIL 13, 1899.

The Week.

We have now heard at last from the President's Philippine Commissioners, with their recommendation how he is to solve the problem. They have issued another proclamation inviting Aguinaldo to treat, and offering him attractive terms if he is willing to give up his dream of independence. That he is sincere in this desire for independence we have every reason to believe. He has given the only proof of sincerity that any people has ever given—readiness to fight for it against enormous odds, and to maintain the fighting in spite of continuous defeat. It is to be observed, too, that he has been fighting in the teeth of another proclamation which promised him numerous benefits in case he would submit and be quiet. All would-be conquerors do as we are doing. They all promise good treatment in return for obedience. George III. promised it to the Americans repeatedly by proclamation, but they refused to believe him, although they were already his subjects, spoke his language, and professed his religion. The Austrians promised it also frequently to the Italians, in terms which by no means led the Italians to believe they would whip Italian ladies in public—which they did. The Russians also promised good things to the Poles if they laid down their arms. In fact, it is the normal accompaniment of conquering enterprises. It is therefore natural for Aguinaldo, who is said to be a man of some education, not to be won over by the promises of proclamations which avoid all mention of independence. It would be so even if no fighting had taken place, or, in other words, if there had been no invasion of the Philippine soil against the will of the de-facto government. But fighting has taken place. Some thousands of Filipinos have been slain defending what they believe to be the right. We have sent against them all the troops we have, and a powerful navy. On the 8th of February, Gen. Otis telegraphed that "Aguinaldo now applies for a cessation of hostilities and conference; have declined to answer." The fighting has gone on ever since, with burning, looting, slaughter, and all the usual accompaniments of "chaos." His capital has been captured after it had been burned. It was not much of a capital, but if it was fine of the Russians to burn theirs in spite of a very good proclamation, we cannot help admiring his burning his, such as it was, in spite of our President's proclamation.

A Spanish General, who has seen

much service in the Philippines, made the prediction some time ago that the Americans would win every battle in the island of Luzon, and yet lose the campaign. This prophecy it is clearly within the power of the insurgents to fulfil, if they choose to. Fighting and running away day after day, they can count upon the nature of the country and the nature of the climate to do the rest. It is evident that the War Department grossly underestimated the difficulty of the military problem in the Philippines, to say nothing of the even more difficult civil problems remaining. We speak of all this only to ask again why the Government does not exhaust every effort to come to some peaceable arrangement with the natives without further fighting. Enough killing has been done to convince the natives of our superior power. Chasing them all over Luzon for two years would not make them any more sure of this or any more ready to treat. With his Philippine Commission on the spot as his chosen instrument of negotiation, and in an impregnable military position, the President should not lose a day or omit an offer or appeal in securing a truce and a settlement in a peaceful way. His Postmaster-General said at Chicago on Monday that Mr. McKinley was dutifully and anxiously waiting for the American people to tell him what to do with the Philippines. Well, they are telling him by every reputable and recognized organ of public opinion to stop the aggressive fighting in those islands. Will he do it?

Whatever comes of the proclamation by the Philippine Commission, its issue has accomplished one melancholy result. It has seriously damaged the reputation of the President of an American university. Only a little over six months ago, President Schurman of Cornell declared that "this republic, whose soul is self-government, does not want Asiatic dependencies or the military despotism they would entail," and added:

"We are not called upon to rectify the tyrannies of Africa or Asia. Nor are we under any obligation to Aguinaldo and the insurgents. Let us keep to our own hemisphere, seeking only naval stations in the Old World."

Last week he signed his name to a flamboyant proclamation, insisting that the United States must have an Asiatic dependency, and will kill all the Filipinos who resent our supremacy; sustaining the military despotism under which our soldiers "let no insurgent live," and "burn hundreds of houses and loot hundreds more"; and adding insult to injury by promising all sorts of blessings to the Filipinos in the future at the hands of the Algerized Administration, which, at this very moment, is slaughtering and

robbing them. It is a deplorable thing to see an instructor of the young thus turning his back alike on his own principles and on the teachings of history.

One of the speakers at the Boston meeting last week to protest against the war of conquest in the Philippines was Mr. H. C. Parsons, a Republican member of the State Senate. Among other things which he said was this:

"We American people are some day to pass on this question. The first right of the American people is to know the truth, the whole truth, as it passes from day to day, and what this country is doing in the distant Philippine Islands."

The reference here is to the fact that the United States Government maintains a censorship of news at Manila, and that the military authorities permit no intelligence to be sent from the Philippines—or even to the islands—which does not meet their approval. The cable company has warned all persons that no dispatch will be transmitted having the least relation to politics without the assent of the military authorities of the United States. A gentleman of high standing in Hong Kong undertook to send to the Philippine Islands an abstract of the remarks made by Mr. Hoar in the United States Senate on the 9th of January, and its transmission was refused. Only a short time ago Reuter's, the European news agency, was forced to send a news letter by steamer from Manila to be placed on the wire at Hong Kong, because its tone was too pessimistic to suit the American authorities. Every careful reader must have observed the sharp contrast between the dispatches which the censor allows to leave Manila, and the private letters which get into print in this country.

Thus, step by step, does the United States follow the example of Spain. Our Government goes forth to conquer in the alleged interest of civilization, it "thrashes the natives" in order to "send the Christ there," and it conceals the methods which it pursues—in each respect imitating what we have always denounced as the outrageous system of Spain. But, after all, nobody can wonder at the establishment of this censorship. The Administration sends a commission to the Philippines which issues a proclamation that "guarantees an honest and efficient civil service." It would never do to let the natives know that the President who authorized this action appointed a worthless politician as Secretary of War, and retains him after the exposure of his gross unfitness, and that the Congressmen who are expected to pass a law establishing the merit system in the Philippines, have just refused to apply that system in the taking of the

census at home. But the Government thus far has failed to apply the censorship to letters from Manila, and in this way we tardily learn such truths as have been told by the correspondent of the *New York Sun*, who reported that "the orders were to let no insurgent live"; the Californian in charge of the Red Cross work, who set forth "the determination of our soldiers to kill every native in sight," and the way in which the bodies of slaughtered natives "were stacked up for breastworks"; and the private from the State of Washington, who wrote home that all the "boys" have come to be of the opinion that "the only good Filipino is a dead one," that "we burned hundreds of houses and looted hundreds more," and that "we have horses and carriages and bull-carts galore, and enough furniture and other plunder to load a steamer." Nor have our authorities yet stopped the publication of pictures, like the graphic collection in the last issue of *Harper's Weekly*, which tell the shocking story far more eloquently than can any words.

An ugly obstacle in the way of Cuban pacification and upbuilding has been removed by the voluntary dissolution of the so-called Cuban Assembly. What broke it down, and showed that it was not really a sovereign Legislature, was the fact that it had not the "power of the purse." It could not levy taxes or negotiate a loan or float a bond. Now an Assembly which can do none of these things becomes ridiculous, even to the Cuban mind, after a time, and when, in addition, its further obstinacy stood in the way of the distribution of \$3,000,000 among Cuban soldiers, who had never before received as many pesetas as pay, the moment for the Assembly to disappear had evidently come. Its withdrawal from the scene will most of all make for peace because it implies the speedy disbandment and disarming of the Cuban army. The existence of large bodies of armed men in cities and camps, who had been for three years leading a roving and pillaging life, was a standing threat to peace and order. The only wonder is that collisions between them and our troops have not occurred before this. Now they will give up their weapons and show whether they are sincere in their professed intention of settling down and going to work. More of our own volunteers, moreover, will be released, and can be sent home in time to avoid the perils of the rainy season in Cuba. All told, the situation is much cleared up by the dissolution of the Cuban Assembly and the prospect that the Cuban army will be speedily paid off and disbanded.

Full details of the Samoan row reached the public on Friday, and they certainly show a lamentable state of affairs. Here were the representatives of three

great nations, charged with the duty of caring for the feeble folk of the islands, and the first thing they did was to fall to quarrelling among themselves. A measure of technical right was on the side of the German Consul. Under the Berlin Treaty, the action of the three foreign consuls must be unanimous in order to be binding. So Herr Rose appeared to be within his legal rights in asserting that a proclamation of the other two consuls, without his assent, was null and void. But it was a most reckless thing for him to come out with a counter-proclamation, which he must have known would be a firebrand among the natives and lead to the fighting and slaughter which did indeed promptly follow. A prudent, sensible Consul would at least have waited for instructions from his home Government. On the other side, Admiral Kautz and the English were no doubt acting under instructions. Both at Washington and at London, it had been decided that the previous defiance by the German Consul of the decision of the Chief Justice against Mataafa had put him out of court, and that whatever the English and American representatives should agree upon was to be done. But while the two sides were wrangling over these nice points of law and treaty interpretation, the natives had to be shelled and slaughtered. It will be strange if these savages hereafter value as highly as they should the benevolent tutelage of three great Powers. But for the name of it, Mataafa and Malletoa might as well have been left to cut each other's throats without assistance.

The rotten-beef trail was brought into the immediate vicinity of Alger and Eagan on Thursday by some very important evidence. William A. De Calndry, Chief Clerk of the Commissary-General for twenty years, testified that he had, at the instance of Gen. Eagan, sent out forty or fifty telegrams to dealers in beef, asking for bids to supply refrigerated beef, Gen. Eagan himself supplying the form of the telegram. He had also been instructed to prepare a draft of a contract for beef supply. When he submitted it a controversy at once arose between him and Capt. Davis, Assistant Commissary-General, as to the length of time which the beef should be guaranteed to keep. Capt. Davis favored twenty-four hours, saying the understanding was that refrigerators were to be built on the shore in the rear of the moving troops. This was the only explanation he could obtain for the change from seventy-two to twenty-four hours in the contract. In one of the revisions of the contract, Eagan himself put in this clause in his own handwriting, referring to the time: "Which shall not be more than seventy-two hours from the time of storing the same in such refrigerators." The Chief Clerk said he did not

understand this clause at the time, but he had no authority to strike it out. He said also that Eagan himself was "dubious" about the twenty-four-hour limit. He seemed to have been something more than dubious, for, according to the Chief Clerk, all memoranda relating to the matter, which the Chief Clerk carefully preserved, have disappeared from the files of the Department.

When an official thinks it necessary to destroy documentary evidence of his doings, it is a pretty sure sign that he has been engaged in operations that will not bear the light. Memoranda on the time clause of the contracts were not the "only things" that the Chief Clerk said had disappeared from the files of the Commissary Department. The bulk of a letter from one of the contractors, relating to the Powell process of preserving beef, had also been returned to them at their request. The reason for such return was revealed a moment later when Major Lee, counsel for Gen. Miles, presented the full letter in evidence. It described the preserving, or embalming, process fully, claiming complete success for it in tests made at Tampa, and declaring the contractors' belief that "such results have never before been accomplished in the history of the fresh-meat business." After this, it will be needless to make any further denials as to the use of chemicals. The contractors themselves claimed "exclusive control of the Powell process for preserving fresh meats." They did not say they kept it sweet by means of ice, but by means of a "preserving process." How the process worked with our troops, everybody knows.

The election in Chicago Tuesday week was a great victory for the independent voter. The city would undoubtedly go Republican again by a large majority, as it did in 1896, on the national issues between that party and Bryanism; yet it has reelected a Democratic Mayor by about 42,000 plurality, despite the diversion of about 46,000 Democratic votes to ex-Gov. Altgeld. The Mayor owes his success to the support of hosts of Republicans who admired the fight he has made against the ring that tried to grab valuable street-car franchises, and who were disgusted with the Republican machine which named that party's candidate for Mayor. One ward, which has been a "Republican stronghold," and which went Republican by over 1,000 plurality on the Town Treasurer issue, was carried on the same day by Harrison; and equally remarkable exhibitions of independence were made all over the city.

The Municipal Association of Cleveland, which led the successful movement of the city's independent voters for the overthrow of Boss McKisson and his

machine in last week's election for Mayor, has issued an admirable statement regarding the moral of this result and its lesson for the future. "Never before in the history of the city," says this address, "was the question of machine politics and government by 'pulls' so squarely put before the people, and the seal of condemnation has been set upon machine politics and all its attendant evils." The best thing in this statement is the announcement that the Association has no idea of considering its recent victory as a final triumph of its principles; that "it is not merely a temporary affair," and that "no notion could be more mistaken than that it has sprung into existence for the promotion of the welfare of any political faction or the furtherance of any private interest." To prove this, it points out that Farley, the Democrat who has just been elected Mayor, is pledged to carry out certain reforms, and declares that "this Association intends, in so far as its power may go, to insist that these promises be kept; and should the Farley administration fall into any of the evils of its predecessor, the Municipal Association will attack it with the same vigor it has attacked the administration of Mayor McKisson." The rise of such organizations of public-spirited men in our great cities is one of the most hopeful signs of the times.

Gov. Roosevelt's message to the Legislature on the subject of the canal-frauds investigation is likely to result in the granting of the special appropriation which he desires. In the communication from Messrs. Fox and MacFarlane, which he sends with the message, the real cause of the backwardness of the legislators about granting the appropriation is revealed. They hope by delaying the inquiry to have the statute of limitation put an end to all chance of bringing canal rascals to justice. Aldridge and his beneficiaries all along the line of the canals have great influence with the Legislature, since both political parties have had their fingers in the pie; and if they can stop the inquiry at its present point, there will be nothing to fear from it henceforward. But the Governor will not let it be stopped. He will raise the necessary funds by a call for popular subscription, if necessary, and the legislators know this. A refusal to grant the appropriation would be effective only upon their own reputations, consequently, and that to their detriment.

The first day's session of the Mazet Investigating Commission removed all doubt about the thoroughness of this inquiry so long as Mr. Moss is in charge of it. Whether it was intended to be thorough by its originators or not, it cannot be made otherwise since the start which he gave it on Saturday, un-

less his services be dispensed with, which is not a possibility. He headed it directly at the source of all our municipal evils when he made Croker the centre of his attack. It was an extraordinary achievement to score at the very beginning, yet this is what Mr. Moss did. We have all known from the outset of the Croker régime that it was based on blackmail, but we have never had the proof laid before us so clearly as it was on Saturday. It was established by witnesses on both sides that the Building Department is under the control of Croker, through a nephew, and that builders can get such favors as they may desire by retaining the nephew as "counsel" at fees ranging from \$5,000 to \$10,000. The testimony on this point was compact and conclusive. One witness, a contractor, testified that previous to January of the present year it was impossible to get the Building Department to approve of what is known as the Roebling system of fire-proof construction. In one case, in which the Roebling bid was \$25,000 below other bids, the veto of the Department made it impossible to accept it. The manager of the Roebling Company testified that the company was reorganized in January last, and a son of Croker was taken in as a stockholder. After that, contracts for work on school buildings which had the Roebling system of construction in them, passed the Building Department without trouble. Curiously enough, the Department put out a new set of requirements for fireproofing systems in the construction of school buildings which were a verbatim copy of the pamphlet descriptions of the Roebling system, and consequently made it impossible to have any other system used. This wonderful transformation in the Department's attitude was completed by the simple process of retaining Croker's nephew, McCann, to appear before the Building Code Commission, and make an "argument" in support of the change, in return for a fee of \$5,000.

After this achievement with Croker, Mr. Moss put the Chief of Police on the stand, and in a very short time exposed his system of administration almost as thoroughly as he had Croker's. He got him to admit that every day, after midnight, he takes his stand on a street corner in front of a liquor-store, and in a neighborhood bristling with dens of vice, and remains there for an hour or more, "smoking and getting the fresh air." While standing there he never notices that the liquor-saloon behind him is violating the law by selling after hours; never notices that dens of vice of various forms are flaunting their business in his face; and does not know that some of them are kept by men who went on his bond when he was on trial as a police captain, a few years ago, on a charge of taking bribes. His ignorance

on these points is equalled by that on all others, as Mr. Moss showed. In fact, according to his own statements, we have for a Chief of Police a man who is an absolute ignoramus so far as the duties of his position are concerned, and a man who is so dull in moral sense as to make admissions which are absolutely destructive to his own reputation as either a capable official or an honest man.

The Irish elections to the county councils, under the new local-government act passed by the Conservatives, have resulted in sweeping victories for the Nationalist party. In other words, what the Tories used to get black in the face denouncing Gladstone for proposing to do, they have themselves gone a great way towards doing. They have turned over Irish local government to the Irish people. Ex-dynamiters for mayors, and the fiercest of separatist agitators in control of the county councils—this is the result, not of legislation attempted by Mr. Gladstone, but of laws enacted by Lord Salisbury. Yet the Conservatives and the nation seem to be taking the thing quietly. It is a fresh illustration of the old political truth that it takes a conservative party to put through radical legislation. Parnell was long if not always of the opinion that genuine and far-reaching home rule for Ireland could be had only of the Tories. They could pass a home-rule bill, and the country would regard it as a mild and wise and healing measure. For a really less radical bill, Gladstone would be damned up and down the land.

A very disagreeable impression has been caused in England by the admission of the Government, made in the House of Commons, that a state of slavery exists in Uganda under an English protectorate. It was in evidence that escaped slaves had been returned to their masters by English authority, very much after our old Fugitive Slave Law style. What was the Government's explanation of this extraordinary state of things under the British flag? Well, it was that by the decree of 1890, under which England took over the government of Zanzibar, it was expressly stipulated that the subjects of the Sultan "shall remain as they are at present, and their status shall be unchanged." As many of the said subjects are in the status of slavery, what can be clearer than that the British Government is bound, by its solemn agreement, to keep them slaves? But the same agreement provided that England might abolish slavery by compensation to slave-owners, so that the Government's hands are not really tied as it pretends. The whole thing leaves a bad taste in the mouths of English philanthropists. But what are humane traditions to do except give way when Imperialism commands it?

THE CZAR'S CONGRESS.

Our Commissioners, named on Thursday by the President, to go to the Peace Congress at The Hague, which will be convened on May 18, will, on the whole, worthily represent the United States. It might hastily be objected to Capt. Mahan that his way of disarming is to knock the weapons out of the hands of his antagonists, while keeping his own powder particularly dry and his finger on the trigger. But this would be to do this distinguished military expert a wrong. If his writings have fed, as we believe they have fed, the passion for war, it has been because they have been wrested from their author's intention. He has consistently argued for more powerful armaments only as a defensive measure. We doubt if a plea, or an excuse, for an aggressive navy can fairly be found in all his books. Capt. Mahan is, therefore, peculiarly a Commissioner to be impressed by the main proposal which is to be made to the Congress in the Czar's name. This is for an agreement among the Powers not to increase their military expenses for a fixed term of years. As the great argument for increase, both in this country and in England, has always been that the army and navy of one country must be kept up to the level aimed at by other countries, it is clear that the Czar's plan is one which must appeal to Capt. Mahan above all men.

It is equally clear that the United States will cut no great figure directly in the deliberations of the Congress. Our army and our navy are comparatively insignificant. No matter what the Congress does, there is no likelihood that our national legislature will ever vote the money for a great standing army. It was only by main strength and desperate appeals that the Administration was able to get the troops imperatively needed in the Philippines and in Cuba. Congress has been less grudging in money for the navy, yet, even with the shadow of war still upon us, the last naval bill was most disappointing to naval experts, and it is still doubtful if the new ships apparently authorized can be built at all on the narrow terms exacted by Congress. It will be, therefore, the easiest thing in the world for our Commissioners to agree to make no increase in our military budget. As the case stands, we have troops and ships enough for the needs of the country in time of peace; and even if the Government wanted more money for national armament, it is certain that it could not get Congress to vote it in time of peace.

Yet, indirectly, the influence of the United States in the Czar's Congress will be great, and we regret to say that we cannot think it will be on the side of peace. This results not from what we say, but from what we do. Five years ago the United States could have gone to a World's Peace Congress and exerted

an enormous moral power. We were then the one great example of a nation whose main preoccupations and aims were peaceful. If the question had then been raised, "How can a country be great or strong without mighty armaments and crushing taxation for military purposes?" our proud answer might have been, "Look at us and see." But we have changed all that. If not in our own thought and purpose, yet in the impression we now make upon the rest of the world, we are no longer what we were, but have taken our place among the heavily armed nations.

That our new attitude distinctly makes for international suspicion, and for drawing the sword instead of sheathing it, is curiously shown in a little pamphlet which has just been published in this city. It is in Spanish, is written by a South American to South Americans, and is substantially a loud call upon the countries to the south of us to be warned in time, and to arm themselves against the aggressive rapacity of the United States. This is the lesson which the author, Señor Zumeta, draws from our war for humanity. He sees in it a threat against the independence of the South American nations. Bolivar's prophecy he thinks on the point of being fulfilled, that the time would come when there would be a general assault of brute strength upon liberty. Señor Zumeta tells his countrymen that the United States is "voracious," and his cry is, "Let us arm!" to defend lands and liberties. This is largely fanciful, no doubt, yet it does serve to show the impression we make on others; that we have provoked doubt and jealousy where once we enjoyed sympathy and admiration, and that we are going to a Peace Congress violently under suspicion of having our tongues in our cheeks.

It is unfortunately true, also, that the Czar, or the Russian Government, will come to the Peace Congress under a cloud. The recent trampling upon the rights and liberties of Finland was most ill-judged, in its effect upon public opinion, on the eve of the Congress at The Hague. It seems to give color to the assertion that the Czar has really little to do with his own Government; that he is allowed to express generous aspirations to the top of his bent, but that the great bureaucrats do the actual work. It is certain, in any case, that a painful impression has been made in England, and even in France, by the rough way in which the rights of the Finns have been ridden over. There seems to have been a clear violation of the compact under which Finland became a part of Russia in 1809; while the brutal disregard of the protests and appeals of the inhabitants has been complete. It will set many people to wondering whether, in the words of the Paris *Temps*, the author of the disarmament proposals wished to give, in the eyes of Europe, the lie to

his liberal language and his humane designs.

Still, the mere calling of a Peace Congress is a great event, and its deliberations cannot but result in good. Luckily, the programme is not too ambitious. It proposes, in brief, to discuss the possibility of arresting excessive armament, of making war more humane when it is unavoidable, and of lending fresh sanctions to arbitration as a means of averting war. For the attainment of all these high aims our Commissioners may confidently be expected to bend all their efforts. They would be false to their country, as well as to their own characters, if they did not. In particular may we look to see them eagerly embrace every plan tending to exalt peaceful arbitration. If this necessarily draws us into better relations with England, our Commissioners are not the men to shrink on that score. Capt. Mahan cannot refuse to accept the fulfilment of his own prophecy. "When we begin really to look abroad," he wrote, in 1890; "when we begin to busy ourselves with our duties to the world at large, and not before, we shall stretch out our hands to Great Britain, realizing that in unity of heart among the English-speaking races lies the best hope of humanity in the doubtful days ahead." There, at least, we have a man ready for an English alliance, not for reasons of gush or sentiment, but on grounds of solid good to the world.

"Dare to love England? And to say so? Yes.
Though the Celt rage, and every half-breed
scowl,
Though Hun and Finn and Russ and Polack
howl
Their malediction, coddled by a Priest
Alert at cursing, indolent to bless."

THE WALL STREET INCIDENT.

The violent tumble of speculative values with which Wall Street was entertained last week, is interesting chiefly as proof that a halt will be called somewhere to crazy speculation; that if the speculators will not stop of their own choice (and they usually will not), they will be brought to at least a temporary standstill by outside agencies. For the wild commotion on the Stock Exchange, during the last month or two, the blame is commonly laid at the door of the so-called "industrial" incorporations. This is true to the extent that the spirit of reckless speculation has perhaps concentrated more on this class of stocks than on others. But the fact is that, in the peculiar position of the public mind at the opening of the year, it was merely a question of finding something which the promoter could foist upon the public at inflated values. It is not at all improbable that if circumstances had not made feasible the "industrial" enterprises as an absorbent of the public's speculative capital, we should have witnessed a wild movement in mining shares, or in colonial "exploration and development" companies. When the

public is in a mood to speculate, and has accumulated the money for the purpose, the promoter is not very far behindhand in discovering means for meeting the demand. That the existing craze is by no means distinctively a result of the industrial incorporations, is pretty conclusively proved by the fact that the wildest of all the recent movements on the Stock Exchange were not in shares of the industrial combinations, but in the stock of the city traction enterprises.

The problem, however, which presents itself under such circumstances to the conservative classes of the community is not necessarily affected by the particular character of the speculative enterprises. The reason why so great account has been taken of the "industrial" speculation lies in two facts—the enormous magnitude of the supply of new stock issues of the kind brought upon the market, and the absolute impossibility of learning exactly what is the financial situation of any given enterprise. As to the volume of such incorporations, take the *Financial Chronicle's* summary of the amount of "industrial" shares and bonds authorized since the 1st of January. The summary for the first two months of 1899 showed authorized capital of \$1,106,300,000 for something like forty-two separate enterprises. Moreover, a month ago, comment was very general, even in the circles of promoters themselves, to the effect that "everything of value had been already capitalized," and that the movement would thenceforth fall to small proportions. The first of these assertions may or may not have been true; the second certainly was not; for the new summary shows a further increase in such authorized capitalization, during the month of March, of \$480,000,000. The total since the opening of 1899 reaches the handsome figure of \$1,586,325,000.

Such a deluge of new speculative securities, on all of which, sooner or later, loans will be asked from the city banks, would constitute a sufficiently perplexing problem, even if the intrinsic value of the new undertakings were known through frequent and official statements. But when, to the enormous volume of such incorporations, is added the fact that not one of them submits a statement which an intelligent business man would accept as a basis for an individual purchase in his own line of business, the extraordinary character of the situation is at once apparent. We have taken the trouble to examine a number of the "prospectuses" put out by these new concerns—the "prospectus" being, in the great majority of cases, the first and last official statement to the public of the company's financial situation. Without exception, the documents which we have examined assure the subscriber or speculator that the companies combined into the larger concern made so many thousands or millions of dollars last year,

that they hope to make more in the years to come, and that if they do, they will be able to pay such-and-such dividends to their shareholders. It would be difficult to conceive of any more absurd basis of appeal for the capital of prudent investors; yet we are assured by bank officers that, in the case of some of these securities now most active in Wall Street, the most patient inquiry has failed to obtain anything more in the line of trustworthy information.

This, it appears to us, is an almost entirely novel situation for a speculative movement on such a scale as has been threatened. The "Kaffir craze" of 1895 in London had at least the monthly returns of output from the mines on which investors might rationally base their judgment. Even in the earliest and most reckless days of railway-building the returns of passengers and traffic were more or less frequently submitted. From the "industrials" not only has the investor no information of true value to reckon on to-day, but he may rest perfectly confident that he will get no such information in the future. The most strenuous efforts of State law officers during several years have failed to extort from the Sugar Refining Company, the type of these recent combinations, anything more than the vaguest and most ambiguous summary even of assets and liabilities.

Whoever carefully considers the facts above set forth will hardly express surprise that the banks have been discriminating, as Wall Street expresses it, against the industrials. If any sort of collateral on loans ever required discrimination, it certainly is this, whose quantity is unlimited, and whose intrinsic value is absolutely unknown. The public, too, had plunged headlong into the wildest and most reckless speculation in these issues; market prices for some of them had risen 50 to 60 per cent. within two months; and the great bulk of the buying was known to be undertaken blindly, and purely for the purpose of selling again at some vastly higher level. It appears to us that if our bank officers, under such conditions, had not taken the stand which most of them have done, and refused to extend their loans on any such security, they would simply have proved themselves unworthy of the responsibility imposed upon them.

CHARACTER AND ASSOCIATION.

It has been our steadfast contention for many years that any man who consents to associate himself politically with Tammany Hall, thereby places himself under suspicion as to his character. That organization is in no sense a legitimate political body. It does not aim in any way to secure good government, but to secure support at the public expense for its followers. Nobody has ever heard of a Tammany meeting at which

the principles of real government, or any question of public policy, were discussed. Its sole and persistent objects are "places" for its men, jobs for its leaders, blackmail and plunder as the means of personal wealth for its boss and his favored intimates. Everybody knows this to be the simple truth about the concern. It deals in nominations, appointments, and everything connected with the public business on a commercial basis. It has government for sale to the highest bidder, and its daily existence is at the cost of the fundamental principles of popular, constitutional government.

This being the case, how is it possible for an honest man to associate with it and maintain his character? As a matter of fact, it is extremely difficult to cite an instance in which any presumptively honest man has been able to escape this loss. Many have been able to retain an appearance of preserved integrity for a time, but ultimately something has happened to show that either the character had been lost before the association was formed, or that it had been sacrificed later under the necessities of the case. Tammany has a use for ostensibly honest and respectable men, in order to give an appearance of decency to it on election days, but it has no use whatever for them in office. They must do the boss's will, or out they must go. It is a safe calculation, therefore, that any man whom Tammany puts into office is prepared to sacrifice both the public interests and his own character whenever the boss desires him to use his office for the benefit of the organization. He may make all possible excuses for his conduct, and emit furious outcries against plain speech and just criticism of it, but the fact will remain that he has yielded to his environment, and has lowered his character to the level of his associates.

A few weeks ago Tammany succeeded in getting control of the Board of Education in this city, and it at once elected Mr. Little to the Presidency. One of the first acts of the Board subsequently was the payment of \$7,000 rental for precisely the same building for which the Board, under the anti-Tammany control of the previous year, had paid \$5,000. Mr. Little, who professed to be a man of very high character, and who resented furiously assertions to the effect that he had always done Tammany's bidding as a member of the Board, made no opposition to this inexcusable waste of \$2,000 of public money. There were Tammany owners of the building who were to profit by the job, and that was sufficient reason for it. A short time later, Prof. Nicholas Murray Butler published in the *Educational Review* some remarks about Mr. Little, in which he spoke of him as a "fine old educational mastodon." Mr. Little was so jealous of his character that he went at once to the District Attorney, who allowed him to go before the

grand jury with his complaint, and the grand jury, for reasons which it is beyond the power of human intelligence to conceive, had Prof. Butler and Mr. Henry Holt, the publisher of the *Review*, indicted for criminal libel. Mr. Little's object in this proceeding was to establish the integrity of his character, and thus to show that an honest man could associate with Tammany and hold office at its hands.

Alas, how vain are human calculations! Instead of establishing his character, Mr. Little invited its injury, for he prompted an investigation of his record, with the result that a decision of the Appellate Division of the Supreme Court was discovered and published in which he was declared to have been guilty of "fraudulent" acts in his capacity as the receiver of a bankrupt business concern. The court charged him with "exercising his ingenuity to deceive the creditors and the court as to the true character of the assets, and, by a series of sharp practices, getting the funds, which belonged to the creditors, into his own hands and into the hands of his accessory in the fraud." That is much more unpleasant to have said of you than to be called a "fine old educational mastodon." It will not strike Mr. Croker as constituting a disqualification for high public office, but, in any genuine political organization, it would be so considered. It throws a great deal of light upon Mr. Little's conduct in the choice of his political associates. He is himself a good deal bewildered by this unexpected result of his libel proceeding, and says he "can only account for the decision and the language of the court upon the theory that it has failed to understand the intricacies and complications involved in the case." Mr. Little's sense of humor does not appear to be acute.

One other observation occurs to us, and that is, that most of the persons who are eager to bring libel suits against newspapers and other publications which criticize their conduct in public matters, have something in their records which will not bear the light. It is this which makes them think that something must be done to vindicate their reputations. No man with a mind conscious to itself of rectitude would think an indictment for criminal libel against his accuser necessary to ward off from himself the disgrace of being spoken of as a "fine old educational mastodon." He could safely leave his reputation to withstand the shock of such an assault. It is because there are so many shady and shaky reputations in Tammany Hall that all Tammany men are so alarmed by free criticism and comment upon them, and wish to frighten the press into silence on the subject. Their attitude is comprehensible enough, but that they should be able to induce a grand jury to help them in their purpose is one of the

most astonishing developments of our time.

BETTER DAYS IN CUBA.

Most of the newspaper correspondence from Havana—French and English as well as American—dwells on the contrast between what Cuba now is and what it was at any time during the three years past. By such comparison it is not, of course, difficult to make out an overwhelming case for improvement under American control. Almost any country at peace would contrast pleasingly with the same country when the theatre of war. And in Cuba war was so doubly horrible, was waged with such unspeakable atrocities on both sides, and involved such frightful suffering for non-combatants, that six months' respite on any terms from rapine and massacre could not but seem to have brought paradise after Gehenna.

But there are, we take pleasure in saying, signs that the American régime in Cuba is doing something more than merely to bind up the wounds of war. It is addressing itself to the inveterate evils which partly caused the war. It is going back to those age-long abuses and neglects of the Spanish government of the island which made its condition for years one of smouldering rebellion, and is reforming and correcting with firm and patient hand. Already Cuba has a postal service better than she has ever known, and improvements in this branch of the public service have only begun. Already her cities are cleaner and safer than they have ever been before. Order and honesty have for the first time been established in her custom-houses. Railway and telegraphic communication between the principal cities and towns of the island is restored and will be speedily made better than anything Cubans have known; a Cuban merchant marine is about to be created; and plans for docks and harbors and other public improvements are on the point of being executed. All these things mean a great amelioration of the conditions of life in Cuba; and perhaps more significant and far-reaching than any of them is the latest sweeping reform effected, namely, of the Spanish system of taxation.

Next to Turkish taxation, Spanish taxation is probably the most burdensome and exasperating on earth. Crushing and grievous to be borne in Spain itself, in Cuba the system was keyed up to an extra pitch of oppressiveness and vexation. It was said of our Continental currency that you could not touch it without being taxed in the act. It is certain that you could not touch Cuba, under Spanish rule, without being taxed. Taxes caught you rising up and lying down; hit you in your home and shop and on your farm, travelling or stationary, living or dead. Industry and agriculture and manufactures were strangled

by the coils of taxation twisted about them in every conceivable way. To have or to buy the prime necessities of life meant to be taxed for them. If you carried products out of a city you had to pay a tax to get them through the gates, and if you brought them back again you had to pay to get in. Professions and trades had to be taxed as such. In short, the Spanish tax-gatherer pursued every symbol of wealth, and fined and mulcted its possessor with an ingenuity and a political blindness worthy of Ottoman Turks.

Now this vicious system has been taken in hand by the American military government of Cuba, and a notable beginning of reform made in it. By a decree of March 25, the full text of which has now come to hand, the old jungle of taxation is cleared up in a surprising way. Many of the old taxes are abolished outright; others are reduced from 25 to 50 per cent. We should judge that the net result could not be other than to reduce the total burden of taxation in Cuba one-half. And the work has been done intelligently. Mediæval taxes are cut up by the roots. Article ii. of the decree abolishes the tax of 4½ cents the kilo on beef-cattle; article iii. forbids the levying of taxes on prime necessities, such as all kinds of food and fuel. Next comes the entire abolition of *octroi* duties (*alcabala* tax, we believe the Spanish call it)—the taxes, that is, with which municipalities punish anybody who brings merchandise within their jurisdiction. The tax on real estate is revised and reduced, being now fixed at a single tax of 6 to 8 per cent. of the net income, instead of the former 12 to 18 per cent. with no end of surtaxes added in. As for manufactures and trades and professions, the taxes on them are either abolished or greatly reduced.

All told, this beginning of a revision and reform of Cuban taxation is a great achievement, and should go further towards pacifying the island than twenty regiments. Most political evils connect themselves in one way or another with excessive taxation. Cuba was undoubtedly squeezed by the Spanish like an orange. Minute and multiplied taxes strangled her industrial life. If the intolerable pressure is now removed, if industry and thrift are encouraged instead of being repressed, the economic improvement will be vast and cannot fail to lead to moral and political improvement. Taxes cut in half will be a stronger argument than any that prejudice or passion can advance. If the American military government can go on making life in Cuba easier and safer, can strike off the fetters from industry and commerce, it will diffuse a general well-being against which the mutterings and agitations of disappointed and disaffected Cuban politicians will be powerless.

THE AMERICAN ORIENTAL SOCIETY.

NEW HAVEN, April 10, 1899.

Once in three years the Oriental Society, in accordance with a not unpleasant restriction imposed by its charter, revisits the scene of its earliest activity and meets in Massachusetts, usually in Boston or Cambridge. But, owing to an intervening session in Andover three years ago, it chanced to be six years to a day since the Society had assembled in Cambridge, where this year the members foregathered on April 6. The spacious hall of the Faculty of Harvard University was kindly put at the disposal of the Society, which mustered above fifty members in attendance. It is not very many years ago, as one of the older members observed, when an attendance of ten was considered a large meeting; a remark that recalls how much the Society owes to the energy and patience of the late Prof. W. D. Whitney, who carried it through all its formative period and really made it what it is to-day. At the annual meeting this year, for example, thirty new members were added to the rolls, which now contain the names of nearly four hundred.

The first session of the Society, President Gilman being the presiding officer, was held on Thursday morning, April 6, when the annual business was transacted, and several of the thirty-four papers offered at this Meeting were read. Prof. Gotthell of Columbia University presented the report of the committee on the cataloguing of Oriental MSS. in this country, a large number having recently been inspected and catalogued by Prof. Hyvernat of the Catholic University of America; two of these forming the subject of a special paper by Dr. Casanowicz of the National Museum in Washington, under the caption, "Two Hebrew Manuscripts." The routine business of the morning was agreeably varied by the suggestion that a telegram of congratulation be sent to Prof. Salisbury of New Haven, for many years an active member and President of the Society, who on this day attained the completion of his eighty-fifth year. This pleasant office was undertaken by his old friend, Col. Higginson. Greetings were sent also to the venerable lexicographer, Otto Boettlingk, who, though nearly eighty-four, still retains a lively interest in Sanskrit studies, and contributes from time to time essays of his own to the German Oriental journals.

The papers read at this first session were few in number, as the greater part of the morning had been given up to business, but the Society listened, before adjourning, to one of the two technical papers offered by Prof. Barton of Bryn Mawr, who gave some explanatory notes on the forty-fourth and forty-fifth Psalms, and a critical note on one of the contract tablets in Meissner's 'Altbabylonisches Privatrecht.' A paper followed from the other side of the house (for, like most Oriental societies, that of America falls naturally into Aryan and Semitic divisions), by Mr. Gray of Columbia, on Pali and Persian phonology, a scholarly attempt to trace parallel lines of phonetic development in the dialectic variations of these two Aryan branches. After an interesting interpretation of the name Jerusalem by Prof. Haupt of Johns Hopkins, who held that the name meant originally 'Stronghold' or 'City of Safety,' the morning session closed, and the visiting members became the guests of the Cambridge members at a pleasant luncheon in the Colonial Club.

The afternoon session was opened by Prof. Morse of Salem, who spoke on the possibility of communication between the West and East in early times. Prof. Morse's paper was restricted to the question whether the American stringed instrument was pre-Columbian, but, handling the subject on broader lines, he came to the conclusion that there was no communication at all before Columbus. This, belonging to neither side of the house, was one of the general papers which occasionally refresh the Society when the alternative of Sanskrit and Semitic becomes monotonous. A technical paper by Prof. Hopkins of Yale, who followed Prof. Morse, offered some new words to Sanskrit lexicography, and, among other points of grammatical and archaeological interest, pointed out two Sanskrit parallels to the famous "automatic" conflagration of Thucydides, ii. 77. Modern observers testify that, in the jungle, fire often is lighted by the friction of bamboos rubbed against each other by the wind; Prof. Hopkins gave extracts from the Hindu epic showing that this fact is recognized in the native literature.

Two other Sanskrit papers were then given, one by Prof. Jackson of Columbia, and one by Prof. Lanman of Harvard. The first of these was a supplementary series of notes on certain dramatic elements in Sanskrit Plays. Prof. Jackson has opened a very attractive field of research in comparing the principles of construction in Sanskrit and in the modern drama of Europe, his special theme in this paper being the observance of the unities by the Hindu dramatist. Prof. Lanman's paper bore the title, "Indian Proverbs which Occur both in Sanskrit and in Pali Books." The subject is one of great literary importance, involving as it does the interrelation of whole branches of Hindu literature, such as the Buddhist Jātakas and the Brahman epic. The illustrations given, though they appealed only to the ear, were striking enough to make the hearer hope that Prof. Lanman would increase his already valuable collection of parallel proverbs.

Considerable discussion was aroused by the next paper, offered by Prof. Lyon of Harvard, on the identification of *alattu* as a variety of stone. Prof. Lyon showed that it was not a precious stone, as has been assumed; but whether the word connoted a special kind of stone or any kind of "striped" stone, which might be used for utensils, remained doubtful. The second session closed with the reading of a technical paper by Prof. Haupt on the vowels of the preformatives of the imperfect in Semitic, and with a very curious parallel, drawn by Prof. Torrey of Andover, between the modern tale of King John and the Abbot of Canterbury and a Coptic original, which Prof. Torrey has found in an unpublished manuscript. In Prof. Torrey's opinion the modern story was brought to Europe via Spain, and he appears to have good reason for his contention that the resemblance between the Oriental and Occidental versions of the tale is too close to be accidental.

The afternoon of Friday being devoted to the papers for the Section on the Historical Study of Religions, an effort was made to have all the remaining essays read on Friday morning. One of the newly elected members, Mr. Montgomery Schuyler of Columbia, gave as his maiden paper an interesting analysis of the part of the buffoon in Sanskrit Plays, and Dr. Christopher Johnston

of Johns Hopkins presented *in absentia* through a fellow-member a new interpretation of the Letter of an Assyrian princess. Prof. Lyon's second paper, giving the record of a Babylonian law-suit, was also read at this session, and Prof. Jastrow of the University of Pennsylvania contributed a discussion in regard to the significance of tearing the garments as a symbol of mourning. Prof. Lyon's record contained much more of general interest than is usually given by Babylonian tablets. Prof. Jastrow's contention was, in brief, that the tearing of garments was not originally a rending, but a stripping or tearing off. On the Sanskrit side, Prof. Hopkins gave the results of an analysis of epic metres in Sanskrit, the epic norm being markedly freer than the classical. Some new inscriptions sent as Indian to Prof. Gotthell were exhibited, and shown by him to be Palmyrene instead of Sanskrit. Prof. Oertel of Yale read by title a communication on the relation of the 'Jāminīya Brāhmana' to the 'Pancavināśa,' and the session closed with two papers, one by Prof. Torrey, to show that three unpublished letters attributed to the pillared Simeon are not genuine, and one by Prof. T. F. Wright, on Saph and the Tell es-Safi. The Society then adjourned to partake of a luncheon hospitably given to the members by President Elliot.

There remained for the afternoon session the papers intended for the newly created section already referred to. It was found that there were many persons who took an interest in the religious papers and discussions of the Oriental Society without caring for the technical papers. The Section for the Historical Study of Religions receives such quasi-Orientalists, and, on the payment of a small fee, sends them all the papers which properly belong to the Section. These are naturally read at one session, to accommodate the more general audience interested in the study of comparative religion. On Friday afternoon, the Society thus had the pleasure of listening first to Prof. Everett of Harvard on the psychology of the two great Hindu philosophers, Vedānta and Sāṅkhya. Prof. Everett showed that in reality both systems were idealistic, though the latter is popularly reckoned as dualistic. The relation between magic and religion formed the topic of a paper presented at this session by Prof. Toy of Harvard. It was Sir Alfred Lyall who first emphasized the difference between magic and religion, claiming that while the latter takes the gods as helpers, the former is always opposed to the gods and works by coercing them. The difference was somewhat exaggerated at its first presentation, and Prof. Toy very rightly pointed out that to a considerable extent the question is one of terminology. Even in India, witchcraft does not always stand in such sharp antithesis to religion.

The meaning of *gog* in Gog and Magog formed the subject of the next paper. It was presented by Prof. Haupt, who held that *gog* was a gentile term equivalent to Northern Barbarian, while *magog* was a repetition of the same word, its prefix meaning no more than *place of* (the Northern Barbarian). A somewhat similar paper, lighting up old names with etymological meaning, was given soon after by Prof. Jackson, who, in analyzing the ancient Persian idea of devil, showed that Ahriman is to be interpreted as the 'Spirit of Antagonism,' who is called also by another epithet that

signifies 'full of death'; just as the Buddhist devil Māra is Death.

The Qur'an as seen by an Oriental Christian was discussed by Mr. Arbeely of New York as the next number of the programme, after which Mr. Newell of Cambridge read a short paper on mediæval fairy castles and the tales of the blest. As the afternoon was drawing to a close, Prof. Jastrow thought best to read by title only what promised to be an important paper on the historical study of religions in America, while Prof. Barton and Prof. Hopkins summarized the contents of their final papers on sacrifice among the Wakamba, an African tribe, and the economics of primitive religion, respectively. The Society then adjourned, after a vote of thanks for courtesies received, to meet again in Philadelphia on April 19, 1900.

The "Meeting," as it is called officially, was favored with perfect weather, and the members carried out the unwritten law of keeping the evenings free for social intercourse among themselves. This, to many, with the opportunity thereby afforded for quiet talk and general discussion, is one of the pleasantest features of the annual convention of the Society, though on this occasion it was combined with regret, as it necessitated the refusal of a very kind invitation on the part of Prof. Norton to meet at his house on Friday evening.

WASHBURN HOPKINS.

Correspondence.

STEVENSON AND NEWMAN.

TO THE EDITOR OF THE NATION:

SIR: In your recent review of Mr. Lewis E. Gates's 'Three Studies in Literature' the reference to Cardinal Newman's style reminds me of a very interesting comparison that may be made between a passage from Newman's 'Grammar of Assent' and one from Robert Louis Stevenson's 'Ebb Tide.' The citation from 'Ebb Tide' was made in the *Nation* when the book was reviewed, and was very justly put forward as a beautiful example of style. It is as follows:

"... The Virgil, which he could not exchange against a meal, had often consoled him in his hunger. He would study it, seeking favorite passages, and finding new ones only less beautiful because they lacked the consecration and remembrance. Or he would pause on random country walks, sit on the pathside, gazing over the sea on the mountains of Etna, and dip into the 'Æneid,' seeking *sortes*. And if the oracle (as is the way of oracles) replied with no very certain or encouraging voice, visions of England, at least, would throng upon the exile's memory—the busy school-room, the green playing-fields, holidays at home, and the perennial roar of London, and the fire-side, and the white head of his father. For it is the destiny of these grave, restrained, and classic writers, with whom we make enforced and often painful acquaintance at school, to pass into the blood and become native in the memory; so that a phrase of Virgil speaks not so much of Mantua or Augustus, but of English places and the student's own irrevocable youth."

This is indeed very beautiful, but who would expect to light on a passage to the same effect, and perhaps even more beautiful, in a volume with so dry a title as Cardinal Newman's 'Grammar of Assent'? He is considering how differently young and old are affected by the words of some classic author such as Homer or Horace:

"Passages which to a boy are but rhetorical

commonplaces, neither better nor worse than a hundred others which any clever writer might supply, which he gets by heart and thinks very fine, and imitates, as he thinks, successfully in his own flowing versification, at length come home to him when long years have passed and he has had experience of life, and pierce him as if he had never before known them, with their sad earnestness and vivid exactness. Then he comes to understand how it is that lines, the birth of some chance morning or evening at an Ionian festival, or among the Sabine hills, have lasted generation after generation for thousands of years, with a power over the mind, and a charm, which the current literature of his own day, with all its obvious advantages, is utterly unable to rival. Perhaps this is the reason of the mediæval opinion about Virgil, as if a prophet or magician; his single words and phrases, his pathetic half-lines, giving utterance, as the voice of Nature herself, to that pain and weariness, yet hope of better things, which is the experience of her children in every time."

J. C. H.

ATLANTA, GA., April 2, 1899.

TWO INDEXES.

TO THE EDITOR OF THE NATION:

SIR: In the very interesting and instructive article on "Americanism, or the Catholic Church in America," published in the *Nation* of March 30, the author speaks of the rules governing the Index Expurgatorius. Permit me to state that such an index, and consequently such rules, do not exist. The only index which is sanctioned by the Church officially is the "Index librorum prohibitorum." If a book is prohibited, not on account of its general tendency, but on account of some objectionable passages, it is published in the Index with the remark: *d. c.—donec corrigatur*.

All attempts to publish a catalogue of books which have to be purged from heresies are of private nature, published by governments or universities, but none of them recognized by the Church. The only Index Expurgatorius which was published in Rome appeared in 1607, and was withdrawn by the author, Guanzelli, a master of the sacred palace, as quickly as 1611. The Papal See has never officially recognized this or any other Index Expurgatorius.

In this connection it may be interesting to state that even the present Pope adorns the list of those whom the official Index honors with the mark, *Auctor laudabiliter se subjecit*, although the book was fortunately published without the name of the author.

It might further be new to a number of your readers to learn that the Index is a sort of compromise. The original rules of the Roman Catholic Church, as laid down in a decree of Leo X., dated May 4, 1515, require that every book, before it be printed, be submitted to the proper ecclesiastical authorities. This "censura prævía" was superseded by the Index, because it had become impracticable.

GOTTHARD DEUTSCH.

CINCINNATI, O., April 6, 1899.

[Milton observed the distinction when, in 1641, he wrote: "Your Monkish Prohibitions and expurgatorious Indexes." But the shorter designation has become a concept so convenient as to be loosely used even in an historical connection.—ED. NATION.]

A NOVEL ENTERPRISE.

TO THE EDITOR OF THE NATION:

SIR: There has recently come to my no-

tice the Breck School in Wilder, Minnesota, with an educational aim so novel, to me, and so interesting, that I venture to call the attention of your readers to it. The principal writes:

"All through the West there are hundreds of young men and women whose early advantages were nothing, and who, having reached maturity, come to realize that they need more schooling, but, because of their age and backwardness, cannot enter the graded or even the district schools. To this class of pupils the Breck has its mission. There is no other school in Minnesota that provides especially for this class of pupils. Many are the pupils the Breck has started on the road to a higher education, pupils who had despaired of ever going to school again.

"This winter a man twenty-eight years of age, the owner of a good farm and well to do, came to see if we could take him. He was the eldest of a large family and always helped to support the family, so had never been able to attend school while a boy. He now realizes his want and, through a student of the school, learned that the Breck was for just such as he. I told him that we could take him. 'But,' said he, 'you don't know how ignorant I am.' He was much relieved when he learned that there were others here just as backward as he, and that he would not feel out of place. He is so pleased with the advancement he made in twelve weeks that he expects to rent his farm another year and be in school six months. After he has finished our Agricultural School preparatory course, he will enter the State Agricultural College and complete a course. The rapid progress of this class of pupils—pupils who have ability, maturity, and an incentive—is something remarkable. Were it not for this school, the majority of them would never go to school."

Yours truly, JAMES M. HUBBARD.

BOSTON, April 8, 1899.

AN EXCEPTION TO THE RULE.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to point out an instance in the Old Country of keeping to the right being the "rule of the road"? It may be of interest to some of your readers.

On that section of railway running from London Bridge Station to the town of Greenwich—one of the first, if not the very first suburban line run out of the metropolis, and formerly known as the Greenwich Railway Company—the trains pass each other on the right. When I had occasion, a few years ago, to use this line regularly, it seemed to me amazing that such should be the case, and I never could get any good reason why it was so. The general belief was that, the Greenwich Railway Company having been one of the first lines started, its managers determined to follow the Continental style and expected all other companies would follow suit. Palpably they were in error, and they have kept it up ever since. It is an interesting bit of bigotry or pig-headedness, for when the working of this line was taken over by the London, Chatham and Dover Company or the London, Brighton and South Coast Company (I forget at the moment which), it was stipulated that the "right of way," if one may so call it, was to be adhered to.

I remain, yours faithfully,

AUBURN GLEN.

101 N. FREMONT AVE.,
LOS ANGELES, CAL., April 6, 1899.

Notes.

The late Archibald Lampman's complete works, edited by Duncan Campbell Scott, a brother Canadian poet, and Dr. S. E. Dawson, Queen's Printer, with a biographical sketch,

a portrait, and a facsimile of one of the sonnets, are to be published in Canada by subscription for the benefit of the widow and two young children of Mr. Lampman, who are left in slender circumstances. The price will be \$3.25, and subscriptions may be sent to W. D. Le Sueur.

The second five volumes of the "Beacon Biographies" edited by M. A. DeWolfe Howe and published by Small, Maynard & Co., will be 'Franklin,' by Lindsay Swift; 'Audubon,' by John Burroughs; 'Aaron Burr,' by Henry Childs Merwin; 'J. Fenimore Cooper,' by W. B. Shubrick Clymer; and 'Edwin Booth,' by Charles Townsend Copeland.

'The Heart of Man,' essays by Prof. George E. Woodberry of Columbia, embracing "Democracy" and a "New Defense of Poetry" among other topics; 'The Quest of Faith,' by Thomas Bailey Saunders; and 'The Development of the English Novel,' by Prof. W. L. Cross of Yale, are to be issued this month by Macmillan Co.

Thomas Whittaker has nearly ready 'An Epic of the Soul,' a cycle of eighty short poems by an anonymous but not untried or unknown writer; 'Irish Life and Character,' by Michael MacDonagh; and 'The Warden,' a biographical sketch of the late head of St. Stephen's College, Annandale, N. Y., by his son, Henry A. Fairbairn, M.D.

L. C. Page & Co., Boston, who have taken over from George H. Richmond & Son D'Annunzio's works, promise shortly a new volume in the series, viz., 'Fire' ('Il Fuoco'). They will also hereafter be the publishers of Magda Stuart Sindici's works. To be brought out this month is 'Yale, her Campus, Classrooms, and Athletics,' by Walter Camp and Lewis S. Welch, with many half-tone illustrations.

'True Tales of the Insects,' a copiously illustrated large octavo, by L. N. Badenoch, is soon to be issued by E. P. Dutton & Co.

An edition of Rudyard Kipling's collected letters of travel for the years 1890-1898, together with other matter more or less accurately printed heretofore, is announced by Doubleday & McClure Co.

The Portfolio of National Portraits already announced by R. H. Russell, New York, will consist, it appears, of Japan proofs of Gustav Krull's eight most remarkable engravings on wood, a rare study in technique in view of the utter absence of mannerism in these great works, viz., Lincoln (two aspects), Grant, Sherman, J. R. Lowell, Garrison, Webster, and Robert E. Lee. The last-named of these (and certainly not the least) is the newest, and has, we believe, not heretofore been put upon the market. The others are known to all connoisseurs, and are now issued collectively at an average price much below the original. The Portfolio will be limited to 250 copies.

Two dainty reprints are the little volume published by Macmillan, bracketing Arnold's "Sweetness and Light" and Pater's "Essay on Style," and 'Washington's Farewell Address,' of which Mr. Worthington C. Ford gives briefly the genesis, and supplies a facsimile of one page of Washington's letter constituting the first draft submitted to Madison in May, 1792 (Boston: Small, Maynard & Co.).

Prof. Herford's handsome ten-volume Every-day Edition of Shakspeare (Macmillan) advances with a second volume embracing the "Taming of the Shrew," "Merchant of Venice," "Merry Wives," "Twelfth Night," and

"As You Like It," each with its concise introduction. Of "Taming of the Shrew" the editor remarks that on the German stage its popularity far surpasses that of any other Shakspearian comedy, and is inferior only to that of "Othello."

'Baedeker's United States' established itself instantly in popular favor as a model guide-book to this country. Six years have elapsed since Messrs. Scribner sent us the first edition, and now we have the second, revised. From the new subway in Boston, the erection of Greater New York, the creation of the Public Library, the transfer of Columbia College, the advent of electricity in our tramways, the completion of the Grant monument, to the newest and southernmost Florida watering-place, Miami, the vigilant editorial eye of Mr. Muirhead has noted our developments in this period. Slips and errors have been corrected. The expansionist or "manifest destiny" future is no further discounted than in the first edition, in which Mexico found a place; the only Cuba visible is in New York and in Alabama. For the sake of the tourist, at least, the island will doubtless be both described and mapped in the next edition, along with Porto Rico.

In the second edition of 'The Day-Book of Wonders,' by David Morgan Thomas (London: T. Fisher Unwin), there is a little "reading-matter" for every day in the year, about dwarfs, an African coronation, the Florence burning-glass, Oliver Cromwell, compensation pendulums, the Wesley ghosts, corpse-candles, Wheatstone's "enchanted lyre," gigantic squids, Kepler's choosing of a wife, Layard's Nineveh exhumations, mistletoes, and all that. The author goes to the trouble of telling us whence he compiled his wonders. The list of authorities in eight pages embraces all sorts and conditions of modern books, with a fond leaning towards such as are not over-trustworthy. Whoever enjoys Hone's 'Every-Day Book' will be likely to enjoy this more, because Mr. Thomas has a decided faculty for these holiday manoeuvres of facts. It would amuse anybody's idle quarter of an hour daily through a year. Add to this that it is printed on such thin paper that, though but an inch thick and well under two pounds' weight, it contains some 400,000 words, or as much as three ordinary volumes of to-day. Would it might be imitated in this by those American publishers who make our wrists ache with books of too slender souls incorporated in too ponderous bodies.

In his lifetime, the late R. H. Hutton had published a volume of 'Theological Essays,' and now we have, garnered from his many kindred writings in the *Spectator*, 'Aspects of Religious and Scientific Thought' (Macmillan). The gleanings cover many years, yet everywhere appears the characteristic note of the author when dealing with religious themes—an almost tender tolerance for unbelief; an almost wistful eagerness to make Christianity comprehensive (or vague) enough to embrace all truth, and, too often, a certain strained ingenuity in making a point for his own side. "The Spiritual Fatigue of the World" is a typical subject; every old reader of the *Spectator* would know just how it would be treated.

Lovers of art, and especially of the history of art, and not Bible-readers alone, will be interested in the new venture of the firm of Velhagen & Klasing of Leipzig, who propose

to publish an edition of the Four Gospels, with reproduction of more than 300 paintings made by German, Italian, and Dutch masters in the fourteenth, fifteenth, and sixteenth centuries, the period of classic masterpieces in religious art, and found in churches, museums, and private collections throughout the civilized world. The illustrations will all have direct reference to the life, doings, and death of Christ, and the collection is intended to be a representative body of the best work of the masters. The first *Lieferung* has appeared and promises well for the whole work, which will be completed within a twelvemonth. An appendix will contain biographies of the artists and the history of the paintings reproduced. The title of the work is simply 'Die Vier Evangelien'; the size is large quarto.

The appearance of volumes I. and II. of the works of Origen, edited by Paul Koetschau of Jena, draws attention anew to the monumental literary project of the Royal Academy of Sciences in Berlin, in the publication of a complete and thoroughly critical edition, with brief introductions and notes, of the entire Patristic literature, orthodox and non-orthodox, of the Greek Church of the first three centuries, in worthy companionship to the excellent edition of the Latin Fathers for years in course of publication by the Vienna Royal Academy. The series opened something more than a year ago with the first volume of the works of Hippolytus, edited by Profs. Bonwetsch and Achelis. The near future will bring an edition of the works of Eusebius, Julius Africanus, and Clemens Alexandrinus. The prime mover in the project has been the indefatigable Prof. Harnack of the University of Berlin. Quite naturally it is impossible to determine exactly how extensive this series will turn out to be, but the publisher, Hinrichs of Leipzig, reckons upon about fifty volumes in the course of twenty years.

The treatise entitled 'Die Botchaft des Csars,' by the Austrian Field-Marshal-Lieutenant, Freiherr von Sacken (Vienna and Leipzig: Braumüller), is important enough to deserve the attention of those who may have a voice in the coming Peace Conference. The fact that disarmament is not alluded to in the Csar's message is recognized by the writer in the sub-title: "No disarmament, but an ennobling reform of the defensive and military system." Hostile encounters between nations, and hence the maintenance of armies, are considered as unavoidable, but the latter should be limited in size and of the highest imaginable perfection. The present Continental system of universal service should be much restricted, or be replaced by one not involving the continued increase in numerical strength. It is the "people in arms" that causes the powerful warlike impulse among the nations of to-day, and will bring on wars in spite of rulers and Parliaments. The author's forecast of a general European war with the present *Militionen* leaves stuns the imagination. His plans for preventing the cataclysm seem fraught with difficulties, but not positively impracticable.

The aptitude of woman for the pursuit of political and social science has often been questioned, but is plainly maintained in an inaugural address by Prof. Herkner of Zurich, 'Das Frauenstudium der National-ökonomie' (Berlin: Heymann). The writer, supplementing the publications of Prof. L. von Stein on the same subject, shows briefly what has been achieved by women, more

especially in England, in the field of political and social economy, and then considers the consequences likely to result, for woman herself and for society, from her continued and more general devotion to those subjects.

The April number of the *William and Mary College Quarterly* is wholly taken up with the records of Isle of Wight County, on the right bank of the James River, Va. They go back to 1622, beginning with a list of the massacred by the Indians on Good Friday, March 23, when more than a quarter of the population of Virginia was slain. Musters, deeds, wills, grants, etc., supply much valuable personal, historical, and social information down to 1783.

Longevity, especially if hereditary, is always an interesting topic, and is illustrated in the *New England Magazine* for April by the Rev. J. W. Chadwick, whose text is the life-work of the Rev. Samuel May of Leicester, Mass., now entering (like his parents before him) on his ninetieth year. Mr. May was on the higher intellectual and social level of his Harvard class of 1829, of which he remains the Secretary and all but the sole survivor. Dr. Holmes, Justice Benjamin R. Curtis, Rev. James Freeman Clarke, Prof. Benjamin Peirce, and the author of "America," were some, but not all, of his eminent classmates. He became a Unitarian clergyman with his home at Leicester, till his engrossment in the anti-slavery cause led him to connect himself officially with the organization of which Mr. Garrison was the leader. As general agent of the Massachusetts Society, he conducted, with admirable competence and fidelity, the propaganda through lectures in the field, rendering a service rivalled only by the abolition press. He has outlived the ill-favor caused among his parishioners and neighbors by his philanthropic sentiments and connections, and Mr. Chadwick's agreeable sketch will be read nowhere with greater pleasure than in the hill-town which honors Mr. May as its oldest and most public-spirited citizen, and most revered.

A staunch advocate of Mr. Dewey's decimal classification of the knowledgeable, Comm. Desiderio Chilovi, librarian of the National Central Library of Florence, discusses at once acutely and temperately the question of the London Royal Society's proposed catalogue of current scientific literature, in the *Nuova Antologia* for March 1. The scheme is by collaboration in various countries to produce a Poole's Index (in the largest sense) on cards, and ultimately in volume form, and to distribute the cards at the will of the subscriber, according to his specialty—something in the manner of our press-clippings bureaus. Signor Chilovi is sensibly adverse to any printed book catalogue, and equally opposed to the plan of translating titles not embraced in a restricted group of languages into (say) English. He denies the need of selecting a universal language for this purpose or for classification, and points to the perfect adaptability of the Dewey symbolism. In fact, it is actually in use by Mr. Herbert Haviland Field, who, under the auspices of the International Zoological Congress, is issuing at Zurich and distributing at cost price cards in that domain. (The Zurich office is styled *Concilium bibliographicum opibus complurium nationum Turici institutum*.) Signor Chilovi's article is decidedly worth reading.

The meteorological observatory of Mont Blanc has published, under the direction of

J. Vallot, the third volume of its *Annales*, a continuation of the meteorological observations made simultaneously on the summit of Mont Blanc, in the Grands Mulets, and at Chamonix, together with studies of the variation of the barometer at different altitudes. There are also papers on the progress of the survey of Mont Blanc and on glacial erosion. M. Vallot contributes accounts of his scientific researches in the Mont Blanc tunnel, and his explorations of the moulins of the Mer de Glace. Half-tone illustrations and a map accompany the volume. "Geological and Petrographic Researches on the Mont Blanc Group" is the title of an elaborate paper by Louis Duparc and Ludovic Mrasec, forming the latest number of the *Mémoires* of the Society of Physics and Natural History of Geneva. It begins with a description of the topography of the mountain, and of the position which it occupies in the Alpine range. The eruptive and crystalline rocks are described in connection with theoretical views concerning metamorphic phenomena. The concluding portion treats of the geological history of Mont Blanc. The illustrations include views of the different peaks and glaciers, and a series of plates showing the minute structure of various rocks.

The proceedings of the International Congress of Diplomatic History held at The Hague last September have begun to be published (*Annales Internationales d'Histoire: Congrès de la Haye, No. 1*). The complete "actes" of the congress may be had for twenty francs of the Count de Tarade, 45 rue Cambon, Paris.

—Those who hesitated about becoming subscribers to the 'Jesuit Relations' (Cleveland: Burrows Brothers Co.) from fear that a work of sixty or seventy volumes would be long in production, and might be retarded altogether, must feel encouraged and gratified at the rate of progress which has been made. During 1898, publication advanced at just double the speed which the prospectus promised, and the same alacrity is maintained this year. If the half-way point may be regarded as the Rubicon of such an enterprise, it has already been passed. Students of American history have every reason to be gratified with the editing, and purchasers can find no fault with the presswork or other mechanical features. 1900 should see the successful end of a noble undertaking. Vols. xxxvii. and xxxviii. contain the following documents: the last of the Relation for 1650-'51 (or more strictly, three papers supplementing the Relation proper); the Relation for 1651-'52; the Journal of the Jesuit Fathers for 1652 and 1653; and a general account of the mission, written in Italian by Bressani, who had served in Huronia for four years. This last was not printed by Cramoisy, but appeared at Macerata in 1653. It contains little which has not been brought out in the previous narratives, and we therefore restrict our brief comment to the fresh material. Lower Canada and the Abenaki region were the only parts of New France where the Jesuits succeeded in accomplishing anything between 1651-'53. Drulillettes, after his fruitless negotiations in the English colonies which we have already noticed, returned to his post among the Abenakis and won their affection completely. How different was his treatment on the banks of the Kennebec from that which his brethren received in the valley of the Hudson,

and westward along the Great Lakes! Ragueneau thus describes in the Relation for 1651-'52 the Abenakis' disposition towards him: "They honored him at their feasts with the viands which they ordinarily give to their Captains. If he went on a journey with them, the best canoe was chosen, and he was given the most comfortable seat; and if he wished to ply the paddle, they snatched it out of his hands, saying that his occupation was to pray to God. 'Pray for us and we will paddle for thee,' they would say."

—Meanwhile the nations of the St. Lawrence basin proved equally amenable. In March, 1651, Jacques Buteux, accompanied by three Frenchmen and forty savages, set out on a mission to that most docile of all the tribes, the Attikamegues. His route lay through a region which is now well known to sportsmen and geologists, the Laurentides, or Laurentian hill country. Le Jeune had traversed some part of this remarkable district in the first days of the mission, but Buteux probably saw more of it than his predecessor did. The characteristic feature of the Laurentides is their endless succession of small rocky hills, between every two of which lies a lake or a bog. Buteux and his party, by walking steadily all day, could advance only six leagues, and the obstacles which they constantly met with aroused their admiration while causing them dismay. Ice falls, cataracts, swift streams, perpendicular cliffs, and lodged timber beset their path. The difficulties of the route may be estimated by the statement that for over forty people only two bushels of Indian corn meal, one of peas, and a small sack of sea biscuit were taken. "We had barely enough to ward off death, rather than to sustain life. For my part, I had enough of my few effects; the difficulties of the road, the fatigue, and the fast, which I did not wish to break in Passion time, did not allow me to load myself with food." Those who are familiar with the district in question will read this early account of its exploration with heightened interest, but in any case it is very graphic. Alas, during the next season the good father encountered the Iroquois, with the usual result. The *Journal des Jésuites* for 1652 contains a bald entry of the fact. "On the 10th day of May, Father Jacques Buteux, in company with a Frenchman named Fontarable, and a Huron named Thomas Tsoudoutannen, was killed by a band of 14 Iroquois. The two Frenchmen remained dead on the spot; the Huron was led away captive. This took place on the Three Rivers, at the third portage." However, Buteux's life and martyrdom are fully described by Ragueneau at the beginning of the Relation for 1651-'52.

—Scholarly study of the every-day Latin of the ancient Romans, that dialect, as Quintilian has it, *quo cum amicis contigibus liberis servis loquamur*—the dialect which merged gently and imperceptibly into the Romance languages—is only just beginning. Five years ago, Columbia University made her first contribution to it in Dr. Cooper's treatment of the Sermo Plebeius, and now she gives us another, by Dr. G. N. Olcott. In his doctor's dissertation, 'Studies in the Word Formation of the Latin Inscriptions: Substantives and Adjectives: with special reference to the Sermo Vulgaris,' he has collected in convenient lists those substantives and adjectives of terminations which are most prominent in the

Romance languages, proceeding on the assumption that such formations were prevalent also in the common Latin. This assumption is fully confirmed, for more than one-sixth of the words in his lists are quite unknown to literary Latin. We are glad to observe that Dr. Olcott uses the term *Sermo Vulgaris* in its proper sense, therein differing from most of his fellow-investigators. As Quintilian employs it (12, 10, 43), it is far from signifying mere slang, or low, indecent language, or that which is "vulgar" in the modern society sense of the word; it has a much wider meaning. Sometimes it may deserve the application of these adjectives, but in general it is not so much the language of low life and ignorance as it is the natural language: in fact, it is what we term colloquialism. Of course, it was tabooed by literary men in their books, and consequently the inscriptions are our best source of information on its nature and development. As Dr. Olcott says: "The writers of the inscriptions used the language of every-day life, not the 'book-Latin' which they had forgotten since their school-days, if, indeed, they had ever learned to use it in the schools." His dissertation, however, contains little in the way of general discussion of the subject; it is rather of the *pour servir* variety. It consists chiefly of thirty-four classified lists of substantives and adjectives, with references to the most trustworthy books in which the inscriptions furnishing them are treated. Many such collections of forms of other classes of words as well as studies of the syntax of the inscriptions must be made before some scholar of the future sits down to compile his epoch-making Grammar of Latin Inscriptions. That scholar, however late he may come, will have Dr. Olcott's dissertation in his revolving bookcase. For present needs, we may note that this young American's work is printed by the Sallustian Typography in Rome, and that it is to be had of Gustav Fock in Leipzig. Which of our universities will be first to establish a real University Press of its own, to print and publish the productions of its faculties and students?

—At length the long-standing promise of the Clarendon Press has been fulfilled, and a trustworthy English translation of Gesenius's Hebrew grammar has appeared (New York: Henry Frowde). It was made in the first instance from the twenty-fifth German edition (1889) by the Rev. G. W. Collins, and after his death revised from the twenty-sixth edition by A. E. Cowley. It has also enjoyed the advantage of revision in proof by Prof. Driver. The result is most satisfactory. It is the only complete and full Hebrew grammar in English. For accident it is absolutely the most exhaustive and trustworthy statement in the language, and its treatment of Hebrew syntax, if somewhat timid in parts, may be called fairly good. But in this last respect our want was not nearly so great. Curiously enough, while Hebrew grammars in German tend to remain incomplete, and their syntax volumes seldom appear, English grammarians are rather stronger in syntax than in anything else. We have long had Driver's exceedingly able if frightfully involved and tenebrous 'Tenses'; Müller-Robertson is a masterpiece of lucid skill and linguistic tact; Davidson's 'Syntax' is admirably simple, yet full of detail and first-hand observation; all this apart from the English translation of the monumental and epoch-making Ewald. Be-

side these books, the syntax in this grammar seems lacking in philological grasp and acuteness; much *bearbeiten* has pounded it into flabbiness. The student will often have cause to groan over its be-figured paragraphs and winding convolutions of division. Yet, with all this, it contains much that is excellent, and its copious references to different and differing authorities and statements of their conflicting views will be especially useful. The grammar, as a whole, may also be said to be fairly up to date. We have noticed but few mistakes or omissions. One, of some importance, is on p. 135, where we are told that *wāw* consecutive is found in Phœnician and Hebrew only. That is not so. Nöldeke some time ago ('Zur Grammatik des classischen Arabisch,' Vienna, 1896, p. 68) pointed out its occurrence in old Arabic. There are about 21 pages of tables and 40 of indices.

—In June, 1893, a year and a half before Dreyfus was arrested, a novel entitled 'Les Deux Frères,' by Louis Letang, appeared in the Paris *Petit Journal*, the plot of which may be concisely described as follows: A young officer, Capt. Philippe Dormelles, who holds a position of confidence in the War Department, is envied and hated by two colleagues, named Aurélien and Daniel, who conspire to effect his ruin by accusing him of selling to a foreign Power the secrets of the national defence. It is arranged that a compromising letter, imitating the handwriting of Dormelles and addressed to a foreign military attaché, shall fall into the hands of the head of the department, Lieut.-Col. Alleward. Dormelles is arrested and thrown into the Cherche-Midi prison, and at the same time Daniel causes an article to be inserted in a newspaper, *Le Vigilant*, charging him with high treason and seeking to excite public opinion against him. This article concludes with the statement that a search in Dormelles's apartment had led to the discovery of important documents referring to the fabrication of smokeless powder, and that Dormelles thereupon had confessed his guilt. He is then sentenced to the galleys, but his betrothed is convinced of his innocence and finally succeeds in detecting the forgeries. Thereupon Lieut.-Col. Alleward is arrested and commits suicide in prison, not with a razor like Henry, but with a revolver. One scene in the novel describes the appearance of a veiled lady on the very spot near the Champs-Élysées where the veiled lady is said to have appeared to Esterhazy three years later, and for much the same purpose. The French Minister of War, Mercier, was forced to proceed against Dreyfus by the *Libre Parole*, which published lies about his confession, as *Le Vigilant* did about the confession of Dormelles. Can it be that the method of conducting the conspiracy against Dreyfus was suggested by Letang's story?

MISSOURI COMPROMISE REPEAL.

The True History of the Missouri Compromise and its Repeal. By Mrs. Archibald Dixon. Cincinnati: Robert Clarke Co. 8vo, pp. xii., 623.

Archibald Dixon was in 1854 Senator from Kentucky in the Thirty-third Congress, filling the unexpired term of Henry Clay. On the 16th of January, the bill to organize the Territory of Nebraska being under consideration, he introduced an amendment abrogating the prohibition of slavery by the Missouri Com-

promise Act of 1820. After a momentary dismay, Douglas, Chairman of the Committee on Territories, dallied with the temptation and soon yielded to it, embodying the amendment in substance in his bill, which, after a memorable contest, became a law.

This was immediately followed by the disruption of parties, and by the organization of the Republican party, which swept nearly all the Northern States at once, and, though it failed to carry the Presidential election of 1856, elected Abraham Lincoln in 1860. As everybody knows, secession and the civil war were the next immediate stages in the logic of cause and effect. The armed raid of Missourians into Kansas to organize the Territorial government there by a brief military campaign, with the incident of a pretended election in which leaves of a Cincinnati directory served as fictitious poll-lists, increased the excitement over the great wrong, but did not alter its character. It was so also with the sham of framing the Lecompton Constitution declaring Kansas a slave State in defiance of the will of an overwhelming majority of the citizens, and the reckless efforts of Buchanan's Administration to force it upon the people. These were only the resorts of desperation in carrying out the fatal policy of repealing the slavery prohibition in these Northern Territories. They were subsidiary acts in furtherance of the dominant purpose to make Kansas a slave State, cost what it might, and were the legitimate fruits of Douglas's bill, though he himself was forced by the public opinion of his own State of Illinois to repudiate the final steps in the outrage.

The responsibility for the first distinct insertion of the repeal of the Missouri Compromise into the Kansas-Nebraska bill was so awful, as tested by its results, that one would expect disclaimers instead of claims to it as an historical honor. We can understand how Douglas, had he survived, might have wished it to appear that he had only yielded to the demands of the South through Mr. Dixon as its mouthpiece; but we cannot understand how one to whom the Kentucky Senator was dear, can, at this day, offer the world an elaborate presentation of his authorship of the fateful measure, and of arguments to persuade us that it was right. Yet that is what is done in the work before us, even to a facsimile of the original paper in Mr. Dixon's handwriting, with the official endorsements of the Clerk of the Senate.

The author was the second wife of Mr. Dixon, married to him in October, 1853, and, as his health was not firm, she acted as his amanuensis and became intimately acquainted with his thoughts and beliefs. The book is proof of no ordinary mental power in its writer, and of no ordinary strength of will and of devotion to her task. She began the study of the subject in 1877, a year after her husband's death; her library and the partly completed manuscript were destroyed by fire in 1893. Daunted only for the moment, she soon began again the collection of material and the second writing of her work, and has lived to give us the result in the stout volume now published. She has adopted Mr. Dixon's point of view, and mastered with indisputable thoroughness his theory of the great subject and what logically flows from it. We cannot fail to assume that his positions are adequately and sympathetically stated. If she defends the system of slavery and its consequences in ways that would seem contrary to a woman's na-

tural bias toward freedom and the sacredness of the family, we are permitted to see in it the stress of her reverential devotion to one whose conclusions she must regard as authoritative for her.

Mr. Dixon was a Whig who professed devotion to Henry Clay, yet he was, in his person, a proof of the decay of the Whig party and its practical absorption into the mere pro-slavery party of the South. He was a lawyer by training, but had become a wealthy slave-owner, and saw the "institution" with quite other eyes than those of the great Whig leader. A convention to revise the Constitution of Kentucky met in 1849, and Clay had taken the occasion to urge the adoption in it of a system of gradual emancipation. He declared his belief that most people in every section of the country regretted the introduction of slavery, and lamented "that a single slave treads our soil." Mr. Dixon was elected a member of the convention, and signalized his radical difference from Mr. Clay by attacking the emancipation proposal. His widow tells us that he "opposed and denounced it with all the energy and vehemence of his nature." He introduced a resolution declaring that, as slaves are property, even the Constitution could not deprive the owner of them otherwise than any other property could be taken. He secured its incorporation into the Constitution in the declaration that "the right of property is before and higher than any constitutional sanction, and the right of the owner of a slave to such a slave and its increase is the same and as inviolable as the right of the owner of any property whatever." We are told that Mr. Dixon's speech in support of this section "was so earnest, its arguments so convincing, its eloquence so powerful, that it carried the convention by storm."

This enables us to understand what progress in revolution was marked by Mr. Dixon's election to serve out, in the national Senate, the remainder of the term when Clay was dead. It gives a certain appropriateness to his official demand that the principle of absolute chattelism of man should be held to abrogate every limit to the spread of slavery, and to send the Ordinance of 1787 as well as the restriction of 1820 to the limbo of exploded frauds upon the supra-constitutional right of property in slaves. It adds significance to his declaration in the course of the debate that, as a pro-slavery man, he knew no party when the interests of slavery were in question. To this complexion had Kentucky Whiggery come at last. Not only was Clay as dead as Cæsar, but it seemed as if he were as long dead.

Yet the abrogation of the Missouri Compromise was put forward as necessarily included in the principles of Clay's compromise measures of 1850; and it was now only 1854! The simple fact was, that the Missouri Compromise was assumed as the basis of Clay's "omnibus bill" of 1850; and, instead of being impliedly abrogated, the new measures had none of their alleged efficiency as a permanent quieting of controversy except as they implied that that compromise was and remained in full force. It was a palpable falsification of the facts of history to deny this. It was so plain that argument was embarrassed by the simplicity of the case, and Greeley rightly cried out that it was hard to say whether the new bill was more an insult or a fraud.

The inspiration of Clay's efforts in 1850

had been to make a "finality" of the anti-slavery agitation by removing all the practical causes of dispute. The only "principle" in it was to find some viable expedient in each subject of quarrel, which might give peace through a mutual yielding by the combatants. It was his reputation as the putative author of the Missouri Compromise, which for thirty years had been thought to be, in Buchanan's words, "hardly less sacred than the Constitution," that made it seem his prerogative to add to it a further compromise regarding regions which it did not cover, and which, by settling the new strifes, should give the promise of permanent peace. He notoriously sought to add to it, not to supersede it. The peace it was supposed to have given for a whole generation, was one of the strongest arguments that there might be a similar settlement of the questions which grew out of the acquisition of territory by the war with Mexico. Arrange these amicably, and sectional antagonisms would cease for lack of a real bone of contention.

Instead of having weight with Northern men, the argument would have ruined every chance of compromise if it had once been suggested that, under pretence of applying "squatter sovereignty" to Utah and New Mexico, the whole great valley of the Missouri and its tributaries be thrown open to slavery. On the other hand, the real argument was, Since you of the North are already secured in the almost boundless regions of the Northwest, to which we are willing now to add the admission of California as a free State with boundaries reaching from Oregon to Mexico, why cannot you give the South the feeble chance of natural competition in the settlement of Utah and New Mexico, where Webster and Douglas unite in declaring that a higher law, that of Nature herself, has decreed that slavery can never enter, because it can never be profitable there? Such reasoning carried the compromise of 1850. In 1854, the audacious claim of political might against right was that Utah and New Mexico had dragged as a tail the whole Northwest into the net of the slave power. Every intelligent man in the country knew that the assertion was false in fact, and it only kindled wrath in Northern men to hear it argued that it was the logical result of Clay's measures of 1850.

The truth, of course, is that compromises are, in form, the discarding of logic. There neither is, nor in the nature of things can be, any "principle" in them from which anything can be argued. They are bargains to settle difficulties by mutual concessions. They begin and end in the specific arrangement made in each case. The North claimed the admission of California with her free Constitution; the South refused it. The South claimed the right to carry slaves into the region taken from Mexico; the North asserted that it was free under Mexican laws and must stay so. Texas claimed New Mexico; it was objected that it never was part of Texas, and had never been occupied by Texans. The North claimed the closing of the slave-markets in Washington; the South demanded a more stringent fugitive-slave law. The compromise admitted California, gave Texas ten millions for a quit-claim to New Mexico, allowed slaveholders to settle Utah and New Mexico if they could do so in peaceful and fair competition with other immigrants, abolished the slave-trade in the District of Columbia, and passed the fugitive-slave law. To pretend that this con-

geries of measures impliedly abrogated the Missouri compromise was regarded by Northern men as the mere impudence of arrogant power. The North might as well have claimed that it was an implied agreement that no new State should ever be admitted except with a free constitution like California. As if to repudiate explicitly the idea of any system of measures having a common principle and mutually dependent on each other, they had been defeated in the form of the "omnibus" which united them, and were passed by the Senate separately.

But Mr. Dixon, however willing to praise the Douglas bill and to applaud the specious argument of the Illinois Senator made for a Northern audience, planted himself and based his amendment upon the ultra-Calhoun doctrine that all restrictions of slavery were unconstitutional. He stood for the recognition of this, as he had succeeded in putting it into the Constitution of Kentucky—a law even "higher than any constitutional sanction." In his brief part in the debate he said, "I look upon the act of 1820 as a violation of the Constitution of the United States." The right to take and hold slaves everywhere was, of course, the logical conclusion from his proposition that slaves and their increase are as absolutely chattels as sheep and oxen.

Earnest anti-slavery men at the North always had a respect for Calhoun and his school, because of their willingness to stand by the logical results of slavery. With them the issue was intelligible, and the debate reached first principles of law and morals. The anti-slavery principle was that slavery was a creature of municipal law, and could exist only when it was established by positive law; that outside of such limits there were no presumptions in its favor, and it was condemned as contrary to the inalienable rights of man. In this contention the whole current of civilized law fully sustained them. Its logical results were also clear. The Federal Constitution did not establish slavery, it only tolerated it within the States which by their own laws established it. Outside those State limits the wrong system had no standing in law, and when easy-going comity of friendly States was repudiated by the South and constitutional rights asserted, the way was open to bring "righteousness to the line, and justice to the plummet."

We should belie our English blood if the majority of our people had not been willing to forego logic in favor of any tolerable arrangement of conflicting interests. As long as sufficient room was left for the westward migration of our teeming millions without immediate contact with the system which degraded free labor, the practical situation could be endured, and only a small minority cared to make a political issue upon it. Why could not the Calhoun doctrine be allowed to work, and the North and South take their chances of the natural migration to the Territories? Mrs. Dixon has answered this as clearly as one could desire, though on this point we may question whether she finds her inspiration in the Senator's writings. As to those "fertile fields," she says, the Northern people "were excluded by the existence of slave labor as effectually as though by act of Congress" (p. 2). Again, speaking of the region taken from Mexico, she says: "No one can blame the people of those Territories for objecting to having slaves brought into their country; and yet one cannot, either, blame the Southern people for demanding a

portion at least of the land which they had so largely contributed to gain" (p. 228).

This essential incompatibility between slavery and free labor is stated by Mrs. Dixon in almost the identical terms which were used in 1820 by the New York leaders, Tallmadge and Taylor, and in 1854 by the Ohio Senators, Chase and Wade. Because it was truly stated by them all, Senator Dixon's amendment in 1854 reduced the struggle to simple and irreconcilable elements. A total surrender of all the Territories was demanded of the North, and we cannot dispute Mrs. Dixon when she says, "It was a question of land, for which the Anglo-Saxon race will always fight." Clay had seen it. He had warned the South that there could be no peaceable secession, and told them that if war should come he would be found on the side of the Union to which he owed his first allegiance. It marks the long gap between Clay and Dixon that the latter, from his home on the banks of the Ohio, did not see the portents of the storm he was raising, and seems to have thought he was doing no more than offer the decision of an academic question of constitutional law. As to Douglas, we know too well the effects of political ambition to wonder so much at his blindness.

The author's perception of the real character of the contest might well have modified her judgment of the public men and measures which she treats; but it has hardly done so. The Northern men who led the opposition to slavery extension are painted as unscrupulous demagogues, the Southern advocates of the great breach of faith as unsullied patriots. The materials used in the book are almost wholly drawn from the Congressional debates, and we find no evidence that even such general histories as Hildreth's, Von Holst's, or Rhodes's have been read or consulted. A number of collateral historical questions are mooted, and it might be interesting to criticize the treatment of some of them if there were space; but there is not. Near the close of the book is an intimation that Senator Dixon condemned the final effort of Buchanan and the party he represented to force upon the Kansas people the Lecompton Constitution, in the making of which the citizens of that Territory had no part, and which they repudiated with wrath. Authentic evidence of the manner in which such a man as Dixon viewed the events of the civil war as they passed, would have a most instructive historical value, could the work be brought down to emancipation in Kentucky.

The First Philosophers of Greece. By A. Fairbanks. Scribners. 1898.

The Ionian philosophers embody for us more than one aspect of the brilliant and restless life of Ionia in the seventh and sixth centuries B. C. Their philosophy sprang into being as the expression of that overflowing life and splendid spontaneity that had made the Ionians the creators of the Greek epic; and perhaps even more was it the outcome of the restless Asiatic curiosity that caused the greatest of them, like Herodotus, to become wanderers on the face of the earth. Before philosophy and poetry had quarrelled, the earliest of the Pre-Socratics expressed in majestic, rugged verse or in abrupt, vivid prose their burning interest in the unexplored universe. What is it all made of? What is its basis, its *Apv*, its underlying

element? That was the inquiry they were eager upon. Human action and human society lay without the sphere of their research; hardly, before Socrates, did men change the form of their question, to ask, "What is it all made for?"

For the characteristic attitude of the Ionians was aloofness. They stood apart. Heraclitus of Ephesus, uttering on the mutability of things words "solemn, unadorned, unsweetened," as he himself said of the Sibyl, declined to instruct his fellow-men. "For what sense or understanding have they? The very best choose one thing before all others, immortal glory among mortals, while the masses eat their fill like cattle." The tears of this great first pessimist, this "weeping philosopher," are symbolic of his despair of mankind, as the laughter of Democritus the Atomist symbolized his doctrine of contempt. All things flow from us—nothing abides; that is the burden of the "harsh protesting cries" that have come down to us in the name of Heraclitus "the Obscure." He must have seemed to himself a sort of Cassandra as he stood preaching, in words that his fellow-citizens failed to understand, the unreality of all the visible tangible phenomena which they took so seriously for realities. Aristotle has told us, in the *Metaphysics*, that the Platonic doctrine of Ideas arose from the universal definitions of Socrates—those definitions of courage and justice and friendship which he extorted or failed to extort from the amazing patience of the Athenian youth—and the Heraclitean doctrine of the flux of all things. In fact, one would not be far wrong in saying that the main preoccupation of Plato's teaching was to bring about a reaction against Heraclitean relativity and mutability. Plato stands between the living and the dead—opposing unchangeable types, as the only realities, to that flux which Heraclitus had taken for a law of all existence. This idea of the unchangeable he borrowed from Parmenides the Eleatic; though he was, perhaps, indebted to Democritus the Atomist for the term itself—*idea*, or *idea*.

This, then, is the origin of the Platonic doctrine of the baseness of matter, which Huxley thought, at best, but a "splendid folly." In the *Phædo* we read of Plato's disappointment in the case of another pre-Socratic, Anaxagoras, who had made so real an advance by introducing a guiding intelligence into the universe, and yet in the end had adduced only secondary and trivial causes for his explanation of its problems. It was from Anaxagoras's teachings that Pericles had acquired his subtlety of statesmanship, for Anaxagoras, at any rate, with some danger to himself, tried to influence human action through his pupil. It was Xenophanes, the founder of the Eleatic school, who inspired Plato with his hostility to anthropomorphic notions of the gods, and to him we may trace the avowed monotheism of the *Republic*. Plato's method of dialectic was derived from the Eleatic Zeno. We have said so much to show that Plato's writings are a palimpsest, because Mr. Fairbanks in his Appendix hardly leaves the correct impression of Plato's use of the pre-Socratic doctrines. He says (p. 264): "Plato's writings betray no particular interest in any of the pre-Socratic thinkers except Parmenides and the Pythagorean school, nor do they convey any hint as to the value of the work of the other early thinkers."

Not explicitly, perhaps. But "they are everywhere in it, not as the stray carved corner of some older edifice, to be found here or there amid the new, but rather like minute relics of earlier organic life in the very stone he builds with." No one has so admirably stated Plato's debt to the pre-Socratics as Walter Pater, from whom these words are quoted.

Mr. Fairbanks's book is, in some respects, disappointing. He seems to have conceived the idea of furnishing students who have no knowledge of Latin and Greek with an English substitute for the first volume of Ritter and Preller's monumental *Historia*. He has, therefore, arranged the fragments with a parallel English translation. The critical notes, however, appeal to another class of students, and might have been omitted; for we cannot suppose that any student who desires a thorough knowledge of the Ionian philosophers will neglect Ritter and Preller for Mr. Fairbanks. We are surprised to find that their invaluable work is not even mentioned, and that Mr. Fairbanks can say (Preface, p. 1) that "the student who desires to examine the evidence for himself still finds the material difficult of access." Diels has naturally been the editor's main source, and his debt is acknowledged. The volume may be recommended to all who read their Plato in Jowett and their Aristotle in Welldon or another.

The term "doxographer," which is throughout used for the familiar "doxographer," does not strike us as a happy innovation. On page 78, Lasus is called "son of Hermiones"; surely Hermione was his birth-place.

The Philippine Islands. By Ramon Reyes Lala. New York: Continental Publishing Co.

Still they greet us—books on the war and our new territory; the last but not the least appearing under the above well-worn title. All of them, with the exception of *'Yesterdays in the Philippines'*, treat the subject in more or less the same way. They invariably begin with the discovery of the islands, their acquisition by Spain, and early history, and continue with observations on the character of the people, soil and climate, the resources, physical geography, and commercial importance. Mr. Lala's book, however, gives us observations made from the point of view of a native Filipino. From Manila, where he spent his early life, he went to Europe to be educated, returned later to the Philippines to study his own people, and has now come finally to America to write about them and their land. In his preface he says: "It has been my aim to give, rather than a long detailed account, a concise but true, comprehensive, and interesting history of the Philippine Islands; one, too, covering every phase of the subject, and giving also every important fact." This is a large task to perform in 342 pages, diminished by the space occupied by 133 illustrations.

Mr. Lala begins with the early history of the islands, from the occupation of Mindanao by Magellan, and comes down through the attacks on Manila by the Chinese and Dutch to the point where the English arrive to hold the Philippines for ransom, and finally to give them over to Spanish colonial rule. He then, without ceremony, jumps into the middle of things as they are at the present day, and tells of the evils of the tax system, the corruption of church and state, the

tardy justice administered by the courts, and the relations between the governing people and the governed. Then, warming up to his work, he discusses the various tribes in different parts of the archipelago, and tries to give due consideration to everything, from the height of the principal volcanoes to the length of village feasts.

In speaking of the religious orders, whom he believes to have been the cause of incalculable harm and injustice, Mr. Lala says that their future treatment is one of the hardest problems to solve. He considers that the most effective way of dealing with the friars is to expel the whole body from the islands, and says: "I do not believe that these good brethren will soon cease to foment insurrection against the hated Protestant conqueror. They have ever been breeders of mischief under the congenial rule of Catholic Spain; what won't they do under the régime of enlightened America, whose first thought is the liberty that means death to extortion and oppression—the cardinal principles of their order?" Mr. Lala here speaks as a Catholic as well as a Filipino, and his radical sentiments are probably shared by a large majority of the civilized natives in the archipelago.

In discussing native characteristics, the author credits the Filipinos with being so far fatalistic that they are resigned to the inevitable. "Incomprehensible inconsistencies," says he, "obtain in nearly every native." We learn they are not noted for foresight or energy—qualities which one would expect to find lacking in tropical races. They are calm, but not secretive; curious, but polite; passionate, and cruel to their foes. They are fond of family life and of children, are superstitious, have no sense of humor, are seldom witty, and are not easily moved to anger. Regarding the feeling which the native holds for the Chinese who have swarmed pretty well over the Philippine archipelago, Mr. Lala says: "Like all courageous people, he despises cowardice and pusillanimity. He has, therefore, but little regard for the meek and humble Chinaman, who will pocket an insult rather than avenge himself." But the Chinaman, though hated throughout the Philippines, is indispensable; and as the labor problem is to be one of the great questions in the future development of the islands, it is worth while to see what the author further says regarding the Celestials:

"The Chinese," he remarks, "have been a great boon to the colony—they have had a civilizing influence on the natives, and have taught them many important things. They have ever been the leaders in commerce and the chief middlemen of the colony; without them trade would almost be brought to a standstill. But by their superior shrewdness and cunning, they have excited the hatred of the natives, who despise them. Their expulsion would, however, be as unwise as it is impracticable, and the only remedy is in state control."

In treating of the various wild tribes of the interior, the author generalizes to such an extent that we do not feel as if he had had the personal contact with them which enabled Prof. Dean Worcester to make his accounts of aboriginal life so interesting in his 'Philippine Islands and their People.'

About the middle of the book Mr. Lala decides to describe Manila, its various suburbs, the customs of the people, and points of interest. He then takes up many of the chief commercial towns in various parts of the archipelago, giving a short description of each. In the latter pages he gives the

history of the commerce with the archipelago in detail, and this in turn is followed by a treatise on agriculture. The cultivation of rice, sugar-cane, hemp, tobacco, coffee, and cocoanut is considered in separate chapters. Following these come others in which are discussed the forests, animal life, and mineral resources. The author believes the archipelago to teem with vegetable and mineral life in inconceivable richness, and thinks that only good government and enterprise are necessary to turn these resources to account. And yet, in another chapter on climate, he hints that the hot weather soon causes the energy that one has in cooler climes to evaporate; and without energy, where is enterprise? The work ends with an account of the struggle of the Filipinos for liberty, the battle of Manila Bay, and the American occupation. Although the book is replete with information, facts are jumbled up in such an uncomfortable way that the reader finds himself frequently wishing for more sequence and less sudden transition from mountain to mole-hill or vice versa. On the whole, however, the volume is creditable to the author, whose father, by the way, keeps one of the best-patronized hotels in Manila to this day; and it is full of illustrations.

Spinifex and Sand: A Narrative of Five Years' Pioneering and Exploration in Western Australia. By the Hon. David W. Carnegie. M. F. Mansfield & Co. 1898. 8vo. Pp. xvi, 454; illustrations, maps.

The author of this book is an excellent representative of the class of men who have made the British empire. The younger son of a Scotch nobleman—Mr. Carnegie himself gives no hint of this—he went to Western Australia, when just of age, in 1892, to try his fortune in the newly discovered gold-fields of Coolgardie. Here he worked as a "surface hand" in a mine "at £3 10s. per week, with water at the rate of one gallon per day"—the water having to be brought from a well thirty-six miles distant—and as a prospector. In this latter employment he travelled extensively through the region searching for "color" or auriferous rock. This occupation was abandoned in turn for that of the genuine explorer, and, with four companions and nine camels, he was first to cross the great interior desert from south to north. Returning by a different route, he reached the southern settlements in July, 1897, after an absence of thirteen months. His aim was not simply to fill up the blank places on the map, but also to discover a practicable stock-route by which the cattle from the Kimberley pastures in the north could be driven to the gold-fields. In this he was unsuccessful, the wells and "soaks" being too few and uncertain to admit of the passage of any animals but camels, nor did he find any trace of gold.

The story of these varied experiences is told in vigorous English colored by the frequent and unstudied use of miners' slang. The first portion is a vivid picture of pioneer life, with descriptions of the different rude methods of getting gold, of the "rushes" to new fields, above all of the eager search and frantic strife for water. This is, in fact, the prevailing topic throughout the narrative, the great Australian desert containing possibly the largest waterless regions on the face of the globe. In his second crossing it he travelled "a distance of about

800 miles" without finding what was apparently "permanent" water. Often the means of discovering it was by capturing a native and compelling him, through thirst—he would not do it freely—to lead them to the tribe's water-hole. Mr. Carnegie acknowledges the cruelty of the practice, but says that without this forced aid of the natives we "should not only have lost our own lives, but possibly those of others who would have made search for us after." The desert, the northern half especially, is remarkable for its sand-ridges, running parallel to each other from east to west, with an average height of sixty feet and a quarter of a mile apart. One day's entry on the route-map is: "Crossed 88 sandhills in 8 hours' travelling." Seen from a height, it seemed "as if the whole country had been combed with a mammoth comb." The predominating vegetation is spinifex, a species of *Triodia* growing "in round isolated hummocks one to three feet high; these hummocks are a dense mass of needle-like prickles, and from them grow tall blades of very coarse grass to a height of sometimes six feet. . . . Most accursed vegetation to walk through, both for men and camels." Scattered through it are small tribes, or families rather, of natives who wander from well to well, living mainly on rats, reptiles, grubs, and seeds. Notwithstanding their wretched life, they are often well formed and of good size, while a certain degree of intelligence is shown by the fact that they are "governed in their social life by marriage laws and class systems of the most intricate kind." In an attempt to explain these laws Mr. Carnegie is obliged to use algebraic symbols.

A pleasant note in the narrative is the good feeling which existed between the author and his companions, in his various expeditions, and the evident sincerity with which he often acknowledges the value of their services. But, strong as was his attachment for them, it was, if possible, stronger for his camels, whom he calls, not without reason, "one of the noblest of creatures and most marvellous works of the Creator. Brave, dumb heroes, with what patience and undaunted courage do they struggle on with their heavy loads, carrying what no other animal could carry in country where no other could live, never complaining or giving in until they drop from sheer exhaustion!" He gives instances of their affection for him in return for treatment so kind and careful that not one perished from the terrible privations and horrors of the desert.

The illustrations are interesting, but the elaborate route-maps show remarkable powers of observation in so youthful a traveller.

Observations of a Ranchwoman in New Mexico. By Edith M. Nicholl. Macmillan Co.

Mrs. Nicholl is an Englishwoman who, after a residence of nearly twenty years in this country, fled for refuge from ill-health to New Mexico. Like all sensible invalids who do not seek a propitious climate till too late, she determined to give herself a more exhilarating occupation than brooding over her ailments, and therefore took a thirty-acre ranch in the Mesilla Valley, near the old Pueblo of Las Cruces. In her little book she gives some vivid descriptions of the arid landscape, the bare battlemented Organ Mountains, and (what constitutes the greatest

charm of the Southwest) its pellucid atmosphere and the infinite variety of tints it throws over the hills and plains at sundown, from gorgeous crimson through every shade of green to deepest blue. Glorious as is an Eastern sunset, it affords no conception of the radiance of light and color which at that hour bathes the horizon of this dreary land, still less of the awful splendor with which it clothes the heavy masses of threatening clouds, which in the rainy season so often hurl down destruction, rather than shower blessings, on the parched earth.

Mrs. Nicholl tells with sincere emotion, though with tiresome amplitude of detail, of all the troubles she had to put up with from the lazy and mendacious Mexican servants, and the still more vexatious disappointments she had to endure from imported American help. The book is written for her countrymen, and this may account for such wearisome prolixity, and for her loading her chapters with trivial comments on our common schools, on the deficiencies of our judiciary, on our political methods and consequent political corruption, on the silver question, and on every other phase of American life and manners, when any excuse offers. As an intelligent resident of long standing, her reflections on ourselves are just and appreciative, and those on the faults of her own countrymen and women candid and keen, but we could have wished that she had confined herself to her farming experiences, and given us the balance-sheet of her ranching operations, and more of the daily routine of her work, and her conclusions as to why one rancher makes so signal a success and another so deplorable a failure. She touches on these delicate points—but only touches. The main drawbacks to the prosperity of the Rio Grande valley, all will agree with her, are the Mexican population and the dearth of water—two radical, and yet she thinks remediable, defects. She contends that the second must be remedied before the first will disappear. If, by the storage of water, certainty of crops could be assured, white ranchers would be induced to enter and displace the indolent New Mexicans, who are the most worthless item of the Gadsden Purchase.

The sonorous title of the river which takes its rise in the mountains of Colorado, the Rio Bravo (Grande) del Norte, is, from the Eastern standard, a ridiculous misnomer. Except when the snows are melting at its source, its bed below Albuquerque is occupied almost wholly by moving sand instead of flowing water; and as more and more water is drawn from its upper reaches for irrigation, that long stretch of river below El Paso which marks the boundary between this country and Mexico, is at certain seasons practically dry. Thus lands on the Mexican side, once under cultivation, have relapsed into aridity, and, as a consequence, the adjustment of international water rights has become one of the diplomatic questions pending between ourselves and the Government of Gen. Diaz. Impounding the water during flood, as is being done in Egypt, or catching the rainfall in reservoirs, are the alternatives. Damming the impetuous Rio Grande is in itself a very different feat from damming the sluggish Nile. All the Western rivers, when in flood, carry down, besides vast stores of fertilizing mud in suspension, incredible quantities of sand, gravel, and boulders, which soon fill up any reservoir erected across the channel. Storage reser-

voirs to store water and not stones must be filled by rainfall or by water tapped, through lateral canals, from the rivers during the short periods of flood. The average rainfall in New Mexico and Arizona is about ten inches, or far more than sufficient to irrigate all the arable land in these two vast but mountainous Territories, if it could be impounded and distributed over their marvelously fertile valleys, which compose but a small proportion of their total area. The climate of the Southwest is ravishingly beautiful and exhilarating simply because of the scanty rainfall. If to the attractions of such a climate could be added the exuberance of vegetation which springs up as if by magic under irrigation, our Western Territories would be in very truth the garden of the earth. The narrow stretches of garden orchard and alfalfa meadows which line the banks of the Rio Grande, the Gila, and the Salt River owe their vigorous life and prolific yield to the water these streams grudgingly and intermittently lend them. But the river valleys are insignificant in extent compared with some of the vast plains of South New Mexico and Arizona, which are composed of soil as rich as that of the river bottoms. Though they are to-day sandy wastes, they would reward with harvests, such as our Eastern farmer never dreams of, the skill of man distributing at regular intervals over their surface the rain which falls in sufficient volumes only during the rainy seasons. Difficult as the task may be, our engineers will accomplish it, and thus add to the Union, without bloodshed or injustice to any one, territory as prolific as Cuba or Porto Rico. To expansion by such means all parties will heartily agree.

Our author justifies the continued exclusion of the last two of our old Territories from the privileges of statehood, while peopled by so many of the original native population, and till the whites attain greater predominance numerically and settle down to more sedentary habits of life. Neither mining nor cattle-ranching is conducive to sobriety of thought and quietness of spirit; and these two employments absorb the energies of the bulk of the Americans of New Mexico and Arizona. Few are willing to endure the toils and reap the slow small gains of farming, and these few are in great measure Mormons.

The Cruise of the "Cachalot." By Frank T. Bullen, First Mate. D. Appleton & Co. 1899.

In these days a book that treats of the whale fishery offers a wide field for the imagination. There was a time, however, before the decline of that industry, when an author was forced to adhere to great accuracy of statement, as being under the scrutiny of a large audience learned in the technique of every phase of the subject. The least deviation from realistic precision, either in the navigating of ship or handling of boat, or in the thousand and one details of the business, or any unfamiliarity with its argot, excited the derision of an army of knowing and exultant critics. The author of *'The Cruise of the Cachalot'* is fortunate in that the composition of his book has been deferred to the last years of the present century.

Mr. Bullen does not dally in proclaiming that he is an Englishman. On the second page of his first chapter he falls into the

trap that writers of his nationality invariably set for themselves when they attempt to transcribe what they consider genuine Yankee dialect. Mr. Bullen's is that employed in London music halls to arouse British hilarity, but which is as far removed from the original as is cockney speech from that of the Southern negro. The hero of the story, an English youth, is at New Bedford, Mass., looking for a berth on a ship. He meets a seafaring man to whom he addresses an inquiry, and who in reply says, "Wall, I should surmise," etc. Nothing can convince an Englishman that this is not a common affirmative of the average American. No Yankee skipper that ever lived has used the word in the sense with which Mr. Bullen applies it. The impossible sort of lingo that he puts in the mouths of the American shipmates of his hero is irritating and fatiguing, and casts a cloud upon the verisimilitude of the narrative. So does the circumstance that, in the last pages of the book, when the ship is within a few hours of reaching New Bedford on the return from a two years' whaling voyage, the author speaks of sighting "Cape Navesink or Ole Never-sunk," as if it were a landmark indicating proximity to the port of destination. He is probably alluding to the Highlands of Navesink, near the entrance of New York harbor, 150 miles more or less west of New Bedford. This disregard of geographical accuracy is unpardonable in a writer who claims to have attained to the grade of first mate in the (presumably) British merchant marine, which he could not have done without having passed a severe technical examination.

It is hardly fair to consider this book seriously. It is the story of an English youth, originally a London street Arab, who, with some previous nautical training, ships on board a New Bedford whaler for a long cruise after sperm whales. He encounters the usual stock adventures—brutal "Yankee" officers; the inevitable battle between a giant octopus and a sperm whale, this time by moonlight, *pour encourager les autres*; opportune gales and convenient lee shores, smashed boats, physical suffering, etc. All the old properties are brought out in succession. The hero, notwithstanding his origin, calling, and youth, possesses literary tastes. Among his other effects he has a copy of the Bible, Shakspeare, and two of Dickens's works. These prove a source of great intellectual solace not only to him, but also to the polyglot crew of the ship, composed of negroes, Portuguese, and the offscourings of a seaport town. Mr. Bullen has gifts of narration and description that would avail as much for adventures on land as for those which he has located upon the sea. The frontispiece to the book is a beautiful example of the best school of wood-engraving.

History of the People of the Netherlands. By Petrus Johannes Blok. Translated by Oscar A. Bierstadt and Ruth Putnam. Part I. From the Earliest Times to the Beginning of the Fifteenth Century. G. P. Putnam's Sons. 1898.

We have met with one or two ardent admirers of Motley who considered it an impertinence that any one should, after him, presume to write on the subject of Dutch history. We therefore lose no time in stating that Dr. Blok, though a professor in the University of Leyden, is free from the charge of poaching within the American his-

torian's enclosures. Beyond doubt the struggle against Spain is the *Glanepunkt* of Dutch heroism, but for a long time before William the Silent the people of the Netherlands had interesting annals, nor did the race exhaust itself by a single, if glorious, effort. Dr. Blok in this work does not select any one incident, movement, or period for minute examination, but writes comprehensively of the Dutch and Flemish folk in their social as well as their political progress. In the first volume, which is the only one at present translated, he begins with the earliest inhabitants—to wit, cave-dwellers—and reaches the death of Count William VI. in 1417. But as the primitive and Roman periods are rapidly dismissed, this instalment might almost be termed a separate treatise on the mediæval history of the Netherlands.

For purposes of convenience, the translators have added to the first volume six chapters which, following Dr. Blok's own division, belong to the second part. Thus rearranged, the pages before us admit of ready analysis, because a logical break occurs almost exactly midway in the book. Although the Dutch Republic was declared free from allegiance to the Empire only at the Peace of Westphalia, the Netherlands virtually cut adrift from Germany during the great interregnum. Certainly by 1300 "the German kingship had become but a name in the Netherlands, respect for which was ever growing less. The counts and dukes were in fact kings in their lands; they had acquired almost all the royal rights as they were more and more impelled to undertake the King's obligation to maintain peace." After glancing at Roman occupation, Dr. Blok describes the condition of the Low Countries during the Inroads, its status under Merovingians and Carolingians, and its emergence from the profound territorial changes of the ninth century. After this, four chapters on the rise of small fiefs, early feudal society, the Netherlands in the Crusades and domestic broils, bring us to the dividing line already mentioned. The second portion of the volume is more distinctly occupied with Flemish and Dutch affairs, inasmuch as, with isolation from Germany, Netherlands history assumes its special and local aspect. In the first half, Dr. Blok must perforce traverse territory which has been pretty thoroughly surveyed by the numerous writers on mediæval imperialism. After 1300 he enters his own province.

By way of adding a single word to this analysis of contents, we may state that the chapters which have interested us most are the ones standing at the head of the second part. In a little less than a hundred pages Dr. Blok presents an admirable picture of Netherlands society at the beginning of the fourteenth century. After considering the position of the territorial lord, he passes on to the three estates, regarding clergy and nobles separately, and dividing the commons into country people and citizens. Such a sketch puts one in a position to understand perfectly the struggle of the Flemish communes in the days of James and Philip van Artevelde, and is an equally serviceable introduction to the relations of Holland and Zealand during the Hook and Cod quarrels.

The translation of this first volume has been made mainly, but not entirely, by Mr. Oscar Bierstadt of the Astor Library. In most respects the English is unexception-

able, but at times we have noticed a certain haziness in the use of personal pronouns. It should also be indicated that the English text does not altogether represent the Dutch original. Some abridgments of the political narrative were deemed advisable by the author, and have been made, "while the account of the development of social, industrial, and intellectual conditions is given in full." We must express regret at the almost total lack of footnotes, an omission which now and then is rather glaring. Thus, in writing a chapter on mediæval nobility, Dr. Blok gives the passage from John of Beka wherein William of Holland's knighting at Köln, October 3, 1647, is picturesquely described, but one of its most distinctive features is left in a mutilated state through the absence of a brief explanatory note. In Dr. Blok's version we are told that the "Lord Cardinal [acting for Pope Innocent IV.], in full dress, spoke to the squire, starting out from the signification of the word knight: 'Every one who wishes to be called a knight must be constant, noble, generous, spotless, and strong.'" Now the adjectives which Capuzius actually used were *magnanimus*, *ingenuus*, *largifluus*, *egregius*, and *strenuus*, constituting, as will be seen, an acrostic upon the word *miles*. Dr. Blok gives no hint of this, and so the point is completely lost. It would also be interesting to know what authority there is for the extraordinary statement that, in a tournament at Neuss, one hundred knights were suffocated by the dust.

The volume is, however, an admirable study, not merely in Netherlands history, but in the life of mediæval Europe. We must state in conclusion that one very useful feature is the appendix, which contains a detailed account of the authorities for early Dutch and Flemish history.

Rights and Duties of American Citizenship. By W. W. Willoughby, Ph.D., Associate in Political Science at the Johns Hopkins University. American Book Company. 1898.

This work is hardly elementary enough, either in substance or in statement, for a wide use in the public schools, nor does it go far enough beyond their requirements to satisfy the needs of college classes. The reader will at once detect in the author a combination of the political scientist and the political reformer. On controverted points he sometimes declares himself and sometimes not. He does not hesitate to oppose suffrage for women and the "Initiative and Referendum," for instance, but gives a summary of arguments on the silver question without any statement as to his own views, and fights shy of the problem of the liquor traffic. We note a number of statements so inexact as to be misleading to the uninformed reader. The time of election for Representatives is not absolutely uniform, as one would infer from the statement on page 162. In case of a vacancy in the House, the Governor *shall*, not *may*, order a new election. In case of a vacancy in the Senate, the appointee of the Governor holds his place "until the next meeting of the Legislature," not until a successor is chosen, as Mr. Willoughby says. All appropriation bills are not given to the committee on appropriations, as is implied on page 176. The statement that "the United States has never found it either necessary or expedient to

levy export duties" is superfluous, in view of the fact that they are forbidden by the Constitution. The prohibition of import duties by the States is put into the text without the qualifying exception that such duties may be laid, under the supervision of Congress, to the extent necessary to secure funds for executing inspection laws. The statement that the inhabitants of the District of Columbia have no right of suffrage at local or national elections should have been accompanied by mention that a considerable proportion of them retain a voting residence elsewhere. The course of action laid down for the introduction of a new State into the Union is not legally obligatory, as the uninformed reader would surely infer. The Constitution puts no limit on the method to be employed by Congress in this matter, and it is important that this should be known at a time when there is so much feeling in favor of putting at the disposal of Congress a large amount of possible material for new States. The pledging of Presidential electors does not result in election by the people "as much as if the people voted directly," since a large majority in any State has no effect outside the State where it is cast. Being a teacher and not a capitalist, the author is excusable for falling into the error that gold certificates are all of the denomination of \$20. Mr. Willoughby's definition of independence in politics, as implied on the closing page of his book, is too nearly that of the enemy. As a reformer, he ought to be satisfied with no use of the term which would bring it into play only when one or both the great parties go wrong.

If a second edition of the book is called for, these infelicities can easily be removed in revision, and a form given to it which will adapt it better to general use in the public schools.

The Referendum in Switzerland. By Simon Deploige. Longmans, Green & Co. 1898.

Not the least meritorious part of this work is the introduction, by the translator, Miss Lillian Tomn of Girton College. In fact, except to the student of politics, this introduction is the only readable portion of the book. M. Deploige's study is extremely thorough. He goes back to the origins of Swiss institutions, and traces the growth of the referendum in every canton. The material that he has collected is of great value, and his work will be peculiarly appreciated in this country, where the referendum is much talked of, but little understood. But these details are quite too minute to be comprehensible to the ordinary citizen, who must in such matters content himself with the testimony of experts as to general results. Such testimony is very well summarized by Miss Tomn; and there is also a letter from Prof. Van den Heuvel of the University of Louvain, in which strong reasons are given for holding the referendum inapplicable in Belgium.

One of the most conclusive arguments against the introduction of the referendum in this country is the fact, on which emphasis is laid by all competent observers, that the institution belongs to democracies of small size. As Mr. Lawrence Lowell, whose opinion is accepted as conclusive by Miss Tomn, has pointed out, the larger the population the harder is the problem of free government. The population of Switzerland is only three millions; its government is efficient and economical, free from corruption and from the

vacillations of our party system. When these conditions are changed, the methods of government which have been successful may cease to be so. Moreover, the evidence here collected is overwhelming to the effect that the referendum in Switzerland has been of very doubtful advantage. Its opponents are as numerous and as determined as its advocates, and the political consequences of these attempts at popular legislation are very generally deplored. It has encouraged the growth of professional politicians, and the mass of the people are altogether incapable of judging of the legislative measures submitted to them.

But we cannot enter into this broad question, and will content ourselves with advising those who wish to understand it to apply themselves to the study of this instructive treatise.

Political Crime. By Louis Proal. With an Introduction by Prof. Franklin H. Giddings. [The Criminology Series, edited by W. Douglas Morrison. IV.] D. Appleton & Co. 1898.

This is a translation of a work called '*La Criminalité politique*,' by M. Louis Proal, a judge of the Court of Appeals at Aix, and a writer on the theory of crime and punishment. The term "political crime" with us generally means one committed against some organized government; *e. g.*, treason, murder, pillage, and destruction of property in aid of insurrection, and outrages having some political aim. The *criminalité politique* of M. Proal, however, means something very much more comprehensive than this, for it includes crimes committed by governments, or by persons engaged in the work of government, for political advantage or reasons of state. The book consists of a vast array of facts drawn from the history of Europe (America is barely mentioned), showing that in politics the maxim that the end justifies the means has been commonly taken as a legitimate guide by men who in private affairs would have been extremely reluctant even to avow any such principle. We have consequently on one side the whole system of statecraft which Machiavelli expounded in one century, which Napoleon attempted to revive in another, and which even to-day finds many defenders in practice if not in theory; on the other, the extraordinary phenomena of criminal Anarchism, in which crimes are committed the political object of which, beyond the fact that they involve the murder of persons connected with the Government (or in some cases merely persons in the well-to-do class), the perpetrators themselves are unable to explain.

With the facts of Anarchism, however, the world is pretty familiar, and M. Proal does not add much to our knowledge of the subject, though his manner of treating it throws new light upon it. His main point is that the Anarchists are egged on by all those modern teachers who deny spiritual beliefs, raise the negation of morality to the dignity of a system, extol egotism and the struggle for existence, and proclaim the right of every one's enjoying everything that he sees in any one else's possession. One teacher proclaims "free love"; another, the right to have food; a third, the right to "material satisfaction"; a fourth, the right to be supplied with work at a price which suits him. What wonder if the doctrine "To every one according to his needs" craves weak and half-educated men and turns them into wild

beasts? There is a direct connection, too, according to the author, between Anarchism and the sentimental speculative philosophy which preceded and helped to cause the French Revolution: "Man is born good," says Rousseau, "and society depraves him." So Ravachol, when the judge says to him, "You commit murder to satisfy your passions; what can society expect of a man who manifests such sentiments?" replies: "It is I who have something to expect of society. It is its duty to support me. . . . All that has happened, I tell you, is the fault of society."

The more important part of the book is that which deals with crimes committed by Governments, or persons in authority. These are not the acts of madmen or criminals, but of respectable and enlightened men, who deliberately lie, steal, murder, and, in fact, commit on occasion any wrong that seems necessary, for "reasons of state." There is a striking chapter on "The Corruption of Law and Justice by Politics." As the author says, judicial crimes are the worst of all, because wrong done by means of judges, through false accusations, not only results in murder or spoliation, but in establishing against the victim the truth of a false charge. The list of the victims comprises some of the most distinguished names in history, Phocion, Socrates, Aristides, Miltiades, Themistocles, Sidney, Russell, the Duc d'Enghien, the Girondins. All ages and every country contribute to it. Instead of saying "O, Liberty," it might have been said, "O, Justice, how many crimes are committed in thy name!"

The strength of M. Proal's book lies in the presentation of the case; its weakness, in the fact that he does not seem to be aware that, to prevent what he calls "political crime," other remedies than moral exhortation and reproof and criticism are within our reach. He seems to think that the only cure for the tendency to abuse power in the way he describes, is a general regeneration of the community, and he enforces the lessons, first, that the use of evil means by Government debauches (through the force of example) every one under it; second, that a good state cannot exist unless it is composed of good citizens. Fortunately, it is not necessary to wait till we are all good before we can have good government. The commission of crimes by those engaged in the work of government can be repressed, and has already in most modern countries been very much repressed, by making those who commit them responsible to the ordinary tribunals. Of course, this cannot be done entirely—occasions will arise in which power will still be abused; but most of the political criminality of the past has come from want of legal responsibility. The principle that officers of the Government are responsible to the ordinary law courts, universal throughout the Anglo-Saxon world, makes such proceedings as disgraced France during the Revolution impossible with us. It prevents the erection of special tribunals to accomplish particular ends, precludes wholesale proscriptions by popular bodies, and, provided the courts themselves are left independent, secures justice even in cases where the rights of the citizen conflict with those of the men who govern him. Another safeguard against political crime is publicity, and the effect of this, even against great odds, can be seen in such proceedings as the Dreyfus case, in which,

but for the press, the forms of justice would have been used by those in authority for the foulest ends—and with complete success.

Edward Thring, Master of Uppingham School: Life, Diary, and Letters. By George R. Parkin, C.M.G., LL.D., Principal of Upper Canada College. 2 vols. Macmillan Co. 1898.

"Edward Thring was unquestionably the most original and striking figure in the schoolmaster world of his time in England." This first sentence from Dr. Parkin's preface will, it is to be feared, seem exaggerated to many readers of the *Nation* who are still stumbling under the Arnold myth which ascribes to St. Thomas of Rugby healings more marvellous than any told of St. Thomas of Canterbury. Edward Thring's life extended from 1831 to 1877. He was the son of a very positive and somewhat stern country clergyman, and a mother from whom he got all the tenderness his life ever knew, and who outlived her gifted son. He was educated at Eton and Cambridge, and went into the Church. In early manhood he applied for and obtained the Mastership of the grammar school at Uppingham, in the heart of the hunting district, a foundation of Queen Elizabeth's day, which, under the listless management of a board of local trustees, educated about twenty-five boys. Thring determined to make a true public school of it. He recognized that the English public-school system, "that which thinks school a better place for boys than home," was firmly fixed in the minds of that class which is determined to give their boys all the education they will take. He saw that the great schools, Winchester, Harrow, Rugby, his own Eton, were filled to bursting, and that there was a grand opening for the fine old foundations over the country, if they would only stretch out their arms and welcome pupils. He conceived, also, first of English schoolmasters, the idea, not of subjecting all boys to unvarying and inflexible tradition, but of doing the best possible thing for each boy by himself.

How he accomplished this work; how he risked his fortune, his very life, living for years under a load of debt; how he fought the narrowness, the indifference, the jealousy of his trustees; how he provided the school with all suitable appliances for study, comfort, and relaxation, without abating a jot of the ancient discipline; how, when he had rescued his boys from the drowsiness of old tradition, he had to fight a Government board, eager to remodel every school almost out of existence; how, when the school had grown more than fifteen-fold in his hands, and was talked of everywhere as a model, he steadily refused to let it increase beyond just limits; how when, by the utter supineness and worse of the town authorities at Uppingham, fever was so raging in the place that the school had to be closed, he moved the whole establishment bodily to the Welsh coast, and conducted it with entire success for a year in the buildings and grounds of a seaside hotel till all danger of infection was removed; how he came to be the father of an annual gathering of the headmasters of all public schools, even the greatest; how he was through it all the devoted minister of the Church of England, never yielding a jot of his ancient beliefs, and all but dying in the Communion service—is the story told in these volumes by one who was drawn

across the ocean to sit at his feet as his model and guide in teaching.

Dr. Parkin's book is largely made up of letters and diary; and, as is apt to be the case in such compilations, many things are spoken of by allusion which are perfectly clear to the writer, but for us need interpretation. This the editor might often have given us without in any degree infringing on his rule of reticence where plainness would give pain. It is to be wished he had added a species of chronology of Thring's successive improvements; and he might have let us know more of his immediate household—at least the names of his children, and when they were born to him. There are many loose threads of this kind that should have been gathered up. But, on the whole, it is a good book about a very good man, and merits a longer notice than is at our present command.

Ichthyologic Obituaries. By C. S. Rafinesque. A verbatim reprint. By Richard Ellsworth Call. Cleveland: The Burrows Bros. Co. 1899. 8vo, 175 pp. Portrait and cuts.

The torment caused to the systematic naturalist by the ill-digested, imperfect, and latterly more or less irrational work of Rafinesque, has often been enlarged upon. A stumbling-block it has been and will remain, and nothing seems practicable but to make the best of it. His account of the fishes of the Ohio, in spite of certain mythical species included through the practical jokes of Audubon, is one of the less obnoxious of his papers. It was first published in the *Western Review and Miscellaneous Magazine* issued, 1819-'21, in Lexington, Kentucky, by William Gibbs Hunt. The type was afterwards rearranged in octavo form, and the work reprinted with some slight revision and a short supplement and index. Of this publication only eight copies are now known to be in existence.

The present volume, comprising 260 numbered copies, will be of use to students of American vertebrates, few of whom can have the opportunity of consulting the original. It is preceded by a preface, a reprint of the portrait and biographic sketch from the 'Life and Writings of Rafinesque' published by the Filson Club in 1896, and a discussion of Rafinesque's ichthyological work. To this is added a literal reprint of the 'Ichthyologia,' with the original magazine pagination, as well as its own, indicated in brackets; a bibliography of Rafinesque's papers on fishes extracted from the 'Life and Writings' above mentioned; and a reproduction of an autograph letter from Rafinesque to Dr. Daniel Drake of Cincinnati, written July 1, 1820, and containing a sketch of one of the fishes described in the 'Ichthyologia,' not hitherto printed.

Dr. Call has not concealed the faults and errors of his author in his discussion of Rafinesque's work on American fishes, yet cannot be denied that the papers published from 1817 to 1821 lie at the foundation of the investigation of our fresh-water species. Only one paper, that of Lesueur on the fishes of the lakes of Upper Canada, antedates them, and, with all their errors and fictions they cannot be ignored. The editor and publishers are therefore entitled to our gratitude for the reissue of this necessary document, to which they have given an appropriate and tasteful dress. Many years ago the late G. W. Tryon performed a similar service for the conchological writings of Rafinesque, but we have not yet heard that a meteorologist has reproduced the tract which this half-crazy systematist described a large number of genera and species thunder and lightning.

BOOKS OF THE WEEK.

Anstam, Jakob. Catherine Mordant. Traduit l'Anglais par Félix Vasson. Paris: La M. Blanche.

HENRY HOLT & CO., N.Y.

OMAN'S ENGLAND

xviii+760 pp. 18mo, \$1.50 net.

Athenaeum (London): "Mr. Oman's remarkable width and versatility of knowledge, his fresh way of looking at even the commonplace of history, the singular charm of his narrative at its best and its adequacy everywhere, all give his book a really high claim to favorable consideration."

LANGLOIS & SEIGNOBOS' INTRODUCTION TO THE STUDY OF HISTORY.

xvii+860 pp. 18mo, \$2.25, net.

Dial: "A strong book, and one that we gladly recommend to students and teachers of history." *Boston Transcript*: "The practical suggestions are of worth, they will serve writers on many subjects other than historical."

FORD'S THE FEDERALIST.

The *Federalist*, with footnotes, an appendix of 140 pages (including the Constitution with amendments, references to U. S. Reports, etc., etc.) and a full index, xvii+798 pp. 18mo, \$1.75 net. *New York Tribune*: "Mr. Ford's editing is nothing less than perfect. This is an invaluable edition."

SEIGNOBOS' POLITICAL HISTORY OF CONTEMPORARY EUROPE; 1814-'96. (In Press.)

KRAUSSE'S RUSSIA IN ASIA.

The Nation.

NEW YORK, THURSDAY, APRIL 30, 1899.

The Week.

The latest news about Samoan affairs is supplied by Herr von Balow's speech in the Reichstag, a statement of singular lucidity and frankness, couched in terms of equal courtesy and self-respect. With such a spirit prevailing in Berlin there can be no fear of any serious trouble growing out of the killing of the American and British soldiers by the Mataafaites the other day, or out of the complication as a whole. The negotiation on our side has been conducted with the evident desire to yield all the points in a game which is not worth the candle; and this is the right way to conduct it. It does not imply "lowering the flag" or sacrificing the national honor, but merely a wholesome desire to get rid of a bad job on the best terms and at the least cost possible. The *Cologne Gazette* gives us unstinted praise for the concessions we have made and the friendship we have shown to Germany, in such sad contrast to the exacting and bickering policy of Great Britain. This means that we have found out the mistake we made in meddling with the Samoan business at all. It means, also, that the less we have to do with it hereafter, the better we shall be pleased. It is not possible to interpret in any other way the announcement which comes from Washington, and is confirmed from Berlin, that when Germany proposed that the Samoan Commission of three should act only by unanimous consent we agreed, and that when Great Britain declined the proposal, thus causing a deadlock, we withdrew from active participation in the controversy, leaving the other parties to fight it out. This was what Burke called a case of wholesome neglect. It had the effect of bringing the others to an agreement which promises to be satisfactory. For this Secretary Hay is to be congratulated. If he could attenuate our share in the Samoan muddle still more, he might spare us further trouble and save some American lives.

Considering what the United States and England and Germany undertook to do in the Samoan Islands, what they actually have done looks like a sarcastic comment by fate on human intentions. By the act, or treaty, of Berlin, concluded on June 14, 1889, the three Powers graciously proposed to show the Samoans how to do it. They were to put an end to the bloody conflicts between rival chiefs, known as "kings." They were to take charge of trade and land titles and education and religion, and in general make the islands blossom at once into

civilization. During the ten years of this kindly tripartite tutelage, however, we have seen two wars conducted in the characteristic way of savages; we have seen endless intrigues and squabbles, principally between the representatives of the three governments who were to teach the natives how to dwell together in unity; and, as the final touch, we see the lives of English and American officers and men lost in the attempt to settle the quarrels of barbarians on the other side of the globe. Surely it was a prophetic word which that sane and cool American, Secretary Gresham, wrote in 1894:

"In our relations to Samoa we have made the first departure from our traditional and well-established policy of avoiding entangling alliances with foreign Powers in relation to objects remote from this Hemisphere. Like all other human transactions, the wisdom of that departure must be tested by its fruits. . . . Every nation, and especially every strong nation, must sometimes be conscious of an impulse to rush into difficulties that do not concern it except in a highly imaginary way. . . . But our first adventure in that direction afforded most signal and convincing proof that the only safeguard against all the evils of interference in affairs that do not specially concern us, is to abstain from such interference altogether. . . . The general act of Berlin has utterly failed to correct, if indeed it has not aggravated, the very evils which it was designed to prevent."

If Mr. Gresham could say this in 1894, what would he say now if he were alive and saw, not only the natives in Samoa butchering each other, but the foreign forces there almost at blows? The way in which all ideas of justice and decency are necessarily mixed up in such a business is shown in the dispatches. A landing party kills twenty-seven natives with machine-guns, with no loss of its own. That is quite right. That is the way civilized men fight and teach savages to be good. But the next day the savages ambush the foreigners, whose machine-gun gets unluckily "jammed," kill half-a-dozen men, and cut off their heads. Thereupon the civilized and Christian world explodes with cries of "Butchery!" Why won't the brown man take his killing by the white man in peace? He will have to be killed some more till he learns this first lesson. Meanwhile, we observe that the angry Germans in Samoa are sneering at the Christianity of the English and Americans, and that Admiral Kautz returns the compliment with fine scorn for German Christianity. One would like to know what the natives could do, if they had a chance, in taunting the religion of their foreign slayers.

The following luminous dispatch was sent on Monday to a Detroit newspaper by Mr. Carmichael, a personal friend of Mr. Alger's:

"If Secretary Alger retires from the cabi-

net before March 4, 1901, there will be no subterfuge or makeshift about it. He will not retire to go to Paris, will not retire on account of ill health, or for personal political reasons. Should he retire, it will only be after the President makes a direct and unqualified request. The Secretary has had expressions from the President as to the desirability of his remaining in the cabinet. He does not know that the President has changed. If the President should change, he must so declare and announce himself; he must assume full responsibility. It is not a case where there can be any pretence. This is Secretary Alger's position."

This is the most direct challenge which has yet come to Mr. McKinley from Alger. He here puts the responsibility of his presence in the cabinet fairly and squarely on his revered chief. We now know that if Alger is there, McKinley alone is responsible for it. Alger is ready to go when properly requested, but he will not go under any subterfuge or disguise. No "need of rest," no "ill health," or anything of that sort. He must be asked to go by the only man who has a right to ask him. Why does not that man ask him? What is the mysterious bond which connects them? Will nobody throw light on this subject? McKinley is not firm or obstinate. He listens to the voice of the people. He consults Destiny and obeys Duty. We have never known a case in which Duty spoke more plainly and Destiny spoke more wisely. Why does he, then, linger? Why, too, this defiant tone on the part of Alger? He knows he can be dismissed to the dreary shades of Detroit in the twinkling of an eye. How comes he to be so "cocky"? Why must McKinley dismiss him squarely? Why can he not, if convenient, get rid of him on some pretext? These are all topics which we think would be excellent as an exercise for the history class at colleges.

Gen. Shafter had a regular picnic with the beef which Eagan and Alger sent him in Cuba. He ate it every day, and though it was "not entirely appetizing, there was no complaint that it was unfit for food." He is even inclined to think that the Rough Riders and others who complained of their rations were really expecting to have "delicacies" instead of bacon and hard-tack. When asked by the counsel of Gen. Miles, "In view of the condemnation of the canned roast beef by about 75 per cent. of the officers in Cuba, what would you say about its further use?" he replied: "As I have said, I don't know of anything better. Personally, I prefer clear bacon. I want to say that the canned roast beef was not unfit for food. That it was unpalatable, uninviting, and without taste, is perfectly true. But it was not unfit for food." It would be interesting to know what the General would consider "unfit for food." His noble championship of the beef shows that he is standing brave-

ly by the powers that put him in charge of the Cuban expedition.

The *Tribune* has begun to give place to attacks on the Administration in the guise of Letters to the Editor, dated from the Union League Club. They receive a kind of editorial endorsement by being set in larger type than other letters to the editor, and placed at the head of a particular column. They show also similarities of style which betray a common parentage. Their temper is so different from the adulation which the *Tribune* bestowed upon President McKinley before the embassy to England was disposed of, as to suggest some connection between the two. Such is the talk, at all events, within the precincts of the club from which the letters are supposed to come. The writer of the letters is disturbed by the fear that he may have to vote for McKinley again, "as a choice of evils"—that he "may be obliged at the next election to endorse the selection of Sherman and Alger for positions in the cabinet." How dreadful that this Union Leaguer never gave utterance to such thoughts until after Joseph Choate was appointed Ambassador. If he had spoken out in time, we might have had a better cabinet and have avoided all the bitterness and bad beef that Alger and Eagan supplied to the soldiers. The way to prevent a recurrence of these evils and to spare the Union League Republican the necessity of making a choice between them and others, is for the editor of the *Tribune* to bring out a candidate in opposition to Mr. McKinley—not necessarily himself, but somebody whom he can rely on in the troublous times that we plainly see coming.

Mr. Moss succeeded very well on Saturday in showing what Croker regarded as "personal" or "private business." Everything that bears on the income which he derives from his system of government is of this nature. Did he give his son \$17,000, as the boy swore he did, to invest in the stock of a fire-proofing concern? He declines to answer, because that is "private business." Although he admits openly that he is the head of the government, disposes of all its offices, and attends to all the duties of its administration, when it comes to his revenues from it, those are "private business," and he will not consent to answer any questions about them. We are, therefore, no wiser on this point than we were before Mr. Moss began his inquiries. How can we get information as to the dimensions of our ruler's income? Would it not be possible to hear from the contributors of funds to his revenue? There were indications of such testimony on Saturday when the Dock Department came into view as a possible agent of oppression against

an ice company, and more may be forthcoming. Croker has offered, first, to sacrifice his right hand in case he is shown to have taken city money dishonestly, and, second, to part with his fortune and liberty in case such a showing is made; but when he is given opportunity to say whether or not he has taken money dishonorably in a specific instance, he replies invariably: "I decline to answer." That shows that proof on this point must be obtained from the other side.

It is quite plain that Croker's flank movement on Platt, assailing him as a man who is in the same business as himself, and as such equally open to public investigation, has gone a long way towards nullifying the work of the Mazet committee. The vote of Monday, by which the Republican members rejected a proposal by the Democratic minority to include the Platt family law firm in the inquiry, put the partisan brand upon the investigation so clearly that its work in the future will be greatly weakened in the public estimation. So long as Croker can continue to ask Mr. Moss, whenever he is pressed as to the sources of his income, "Why don't you call Platt and ask the same questions of him?" there is small hope of awakening much public indignation against Tammany. The spectacle of one boss investigating another boss, when the public is fully aware that one is not a whit better than the other, and that the two are at odds temporarily only because of dissatisfaction over the division of the "swag," is not an impressive moral spectacle, whatever else may come of it.

A telegram from London says that a Blue Book has been published giving the evidence obtained by the Indian Currency Committee. This is the Committee which sought to meet the views and wishes of the Wolcott Commission by reopening the Indian mint to silver, and by taking a certain amount of silver into the metallic reserve of the Bank of England. The Blue Book is said to contain a letter from Secretary Hay to Lord Aldenham, a leader of the English Bimetallists, dated November 25, 1898, saying that our Government does not consider it expedient for the United States to reopen the bimetallic question at present. Lord Aldenham said that Secretary Hay's letter had been delayed, and he thought intentionally, until after the elections of last November. This shows that his Lordship is a man of discernment in the political field, if not in the economical. The McKinley Administration interpreted the elections of last autumn as putting the silver question on the shelf, and therefore had no further use for international monetary conferences. Lord Aldenham thought, however, that something might be gained by negotiating with the United States about a ratio to be adopted for reopen-

ing the Indian mint to silver. This is very likely. We can see no reason why Secretary Hay should withhold his consent from any ratio for India that the responsible authorities of that country should think it advisable to adopt.

The budget just presented by Sir Michael Hicks-Beach does not meet the approval of the most influential part of the English press, but it is likely to pass the House when the pinch comes. It shows an increase of about £2,000,000 in expenditures over last year (due to increase of the navy). There has been a progressive increase in the annual expenditure of nearly £20,000,000 in the past five years, which has been met by increased receipts, but the Chancellor faces a deficit of about £1,800,000 during the coming year. This he expects to meet by new taxes, and by such a change in the sinking-fund arrangements that the annual payment of the principal of the public debt shall be in part postponed. This is to be accomplished by extending the terminable annuities. The annual charge will thus be lessened, but the term for which they are to run will be lengthened. This is a well-known device of finance ministers, and a very easy one for dealing with a deficit. It amounts to fresh borrowing, although the fact is not so notorious as it would be if new consols were sold in the market. Sir William Harcourt, in the debate on the budget, unravelled the skein of extended annuities in a very lucid manner, and visited it with severe condemnation, and in this he seems to have the concurrence of the *London Times*, which, in nine cases out of ten, supports the Government's policy. The *Times*, however, believes that the budget, as presented, will meet with little popular opposition.

Perhaps the most hopeful augury to be drawn from the speech of the Chancellor of the Exchequer is to be found in his remarks on the coming Peace Conference. What he said on this subject came from the heart. He bestowed unstinted eulogy upon the humane views which inspired the calling of it, and he hoped that it might put a check on the terrible competition in armaments "so wasteful to our ability, energy, and money, from which even the wealthiest nations may pray to be delivered." If the coming conference could consist of the Finance Ministers of the several countries, there could be little doubt of a triumphant success in achieving the purpose of the Czar's famous letter. The men who have to find the money for the ships and the soldiers, spend sleepless nights over their tasks, and generally end by sliding into a little more debt. There comes a time, however, when such financiering will not serve the turn. Italy has reached it. France is on the verge of it. Austria is not far behind,

Russia, with all her slumbering resources, is hard put to it to make ends meet. The movement for the Peace Conference had its initiative in the Russian Department of Finance. It was discernible in the published reports of that department before the Czar wrote his letter. Indeed, taxes are the most potent corrective of the tendency to war—more potent than religion or education. We shall discover the universality of this truth whenever our present surplus is exhausted, and the Secretary of the Treasury is compelled to call for additional revenue. Powder and ball and pensions for the soldiers and sailors who are butchering and being butchered in the Philippines and Samoa, are costly. Blood may be cheap, but modern ships and projectiles are terribly expensive.

The Czar's treatment of Finland has naturally enough prejudiced a good many in England against his peace proposal, but there is no sound reason why it should. He has been, in a measure, driven into it by the rage for many years back of the Pan Slavists, or Jingoists, the Destiny and Duty men. These worthies have long been furious that part of Russia should have a constitution and the rest should be governed despotically, and they have, like the fox, been doing everything in their power to have all tails cut off. The invectives against the Finns have increased in violence as the Pan Slavist feeling has grown. What we see now, outrageous as it is to us, has been long impending, and the Czar is a young and impressionable man. But there is in this nothing that makes it improper that he should try to lessen the chance of war. He is not departing from his principles of government as we are. He is simply carrying them one step further. He is doing an oppressive thing, but he is doing it for the development of Russia's greatness on the lines she has always followed. We are doing an equally oppressive thing, to people who have never lived under our rule, on absolutely new lines which we have denounced, with all the invectives at our disposal, for one hundred years. Nothing the Czar has done or proposed to do to the Finns approaches in atrocity what we are doing every day to the Filipinos. There has not been since the partition of Poland a transaction which can equal in nefariousness our pretence that we have bought the Philippines from Spain under "international law." In fact, there is nothing in Russian history, black as it is in many respects, which can equal our "conquest" as a mixture of gas and crime.

The London *Daily News* calls attention to the small amount of support given to the peace movement in England by the clergy of the Established Church, compared to that which it has received

from the Nonconformists. The appearance of the Bishop of London in the deputation to Mr. Balfour may be said to constitute a brilliant exception. The attitude of the Anglican clergy towards every reform since 1815 has been open to the same criticism. The Bishops in the House of Lords opposed the abolition of the slave trade and slavery. The clergy throughout the country fought hard against the Reform Bill. They were furious haters of Mr. Gladstone and all his works. They were violent opponents of his great crusade on behalf of the Bulgarians in 1877. Needless to say, they were opposed to his Home-Rule movement, but in this they only went the way of most Englishmen. They are not now, as a rule, opposing this peace movement, but they are giving it comparatively small support.

The explanation of this lies not in any difference between the doctrines they hold and preach, and those preached or held by the Nonconformist ministers, but in two what may be called "lurking senses." One is that the Anglican church is the church of the gentry, and ought not to be mixed up in anything frowned on by good society. The parson never forgets that he dines with the Squire. The other is, that he looks on himself as to some degree a state official, who should not lightly take part in any "agitation" intended to force the hand of the Government. As clergymen rise out of the ranks, too, they remember, consciously or subconsciously, that preferment in the church is in the hands of the minister of the day, that it is he who bestows the bishoprics and deaneries, and that he has many livings at his disposal. All these things dispose an Anglican minister to keep still, not to get excited, and be "solid" with the "genteel." What this means is that his church is a state church, and that as long as it is so it can never be the church of the people. Nothing is more curious, though it has not been much remarked upon, than that all the great excitements and controversies which have raged in the Anglican church have raged among the clergy or the intellectual aristocracy of the universities. In none of the memoirs will you find that the laity have taken much part in them or interest in them. That portion of the laity which takes much interest in religion, as a rule, is Nonconformist, or, in other words, belongs to a different England. In fact, the two nations knew so little of each other that, until within a few years, an Oxford undergraduate could hardly believe that a Nonconformist minister knew how to tie his white cravat.

Full returns of the Spanish elections of Sunday are not yet forthcoming, but that the Government has won a majority in the new Cortes, is already apparent as it was the only thing to be

expected. Governments in Spain always get a majority, and are later turned out of office by it. The present Prime Minister, it is true, had proclaimed a new departure. He had declared that he would exert no pressure in favor of Government candidates, and said that he should consider defeat more honorable than a triumph secured by the usual means. Silvela even went so far as to issue a circular, pointing out the pains and penalties provided by law for all forms of electoral corruption. It must be said that scoffers in Madrid made merry over this return to political purity. Without directly impugning Premier Silvela's honesty, they remarked that he was associated with some uncommonly wicked partners, and that his Minister of War, Gen. Polavieja, was in particular running the campaign in the good old high-handed way. But, pure or corrupt, the election passed off on Sunday, as was predicted, in the midst of great popular indifference. The number of votes cast was small, as in Spain the people have become weary of the political farce, and have lost interest in the game of punishing one boss by rewarding a worse one.

More important for Spain than the personnel of Cortes or Ministry is the question of the country's financial recuperation. On this subject a French economist, M. Edmond Théry, holds optimistic views. He was sent to Madrid by the French Government to make an expert study of Spanish finance, and his report, though not yet published in full, has been outlined. M. Théry considers Spain's case as anything but hopeless, and says that if—much virtue in this if—a competent statesman were at the head of her affairs, she might show the world as rapid a recovery as that of France after 1871. He maintains that Spain can meet all her engagements without too severely increasing the burden of taxation. The first measure which he expects to see the Government adopt when the Cortes assemble in June is a suspension of the sinking-fund until the country regains a better financial position. England cannot criticise such a scheme, as her Chancellor of the Exchequer has just embraced it, nor can the United States, as our Treasury has found it highly convenient to disregard the law calling for payments on the sinking-fund account. The remainder of the Spanish financial programme is an increase of revenue from public monopolies, tobacco, alcohol, etc.; higher import duties; an income tax on securities, as high as 20 per cent.; and an export duty on minerals. This last may be regarded as a sly blow at England, as British capital is largely interested in the Rio Tinto mines and in the export of hematite and other ores. But this tax will be in any case a light one—2 per cent. is the rate proposed.

OUR SAVAGE WAR "FOR THE CAUSE OF HUMANITY."

In a few days it will be a year since the United States went to war with Spain "for the cause of humanity." The war with Spain ceased months ago, the freeing of Cuba from her domination having been accomplished, but a large army of our troops is still engaged in fighting. Having started out to give the inhabitants of Cuba their independence, we are now insisting that the inhabitants of the Philippine Islands, who had also revolted against Spanish rule, shall acknowledge our supremacy over them.

This war is the most savage war which was ever known in the history of our republic. The brief official dispatches from the commanders of our troops cast little light upon the situation, but thousands of private soldiers are every week sending home letters which tell the horrible truth with all the impressiveness of native eloquence. The war of 1898 "for the cause of humanity" has degenerated in 1899 into a war of conquest, characterized by rapine and cruelty worthy of savages. The wanton destruction of property by our army has been boasted of by our soldiers. E. B. Furman of the regiment from the State of Washington, writing of the battles of February 4 and 5, said that "we burned hundreds of houses and looted hundreds more," and that "we have horses and carriages and bull-carts galore, and enough furniture and other plunder to load a steamer." Capt. Albert Otis, describing his own exploits at Santa Ana, wrote that "I have six horses and three carriages in my yard, and enough small plunder for a family of six." Guy Williams of the Iowa regiment, after describing the abandonment of a village by the inhabitants, wrote:

"The soldiers made short work of the whole thing. They looted every house and found almost everything from a pair of wooden shoes up to a piano, and they carried everything off or destroyed it. *Talk of the natives plundering the towns—I don't think they are in it with the Fiftieth Iowa.*"

Wholesale plundering is bad enough, but it is not the worst feature of our warfare. The fact is now fully established that in many cases the rule has been that our troops take no prisoners. There can no longer be any question about this. Private letters from a number of soldiers in different regiments tell the same story. Charles Brenner of Minneapolis, Kan., in describing the part played by his regiment in the fight at Caloccan, wrote:

"Company I had taken a few prisoners and stopped. The Colonel ordered them up into line time after time, and finally sent Capt. Bishop back to start them. *Then occurred the hardest sight I ever saw. They had four prisoners and didn't know what to do with them. They asked Capt. Bishop what to do and he said, 'You know the orders,' and four natives fell dead.*"

Leonard F. Adams of Ozark, Mo., who is in the Washington regiment, de-

scribes the terrible slaughter of natives in the battle of February 4, after which "we went over the battlefield in squads, burying the dead niggers"; tells how he "saw seventy-four buried in one hole"; says that "in the path of the Washington regiment and Battery D of the Sixth Artillery there were 1,008 dead niggers, and a great many wounded"; and adds:

"I don't know how many men, women, and children the Tennessee boys did kill. They would not take any prisoners. One company of the Tennessee boys was sent into headquarters with thirty prisoners, and got there with about a hundred chickens and no prisoners."

The Brooklyn Eagle of Sunday published a private letter just received from Fred B. Hinchman, formerly a student in the Polytechnic Institute, who is now serving with Company A, United States Engineers, and whose testimony on this point would of itself be conclusive, as "I am connected with the provost marshal's headquarters, have had a particularly good opportunity of observing 'symptoms,' and in some cases have had an insight into things which were not generally known." Writing from Manila on the 22d of February, he describes the first engagement between our forces and the natives, and in the course of his narrative says:

"At 1:30 o'clock the General gave me a memorandum with regard to sending out a Tennessee battalion to the line. He tersely put it that 'they were looking for a fight.' At the Puente Colgante (suspension bridge) I met one of our company, who told me that the Fourteenth and Washingtons were driving all before them, and taking no prisoners. *This is now our rule of procedure for cause.* After delivering my message I had not walked a block when I heard shots down the street. Hurrying forward, I found a group of our men taking pot shots across the river into a bamboo thicket, at about 1,200 yards. I longed to join them, but had my reply to take back, and that, of course, was the first thing to attend to. I reached the office at three p. m. just in time to see a platoon of the Washingtons with about fifty prisoners, who had been taken before they learned how not to take them."

It must be said, to the credit of our soldiers, that while in the heat of battle they carry out the orders to take no prisoners, most of them inwardly revolt at the idea of such barbarism, and want to come home. Sergeant Elliott of Company G, in the Kansas regiment, who returned last week with the body of his father, captain of the company, talked in this frank way to a reporter of the Kansas City Star:

"Most of the general officers think it will take years and a large force of soldiers to thoroughly subjugate the natives. And the unpleasant feature of this is that unless the conditions change radically, there will be few soldiers who will care to stay there. There's no use trying to conceal the fact that many of the men over there now, especially the volunteers, are homesick and tired of fighting way off there with nothing in particular to gain. There is not one man in the whole army now in the Philippines who would not willingly give up his life for the flag if it was necessary, but it isn't pleasant to think about dying at the hands of a foe little better than a savage, and so far away from home. And the thought of its not ending for several years is not an especially pleasant one, either."

The truthfulness of this picture is

established by the Herald's dispatches on Monday. The censor at Manila allowed the Herald's correspondent to state that Gen. Lawton is evacuating the towns beyond Laguna de Bay, from which the insurgents were driven a few days ago, and to quote this admission by Gen. Lawton:

"With the forces I have there is no doubt I could go through the whole island; but if a government is to be established, it will be necessary to garrison all the towns. *It would take 100,000 men to pacify the islands.* I regret the necessity of abandoning the captured territory."

The correspondent of the Herald at Washington says that "the desire of the volunteers to return to this country is evidenced in a report which shows that of those who have been offered opportunity to reenlist, with the offer of a bonus in travel-pay of over \$500, only about 7 per cent. will accept. The volunteers, it is stated, desire to come home by organizations, instead of individually." Such is the shocking conclusion of the war "for the cause of humanity" begun in Cuba.

A PLAN FOR THE PHILIPPINES.

Any proposal to unravel the Philippine snarl must, of course, look straight at the facts as they exist to-day. The march of events has changed the problem from month to month. Last May the solution was to order Dewey to refit and recoil and sail away. This was the course urgently pressed at the time upon Mr. McKinley by Senator Sewell. The President rejected the advice, and soon it became too late to take it even if he wanted to. Other solutions were possible before the meeting of the Paris Commission—before the ratification of the treaty by the Senate—before the fighting broke out in the islands; but those events successively put a new face on the difficulty, and compelled new plans to solve it. To-day we have full legal authority to do what we will in the Philippines. The islands are ours before the law of nations. But no nation on earth, unless it be an enemy to us, is satisfied with the Philippine situation. Our best friends, the English, are not; this country itself is not. The case cries loudly for some change of policy. What shall it be? What course, at once prudent and practicable, can be adopted to put an end to a strife which is both humiliating and fruitless?

We find in the London and China Telegraph an interview with a man who knows the Malays well, and knows Americans well, and who thinks he sees the true policy for us to pursue. It is Dr. Alfred Russel Wallace, the distinguished naturalist, and what he says is this:

"Surely it is possible [for the Americans] to revert to their first-expressed intention of taking a small island only as a naval and coaling station, and to declare themselves the protectors of the islands against foreign aggression. Having done this, they might invite the civilized portion of the natives to

form an independent government, offering them advice and assistance if they wish for it, but otherwise leaving them completely free. It might be advisable first to leave the great island of Mindanao, mostly inhabited by Mohammedans, to form its own separate government; and some guarantee might properly be asked for the fair treatment of the uncivilized portion of the population, such as the presence of a few American residents as protectors of the aborigines. By some such method as here suggested the great republic of the West might aid in the production of a new type of social development adapted to the character of the Malayan race."

Let it be noted that this suggested solution of the difficulty steers clear of the great objections which have been made to other plans. It does not propose to "hand back" the islands to Spain. Most Americans, we presume, would be glad to hand them to Spain or any other Power foolish enough to take them; but it is too late to do that now. The islands are ours for better or worse, for richer or poorer. But Dr. Wallace himself does not contemplate that we should leave the Philippines a prey to scrambling foreign Powers, and so perhaps bring on a European war. We are to announce ourselves their protectors. We are to defend them against foreign aggression. In short, we are to follow the well-approved English plan of declaring a protectorate, and then leaving the natives to develop the best indigenous government they can. An American protectorate over the Philippines, the recognition of American suzerainty by the inhabitants, would be a very different thing from administrative supremacy. It would mean American sovereignty and supremacy for a time in all that affected the foreign relations of the islands; it would mean suitable guarantees for the protection of life and property; it would, of course, mean American garrisons as the sufficient symbol of American power; it would mean the protection of one island or one race from possible aggressions on the part of another; but it would also mean the free development of native life and local rule, and, above all, it would mean the immediate ending of the aimless and bloody fighting which is disgracing us in the eyes of the world.

The Filipinos would accept an American protectorate. They are eager for it, unless they have changed their minds since last August. The testimony from their leaders laid before our Paris Commissioners was emphatic on this point. They knew that they could not protect their own islands against voracious European countries. They desired also the presence of a strong American force while the first experiments in native government were being undertaken. We should then have been assisting, instead of crushing out, what Prof. William James has called "the sacred thing in this great human world—the attempt of a people long enslaved to attain to the possession of itself, to organize its laws and government, to be free to follow

its internal destinies according to its own ideals."

That milk is spilled, and there is no use in crying over it now. But is it too late to retrace our steps and do in effect what we should have done long ago? It seems to us that it is not. In fact, the way seems easy. As the case stands, our dispute with the Filipinos is largely a dispute about words. If the first article of the proclamation of the Philippine Commission were verbally changed, there is no doubt that the natives would accept it with enthusiasm. Suppose that instead of reading, "The supremacy of the United States must and will be enforced throughout every part of the archipelago, and those who resist can accomplish nothing but their own ruin," it had stood, "The United States declares itself protector of the Philippine Islands against foreign aggression, and calls upon the natives to set up their own internal government." It is clear that the war would have ended on the spot; that all the rest of the proclamation, so admirable in its promises of local control of local affairs, guarantees of civil and religious rights, a pure judiciary, and so on, would have been put into effect without the firing of another shot, the leaving of another Filipino to die a death of slow torture in the jungle, or the killing of another American soldier ordered to massacre the people whom he thought he was sent to free.

Now, the point we insist upon is that this plan, Mr. Wallace's plan, would give us all that we can get under any plan, and give it to us peacefully. A protectorate would be as good for American trade as would administrative supremacy; the islands are open to the commerce of the world in either case. Under the proclamation, it was proposed to give the natives "the amplest liberty of self-government"; that could be still better given, and just as well safeguarded, under a protectorate. So with all the rest of it. If we are honest in saying that we wish only to develop and build up the Philippines, instead of ruthlessly exploiting them, we must confess that we could do the work as well under a protectorate as under a sovereignty asserted throughout every part of every island. As kindly protectors, instead of boastful sovereigns, we should be able to discharge all our duties to the world which we have assumed by expelling the Spaniards from the Philippines; should get just as much profit and more praise ourselves; and should implant in the breasts of the natives gratitude and hope where now we are rousing hatred and revenge. We need only realize that it is possible to benefit lower races without first crushing them under the heel of a conqueror; need only understand, with Dr. Wallace, that even the most benevolent conquests sow seeds of misery among the conquered, and terribly retard their natural development. Our mistakes in the Philippines have, so far,

been egregious. Even Jingoism privately admit it; history will write it inexorably. But we may still do much to redeem the situation if we will now frankly face it, choose the words and the acts which best suit the wishes of the natives, instead of our vulgar pride, and by wise conciliation, by patience, by experiment after experiment, prove to the Filipinos that liberty does not mean repression and death, but the opening of the prison door and opportunity for manhood.

THE CAUSE OF PEACE.

On the 29th of March a very interesting event took place at the Foreign Office in London. A deputation of extraordinary magnitude and interest waited on Mr. Balfour, who for the nonce took Lord Salisbury's place. Now "when a mind like Mr. Balfour's," as the silver men used to say, treats a subject of which he is master, as he is of this though he was not of the subject of silver, it is an important event. The subject on this occasion was peace as presented by the Czar's proposal. The deputation was introduced by Lord Aberdeen, who explained for what it stood. He said the gathering was "to an unusual degree representative." The meetings whose views it put forward had been held throughout England, north, south, east, and west; and though people of all shades of opinion had been admitted to them, though ample opportunities for discussion were given, they spoke with one voice, deliberately approving the Czar's proposal. It represented the "whole of the thinking public." These meetings, too, were not meetings of clubs or associations. They were meetings of the towns and cities, called by their mayors or other authorities.

The proceedings were opened by the Bishop of London, who is probably one of the least visionary or sentimental of English public men of prominence. This is how he introduced the matter:

"No subject had been received with such complete enthusiasm and unanimity as this subject of the promotion of peace; there was no subject on which the English people had been approached for a long time in which they had shown such deep interest. And this was the more remarkable, for the English public were not given to the expression of ideas in the abstract; and those who had stood aloof had probably done so in order to see what would come of the endeavor before they expressed a strong opinion on the subject. The meetings had been held without any connection with current topics of political controversy, which, as a rule, lent a fictitious interest to proceedings; they had been attended by thinking men and women, who were profoundly impressed with the importance of the opportunity now offered of supporting, by every means in their power, this totally unexpected attempt towards disarmament on the part of one of the principal Powers in the politics of Europe."

Mr. Balfour spoke in the same strain. He said peace was "not only one of the greatest interests of the British Empire, but one of the greatest interests of the world, and that all England feels so." He based on the lessons of the past the

hope and expectation that war was going to be, perhaps not extinguished, but greatly diminished.

"Since the conclusion of the great revolutionary wars this country has only once been at war with a civilized Power. That is to say, in a period of more than eighty years our peace with the civilized nations of the earth has only been disturbed for a single period of about three years. Compare that with what went on in the last century. A man of forty at the present time has never seen war in this country. A man of forty in the last century—put that period of forty years where you will in the century—would certainly have seen two wars, might well have seen three, and it might even happen that of those forty years the greater part were spent in war, and not in peace. The change is an enormous one."

He drew attention to the fact that, in spite of the incessant talk of the day about "armaments," improved guns, more destructive ships, the reluctance of civilized nations to go to war plainly increases; that the growth of those in favor of peace which seemed so feeble only one hundred years ago, is now strong, and is one of the strongest guiding factors of national policy. This is sadly important, because it comes at a moment when one of the commonest topics of debate and conversation with us is, not how to promote peace, but whether we ought not to form "an alliance" with British Jingoism to kill brown people and seize their property. We are, at the moment these things are being said in London by some of the foremost men of our race, engaged in a war, carried on with mediæval atrocity, in which every advance made in morals or law or religion by Christendom is flouted or depreciated. We are preaching a new sixteenth-century view of nature and national greatness which Philip the Second of Spain would have endorsed. We are throwing cold water on that great American doctrine of the supremacy of the law above men, probably the noblest product of our Revolution. We are confessing the insufficiency of the Christian religion for the formation of character without occasional attacks on people who may never have injured us in mind, body, or estate, in order to kill them and destroy their property. And, worse than all, we hear these very sentiments from the sacred desk, from men who pretend to hold a commission from Jesus Christ.

It is the most astounding case of backsliding which has ever occurred in the history of civilization. As the Turk is fading away—a striking illustration of the folly of force, to use no stronger term—we, the "foremost in the files of time," are trying to step into his place and become the savage bully of Christendom which he was in the fifteenth and sixteenth centuries; a nation which cares not to be powerful through morals and laws, but through capacity for slaughter and plunder.

THE CROKER SYSTEM.

It is said proudly of Croker, by him-

self as well as by his friends, that there is no humbug about him—that whatever else he may be he is no hypocrite. His testimony on the witness stand confirms this view of him. He frankly confesses his rulership of the city, and asserts his rights to the emoluments of his government. If the people of the city do not like the picture which he draws of their condition as his subjects and serfs, that does not trouble him a particle. He is what he is through their permission, and if they feel humiliated by his contemptuous references to them, and by the disgrace with which his open avowal of his power brands them as free-born American citizens, they have only themselves to blame. He shows himself without concealment to be a ruler who is as dull of moral sense, and as indifferent to the character and good reputation of his associates and allies, as he is ignorant and brutal. If any of his associates are ashamed of his company and leadership, he does not spare their feelings. He is thoroughly satisfied with himself and his system, and they had best be the same.

His treatment of his Mayor is especially characteristic. He himself, and not the Mayor, selected the subordinate officers of the city government. He, and not the Mayor, sits with these officers at The Club and discusses all matters of public business, including especially the selection of subordinates. "I am the leader of the party, and I acknowledge it," he says. "At the present time your influence is greater than that of any man you know?" he is asked, and he nods complacently in the affirmative. Quite right, he is too. There is no power on earth at all comparable to it, when we consider that it is self-assumed and is exercised without any responsibility whatever to the people who pay the cost of it. He selects nominees for public office, including judicial positions, but he cannot quite admit that they pay such high prices for the latter as \$12,000 or \$18,000 each. He is chairman of his own Finance Committee, but he does "not know always" what money comes into his hands, and does "not always" keep an account of what he receives. When checks are made out to his order, he endorses them. A little light upon the extreme caution with which he conducts his exchequer is thrown by the testimony of ex-Justice Pryor, who was assessed \$10,000 for his nomination in 1891. Mr. Pryor made his check payable to the order of Richard Croker, but the next day Mike Daly, the ever-faithful, brought it back with a request that he make it payable "to bearer," which he did.

No part of Mr. Croker's testimony is more illuminating than that in which he sets forth frankly what he expects of the men to whom he sells judicial nominations. He expects all of them to do their duty by Tammany, but "they

don't always do it." Which ones do not? "I don't want to talk about men that has not done that. There is men on the bench now that has not done that—a few of them." Those who do their duty always appoint good Tammany men as referees. The referees, among other things, select the auctioneers, and good Tammany referees always select Peter F. Meyer of the firm of Meyer & Croker. When referees appoint this firm they "do good party acts." The full testimony on this point is too valuable to be condensed:

"Q. And the judge ought to do that thing which puts into your pocket money, because you are a Democrat, too? A. Yes.

"Q. Then we have this: that you participate in the selection of judges before they are elected, and then participate in emolument that comes away down at the end of their judicial proceedings, namely, in judicial sales? A. Yes, sir.

"Q. And it goes into your pocket? A. Yes, that is my own money.

"Q. And the nomination of the judges by Tammany Hall in this city is almost equivalent to an election, is it not? A. Yes.

"Q. So that if you have a controlling voice in the affairs of your party and secure the nomination of true men, you may be sure that at least in the Real-Estate Exchange and in the firm of Meyer & Croker you will, as a true Democrat, get some of the patronage? A. We expect them at least to be friendly.

"Q. And get a part of the patronage? A. Yes, sir.

"Q. You are working for your own pocket? A. All the time, and you too.

"Q. Then, it is not a matter of wide statesmanship or patriotism altogether, but it is wide statesmanship, patriotism, and personal gain mixed up? A. It is. 'To the party belongs the spoils.' I will say that, so you can make it all right up here. We win, and everybody stands by us when we win."

Croker said voluntarily of the profits of this branch of his "private business": "I want to say to you now that my half in that business has amounted to \$25,000 or \$30,000 right along for the last six or seven years." That is a tidy income to receive by means of a "pull" on the bench. Without that "pull," the business would not have been worth a copper. In view of this admission, Croker's fervid declaration that he will sacrifice his right hand if any one can show he has taken a dollar of city money, gives us a sample of his moral sense. He uses the power of his position as boss to levy blackmail through the bench, and then calls the result "private business."

The generalization from this revelation to the whole Croker system of government is easy and logical, but when Mr. Moss tried on Friday to get Croker to say that what went on in relation to referees and judicial sales went on in relation to all other varieties of the spoils of victory, the boss was wary and pretended not to understand him. This does not throw the slightest doubt on the matter, however. It is the natural and incontestable inference that the boss who takes this view of a judge's duties should take a like view of the duties of all other of his nominees to whom he has sold offices. Ex-Justice Daly gave under oath on Friday the familiar narrative of his exclusion by Croker from the bench

because he would not favor the transfer of the place for judicial sales to the office of Meyer & Croker, and because he would not, at Croker's request, appoint Mike Daly to a clerkship. Young Croker and Croker's nephew have shown how the boss works the Building Department for his private pocket; why should any one doubt that he works all other departments in the municipal service in the same way? As he himself says, he has to "get a living." That he gets an extremely good one, is notorious. The people of the city are supporting him in great affluence, and it is not surprising that their docility under his power, as well as their generous treatment of him, should make him a bit arrogant at times.

It is extremely edifying to see the same Republicans who are unable to find anything objectionable in Platt's methods of party leadership, hold up their hands in horror over the revelation that Croker has been using his own sons as collectors of revenue for his peculiar government. To think, they say, of a father introducing his own offspring to such a life as that! Is there any difference between what Croker has done and what everybody knows Platt has been doing for the past five or six years? Has not Platt been using one son in the family law business and another in the family surety company in precisely the same way in which Croker has been using his son and nephew? If a contractor wished to have his kind of fireproofing authorized for use by the Building Department, he either took a Croker boy into partnership, or retained a Croker nephew as "counsel" at a fee of \$5,000 or \$10,000. If a citizen wished during the past few years to get a bill through the Legislature, and retained the Old Man's family law firm as counsel, it was at once "sure to pass," was it not? If a contractor wished to get a piece of canal work under Aldridge, he took out his bond from the Old Man's Surety Company, did he not? In short, have not both bosses used their sons in the same way—that is, to get profit for themselves by putting forth the boys as repositories of the "pull"? If not, will some good Republican point out the difference to us?

Croker himself asserted this fellowship in his testimony on Saturday. When asked to reveal the business enterprises of his boys, he protested:

"All this talk is very well, but why don't you go and examine the man that created you and sent you here? Go and investigate the office of Tracy, Boardman & Platt. There is more corruption in that office than in any office in this town. They are retained by nearly every corporation in this town. Go and attend to them. Go and investigate the man you get your retainer from, Mr. Moss; [turning to the chairman] the man who made you possible; Platt is the man I mean."

If this were a non-partisan inquiry, both bosses would be put on the stand, but everybody knows that the committee

would not dare to accept Croker's challenge, and put Platt on the stand, or Platt's sons and their partners; and knows, furthermore, that Mr. Moss would not be allowed to question Platt and his boys as he has questioned Croker and his. We have always affirmed that one boss is as bad as the other, and that there is no difference in their systems of government. It is edifying and amusing to see Croker asserting this fact as in some sort a justification for himself.

THE CANDIDACY OF BRYAN.

Mr. Bryan's speech at the One Dollar Dinner must be viewed with reference to his candidacy. It was more moderate in tone than was generally expected, and perhaps more so than his audience desired. The latter came together prepared for "hot stuff," and the speaker could not have given them too much of it. On the other hand, he gave them a very tame discourse as compared with his speeches in the last Presidential campaign. On the silver question, he charged that President McKinley had pursued a negative rather than a positive course, which is true, but it is also true of Mr. Bryan in this instance. He did not even say what he would do if all power were placed in his hands. He limited himself to some criticism of the policy of the Republican party, and it is worth while to inquire whether this criticism is well founded or not.

Mr. Bryan assumed rather calmly that the gold standard was a foreign contrivance, more particularly British. It was at all events un-American. He looked into the Chicago platform for his proof. It was easy to pass from this assumption to the other one, that the American standard (or as he prefers to call it, the double standard) is silver, and that all persons who consider the existing gold standard American, and who stand by it, are radicals and destructives, while those who are for changing it are conservatives. Hence his words: "They [the Republicans] are destructive, not constructive; they oppose without proposing." This was the most exciting phrase in his whole speech, and it reads rather tamely by the side of his previous utterances on the same subject. Mild as it is in tone, however, it cannot be accepted until all the rules of logic, from Aristotle down, are turned topsy-turvy. The conservatives are those who conserve, and the destructives are those who destroy, or would if they could. The gold standard, according to Mr. Bryan's party, was introduced into this country by "the crime of 1873." That act had no significance or meaning otherwise. The gold standard had been introduced *de facto* in 1834; but, if we allow room for all kinds of quibbles on that point, the truth still remains, that the gold standard has existed here *de facto* and *de jure* for

more than a quarter of a century, and is now on a firmer basis than ever before in the country's history. Even if we were to suppose that it is more foreign, or more British, than American, it has been ours by free choice for nearly a whole generation. Nobody imposed it upon us from abroad in the first instance, and nobody has prevented us from casting it off since. Nobody has been strong enough to do so. Therefore, Mr. Bryan's assumption that the gold standard is un-American falls to the ground, notwithstanding the high authority of the Chicago platform, which he helped to make, and with it falls his solemn argument that the Republicans are destructive and not constructive in this particular, and that they oppose without proposing. They are neither destructive nor constructive. They simply hold fast to what exists. That Mr. Bryan should find some support from the Wolcott Commission, which President McKinley sent abroad in 1897, is nothing to the purpose. This merely proves that Mr. McKinley was tarred with the same stick, but to a less extent than Bryan himself.

Very little fault is to be found with any other part of Mr. Bryan's speech. His remarks about an income tax are moderate in tone, and those on the war in the Philippines might have been stronger without passing the bounds of just criticism. He discountenanced the Trusts and combines that have multiplied so enormously of late, but not too vigorously. What he said about government by injunction was tame in comparison with his earlier sayings on the same subject. Altogether, the speech leaves the impression that he desired not to offend the conservative element of the Democratic party, or to make united action, with him as a candidate, impossible next year. Yet we doubt if he has succeeded in it. The chasm between himself and the Gold Democrats—those who voted for McKinley and Hobart in 1896, as well as those who voted for Palmer and Buckner—is still so wide that if he had ignored the silver question altogether they could not take him for their candidate next year.

According to present appearances, however, the South, which is the controlling element in the Democratic party, will insist upon making the fight again on the silver issue, and in that event Bryan is the inevitable nominee, and the party will be thrashed at the polls again, although it will be their turn next year to win. Silver is not the question that most engages public attention now. It is not nearly as attractive an issue as it was three years ago. All the enthusiasm, all the spontaneity, have gone out of it. It was not this that gave Mr. Bryan his warm greeting at the One Dollar Dinner, but himself as the party's standard-bearer in the last campaign. It cannot be affirmed again that the gold standard is the cause of hard times

—the hard times have gone, but the gold standard remains. Ancient prejudice against Great Britain will not serve the turn now, because the prejudice does not exist. More votes will be lost than gained by inveighing against the British gold standard. Nobody can say with a straight face that there is not gold enough to do the world's business, or to maintain prices. In short, a campaign on that issue next year will be an anachronism, and will become a weariness or a laughing-stock before the voting takes place. Yet it seems now as though the masters of the Democratic party in the South would have it so. Something may occur in the next twelvemonth to change the drift of sentiment in the South, but it has not shown itself as yet.

AN ACADEMIC DISCUSSION OF EXPANSION.

PHILADELPHIA, April 12, 1899.

The third annual meeting of the American Academy of Political and Social Science, held in this city on April 7-8, ranks easily as the most important incident in the life of the organization. Founded ten years ago through the personal endeavors of energetic leaders, the pretentious title and novel methods of the organization exposed it to sharp criticism and inevitable discredit. A sagacious administrative policy and an increasing scientific activity have done much to change this attitude within the past few years. The Academy is neither in fact nor in purpose a scientific body such as the American Economic Association or the American Historical Association; but at the present time few economists or historians are unaffiliated with the organization, and none can afford to neglect its proceedings and its publications. Not only for the important local influence it has exerted, but for the stimulus and direction it has given to the intelligent discussion of matters of grave public concern, the Academy has within a decade of more or less experimental activity fully justified its existence.

Three years ago the policy of an annual scientific meeting, held in Philadelphia during the spring recess, was adopted. A traditional programme of miscellaneous papers engaged the first meeting. In 1898 the advantage of specialized discussion was recognized, and the sessions were devoted to the consideration of a single topic—the scope and method of sociology. The same practice prevailed in the present year, and the interest of a larger circle was enlisted by the selection, as the theme of the meeting, of "The Foreign Policy of the United States: Commercial and Political." The skilful arrangement of the programme, the representative character of the participants, and the significance of the papers presented were the elements that placed this last meeting in an entirely different category from any of those which had preceded.

The first session, on Friday afternoon, was devoted to the general subject, "The Government of Dependencies." Formal papers were presented with this common title by Prof. Theodore S. Woolsey of Yale, Prof. E. W. Huffcut of Cornell, Mr. A. Lawrence Lowell of Harvard, and Mr. W. Alleyne Ireland of London. In scholarship and definiteness these papers were probably the most satis-

factory of any presented at the meeting. The actual condition of affairs arising out of the war with Spain was in each case confronted, and certain definite rules of practical conduct were proposed.

Prof. Woolsey called attention to the two theories underlying the relationship between a state and its dependencies. The first, represented by the Dutch rule in Java, regards colonies as property from which an income is to be drawn; the second, exemplified by British colonial policy, considers them a kind of trust to be administered for the benefit of the inhabitants, while the profit to the mother state comes in the enlarged opportunities for the energies of its surplus youth and in that stimulated trade which follows the flag. The second principle will, doubtless, shape the form of government to be adopted for the new dependencies placed under our sovereignty. Porto Rico presents materials for a State after Territorial apprenticeship; or, as an unorganized Territory, we may watch it working out its ideas of self-government. In the Philippines, different social, racial, and geographical conditions render a similar policy impossible, and instruction may be derived from a study of the results of British administration in India. It seems clear that a civil government for these islands, under our Constitution, is, and must be for the indefinite future, inadmissible. Military government, dependent upon the inaction of Congress, is the only course possible.

The constitutional problems involved in the government of dependencies by the United States were discussed with acuteness and learning by Prof. Huffcut. A detailed analysis of all the constitutional restrictions upon congressional power and of all the pronouncements of the federal courts relating thereto, resulted in the conclusion that it is possible to hold, with entire loyalty to the Constitution and respect for judicial decisions, that all dependencies, except the District of Columbia, are governed under the general power given to Congress "to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States"; that this power is limited only by the provision prohibiting slavery within the United States or any place subject to their jurisdiction; that no decision of the Supreme Court holds that any other limit is placed upon the power of Congress over the Territories, and that such dicta as may be found to the contrary either are wholly discredited, or resolve themselves into a mere statement of constitutional or political theory.

Mr. Lowell assumed the two propositions which the preceding papers had established, viz., that our primary aim is to be the welfare of the dependencies, and that the Federal Constitution will not interfere seriously with the establishment of the most desirable form of government in our new possessions. It is not improbable that our institutions can be applied to the Sandwich Islands without modification, and a Territorial government copied from the pattern that has proved successful in the West will doubtless be there employed. In the Philippines the task is that of ruling a tropical colony where the proportion of white men must always remain insignificant, and where the natives, except in the case of selected individuals, will be incapable of taking part in the government for an indefinite period. The most important requisites for the administration of such a

colony are justice, a consistent policy, and a thorough knowledge of the native character. For Porto Rico, the obvious solution would appear to be a Territorial administration, with a governor appointed by the President, and a Legislature composed partly of appointed and partly of elected members.

Mr. Ireland, speaking from the experience of long residence in the British colonies, expressed the opinion that the inhabitants of the tropics will never be capable of self-government in the sense which is usually attached to that expression, and that without the strong hand of the man of the North to hold things together, the tropics will never advance beyond the point which has been reached by the Central American republics.

The annual address to the Academy, delivered by the Hon. Carl Schurz on Friday evening, under the title "Militarism and Democracy," served as a wholesome corrective of the matter-of-fact, indeed cheerful, acquiescence in the existing state of affairs which characterized the afternoon's proceedings. Defining militarism as the system which makes the maintenance of great armaments one of the principal objects of the state, Mr. Schurz proceeded, with philosophic spirit and unerring logic, to trace the opposition of such a system to the democratic spirit, and to describe the danger it offers to democratic institutions. The development of militarism in European states is explained by the necessity which each Power conceives itself to be under to protect itself from, and to preserve peace among, its neighbors. In the United States the need for large armaments can result only from a spirit of warlike adventure, beginning, perhaps, in a desire to liberate and civilize certain foreign populations, but developing into a downright and reckless policy of conquest. There was a stirring quality of comprehensive grasp and large statesmanship in Mr. Schurz's address, and no more accurate key-phrase for its content could be found than one of its happiest epigrams: "War makes military heroes, but makes also civic cowards."

Our commercial relations with the Far East formed the general topic of Saturday afternoon's session. Formal papers were presented by Mr. Worthington C. Ford, late Chief of the Bureau of Statistics of the United States Treasury Department, and by Mr. Robert T. Hill of the United States Geological Survey. Briefer addresses were made by Mr. John Foord, Secretary of the American Asiatic Association, by Dr. W. P. Wilson, director of the Philadelphia Commercial Museums, and Prof. E. R. Johnson of the University of Pennsylvania. It was inevitable that a discussion of commercial development should resolve itself into a series of conflicting forecasts, yet the most tolerant mind experienced a keen sense of disappointment at the hopeless antagonism of expert opinion. To Mr. Ford, the commercial opportunities of the United States in the Far East seemed rigidly limited, even though Manila be maintained as a free port or employed as a manufacturing basis. To Mr. Hill, the development of China under the protective policy of European nations meant opportunity for our young men and markets for our wares, while continued Chinese methods presented not one ray of hope for national profit. To Mr. Foord, the natural line of commercial advance lay in the positive support by the United States of the policy of the open door in China. Dr. Wilson found the key to the situation in a

larger energy and bolder initiative of the American merchant and manufacturer, and Prof. Johnson cast an apparently well-founded discredit upon the statistical basis of the debate.

The final session of the meeting on Saturday night was devoted to the political relations of the United States with the Far East. If not the most profitable, this was certainly the most brilliant session. Prof. John Bassett Moore presented a brief historical review of our diplomatic intercourse with the East, naturally revealing the scholarly academician rather than the efficient diplomatist. The main address, upon "China's Relation with the West," was made by the Chinese Minister, his Excellency Wu Ting-fang. We have probably had no more skillful presentation of the case of China and her claims than this forcible statement of one of her most distinguished representatives. The gradual but sure advance of Chinese civilization, the mischievous effects of "prose-lytism" and "commercialism" in the Far East, and the antithesis between the ethical pretence and actual practice of Western nations in their dealings with China, were described with extraordinary skill and ability. In a rather misplaced "discussion" that followed the important address of the evening, Prof. Lindley M. Keasbey suggested that our guiding policy in the Far East be economic competition with all and political alliance with none. Prof. Frederick W. Williams of Yale found in Russian aggression the real menace of China and the world, and urged that we harken before it is too late to "the Macedonian cry of that misgoverned nation to go over and help them." Vividness and color were given to the discussions of the meeting by a special exhibit of the products of the Far East at the Commercial Museums, arranged and described in an informal address on Saturday morning by Director W. P. Wilson.

The Council of the Academy took steps for the publication at an early date of the proceedings of the meeting in full, and for the provision of a permanent home for the organization. The only change in the officers of the Academy was the election as Corresponding Secretary of Prof. L. S. Rowe, to whose energy as chairman of the local committee the success of the meeting was largely due. J. H. H.

HOUSSAYE'S WATERLOO.

PARIS, April 5, 1899.

M. Henry Houssaye is writing the history of the fall of the First Empire, with the help of original documents. The two first volumes of this work had for their titles: '1814-1815—The First Restoration, The Return from Elba, The Hundred Days.' The last and third volume has just appeared under the title, '1815—Waterloo.' Many accounts of the battle of Waterloo have been written. M. Houssaye has evidently had the ambition to write the last and to leave nothing behind him for future historians. He enters first into infinite details upon the last army of the Empire, the army which Napoleon organized after his return from Elba. For this purpose he has availed himself of the documents found in the archives of the Ministry of War. Napoleon found only 200,000 men under the French flag on his return. "If," says M. Houssaye, "he had had his old absolute power, he would have doubled the army by an extraordinary call

of the classes of 1806 to 1814, by the recall of the class of 1815, and the call by anticipation of the class of 1816." But he hesitated, having only just seized the crown again, before so unpopular a measure as the reestablishment of the conscription, which had been abolished by Louis XVIII. His only resource was the recall to the regiments of the soldiers who were absent on limited or unlimited leaves, and the recall of the great number of deserters who figured on the regimental lists as "absent without permission." The men who were absent on leave were 32,800, the deserters 85,000. It was difficult to count on many of this last number. Napoleon feared, besides, to put the army too suddenly on a war-footing; he was trying by all means to enter into negotiation with the Powers to maintain peace. The French population wished ardently for the continuation of peace. The west of France was agitated, the south was partly in arms; the royalists all over France predicted war. As soon as all hope was given up of an understanding with the Powers, Napoleon published his decree; the French funds in one day suffered a fall of eight francs. France felt that she must prepare for a terrible war, perhaps for a new invasion.

The feeling of the country is well shown by the number of free volunteers: there were only 15,000. Napoleon had to augment the regular army by the mobilization of the National Guard. He would have much liked to keep the four Swiss regiments of the army of Louis XVIII., but the Swiss officers refused to exchange the white cockade for the tricolor, and these regiments had to be disbanded. He could keep only two foreign regiments, Isenberg and the Irish regiment. Of the 234,720 National Guards who were called into active service, 150,000 were on their way to their regiments on the 15th of June; they were not enthusiastic, but resigned, and determined to do their duty.

The correspondence of Napoleon shows what immense pains he took to equip and organize completely his new army, to form the corps, to choose the troops of the first line. The command of the corps was of the greatest importance. Of the twenty marshals of France, three had accompanied Louis XVIII. to Belgium—Berthier, Marmont, Victor. Many of the others were wavering and did not inspire Napoleon with great confidence. He was especially discontented with Ney, but, after some hesitation, he wrote to the Minister of War: "Call for Marshal Ney, and tell him that if he wishes to be in the first battles, he must go on the 14th to Avesnes, where my headquarters will be." Napoleon refused to give a command to Murat; he had not forgiven him for having begun hostilities so late in 1814 against the Austrians. He regretted this decision at St. Helena. "At Waterloo," he said in one of those conversations, or rather monologues, which have just been repeated to us in the Memoirs of Gourgaud, "Murat would perhaps have given us the victory. What did we need? To break three or four English squares. Murat was just the man for it." Grouchy was an able officer, and like Murat could handle well great masses of cavalry. Napoleon gave him a command.

The choice of a major-general was all-important. Berthier had always occupied this post, to the satisfaction of the Emperor; he had been an admirable instrument. He did not remain long at Ghent, but left for Bamberg, where lived his uncle by marriage, the

King of Bavaria; he was kept there as a sort of prisoner of the Allies. On the 1st of June, as a Russian regiment was passing before the castle on its way to France, Berthier was seen to leave a window on the first floor, to reappear at a window on the third floor, to fall from it on the pavement. His death was attributed to an accident; it was probably a suicide. Napoleon's choice for a major-general fell on Soult, who had never occupied the post. Napoleon wished to have it occupied by a Marshal of France. He left Davout in the Ministry of War. The commanders of the army corps were all able and experienced men. "Never," says M. Houssaye, "will the French army have such chiefs. All of them had made war for more than twenty years, and none of them was as much as fifty years old." Napoleon's age was forty-six years; Davout was forty-five, Soult forty-six, Ney forty-six, Grouchy forty-nine, Drouot d'Er-lon forty-nine, Lobau forty-five, Lamarque forty-five, Kellermann forty-five, Reille forty-four, Vandamme forty-four, Rapp forty-three, Clausel forty-three, Suchet forty-three, Pajol forty-three, Gérard forty-two, Drouot forty-one, Exelmans forty. All these men, who had so often led their soldiers to victory, had no longer their old faith in the success of the French arms. They knew well what formidable armaments were preparing against the Emperor. Discipline reigned in the general staff; discipline suffered from the effect of a general suspicion; the soldiers believed only in the Emperor, they all wanted to be passed in review by him. They believed that they alone had brought Napoleon back to the Tuileries. The army of 1815, sensitive, undisciplined, distrusting its chiefs, troubled by the fear of treason, but ardent for vengeance, was capable of the most heroic efforts. "Never," says M. Houssaye, "did Napoleon have in his hand a more dangerous or more fragile weapon."

Napoleon had made his plan of campaign early, long before the breaking out of hostilities; it was based on that of the Allies, which was known to him. Six armies were to cross the French frontier—four from Maubeuge to Bâle; the three others by way of the Alps. Napoleon decided to concentrate an army of 150,000 men on the northern frontier, to fight separately the English and the Prussians, and then to deal with his other enemies. It was necessary for him to operate so as to hinder the junction of Wellington and Blücher. The Allies did not understand his movements of concentration. On the 15th of June, when Napoleon had already a foot in Belgium, Wellington wrote a long letter to the Czar, in which he said that he would assume the offensive at the end of the month. Blücher, a few days before, wrote to his wife from Namur: "We shall soon be in France. We might easily stay a year longer here, for Napoleon will not attack us." I will not follow M. Houssaye into all the particulars of the campaign. After Charleroi was taken, Napoleon and Ney had an interview. The Emperor told Ney to take command of the First and Second Corps, to follow the enemy on the road to Brussels, and to take position at a cross-road called Quatre-Bras. Ney, prudent for the first time in his life, took position only at some distance from Quatre-Bras; nevertheless, Napoleon had succeeded in establishing himself in the centre of the enemy's position.

After Byron, after Thackeray, M. Houssaye gives us a description of the eve of Waterloo at Brussels. He is rather severe

on Wellington. At the ball of the Duchess of Richmond, Wellington was very gay; he entered the room only towards midnight:

"This whole day, he obstinately kept his troops dispersed at four, eight, ten, fifteen leagues from each other; and his evening orders, by which he flattered himself to have repaired his grave fault, were pitiable. . . . If his orders had been executed, a gap of four leagues would have been opened between Nivelles and the Dyle, a gap through which Ney could have advanced half way to Brussels without firing a gun, or have fallen on the rear of the Prussian army and caused its utter destruction. . . . Fortunately for the Allies, some of the subordinates of Wellington took it upon themselves to act without awaiting his orders, and others intelligently disobeyed those which, after so much time lost, he decided to give."

I leave it to military judges to weigh the value of these remarks. M. Houssaye, on the other hand, defends the Emperor against the imputations of theoretical strategists like Charras (who wrote, during his exile under the Second Empire, a minute account of the battle of Waterloo), who denounce Napoleon's fatal indecision and torpor of mind during the campaign. Lord Wolseley has lately made similar criticisms; but, if we judge of Napoleon's state of mind by the incessant orders he gave during those momentous days, it is difficult to admit that his intelligence was impaired.

Wellington's and Blücher's meeting near the village of Brye must have been very impressive. It took place before the battle of Ligny, which ended in the defeat and retreat of the Prussian army. During the battle, Napoleon sent nine dispatches to Marshal Ney, with whose help he hoped to annihilate completely the army of Blücher, but Ney "was no more the same man," said Napoleon at St. Helena; he had become too prudent, and had neglected to occupy the position of Quatre-Bras; his divisions were dispersed, and when Napoleon himself determined to attack Quatre-Bras, he had to fight a real battle against Wellington. The battle was lost by him, or rather ended without any result, as in the evening the English and the French resumed nearly the same positions they had in the morning, with the difference only that the English were now in force in positions where before they had only detachments. When Wellington heard of the defeat of the Prussians at Ligny and their retreat on Wavre, he determined to occupy Mont-Saint-Jean, a strong defensive position, which he had studied the year before. He received news of Blücher on the night of the 17th to the 18th June at two o'clock in the morning, and, being assured of the coöperation of the Prussians, he resolved to accept the battle.

Napoleon dictated the same night his order of battle. All the details of the great struggle are known—the last review of the French troops, the dispositions for the attack, the storming of the farm of Hougomont, the orders sent to Grouchy, who had 30,000 men under his command when the first Prussian columns appeared, the charges of D'Erlon, of the Somerset Guards, of the Ponsonby Dragoons, the two attacks on La-Haye-Sainte, the repeated charges of the French Cuirassiers, the storming of La-Haye-Sainte by the French infantry, the coming into line of Bülow, the last general attacks, the assault on the Mont-Saint-Jean by the Guard, the final defeat, the rout, and the confused retreat of the French army, followed by the Prussian cavalry. Napoleon had been warned before the battle by Gérard, who spoke to him of

the tenacity of the British infantry. Instead of manœuvring and making flank movements, he wished to mark his victory by what he called a *coup de tonnerre*; he determined to concentrate on the English centre in its trenches a terrific artillery fire, and to break this centre so as to divide the English army in two, and to obtain a crushing and terrific victory. He did not reckon sufficiently with that "indomitable English courage," of which Macaulay speaks, which is never greater than in the evening of an undecided and murderous struggle.

The details of the French retreat given by M. Houssaye are appalling. The army had made too great an effort. All hope was given up, and the Prussian cavalry had too easy a task in following with merciless ardor the remnants of what was the last army of Napoleon.

Correspondence.

A PROTEST AND A PROPHECY.

TO THE EDITOR OF THE NATION:

SIR: Like yourself, I should have preferred a real leader of men such as Thomas B. Reed in the White House, rather than McKinley, who parcels out not only his patronage, but all his functions, among Senators and Representatives, and who heeds clamor rather than the country's welfare. I would much rather have a man of whom a modern Ennius might sing:

" . . . non posuit rumores ante salutem."

Like yourself, I cannot see any wisdom in paying \$30,000,000 for an unfalling source of bloodshed, waste, and scandal. But on one point you wrong our President. You accuse him, every now and then, of doing this or that shabby thing to "get delegates," that is, to bring about his renomination. He is undoubtedly quite innocent of anything of this kind, for he knows already perfectly well that no other candidate will contest the Republican nomination with him. The party in power cannot put forward anybody else than the incumbent without admission of failure. Mr. McKinley will be nominated on the first ballot, receiving the vote of every delegate; and as the Democrats cannot, between now and November of next year, shake off Mr. Bryan and Sixteen-to-One, Mr. McKinley will be elected by a majority of over one hundred among the electors.

Current problems should be discussed in the light of this prospect.

Respectfully yours,

D.

LOUISVILLE, KY., April 10, 1899.

"AS OUR FATHERS DID."

TO THE EDITOR OF THE NATION:

SIR: It is the fashion of the Administration hack-writers to dismiss with scorn the assertion that the natives of the Philippines are heroically fighting for their liberties. But the race that has produced not only the able and much maligned Aguinaldo but also the great and lovable man of science and martyr, Rizal, has, in the course of its long history, proved time and again that it possesses that real love of liberty which gives birth to the nations of the world. To stigmatize the Tagals as "mere savages" may suit the ignorant and indifferent minds among us, but there is no denying the fact that their two months' struggle against the

power of the United States is part and parcel of their century-long battle to be free, from Spain, from us, from all the races of men who have sought to make them less than they hoped to be. The story of their struggle with Spain is too glorious for the world ever to forget, and the necessities of the opportunist policy of the Administration cannot blind us to its significance. They were on the eve of victory when we came to destroy their dream of a home-land all their own. No cry of traitor can silence the unprejudiced historian who shall write the record of this brave and valiant people, nor can our flag ever replace the heart-born liberty it seems bound now to extinguish "in the name of humanity." Senator Hoar and his able supporters are not alone in comparing the struggle of the Filipinos with that which gave birth to our own republic. There is a notable tendency on the part of those who have had to do with the Tagals to compare them with our own patriots of old.

A writer in *Putnam's Magazine* (vol. viii., p. 144), thirty-three years ago, thus describes (the italics are mine) the battle of the 27th of April, 1521, in which Magellan fell:

"The battle with the steel arms of Europe against the wooden arrows and lances of the islanders lasted many hours. There was no finching on either side. The courage of the Indian [i. e., Filipino] was proof against the mail of the Spaniards; the latter, appealing to their foes' terror and love of home, set fire to their houses, and a village was in a blaze. But, as our fathers in like case once did, the brave natives fought with more determined fury; and, with but seven or eight survivors, the Spaniards, as the fight grew fiercer, fell step by step back to the shore."

Have the Filipinos changed in their love for liberty to-day? Hardly; they face the cannon, as their ancestors did the musket. Is it too late yet to "do justice and fear not"?

ALEX. F. CHAMBERLAIN.

WORCESTER, MASS., April 11, 1899.

EXPATRIATION.

TO THE EDITOR OF THE NATION:

SIR: The opinion of Secretary Day concerning forfeiture of citizenship, against which a correspondent protests in the *Nation* of the 6th inst., seems not materially to differ from the opinions of his predecessors in office, as quoted in Wharton's *Digest*, vol. 2, p. 446, and following.

Daniel Webster's opinion was that "a person found residing in a foreign country is presumed to be there with the purpose of remaining; and, to relieve himself of the character which this presumption fixes upon him, he must show that his residence was only temporary, and accompanied all the time with a fixed and definite intention of returning. If in that country he engages in trade and business, he is considered by the law of nations as a merchant of that country; nor is the presumption rebutted by the residence of his wife and family in the country from which he came. This is the doctrine as laid down by the United States courts."

"Citizenship," says Mr. Fish, "involves duties and obligations as well as rights. The correlative right of protection by the Government may be waived or lost by long-continued avoidance and silent withdrawal from the duties of citizenship as well as by open renunciation."

The opinions quoted from Secretaries Mar-

cy, Seward, and Everts are in harmony with the foregoing. J.

FORT WAYNE, IND., April 8, 1899.

DISARMAMENT AND PANSLAVISM.

TO THE EDITOR OF THE NATION:

SIR: In your issue of November 2, 1887, you printed an interesting letter from Theodore von Bunsen on "International Peace," disarmament, and arbitration. The whole letter is worth rereading, but one sentence in particular has a peculiar point just now: "To my mind, the great approaching war with Panalavism must be fought before a reduction of European armaments by mutual consent can be brought before a conference of the Powers."

W. H. B.

ATHENS, GA., April 10, 1899.

[Bunsen's prevision has been falsified by the Czar of the Slavs taking the initiative. The conference will be held, and reduction brought before it.—ED. NATION.]

SINCERE GOOD CATHOLICS.

TO THE EDITOR OF THE NATION:

SIR: Perhaps an astute Pope of Rome, dealing with "good American" Catholics, might be able somewhat to harmonize matters—if I've rightly divined what a good American and a presumed bad American Catholic may be—by following the course prescribed by Clement IX., as laid down in Voltaire's 'Siècle de Louis XIV.', ch. xxxii., page 435, upon the subject of Jansenism:

"Rospigliosi, devenu pape sous le nom de Clément IX., pacifia tout pour quelque temps. Il engagea les quatre évêques à signer sincèrement le formulaire, au lieu de purement et simplement."

If the "good American" branch would only be *sincere* instead of *pure* and *simple*, and would just accept things that way, it would accommodate the Holy See, and probably everybody else would be satisfied.

H. M. DOAK.

NASHVILLE, TENN., April 11, 1899.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me space to correct a mistake which I made in the recent annual report of this museum, in describing one of the more important Greek vases acquired last year? The vase in question (page 68, No. 41) bears the signature of Hieron together with the name of his father. This name appears in the genitive — *Μελισσος* — and I said it should have been *Μελισσος*. My statement was an error, the spelling was correct, and the name is Medon, not Melidon. As this is the first instance in which the name of Hieron's father has appeared, the matter is not without importance to students of Greek vases, and I make the correction here in the hope that it may reach as many as possible of those who are interested in the subject.

Very respectfully yours,

EDWARD ROBINSON.

MUSEUM OF FINE ARTS,
BOSTON, April 13, 1899.

AUDITORIUMS AND ORATORY.

TO THE EDITOR OF THE NATION:

SIR: In your editorial "Changes in Ora-

tory" I do not find enumerated among the causes of decline the struggle with the hall, as depicted in an address by a specialist, Dr. Ephraim Cutter, "to the section on laryncology and otology, at the forty-ninth annual meeting of the American Medical Association, held at Denver, Col., June 7-10, 1898." He considers it a humane undertaking on the part of the doctors to call attention to the auditorium indisposition and the remedy for the disorder. The ailment in part is due to the architect and also to the speaker. The former, nine times in ten, has in view the auditor's eye rather than his ear, ornamentation rather than phonation. An instance, among countless ones, is that of the Albert Memorial Town Hall, at Leeds, with its "magnificent walls and pillars of polished variegated marbles." Though a "general visibility of the platform to the whole audience" is not neglected, under the prevailing conditions of intelligence among orators this hall encloses a space which the human voice fills with inarticulate echoes, and where the would-be hearers strain ineffectually for what is addressed to their intelligence. To cite a case in America, the hall in Saratoga is of bad repute for hearing.

To the architect the lecturer urges two ways of getting at the remedy: (1.) The concrete. Take auditoriums, he advises, which are easy to sing and speak in, and he instances that of the First Congregational Church in Woburn, Mass., which the architect, the late John Stevens of Boston, "wanted to be his monument. He certainly favored the ear and eye both. There is not a seat of the fifteen hundred but commands a perfect hearing and view of the preacher or speaker at the pulpit." A well-known elocutionist "pronounced it to be the best auditorium for phonation he ever met with. Clergymen have testified to the same; singers also." "Major Ambrose Bancroft, master carpenter, Woburn, has given me [the lecturer] the following dimensions of the auditorium: Height of ceiling from floor, 34 feet 10 inches; width, 80 feet; length, 150 feet; width of side galleries, 11 feet; width of rear galleries, 14 feet." The keynote of this auditorium is F. Another example is "the chapel of the New York city Church of the Comforter." "The auditorium is 25x50 feet, open to the roof; height of ridge-pole, 18 feet." (2.) The ideal. "Study the nodes of the key of F, for example, and have the walls and height correspond to them." Sound the keynote; then, "walking in the direction of the long diameter of the auditorium, note when the tone is loudest and weakest." In the Woburn church the node of the keynote is about fifteen feet.

W. W. TUFTS.

CAMBRIDGE, MASS., April 16, 1899.

Notes.

The well-known English writer Major G. J. Younghusband joins the throng who compose books on the seat of what Senator Hoar aptly calls our present "civil war" in the East. He landed in Dewey and Merritt's wake, and 'The Philippine Islands and Round About' is the result, to be published directly by Macmillan & Co. They also promise without delay 'The Making of Hawaii,' by Prof. William Fremont Blackman of Yale.

Miss Hamm's portrait, in her 'Porto Rico and the West Indies' (F. Tennyson Neely), indicates a person not to be trifled with in the pursuit of knowledge. We have already noticed her work on the Philippines. The present is also the result of visits to the scene of observation, and possesses a like interest, conveyed (with the aid of many illustrations) in the same newspaper English. To make a thick volume, she has had to resort to historical compilation, and is most to be trusted in matters obviously within the range of her observation—climate, manners and customs, the status of women, cookery, products, trade and transportation, and the like. She finds it necessary, for the political development of the island, that our district system should be speedily introduced and adopted. "This simple and efficient machinery is unknown to Spanish history." But Miss Hamm has a wholesome dread of "the adventurer and the carpet-bagger."

Another book for the day, from the same firm, is an oblong collection of half-tone war portraits and views in the West Indies and the Philippines, under the title, 'Greater America.' The only text is in the legends. No doubt these photographic memoranda will have their value as time goes on; but their number is legion.

In line with the foregoing is 'The Spanish-American War: The Events of the War Described by Eye-Witnesses' (Chicago: Herbert S. Stone & Co.), consisting of chapters from the war correspondence of leading American journals. The narrative shifts from the East to the West Indies in a carefully prepared chronological sequence, the date being given in the running-title. For this reason, and because of the illustrations, the compilation will be found convenient to refer to.

"A ready reference-book of facts and figures, historical, geographical, and commercial, about Cuba, Puerto Rico, the Philippines, Hawaii, and Guam," is the self-definition, well justified, of the 'American Colonial Handbook,' edited by Thomas Campbell Copeland, and others (Funk & Wagnalls Co.). It is in the form of a catechism, preceded by a synopsis of the treaty of peace, and in the case of each division by an historical sketch. Authorities are duly marshalled at the end. Each section has a map. A parallel index binds all together. The little volume, with rounded corners, slips easily into the pocket.

Prof. A. G. Cameron's 'Selections from Edmond and Jules de Goncourt' (American Book Company) is a decided success, if the aim of the book be, as we suppose it is, to stimulate and enable the reader to choose intelligently, for more extensive reading, from among the numerous works of the Goncourts those most to his taste; for the selections, while too short to be of much interest in themselves, are sufficient, in connection with the analyses of the "Introduction," to give an idea of the style and character of the writings from which they are taken. The introduction, notes, list of critiques, and appendixes, bear proof of great industry and genuine interest in the lives and works of the remarkable pair of brothers. If there were no other sign of the editor's diligent study of his subject, it would certainly be found in the originality and eccentricities of his own style, so plainly affected by the style—or shall we say the variant styles?—of the two Frenchmen. We remark that Renan's name is spelled with the acute accent every time it occurs.

In No. 119 of the "Bibliothèque de l'École des Hautes Études," M. Gabriel Monod begins what promises to be the best critical introduction in existence to the sources of the Carolingian period, in continuation of similar studies of the Merovingian sources in the same series. In this first part he is concerned with the Carolingian annals to 829, dealing mainly with their dependence upon one another, and their sources of information. M. Monod considers all the important theories of his predecessors in the same field, furnishing a most useful guide to the literature of the subject, and gives, though never at great length, the results of his own studies, which are characterized by all his well-known moderation and sound common sense. Of 175 pages, 60 are given to the great 'Annales Laurissenses majores,' and 60 to two introductory chapters, which will be found of general interest, one on the general characteristics of the Carolingian historiography, and the other on the Carolingian renaissance. Perhaps M. Monod's most interesting suggestion is that the common features of the annals may be due not to their dependence on the work of some predecessor, but to their borrowing from a kind of circular letter which he supposes may have been sent out to inform the annalists of important events.

Several years ago, Prof. Du Bois-Reymond of the University of Berlin published a discussion of the principles of art from a physiological point of view, in which he maintained that the delineations of centaurs and other monsters, whose organisms violate the laws of nature and can therefore have no real existence, are mythopoetic aberrations of the fancy, in which the modern artist should not indulge. Of the same general character is 'Die Schönheit des weiblichen Körpers,' recently issued by the Stuttgart publisher, Ferdinand Encke. The author, Dr. C. H. Stratz, is a physiologist and physician, and points out some curious pathognomonic symptoms in types of female beauty in famous works of art. Thus, according to his diagnosis, the celebrated Venus of Botticelli in the Uffizi at Florence shows unmistakable signs of consumption, and ought not to be sailing naked in an open shell across the sea. A modern example of the same kind is furnished by Franz Stuck's "Expulsion from Paradise," exhibited at Munich in 1891, in which peculiarly crooked limbs, enlarged joints, and depressed ribs of our common mother indicate that she had suffered severely from rickets in her childhood. Still another instance cited is the Aphrodite in Klein's "Judgment of Paris," whose bodily formation proves that rachitis must have prevailed in the abode of the Grecian deities as well as in Eden before the fall. Our author thinks the only remedy for such lapses is for artists to study pathology as well as anatomy. He also gives some sensible advice to women concerning the cultivation of beauty on hygienic principles.

Ludwig Günther of Stettin publishes a German translation of Kepler's 'Somnium,' a study of how astronomy would appear upon the moon (Leipzig: Teubner). The name of Günther (probably identical in origin with Gonthier, the family name of the Schwartzburgs) is already represented in science half-a-dozen times over, without counting the English Edmund Gunter. We are glad to make a new acquaintance worthy of the family. Prof. Sigismund Günther of Munich is a learned and delightful writer on

the history of the mathematical sciences. He has sometimes been accused of too great originality, but Herr Ludwig altogether surpasses him in a title-page which is "ein genaues Faksimile" of the original edition of the 'Somnium,' except that it is somewhat reduced, and except that it is translated from Latin into German! If the volume had no other interest, it would be worth getting for a remarkable portrait of Kepler, looking much more mathematical and less witty than Nordling's, which, however, Kepler himself said was not a good likeness. That is beetle-browed; this has a low, retreating forehead. The nose, cheeks, and hair leave no doubt that this really is Kepler, and it is impossible to resist the conviction that it is a likeness. It is dated 1610, the year after the publication of the 'De motibus stellae Martis,' when Kepler was in Prague.

The brood of daintily printed literary and semi-political journals which came into being like so many butterflies a few years ago in this country, has, in spite of some failures, been reinforced of late. Such is *In Lantern-Land*, a monthly quarto, edited at Hartford, Conn., by Charles Dexter Allen, author of a well-known work on 'American Book-plates.' The fifth number, for April 1, contains a book-plate on a separate supplementary leaf. It comments on current topics, reviews books, deals with current fine art and the drama, and has at least the merit of serious intent. Another venture, *La Crème* (Boston: Charles E. Brown & Co.), is a 16mo in paper covers, each issue containing a single story. The first, for March 31, gives Kipling's "My Lord the Elephant," plus his "Recessional" and "Vampire."

The principal article in the *National Geographic Magazine* (Washington) for April is an account, by W. D. Wilcox, of two expeditions, in 1896 and 1898, to the sources of the Saskatchewan. Considerable danger was experienced in the first from an extensive forest fire, and in the second, which was in October, from the snow which fell on thirteen of the seventeen days in which the explorer was out. The scenery, of which several fine illustrations are given, is "remarkably grand, and unfailing in variety of mountain forms so long as the valleys are the point of view"; but from high summits it is somewhat monotonous on account of the uniformity in height of the thousands of mountains visible. The forests which clothe them up to 7,000 feet "are chiefly of Engelmann's spruce and balsam fir, with occasional areas of jack pine." Mr. Wilcox attributes no small measure of his success to the splendid qualities of his pack-horses. An interesting note is communicated by Mr. W. H. Dall on a harpoon-head obtained from a whale in Bering Sea which may have carried it at least thirty-six years. It bore the private marks of the *Montezuma*, once a British man-of-war, then a New Bedford whaler, and finally one of the "stone fleet" sunk in Charleston harbor during the Civil War.

The *Annales de Géographie* for March contains the introductory lecture of Prof. Vidal de la Blache of the University of Paris on the physical geography of France. Among the other articles is an historical sketch of the colonization of the provinces of Ufa and Orenburg in Eastern Russia, and an account of the Jewish and German agricultural colonies in Palestine. There are fourteen of the former, with 4,220 inhabitants, who have not succeeded yet as farmers, but make excellent

gardeners and cultivators of the grape. Their wine sells in the European markets for four times as much as that made by the Germans. These number 1,500, all but 400 of whom are of the sect of the Templars, founded in 1868. They support themselves by both farming and grape-growing, and by pursuing various trades. The rector of the Jesuit College near Shanghai contributes a short note on the recent geographical and other scientific work of his society in China. These include explorations of the Yangtze River, collections of natural history, meteorological and astronomical observations, and the preparation of a "Chinese encyclopædia, accepted officially by the Government, for the scientific education of young China [*la jeune Chine*]."

The principal topics treated in *Petermann's Mitteilungen*, No. 2, are the geology of southwestern Hayti, and the Siberian district of Anadyr in extremest northeastern Asia. The products of Anadyr include coal and probably sulphur. Its Russian inhabitants number about 500, and have a high character for industry, temperance, morality, peaceableness, and "an ideal honesty." They are profoundly melancholy, however; social pleasures, sports, dancing, and singing, being unknown among them. There are also shorter notices of the Nicaragua and Panama Canals, of the changes on the Netherlands coast in 1897, and of the distribution of Danes and Germans in northern Schleswig, with a map. In supplemental No. 127 Dr. Carl Sapper treats of the geology, hydrography, orography, and surface soil of northern Central America, the result of observations made during the years 1888-1897. Three large maps and twenty-five geological profiles accompany the paper.

The special features of the April Bulletin of the Boston Public Library are lists of books and documents added to the statistical department, and of works relating to baths, gymnasia, and the labor movement in England and America. The additions to the Brown musical library and to the Garrison collection of anti-slavery MSS. are also noteworthy.

The twenty-third annual report of the Boston Museum of Fine Arts shows that the year 1898 was one of great prosperity for that institution. Bequests aggregating over a million dollars are recorded, and there is evidence of gratifying growth in every department included in the museum. It is in the field of ancient art that the acquisitions of the year have been most extensive. The report of the curator of classical antiquities fills seventy-six pages, and deals with nearly four hundred objects, chiefly original specimens of the minor arts of ancient Greece and Italy—small bronzes, engraved gems, articles of jewelry, painted vases, and the like. Not less noteworthy than the extent of these acquisitions is their high quality. Such a record is without a parallel in this country, and Boston is yearly exercising, by virtue of the policy of its museum, a more and more potent attraction upon American students and lovers of Greek art.

Tommaso Corsini, President of the "Association for the Protection of Ancient Florence," has recently been presented with a written address, congratulating him on the success already attending the efforts of his society, but urging yet greater earnestness in the accomplishment of its purpose. To this paper are affixed ten thousand signatures, among which are the names of princes &

New York bishop, and prominent representatives of historic, social, artistic, and ecclesiastical circles of Europe. Complimented by this general expression of interest, but piqued by the accusation which it implies of their own indifference, the Florentines deny the destruction of historic buildings through so-called "improvements," and recall the fact that, a few years since, they abandoned a project for broadening a certain street because it involved the sacrifice of an ancient shrine and an old city gate. Is not this proof enough, they ask, that the modernizing of Florence will not be at the expense of her historic monuments?

The Société des Amis de l'Université de Paris, which was organized some months ago, has issued a public announcement of its purpose and method. Its general object is to advance the interests of the University of Paris, and its first object will be to look after the welfare of the students; but the maintenance of dormitories and the offer of financial aid to the needy, with help in the way of tutoring and coaching, are also in view. Quite naturally the Society will also offer special prizes for proficiency, a method much more popular in France than in any other country. It is generally understood that it will devote special attention to foreigners.

Recently a few medical students of the University of Halle began a campaign against the admission of women to the courses of clinical instruction in that institution, declaring that their presence produced unpleasant situations and was extremely painful to modest young men. They even went so far as to post their protest on the blackboard of the University of Berlin, in order to gain adherents to their views in other academical circles and to strengthen their position by a general agitation of the subject. This step on the part of undergraduates was resented by the medical faculty of Halle as an impertinence, and called forth a sharp reply, emphatically denying the truth of the statements made by the students, and attributing them partly to ignorance of the facts and partly to wilful misrepresentation. The professors assert that the presence of women in the lecture-rooms and the clinical hospitals has not had the slightest injurious moral effect, nor diminished in the least the earnestness with which the studies are pursued. They express their deep sorrow at the animosity shown by these students towards their female colleagues, for which there is no ground whatever. The faculty, it is added, would feel justified in disciplining the authors of the protest, were it not for the conviction that it had been made without due consideration of its nature and scope. In conclusion, the hope is expressed that the more thoughtful members of the clinic will disapprove of the regrettable action of their fellows, and that nothing more will occur to disturb the cordial relations hitherto existing between professors and students.

—The Massachusetts Historical Society has just removed from its home on the slope of Beacon Hill, Boston (within a biscuit throw of the site of its foundation in 1791), to the border of the Fenway, the landscape gardener's reclamation of the old-time estuary called the Back Bay. This event was made the occasion by the President, Mr. Charles Francis Adams, of a deferred inaugural address long beyond precedent and equally interesting, delivered at the new rooms on Thursday last before a select audience of which it was

noticeable that ladies composed about a third. Himself a skilled writer of history and biography, Mr. Adams spoke to a large number of active and eminent cultivators of both these branches regarding the modification of the historian's aim and method induced by the publication of the 'Origin of Species'; and the corresponding change in the function of historical societies. Macaulay's and Bancroft's histories were chosen as types of works at once over-long and fragmentary, and, from the Darwinian point of view, unphilosophical. Their great successors hereafter are to be, not men of research among the sources, but builders on the monograph; and the main object of the historical society should be to facilitate knowledge and use of its collections by the patient specialists whose quintessence the evolutionary historiographer will pack away in four volumes like Green in his 'History of the English People,' or in one like Goldwin Smith's 'History of the United States.'

—Mr. Adams would not have been himself if he had not enlivened his discourse with much humor and many striking observations, such as his summing up the bloody battles of Antietam and Gettysburg as meaning, for his own personal participation in them, a couple of refreshing naps on the field. And again, he had ascertained that, "in the case of one public library in a considerable Massachusetts city," the copy of Gibbon's 'Decline and Fall' had, "in thirty years, not once been consecutively read through by a single individual." The orator quoted Darwin's approval, as not exaggerated, of a German opinion that "all other series of events—as that which resulted in the culture of mind in Greece, and that which resulted in the empire of Rome—only appear to have purpose and value when viewed in connection with, or rather as subsidiary to, . . . the great stream of Anglo-Saxon emigration to the west"—which Mr. Adams translates into the voyage of the *Mayflower* and the founding of Boston. The Massachusetts Historical Society, we remark in closing, is the oldest in America. It would be interesting to know if Mr. Adams's "possibly the first [to be organized] in the world" is also among its titles to distinction.

—The fifty-seventh and fifty-eighth volumes of the 'Dictionary of National Biography' (Macmillan) carry this great work fairly into the letter W, so that it "smells land," in the Suffolk phrase. As our readers are well aware, many foreigners find commemoration here whose lives were associated with England, and one meets with such contrasts as, on opposite pages, Sir Robert Richard Torrens (1814-1884), author of the Australian land-title act that bears his name and is now invading this country in the wake of the Australian ballot, and Pietro Torrigiano (1473-1522), who smashed the nose of his fellow-art student Michelangelo. Very interesting is the sketch of Mme. Tussaud, whose London wax exhibition is now the property of a company, yet employs as its modeller her great-grandson. Probably the world cannot produce a similar show which has been (in France and in England) open to the public for money since 1770. Another kind of distinction was won across the Channel by Polydore Vergil, the historian; and still another by Van Dyck. Turner is the next most distinguished artist in this tract of the Dictionary, his not unfriendly biographer mak-

ing the admission that "his private life was sordid and sensual." A peculiar æsthetic sensibility was owned by Wainewright, the poisoner, who extenuated his dispatching of Helen Abercromby on the ground "that she had very thick ankles." Edward Vernon, the elder admiral (1684-1757), it was who first watered the rum dealt out to seamen, the unwelcome official mixture being called by them "grog," "which is said to have been Vernon's nickname in the squadron—derived, it is said, from his having a program boat-cloak." The Oxford Dictionary will presently pass upon this *on-dit* etymology. Vernon's change of the dram in strength and in regularity of service is pronounced to have been "perhaps the greatest improvement to discipline and efficiency ever produced by one stroke of the pen"; but the stroke which in our day abolished grog altogether in the navy has at least an equal claim to that laurel. Capt. John Underhill of Pequot War fame; Sir Harry Vane; William Vassall of Plymouth; Vancouver; and Mrs. Trollope are among the lives which touch America nearly. In Mrs. Trollope's case the marvel is that she began writing at fifty-two, and scored a great success at once even if she lost caste in the country whose ruder manners she could not overlook nor refrain from depicting. Her biographer taxes her generally with an eye for coarseness; but her 'Domestic Manners of the Americans' was not therefore a coarse book. That, and Miss Martineau's 'Society in America,' have, for intellectual vigor, yet to be rivalled by the observations of any travellers of their sex in any country.

—'The French Revolution and English Poets' (Henry Holt & Co.) is the title of a Harvard dissertation by A. E. Hancock. It was unfortunate for the author that no less an authority than Prof. Dowden should have forestalled him—not in date of composition, but of publication—in the same field. Mr. Dowden's lectures on 'The French Revolution and English Literature,' delivered at the Princeton celebration, were reviewed in these columns on their appearance in print. Their author, as his title implies, covered a wider field than does Mr. Hancock, who gives a less detailed treatment of Godwin and Day, and omits mention of Landor in the character of a disciple of revolution. On the other hand, Mr. Hancock points out the influence of Helvetius and Holbach on Godwin and Shelley, and of Rousseau on Byron. Wordsworth and Coleridge, disappointed and disillusioned by the excesses of the Revolution, experienced a reaction, and together sought consolation in Nature.

"Abandoned of Heaven! mad avarice thy guide
O Albion! thy predestined ruins rise!"

So wrote Coleridge at the crisis of his revolutionary fervor. It is amusing to find him a little later addressing that same Albion as:

"Thou Queen! Thou Delegated Deity of Earth."

But that was when he had recovered his patriotism by means of a brief exile in Germany. Byron and Shelley, who were less critical and more genuinely in love with individualism in all its aspects, never performed this *rolle-facc*. Style is not Mr. Hancock's strongest point. We have found the shortness and jerkiness of his sentences a decided drawback to the pleasure of reading this praiseworthy little study. A bibliography would have greatly increased the value of the book.

—The work of editing Juvenal has been done, once and for all, by Mayor, but his famous edition does not at present include the Sixth Satire, though we understand that his notes on it are collected in readiness for publication. Moreover, Mayor's commentary is somewhat overweighted with illustrative matter, so that it is used in this country, at any rate, rather as a book of reference than as a text-book. The new edition of the 'Satires,' by Mr. J. D. Duff of Trinity College (Cambridge: University Press; New York: Macmillan), is doubly welcome. The scholarship of the editor of Munro's 'Lucretius' is peculiarly accurate and unpedantic; he combines a close knowledge of his period with a neat gift for pointing out modern parallels—an exercise that calls for the utmost discretion and tact, if it is not to cheapen and mislead. Mr. Duff's enterprise in including the Sixth Satire makes his edition especially valuable. He has selected for commentary no less than 530 out of the 661 lines of this brilliant and neglected composition. "Satires III. and X. are prostituted by parliamentary and vulgar use, and should lie by for a while," wrote Fitzgerald. They have certainly received undue prominence at the expense of the "Legend of Bad Women." The Sixth Satire, which is Juvenal's longest and most epigrammatic, contains his advice to one about to marry to choose some quicker form of suicide: "Who would marry when he could buy a rope and hang himself?" The scathing pictures of the athletic woman and of the woman who knows Greek—"Give me a wife who doesn't know Greek," said Martial, about this time—the studies of life in a large city corrupted by foreign influences, read with amazing verisimilitude after the lapse of eighteen centuries. Mr. Duff's commentary is lively as well as scholarly. On the whole, his is an edition that should replace all others than Mayor's for general use in schools and colleges, and, as we have indicated, in the matter of the Sixth Satire, it supplies Mayor's omissions.

LORD HALIFAX—THE STATESMAN.

The Life and Letters of Sir George Savile, Bart., First Marquis of Halifax, etc. With a new edition of his works, now for the first time collected and revised. By H. C. Foxcroft. 2 vols. Longmans, Green & Co. 1898.

Every one agrees that George Savile, First Marquis of Halifax, merits a biography; the eulogies of Hume, of Ranke, of Mackintosh and Macaulay, are more than sufficient to vindicate his title to fame. Every judicious reader of Mr. Foxcroft's meritorious volumes must admit that Halifax has not yet received the monument he deserves, for the present 'Life and Letters' is, indeed, the material for a biography, but is no more a biography than a huge heap of bricks and a lot of mortar are a house. Meanwhile, a critic who acquiesces in the claim of Halifax to posthumous reputation may feel some difficulty in answering the following question: Wherein precisely consists the greatness of Halifax?

The inquiry is one to which it is not at first sight quite easy to find a reply. Halifax cannot be numbered among the heroes of the English nation. He had about him nothing heroic. His caution and his timidity, to use no harsher term, were as obvious as

his prudence and sagacity. He does not belong to the same class as Hampden, or Cromwell, or William III., or Strafford, or Laud. The names of these men even now excite vehement admiration or virulent hatred; they all exhibit an element of greatness; they are the progressive or reactionary statesmen of a Revolutionary era—this holds good even of Laud, though he remained to the end of his life a sort of glorified Don, whom the freak of fortune removed from the headship of St. John's College to the Archbishopric of Canterbury at a crisis in English history when an archbishop needed the genius of a statesman. But the name of Halifax can at the present day kindle no strong emotion. You can eulogize his virtues and show that they more than balanced his defects; yet an admirer can judge Halifax with calmness, and admit that he did not rank among the highest class of statesmen.

He was, further, in no way the centre of English politics. He played a remarkable and for one moment (when he insured the rejection of the Exclusion Bill) a splendid part, but he was never the leader of the nation. Men far inferior to him, intellectually and morally, were the leading actors on the public stage. The reputation of Sidney and of Russell, and the fame or the infamy of Shaftesbury, have impressed themselves on popular imagination. The name of Halifax would be—most unjustly, we admit—forgotten were it not for the sympathetic criticism which he has received from men of letters. He is a good deal better known to historians than to history.

Can it, again, be asserted that the statesmanship of Halifax was vindicated by extraordinary success or wisdom? Macaulay seems to answer this inquiry with a decided affirmative, and, were his reply unflinching, the present writer at least would yield to the authority of the great historian. But Macaulay's language is indecisive: "What distinguishes [Halifax] from all other English statesmen is this, that through a long public life, and through frequent and violent revolution of public feeling, he almost invariably took that view of the great questions of his time which history has finally adopted." The "almost" which we have underlined is, in the mouth of a writer not much given to qualifications, preeminently significant. Macaulay's love of truth, which, despite the strength of certain prejudices, was his most marked characteristic, prevented his bestowing upon a statesman whom he profoundly admired the complete eulogy with which the historian wished to close his account of his hero. That Halifax was sagacious in noting the flow and ebb of opinion, and that the coolness of his intellect, no less than the moderation of his passions, preserved him from the errors of enthusiasm or fanaticism, is certain; but that, on the Whig view (which, we may add, is in the main the true view) of the times in which Halifax lived, he made, in matters of judgment, tremendous mistakes, is certain.

It is, for instance, certainly arguable that the rejection of the Exclusion Bill was a blunder. The whole of James's subsequent career shows that he could not be trusted with power. It suggests, if it does not positively prove, that towards the end of the seventeenth century a sincere and ardent Roman Catholic could not with safety to the commonwealth be King of England. Unless this be true, the whole policy of the Whigs, and

the Revolution of 1688 itself, were blunders. But if it be true, as Macaulay certainly believed, and with reason, that the safety of the nation was imperilled by allowing James to mount the throne; if it be true, as all the Whigs and many Englishmen who were not Whigs believed, as indeed many of them still believe, that the existence of a Roman Catholic dynasty must be found incompatible with the maintenance of English liberties and English Protestantism, what course was dictated by wisdom except the exclusion of James from succession to the crown? "The Exclusion Bill," it will be said, "was rejected and English liberty was saved." The reply to this argument is obvious; it is given by every page in Macaulay's History. English liberties were placed in deadly peril. It was the folly of James and the energy of William, not the foresight or the wisdom of Halifax, which saved them from destruction.

But the case against Halifax, as regards the Exclusion Bill, is stronger than at first sight appears. There was a great deal to be said for preventing James's accession to the crown; there was something to be said for allowing James to inherit the ordinary rights and responsibilities of an English king. The policy which was rejected by the nation would, as we now know, have averted the peril of despotism and the necessity for a revolution, but would probably have rekindled civil war. The course which was adopted by the nation at any rate postponed civil conflict, and might possibly, had James exhibited common prudence, have been ultimately found compatible with the maintenance or the foundation of Parliamentary government. But a third policy was conceivable which, while seeking to avoid, in reality combined, the disadvantages both of rejecting and of passing the Exclusion Bill. It consisted in limiting beforehand, by act of Parliament, the authority of James when he should become King, and then allowing him to take the crown as little more than a nominal monarch. But this was the policy of Halifax. "He assured me," says Burnet, "that any limitations whatsoever that should leave the title of King to the Duke might be obtained of the King, but that he was positive against the exclusion"; and Halifax, when he induced the House of Lords to reject the Exclusion Bill, seems to have expressed his confidence in his own capacity to supersede the Exclusion Bill by a practical scheme of limitations (p. 217). This policy of limitations, characteristic as it is of Halifax's intellect, assuredly bears failure on its face. It might for a moment have averted civil war, but it insured a violent political conflict on the death of Charles the Second. No wonder that, to use the expressions of Mr. Foxcroft, James entertained "a mortal hatred" for the limitation project, even as contrasted with the Bill of Exclusion. The wonder is that any one could have supposed that James as King would have loyally respected a law which he detested as Duke of York. If Halifax had any real belief in any plan of limitations, he took a view of the situation utterly different from any view finally adopted by history.

Was, again, Halifax right or wrong in declining to join in inviting the Prince of Orange to invade England? The question is a crucial one. If Halifax was right, the Whig leaders were wrong. But, to speak plainly, there is no single point on which the policy of the Whig leaders has been more emphatically justified by the events

The Revolution of 1688 was the most successful revolution on record. If events had progressed as might have been expected—that is, if either William or Anne had left descendants—the English Constitution would have been saved without the evils, which were undoubtedly considerable, of keeping a foreign and unpopular dynasty upon the throne; and the evils flowing from the accession of the House of Hanover were, after all, trifling. It is of course possible that Halifax's courage rather than his wisdom was at fault, and that his refusal to join the Whig Lords arose from the desire to save his own head, rather than from a wish to avert evil from the country. But this suspicion, though natural, is unjust. The intervention of foreigners is an incalculable evil. There is nothing discreditable in hesitation to invite the invasion of a Dutch Prince at the head of a Dutch army. But the statesmen who declined to invite William did not anticipate the verdict of history. Fanaticism has occasionally true provisions denied to statesmanlike prudence.

If, then, Halifax was not the leading English statesman of his age, and was not gifted with the foresight which invariably discerned the true path of political progress, what are the qualities which have enlisted the admiration of the foremost among historians, and well entitle him to a fame which he has hardly as yet acquired among the majority of Englishmen? The answer is, that Halifax was the earliest of really parliamentary statesmen. He was also the first in rank, if not in date, of English political pamphleteers.

As you read his *Life*, and still more as you read his writings, which are, at the present day, far more noteworthy than his statesmanship, you feel that you have passed into a quite modern age. At Halifax's birth, 1633, the civil wars had not begun. At his death, 1696, not forty years had passed since the close of the Protectorate. Englishmen of today are as far removed from the times of Palmerston as was Halifax at his death from the age of Cromwell; yet Halifax distinctly belongs in policy, in feeling, and in thought to the England, not of the seventeenth, but of the eighteenth, and even of the nineteenth century. He exhibits the moderation and the eloquence of the best Parliamentary statesmen; he already watches public opinion after the manner of an experienced Parliamentary hand. He hates violence. He trusts in trimming, or, to exchange the political slang of his day for the political slang of our own time, he is an Opportunist. We cannot conceive of his taking part in a meeting of Independents where prayer was intermingled with politics. He resented, no doubt honestly, the accusation of atheism. His Christianity, such as it was, had no connection with his public life, and was a very cool specimen of the rather chilly "rational piety" so dear to the Whigs. Sydney Smith would have been a divine exactly after the heart of Halifax. Halifax came into the world fifty years, or a century, too early—he belonged to a later age; he would have found his proper place in any Liberal and aristocratic cabinet from the time of the elder Pitt to the time of Palmerston, and this anticipation of the failings and the virtues of later times runs through his literary no less than his political achievements. He is the greatest of that long and splendid line of English pamphleteers which is at last, it may be feared, coming to an end. It is still,

indeed, represented by one writer as public-spirited as he is brilliant, but it would be difficult to find, either in England or in the United States, any other representative of the school whereof one may call Halifax the founder. Nor was it only in his political pamphlets that he opened and marked out the path of English literature. His *'Advice to a Daughter'* sets forth what is called the philosophy of life in the language of the men of the world, and gives to very practical counsels the additional interest of a slight intellectual flavor. It is the model which has been followed down even to the present day by English essayists.

But the writings of Halifax deserve separate treatment. What ought, on this occasion, to be noted is, that Halifax combined the characters of the statesman, the pamphleteer, and the practical moralist. It is the union of qualities, all remarkable in themselves, and all in a special sense belonging to the men of a later age, which is the true foundation of the fame of Halifax. It is this combination which gained the admiration, we might say the affection, of Macaulay. Mr. Foxcroft, after the fashion of the present day—a fashion, we are well assured, as transitory as it is unreasonable—is apologetic for acknowledging any virtue in Macaulay, and marvels at "a display of imaginative insight rarely evinced by the great Whig historian." Never was wonder more misplaced. How could the calm statesmanship and the literary gifts of Halifax fail to charm the last Englishman who has been at once a leading statesman and a great man of letters?

Spain; Its Greatness and Decay (1479-1788).
By Martin A. S. Hume. With an Introduction by Edward Armstrong. Cambridge: University Press; New York: Macmillan. 1898.

This sketch of Spanish history, which fills a place in the Cambridge Historical Series, is very distinctly defined, so far as its chronological limits are concerned. Measured by reigns, it extends from Ferdinand and Isabella to Charles III.; and by great landmarks in political development, from the union of the two chief Iberian kingdoms to the French Revolution. During almost the whole of these three hundred years, Spain was either the leading Continental Power or a state in the first class. Of course her military prestige waned during the Thirty Years' War, but even under the later Hapsburgs she had armaments on both elements, and at the worst she never dropped out of the reckoning altogether. However weak she might be inherently, she took a hand in current contests, often painting her lath to resemble iron, but never being wholly destitute of forces that knew how to die. The state of chronic feebleness and revolution which has been her fatal characteristic within recent memory, dates from the death of Charles III., and does not therefore come within the range of the present narrative.

This volume represents a divided labor, in which the larger portion falls to the share of Major Hume. Mr. Armstrong's introduction, however, is much more than a word of preface. As regards scale, it is almost in due proportion with what follows, and seems to have been written that Major Hume might begin at his favorite period, the second half of the sixteenth century. The interval between Ferdinand and Philip II. Mr. Armstrong divides into three sections, the first

closing at the death of Isabella and the second at the peace of Cambray. The one point upon which, as it appears to us, he most strikingly insists is the tendency of Charles V. to become more and more a Spaniard in sympathy and political disposition. He dwells upon the gradual relinquishment of the Emperor's Burgundian policy, and sees in his final retirement to Yuste in Estramadura, the fit climax of his changed views. "Out of all his wide dominions he found himself at home in Spain. The Flemish alien had become a Spaniard."

Despite Mr. Armstrong's contention that, in the end, Charles V. identified himself with the land of his mother, it seems pretty well agreed between him and Major Hume that the reign of Philip II. is the acme of distinctively Spanish greatness. At this point the authorship changes, and Major Hume writes once more on a subject with which his work at the Record Office has rendered him thoroughly familiar, and which he has already treated in more than one book. We have not discovered that he adds anything of consequence to what he has before written concerning the political leader of the Catholic Reaction. In 1897 he contributed a volume on Philip II. to the "Foreign Statesmen" series, and from this he draws copiously, both for his general propositions and for phrases or sentences. His conception of Philip is still the same—that of a narrow, unimaginative, conscientious man, who loved his country and worked hard for it, but managed to spoil every enterprise by formalism and the dependence of all generals or admirals on himself.

The main stages of Spanish decline under the later Hapsburgs are as well known as the protruding chins of those rulers. Major Hume has no difficulty in accounting for the facial distortion, but pays slight attention to the hidden causes of national ruin. Still, the proximate causes are clearly discernible in his picture of clerical aggression, royal imbecility, militarism, and the shameful rule of the "Lermas, the Olivares, and the Valenzuelas." Underneath the surface of court intrigue which purports to represent national government, he sees a "generous, sound-hearted people," led wrong by an unfortunate historical development, rather than betrayed by its own sins. Major Hume's sympathy with the Spanish folk is strong, without at all blinding him to their racial and political shortcomings. Speaking of Olivares's attempt at the unification of institutions, he says:

"The policy itself, however ill-timed, was not in itself unwise, for the lack of unity between the provinces of Spain has produced a plentiful crop of troubles lasting to the present day. In short, Spanish pride wanted the glory of empire without paying for it. Olivares was no wiser than his contemporaries in economic science, and could only raise money by hampering industry which provided money. . . . It is lamentable and pathetic enough, but it is unjust to saddle the blame upon Olivares, who found the system already at work, and whose great sin was that he tried to insist upon all Spaniards making equal sacrifices to pay for the barren pride which all Spaniards shared."

We must express some surprise at a division of space which left Major Hume with only ten pages at his disposal for the reign of Charles III., the most honest and encouraging period in Spanish history since the sixteenth century. Not only does its length (1759-1788) entitle it to a fuller consideration than it receives, but the liberal

experiments then tried and their fair measure of success deserve an ample description. As Buckle long ago pointed out, Charles III. was the ablest ruler of his age with the exception of Frederick the Great, "whose vast abilities were tarnished by a base rapacity and by an incessant desire to overreach his neighbors." Major Hume also calls Charles "enlightened, generous, and just; sleepless in his vigilance for the good of his people," and he is appreciative of Floridablanca's vigorous régime. But we could have spared a good many pages from the account of Philip IV. and Charles II. for enlarged detail concerning Spain as she was between the Seven Years' War and the French Revolution.

Papias and his Contemporaries; A Study of Religious Thought in the Second Century. By Edward H. Hall. Boston: Houghton, Mifflin & Co. 1899.

This book has not the musty smell which we expect from books of critical theology, and nothing of that "sacred dulness" from which few distinguished critics besides Renan and Strauss have been exempt. It is actually pleasant reading. It is written as if for the instruction of people of good intelligence, yet not specialists, and it will convey more to such than the whole series of Harnack's 'History of Dogma,' which covers, so far as published, much the same ground. In the body of the book, the careful studies underlying it are assimilated to the literary form, but in the footnotes and the appendix we find Mr. Hall conversant with the whole range of original documents and critical discussions pertaining to his subject, and moving about among them with a quiet confidence that is not excessive, but well within the limits of the writer's exceptional understanding of his subject in all its parts and implications. For it must not be understood that we have here a product mainly depending for its value on the special application of the last six years, during which Mr. Hall has had no parochial charge. Twenty-five years ago he published a small book called 'Orthodoxy and Heresy.' Its purpose was to show that orthodoxy was a theological fiction, that there had never been any such thing, for the reason that there had been differences of opinion in the Christian church from the beginning, with no authoritative voice to decide upon their merits one way or the other. During the interim between that book and this, Mr. Hall has evidently brooded long on those conditions with which he had much concern in his former study, and hence the ripe and genial quality of the present one. There is something quintessential about it, as of a repeated distillation.

Mr. Hall's procedure reminds us of that of Kuenen in dealing with the Hexateuch. As Kuenen takes the eighth-century prophets and works back from their clear indications to the writings generally supposed to be anterior to them, so Mr. Hall takes the second-century Christian writers, and works out from them into the New Testament problems. He first consults Papias, the first writer after the death of Paul who presents any marked individuality. He interrogates him as to the New Testament writings, and finds that midway of the second century he knew nothing of those writings, but something of a "Matthew" which was not our "Matthew," and a "Mark" which was not our "Mark." Moreover, we

find him valuing oral traditions of the Apostles' words much more highly than those written; and the average feeling of the century was of this kind. This is brought out very clearly in a second chapter, which considers such early writers as Clement and Ignatius and Polycarp and Barnabas, so-called, and with these the quite recently discovered 'Teaching of the Twelve Apostles' and 'Gospel of Peter.' From all these comes the same intimation—that, until far along towards the last quarter of the second century, our four Gospels had not been separated from other similar writings as of special value or authority. Chapter III. is mainly devoted to "two learned doctors," Justin Martyr and Marcion. Mr. Hall's treatment of Justin has no trace of that acerbity which Justin's name has heretofore excited in so many pious hearts, whether of those believing or denying that his 'Memoirs of the Apostles' were our present Gospels. If they were, he took no pains to give the author's names, and Mr. Hall plainly inclines to the belief that they were other writings, and certainly that our fourth Gospel cannot be identified by one or two phrases of similar character, as if its characteristic doctrines had not been in the air. But, for the reason that Justin's 'Memoirs' were read regularly on Sundays, it is plain that the Old Testament writings were ceasing to be the only sacred scriptures, though which Christian writings, and which alone, would take a place beside them as of equal value, it would require another century, and longer, to decide.

Mr. Hall's discussion of Marcion and his writings, though perfectly judicial, has more of the warmth of advocacy than any other part of his book. Marcion cherished the Epistles of Paul as genuine Christian writings, and one Gospel, which may have been an earlier form of our present Luke—but he made no such claim for it, as he would gladly, it must seem, have done if he had had any excuse for doing so. Marcion was an early anti-Semite, denying the sacred character of the Hebrew scriptures and that Jehovah was the true God. He carried somewhat farther the un-Jewish sentiments of Paul, whom he admired so much. It is Renan's opinion that we are indebted to him for the preservation of Paul's letters. It is certain that learned doctors of his time took much offence at his enthusiasm for the Apostle to the Gentiles. Mr. Hall has other uses for Marcion in his next chapter, but at this stage the main one is to show how little knowledge he had of our New Testament as such. It is no part of Mr. Hall's business to exact for our Four Gospels later dates than are assigned to them by the somewhat reactionary criticism of Harnack and others. He would, however, suggest that the Synoptic Gospels, in order to go back to 70-80 A. D., must drop a good many of the *impedimenta* which they have been carrying since 200 A. D. or thereabouts. Those early Gospels were not exactly our Gospels, but something like them, and remained fluid for well nigh another century, undergoing constant diminution and addition.

"The progress of investigation may be said to have shown less and less token of deliberate or fraudulent manufacture of ancient records, and more and more evidence that the private or primitive documents out of which the New Testament sprang date back in some form close upon apostolic times. . . . The value of such a sketch as is here attempted, if value it have, lies not at all in weakening the foundations of a struc-

ture which, after all is said, must have its foundations in the distant past, but only in giving some notion of the early stages of its formation."

The effect, however, is not so confined as it is here represented as being. Obviously it includes the persuasion that the New Testament writings have no supernatural or peculiar sanctity. The action of Mr. Hall's method on the contrary persuasion is not that of the farmer with his pick and shovel breaking up the lingering drifts of winter's snow, but that of the spring winds that dissolve them in a more gentle but not less effectual manner.

"The Millennial Reign" is a chapter showing what good orthodoxy, as good as any, this doctrine was in the second century, when the survival of the soul apart from the resurrection of the body was accounted a most damnable heresy. The next following chapter extends the same criticism to the Gnostic speculations of the second century, and exhibits Paul's later Epistles as profoundly implicated in those speculations; as were similarly the speculations of the Fourth Gospel and the related Epistles. The concluding chapter, "The Mystic Gospel," is the most attractive presentation we have ever seen of a view that differs widely from that of the Christian apologist. "It will be impossible," says Mr. Hall, "to overrate its power or to be blind to the splendid assurance and sustained imaginative force with which it lifts the entire earthly scenery of Christianity into visionary spheres." Yet, "with the Fourth Gospel alone," we are assured, "we should never have guessed that Jesus of Nazareth led a human life, ending in a human tragedy." A note twelve pages long sums up in a very clear and convincing manner the whole modern discussion of the "Date of Authorship of the Fourth Gospel." Mr. Hall's position is that of Prof. Toy, viz., that, could the date of the Gospel be pushed back to the beginning of the second century, its critical significance would be much the same as if a later date were fixed. The Gospel would be no more historical with the earlier than with the later date.

Those who remember Dr. Holmes's description of Emerson as "an iconoclast without a hammer, who took down our idols from their pedestals so tenderly that it seemed like an act of worship," will think, perhaps, that another such is here. Mr. Hall's tenderness is unmistakable; his admiration, too, of many things which he cannot assign to their traditional places; likewise his human sympathy with forms of thought quite different from his own.

In the Australian Bush, and on the Coast of the Coral Sea. By Richard Semon. Macmillan Co. 1899. Roy. 8vo, xvi, 553 pp. Illustrated.

The author left Germany in 1891 with the intention of devoting two years to the study of the vertebrate Australian fauna, especially the development of the oviparous mammals and marsupials, and of *Neoceratodus*, a remarkable Australian fish. In pursuance of these objects he spent a good deal of time in Queensland, Northeast Australia, besides visiting the district of Thursday Island, Torres Strait; the south coast of British New Guinea; Celebes and other islands between Papua and Borneo, in the group of the Moluccas; Java, Banda, and Singapore.

Neoceratodus, commonly known to Australian settlers as the "Burnett salmon,"

and sometimes called the "lungfish," is a large animal, representing a type more or less intermediate between amphibians and fishes, with many archaic characters; the fins are limblike, the tail pointed instead of forked, and its supposed nearest relatives occur as fossils. At the time of Dr. Semon's expedition, nothing whatever had been recorded in regard to the development of this animal, the study of which was expected to throw much light on the evolutionary history of fishes. The embryology of the duck-billed *Platypus* or *Ornithorynchus* was also at that time entirely unstudied, and but little was known in regard to the younger stages of the Australian marsupials. The field which he explored was therefore one of rich promise, and offered to the successful investigator exceptionally important scientific results.

The geographical distribution of the living *Neoceratodus* is limited to the upper waters of two Queensland rivers, the Mary and the Burnett; it obtained its name of "salmon," not from any external resemblance to a salmon, but because its flesh is of a reddish color. It is an uncommonly indolent creature, a general feeder, which will occasionally take the hook, but is usually caught by the Australian natives in small hand-nets. It cannot progress when out of the water, and, according to our author, does not, like its African relative *Protopterus*, bury itself in the mud in times of drought in a kind of hibernation. Although it has in addition to its gills a sort of lung by which it can breathe air, it does not appear to be able to exist entirely without water; the most that Dr. Semon will admit in this direction is that, when severe droughts reduce a stream to a series of fetid mud-holes and slimy pools, the lungfish is able to survive when the other aquatic animals succumb. The spawn is gelatinous and very delicate, requiring the greatest care to keep it alive for study.

Dr. Semon, with some white assistants and a number of natives, camped in the vicinity of the Burnett for some months, and, after much trouble, succeeded in obtaining and preserving a series of the eggs in various stages. The hours of waiting were improved by collections of the birds and mammals, especially the young stages of *Echidna*, and several marsupials. His study of the eggs of *Neoceratodus* showed that the development is much more like that of amphibians than that of any other known fish; thus confirming the theory of its intermediate character which had been based on the anatomical characters of the full-grown animal.

The account of Dr. Semon's labors and travels is destitute of any very startling adventures. He describes in a pleasant way his daily occupations, the scenic characteristics of the regions visited, and the impression made upon him by their native inhabitants. He formed a somewhat higher opinion of the Australian blacks than that usually expressed by travellers. The relation of his experiences on the coast of New Guinea is perhaps the most entertaining part of the book, as touching a region much less known to the layman than the other districts visited. The chief and in fact almost the only criticism which suggests itself is, that the author has dwelt somewhat too long on unimportant and personal matters, and thus increased the size and cost of his book as well as diluted its interest.

The illustrations are excellent, the maps

good, there is a sufficient index, and for those interested in and not yet familiar with the literature of the Malay-Australian region the work can be cordially recommended. It may be added that the translation of this work from the German original was made under the author's supervision, and that the technical scientific results of the expedition are being separately published under the title of *Zoologische Forschungsreisen in Australien und dem Malayischen Archipel*.

The Land Registration Act of Massachusetts, which took effect October 1, 1898. With an introductory statement, annotations, cross-references, and citations of cases bearing upon it. By Charles S. Rackemann. Boston: Little, Brown & Co. 1898.

Mr. Rackemann has rendered, in this little book, a considerable practical service to his profession and the public. He has not only published an annotated edition of the new Massachusetts Torrens law, but has put his finger upon the weak spot in the statute, and indicated concisely but clearly the constitutional question which will have to be met before the system can supplant that now in existence. The passage of the Torrens law in Massachusetts has already brought this question into the courts, and, while it is still *sub judice*, we are not inclined to express an opinion one way or the other; but the point involved is worth attention, as, should the statute be declared unconstitutional, it would seem as if a very serious difficulty had been encountered by those who are endeavoring to establish the Torrens system in this country.

The system is in essence one of title insurance by the State. Its object is to make the transfer of land as simple as that of personal property, by making titles incontestable. It differs in several respects from the present system of private title-insurance, which in the last twenty years has established itself in all the chief cities of the United States. The latter system insures the purchaser against eviction, just as fire insurance insures him against fire. He pays a small premium, and, if evicted by superior title, he recovers a sum of money which makes his loss good. But eviction cannot be prevented. Under the Torrens system, eviction is wholly impossible, and the insurance money goes not to the purchaser, but to any one having a superior title who may suffer from not being able to evict him. All titles once obtained from the State (for under the Torrens system the State is the issuer of the title) become non-contestable.

The objection made by Mr. Rackemann—and this we understand to be the sum and substance of the suit now pending in the Massachusetts Supreme Court—is that, under our constitutional system, this is impracticable, substantially because a Torrens law decree that the title of A. B. is valid and non-contestable, involves the summary adjudication of a question between A. B. and the whole world, and that our constitutions make no provision for such an adjudication by any summary process. A. B. comes into a Torrens court and demands a certificate of title for a piece of land bounded by land of persons unknown. The scheme of the act is that the court shall call on all concerned to come into court and prove any adverse claim or else for ever hold their peace. But the objectors say that such a method of

barring claimants to land is neither equity nor common law; that there can be no proper trial either *inter partes* or *in rem*; that it is not "due process of law," but deprives persons of their property otherwise than in accordance with "the law of the land." It is a nice point, and we do not profess to prophesy what view the Supreme Court of Massachusetts will take of it. Mr. Rackemann's book has been the signal for a battle royal over it, and all those who, like ourselves, heartily approve the principle of the Torrens system, will be glad to have the question of constitutionality (we have only mentioned the point principally involved) considered and disposed of by a court of last resort of high standing. The volume includes a Torrens System bibliography of nearly fifty titles.

BOOKS OF THE WEEK.

- Abrojal, Tullis. An Index Finger. R. F. Fenno & Co. \$1.25.
 Arnold's "Sweetness and Light" and Pater's "Essay on Style." Macmillan. 75c.

COMMEMORATION EDITION.

A History. Comprising a Narrative of his Life, with Extracts from his Letters and Speeches, and an Account of the Political, Religious, and Military Affairs of England during his Time. By SAMUEL HARDEN CHURCH, Litt.D., A.M.

With 18 photogravure illustrations, and battle plans of Marston Moor and Naseby. Royal 8°, size 6¼x9½, gilt top, uncut edges, pp. xvii + 542, \$6.00, net.

What, however, we confess interests us most in the volume is the excellent account furnished by Mr. Church of the military side of Cromwell's career. He appears to have neglected no means by which to arrive at the most complete and accurate account of the various conflicts of the prolonged Parliamentary War. We doubt whether a better description on the whole of the leading battles of the civil war has ever been furnished than in this work.

The Nation.

NEW YORK, THURSDAY, APRIL 27, 1899.

The Week.

It is over fifty years since John Stuart Mill, in the first edition of his 'Political Economy,' called attention to our practice of burning human beings alive, as an illustration of American character. The civil war led him to change his views about us, and erase these passages from subsequent editions. We consoled ourselves under his criticisms by the reflection that it was slavery that had started these things, and that emancipation would usher in "nobler manners, purer laws." It is thirty-four years since emancipation, and the practice of burning and torturing black men by the verdict of unknown mobs has steadily continued and grown. It is pretended now and then that it is caused by negro assaults on white women. As a matter of fact, the punishment of death at the hands of a mob is inflicted, with circumstances of more or less atrocity, at the South, for anything which happens to displease the local mob. We have no certainty that the assaults on women always occur, nor is any attempt to ascertain their truth, by any process known to civilized men, ever made. The fact is, that the burning and torturings increase in number, are not punished, and that the only legal efforts that we have heard of to prevent them have been, in Texas, disfranchising the sheriff, and in South Carolina, putting a fine on the county in which the outrage occurs. The impossibility of criminal pursuit is a striking illustration of the state of civilization which produces them.

Do we spend an hour's thought, after we have yelled over San Juan, on the question, what sort of young men a few years more of unpunished burning and torturing will give us? And what will be the effect of adding to these amusements more conquests and assaults and devastation among people who have never injured us, of rendering life still less sacred, the arts of peace still more contemptible, and the habits of plunder and slaughter still more exalted, by a few more aggressive wars, and holding up a few more avowed buccaneers for example to our youth? We may never get an answer to these questions, but as sure as the world is ruled by retribution, they will have to be answered. "The moving finger writes, and, having writ, moves on." Not all your drums or trumpets or flag-hoistings can avert the inevitable day of account.

We gave last week some graphic pic-

tures of the wholesale looting by our troops in the vicinity of Manila, on the island of Luzon, from the letters of private soldiers in Western regiments to their homes. We can now supplement these with a similar sketch of the pillage committed upon the island of Iloilo, found in the letter of D. M. Mickle, a private in the Tennessee regiment now serving in the Philippines. After describing the burning of the city of Iloilo by the natives, he thus tells of a visit to the house of the Spanish Governor-General, "the most gorgeously furnished house I ever saw in these islands";

"The building had been taken possession of by a United States officer, and he looted it to a finish. I suspected something and followed one of his men to the place. I expected to be jumped on by the officer as soon as I found him there, as I was away from my post, but it seems he was afraid I would give him away; in fact, we were both afraid of each other. He was half drunk, and every time he saw me look at anything he would say, 'Tennessee, do you like that? Well, put it in your pocket.'"

The writer says he is using some paper which he found in the house of a Spanish tax collector in Jaro, and adds:

"The house was a fine one, richly furnished, but had been looted to a finish. The contents of every drawer had been emptied on the floor. You have no idea what a mania for destruction the average man has when the fear of the law is removed. I have seen them—old, sober business men, too—knock chandeliers and plate-glass mirrors to pieces just because they couldn't carry them off. It is such a pity."

English setters-on of American Imperialists are just now loud in their cries that America must not "retreat." They trust we have too much pride and resolution to turn tail in the Philippines. But there is no question of retreating, except from so much of our blundering as it is still possible to retrieve by a change of method. It is not pride but stupidity to persist in a course proved to be insane. And it is certain that the events of the past five months have shown the President's plan for subduing the Philippines to have been ignorantly conceived, and to have utterly failed in execution. The Manila correspondent of *Harper's Weekly* distinctly affirms that the trouble dates from Mr. McKinley's first proclamation in December. The natives paid no attention to his fine phrases and buttery promises, but fastened on his statement that they must submit or die. A little real statesmanship then, a little wisdom drawn from the experience of others, a little docility in taking the advice of men like Sir Andrew Clarke and Dr. A. R. Wallace, would have prevented all the miseries that followed. Now that the frightful mistake is displayed to all the world, it is not a retreat, it is only a resumption of common sense, to go back and do, even if belated, what should have been done in the beginning. The thing

to remember is that Mr. McKinley can stop all this wanton slaughter in the Philippines by one short cablegram. He can order an immediate cessation of all aggressive military operations. He can insist on peaceful negotiations with the native leaders, satisfying their legitimate desires, and at the same time discharging our whole international duty. Will he do it? Let the whole bench of Methodist Bishops ask their brother McKinley why not.

The London *Spectator* has for a good while preached colonization to Americans with great assiduity, though with extraordinary ignorance of the conditions of the problem; but in a recent number it has begun to preach them with "passionate earnestness." This is what the editor preaches:

"One thing we would impress upon the Americans with passionate earnestness. Let them have only a moderate number of white men, but let all of those picked men hold important posts and have large salaries and not merely a living wage. Let them adopt, that is, Lord Cromer's admirable principle, and have American heads and Filipino hands. In each central department and each provincial district an American brain must control, must enforce responsibility, and, most important of all, must see that equal justice is done; but the executive hands may well, nay, had better, be inhabitants of the islands."

There are one or two things we must say to him, also with "passionate earnestness." The first is, that this advice in which he is expending himself on the Americans, reaches only a few hundreds of them in the large cities, and does not produce the smallest effect except amusement. The second is, that he evidently does not know enough of the conditions of American political life to make his advice of the slightest use to people, even if it reached them. There are about two dozen things which make his system of colonial government unlikely to be set up until long after he is dead. There are about one dozen which, as things stand at present, would prevent its working well even if set up. We advise him, for the sake of his reputation as a political philosopher, to begin his studies of American politics in an entirely different direction. We would, in his place, enter on this field of knowledge by an inquiry into the reasons which prevent President McKinley from removing Secretary Alger. This is the most interesting question in American politics to-day.

In a letter from a Nebraska soldier to his family, received at his home after the cable had announced his death from wounds received in battle, he said: "I am not afraid, and am always ready to do my duty, but I would like some one to tell me what we are fighting for." An-

other Nebraska soldier, J. E. Fetterly, has written a letter, published by the *Omaha World-Herald*, which is no less significant of the feeling that prevails among our troops. After some interesting stories of personal adventure, he discusses the general situation, and says:

"Some think the insurgents are disheartened, but I think they will make a desperate struggle for what they consider their rights. I do not approve of the course our Government is pursuing with these people. If all men are created equal, they have some rights which ought to be respected."

He goes on to give his own observations as to the intelligence of the natives; says that he has found but few who cannot read and write both their own and the Spanish language; tells of stopping the school-boys on the streets to examine their books, and of its being "no uncommon thing to find boys of fourteen and fifteen and sometimes younger with algebras, geometries, or a general history, sometimes a natural history"; says that while, of course, the educational facilities are not so good outside of Manila, the Catholics have established schools in the provinces; and concludes his review with the remark that, "generally speaking, I could not call the people an enlightened race in the sense we use the term, but if I consider their geographical position and the influence of climate and their limited opportunity of educational advantages, and the poor inducements there have been for higher education, one would be favorably impressed with the progress they have made."

There is a great hullabaloo in the imperialist organs about "treasonable and seditious communications" sent from this country to the volunteers in the Philippines, advising them not to reenlist; and terrible threats of "exposing the traitors." There is not the slightest attempt at secrecy about this matter. A fortnight ago a meeting of the parents, relatives, and friends of the soldiers in the Nebraska regiment which is serving in the Philippines, was held in the State-house at Lincoln, to promote the movement for their early return home, now that their term of service has been ended by the exchange of the ratifications of the peace treaty. The meeting was attended by delegates from the home towns of almost all of the companies. Every speaker warmly urged the importance of strongly presenting to the Administration the earnest feeling of all concerned that the regiment should be brought back at once, and a resolution was unanimously adopted appealing to the President to muster the troops out of service as soon as possible, giving as reasons their early enlistment, their valiant service in the field, and the fact that the cause for which they enlisted (the freeing of Cuba from Spanish rule) had been gloriously won. In the course of the discussion, Mrs. C. E. White of Omaha reported that the "Ladies'

Auxiliary," realizing that the soldiers would want to know how their parents, relatives, and friends felt about their continuing in the service, had sent the following telegram to Manila: "Boys, don't reenlist; insist upon immediate discharge"; and that word came back that the telegram had reached Manila all right, but could not be delivered, as it was held by the Government censor. We have here another illustration of our adoption of Spanish methods—the American Government refusing to let American soldiers know how their fathers and mothers feel about their fighting to deny another people the right of self-government.

The loss to the nation from the retirement of Speaker Reed is appreciated only when one considers the men suggested as his successors. The whole lot does not include a single man possessing the distinction which ought to be an indispensable qualification, nor one who has displayed on the floor that force, and especially that power of resistance, which are the qualities most imperatively demanded in the incumbent. They are simply men of respectable ability and of consistent partisanship. Not one of them would ever think of doing such a thing as Mr. Reed did when he voted against the Administration measure for the annexation of Hawaii, or of thwarting such a scheme, pushed by the McKinley-Hanna syndicate, as the Nicaragua Canal job. Mr. Reed's great service during the past two years has been as a brake. Nobody who is mentioned for the Speakership of the next House could be depended upon to check the wildest schemes of extravagance in expenditure or recklessness in governmental methods.

Ex-Governor and ex-Senator Oglesby of Illinois died on Monday at his home, in his seventy-fifth year. He was one of the rough diamonds of American political life—a type that was plentiful fifty years ago, and of which the very highest example was Abraham Lincoln. Lincoln and Oglesby began to be known beyond the boundaries of their own State about the same time—that is, in 1858, when the former was a candidate for the Senate against Douglas, and the latter was a candidate for Congress in one of the districts of Central Illinois. Both had been Old Line Whigs, and both had attached themselves to the rising Republican party. Both were defeated in this campaign, and both rose to eminence a little later. When the civil war began, Oglesby took the stump to encourage volunteering, but without any intention then of going to the war himself. His efforts were so far successful that a regiment was soon in readiness to go to the front, provided he would lead it. He promptly accepted

his responsibilities, went to the front, was desperately wounded at Fort Donelson and reported dead, but recovered and went again to his duties in the field. After the war he was elected Governor of Illinois and Senator of the United States. He never showed trepidation in any place where duty called him, except, perhaps, in the labor troubles in East St. Louis, where he was subjected to some criticism for delay in suppressing a riot. This was a slight blemish, however, on a long, honorable, and useful career.

Gov. Roosevelt has scored a notable and distinctly personal triumph in the passage of the bill which repeals the Black "starchless" civil-service law. It is very seldom that a Governor of the same political faith as his immediate predecessor can accomplish such a feat as this is, for it amounts to the undoing of that predecessor's most cherished official achievement. Mr. Black, in fact, seemed to have been lifted by the Republican boss from obscurity for the single purpose of "taking the starch out of our civil service." He announced this as his most earnest desire when he entered upon his duties, and he devoted himself to its accomplishment with more zeal than he displayed in any other cause. His law was about the only trace he left of his individuality upon our statute-books, and this has now been erased by his successor. In bringing about this result, Gov. Roosevelt has displayed much courage and pertinacity, and has done the State a valuable service. He has put back the starch in more than its original quantity, and the main outcome of Gov. Black's exertions is the securing for the State of a more thoroughly reformed civil service than we had before his advent. Our laws on the subject are now more harmonious, more thoroughly united in a scientific system, than they have ever been.

There was some extremely valuable testimony in the Mazet inquiry on Friday, in spite of the general desire on the part of the Tammany witnesses to imitate Croker's manners and give the committee impudence instead of information. Nothing more thoroughly illuminating has been elicited than Andy Freedman's unwilling description of the way in which he conducts the business of the Croker Surety and Bond Company, which was started immediately after the election of 1897, for the fiendish purpose of undermining the business of the Platt Family Surety and Bond Company. Freedman seemed to have a very faint idea of the complete manner in which he "gave away" the real nature of this financial enterprise. He admitted freely that there was little behind the enterprise save Croker's personality. "I was very anxious," he said, "to have the

Crocker's friendship and association in this company on account of the legion of friends that he has got all over this country; and I realized if Mr. Crocker would take stock and join me in this enterprise, it would be most successful, because he has got more men, more friends, that are willing to serve him through friendship than any other man in this country." The division of profit seems to have been handsome on both sides. Crocker gives Freedman a salary of \$15,000 a year, and also commissions on the business. Freedman gives Crocker a share of the profits, but will not disclose the amounts which he has thus paid over, because that is "private business."

Some time ago, when the Tammany influence with Crocker at its head was interested in a street-railway corporation, the concern was spoken of by Bourke Cockran as "wind and a 'pull' capitalized." The Crocker-Freedman Company appears to be merely the Crocker pull capitalized, with Freedman and Crocker dividing the profits. It is inconceivable that there should be other stockholders, for Freedman testified that although he and Crocker were making great profits, there had never been any dividends. Crocker said on the stand that he had received "dividends" regularly, but he undoubtedly meant the rolls of bills that Freedman had handed to him. It is not the least interesting revelation of Freedman's testimony that this extraordinary company was in the habit for some time of doing a joint business with the Platt family company, with a square division of the profits. Later, a cut-rate warfare has broken out between them, but that has been brought about, we suspect, because of the superiority of the Crocker pull to the Platt pull, as a capitalized attraction. It is a great pity that a full investigation of the doings of both companies could not be made, in order that we might see at how many points the systems of our two bosses harmonize completely.

It has been clear for some time that Mr. Crocker thinks that his colleague in the boss business, Mr. Platt, has been guilty of a breach of the "amenities of the profession" in allowing the investigating committee to make inquiries as to the business activities of his sons. He intimated as much on the witness-stand when he asked the Committee why they did not examine the Platt family law firm and see what they could discover there. On Thursday, in the Senate, at Albany, two of Mr. Crocker's especial friends took up the subject and spoke with feeling and frankness about it. Senator McCarren said that "the people had never been treated to such an exhibition of political ingratitude as is manifested in this investigation"; that "everybody knows the relations which

exist between political leaders," and that "it is pretty generally understood that Mr. Crocker has treated the Republican leader in a fair and manly way." He was free to say that he knew of no instance in which Mr. Crocker "would signify a willingness to go into such dirty work as engages this committee," and if the "Republican leaders responsible for it had a spark of manhood they would feel contempt for themselves." Tom Grady took a similar view, as became a man who had been hit hard by the same investigation, and remarked that "no Democrat had ever pointed the finger of scorn at Mr. Platt because one of his sons was at the head of a trust company, and another was in a law firm going from one department of the State government to another acting as attorney." Perhaps Mr. Crocker may be induced later, in view of the ungrateful and indecorous conduct of his fellow-leader, to give us specifications of what Senator McCarren styles his "fair and manly" treatment of Platt, in return for Platt's great service in putting him in possession of this city.

Quay has been acquitted. The jury took a good many hours to reach a verdict, but they finally said, "Not guilty." The misfortune of the prosecution was the fact that its evidence was largely technical, while the defence made a strong point of circumstances which suggested the idea of conspiracy among the opponents of the boss. However firm the moral conviction of Quay's guilt may be in the community, he has been tried by a jury and has been acquitted. The verdict cannot fail to help him immensely in his fight for the Senatorship before the Legislature which will be chosen next year. Meanwhile "the Governor whom I own" has enabled Quay still to wear the title of Senator by appointing him to the office now that the Legislature has adjourned, although there is not the slightest reason to suppose that the Senate next winter will recognize his right to a seat under such an appointment.

The full text of Sir Michael Hicks-Beach's budget speech shows that its cabled summary did not do justice to the extraordinary reason he advanced for taking \$10,000,000 a year out of the sinking fund. The real reason was, of course, that he shrank from levying taxes for that amount. It might show the taxpayers that Imperialism had its unpleasant little bills which cannot be bilked. But Sir Michael gave as his ostensible reason for dipping into the sinking fund the fact that it was necessary to remove temptation from the path of future Chancellors of the Exchequer. He said that if the sinking fund were allowed to go on increasing, the "infallible result" would be that Parliament would

some day seize on it all so as to remit taxation. To prevent that calamity, he proposed to seize on a part of it himself. He so dreaded the lack of firmness on the part of future Chancellors, that to save them he would relax his own firmness. Distrusting their virtue made it necessary for him to do a little anticipatory sinning himself. The *London Economist* savagely calls all this "clap-trap," but it is really only the historic excuse of the boy caught robbing the orchard: other boys would have stolen the apples if he had not taken a few himself as an awful warning to them.

A case was brought before the Police Court in Paris on Friday, in which the Comte de Dion, the head of an automobile factory, was charged with violating the law which fixes the number of hours that constitute a day's labor in France. This law was passed in 1848, and it places the limit at twelve hours, which certainly seems liberal, if it is wise for the law to interfere at all. It imposes a penalty of one franc per day on the employer for each man who exceeds that limit in his employ. If a workman labors twelve hours for his employer, and then does additional work for himself, the law does not concern itself with this sort of overtime. In the case of the Comte de Dion, the workmen in his factory, six hundred in number, presented a petition that they be allowed to work overtime, as they received extra compensation therefor. The court would not consider this petition. It held rightly that it sat to enforce the law, not to connive with workmen or others in breaking it. The defendant pleaded that demands upon his factory and other automobile works were so great that orders could not be filled without working overtime. If dull times should come later, he wanted to know whether the court would find work and wages for his laborers. The court replied promptly that it would not, but that it would enforce all the laws of which it had jurisdiction when properly brought before it. If this was a bad law, it was for the defendant and his employees, who were dissatisfied with it, to go to the Legislature and ask for its repeal. Judgment was then rendered against the Comte de Dion for eight francs, being the minimum fine for eight laborers who were named in the proceedings. Of course this fine, although trifling in itself, contains the germ of much larger ones if the offence is repeated. It brings up the question, however, whether laws limiting the hours of labor for adults are ever really useful. Those which limit the hours of child labor are based upon other considerations, but in the case of full-grown persons who really desire to work overtime for the sake of extra compensation, it seems a hardship and an injustice that they should not be allowed to do so.

A "PAROCHIAL AFFAIR."

Everybody has read with horror the account of the execution of a negro in the State of Georgia for a heinous crime on Sunday afternoon. He had no legal trial, and an ex-Governor of the State made a faint appeal to the mob which executed him, to let "the law" take its course. The man was chained to a tree and burned alive; but before he was burned, his ears and fingers were cut off one by one, and after he was dead the body was cut to pieces with jack-knives, and his heart and liver were taken out and divided. Such things, and possibly worse ones, can easily be found described in the stories of Indian wars. The Iroquois were particularly fond of this sort of amusement in Canada. What makes this most interesting is that the perpetrators of the deed wear broadcloth, go to Christian churches, give tolerably large sums to missionary societies, and, what is best of all, are among those who are to-day engaged in the Philippines in shooting the gospel into and in "civilizing" brown men. It is very important that this account should not reach the Filipinos, because it will probably make their resistance more bitter and prolonged, and will prevent the proclamation of the Commissioners being read with due reverence.

By way of precaution, the Commissioners should issue another proclamation, pointing out to the Malays that if they refrain from the crime for which this negro was executed, they need not fear burning or mutilation; that all that this shows is the horror our people have of crime; and that all even bad, immoral Tagals, or Malays, have to do to avoid having their ears and fingers cut off, is to behave decently and frequent some Christian church. There is no record of our ever having burnt or mutilated anybody who had not done something to provoke us.

There are probably impudent Tagals who will ask us whether this sort of punishment for crime had not long ago been abolished in other parts of the civilized world. We shall have to admit that this is true, but we shall have to say that we are contending with a new kind of crime, which has become rife within thirty years, and that the ordinary law has proved ineffective. But we fear the impudent Tagal will then ask how much the ordinary law has been tried as a remedy for this offence, and we shall have to reply that it has seldom been tried at all. He will then naturally ask whether this plan of burning and mutilation has succeeded either, and we shall have to confess that it does not seem to have done so, as the horrors occurring every day at the South seem to show. We began burning for this offence a few years ago in Texas, and we have gone on burning ever since, but, from what the Southerners tell us, the cases are only more numerous, so

that the Governor of a State has nothing better to suggest than the fortification of every house containing women in regular mediæval style—moat, bridge, and modern arms. The Tagal aforesaid will, we fear, then ask us whether it is possible that such great civilizers as we are, so great that we have to go round the world looking for people to civilize, have never given to the cause, growth, and remedy for this crime the serious consideration of our wisest men, with a view not to vengeance simply, Iroquois fashion, but to its cure; the friars having taught these savages that God has created a cure for every crime. What can we say except that our people in some cases prefer vengeance to law, because vengeance is "sweeter" than law, and because law is slow and uncertain, because inquiries and preparations are a bore, and because they are too hot-blooded for organization of any kind?

These Tagals are so "sassy" that we fear this fellow will ask us whether it is possible that such a refined people as we are, could have so much time, money, and life to spend in spreading the true religion so far from home as his own country, and issuing benevolent proclamations that might melt the heart of a gorgon, yet had not a moment or a dollar to spare in thirty years for a sober, enlightened, statesmanlike consideration of the question of our own negroes, their civilization, cultivation, education, welfare—in short, as human beings for whom we had, as Griggs says, centuries ago "accepted the responsibility." Has there been a thing done for them by us as a nation, except burn them by mobs when they did wrong? How long can this awful refusal of responsibility go on without dragging us down to their level? How much above the ignorant negro ravisher is the white, full of gospel, and schools, and church sociables, who cuts the negro's heart and liver out, and divides them into small pieces among his friends? Not much, we fear, in the regions to which we are sending the Tagals so copiously.

THE POLICY OF IGNORANCE AND DRIFT.

The Administration has relaxed the censorship at Manila. Details of the formidable nature of a campaign of conquest in the islands have at last been allowed to reach the American people. Aggressive movements against the Filipinos seem to have been suspended. The authorities are eagerly waiting for news of a peaceful adjustment. All this is gratifying if it really indicates that the President has waked up at the eleventh hour to the utter failure of his policy of blood and iron. That policy has hitherto been an unhappy compound of ignorance and drift. It has been the steady complaint of our officers at Ma-

nila that the situation there was not grasped at Washington. Gen. Greene wrote as long ago as last August: "The situation is not understood in America, and, unless properly dealt with at Paris, will inevitably lead to future complications and possibly war." It is said that Admiral Dewey plainly warned the Government last summer that it would take 100,000 men to subdue the Philippines, and that the Washington wise men thought him half crazy, just as their predecessors thought Gen. Sherman a lunatic when he told them how many men it would take to put down the rebellion. Be this as it may, we know that Dewey telegraphed the chief need at Manila to be "a first-class statesman." Of course, the Administration is full of such, but none could be spared. Dewey also showed by his call for the *Oregon*, two months ago, that his grasp of the military problem was far better than that of the War Department. And his early statement that the Filipinos are "far superior in their intelligence and more capable of self-government than the natives of Cuba," he distinctly reasserted in the only letter of his printed in the Peace Treaty documents, in which he said: "Further intercourse with them has confirmed me in this opinion."

Other evidence of knowledge and advice coolly set aside by the President has since come to hand in Major Younghusband's new book, just published by Macmillan, 'The Philippines and Round About.' The Major is a British officer, glad of the alliance and all that, but his sketch of the situation in the Philippines, as he saw it at the end of last year, reveals the fact that he knew more, and our officers there knew more, of what was likely to happen than was ever dreamed of in the Washington philosophy. Major Younghusband writes: "To an observer on the spot, it was apparent that the authorities in the distance were hardly alive to the complications which existed." What he meant was that the Americans had treated Aguinaldo as a valued friend and ally until Manila was captured, but then set about ignoring and abusing and exasperating him in every possible way. Aguinaldo, in the meanwhile, had gathered an army, set up a government, and taken control of practically the whole island of Luzon. What was to come out of this but war? Very well, let there be war, said the Americans; our 20,000 troops can in a pitched battle defeat Aguinaldo's 50,000, and that will be the end of him—not knowing, says Major Younghusband, wise before the event as we are wise after it, "that the ordeal of a set battle was the last form of suicidal mania which Aguinaldo would be likely to indulge in."

Younghusband records the interesting fact that the "American army officers at the seat of war" were "almost unanimous in deprecating the annexation of

the Philippines." They pointed out that "to garrison the Philippines the American standing army must at once be raised to twice its present strength," and that, "once the novelty had worn off, the American people would resent the increased taxation involved." Why was Washington left in ignorance of all this? Why did it go on trusting blindly that our good luck would not fail us? Major Younghusband supplies, we believe, the correct answer when he writes that "the true parting of the ways was not in the actual act of annexation, for that had become inevitable, but in having allowed Admiral Dewey to do more than defeat the Spanish fleet and exact a heavy indemnity from the city of Manila before sailing away, thus leaving the Philippine problem for the Spaniards and their friends to solve." That is, we had a President who did not know his own mind, who was moving about in a world not realized, and who concluded to let things drift. But to put off deciding is to decide; and the plight we are in now is of McKinley's making on that fatal day in May when he resisted Senator Sewell's importunities that Dewey be ordered home.

If ignorance and indecision have brought the Government into its present *impasse* in the Philippines, the only wisdom now possible is to retrace our steps. We must do now what we should have done in the beginning—treat the Filipinos as we treat the Cubans, protect them, watch over them, help them, but urge them to do their own governing. No pride of opinion, or unwillingness to admit huge blundering, should detain Mr. McKinley for one hour from making haste to try kindness and fairness and confidence on the natives, instead of bluster and bullets. It must be evident to him now, as it is to all the world, that he has dashed himself against a strong national sentiment in the Philippines. Let him recall Pitt's famous prophecy of what would happen to Napoleon when he came into collision with such a national sentiment in Spain. Let him reflect on Napoleon's own confessions on the subject. They are given in Lady Malcolm's recently published journal of conversations with Napoleon at St. Helena:

"The system," Napoleon said, "that I pursued in Spain, although it would have eventually been for the good of that country, yet was contrary to the opinion of the people, and therefore I failed. Ferdinand is right in following his present system, for the Spaniards like their bigotry, their priests, and all their ancient customs. Ferdinand's confessor once said to me: 'Why do you wish us to change our present modes? We like them and so ought you; for while we follow them we shall never be a great nation, but we are content to be as we are.' It is impossible to force a great nation contrary to its opinion."

Will the "Little Napoleon" hearken to these words of Napoleon the Great?

OUR RELATIONS WITH GERMANY.

There was some uneasiness in com-

mercial circles last week touching our relations with Germany in respect of Samoa, and this feeling was not exactly soothed by the speech of Capt. Coghlan of the *Raleigh* at the Union League banquet on Friday evening. What he had to say about the Germans in the East was most offensive and indiscreet. He should have reflected that his remarks would be telegraphed to Germany, and would create ill-feeling. In private conversation, and making allowance for the American gift for humorous exaggeration, it might do to say that the German officers at Manila "didn't dare to breathe more than four times in succession without asking Admiral Dewey's permission"; but such things said at a public dinner, by an officer of the United States, are not becoming. It is all very well for our irresponsible private swashbucklers to go on breathing out threatening and slaughter against the world; foreigners have learned how to take their rhodomontade for what it is worth; but if we really wish to live at peace with nations for whom we profess friendship, our naval officers must bridle their mouths when speaking in public of their affairs. The Captain of the British man-of-war at Manila is said to have apologized to Admiral Dewey on behalf of the Germans, on the ground that "you know they have no sea manners." The sea manners of our naval officers are irreproachable, but some of them need to look to their land manners.

Captain Coghlan made another speech on Saturday evening (rather incoherent, as it appears in the newspaper reports), in which he refrained from mentioning Germany, but repeated with emphasis his previous utterances, and added that "we came very near to killing them"—presumably German officers and sailors in Manila harbor last year. Very properly, he has been called upon for explanations by the Secretary of the Navy, and ordered back to his ship while he was on his way to a third dinner party.

There is some commercial bickering springing from the protective tariffs of the two countries, but this does not interest many people in the United States, and, however it may be settled, or even if it is not settled, will not disturb the peace of the two countries. It is worthy of note that the only incidents ever threatening a breach of peaceful relations with Germany have grown out of our so-called policy of expansion. The Samoan complication was really a forerunner of that policy. It was an act of meddlesome folly running counter to the traditions of the republic and to the teachings of the fathers, having no decent support or pretext. In order to make ourselves strong at a place where we ought never to have been except as peaceful traders, we sent two war-ships to Apia, which were forthwith blown to pieces in a hurricane, with the loss of

hundreds of lives. If our government had been minding its own business, those men and ships would have been at home, and would have escaped that appalling disaster. Since that time we have gained nothing from Samoa that we could not have gained without any other than commercial relations, the same that we have with the Fijis and other groups in the Pacific. We have, however, exposed ourselves to a large chapter of accidents growing out of the uncertain temper of the people in whose management we have taken a share, and also of the officials in civil and naval life whom we send there. Added to other difficulties is that of distance and infrequent communication, which prevents close supervision and prompt and accurate knowledge of what takes place there.

Ten years have passed since we took a hand in the Samoan complication, and now we are sending out a commission to rearrange the terms of it, without having received the smallest compensation for the money spent and the lives lost in those islands. Moreover, nobody knows what may happen next. It is reassuring, however, to feel that the people of Germany and the United States are held together by the strongest bonds of both friendship and commercial interest, which not even the folly or the superfluous zeal of their servants and representatives in Samoa can seriously weaken. This friendship is due, not alone to the presence among us of a large population of German birth or descent, but also to the benefits derived by each country from the other during the whole period of our existence as a nation, which has been a period of unbroken peace. Thousands of our sons have been educated in Germany. Thousands of Americans travel there every year. Thousands are domiciled there all the time. The ties which unite the two countries are of many different kinds, but all of them are strong and enduring. We need no alliances with foreign Powers, and we shall make none on paper, but surely we have one with Germany, written in the hearts of the people of both countries, which does not need to be stamped and sealed by the Government of either.

As to the friction in the Philippines last year, to which Capt. Coghlan made his indecorous allusion, it is not publicly known what act or what demeanor the German Admiral at Manila was guilty of. It is not known whether our Government ever made any complaint of it, or whether the German Government approved it or disavowed it. It is certain that no international trouble grew out of it, and that nearly everybody had forgotten it when it was so suddenly revived at the Union League Club last Friday. It is gratifying to know that Secretary Hay has signified to the German Ambassador at Washington his strong disapproval of Capt. Coghlan's

speech. With that declaration, the incident may be considered at an end, so far as it has international character. For the sake of good order and discipline at home, however, some further steps ought to be taken in Capt. Coghlan's case.

✓ THE ESSENCE OF BOSS GOVERNMENT.

We are unable to agree with Dr. Parkhurst as to the inutility of the present investigation of Tammany. He holds that unless both Platt and Croker are included in the scope of the inquiry, the results are likely to be without value. It seems to us that if the investigation were to stop at the present point, it has achieved one thing that more than justifies its existence. It has, quite unexpectedly to its promoters, impressed firmly upon the minds of the public the fact that there is really no difference between Platt and Croker as political leaders—that the boss system of one is the boss system of the other in principle and in practice. Surely, it is a gain to have a Platt committee make this demonstration so clearly that everybody recognizes its truth. Croker helped it a great deal when he called attention to the fact that his sons were performing precisely the same functions in his system that Platt's sons were performing in his. Both were using their boys as salesmen in their traffic in the fundamental principles of popular government. A boss who has nominations, legislation, public contracts—in short, all the powers and privileges of a city or a State Government—for sale, must have subordinates and agents upon whom he can depend for the clerical work of the business, and who could be better fitted for it than his own sons?

✕ Of course, everybody who has followed the developments of our modern boss system as it is now paramously established in several of our States, has known for some time that there was no appreciable difference between its Democratic and its Republican forms, Platt's system is like Croker's, and both are like Quay's and Hanna's. All of them are founded and operated on the possession of the chief powers of popular government for the personal profit of the boss and his associates. All of them lay their foundation in the primaries, which they control absolutely, either by the use of patronage or money, or both. Long before the national Republican convention which nominated Mr. McKinley for the Presidency came together, Hanna had so "fixed" the primaries that McKinley's nomination was a mere formality. That is what we see in all our nominating conventions in this State, Republican and Democratic. The bosses own them absolutely, because they have bought and paid for the delegates in the primaries.

A common peculiarity of the bosses

who thus get possession of the nominating machinery, and by that means leave the people no alternative but to elect one or the other of their candidates or sets of candidates to office, is to assume, after election, that they have a majority of the people behind them, and are consequently justified by the people in whatever course they may adopt. The McKinley war policy was based upon this assumption, and the assumption was asserted with such vigor that even criticism of it was branded as treason. Croker said on the witness stand, a few days ago, to Mr. Moss, who was asking him questions: "You are conducting this investigation by a minority vote of this city, and I am sitting here representing my friends with a big majority vote." His meaning was clearly that so long as he had been put at the head of the city government by popular vote, he had popular approval for whatever he did, no matter what its character. Almost at the same time the Quay Republicans in the Pennsylvania Legislature were adopting a resolution in caucus declaring that since Quay had been nominated for Senator by a party majority in regular caucus, he was entitled to and should receive the vote of every Republican member, and that members refusing would be subject to "odium" for their course. What is this but the Croker assumption over again? No matter what may be the character of the candidate, no matter by what means he secured a majority in his support, the mere fact that he has a majority should silence all criticism and justify anything that he may do. We see the same principle in operation in the New York Legislature at every session. It is shown most clearly in the business called "jamming." Platt holds that his possession of a majority entitles him to ignore completely all expressions of disapproval. If he wishes to "jam" a bill through, without deliberation or discussion, he does it, and maintains that since the people have given him a majority, they mean that he shall use it as he pleases.

When the boss of one party cannot secure this majority or popular support by his own exertions, he gets the necessary aid from the boss of the opposite party. Croker is not strictly truthful when he says that he sits in the witness chair representing his friends "with a big majority vote." His government was elected by a minority, but he got for it the necessary plurality because his fellow-boss, Platt, ran a candidate of his own and divided the opposition. Of course, in theory and in practice, this plurality is considered as much of a popular support as a majority, but it by no means furnishes sufficient ground for the claim which Croker bases upon it. The main point about all these boss methods of getting control is that the people are cheated in each instance. The bosses get possession through corruption, or

trickery, or fraud, and, once in power, they cite the fact of possession as evidence of popular approval for whatever they wish to do. The apathy with which all classes regard this pretension is a melancholy sign of political decay in the first decade of the second century of our republican experiment in self-government.

OUR FAULTY COPYRIGHT LAW.

Up to 1891, the United States had refused to recognize in any way whatever the rights of foreigners in the matter of literary property. The world was all before our publishers where to pirate. But, by the act of March 3, 1891, we made a tardy and grudging confession that our previous legal position had been that of outer barbarians. We accorded to foreigners a certain control of the results of their own intellectual labor. In a halting and faulty way, we made our entrance into the family of civilized nations that recognize international copyright. We were naturally welcomed as repentant prodigals. Poems of congratulation were written, orders conferred, effusive greetings interchanged. From the first, however, the clear-sighted saw that our legislation on the subject was but a limping affair; that we ought frankly to have joined the Berne convention, which gives authors perfectly fair and perfectly reciprocal treatment in the nations adhering to it, and not have set up a mongrel method of our own. Still, it was maintained by our own copyright agitators, and hoped by foreign writers, that, having made a beginning, we would speedily go further and correct our laws so as to make them conform to civilized usage.

But eight years have passed; nothing has been done, or even attempted, in the way of amendment; and foreigners, tired of waiting, are beginning to say unpleasant things of us. We no not now refer to Mr. Alfred Austin's letter to Secretary Hay; that was urbanity itself, if also vagueness itself. The traditional inhabitant of Jupiter could never suspect that there was any row, or guess what it was all about, if he had only Mr. Austin's letter to go upon. But some Italian publishers have lately been blowing a trumpet of less uncertain sound. It is, in fact, upon writers who are foreign in language as well as in nationality that our copyright laws bear hardest. English authors find them awkward and vexatious, and in some cases tantamount to an unjust tax upon their literary property, but it is the French and Germans and Italians and Spanish who catch it. The case is so well put by this Italian complaint, laid before the Ministry, that we quote a part of it in translation. (The whole may be found in the January-February number of *I Diritti d'Autore*.) It is an accurate description of the facts:

"In accordance with paragraph 4956, pro-

tection cannot be claimed unless two copies of the book which is to be protected have been, at the latest on the day of publication, sent to the Librarian of Congress in the United States, or, in the case of a foreign country, have been deposited with the post in the territory of the United States, addressed to the Librarian. But this is not enough. These two copies must have been printed from type composed in the territory of the United States, or from stereotyped plates made from type so composed. If, then, the European author of a work does not wish to lose the benefits of the American protection, he must, before offering his work to the public in his own country, find a publisher in the United States, he must send him a copy of his manuscript, wait until a translation of it has been made, until the American typographical composition has been completed, and until two copies of the translation thus printed have been consigned to the Librarian of Congress at Washington, or lodged with the post addressed to him. Then alone can he proceed to issue the original edition of his book. The slightest mistake, the smallest delay that may occur in the composition in the United States, causing the author, in his ignorance of it, to produce the original publication but one day before the translation, and the protection becomes null, all the steps taken are void, and pirate publishers can produce the work with impunity, without either author or publisher possessing any rights."

It is quite needless for the protesting Italians to say that, under such a system, it is "absolutely impossible for our authors to get protection of their rights." With a very few exceptions—such as Zola, Nansen, possibly D'Annunzio, Tolstoy, Bismarck—it has not been practicable for non-English authors to take advantage of our international copyright law at all. We flattered and plumed ourselves mightily about it and had all sorts of sugar-plums thrown at us in consequence; but, in hard fact, we were giving the foreign writers only "nothing between two plates," as the Spanish say. The Italians are calling upon their Government to secure better terms from the Americans, or else to denounce the existing treaty and begin to retaliate. It is really an affair for our own authors to take up and for our own legislators to cure, but we regret to say that we see no sign of activity on the part of either.

The whole trouble grew, of course, out of our joining together what common sense and justice would put asunder. We set out to legislate for the protection of literary property, and ended by passing a law for the protection of the manufacture of books. We know it has often been said that, but for the vicious "manufacture clause," we could have got no international copyright law at all. Well, it might almost have been better to have had no law at all than one holding out a fair promise only to withdraw it in the act. We might as well have enacted, at the same time, for the encouragement of engravers, that no book should be copyrighted unless illustrated; or the wood-pulp men might as well have been placated as the type-setters, with a provision that copyright should be extended only to books printed on Warner Miller's wood-pulp paper; or it might have been stipulated that copyrighted books should never be sold

in department stores, or at less than \$2.17 each, thirty off for cash. When we legislate, we need to legislate with a single mind, and not mix up the Typographical Union and the labor vote with the question of the rights of literary property. Until we can treat such property as a single and simple thing by itself, and pass laws respecting it with no thought of helping anybody's printing business, or the paper trade, or even the trade in foreign decorations, our international copyright law will remain the lame and humbugging measure it is.

A NEW FRENCH HISTORIAN.

NEW YORK, April 21, 1899.

Within the past three years a new historian has revealed himself in France, and of the rarest kind, for to the merit of being a writer already illustrious he adds that of having attacked the most difficult and least known of all histories, namely, the contemporary. Tolerably complete school manuals of the history of the Third Republic, it is true, already existed; and Taine gave, in his 'Modern Régime,' a conscientious, profound, and exact study of political and social life in nineteenth-century France. Moreover, the body of journals and reviews enable any one endowed with critical sense and a sense of proportion to disengage the truth from the errors or lies with which history is written in daily or weekly publications. But no one had yet tried to describe or to relate the true life of his contemporaries, and no longer in the deceptive decorum of their official occupations, but in the commonplace reality of their daily being, with their ambitions, their pettiness, their ridiculousness, their distress. What does a Frenchman of 1899 do, think, and really believe? How is he affected by political events and social transformations? What is he saying, not in the press or in public harangues, but in the freedom of familiar chat at the café, among friends, about the questions of the day and the great or petty incidents of national life, whether the topic be war, militarism, religion, anti-Semitism, the policy of Leo XIII., the latest political scandal, or the latest worldly tittle-tattle? What, in a word, is the true state of mind of a Frenchman of to-day, be he soldier or magistrate, professor or priest, nobleman or office-holder?

It would seem easier to answer this question for a Frenchman of the eighteenth century, who wrote his memoirs every evening, or for contemporaries of Louis XIV., who, like Mme. de Sévigné, unbosomed themselves in letters to their friends, or, like Saint-Simon, recorded privily the secret history of a reign of which the courtier Dangeau saw only the solemn and dreary aspect. Well, from this time forth we shall be almost as well acquainted with the France of to-day as with that of two centuries ago, thanks to the new historian who has just arisen with his three volumes "of contemporary history," as he himself styles them. He is none other than M. Anatole France, and the three books he offers us bear the following unscientific names: 'L'Orme du Mail,' 'Le Mannequin d'Osier,' and 'L'Anneau d'Améthyste.' The first appeared in 1896; the last during the current year.

Those who are familiar with the literary

manner of Anatole France, and have read the appetizing books entitled 'Le Crime de Sylvestre Bonnard' or 'La Rôtisserie de la Reine Pédauque,' will doubtless see in the label "contemporary history" affixed to his last three works only a pleasantry on the part of this witty sceptic, who unites the irony of Sterne with the philosophy of Renan. Such is not the case: it is emphatically history that we have to do with. While we certainly do not find in this novelist's historical books either every event in French contemporary history, or an enumeration of every ministry, or recitals of every colonial war, it is nevertheless true that whoever to-day, or a century hence, would know the veritable history of France under the Third Republic, and would have a precise notion, not regarding things and doings of little interest, but regarding men who alone signify, cannot dispense with reading and studying these three works of the imagination, which will remain the most precious testimonies and documents of an epoch anything but deficient in literary manifests.

Frankly, M. France's method in his latest works does not differ from that employed by him when, in 'Thais,' he made Alexandrian courtesans and philosophers converse about the great problems of human life; or when, in 'La Rôtisserie de la Reine Pédauque,' he put bold and cynical speeches in the mouths of free-thinking priests and enlightened burghers several centuries ago. Here again are personages more or less imaginary who discourse together on all the subjects which have ever piqued man's curiosity—to wit, life, death, the why and the how of things. And they all talk with that elegant grace, that keenness of wit, that wide erudition, and that classic purity of language which the author lends to all his heroes. But this time these heroes are Frenchmen of 1896, 1897, and 1898; they have the ideas, preoccupations, and passions of to-day; they comment on yesterday's events, judge the men of the hour, touch on every subject that has a place in the thought of living Frenchmen.

What have been, of recent years, the great questions of political life in France? The relations of the clergy and the republic; universal military service; the progress of socialism—not to speak of secondary incidents momentarily arising, like the Panama scandal or similar episodes. This is what the personages in M. Anatole France's books speak to us about, especially two of them—a university professor and a Catholic priest, who like to chat with each other under the shade of the *orme du mail*, though at all points holding opposite views. "But they were," says M. France, "the only people in town interested in general ideas."

Where is the scene of these dialogues? Nobody can tell; but those who know provincial life in France will recognize the marvellous picture here drawn of it, with its empty monotony, which men endeavor to animate and to fill up with their passions, their ambitions and rivalries. Here are grouped representative types of political, religious, military, university, and social life—the sum of French life. There are a prefect, an archbishop, priests, professors, middle class and aristocracy; and these men, differing in education, culture, and ideas, live before us in the narrow frame of that provincial town, talk freely, bustle about as in reality, and exhibit in word and deed everything mediocre, frivolous, or puerile that occupies their

minds. When we have heard them discuss the last incident that has engrossed the town, or politics, or religion, and have penetrated with M. France their daily life, we know exactly the thought and action and desire of a prefect, an archbishop, a general, a librarian, a professor of the Third Republic. We know exactly their conception of the world, the place which concern for advancement and red ribbons holds in their hearts. Already some of these types have become legendary in France, like the characters in the most popular novels; and this not alone because public malice has thought it recognized the real men judged to be represented, but because the unanimous consent of readers has found alive and truthful the personages whose words and deeds M. France rehearses to us through three volumes.

Everybody in France now knows M. Worms-Clavelin, the Jewish and free-mason prefect, vulgar and empty type of those political parvenus whom the Republic has brought into relief. A pliant and crafty man, indifferent to ideas, a stranger to all conviction, he repeats in his talk the commonplace official language, and his whole politics consists in holding on to his office, which is uncertain by nature since it is at the mercy of political fluctuations. This Worms-Clavelin is certainly a typical prefect of to-day and functionary of the Third Republic; never was a portrait drawn with an exacter or finer stroke, and yet nobody had ever depicted him. M. France has here been a true creator. But his most successful types are those of the clerical world. With Ferdinand Fabre he will rank as the most wonderful historian of the Catholic clergy of this republican period, in which the situation of the Church has been so difficult and thankless, placed between a hostile government whose favors it must obtain, and a fanatical Catholic party whose anti-republican passions it must humor. The question of the bishops, already treated by Fabre, is in this respect one of the richest themes, since it enables us to study clerical suppleness and diplomacy in the struggle against the temporal power. The story of the priest who would become a bishop, as related to us by M. France, is of itself a masterpiece. So far as he depends on the State for his nomination, the Abbé Guitrel (another classic type at present) performs prodigies of opportunism, never committing himself on any delicate subject, and discreetly handling all parties of whom he seeks to make use. Then, once appointed, the diplomatic, cunning, and shifty priest, assured of his place, becomes an intractable bishop who fulminates against the pretensions of the State in the name of the sacred rights of the Church. Whoever wishes to acquaint himself with the French clergy under the Concordat of 1802 cannot dispense with studying the priests created by the imagination of M. Anatole France, and truly to be said to belong to history.

The most popular and veritably immortal type of these books is Monsieur Bergeret, professor of Latin poetry at the University, and author of a book on 'Virgilius Nauticus,' a learned and laughable philologue. A poor man, persecuted by his dean and deceived by his wife, endowed with an intellect superior to his fate, he comforts himself for his wretchedness by philosophizing *de omni re scibit*, now with a fanatical old priest, now with the radical and narrow-minded town librarian. To him has been given to convey

M. France's mocking, disillusioned, and revolutionary philosophy. Beneath the "l'orme du mail," or in a corner of a little bookshop where he daily takes refuge, M. le professeur Bergeret ventilates on all the ideas, creeds, and institutions which men are wont to reverence, more paradoxes than would suffice to get him stoned by the fanatics of all parties if they were intelligent enough to comprehend his subtle and mordant thought, or artistic enough to perceive the danger of such language, the most seductive that has been spoken since Renan.

The clever author has not only introduced in his books every political and literary topic of conversation in these latter years, including the Armenian massacres, the burning of the Charity Bazaar, the American war with Spain, and the new prosody of the younger poets, he has, as events unfolded themselves, made his characters hold forth on every fresh incident capable of philosophic commentary which contemporary history offered them. Thus, this latest volume, 'L'Anneau d'Améthyste,' contains the opinions of Monsieur Bergeret, a notable "Dreyfusard," on the crisis of national dementia through which chauvinism and anti-Semitism have compelled France to pass for eighteen months. He has introduced in it, with cutting irony, admirable observations on the aberrations into which men are led by passion; on the stupidity of the mob, the cowardice of individuals, the rôle of falsehood and its "superiority to the truth" (for, the truth being one while falsehood is multiple, "the majority is against it"). He has even introduced a new character, no other than Esterhazy, whose portrait is so deftly and yet so strikingly drawn that everybody recognizes the "uhlan national," as he is called in France. A great joy and delicious revenge on the demons has been the thought of sensible men that the skilful pen of Anatole France forced on the passionate readers of the most military journal these pleadings of Monsieur Bergeret in behalf of reason and justice; for every Monday these chapters of contemporary history appeared in the *Écho de Paris*.

It is perhaps prudent to add in closing that, precious as are these contributions of the new French historian, the reading of them is not indispensable to all, and may even be injurious to many. "One must be no longer wholly innocent to find satisfaction in moralists," writes somewhere Anatole France himself. This ironical literature is disintegrating and anarchistic, and from it escapes a perverse and disturbing odor of decadence. After all, these Frenchmen of to-day described by M. France are not all the French; these pitiful and doltish ambitious functionaries are not all the functionaries, nor these priests all the priests. These books must be taken, as they were written, *cum grano salis*, and viewed as documents exact and veracious, it is true, but partial, for the history of contemporary France. OTHON GUERLAC.

SUDERMANN'S SYMBOLICAL DRAMA.

CAMBRIDGE, MASS., April 19, 1899.

A curious illustration of the evasiveness of genius, and of the impossibility of predicting its course from the influence of surrounding circumstances, has lately been afforded in the unexpected turn taken by the two foremost of living German dramatists.

Hauptmann, after having risen in "The Sunk-en Bell" to sublime visions of the infinite, has allowed himself once more to be drawn into the sphere of the hopelessly earthly. Sudermann, on the other hand, the racy satirist, the impassioned orator, the rough-and-ready delineator of blunt actuality, all of a sudden reveals himself as a lyric poet in whom reëcho the most aerial sounds of mediæval mysticism.

Paradoxical and unrelated as these facts seem to be, they yet point to a common source. They are symptoms of the restless search of the modern world for a new faith, of its ineradicable striving after a new answer to the riddle of life. They clearly show that we are still in the very midst of that spiritual fermentation which set in with the final decay of the feudal world in the eighteenth century. They are a new proof of the evident fact that the blue flower of the Romantics has not yet been found, that the spirit of the Middle Ages is still walking about and is still in vain trying to reincarnate itself.

Nor is the personal link of Sudermann's latest drama with his former production by any means entirely wanting. In his "Johannes" he portrayed a moral visionary who goes through the world with eyes riveted upon a fictitious ideal, and who, therefore, fails to see the needs of the life that is pressing upon him. In "Die drei Reihfeder" he now brings before us an æsthetic visionary who chases after a magic form of womanly love and beauty that hovers before him on the distant horizon, without noticing that in his flight he tramples into the dust not only his own happiness, but also the life of the woman who has given to him her all. To restate in commonplace prose the details of the exceedingly romantic happenings of this drama would be an injustice to both author and translator. A few words, however, about its essential features and its leading thought may be not unwelcome to readers who otherwise might be bewildered by the extraordinary variety—not to say, apparent incoherence—of the action.

Young Witte, Prince of Gotland, is a mixture of *Parzival*, *Hamlet*, and *Faust*. Like *Parzival*, he is a knight-errant, roaming through the world in quest, if not of the Grail, at least of some supernatural goal of happiness. Like *Hamlet*, he is a dreamer of deeds rather than a doer of deeds, in constant conflict between the impulse to follow the call of an heroic mission and the capricious promptings of his little weaknesses and frailties. Like *Faust*, he is a man of infinite susceptibility, of boundless appetites, a consummate egoist, but at the same time a soaring idealist, yearning for completeness of life. He has left his home, impelled by a vague longing for the woman of his destiny, the woman that shall fill his soul, that shall inspire his highest thought. Fate has revealed to him that to make himself worthy of her he must first win a magic treasure, the feathers of a wild, demoniac heron who is worshipped as a god on a desolate island of the northern seas:

"Es liegt eine Insel im Nordlandsmeer,
Wo Tag und Nacht zur Dämmerung wird;
Noch niemand feierte Wiederkehr,
Der sich im Sturme dorthin verirrt.
Das ist dein Weg.
Dort, wo das Heil noch nie gelehrt,
Dort wird in einem kristallinen Haus
Ein wilder Reiher als Gott verehrt.
Dem Reiher reissee drei Federn aus
Und bringe sie her!"

If he burns the first feather, he will be lost.

the image of the coveted woman in the far distance. By burning the second, he will be united with her in the secrecy of the midnight hour. The burning of the third will bring destruction to her likewise.

Both the greatness and the tragedy of *Witte's* career lie in this, that he allows himself to be drawn under the spell of these fatalistic conceptions. He accomplishes the task demanded: he struggles through the horrors of the enchanted island and brings back his prize. He burns the first feather, and now there floats before him, between sea and sky, the gigantic shadow of a womanly form which incites his feelings to highest passion. He rushes upon it as *Faust* rushed upon the phantom of *Helen*; but, like the phantom of *Helen*, it vanishes into air before his outstretched arms.

From here on he seems almost bereft of reason. He has no thought of his country suffering under the tyranny of a savage usurper; he has no eye for any sight of real life that presents itself to him; he only raves in ecstatic desire for that fair image. Thus he comes, in the course of his wanderings, to the court of a young widowed queen who, in order to satisfy the clamorings of her people for a ruler, has proclaimed her willingness to accept the hand of him who in knightly combat should defeat the host of her wooers. Half against his will, unconsciously moved by the entreating glance of the lovely young queen, he takes up arms for her, and, although severely wounded in the tournament, is declared victor and accepted as the queen's husband. But even now, at the side of the fairest and sweetest of women, he finds no rest; his only thought is of that magic vision in the clouds. The cares of state weigh upon him; like the hero of "The Sunken Bell," he feels burdened with the commonplace concerns of everyday life; his wife seems to him to draw him down into ordinary enjoyment—"Geniessen macht gemein." Despondent of his fate, out of accord with himself, he once more takes refuge in the supernatural: in solitary midnight hour he burns the second magic feather which is to unite him with the beloved. The queen, who has spent a sleepless night, grieving over her husband's gloom, is attracted by the flame and thus appears before him. But the frenzied man, instead of seeing in her appearance the fulfillment of the oracle, instead of recognizing in her the woman of his destiny, reproaches her for having watched and suspected him. His harsh words cause her long repressed feelings for him to break forth without reserve; and in a supremely beautiful scene husband and wife are for a moment truly brought together.

But only for a moment. For soon *Witte's* restless craving leads him again astray. He abandons himself to wild orgies and dissipations, and although in a measure he atones for these by rising to spasmodic heroism in the political crisis brought upon the country through his eccentricities, he sinks back into his former state as soon as the crisis is past; and he ends by laying down his crown and resuming his old knight-errantry, he, "der Sehnsucht nimmermüder Sohn." In the last act we see him, a prematurely broken man, after many weary wanderings and many fruitless undertakings, on his way homeward to the scenes of his youth. Passing by the castle of his wife, he is recognized by a peasant, and the news is brought to the

queen. She who, during all these years of loneliness, has lived for him and in him only, at once hastens to greet him. And now at last the scales fall from his eyes. He sees that he has wasted his life, that he has been under the spell of an illusion, that he has wilfully spurned heaven's best gifts. Feverishly he grasps for the last fatal feather; he will break the spell, will destroy the pernicious image that has hunted him all his life. He casts the feather into the flame. But instead of the hoped-for magic effect, he sees his own wife sinking at his feet, uttering a last dying word of faith and love. Despairingly he throws himself upon her body, and is thus united to her at last:

"Wer seiner Sehnsucht nachläßt, muss dran sterben;
Nur wer sie wegwirft, dem ergiebt sie sich."

That a drama like this should in general have found little favor with the critics is not surprising. Surprising—and highly gratifying—is the fact that the verdict of the reading public seems in this case to differ widely from that of the critics. Already, hardly three months after its first performance, the drama has reached a tenth edition. That it has its serious artistic blemishes it would be folly to deny. There is a certain forced grandeur in the heroic parts and an equally forced vulgarity in the subordinate figures. And reasonable exception might perhaps be taken to this whole genre of symbolical poetry. It certainly is true that the leading idea of this drama, embodied in characters of our own time and in actions belonging to the sphere of our own experience, would have touched the average reader of to-day more quickly and more surely. But may it not be that, on that very account, this work will speak more distinctly to future generations, that its very timelessness and inconcreteness will give it permanence and universal value? Even if this should not be the case, it will most assuredly live in history as a noble monument of German intellectual life at the end of the nineteenth century, as a *magna pars* of the artistic revival which has placed the German drama once more in the very front rank of European literature. For, however strange and far away at first sight its characters and its actions may seem to be, it is, after all, most closely related to our own lives; it brings before us what may be called the problem of problems of our own time—the reconciliation of intensest activity with simple enjoyment; of restless striving with spiritual peace.

KUNO FRANCKE.

Correspondence.

A MISFIT.

TO THE EDITOR OF THE NATION:

SIR: On page of 285 of "The Week" in the current number of the *Nation*, you justly criticize my townman, Gen. Alger; but when you say, "He knows he can be dismissed to the dreary shades of Detroit, etc." it causes me disturbance, resulting in this resentful protest. To a citizen of the most beautiful city in this country, the best paved, best lighted, best sewer, cleanest, and best equipped with street-railway service, the words "dreary shades" are especially irritating. Detroit is a city of 300,000 people, including our beloved Alger; and if you will compare its bank clearings for the present week with cities of its class, you will gain a

clearer conception of its commercial importance. Had you written "the beautiful metropolis of Michigan," all would have been well. Do with Alger as you will. Catch him and feed him an occasional (small) ration of chemically prepared beef, but kindly remember that for "dreary shades" the City of the Straits does not meet the requirements.

P.

DETROIT, April 22, 1899.

"HERR" VS. "MR."

TO THE EDITOR OF THE NATION:

SIR: May I use the columns of the *Nation* to enter a solemn protest against the promiscuous use of the German word "Herr" as a designation of foreign dignitaries of almost any nationality? The April number of the *American Monthly Review of Reviews* contains a picture of "Herr Coloman Szell, the new Hungarian Premier." *Herr*, needless to say, is neither Hungarian nor English. The Hungarian word is "Ur" and is placed after the name, viz., "Coloman Szell Ur." I remember having seen in American papers the combination, "Herr Ristowitsch," which, in the vernacular of that gentleman's country, would be "Pan Ristowitsch." I have seen *Herr* used in a great many other cases where it is absolutely uncalled for. Why assume such bogus learning? Why not call a man by plain English "Mr." (which is in no way farther remote from the language of the gentlemen mentioned than German "Herr")? Why prefix anything to their names at all? Even the German papers very rarely speak of "Herr Richter," "Herr Bebel," but either of "Richter," "Bebel," or of "Eugen Richter," "August Bebel." The latter form would be the usual one with pictures.

I presume that such protests may have appeared in your paper before, but it seems that they cannot be urged too often. I am afraid that some day I may see the likeness of a noted Chinaman with the inscription "Herr Li Hung Chang."

Yours respectfully, E. C. R.

ANN ARBOR, MICH., April 17, 1899.

Notes.

Prof. George Hempl of Michigan University has in preparation a volume of 'Runic Studies' to be issued probably during the present year. An abstract of one of its chapters was read at the sixteenth meeting of the Modern Language Association, and is to appear in the current volume of the *Journal of Germanic Philology*. It offers a key to the origin of the Runic alphabet.

D. Appleton & Co. announce for early publication 'The Races of Europe: A Sociological Study,' by Prof. William Z. Ripley; 'Imperial Democracy,' by David Starr Jordan; 'Alaska and the Klondike,' by Prof. Angelo Heilprin; 'Love among the Lions,' by F. Anstey; 'Idylls of the Sea,' by Frank T. Bullen, author of 'The Cruise of the Cachalot'; 'Hungarian Literature,' by Dr. Zoltan Bodthy; 'Uncle Sam's Soldiers,' by O. P. Austin; 'Our Navy in Time of War,' by Franklin Matthews, and 'The Story of the English Kings according to Shakespeare,' three new volumes in Appletons' "Home-Reading Series."

A life of Oliver Cromwell, elaborately illustrated, is in preparation by Samuel Raw-

son Gardiner, and will be published by the Scribners. They announce also 'Cathedral Builders: The Story of a Great Guild,' by Leader Scott; and 'Across the Campus,' life at Smith College, by Miss Caroline M. Fuller.

'Two Summer Island Papers,' a new book about Bermuda, "in effect a literary history of the islands," by J. C. L. Clark, is to be published in September by C. de Hasbrouck, No. 57 Bromfield Street, Boston.

A new number of the Columbia University Series of Contributions to Philosophy, Psychology, and Education (Macmillan) will be 'Educational Legislation and Administration of the Colonial Governments,' by Miss Elsie W. Clews.

The "Cambridge [Mass.] Edition" of the 'Complete Poetical Works of John Milton' (Houghton, Mifflin & Co.) succeeds in compressing them into one octavo volume of a little more than 400 pages. The poems are in double columns, but considerable space is allotted to a Life and to appropriate introductions and notes, calculated for school use or private culture. A youthful portrait of the poet is the only one given. It is a pity that an editor could not have been found with some simplicity of style and reverence of temper, not patronizing Milton alike in his juvenile psalms and in "Paradise Regained"—not "steeped to his lips," to borrow from Matthew Arnold, "in the fantasticalities" of this present decadence, every bit as unnatural as those of Donne or Cowley. We are shown, "in odd relief out of this precocious solemnity, one of those lightning flashes from the clear sky of youth which tell of the summer passion suspended there," and learn that of "the twin poems" "the speech incarnates the thought as easily, as satisfyingly, as the muscles of a Phidian youth incarnate the motor-impulses of his brain." "Il Penseroso" and a boxer! Hyperion to a Satyr! The editor twice has to use the term "conceitfulness" to express his idea of Milton's early style. The prose translations of the Latin poems are neither strict nor graceful, and there are some bad misprints.

More endearing to the eye is the little selection of 'Poems, Narrative, Elegiac, and Visionary, by Percy Bysshe Shelley,' in the Dent-Macmillan "Temple Classics" series. Mr. Gollancz has naturally called to his aid as sub-editor Mr. H. Buxton Forman, whose task has not been heavy. To the same series belongs De Quincey's 'Confessions of an English Opium-Eater,' with marginalia and notes from the hand of Mr. Walter Jerrold.

Much solicitation has at last obtained of Macmillan & Co. the inclusion in their Golden Treasury Series of Fitzgerald's 'Omar'; with Fitzgerald, however, omitted from the title-page, and invisible by name everywhere except incidentally in the bibliographical chronicle on the verso of the title. To be in keeping with the series, this edition could not compete altogether with the best American, in comparison with which all that can be said is that it is handy.

Lieut. Hobson's unaffected account of 'The Sinking of the *Merrimac*' has been read serially by thousands in the *Century Magazine* with thrilling interest. Posterity is entitled to share this emotion, with the added ease which a book affords, and the *Century Co.* has done well to reproduce in a handsome volume the story of an exploit whose glory (let rampant warriors take heed) is in its essentially non-resistant character.

Mr. John Boyd Thacher of Albany, who maintains so creditably the traditions of an older generation of book collectors who cared for something more than the price their treasures cost them, prepared one of the most interesting of the papers presented in honor of John Cabot at the quadricentennial meeting in Halifax in 1897. His address, which describes the discovery of 1497 in picturesque fashion, but with a proper sense of the distinction between the known and the guessed-at, was printed in the *Transactions of the Royal Society of Canada*, and a special edition has also been issued by Mr. Thacher. He has illustrated it most intelligently with heliotype facsimiles of several of the significant sources of Cabotian information, taken from books and manuscripts in his library.

Dr. Georgiana Morrill's 'Speculum Gy de Warewyke' is one of the most elaborate pieces of editing on which the Early English Text Society has so far put its imprint (London: Kegan Paul, Trench, Trübner & Co.). The text, with the variants, takes up less than fifty pages; the introduction, notes, and glossary extend to more than two hundred and fifty. Miss Morrill is a pupil of Zupitza and of Schick, and has been carefully trained in Middle English linguistics. She has worked at her thirteenth-century poem with industry and enthusiasm, and her edition is not likely to be superseded. The 'Speculum' is, in the main, a *refacimento* or free version of Alcuin's moral epistle to Count Guy of Tours. It is a very dull composition, and its interest consists almost entirely in the fact that the English redactor has, by a natural transference, attached the "sarmoun" to the romantic history of Guy of Warwick. Anything that throws light on this mysterious personage is welcome to the student of popular literature, and Miss Morrill's extensive and erudite, though somewhat indigested, introduction will doubtless be frequently consulted.

The Department of the Colonies of the Netherlands issued, two years since, the first part of a daily record, kept at Batavia, of early events in the Dutch East Indies, whose original is in the Government archives at The Hague. The second part of this 'Dagh-Register gehouden int Casteel Batavia' (The Hague: M. Nijhoff, 1898), continues the story from 1631 to 1634. The book, a volume of nearly 500 pages, is more of a detailed history than its title implies. The part here under review comprises the administrations of the Governors-General Jacques Specx and Hendrik Brouwer. As the editor, Dr. H. T. Colenbrander, points out in his preface, the commerce of the Dutch East India Company in this period is seen steadily to increase, and the shadows, at least, of the assertion of sovereignty that the Company, through the force of circumstances, is gradually obliged to make, have already become visible. Not only is it necessary for the Dutch to defend themselves in the possession of their property, but they are forced from time to time, for the sake of prestige, to assert themselves by assuming the aggressive. The record, furthermore, does not confine itself to what has since become the Dutch East Indies, but extends to dealings with other countries and islands of the East, with Persia, Japan, Siam, India, Ceylon, and the Philippines, and incidentally has no little material with regard to the early navigation of the unknown Malay archipelago. The book is an extremely

valuable source of original information concerning not only the development of the Dutch colonies, but of European commercial and colonial power in the Far East. There is a carefully prepared index.

In the *Atenaeum* of April 8 Mr. W. Fraser Rae begins, in a first instalment, to pour forth his "New Light on Junius." This light does not, he confesses, illumine the hitherto undiscoverable incognito beyond dispute, but it helps to throw Sir Philip Francis and his adherents still further into the shade.

Prof. E. Hübner of Berlin, who ten or eleven years ago occupied temporarily a chair in the Johns Hopkins University, and at that time published contributions to a Ciceronian bibliography, writes in the *Rundschau* for April on the variable position held by Cicero, the writer and the man, in the estimation of scholars and cultivated circles, in different lands and periods. He regrets the disfavor, not to say condemnation, which the character and writings of the immortal Roman have for some time past incurred among the educated class in Germany. Though disclaiming any attempt at a *Reitlung* or whitewashing of Cicero, he nevertheless has at heart the rehabilitation of the great classic wherever he may have lost prestige.

The *Scottish Geographical Magazine* for April opens with a description of the Caroline Islands by F. W. Christian, who emphasizes the neglect of the Spaniards to develop their resources or to civilize the natives. Some of the islands are "nothing better than pirate strongholds." In earlier days the natives were "great navigators, guiding their way fearlessly by a most accurate knowledge of the stars and ocean currents." Even as late as the beginning of this century a fleet of eighteen or twenty large canoes sailed annually in February to Guam, a distance of some five hundred miles, returning in April or May. The article is illustrated by pictures taken by a Manila photographer who accompanied the writer, but has since been shot by the Spaniards as a rebel. Mr. Christian's reference to the native rising in the Philippines is interesting as that of a non-partisan observer. He says emphatically that it is "not a cause of pure patriotism. It is directed by unprincipled men working for their own selfish ends against law and order. . . . It means the massacre of peaceful Europeans, and the torture of helpless women and children." There are also accounts of a region on the western shore of Lake Balkal and of the French Niger Territory, some of which is extraordinarily fertile but still undeveloped.

The *Consular Reports* for April opens with a statistical account of the trade of this country with northern China, which it shows has for some years been "constantly increasing—not slowly, but in an almost phenomenal manner." There is also a description of a method of inducing persons of small means to save which has proved very successful in some German cities. Instead of obliging them to bring their savings to the bank, the bank undertakes to collect from its depositors certain fixed sums weekly. On the receipt of the money, which varies between the limits of 50 pfennigs and 10 marks, the depositor is given a printed coupon, showing the amount collected, the date, and the number of the pass-book. In Mainz the number of weekly depositors on January 1, 1898, was 5,799, who made a weekly deposit of \$3,704, the majority depositing one

and two marks. In a table showing the tonnage of ships entered in the principal ports of the world in 1887 and 1895, it is noteworthy that Constantinople stands second, or next to London, with (in round numbers) thirteen millions—an increase of nearly four and a half millions. New York has dropped from the fifth to the eighth place on the list, foreign commerce alone being included, with an increase of less than a million.

In one of the recent monthly meetings of the Association de Représentants de la Presse Étrangère, at Constantinople, Major von Huber, one of the German officers in the service of the Ottoman Government, in connection with the building of the Anatolian railroad, reported the preparation by himself of a map of Asia Minor, Syria, and Palestine, based on reliable sources of information, mostly of an official character, access to which was facilitated by the friendly feeling entertained by the Turkish authorities towards the Germans. The size of the map, which as yet has had only a limited circulation in MS. reproductions, but is soon to be published somewhere outside of Turkey, is 1.30 by 0.94 metres, and the scale is 1:1,500,000. The author states that it contains some 9,500 data with reference to the highways, railroads, etc., of these provinces, while special efforts have been made to indicate the exact population, status, etc., of the Christian contingent. Accompanying this main map are two smaller ones, dealing with Crete and Constantinople. The political significance of this collection of charts at the present time is apparent at a glance, and probably explains why the Porte refused to permit their publication within the limits of the Empire. It is Von Huber's purpose to bring out his map in an accurate but quite inexpensive edition.

We are requested to state that the entrance examinations for the Library School of Pratt Institute, Brooklyn, are to be given this year on June 24 instead of in September as heretofore.

The summer courses for foreigners in the study of the French language at the University of Grenoble will be open from July 1 to October 31, and will be more complete than ever. In the first fortnight in July a formal opening session will be presided over by the rector, and will comprise a lantern lecture on the geography of Dauphiny by Prof. Collet. For all particulars, students should address M. Marcel Reymond, No. 4 Place de la Constitution.

The Anti-Imperialist League, whose headquarters are at No. 43 Milk Street, Boston (Francis A. Osborn, Treasurer), desires contributions in aid of the spread of argumentative literature that makes for peace and national integrity.

—The American success of "Cyrano" has led to the republication (Doubleday & McClure Co.) of a quaint seventeenth-century translation of the 'Histoire comique des états et empires de la lune,' with an excellent biographical introduction and notes by Mr. Curtis Hidden Page. Though subordinate to the work itself, the editor's share calls for special attention on account of the reasonable limits to which it has been restricted and its accuracy in matters of detail. For example, Mr. Page's note on "sara-band," which makes of this "a Hoely Spanish dance," differs from the common erroneous description of English dictionaries, which call it "stately," and agrees with the *con poco modestia* of Spanish authorities. Also, the

bibliographical indications point out important works of kindred character in various languages, and suggest possible indebtedness on the part of Cyrano. Of the "Voyage," comparatively little is likely to hold the interest of readers unprepared by reëxamination of Gautier's essay in 'Les Grotesques.' The work is a fitful gallopade in the thin upper regions of a fancy somewhat lacking in ethereality and inventiveness. Even in the common device of inverting or reversing terrestrial conditions, the author fails to work out the scheme on systematic lines. We find that some of the lunar inhabitants, though shaped like human beings, walk on four feet; that they puzzle over the nature and sex of their earthly visitor; that they feed, not on solids, but on vapors—with more of the same sort. Underlying all these imaginings come theories physical and metaphysical, gathered right and left from Campanella, Cardan, Gassendi, and others, but presenting, to our eyes, a veritable farrago of speculation, in which, however, a subtle allegory may possibly lurk. More attractive is the curiously anticipatory character of several practices of Cyrano's entertainers, who are familiar with cremation and "ambulatory" houses; and who, to belief in a sort of microbian hypothesis, add a firm trust in the efficacy of faith-cures. It is also worth noting, as a typical bit of Cyranoesque egotism, that *large-nosed* moon-dwellers are alone permitted to multiply. And, lastly, when we observe what poetical setting M. Rostand has succeeded in giving to his hero's ways of reaching the moon, all prosaically detailed here, we feel more than ever the truth of Cyrano's sad dying admission,

"Où, ma vie,
Ce fut d'être celui qui souffre—et qu'on oublie!"

—Under the title of 'Nouvelle-France et Nouvelle-Angleterre' (Paris: Calmann Lévy), Mme. Th. Bentzon publishes her impressions of travel lately issued in the *Revue des Deux Mondes*. The notes for this volume were the fruit of observations along the Saguenay trip, in Montreal and Quebec, and during rapid visits to Concord, Salem, the commencement exercises at Harvard, and so on. In the Canadian part there are two distinct elements—a capital guide-book for future tourists, compiled with the practised ease of a good observer, and a bundle of judgments and opinions on the conditions of French Canadian life as affecting women, to which aspect, it would appear, Mme. Bentzon almost exclusively confined her attention. For the many conventual establishments—and especially for hospitals directed by Sisters of Mercy—which came in her way, the traveller has little else than praise, not unaccompanied with disparagement of rival institutions in hands English and secular, concerning which (from hearsay, apparently) she concludes less favorably. At the same time, a discreet innuendo here and there suggests that ecclesiastical reins struck the writer as being drawn a little closer in the Province of Quebec than in France of today; and there is also recognition of the fact that difference of race would produce much less friction in the absence of religious antagonism. Dealing with French Canadian peculiarities, Mme. Bentzon takes a more charitable view than the late H. C. Bunner, and finds the *habitant* guilty of the sole vice of drunkenness. She touches very gingerly on the quality of language and accent characteristic of French Canada, contenting herself with the mild irony of "Oet accent

non classé est tout simplement, on le croit du moins au Canada, l'accent du XVIIe. siècle." It is, however, surprising that in connection with the return of Canadian factory-hands from New England industrial towns, no notice should have been taken of the frequent Anglicising of names; but an unprepared traveller may well be excused for not recognizing "Noël Trudeau" under his alternative designation of "Christmas Waterhole."

—Passing from French Canada into New England, Mme. Bentzon's attention was drawn to the contrast thus presented in life, type, and character, though the difference appears less sharp to one who proceeds slowly by way of the district known as the "Eastern Townships," between the St. Lawrence and our own frontier. The visits to Concord and Salem contain little more than the traditional observations and reflections on the Transcendentalists and the witches, many of which are doubtless new to French readers. The latter should, however, be informed that "a lintoo roof" is approximately correct in sound, yet unconventional in spelling; also, that to English ears a "glee club" does not suggest "club de la joie." In conclusion, the author, prudently hazarding no independent counsel or opinion, records a hope for a splendid future to Canada, as a mark of gratitude for attentions and hospitality generously given and here so gracefully acknowledged.

—In order to excite greater zeal in the study of modern languages and to make it possible to learn them more thoroughly, somewhat more than a year ago a number of educators in Germany organized a system of international correspondence between the pupils of schools in different countries, the exchange being made through a central office at Leipzig. Experience has now shown the thorough success of this innovation. More than thirty schools in Germany, England, and France have in this first twelvemonth already cooperated in the scheme. Somewhat to the surprise of the Germans, the French and the English have been the most enthusiastic participants. The plan calls for a letter from each member every two weeks, alternating in the language of the writer and that of the recipient. The recipient returns the letter corrected. Each pupil is permitted to have but one correspondent. In order to avoid possible trouble, the missive is addressed, not to the pupil, but to the school. The higher schools for girls are taking the liveliest interest in the work. The principal of a young ladies' seminary in Macon, France, writes to the central office at Leipzig that through these letters her pupils have become ardent students of German, and that the communications have proved to be great aids to study. The applications for membership by the schools of France and England have been so numerous as to embarrass the Leipzig office. The friends of the movement, in addition to the educational value of it, draw attention to the moral benefits in the formation of friendships between young people of different nationalities which will necessarily bear good fruit hereafter.

RECENT AMERICAN POETRY.

It can scarcely be denied, in looking over the harvest of American poetry yielded during the last six months, that the three or

four volumes indicating most promise are by women. One of these writers is Mrs. Lilla Cabot Perry, known best as a painter; but also through her remarkable translation of 'Pictures in Prose,' by Turgeneff, and her little volume, 'In the Garden of Hellas,' of versions from the Greek Anthology. In her 'Impressions' (Copeland & Day) there is a vigorous grasp, as in the following (p. 81):

A DREAM.

"Horseman, springing from the dark,
Horseman, flying wild and free,
Tell me, what shall be thy road,
Whither speedest far from me?"

"From the dark into the light,
From the small unto the great,
From the valleys dark I ride
O'er the hills to conquer fate!"

"Take me with thee, horseman mine!
Let me madly ride with thee!"
As he turned I met his eyes,
My own soul looked back at me!

The same quality is seen also in the fine closing line of this brief definition (p. 47) called

ART.

Wouldst know the artist? Then go seek
Him in his labors.—Though he strive
That Nature's voice alone should speak
From page or canvas to the heart,
Yet is it passionately alive
With his own soul! Of him 'tis part!—
This happy failure, this is Art.

It is to be noticed that each of these poems culminates in the complete felicity of the last line, as often happens in the Greek Anthology; and this is true of many of Mrs. Perry's poems, whereas with more commonplace artists the last line is apt to enfeeble the whole. Her defect lies, however, after all, in an imperfect control of her own chisel; there are halting lines, insufficient cadences. This, and this alone, leads to the impression that perhaps the pen is not, after all, her final and predestined implement.

Miss Josephine Preston Peabody, in 'The Wayfarers' (Boston: Copeland), is one of the youngest American women whose poems have matured into a volume, and she is certainly one of the best worth reading. Sometimes mastered by her own conception and not always working it thoroughly out into clear utterance, she yet has always something to say, and often gets it well and strongly uttered. "The Weavers," for instance, is a very striking and original personification of the unseen powers that mould our destiny even while we sleep (p. 26):

THE WEAVERS.

All day I walk among the crowd,
Seeking the Weavers. Well I wot
This noonday, starting blank and hot,
Is not for them; yet in a cloud
Of men I wander—call aloud.
All day I seek, and find them not.

Lo, every night the Weavers come,
And one by one, and silently,
With eyes down-looking timidly,
They steal into the darkening room,
Bent forms and eid against the gloom,
With faces gray as mystery.

Dim faces have the Weavers,—eyes
Of patience that do seem to shun
The waning light, as one by one
They come what way the shadow lies,
Like long imprisoned memories
That dare not look upon the sun.

With flickering smiles of gentleness,
Finger on lip, they come: and soon
Beneath the shuttle's lowly croon
The silence groweth less and less,
As dusk before the loveliness
Of a slow-rising summer moon.

The shuttle singeth. And fair things
Upon the web do come and go;
Dim traceries like clouds ablow
Fade into cobweb glimmerings.
A silver, fretted with small wings,—
The while a voice is singing low.

The quiet yieldeth up its sweet
To a great laughter; winds arise;
Wild birds awaken alien skies,
And in a tremulous outer heat
The pulses of the summer beat
To the deep hum of dragon-flies.

"Lo, the Life-glory, it hath come!"

Ah, Soul, who laughed aloud at thee?
Nay, not the Weavers. Mystery!
Was it a shuttle, broken, dumb?
Nought is there, nought in all the room
Save daylight and its vacancy.

Last night the Weavers came and went.
Ay me, so fair a web was wrought,
All winged hopes within it caught!
And ere the colors were forgotten,
The blank day matched the joy they lent,
Day, starting like a thing distraught.

I seek the Weavers. As I go,
All faces save their own I see,
But not their gentle company,—
Never their smiles that flicker so.
There are the only eyes I seek;
All other folks are strange to me.

In 'England and Yesterday,' a book of short poems by Louise Imogen Guiney (London: Grant Richards), we have, all things considered, the finest poetic tribute yet paid to that imperishable tie which links England and America in literary traditions. Miss Guiney, perhaps the most cultivated and the most original of American women who write poetry, has printed in England a little book of poems born in English soil, yet essentially American at heart. She is the only representative here of that Celtic revival which is the best thing in contemporary English verse; and it is not strange to find her various lyrics and sonnets inscribed to leaders of that movement, such as Lionel Johnson and Dora Sigerson. Oxford has also laid its spell on her, as on all such temperaments; and many charming memories will be recalled by a sonnet like this (p. 20):

BOOKS IN NEW COLLEGE GARDENS.

Through rosy clouds, and over thorny towers,
Their wings with darkling autumn distance filled,
From Isis' valley border, hundred-billed,
The rooks are crowding home as evening lowers:
Not for men only, and their musing hours,
By battled walls did gracious Wykeham build
These dewy spaces early sown and stilled,
These dearest inland melancholy bowers.
Blest birds! A book held open on the knee
Below, is all they guess of Adam's light:
With surer art the while, and simpler rite,
They follow Truth in some monastic tree,
Where breathe against their docile breasts, by
night,
The scholar's star, the star of sanctity.

Best of all, perhaps, as separating her by a clear strong line of demarcation from those Americans whom England simply dwarfs and retains, is this memory of home, even among the London docks (p. 14):

IN THE DOCKS.

Where the bales thunder till the day is done,
And the wild sounds with wilder odours cope;
Where, over crouching sail and colling rope,
Lascar and Moor along the gangway run;
Where stifled Thames spreads in the pallid sun,
A hive of anarchy from slope to slope;
Flag of my birth, my liberty, my hope,
I see thee at the masthead, joyous one!
O thou good guest! So oft, as, young and warm,
To the home wind thy hoisted colours bound,
Away from this too thoughtful ground,
Sodden with human trespass and despair,
Thee only, from the desert, from the storm,
A sick mind follows into Eden air.

Miss Helen Hay, under the modest title of 'Some Verses' (Chicago: Stone), fortunately does not follow her father in the direction of dialect—since one dialect writer is enough for a family—yet shows much power in verse-making, a delicate eye for nature, and a real depth of feeling, which, unfortunately, takes, especially on the first and last pages, a somewhat severe and even repulsive form. There is much concentration in these poems, and the very shortest sometimes present a striking imaginative suggestion, as in the following (p. 67):

THE LAST CLOUD.

A red-rose cloud upon the evening sky,
A warrior cloud which dies in gallant fight,
Too proud for prisons of triumphant night,
Knowing no pause, no strain of changing years,
Its little hour too short for dreams or tears,
The faithful sun its first and latest light—
Who would not so be glad to fight and die!
A red-rose cloud upon the evening sky.

The poem which, although not remarkable in conception, shows the most distinctly mu-

sical gift, and has even a haunting quality, is the following (p. 60):

TO DIANE.

The ruddy poppies bend and bow,
Diane! do you remember?
The sun you know shines proudly now,
The lake still lists the breeze's vow,
Your towers are fairer for their stains,
Each stone you smiled upon remains.
Sing low—where is Diane?
Diane! do you remember?

I come to find you through the years,
Diane! do you remember?
For none may rule my love's soft fears.
The ladies now are not your peers,
I seek you thro' your tarnished halls,
Pale sorrow on my spirit falls,
High, low,—where is Diane?
Diane! do you remember?

I crush the poppies where I tread,
Diane! do you remember?
Your flower of life, so bright, so red—
She does not hear—Diane is dead.
I pace the sunny bowers alone
Where naught of her remains but stone.
Sing low—where is Diane?
Diane does not remember.

'Along the Trail: A Book of Lyrics,' by Richard Hovey (Boston: Small, Maynard & Co.), is rather misnamed, for the author shows us his well-known lyric gift only in the now familiar song "Give a Rouse then in the May-Time," while a large part of the book takes the sonnet form. It is fitting that a good deal of the book should have academic reference to Dartmouth College and the Psi Upsilon Fraternity, and in these it is appropriate enough that the author's art should show itself as being, in his own phrase, "frank-and-twenty"; yet there comes a time when this prolonged juvenility must perforce wane a little, and, perhaps, both the authors of 'Vagabondia' need to bear this fact in mind. For some reason or other, the maturer muse of Mr. Hovey does not seem always to show recognition of this truth, nor are the luscious and morbid horrors of Mallarmé the best school for a healthy maturing; but there is no cause for real anxiety in regard to one who can write, in the intervals of 'Vagabondia,' anything so strong and simple as this sonnet (p. 27):

AFTER BUSINESS HOURS.

When I sit down with thee at last alone,
Shut out the wrangle of the clashing day,
The scrape of petty jars that fret and fray,
The snarl and yelp of brute beasts for a bone;
When thou and I sit down at last alone,
And, through the dusk of rooms divinely gray,
Spirit to spirit finds its voiceless way,
As tone melts meeting in accordant tone,—
Oh, then our souls, far in the vast of sky,
Look from a tower, too high for sound of strife
Or any violation of the town,
Where the great vacant winds of God go by,
And over the huge misshapen city of life
Love pours his silence and his moonlight down.

'Poems by Richard Realf, Poet, Soldier, Workman,' with a memoir by Richard J. Hinton, is a thick volume of more than 300 pages (Funk & Wagnalls), about one-half being biography and one-half verse. The memoir is a curious illustration of a fact as old as history—the fascination exercised by the brilliant, sentimental, mercurial type of man over the honest but unimaginative friend. It is simply impossible to make a hero—outside of a French novel—of one who began his career at nineteen in England by seducing a young relative of his chief benefactor, Lady Byron, and who, being beaten unmercifully by the girl's brother, disappeared and was afterwards recognized as a barefooted ballad singer; who, being banished from England to America, married three wives, two of them illegally, and finally committed suicide because his second wife, being apparently of more determined character than the others, persisted in following him up. It was perfectly in character for such a man to become John Brown's secretary, and betray his secrets for six hundred dollars (p. xlvii), and on the other hand, that he should give away half the money

to two of John Brown's escaped companions; nor is it out of character that he should write to his sister, "Why, Sallie, I have sung 'Home, Sweet Home,' when no eye but God's has seen me, and when no ear but His has listened; because, if I had not sung it, my full heart would have broken; and the tears would roll down my cheeks, and I would tremble till I could hardly sit on my horse" (p. xxxv). The best explanation that his faithful friend and biographer can give of him, is that he must have "suffered at times from some form of dementia" (p. xxx). Thus much of the memoir, and for the poems the following love-sonnet is, perhaps, the very low-water mark; it would be a pity, indeed, to have it go much lower (p. 19):

PASSION.

I clench my arms about your neck, until
The knuckles of my hands grow white with pain,
And my swollen muscles quiver with the strain,
And all the pulses of my life stand still.
I say I clench so. Ah! you cannot tear
Yourself away from my immortal grip.
Of forlorn tenderness and salt despair.
And child-like sorrowing after fellowship,
And wolf-like hunger of the famishing heart;
For not until my sundering fibres crack,
And my torn limbs from their wrenched sockets start,
O darling, darling! will I yield me back
To that lone hell whence, shuddering through and through,
With one wild tiger-leap I sprang to you.

So far as it appears, Real was a good soldier for four years during the civil war, and was offered a first lieutenantcy in the regular army, but declined it (p. lxxi). The high-water mark of his verses—which are in general, it must be said, mediocre—is, perhaps, the following (p. 40):

MY SWORD SONG.

Day in, day out, through the long campaign,
I march in my place in the ranks;
And whether it shine or whether it rain,
My good sword cheerily clanks.
It clanks and clanks in a knightly way
Like the ring of an armored heel;
And this is the song which day by day
It sings with its lips of steel:

"O friend, from whom a hundred times
I have felt the strenuous grip
Of the all-reouncing love that climbs
To the heights of fellowship;
Are you tired of all the weary miles?
Are you faint with your swooning limbs?
Do you hunger back for the olden smiles,
And the lift of olden hymns?"

"Under the wall of the shuddering world
Amoan for its fallen sons;
Over the volleying thunders buried
From the throats of the wrathful guns;
Above the roar of the plunging line
That rocks with the fury of hell,
Runs the absolute voice: O Earth of mine,
Be patient, for all is well!"

Thus sings my sword to my soul, and I,
Albeit the way is long,
As soiled clouds darken athwart the sky—
Still keep my spirit strong:
Whether I live, or whether I lie
On the stained ground, ghastly and stark,
Beyond the carnage I shall decry
God's love shine across the dark.

Take four parts of Joaquin Miller, add two of Kipling, one of Stephen Crane, and three of natural and almost boyish feeling—lasting strangely amid a medley of discourse, often childishly or vulgarly selected—and you have 'Kufu, and Other Poems,' by Clay Arthur Pierce, published in St. Louis by the author. The volume is an excellent piece of book-making in externals (from the Gottschalk Press, St. Louis); and its checkered black and red lines have an oddity which sometimes verges on picturesqueness. Apparently, the author wishes you to know his favorite lines, and so puts them in scarlet, and he often uses these tints instead of ordinary italics; or employs them to designate in the margin the precise date of the poem—for he is very much interested in his own statistics. Occasionally a red line slants across the whole page, not for erasure, but for distinction. Yet with all these evidences of whim and perhaps juvenility, there are signs of pro-

mise in "The Ballad of Yuba Wood" (p. 96), and in the protest against Juvenal's Sixth Satire (p. 141).

We have glimpses of Kipling again and of Browning and of Leopardi—and, above all, of youth and its ardor and its crudeness—in "The Song of the Wave, and Other Poems," by George Cabot Lodge (Scribners). The enormous gilded wave which overspreads the cover of this book answers the purpose of all Mr. Pierce's torrents of scarlet, and they alike give a promise of something turgid and rhetorical, whose pledge the book itself in each case does something to fulfil. Yet the title-poem (p. 7) is not wholly unbecoming the grandson of an Admiral:

THE SONG OF THE WAVE.

I.
This is the song of the wave! The mighty one!
Child of the soul of silence, beating the air to sound:
White as a live terror, as a drawn sword,
This is the wave.

II.
This is the song of the wave, the white-maned steed of the Tempest,
Whose veins are swollen with life.
In whose flanks abide the four winds.
This is the wave.

III.
This is the song of the wave! The dawn leaped out of the sea
And the waters lay smooth as a silver shield,
And the sun-rays smote on the waters like a golden sword.
Then a wind blew out of the morning
And the waters rustled
And the wave was born!

IV.
This is the song of the wave! The wind blew out of the noon,
And the white sea-birds like driven foam
Winged in from the ocean that lay beyond the sky,
And the face of the waters was barred with white,
For the wave had many brothers,
And the wave was strong!

VI.
This is the song of the wave, that rises to fall,
Rises a sheer green wall like a barrier of glass
That has caught the soul of the moonlight,
Caught and prisoned the moonbeams;
Its edge is frittered to foam.
This is the wave!

Mr. Paul Laurence Dunbar has effectually commanded an audience for his poems, and the time has arrived when they should be discussed, not as something sporadic or unexpected, but as dispassionately as if they came from the Anglo-Saxon type. Thus judged—and sympathy makes it difficult to apply the test—it must be said that, while smooth in diction and fairly animated in thought, they do not show that supreme quality which promises to help the colored race as it has been aided by the eloquence of Frederick Douglass or the organizing power of Booker Washington. Yet there is certainly promise in this volume, 'Lyrics of the Hearthside' (Dodd, Mead & Co.); the poems are not tinged with conceit because of sudden applause; and they are best where they come most nearly from the peculiar conditions of the author's life, as in the following poem (p. 40):

SYMPATHY.

I know what the caged bird feels, alas!
When the sun is bright on the upland slopes;
When the wind stirs soft through the springing grass,
And the river flows like a stream of glass;
When the first bird sings and the first bud ope,
And the faint perfume from its chalice steals—
I know what the caged bird feels!

I know why the caged bird beats his wing
Till its blood is red on the cruel bars;
For he must fly back to his perch and cling
When he fain would be on the bough a-wing;
And a pain still throbs in the old, old scars
And his pulse again with a keener sting—
I know why he beats his wing!

I know why the caged bird sings, ah me,
When his wing is bruised and his bosom sore,—
When he beats his bars and he would be free;
It is not a carol of joy or glee,
But a prayer he sends from his heart's deep core,
But a plea, that upward to Heaven he flings—
I know why the caged bird sings!

We have before now called attention to

the fact that, when our race once reaches the shores of the Pacific, the merely English traditions and phrases are apt to drop aside from verse, and something fresh and indigenous is revealed. 'Songs from Puget Sea,' by Herbert Bashford (San Francisco: Whitaker), may not as a whole be pronounced original or great, yet how refreshing are the local coloring and atmosphere in this little poem (p. 32):

EVENING ON THE RANCH.

The sunshine gilds the moss-robed roofs
And glares upon the window panes;
By two and threes the lazy herd
Strolls down the winding, dusty lanes.

The flushed sun sinks; the gold-blurred west
Shows dimly through the maple boughs;
The stars flame out; within their stalls
The wearied oxen dream and drowse.

Like some huge ship with hull afire
The crescent moon in vast, wild seas
Of sombre pine slow settles down
And burns the black tops of the trees.

A sudden silence, deep, profound,
Steals through the wan, uncertain light,
And now one lone frog's lagoon-let
Rings clear across the falling night.

The same native quality sometimes shows itself in the smallest California productions; so that a little pamphlet of a dozen pages (privately printed), such as 'Southern California Verses,' by Grace Luce, may give more that is indigenous and genuine than Bret Harte, for instance, has told us about California during the quarter of a century that he has lived across the Atlantic, reproducing old types of human life now as utterly departed as the Aztec civilization. Yet the poppies still remain on the hills, and Miss Luce sings them as freshly as Wordsworth his daffodils (p. 5):

POPPIES.

Poppy, blitheest flower that grows—
The bees that bend thy orange bloom
Are silenced by thy wild perfume,
And they leave thee in thy whispering rows
Afar from any garden close.
Children of our sunset skies,
And, dancing where the west wind blows
Over mesas, hills, and flowering leas,
You wander to the brink of seas,
A vagrant with the wilful breeze.
Free and wild, where men go not,
The wilderness your favored spot,
You open wide your winsome eyes
On Nature's gorgeous mystic-rites,
Content to grow, to gleam, and glow,
Forgotten by the butterflies.

The harvest of military and naval verses is not yet at an end, although the Philippine war seems, for very obvious reasons, to add little to it. Even the Spaniards have written but little heroic verse about bull-fighting. 'War Poems, 1898,' compiled by the Californian Club (San Francisco: Murdock Press), has in it not much that is above mediocrity, and the illustrations are below even that grade. Of the poems, the following is best worth quoting, by Miss Blanche M. Channing (p. 106):

THE NEGRO SOLDIER.

We used to think the negro didn't count for very much—
Light-fingered in the melon-patch, and chicken-yard, and such;
Much mixed in point of morals, and absurd in point of dress,
The butt of droll cartoonists and the target of the press;
But we've got to reconstruct our views on color,
More or less,
Now we know about the Tenth at La Quassina!

When a rain of shot was falling, with a song upon his lips,
In the horror where such gallant lives went out in death's eclipse,
Face to face with Spanish bullets, on the slope of San Juan,
The negro soldier showed himself another type of man;
Read the story of his courage coldly, carelessly, who can—
The story of the Tenth at La Quassina!

We have heaped the Cuban soil above their bodies,
Black and white—
The strangely-sorted comrades of that grand and glorious fight—
And many a fair-skinned volunteer goes whole and sound to-day
For the succor of the colored troops, the battle-records say.
And the feud is done for ever, of the blue-coat and the gray—
All honor to the Tenth at La Quassina!

Another book of the same class, although by a single author, is 'Songs of Good Fighting,' by Eugene R. White (Lamson, Wolfe & Co.). Just as a Whitman literature already exists in the line of imitation, because it is so easy to follow a poet's whims and omit his inspiration, so this book may yet have a bibliographical interest through the rhetorical tricks it borrows from Kipling, as in the following (p. 41):

ON THE GREAT LAKES AND THE SEA.

AS SAID THE SEA:

Now, list to me, said the Cresting Sea, ye wastrel spawn of land,
Ere that ye claim, so confident, kin to the Master's band;
For I am grey as Time is grey, for I am the Twin of Time.
I have seen the base of the Elder Days, I have looked on the ancient rime,
I have battled with man, I have battled with cliff,
I have battled with ships and dune,
At the Altar of Fate I pledged my hate that none may be immune.
Though I be grey with baffled deeds, yet red is the race I ran,
No rest I take my thrall to slake till the Earth be purged of man.

We catch another glimpse of Kipling in these verses from 'For the King, and Other Poems,' by Robert Cameron Rogers (Putnam) (p. 85):

THE STEERSMAN'S SONG.

The fore-shrouds bar the moonlit scud,
The port-rail laps the sea—
Aloft all taut, where the wind clouds skim,
Along the cutwater snug and trim,
And the man at the wheel sings low; sings he—
"Oh, sea-room and lee-room
And a gale to run afore—
From the Golden Gate to Sunda Strait,
But my heart lies snug ashore."

Her hull rolls high, her nose dips low,
The rollers flash alee—
Wallow and dip and the up-tossed screw
Sends heart-beats quivering through and through—
And the man at the wheel sings low; sings he—
"Oh, sea-room and lee-room
And a gale to run afore—
Sou'east by South and a bone in her mouth,
But my heart lies snug ashore."

The book has, however, some good frontier poems, the best of which is "The Maverick" (p. 48)—this being, as is well known, the name given by frontiersmen to the stray, unbranded, unshod horses who make up the untamable "wild bunch" of the prairies.

The Kiplingese influence is to be found again in 'The Shadows of the Trees,' by Robert Burns Wilson (New York: R. H. Russell), and it is the more remarkable because the pervading tone of the book is that of the love of nature and of a gentle melancholy. The volume is, however, exceptional in merit because the illustrations adorn instead of impairing it, as is more usual. The Kipling strain occurs thus, for instance (p. 7):

A SONG OF NEW SEAS.

Give us new seas to sail—the cry is, give us new seas to sail!
New seas to sail, be they never so mad and we ship in the teeth of the gale:
For the old seas pall on our souls like death, their tides and their deeps we know,
The slope of the continents under the brine, and the black ooze-beds below.

The currents that drift from pole to pole—what new hope can they bring?
And the breakers that beat on the thousand shores, what new song can they sing?
The thousand shores—the dreary stretch, what have they else to give
But the same dull death for those that die, and the same dull life to live!

The thousand shores—the gabbling millions, fronting the patient sun,
What will they do in their child's-play world but that they have always done?
These slaves of time with the farce of their flags, and their drivelling cant, accurst,
They will know no more when the last man lives than the first man knew at first.

A collection of more value than these is one called 'The Memory of Lincoln' (Boston: Small, Maynard & Co.), containing poems selected from a dozen different authors and skilfully edited, with an introduction, by M. A. De Wolf Howe. Another charming compilation—the best upon its own theme, indeed,

that we have ever seen—is 'Mother-Song and Child-Song,' edited by Charlotte Brewster Jordan (Stokes). From "Philip My King" to "Little Orphant Annie," this includes the whole gamut of poetry for young children, and will be a messenger of delight to many households.

A History of Physics in its Elementary Branches. By Florian Cajori. Macmillan Co. 1899.

Prof. Cajori's 'History of Mathematics' has proved a useful book, notwithstanding the fault that was found with it for not being a kind of book it was never designed to be. Should a similar mistake be committed about the present work, however, it will be in a measure the author's own fault; for in a preface he quotes from the chemical leader William Ostwald some sentences which, in German verbose eloquence, express the idea that scientific teaching is not sufficiently historical, and thereupon hopes that this book may do something towards remedying that defect. This, being the main substance of the preface, seems to declare the purpose of the book. But what Ostwald wished to recommend, if anything more than the perusal of classical memoirs, was probably text-books on the plan of Mach's 'Die Mechanik in ihrer Entwicklung historisch-kritisch dargestellt' (a good translation is published by the Open Court Co.), which imparts a very clear notion of the fundamentals of the science in a quite admirable account of the historical evolution of its conceptions; adulterated, unfortunately, it is true, with some baseless metaphysics. Since 99 per cent. of those who study chemistry, as of those who study mechanics, pursue it simply with a view to making industrial applications of their skill, we have little doubt that, for their purposes, Ostwald is quite right in confessing that the unhistorical methods are "very successful," contrary to the contention that there is economy in the historical way of teaching. But, however that may be, in what manner Prof. Cajori can imagine that an anecdotal and "crisp" (we will not say newspaper) narrative of physical discovery can subserve the historical plan of inculcating profound ideas of physics, is not very clear.

All that can be expected in a volume which compresses the whole development of elastics, thermotics, acoustics, optics, electricity, etc., into a hundred thousand words, is a sketch of the most exterior facts for those who come to it utterly ignorant, together with entertaining reminiscences and perhaps some stray, forgotten circumstances for those who have been over the ground before; and so much this volume certainly gives us. It is impossible to blame the author for not introducing us into the inner current of physical thought, except when he himself, by direct pretension to discuss the vexed question of the reason for the failure of ancient physics, renders it impossible not to notice this side of the work. All our studies of scientific methods during the last half century have gone to confirm Whewell's sagacious induction of 1837, that scientific discoveries cannot be made until appropriate ideas have first grown up. For example, the fact that Aristotle could assert that heavy bodies fall faster than light ones shows that his ideas were not in that state of preparation for the subject which would insure its occurring to him that, whether two bodies of equal weight falling side by side were welded together or not, could

make no difference in their rate of falling, unless a strain upon the welding would necessarily be brought about; and so long as such ways of thinking would not be sure to occur to him, he was plainly incapable of devising any suitable experiments relating to the phenomenon, as well as of reasoning from them rightly had they been brought before his eyes. Very few have been the exact general propositions drawn from history, perhaps none before Whewell's date, so eminently instructive as this; for it shows us that science is not unmixed receptivity, but essentially involves a conceptual element that has to go through a period of growth and a process of ripening. There is a certain psychological naïveté, therefore, in Prof. Cajori's bringing forward in 1899 the objection (borrowed from the most anti-historical of all modern schools of philosophy) that Whewell does not explain why such quick-witted folks as the Greeks should have failed to catch appropriate concepts; as if concepts were things that bright minds could always pluck at will. Certainly, Whewell's law does not pretend to explain everything about its subject-matter. That is a character it shares with the theory of evolution through variations at birth, and indeed with all genuine scientific inductions. But it does render the sort of cavil noticed a mere *ignoratio elenchi*. It is true enough, as Prof. Cajori says, that the ancient Greeks were not good physicists because they did not care seriously for physics and had no turn for it. But the reason why they did not care for it and had no turn for it was that they had not yet grown up to it, nor developed the ideas appropriate to that study. In later times, they turned out extremely successful with such branches as by the growth of appropriate ideas they were prepared to study.

Prof. Cajori distributes his space justly both among the different branches of physics and among the different periods of history. The Greeks get 1-24 of his 300 pages, the Romans 1-150, the Arabs 1-75, the Middle Ages 1-37, the Renaissance 1-12, the seventeenth century 1-6, the eighteenth 1-8, and our own 5-9. The natural consequence is that the book gets better and better the further one reads. The very best chapter is the very last, on the evolution of physical laboratories. On the other hand, a person who could not off-hand furnish a more satisfactory account of Greek physics than is here to be found, could hardly be reckoned as ordinarily well informed on the subject. No doubt, Prof. Cajori could have done much better. But he has given such rough characterization as the space to which he restricted this period would permit, as long as it was assumed that the reader was pretty thoroughly unacquainted with the Greeks beforehand.

Whatever all the similar modern compendiums get right this book gets right, and where they are apt to slip, this book is pretty sure to come to grief along with them. Thus, Mach having raised some purely gratuitous objections to the statical reasoning of Archimedes, prompted thereto by his metaphysics, we find Cajori only willing to admit that Archimedes "endeavored to establish" the principle of the lever. Good logic and good sense go with Lagrange in the opinion that the demonstration is perfect, epochal, and superbly ingenious in the highest sense. At any rate, if Prof. Cajori would only attend to the meaning of the word "establish" in English and not of *feststellen*,

or *beseidigt*, or *begründen*, in German, we think he must admit that, whether the proof was indisputable or not, the principle was, as a matter of historical fact, established by Archimedes. In like manner, he meekly falls into the train of those German commentators who have blunderingly accused Galileo of fallacious reasoning in his refutation of the hypothesis that the velocity of a falling body is proportional to the space described from the state of rest. The most that ought to be admitted is that, in reproducing at eighty years of age his reasonings of sixty years before, he does not set them forth with quite sufficient fulness; but that the reasoning itself, once it is fully stated, is perfectly sound, is quite beyond dispute. He assumes, of course, that the time of the fall is not infinite, and on that basis asserts that, were the law as supposed, the time of falling the first four yards would be no longer than the time of falling the first two. His suppressed reasoning was no doubt something like this: Under the supposition, the time of falling the second half of the first four yards would equal the time of falling the second half of the first two yards, the time of falling the second quarter of the first four yards would equal the time of falling the second quarter of the first two yards; so with the second eighths, the second sixteenths, and so forth indefinitely. Hence, there is no fallacy in concluding that, if the total times are not infinite, they must be equal. The truth of this conclusion is an elementary corollary from an unquestioned formula (that the time is the space integral from zero of a constant divided by the space described from the state of rest); but this does not prevent congenial blunders from flatly denying it. Prof. Cajori, by the way, tells us in a footnote where to find a German version of Galileo's 'Discorsi'; but an elegant and well-known translation into mere English is passed over in silence. Of nobody was it ever truer than of Galileo that the style is the man; and perhaps Prof. Cajori deems the German language and habits of composition fitter stuff for rendering the keen sixteenth-century Italian than English can be filed down to be.

It is for sundry reasons a good deal easier to write a satisfactory history of physics than a history of mathematics; and probably this will prove the most successful of all Prof. Cajori's histories. The chief difficulty of such an undertaking arises from the separateness of the several branches of physics, and the consequent danger of producing, not a history of physics in general, but a fagot of historiettes of its different branches under one binding. Towards the untying of this knot the present essay affords little clue. However it may be sweetened, a book like this is mainly a record of definite dry facts; and the principal question is, Is it accurate? Without undertaking to search out little flaws, we have found it to be in that respect all that could be expected.

Natalité et Démocratie. Par Arsène Dumont. Paris: Schleicher Frères. 1898.

This book illustrates in a striking way the methods which make so many French treatises at once instructive and futile. Nothing can exceed the industry of the author. He has been at infinite pains to study and classify the returns of marriages, deaths, and births, not only from France as a whole, but

also from particular departments and even communes. He has supplemented these labors by personal observations on the condition of the inhabitants in selected regions, and his generalizations are, so far as the movements of population are concerned, correct and of much value. He demonstrates mathematically the existence and the strength of important tendencies, and shows what these tendencies signify for the French nation. He has thus laid a substantial foundation for a conclusive determination of the causes which prevent the increase of population in France, and for the means by which these causes can be counteracted. This superstructure, however, he is unable to erect, and he is thus obliged to confine himself to lamentations over the present deplorable conditions and to gloomy prognostications of the future.

Before considering his statistics, we shall briefly explain this failure of his to make any profitable use of them. Attention has been forcibly directed in this country of late to the distinction between the Government and the community. We have seen patriotism defined as enthusiastic support of whatever policy and whatever measures our rulers, or a majority of them, are pleased to adopt, without regard to their effect on the general welfare. We have seen criticism of this policy and these measures denounced as treason, and the critics accused of "un-Americanism." Happily, a very large number of our citizens have not been silenced by this clamor, and among them are included most of those qualified by experience, by learning, and by disinterested public service to form an intelligent opinion. They understand wherein true patriotism consists, and are not prevented by the outcry of ignorant and corrupt demagogues from proclaiming that it consists as often in opposing the policy of rulers as in supporting it.

In France, however, we must recognize the fact that this confusion of thought and emotion, this most pernicious of political fallacies, is almost universally prevalent. There are a few disciples of the school of Turgot left, a few descendants of the believers in the rights of man. But they are very few, and they are without influence. The welfare of the French people is assumed to be whatever the rulers of France declare it to be; and hardly any one sees, or dares to say if he sees, that the policy of the French Government is in many respects ruinous to the prosperity of the people. Hence that policy receives no intelligent criticism. The condition into which France has been brought is everywhere admitted to be alarming; but no one is able to suggest any practical reforms. Those who lift up their voices, indeed, point out that if human nature were other than it is, in such respects as it pleases their fancy to imagine, the present policy of France might be continued; but their brilliant generalities have no practical value.

M. Dumont, for example, tells his fellow-citizens that they are deficient in "solidarity"; if they only had solidarity enough they would beget large families of children in order that the vast colonial possessions of France might be peopled, the French army increased in numbers, the revenues of the Government enlarged by additional taxes. He entirely ignores the fact that the colonial acquisitions of France are a curse to the country, that it was folly to

seize territories which there were no Frenchmen to colonize, and which can never be inhabited by people of the French race. He is blind to the plain truth that it is madness for France to crush her people with the burden of a vast standing army, which is a menace not only to her own tranquillity, but also to that of Europe. France has no enemies except those of her own creation. No other Power has anything to gain by attacking her, and were her army to be disbanded, the country would be safer from attack than it is now. To beget children that they may be exiled to the Sahara, to Tonkin, or to Madagascar, or slaughtered on European battle-fields in wars that can only increase the miseries of the French people, is not an impulse of "solidarity." Solidarity means, as M. Dumont explains, what we call public spirit; and it is no exhibition of public spirit to promote a national policy which will ruin the nation.

M. Dumont's researches prove that the decline in French "natality" is due to no physiological cause, but to voluntary abstention from procreation. There is no lack of marriages, but they produce few children. He indulges in many speculations concerning the motives for this abstention, but he neglects the most important. He does not see that Frenchmen are unwilling to bring children into the world when they know that their lot will be worse than that of their parents. They know that the French law of inheritance will tear the heritage to pieces, and confiscate a large part of it in the process. They know that their sons must receive the corrupting education of the barracks, and that the dowries of their daughters will be wasted by taxation. Many of them decline the responsibility of thrusting existence under such conditions on human beings, and most of them decide that they will have, in any event, but one or two children. As the policy of the French Government is resulting in a decrease of foreign commerce, and even the deposits in the savings banks are declining, we need not be surprised that the population is also diminishing.

It is true, as M. Dumont argues, that luxurious living is unfavorable to a high birth-rate. People who devote themselves to sensual gratification think the pleasures of paternity are not worth the prolonged trouble of the care of children. To a certain extent this tendency may affect a whole people. When its wealth is declining under the influence of misgovernment, its birth-rate may also decline. But to attribute a general decline to the increase of selfish indulgence—which is what M. Dumont understands by "individualism"—is preposterous. His own labored statistics refute him. He proves that in many communities where the very idea of "solidarity" is unknown, the birth-rate is high. Some of these cantons he describes as "plongés dans l'ignorance et la superstition"; one department is "absolument étrangère aux mœurs et aux idées françaises." There are many communities where poor people limit the number of their offspring; there are many where well-to-do people do not. There are none, however, where the size of families is shown to have any connection with "solidarity"; it may be doubted if a single Frenchman ever begot a child with the intention of increasing the population of the French colonies. The general result of M. Dumont's investigations is that civilization and progress

check the growth of population; he might claim to have proved inductively that only those Frenchmen have large families who are too ignorant to know or too besotted to care what their future may be. The evidence, however, appears to us to prove that Frenchmen refrain from having large families because their institutions discourage progress. It justifies the conclusion that if they were assured that their offspring would be exempt from military servitude, and would receive the savings of their parents intact, their families would be of sufficient size to dispel all apprehension of the extinction of the French race.

Saladin and the Fall of the Kingdom of Jerusalem. By Stanley Lane-Poole, M.A. G. P. Putnam's Sons. 1898. [Heroes of the Nations Series.] Pp. xxiv + 416. 8 maps and plans; 3 folding genealogical and chronological charts; many contemporary illustrations.

There are comparatively few books in English which deal in a scholarly and trustworthy way with Muslim history, and to these Mr. Stanley Lane-Poole has made a welcome addition. The book is based throughout on a sound study of the original sources, and yet the weight of learning is borne lightly, and few lay readers will guess how much solid work has been put into it by the veteran numismatist. A few prints of coins inserted here and there for ornament are all that shows what is the chronological backbone of the book, and we are introduced to the authors of the written sources, Eastern and Western, in some half-dozen prefatory pages.

It may be said broadly, and yet with essential truth, that it is impossible to write Muslim (or any Oriental) history according to the canons of modern historical science. In one respect only are we on a sound basis; there are the coins and they do not tell lies. But beyond that there is no one of the means on which the modern historian relies to build up a certain narrative. The historian of the East has no letters, state-papers, treaties, records of any kind. Such a source as *Domesday Book* for early English history he cannot dream of. The laborious but sure fixing of facts by indirect references and odd remarks made by the way, with no reason for their falsification, has little place with him. There are few inscriptions, and the most of these are inaccessible; their *Corpus* has not struggled beyond the first number or two. Practically he is referred back to the Arabic historians, and only a student of these knows how they can lie. In them the Oriental imagination is seen at its best, and their reader must ever be on his guard not to be misled by popular aphorisms about smoke and fire.

Fortunately, the materials for the life of Saladin, though they are of this nature, are good of their kind. They comprise a formal biography, of a worshipful and eulogistic character, by Bahā ad-Dīn, who was in close intercourse with him through the last years of his life. Bahā ad-Dīn is a fairly honest man and good writer, but he cannot be trusted to tell anything to Saladin's discredit; thus the shadow over the Assassins and their relations to his master is broad and deep. Imād ad-Dīn, another of Saladin's secretaries, wrote a history of the winning back of Palestine and Jerusalem, rhetorical but still at first-hand. Ibn al-Athīr, a contemporary

historian, gives the hostile criticism to balance the eulogy of Bahā ad-Dīn. Usāma ibn Munqidh, who died an old man five years before Saladin, left behind him a most entertaining autobiography full of side lights on his times. Abd al-Latif, the great Baghdad physician, has left a record of how Saladin impressed him. Ibn Jubayr travelled through the Syria and Egypt of the time and wrote his travels. Then there are the crusading chroniclers, William of Tyre, Ernoul, and the rest. From all these a fairly sound if never absolutely certain historical picture may be constructed, and that has been done in the present biography. It cannot be doubted that its portrait of Saladin is true and just, even though we may find it difficult to understand how such and such qualities could be united in one character. Saladin was a Kurd and a Muslim, of Aryan blood and Semitic faith; and that may explain much. Many details, it is true, remain still obscure. The strange story of how he was dubbed knight by the great Constable, Humphrey of Toron, his dubious dealings with the Assassins, his hatred of the Templars—these may never be entirely cleared up. But there are some points on which the reader might, with justice, ask further light. It would not be necessary to go back to the beginning of all things to explain the religious situation of the time. Sūfism, in its two forms, monotheistic and pantheistic, hardly has justice done to it; the explanations of such terms as Shāfi'ite, Shi'ite, Sunnite, of the difference between the Abbāsids and the Fatimids, are bald in the extreme. It is evident that Mr. Lane-Poole knows his ground, but he might tell his readers more. Probably he feared making his book too ponderous; but that is where skill is needed and may fairly be required.

Apart from this criticism, which is really a recognition of what Mr. Lane-Poole could do if he chose, we have little fault to find. One inevitable error clings fast. On page iv we have the old story that Nizām al-mulk had been a school-fellow of Omar Khayyām. When we consider that Nizām al-mulk was assassinated, nearly eighty years old, in 1092, while Omar did not die for another thirty years, we need hardly investigate further. But it can be shown that the whole legend, so dear to biographers of Omar, goes back to a book, the 'Wasāyā,' written probably in the fifteenth century, and thereafter falsely ascribed to Nizām al-mulk. (See Houtsma's edition of al-Bondārī, preface p. xiv, and Rieu in the 'Catalogue of the Persian MSS. in the British Museum,' ii, 446.) There are hardly any other points open to criticism except the veriest details. Boccaccio's use of Saladin in the 'Decameron' should have had part in the chapter on Saladin in romance; even there he is the chivalric and generous figure that afterwards appeared so often in Western literature. The standard misquotation, "the last infirmity of noble minds," plays again a part. But enough. The book is far too good, both as history and as literature, for any picking at weak points. It may be heartily recommended to all, whether specialists or not; the lay reader will enjoy it and the specialist will learn from it. The choice of illustrations is excellent, but the mechanical reproduction of some of them is very poor.

Christian Wagner: Der Bauer und Dichter zu Warmbronn. Eine ästhetisch-kritische und sozial-ethische Studie von Richard

Weltrich. Mit einem Bildnis des Dichters in Lichtdruck nach dem Gemälde von Emilie Weisser. Stuttgart: Strecker & Moser. 1898. Pp. xii, 497.

Warmbronn is an obscure Suabian village lying about a dozen miles westward from Stuttgart and containing some seven hundred inhabitants, who live chiefly by rearing cattle and selling fire-wood and juniper berries. A couple of hours distant is the market-town Weil, the home of Luther's contemporary and coadjutor Brenz, and near it the old hamlet Magstadt, in which the astronomer Kepler was born as the son of a country innkeeper; while a few miles to the north is Leonberg, the birthplace of the philosopher Schelling, and now perhaps still more famous for a breed of dogs rivaling those of St. Bernard in strength and sagacity. No local celebrity has ever given especial distinction of this kind to Warmbronn; even the name has no etymological significance in its application to this place, since no record or tradition exists of any "warm spring" that dispensed its healing or cleansing waters there; least of all is it a spot where we should expect to find a "Pierian spring" or a single inhabitant thirsting for such a fountain. It was here, however, that Friedrich Christian Wagner, whose soul, as it takes expression in his poetry, is a living source of the warmest love for every form of life, was born on August 5, 1835.

He was the only child of his parents. The father combined the trade of a carpenter with the management of a small farm; the mother, whose maiden name was Friederike Weeber, belonged to a family which had produced one schoolmaster and one musician, and through her the boy seems to have inherited his taste for letters and his talent for poetry. As his rather frail physical constitution unfitted him for severe manual labor, it was deemed best that he should become a teacher, and for this purpose he attended the village school until his fourteenth year, when he went to Esslingen on the Neckar to enter the so-called Paedagogium, or Normal Institute, where, after a few weeks, he was taken ill, and, on the advice of a physician, sent home and obliged to abandon his prospective career. Fate decreed that he should remain a peasant and lead the life of "a homely swain" in the open air. This decision was unquestionably best for his physical, and perhaps also for his mental, health and growth, since it enabled him to gratify the intense and universal love of nature which is one of the strongest passions of his soul and most characteristic features of his poetry. To him the fields and woods of Warmbronn are, like *Prospero's* enchanted isle,

"full of noises,
Sounds and sweet airs, that give delight and hurt
not."

His imagination animates and personifies the simplest objects and endows them with thought and feeling. The violet, the lily, and the rose are to him not mere symbols of certain attributes, modesty, purity, and love, but independent entities, with characteristics akin to those of man and distinctly individual self-consciousness.

This subjective illusion, by virtue of which the phenomena of nature become the confederates of his mythopoetic conceptions, pervades all his creations. The first collection of his verses, entitled 'Sonntagsgänge,' consists almost exclusively of legendary interpretations of local flora, sometimes the

amplifications of popular tales and traditions, but more frequently the suggestions of his own alert and genial fancy, as he wanders on Sunday through the meadows and forests. One of the most charming of these productions is that addressed to the anemones as "pale daughters of Zion," standing in groups and mournfully hanging their heads on Easter eve. Equally subtle and startling are the transformations wrought by his imagination with the buttercup, the daisy, the tulip, the spurge-laurel, the Turk's-cap, the slender shivering birch, and the blooming cherry tree.

As a peasant, Wagner is especially fond of rearing cattle and proud of having the finest specimens in his stall. When he began to own live stock, he firmly resolved never to fatten any animal for slaughter, but, if necessary to sell it, to find a purchaser who would treat it kindly and keep it alive. No amount of money could ever induce him to dispose of an ox, a pig, or a sheep to the butcher, and yet his scruples are not so strong as to prevent him from eating the flesh of animals with which he has no personal associations. His aversion to this kind of food, or rather his scruple to supply the shambles with it, would seem, therefore, to be based on romantic sentiment rather than on philosophic principle; and yet a closer investigation of the grounds of his conduct proves that such is not the case. He holds the doctrine of metempsychosis, and it is this psychological theory, and not a mere myth-making whim of the fancy, that endows all organisms with spiritual life and personality. Prof. Weltrich devotes the greater part of his volume to the exposition of Wagner's "Weltanschauung," and gives a succinct and exceedingly interesting history of the origin and evolution of the idea of the transmigration of souls and its influence upon the relation of man to the lower animals. It is curious to observe this comparatively unlettered peasant in an obscure Suabian village absorbed in "speculations high and deep," which have engaged the attention of Indian sages and Oriental metaphysicians from time immemorial without a final and irreversible conclusion being reached.

Besides the above-mentioned "Sonntags-gänge," Wagner has published three volumes of verses: 'Weihegeschenke,' 'Neuer Glaube,' and 'Neue Dichtungen,' all of which are pervaded by a vein of mysticism, and, although lyrical in form, have a decidedly ethical-didactic character. He is a man of warm affections, keen intellect, and creative imagination, a rare combination of "Dichter und Denker," and one hardly knows whether to wonder more at his gifts as a poet or his acuteness as a thinker. That he should sometimes strike the reader as monotonous and crude is not surprising in view of his defective education and the narrow sphere of his life. The marvel is that he should show such variety of invention in his productions.

Report on the Investigations into the Purification of the Ohio River Water, at Louisville, Kentucky. By George W. Fuller, Chief Chemist and Bacteriologist to the Louisville Water Company, etc. New York: D. Van Nostrand Co.

The investigations in question covered a period of nearly two years. We learn that the Ohio River water is at no time clear, or free from minute particles of suspended matter, and with every rain it becomes muddy. A table on page 17 shows 1,059 freshets,

with one to forty-six feet rise, in a period of thirty-six years. The analyses indicate that at times the suspended matter amounts to from fifteen to sixteen tons, and for considerable periods two to three tons, for each million gallons of water. There is also at times serious pollution by sewage.

The experiments were mainly directed to testing the applicability of the "American" system of rapid filtration through sand, preceded by the injection of alum as a coagulant and a short period of sedimentation in settling tanks. The period allowed for subsidence was from twenty to sixty minutes. Three proprietary systems (viz., the Warren, Jewell, and Western), differing only in the less important details, gave filtered water of satisfactory color, odor, and taste, removed all suspended matter, some dissolved organic matter, and from 97 to 98 per cent. of the bacteria. Under careful operation, no alum appeared in the effluent. The carbonic-acid gas in the water was increased, making it more corrosive for steam-bollers, tanks, pipes, etc. The cost of the process is not given, but some of the elements of cost are furnished, and from these it is safe to conclude that it would not be less than \$12 per million gallons in actual practice. The cost of alum alone for the 25,000,000 gallons of water needed daily to supply Louisville is estimated by the author at from \$51,800 to \$58,800 annually, or over \$6 per million gallons. The author concludes that if the system is modified by increasing the period of sedimentation to twenty-four hours, the cost will be decreased and the results will be satisfactory. An investigation of coagulants shows that alum is the best for the purpose. Two systems of electric treatment failed utterly, and a polarite filter was found not to be applicable to this water.

The Lawrence experiments of the Massachusetts Board of Health were directed to the application of slow sand filtration, as practised in Europe, to purify naturally clear water charged with sewage; those at Providence and Long Branch, together with a number of successful plants in operation, had proved the value of the "American" system for clear, or slightly turbid, polluted waters; but the Louisville experiments are pioneer work in the treatment of the more troublesome, turbid waters of the Mississippi basin. Beyond the entire breakdown of the "American" system at New Orleans and its partial failure elsewhere, scanty data existed upon which intelligent opinion could be based, although few thoughtful engineers would have expected any filter to cope successfully with fifteen tons of mud per million gallons of water, without the aid of careful sedimentation. The whole investigation is thorough, timely, and suggestive.

Eighteenth Century Letters. Edited by Brimley Johnson. Henry Holt & Co. 1899.

The mere copiousness of a correspondence seldom deters the reader. No one is daunted by the fact that there are some twelve hundred pages of the Browning Letters to be read, and read carefully, or ever the tale is told. The drama enacted there lives and moves under the eye after more than half a century; and when the last luggage-label is bought, and we learn with breathless relief that the boxes are safely out of the house, we close the book with a feeling of personal loss that almost makes us sympathize with Mr. Barrett. It would be futile to make selections from a whole so or-

ganic. There are, however, letter-writers, even of the highest rank, about whom one feels, like Mr. Weller on matrimony, that it is hardly worth while going through so much to get so little. Of this class are Johnson and Chesterfield. Mr. Brimley Johnson has therefore done the public a service in editing, in two attractive volumes, under the title of 'Eighteenth Century Letters,' selections from the letters of the above-named authors and from Swift, Addison, and Steele. Johnson's letters have little literary interest. Except in the case of Mrs. Thrale, he disliked the exertion of letter-writing, and his correspondence, though it is full of sound sense and irreproachable moralizing, has a hopelessly perfunctory air. Nevertheless, about 1,100 of his letters have already been printed, and Dr. Birkbeck Hill, who writes a pleasant introduction to Mr. Johnson's first volume, intimates that from time to time others come to light. From Johnson to Chesterfield is a long drive, and the former at least would not have thanked his editor for their coalition. "The utmost that can be said of Chesterfield's Letters," said Macaulay, "is that they are the letters of a cleverish man." Like some other judgments of that rhetorical critic, this estimate of Chesterfield is quoted to-day only to discredit its author. On the other hand, Landor thought that "one reason why a gentleman has become almost as rare as a man of genius" was the neglect of these Letters. Mr. Johnson's edition includes several of the "Letters to his Godson" which appeared for the first time in 1890, and are, as a rule, far less entertaining than the earlier work.

Mr. Stanley Lane-Poole's introduction adds to the interest of the second volume, which is mainly devoted to the correspondence of Swift. Dr. Hill published this year, for the first time, Swift's Letters to Chetwode, a fact which has caused a revival of interest in the Journal to Stella. The present selection is from Sir Walter Scott's colossal edition. Addison's stately epistles are relieved by the advice to the young Earl of Warwick on bird-nesting; yet even on this theme he cannot forbear quoting Cicero and Statius. Steele's ill-spelt and ill-considered letters to his "dear dear Prue" are in contrast a great refreshment. There is certainly no offensive elaboration about the following:

DEAR PRUE,

I dine with Lord Halifax and shall be at home half hour after six. For thee I dye, for thee I languish. RICHARD STEELE.

To our mind, Steele's effusions are the best reading of the collection.

The Land of the Pigmies. By Captain Guy Burrows. With introduction by H. M. Stanley, M.P. With illustrations from photographs and sketches by the author. T. Y. Crowell & Co. 8vo, pp. xxx, 299.

Captain Burrows was commander of a district in the eastern part of the Congo Free State from 1895 to 1897, but he has little to tell of his official life and work. Possibly he was not free to do so. He describes briefly his uneventful journey to his distant post, and one or two "punitive expeditions" in which he took part. Some information, also, is given in regard to the composition of the central government, and to the medical service, and there are a few missionary statistics. The greater part of the book consists of somewhat amateurish observations on the manner of life and customs of some

of the tribes inhabiting the Upper Wellé region, in which we have detected not much that is new. Novel is the statement that the "great ladies" of the Mang-bettous "wear the nails of the last three fingers of the left hand very long, to show that they do no manual labor." The most interesting chapter is upon the Akkas, or pigmies, whom the author claims to have had exceptional opportunities of studying. He says that they "have apparently no ties of family affection, such as those of mother to son, or sister to brother, and seem to be wanting in all social qualities, asking nothing more than to be let alone." On the other hand, though cunning, revengeful, and suspicious, the pigmy "will never steal." In proof of this assertion, Captain Burrows says that they are very fond of bananas, and that

"on returning from a day's hunting, the pigmy carefully wraps up several small pieces of meat in grass or leaves, betakes himself to the nearest banana plantation, and, having selected the bunches of bananas he requires, shins up the tree, cuts down the branches selected, and in payment affixes one of the small packets of meat to the stem by a little wooden skewer. By this means he satisfies his conscience, and can declare that he has not stolen the bananas, but only bought them."

An excellent marksman, "he will shoot three or four arrows, one after the other, with such rapidity that the last will have left the bow before the first has reached its goal." He has an excellent appetite, also, if the statement is not an exaggeration that he "eats as a rule twice as much as will suffice a full-grown man. He will take a stalk containing about sixty bananas, seat himself and eat them all at a meal—besides other food."

No great interest attaches to Mr. Stanley's introduction, or King Leopold's letter printed in the appendix, beyond the stress laid by the latter on the fact that all his efforts have been concentrated on occupying and guarding the frontiers of the State. This policy has its advantages in preventing such disputes as those between France and Great Britain in West Africa, but it means the deliberate subordination of the interests of the natives and the development of their country to a policy of forcible conquest, with all its attendant evils both to conquerors and conquered. A glossary of Mang-bettou words and phrases is appended, and there are numerous well-chosen illustrations.

The Foundations of England; or, Twelve Centuries of British History. (B. C. 55—A. D. 1154.) By Sir James H. Ramsay of Bamff, Bart. With maps and illustrations. Two volumes. Macmillan. 1898.

We must be content with indicating the general character of this extensive and painstaking work, since the multiplicity of its topics is such that any notice of special points would seem purely arbitrary and haphazard. Sir James Ramsay, who is already well known through his 'Lancaster and York,' puts forward the present volumes as a further instalment of his researches in English history. "Reasons to which I need not refer," he says, "induced me to begin by publishing the last section of my History first. But I do not propose to go on advancing by backward steps, and therefore I now go straight to the period at which the British Islands are first brought within the light of external history."

If we were seeking to define in a single

phrase the quality of Sir James Ramsay's *opus*, we should style it a chronological dictionary of English antiquities. In brief, precise, and colorless paragraphs it considers almost all the main questions which arise from a consecutive survey of English progress down to the date where the study ends. Facts as they arise in due sequence are considered with reference to their truth. The basis upon which each rests has been examined, and copious citations from the original sources evince an independent accumulation of material from widely scattered quarters. Determination of evidence, then, is made the chief point. Exposition is rendered subservient to it in a way which fixes upon the book the character of a dictionary.

Executed as it is honestly and without perverting prepossessions, this compendium should be of great practical value, especially to teachers of English history. Since the days of Lappenberg, Pauli, and Pearson, the investigation of origins, though not always conducted systematically, has been continuous; and few will deny Sir James Ramsay's claim that "a fresh landmark may fairly now be set up." The only question is that regarding the particular author's ability and attainments. Of Sir James Ramsay's qualifications there can be no doubt whatever. He has worked on his subject diligently and with single purpose for many years. In the dedication he refers to his "lengthy task," and constant evidences of sustained effort show that this phrase is not merely an idle profession. Year by year, topic by topic, he advances steadily, without animation of style or desire to establish new theories of church and state, but with a persistent anxiety to get at the ground facts as they have occurred. His footnotes are so full that they furnish a tolerably complete bibliography of the best documents available in each case. When stating that the book will be useful to teachers, we have in mind the wealth of brief notes just mentioned, and the heavily loaded marginal headings which abound on each page. The text not only represents a vast amount of inquiry into minutiae, but is so divided that it can be quickly consulted on all these separate particulars.

Topography is one of Sir James Ramsay's leading interests, and he is never more agreeably occupied than when discussing the site of an obscure battle-field, *e. g.*, the exact situation of *Mons Graupius*, where Agricola and Calgacus fought it out in 84 A. D. For the earlier Anglo-Saxon period he avows that "fixing of dates and sites is the most that can be done." At a later age, Brunanburh, Maldon, Ashington-Canewdon, and Senlac all furnish subjects for topographical excursions. In the last-mentioned case Sir James declares against palisades:

"With respect to a much disputed question, we find no sufficient authority for holding that the English position was protected by earthworks, palisades, or fixed defences of any sort. The only writer who introduces them is Wace in the *Roman de Rou*; his statements on the subject are inconsistent with each other, while neither he nor any other authority gives any incident of the action in any way implying their presence. On the contrary, we hear of the English as repeatedly breaking out of their ranks and then rejoining them without impediment; the Normans, on the other hand, gaining ground inch by inch."

One of the most admirable features of Sir James Ramsay's researches is a desire to throw light on English affairs by an examination of the Continental authorities. Thus, Baudri of Bourgeuil, Adam of Bremen, Ru-

dolph Glaber, William of Poitiers, William of Jumièges, Robert de Monte, and Suger have been profitably examined, besides other greater or lesser chroniclers who figure in Pertz, Muratori, and the leading European collections. This thorough search is, of course, no more than should be expected of every systematic writer, but, because so often neglected, it signalizes Sir James Ramsay's care and erudition.

Against the meritorious features which we have named must be set some shortcomings. The style is not on a level with the information displayed. Even for scientific history it is unnecessarily bald, and we imagine that few will ever read the two stout volumes through. Again, for any work not avowedly a dictionary, facts are often too solidly tabulated, *e. g.*, vol. II., p. 456, where one finds half a page of unbroken names—a list of Cistercian and Augustinian monasteries. To face it, p. 457, is another half-page of Stephen's children and grandchildren. Finally, the notes are sometimes trivial, and the proof-reading is not quite up to the mark.

On striking a balance, the praiseworthy part of Sir James Ramsay's work far outweighs that with which fault can be found, and both volumes deserve a place in every good historical library.

Letters of Walter Savage Landon, Public and Private. Edited by Stephen Wheeler. Philadelphia: J. B. Lippincott Co. 1899.

Two years ago Mr. Stephen Wheeler edited a volume of letters and writings of Landon, hitherto unpublished. The present work is in the main a collection of letters addressed to Miss Rose Paynter, the niece of that Rose Aylmer whose memory received a sort of literary apotheosis in one of the most celebrated of English lyrics. "Whatever he may profess," Browning wrote, in 1860, to Forster, "the thing he really loves is a pretty girl to talk nonsense with; and he finds comfort in American visitors, who hold him in proper respect." To that amiable weakness we owe these letters. They are pleasant and garrulous, as might be expected; the letters of an old and disillusioned man, whom a massive and endearing self-conceit had kept free from a touch of sourness. Forster occasionally quoted from them in his biography of Landon, but for the most part they will be new to the public. The occasional poems that Landon was in the habit of enclosing to his "fair correspondent" will add little to his reputation. He was not a brilliant letter-writer, and the most that can be said for the present volume is that it gives a clearer picture than one had before of the life he led at Bath from 1838 till his death in 1863, after his final retreat from England. The public letters addressed to the *Esaminer*, printed at the end of Mr. Wheeler's volume, need hardly have been exhumed from "the limbo of old newspapers." They are on political subjects, and Landon was no politician. Fisher's sketch of Landon in a passion, made in 1840, is very happy, and, though it borders on the limits of caricature, it is so convincing to the imagination that it should supersede all other portraits of the "old Roman."

Mr. Wheeler's volume is admirably got up, and contains, besides the sketch mentioned, a charming reproduction of a miniature of Miss Rose Paynter. We observe that Landon's 'Commentary on the Memoirs of Charles James Fox,' which was suppressed before publication, is now to be reprinted.

The only copy known to exist is in the possession of the Earl of Crewe. All this shows a very admirable zeal for the memory of Landor. But we question whether the publishing of trifles that their author was willing to let die, is ever anything but a mistaken kindness. What Mr. Garnett did for Shelley and Mr. Kitton for Dickens, Mr. Wheeler is now doing for Landor. Will Landor's genuine admirers feel a becoming gratitude?

HAVE JUST PUBLISHED:

James's Talks to Teachers

By Prof. WM. JAMES, Author of "The Principles of Psychology." 301 pp., 12mo, \$1.50 net.

Eighteen brilliant "Talks" on psychology that, while preserving all of the concrete practical applications, are practical and popular in the extreme. In the last two articles the author speaks for the rights of individualism in a way which readers of his *Will to Believe* will recognize.

Contents: Psychology and the Teaching Art; The Stream of Consciousness; The Child as a Behaving Organism; Education and Behavior; The Necessity of Reactions; Native and Acquired Reactions; What the Native Reactions Are; The Laws of Habit; The Association of Ideas; Interest; Attention; Memory; The Acquisition of Ideas; Apperception; The Will; The Gospel of Relaxation; On a Certain Blindness in Human Beings; What Makes Life Significant.

THEY HAVE RECENTLY PUBLISHED:

Walker's Discussions in Education.

By the late FRANCIS A. WALKER, President of the Mass. Institute of Technology. Edited by JAMES P. MURPHY. 8vo. \$3.00 net.

Literature: "The distinguishing traits of these papers are open-mindedness, breadth, and sanity. . . . No capable student of education will overlook General Walker's book; no serious collection of books on education will be without it. The distinguished author's honesty, sagacity, and courage shine on every page."

Lavignac's Music and Musicians

Edited by H. E. KREHBIEL. With numerous Illustrations. 504 pp. 8vo. \$3.00. (Descriptive circular free.)

Practically a cyclopedia of its subject, with 1,000 topics in the index.

W. J. Henderson, Musical Critic of the New York Times: "It seems to have been his idea when he began to let no interesting topic escape. . . . The wonder is that the author has succeeded in making those parts of the book which ought naturally to be dry so readable. . . . One of the most important books on music that have ever been published."

Adams' Science of Finance

By Prof. HENRY CARTER ADAMS of the University of Michigan. xiv+571 pp. 8vo. \$3.50 net.

Prof. E. R. A. Seligman of Columbia, in Political Science Quarterly: "One of the most original, the most suggestive, and the most brilliant productions that have made their appearance in recent decades."

Ready in May.

Daniels' Elements of Public Finance

By Prof. W. M. DANIELS of Princeton. 12mo.

A handy manual of some 370 pages, for general reader or student, describing the actual system in the United States, with some exposition and criticism of our monetary system. The author's standpoint is in the main conservative.

Postage on net books 8 per cent. additional. The Publishers' New Catalogues ready in May.

THE STUDENTS' SERIES OF LATIN CLASSICS.

24 Books now out and under way.

ANNOUNCEMENT.

The Cambridge Literature Series,

Under the editorial supervision of THOMAS HALL, JR., Harvard College. The best in uniform excellence—the cheapest in price.

BENJ. H. SANBORN & CO., Publishers, Boston.

TRANSLATIONS AND REPRINTS. English Mediæval Institutions.

Including 7 numbers, aggregating 217 pp. Price \$1.35.
 Circulars on application. D. C. MUNRO, Univ. of Pennsylvania, Philada., Pa.

THE BOOK LOVER Large, handsome, unique, magazine. Quarterly; \$1 a year. Sample, 25c.
 1903 N. Market Street, San Francisco, Cal.

BOOKS, SECOND-HAND AND NEW, Standard and Rare. Books bought. Catalogues sent. E. W. JOHNSON, 9 E. 43d St., N. Y.

"To writers and thinkers on municipal problems the volume is almost indispensable."
 —OUTLOOK.

Municipal Monopolies

By EDWARD W. BEMIS, JOHN R. COMMONS, FRANK PARSONS, M. N. BAKER, F. A. C. PERREN, MAX WEST. 12mo, cloth, appendix, index, \$3.00. (Vol. VXi., Crowell's Library of Economics and Politics.)

"Probably no more timely work has appeared in this generation. The facts and statistics gathered in these seven hundred pages are those which thousands are inquiring for. They are exact, official, and unimpeachable."—N. Y. World.

For sale by booksellers. Sent, postpaid, on receipt of price by the publishers.

THOMAS Y. CROWELL & Co.,
 New York and Boston.

Lone Pine.

The Story of a Lost Mine. By R. B. TOWNSHEND. 12mo, \$1.25.

"A thrilling story of a lonely white prospector in New Mexico."—The Outlook.

"A good story, well built, and ending with an exciting battle . . . full of incident and adventure."—Buffalo Express.

"The book gives evidence of a vigorous capacity in narrative and is full of descriptive force. The writer's strength in dealing with scenes of violence and of bloodshed is certainly remarkable. The book is evidently the work of a clever writer."—The Athenæum.

G. P. PUTNAM'S SONS,
 27 West 23d St., New York.

JUST PUBLISHED:

One Poor Scruple.

A Seven Weeks Story. By Mrs. WILFRID WARD. Crown 8vo, \$1.50.

LONGMANS, GREEN, & CO.,
 91-93 Fifth Ave., New York.

OXFORD MAPS.

By Prof. H. S. OSBORN, LL.D.

These maps cover all Biblical Geography, contain all recent discoveries, and are accepted authority. Can be seen over large rooms. Special terms for the maps as a set.

Oxford Map Publishers, Oxford, Ohio.

Modern French Literature.

By BENJAMIN W. WELLS, Ph.D., Harvard.
 12mo, Cloth, \$1.50.

LITTLE, BROWN & CO., Publishers,
 254 Washington St., Boston.

FOUR IMPORTANT BOOKS.

THE LIFE OF DANTON.

By HILAIRE BELLOC. With portrait. Octavo, 440 pp., \$2.50.

"Mr. Belloc has produced the first searching, exhaustive, and profound study of Danton's character and its times and surroundings that has appeared in the English language. He has done more. He has written one of the most fascinating and at the same time well-rounded and masterful historical studies in existence—a monumental work that will be the last word and an authority for many years to come."—*Chicago Times-Herald*.

ON THE SOUTH AFRICAN FRONTIER.

The Adventures and Observations of an American in Rhodesia.

By WILLIAM HARVEY BROWN. With 32 illustrations and 2 maps. 8vo, \$3.00.

"Every word in Mr. Brown's 'On the South African Frontier' is the simple, straightforward word of a frontiersman who has a tale to tell, and tells it without too much varnish. As a mere narrative of stirring adventures, the book can be recommended to the general reader; but it is of especial value just now on account of the interesting side-light it throws upon the British method of governing savages."—*Literature*.

IN THE KLONDYKE.

By FREDERICK PALMER. Illustrated from photographs. 12mo, \$1.50.

"There is good reason for saying that this is the best description of the Klondike mines and miners yet written. Except in his entertaining picture of a passage over the famous Chilkoot Pass, Mr. Palmer has permitted the country and its inhabitants to tell their own story, as it were. The result is a book of extraordinary interest."—*Boston Journal*.

HOW TO KNOW THE FERNS.

A Guide to the Names, Haunts, and Habits of Our Native Ferns.

By Mrs. FRANCES T. PARSONS (formerly Mrs. Dana). With 144 illustrations. Crown 8vo, \$1.50 net.

"This book follows the plan of 'How to Know the Wild Flowers' (now in its 43d thousand). It is fully illustrated, and will be of great service to all who have not had the opportunity of early training in woodlore. 'How to Know the Ferns' not only identifies the ferns, but their family relations and neighbors. It will beyond doubt receive a general welcome."—*The Outlook*.

TWO EDUCATIONAL BOOKS.

Ready May 6.

A SYSTEM OF ETHICS.

By FRIEDRICH PAULSEN, Professor of Philosophy in the University of Berlin.

Edited and Translated by Frank Thilly, Professor of Philosophy in the University of Missouri. Crown 8vo, pp. 720, \$3.00 net.

The value of Prof. Paulsen's Ethics was at once recognized upon its first appearance in Germany, and the desirability of an English translation has been so often and so urgently advised that the publishers have been pleased to undertake it. Not only as a text-book for colleges and universities, but as a treatise appealing to the general educated public, does this work lay special claim. By many competent critics it is regarded as the most inspiring and suggestive discussion of morality thus far written.

A STUDY OF ENGLISH PROSE WRITERS.

By J. SCOTT CLARK, A.M., Professor of English in Northwestern University.

8vo, 900 pages. \$2.00, net.

This unique book presents a "scientific method" of studying the great writers, devised by its author after long experience in teaching, and tested for years in his classroom. It is a study of rather than about the masters of English prose, mainly through citations of the most authoritative published criticism on each writer, with analyses of the styles of the various authors. These analyses are so arranged as to exhibit the central characteristic of each author, and are supplemented by exhaustive bibliographies.

Descriptive circulars of these books mailed upon application.

CHARLES SCRIBNER'S SONS,
PUBLISHERS, NEW YORK.

Thaddeus Stevens

By SAMUEL W. MCCALL. In "American Statesmen Series." 16mo, \$1.25.

A biography of "The Great Commoner" who was so conspicuous a figure in Congress during the war for the Union. Mr. McCall, the able representative from Massachusetts, has told the story exceedingly well.

Psychology and Life

By HUGO MÜNSTERBERG, Professor of Psychology in Harvard University. Crown 8vo, \$2.00.

Professor Münsterberg, who is an authority in his domain, here treats of Psychology in its relation to Physiology, Education, Art, History, and Mysticism. His book is of remarkable value, and those who read it with appreciation will find it invigorating and in a high degree helpful.

The Antigone of Sophocles

Translated into English by GEORGE H. PALMER, Professor in Harvard University. With an Introduction. 12mo, 75 cents.

This translation is of equal excellence with Professor Palmer's admirable translation of the Odyssey. It has the force and fluency of an original work. His Introduction treats in a luminous manner of the Greek drama and the place of Antigone in Greek tragedy. It would be difficult to gainsay Emerson's advice to read the great ancient classics in translations if they were translated like Professor Palmer's Odyssey and Antigone.

Hermione and Other Poems

By EDWARD ROWLAND SILL. Small 16mo, \$1.00.

The poems in this book are of the same high order of thought and poetic charm with Sill's two other books—Poems, and The Hermitage—and the three little volumes are a precious addition to American poetry.

Under the Beech-Tree

Poems by ARLO BATES, author of "The Puritans," etc. Crown 8vo, handsomely bound, \$1.50.

Those who have enjoyed Mr. Bates's previous books of poetry will welcome this tasteful volume, which is the best he has yet produced, the one which shows most fully his imaginative power and the lyrical expression of which he is master.

Sold by all Booksellers. Sent, postpaid, by
HOUGHTON, MIFFLIN & CO., Boston,
11 East 17th Street, New York.

The Queen's London.

Containing Exquisite Views of London and its Environs, together with a fine series of Pictures of the Queen's Diamond Jubilee Procession. Enlarged Edition. Price, \$3.75.

CASSELL & COMPANY, Limited,
7 AND 9 WEST 18TH ST., NEW YORK.

The Nation.

NEW YORK, THURSDAY, MAY 4, 1899.

The Week.

Gen. C. McC. Reeve, who has just returned from the Philippines, not only considers the war which we have been waging the past three months as deplorable and unjustifiable, "contrary to our principles in the past," but he also holds that "this bloodshed, this necessity of conquering these poor wretches, might have been avoided." To prove this contention, he tells "one piece of news that is not generally known in the United States," but which ought to be brought to the attention of every citizen:

"On Sunday, February 5, the day after the fighting began, Gen. Torres of the insurgents came through our lines under a flag of truce and had a personal interview with Gen. Otis, in which, speaking for Aguinaldo, he declared that the fighting had been begun accidentally and was not authorized by Aguinaldo, that Aguinaldo wished to have it stopped, and that to bring about a conclusion of hostilities, he proposed the establishment of a neutral zone between the two armies, of any width that would be agreeable to Gen. Otis, so that during the peace negotiations there might be no further danger of conflicts between the two armies. To these representations of Gen. Torres, Gen. Otis sternly replied that the fighting, having once begun, must go on to the grim end. And it has been going on ever since."

An official dispatch sent by Gen. Otis on the 8th of February, and given to the press by the authorities at Washington, stated that "Aguinaldo now applies for a cessation of hostilities and conference; have declined to answer." But it has never before been made plain, as it now is by Gen. Reeve, that Aguinaldo disavowed responsibility for the first collision of the opposing forces, and immediately sought to open negotiations for peace, but was repulsed by the American commander in terms which virtually forced him to keep on fighting.

Idaho volunteers have been doing their part in killing Filipinos, but now they are needed at home to put down riotous miners in the Cœur d'Alène district. The Governor of the State has called on the President for United States troops, inasmuch as the local militia have been sent to Manila. This demand is perfectly proper; and the general Government, having stripped Idaho of its own defenders, is bound to see to it that life and property are protected against riot. It is extremely fortunate that the country has been so generally prosperous during the past six months. Otherwise, Mr. McKinley might have had many disagreeable reminders, like this one from Idaho, of the danger of accepting the services of volunteers for one war and then holding them for service in another.

Of the men now talked of for Speaker

of the House, Mr. Cannon of Illinois is decidedly the fittest for the position by experience, temper, and firmness. He has been chairman of the committee on appropriations long enough to enable the country to form a judgment of his character, and the general conclusion is that the place has not been filled more acceptably during the present generation. He has been the consistent foe of jobs and extravagance, and no scandal has ever come near him. Moreover, although a consistent Republican, he has not been an extreme partisan. His most prominent competitor is Gen. Grosvenor of Ohio, a man of ability, but of uneven temper, and a partisan to the point of extreme fury. Two members from New York, Payne and Sherman, are also talked of, but neither of them has yet made such a mark in the public mind as either Cannon or Grosvenor. It is a part of the jargon of politics that the West can get the Speakership if the South will join forces in the attempt, or that the East can get it if Ohio and the South will help, and so forth. The less we hear of this kind of sectionalism the better. Speaker Reed was elected not because he was from the East, but because he was considered the best man for the place. The same was true of Mr. Carlisle when he was chosen Speaker, and of Mr. Randall and Mr. Blaine when they were chosen. Sectionalism was "not in it," and it ought not to be now, and probably will not be when the time comes for making a decision.

The argument on the Quay side in the controversy over the right of the Pennsylvania Governor to give the boss a temporary appointment as United States Senator develops some humorous features. One of them is the contention of the Philadelphia *Inquirer* that, when the Constitution says that the Executive of a State may make a temporary appointment if the vacancy happen during the recess of the Legislature, until the next meeting of that body, it means that Gov. Stone of Pennsylvania may name Quay, but that the Governor of Delaware cannot name his choice when the same sort of vacancy exists in that neighboring commonwealth. Four Legislatures which should have chosen Senators the past winter failed to do so—in Pennsylvania, Delaware, Utah, and California. One would naturally suppose that the Governors of all four States would possess equal authority to make a temporary appointment. The *Inquirer* insists that there can be no doubt of Gov. Stone's right to do this in Pennsylvania, but that Gov. Tunnell of Delaware must not, its language being:

"It is argued by some of his opponents that

while it might be an easy task to seat Quay on personal grounds, yet if he were seated, the Governors of Delaware, California, and Utah must be conceded the right to appoint claimed by Gov. Stone. This is not necessarily so, for each case must stand upon its own ground. It could hardly be claimed, for instance, that the Democratic Governor of Delaware should be entitled to appoint a Democrat when there is a Republican Legislature."

The *Inquirer* seeks to defend this position by laying down the principle that "the popular voice must be taken into account." It claims that Quay was made a direct issue before the people, that he won by a great Republican majority, that he was the regular candidate of more than two-thirds of the Republican members, and failed of election only "because a couple of petty Republican bosses entered into a conspiracy to defeat him." But Quay's opponents maintain that "the popular voice" of the majority of the people of the State was the other way. The truth is, that it is often difficult to tell what the popular voice in any State at a particular time is. Take the case of Connecticut, for example. In 1884 it gave a plurality of its popular vote for Cleveland for President, and chose a Legislature which elected a Republican to the Senate. In 1892 it again gave a plurality for Cleveland, and again chose a Legislature which elected a Republican to the Senate. Which was "the popular voice" in Connecticut in these two years—the support of the Democratic party on the Presidential issue, where every vote counted, or the support of the Republican party on the senatorial issue, through the unjust advantage enjoyed by that party in the apportionment of the State for members of the Legislature under an antiquated Constitution?

An incident of the Georgia lynchings on Sunday and Monday of last week forcibly illustrates the more than likelihood that "Judge Lynch" may err in his decisions. The mob that hung the colored preacher Lige Strickland, on the unsupported testimony at the stake of the wretch Sam Hose, would as readily have hung another colored preacher, against whom no charge had been made, but for an opportune discovery of a mistake in identification. After the murder of four negroes by lynchers at Palmetto last month, the colored minister there, named Tharpe, dared to criticise the act of the mob. Because of the consequent feeling aroused against him he was sent to Fayetteville, changing places with Strickland. When the mob started in search of Strickland they went to Fayetteville, not knowing of the change of ministers, and captured Tharpe. Placed in irons, he was started on the way to Palmetto, but at a railroad junction he was identified by Dr. Hal Johnson and Represent-

tative Blalock, and was released. Dr. Johnson says that if Tharpe had been taken to Griffin or Palmetto, it is certain that he would have been lynched. The people of the surrounding counties were on the lookout for Strickland, and, not knowing him, it is believed that they would have taken the word of the mob from Fayetteville that they had the man sought.

A movement has been started to procure from Congress a reduction of postage on authors' manuscripts passing between authors and publishers so that they may be sent as third instead of first-class matter. The bill is coming up at the next Congress. Many influential Senators and Representatives are especially interested in the bill, and will press it to a speedy enactment. If they succeed, authors' manuscripts will be placed on an equality with all other merchandise using the mails. The same manuscript which is now charged letter rates when going to the publisher for the first time can be sent back to the author accompanied by proof-sheets at third-class rates, and again returned to the publisher with the proofs at the lower rate of postage. It is only the first step that costs, yet there is no reason why the first step should be so costly. It would be necessary to provide in the law that nothing but the manuscript proper should be in the package—no directions or private communications of any kind in the nature of a letter—and for this reason the package should be unsealed. In England manuscript goes at third-class rates. It costs in England four cents to send a manuscript that here would cost sixteen cents. It is particularly important that the measure shall have the support of all those who will be benefited by the reduction.

It is to be said of the New York Legislature which adjourned on Friday that if it did not accomplish as much good as it might, it did far less evil than any of its predecessors for many years. Gov. Roosevelt has not had his way in some things which he has urged upon it, but he has succeeded in preventing all legislation which he did not approve. The most conspicuous failure of the session is the defeat of the biennial-sessions amendment, a breach of party pledges to the people which is to be charged entirely to the Platt machine. The failure to pass any radical police legislation was foreseen from the beginning, and is not a subject for lamentation. By all odds, the great achievement of the session is the repeal of the Black "starchless" law, and the enactment in its stead of the most thoroughgoing civil-service reform statute that any State has succeeded in getting. This is a distinct personal triumph for the Governor. Another was in the passage of a bill "appropriating \$20,000 for the use of Austen G. Fox and

Wallace MacFarlane, counsel designated by the Governor in connection with the investigation of the canal frauds." This records a defeat for Aldridge and Payn and the old canal forces that sought to put an end to the canal inquiry by refusing to have any State money employed in the work. The vigorous announcement by the Governor that if the Legislature refused the money, he would appeal to the public for a popular contribution, or would even pay it out of his own pocket, silenced all opposition. The appropriation was passed without a murmur, the feeling among the canal statesmen being that the less said about it the better.

The powers now conferred upon the State Civil-Service Commission are as great as those exercised by Croker in the administration of his government. The Commissioners virtually have the whole State at their mercy. They prescribe the rules for examinations; and every appointing officer filling a place in the classified service is obliged to make his selections from the eligible list in the order in which the names are placed upon it. He must take the person standing highest first, and proceed in order down the list. If he has only one place to fill, the Commissioners may give him only one name, the highest, and he must accept it. The State Commissioners have full powers of supervision over Municipal Commissioners; may compel them to adopt such rules and regulations as they choose; may, in case a Municipal Commission fails to establish rules as the law requires, compel them to take such rules as they wish; when a Mayor fails to appoint a Municipal Commission, they may appoint in his place; when a Municipal Commissioner fails to perform his duty, they may, by unanimous vote and with written approval of the Governor, remove him from office. They have power also to extend the competitive system to all the counties of the State, and are directed to investigate from time to time the operations of local boards and the acts of public officials generally, with respect to the execution of the law, and in this work they are endowed with all the powers of a legislative committee. This is "starch" in appalling volume.

The Krum bill amending the savings-bank law of the State, as it finally passed the Legislature and received the Governor's signature, permits savings banks to invest in the first-mortgage bonds of any railroad in other States connecting with and controlled by any railroad of this State, on the same conditions as to solvency and dividend-paying that are required in respect of New York railroads. They may invest also in the first-mortgage bonds of the Chicago and Northwestern Railroad Company; Chicago, Burlington, and Quincy Railroad Com-

pany; Michigan Central Railroad Company; Illinois Central Railroad Company; Pennsylvania Railroad Company; Delaware and Hudson Canal Company; Delaware, Lackawanna and Western Railroad Company; New York, New Haven and Hartford Railroad Company; Boston and Maine Railroad Company; and Maine Central Railroad Company, on similar conditions. Not more than 20 per cent. of the whole amount of deposits of any savings bank can be invested in railroad bonds, and not more than 5 per cent. in the bonds of any one railroad. Street railways in cities are not included in the term railroads within the meaning of the act. This amendment of the law opens a new field to the investments of New York savings banks, without doing violence to the conservative precedents of the State. Yet it is not likely to increase the rate of dividends of those institutions. It may retard the decline in the rate of dividends, and at all events will equalize the New York rate with that of other States which have already allowed investments in the securities named.

The Mazet committee has obtained an extension of its time which will enable it to continue its sessions throughout the year, if it desires to do so, making its final report to the next Legislature on February 1, 1900. The scope of its inquiry has also been enlarged, so that it includes now the "occupation, character, composition, expenses, operation, conduct, and control of any and every department and public office of the city of New York and the counties therein included, and the influences affecting and controlling the officers therein, with full power to prosecute its inquiry in any and every direction in its judgment necessary and proper to enable it to ascertain and report the facts." This certainly affords a sufficiently wide field for a summer's work, and if that work is prosecuted with vigor and fearlessness, a large amount of interesting information should be forthcoming. Curiously enough, the increase in the power of the committee and the enlargement of its field of inquiry are accompanied, both here and at Albany, by a steadily growing suspicion that very little of consequence will be developed henceforth. It is even asserted positively, in some quarters, that our two bosses have reached an agreement that neither of them shall suffer any further annoyance from the committee, no matter who else suffers. Croker sailed away joyfully for Europe on Wednesday week, to live in luxury for the summer on the proceeds of his "private business." Platt sat at a banquet with Gov. Roosevelt and other reputable men and heard the Governor's fervid praise of his magnanimous conduct in consenting to the appointment of a commission to consider the future of the canals of

the State of New York. Conduct of that kind is always easy to him. It does not cost him a penny of patronage or business to have the future of the canals considered and reported on. The wonder of it is that Gov. Roosevelt should think the act one of such noble public service as to require eulogy.

Dr. Huntington's rejoinder to the clergyman who protested against Prof. Briggs's ordination as a priest of the Episcopal Church is crushing and conclusive. If Prof. Briggs cannot find rest and a welcome within the Episcopal communion, then some of its most distinguished members should leave it at once. One honored and godly scholar more can surely be received without destroying the foundations. We feel bound to say, also, that these nice points of doctrine are most unsuitable for discussion within the Episcopal fold. Its strength does not lie that way. The Presbyterians and Methodists can beat it hollow at that. The growth and popularity of the Episcopal Church in this country have been in no small part due to the belief and the fact that over its doors weary men and women have read the legend, "Leave all theological wranglings behind, ye who enter here." It would be a sad and disturbing event if Prof. Briggs should be the innocent means of carrying a theological storm-centre with him into his new ecclesiastical relations. There is a solemn truth in the protest of the Englishman who said, "Do not say a word to me against the Established Church; it is the only thing which stands between us and true religion." The Episcopal Church in this country has, in like manner, been a grateful barrier to many against the "true religion" which consists of theological hair-splitting and heresy-hunting; and it would be a fatal mistake for it to let those waters of bitterness break through.

Lord Salisbury's agreement with Russia about spheres of influence in China relates only to railway concessions, but may easily lead to a complete understanding on all points at issue. Even as it is, it amounts to a great diplomatic achievement in the interest of peace. Lord Salisbury himself refers to it in his customary guarded tone, but we have only to remember how short a time ago it is since Lord Charles Beresford and all the Jingoese wanted to go to war with Russia over this very dispute, to see how important is a peaceful arrangement putting the differences to sleep. It recognizes Russia's superior interests in Manchuria just as it does England's in the Yang-tse valley, and so marks one step more in Lord Salisbury's new policy of a friendly understanding with Russia. Of late years he has apparently taken up with the plan of allowing a subordi-

nate to let off steam and split the ears of the groundlings, while he keeps still, but drives on the work of negotiation. Now it is Sir Michael Hicks-Beach, now it is Mr. Chamberlain, who emits a good roar against Russia, or the Ambassador to France who breaks out in undiplomatic warnings to the French Government, but their chief is all the while as dumb as Br'er Rabbit and as bent on his own steadily sought ends. That these are peaceful ends, and that one after another of them has been honorably attained, is a fact enormously to Lord Salisbury's credit; and this latest settlement of his with Russia, coming on the eve of the Peace Congress at The Hague, emphasizes his great contribution towards the maintenance of the world's peace.

Satisfaction is expressed at Washington with the new Anglo-Russian agreement in respect of China, and the opinion is expressed that no commercial detriment will be felt by the United States in consequence of it. This is a very mild statement of the case. It would be quite safe to add that the influence of Great Britain in the Yang-tse valley will, within a few years, open that rich territory to a much larger commerce with the United States than we have ever enjoyed there before, or could enjoy without it, while the influence of Russia, in the region dominated by her, promises a similar although perhaps less decided gain. On the other hand, if the two countries had gone to war in that quarter, our trade with China would have been ruined for the time being, and our trade with Russia itself paralyzed. There is every reason why we should rejoice that this disturbing cloud in the East has disappeared, and with it the greater menace which a prolonged dispute between the two Powers would imply. The question what is meant by "sphere of influence" in China, as regards foreign trade and tariffs, is yet to be answered, but we know beforehand that in English phraseology it means the open door.

Thus far the proceedings of the new Irish County Councils seem to have been fairly respectable. We must remember how long in Ireland the business of the counties was confined to a class of Conservative gentry selected by the high sheriff, in which the Catholics had but little chance of representation; how hopeless it was for the Catholic farmers to expect to have any influence on the grand juries. The hostility existing between these gentry and the Irish people has long been one of the most lamentable phenomena of Irish life. All foreign observers who have discussed Irish affairs, from Arthur Young down—Beaumont, Cavour, though last not least General Gordon—have noticed this with a certain horror. Gordon speaks very

strongly about it in a letter printed in his recent *Life*. For fifty years before Gladstone's Home Rule, one never met an Irish Protestant gentleman abroad who did not give the very same atrocious account of the character of his own Catholic countrymen which the French nobles used to give of their peasantry in the eighteenth century. The Irish would undoubtedly have wreaked the same vengeance on their gentry that the French wreaked on theirs, if England had not stood in the way. It is a little too soon to expect *entente cordiale*. It is curious how soon we get into the way of abusing people we have injured. We are already at it as regards the Filipinos. They have done us no injury except refuse to let us own them, but we already pronounce them fit only for manure for their own fields.

The movement to erect a statue to Oliver Cromwell on his three hundredth anniversary has more behind it than appears at first sight. It has been stimulated greatly by the ritualistic agitation, which is bringing Cromwell forward as the great champion of Puritanism. Celebrations have taken place both in London and in Huntingdon, the 600 Nonconformist Free Church Councils participating. Cromwell's address to the high-church parson in Ely Cathedral is again ringing in people's ears: "Cease your fooling and come down, Sir." Dr. Clifford proclaims, in what we call a "ringing" pamphlet, that "Cromwell gave an impetus to liberty, to free speech, to democratic government, to civilization, to progress, and to religion felt to-day all over the Anglo-Saxon world." Another claim he will have on some of our people is, that he did a good deal of slaughtering of inferior races.

The testimony given by Col. Du Paty de Clam on Monday opens a new chapter in the Dreyfus case, and abundantly confirms the suspicion that this witness and his colleague Esterhazy were the real culprits. Paty de Clam testified that Gen. Gonse told him in 1898 that it was imperative to save Esterhazy at any price, in order to prevent his committal of irreparable acts of suicide or flight; also to avoid diplomatic difficulties, as war, owing to the lack of preparations, would then be disastrous. It does not follow that Gen. Gonse did what this witness testifies, but the witness has established his own character to the public satisfaction, for he acknowledges that he fell in with the suggestion to tell as many lies as were necessary in order to save Esterhazy. This chicanery and deception, he says, was approved also by Gen. Boisdeffre, the chief of the general staff. Very likely, but a new cross-examination of the latter would be a desirable addition to the *enquête* now proceeding.

THE NEGOTIATIONS AT MANILA.

The telegrams from Manila giving details of the negotiation between Gen. Otis and the Filipino agent, Arguelles, say that the latter persistently declared that the Filipinos must be permitted to retire with honor, but that Gen. Otis is not willing to concede this point, but insists that they shall surrender unconditionally, or without any other guarantee than that of amnesty. The hopeful part of the negotiation is that the Filipinos are ready to retire on some terms, and that peace is now possible. Under such circumstances it would be most deplorable if the war should break out again on a mere question whether the Filipino Congress should be recognized long enough to satisfy its own sense of dignity, and long enough to surrender with the ceremonies it considers due to its honor. A weighty responsibility has been incurred by President McKinley for blood poured out in attempts to subdue a people fighting for liberty, with arms that we had given them for that very purpose. If more blood is to be spilled on a mere point of etiquette, that responsibility will be much heavier than before, and the indignation excited among those who still believe in the principles of the Declaration of Independence will be correspondingly heightened.

Why should we not concede something to the sense of honor of the Filipinos? If they are to be our subjects in permanency (which Heaven forbid), is it not desirable that they should have a sense of honor? If they are to be our subjects for only a few years, and are then to be independent, should not their sense of honor be fostered and encouraged? Will they not be better subjects now, and better friends afterwards, if we recognize their sense of honor and yield to its demands, instead of trampling on it because we are the stronger party? The case before us recalls an incident at the beginning of the Revolutionary war, when Lord Howe refused to recognize the American rebels as belligerents, and accordingly addressed their commander as "George Washington, Esquire." The communication was promptly returned, and the impertinence was not repeated.

There are doubtless those who scout the idea that the Filipinos have, or can have, any sense of honor corresponding to what we understand by that term. Honor, according to this conception, belongs only to people who have reached a certain stage of civilization and education; but this is a grave mistake. It is contradicted by history. Very many instances can be shown where a keener sense and appreciation of honor have been exhibited by savage than by civilized men. Honor does not necessarily grow out of or increase by reason of civilization. It is certain that the sense of honor in the Roman republic was far greater

in its infancy than in its maturity and its old age, and that the half-civilized Turks and Arabs in the Middle Ages were often governed by a higher sense of honor than their Christian antagonists. If we have shown any higher sense of honor in the present war than the Filipinos themselves, that fact has not been disclosed by the letters lately published from our soldiers in the field or in any other way.

What the Filipino agent demands in his negotiation with Gen. Otis is that his self-respect and that of his associates shall be preserved, and that the terms of peace shall be such as they can look back to without shame. It would certainly be magnanimous to grant this request. It is something which we can well afford. Every life lost, every drop of blood shed on either side after refusing it, would be wanton sacrifice and waste. We cannot believe that hostilities are to be renewed on so small a margin of difference between the contending forces, especially since the terms of peace cannot be affected in the least to our detriment by the concession demanded. Whatever conditions Gen. Otis can require of Arguelles or of Aguinaldo as individuals, he can require of the Filipino Congress. So he loses nothing material by granting the request. Nor can it be thought that the United States sacrifices any dignity by making the concession. The difference in size and resources between the contending parties is too great. As a full-grown man can afford to concede something to a wayward child, so can we yield to the Filipinos a point which is to us non-essential, but which may make all the difference between peace and the renewal of a war considered by many Americans as unjust and by all as inglorious.

Among the items telegraphed from Manila is a reported interview between President Schurman and Arguelles, in which the latter declared that unconditional surrender would be humiliation. The reply of Mr. Schurman, according to the report, was that

"There would be no humiliation in Gen. Otis treating our brother Filipinos as Gen. Grant treated our brother Americans at Appomattox."

Very likely this gives an imperfect report of what President Schurman did say, but we cannot avoid pointing out the differences between the two cases brought into comparison. The first discrepancy is that our brother Americans at Appomattox were surrounded, and were destitute of provisions, and had no alternative but to surrender or be killed. The next is that they were really our brother Americans, who had rebelled against a government common to both and to which they owed allegiance. The Filipinos never owed allegiance to us. We encouraged them to rebel against Spain and put arms in their hands for that purpose, and then we bought them from Spain on a bargain-counter, where

they were not represented. Did this make them our brothers? Not in the least, nor have we given them any sign or intimation that we intend to treat them as brothers hereafter. We have said to them that we would govern them according to their best interests as we understood them. That is exactly what George III. and his advisers said they would do for us in 1774 and thereabout. But George III. had a better right to say so than we have to repeat his words to the Filipinos. He did not buy the American colonies from a foreign Power after having encouraged them to rebel. They had descended to him by inheritance, and, according to the public law prevailing at that time, he had a right to hold them if he could. In no way have we commended ourselves to the Filipinos in the character of brothers. In no way have we earned the right to address them as such.

SECRETARY LONG'S DEFENCE.

Secretary Long delivered a speech on Monday evening in Boston in which he made an elaborate apology for President McKinley. It was, we think, the very first apology we have had for him from any official source; nearly all other accounts of him given to the public by his subordinates or supporters have been high-flown eulogies of the most extravagant kind, the temper of which has been well caught by Mr. Dooley. That is to say, nearly everybody who made one, owed to him place or favors of some kind, and naturally, for his own sake, put his creator in the very highest rank as a statesman. This, until now, has made the McKinley literature and oratory read like the poems which Oriental poets used in the great days of Mohammedanism to address to the chief of their state, or, to come lower down, like the flattery addressed to Louis XIV. by his courtiers. In civilized states the praise of eminent statesmen has to be what the French call "raisonné"—that is, either comment on well-known facts, like the greatness of Washington or of Pitt, or else an analytical demonstration that a new light has appeared in politics, as has been shown by "the following facts." Greatness is a thing which does not bear simple announcement. The world has to have warning that a new light is about to appear on the horizon. The difficulty in Mr. McKinley's case was that he was not an unknown man. For twenty-five years his countrymen had been painfully taking his measure, and had been able to award him no element of greatness except what flowed from a childlike faith in tariffs. The task of showing that he had suddenly developed capacity beyond the usual measure of middle-aged men in country villages, was a task of no ordinary difficulty, and unhappily until now no one has undertaken it whom the public treated seriously. We have

therefore, read Mr. Long's speech with care and interest.

We are sorry that the Secretary sees fit to open his speech with a denial that "there is any purpose anywhere to subjugate or reduce these Philippine islands to vassalage, or make their people slaves, or deprive them of any rights which are enjoyed by the inhabitants of our own Territories at home." We cannot help doubting whether Mr. Long uses language here in the same sense that we do. President McKinley's proclamation of December 21 was one of the plainest proclamations of an intention to "subjugate" we have ever read, and it was accompanied with an invitation to come in and be subjugated. The Century Dictionary's definition of "subjugate" is "to subdue, conquer, compel to submit to the dominion of or control of another." President McKinley announced the "conquest of the islands"; warned all persons who refused to submit to his "lawful rule" that they would be brought within it by "firmness." Over and over again, the resisting inhabitants have been treated as and called "rebels," which implies a design to "subjugate," although they never owed us allegiance. When President McKinley issued this proclamation he had no more right to the islands, no more title to them in law or usage, than he had to Mr. Long's farm in Massachusetts. This fact, which nobody dare deny, ought to be seared into every American brain. Moreover, Gen. Otis has more than once refused to treat with the Filipinos, which no modern general has ever done except with people whom he considered rebels, or meant to conquer and punish for fighting. What was his object, we do not know. And what "inhabitants of our own Territories at home" have ever been compelled to submit by force of arms to a government they were opposed to, except after a deliberate attempt to break up a government under which they had long lived? Who are they, Mr. Long?

In answer to the charge of "cruelty and brutality" as alleged by many eye-witnesses, Mr. Long has nothing better to answer than that President Seth Low and Dr. Lyman Abbott do not believe it. This is the most extraordinary bit of proof, we think, that ever came from any lawyer but a French one, and from him only in the Dreyfus case. Neither President Low nor Dr. Lyman Abbott knows anything about the matter, or professes to do so, more than the first man you meet in the street. The only particle of excuse for calling them as witnesses is that they believe, like the followers of Mahomet, in "holy wars," and dislike to admit that this one has been stained by cruelty or excess. The failure of English writers, whom Mr. Long cites, to comment on these things proves, not that they never occurred, but that the English do not wish to offend us, and want us to keep

on conquering, to which they have no objection, and do not see ours.

In fact, Mr. Long has not a word to say in defence of our conduct in the Philippines which would bear five minutes' examination in any court-room, church, or hall. He offers us a string of evasions, irrelevancies, and confessions. One story is worth the whole of it. A Kansas soldier, named Brenner, wrote home a month ago that prisoners were, to his knowledge, shot by order. His letter was published by the *Evening Post* three weeks ago. This the Administration professed to take seriously, and ordered, or said it ordered, an investigation. Three weeks have elapsed, and nothing has come. Now to a commanding officer the investigation of a statement made by a soldier whose name, company, and regiment are known, unless he is on duty at a long distance from headquarters, can hardly last more than two days. Are you Brenner? Did you write this letter? Was it true? Did you see prisoners shot by order? Where was it? Are you aware that President Seth Low and Dr. Lyman Abbott do not believe you? Why is this? Surely two days on the spot would suffice to answer these questions one way or another. Why do we hear no more about it? Why is it drifting away into the *Ewigkeit*? Ah, gentlemen conquerors, don't fancy God has forgotten you. Your case is set down for a hearing, and all your piety and wit won't lure the Moving Finger back to cancel half a line of it; and when the day comes, you will find that it will be bad pleading to cite either the English, or Seth Low, or Lyman Abbott.

QUAY AND THE CONSTITUTION.

The Pennsylvania boss continues to claim a large share of public attention, and is sure to retain this position of prominence until the Senate shall have passed upon his right to a seat in that body, under the temporary appointment of Gov. Stone, pending an election by the Legislature to be chosen in 1900. The question now is as to how the Constitution shall be interpreted in the case of Quay.

In order to prevent any lapse in the representation of a State in the upper branch of Congress, the framers of the Constitution provided that, "if any vacancies happen, by resignation or otherwise, during the recess of the Legislature of any State, the Executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies." Can it be said that a vacancy "happens" during the recess of the Legislature when a term expired while that body was in session, and it has failed to elect anybody for the new term before its adjournment? Can the Governor, upon such adjournment, make a temporary appointment which should be recognized as valid?

These questions have been discussed over and over again, and settled alternately one way and the other. For over a third of a century after the Government was established in 1789, the practice was to admit a claimant who came with a Governor's certificate given under such conditions. Then, for over half a century from 1825, the opposite rule was pursued, and nobody appointed by an Executive when the Legislature had failed to elect was recognized. In 1879 the Senate went back to the position which had been maintained from 1789 to 1825, but in 1893 it reversed itself again, and in a test case from Montana, involving also similar appointments from Washington and Wyoming, refused to admit a claimant. Last year this position was reasserted so emphatically that everybody supposed the question had been finally settled, fifty Senators voting that the Governor of Oregon had not the right to appoint when the Legislature, having a chance, had not elected, and only nineteen voting to sustain the Executive's action.

But Quay and his friends insist that this precedent will be reversed, and many good judges regard their confidence as not unjustifiable. The question last year was Corbett vs. the Constitution; next winter it will be Quay vs. the Constitution—and it scarcely need be said that these are two very different issues. Quay has this advantage on his side at the start, that two of the best authorities in the Senate on the interpretation of the Constitution, Mr. Hoar of Massachusetts and Mr. Spooner of Wisconsin, maintain the executive right of appointment under such circumstances. Allison of Iowa, Frye of Maine, Hawley of Connecticut, and Lodge of Massachusetts are other prominent Senators committed to the same side in the Corbett case, and able to make a strong defence of their position. A large number of new members will sit in the Senate next winter, and they can find a good excuse for following such able interpreters of the Constitution. Probably not a few of those who voted on the other side last year will be ready to confess that they have seen new light in the interval. One such change is assured at the start in Penrose of Pennsylvania, for it is an amusing circumstance that both Quay and his creature voted against admitting Corbett in 1898.

In the short list on Corbett's side last year, however, was the name of one Senator who represents a class which will be far more potent in deciding the same question next winter than all the Constitutional lawyers. That is Hanna of Ohio. There are plenty of men in the body who, like him, will waste little time over what they consider "hair-splitting," but will vote according to their ideas of party, factional, or personal advantage. Platt of New York is one of this class, and there is nothing in the slightest de-

gree improbable in the story that the New York boss will do his best to seat Quay on condition that Quay will order the Representatives whom he owns to support Platt's candidate for Speaker of the House. Equally easy of credence is the report that the influence of the McKinley Administration will be favorable rather than adverse to Quay, as the controller of a machine which will send the largest delegation but one in the whole country to the Republican national convention in 1900.

Another body of recruits for the Quay side is to be expected from the Democratic membership of the Senate. No other Republican in that body has so many warm friends among the Opposition—as was shown a few weeks ago, when even a Senator of such high character as Mr. Gray advised Democratic members of the Pennsylvania Legislature to give Quay the preference over any other Republican. Quay's strength with the Opposition is due to two facts—that he has put many of his Democratic colleagues under personal obligations, and that he has repeatedly voted with the Democrats on important party questions, notably to defeat the Force bill and to help the free-coinage movement, some years ago. There is no place in the country where the maxim, "One good turn deserves another," counts for more than in the United States Senate.

A general in the United States army, who returned from the Philippines a few months ago an earnest advocate of annexing those islands, met an objection on constitutional grounds with the declaration that "we have outgrown the Constitution." But it is not necessary to abolish or amend the Constitution in order to change our policy. The Senate of one Congress may vote more than two to one that a clause in the instrument means one thing, and yet a majority of the Senate in the next Congress may decide that it means the exact opposite. Quay and his friends believe that this will happen, and there is little in the recent history of the body to discourage their belief that the present Quay interpretation of the Constitution will be accepted.

PROGRESS IN EGYPT.

The recent annual report of Lord Cromer brings up afresh the subject of progress in Egypt—not the progress of arms in the Sudan, but the material and industrial gains of the ancient land of the Pharaohs and the Ptolemies, of the Arabs and the Mamelukes. The country is described in the guide-books as being, in point of area, two-thirds the size of Russia in Europe, but in tillable land no larger than little Belgium. This area of tillable land consists of a triangular piece called the Delta, composed of Nile mud, and of a narrow strip or ribbon of similar material on either bank of that stream, varying from ten miles to

ten inches in width, plus a few oases of no great size in the Libyan Desert. All else is an undulating expanse of sand and broken stone, as useless for human purposes as the nebula of Orion.

Yet this small strip of nourishing soil has held a great place in the annals of mankind, its most remarkable feature being the vitality of its population under the successive visitations of war, tyranny, oppression, ignorance, and Mohammedanism, which have not infrequently huddled upon its back all at once. It is only a few years since the taxes of the peasantry were an arbitrary sum, collected by the *bastinado*. Nobody knew how much he had to pay or when he must pay it; nor did he know after he had paid it that he might not be required to pay it again the same year, in labor if not in cash. The *corvée* was in force at the will of the Government. Any man might be ordered from his own proper work to that of the Khedive on the promise of some small pittance per day, which was never paid. Bad as the Egyptian fellah's lot was in his own mud hut, it was worse when he was called to serve in the army. Once enrolled, he was given up by his family, his friends, and himself for dead. His natural expectation was to fall a victim to the incompetency of his own officers, either in peace or in war, and in this he was seldom disappointed.

The kind of justice he received in camp, or in his own village, was of the common Oriental type. Lepsius, the Prussian Egyptologist, gives us an example which occurred incidentally during his travels there. While at work near the Pyramids, he employed the Sheikh of the village of Sakkara to furnish a guard for his camp, notwithstanding which the camp was raided and plundered, the guards running away at the first sign of danger. He reported his loss to the authorities at Cairo, who sent a mudir and a troop of soldiers to investigate. They became pretty well satisfied that the robbery had been committed by a party from another village not far from Sakkara, but could not identify the robbers. So, in order that no guilty man should escape, the mudir ordered that every male adult of this village, including the Sheikh, should be subjected to the *bastinado*. This was done, against the strong remonstrance of Lepsius himself. Then the mudir ordered that all the male adults of Sakkara, including the Sheikh, should be *bastinadoed* because the hired guards had run away, and this was done, against the entreaties of Lepsius. Most of the victims of the punishment fainted under it, and some of them were unable to stand on their feet for weeks afterward. After all the whipping had been finished, the mudir levied a fine on the two villages equal to the value of the property lost, and this was collected under penalty of renewed application of the

kurbash. This illustrates the kind of law which prevailed in Egypt, and which continued unchanged until England took charge of the country. We have instanced this case because it occurs in the writings of a well-known and unimpeachable witness.

In spite of arbitrary taxation, in spite of the *corvée*, the conscription, and the *kurbash*, the Egyptian fellah of the past lived on, and his posterity are now beginning to save some money and find enjoyment in the world. Taxation is now a fixed sum, the *corvée* no longer exists, the conscription has been robbed of its terrors, soldiers actually come back to their villages after their term of service expires, and the *bastinado* is never applied. For the first time in the history of Egypt, which is the oldest history known to men, each person is allowed to have what he earns. The conditions of life are becoming easier in other ways, and public works are going forward which will in a few years add new land to the tillable parts of the Nile valley and make the cultivation of the older parts less laborious. Education is beginning to make its influence felt in the regions adjacent to Assiut, Luxor, and Assuan, as well as in the cities of Cairo and Alexandria. The English language is taught in many of the schools, and in this way the door is opened to the admission of modern science. In this particular the American Presbyterian mission at Assiut, with its branches, had cleared a great deal of ground before the English came in. Its work has been extremely beneficial, and the perseverance of the men and women who have had charge of it cannot be too highly praised.

The question is sometimes asked whether the Egyptians are grateful for what England has done for them, whether they know the source of their betterment, whether they would vote to have English rule continued if they were allowed to decide that question for themselves. It is very doubtful whether the mass of the people, the cultivators of the soil, know that their improved condition is due to a foreign Power, or whether they have intelligence enough to form an opinion on the subject. As Lord Cromer says, there are less than one hundred English officials in the whole country north of the Sudan. The fellaheen have no means of knowing what their government consists of except as they see it and feel it. If they are better off now than they were before, they have no evidence that it is not due to the Khedive, whose nominal authority is still visible to them. All proclamations and decrees and legal instruments run in his name, and it is right that they should. So long as he does not interrupt the work which is binding up the wounds and healing the sores of the ancient land of the Pharaohs, his place as figurehead should not

be disturbed. He is doing no harm. What he might do if he had more opportunity, it is needless to inquire. He is now a gentleman farmer on a large scale, and he seeks to improve the breed of cattle and to introduce scientific agriculture among the people. This is a useful occupation, and, as long as he adheres to it, he is deserving of praise. The real benefactor of Egypt, however, is Lord Cromer, or rather the country which sent him there and which supplies him with moral and material backing.

THE IRISH LOCAL-GOVERNMENT ELECTIONS.

DUBLIN, April 18, 1899.

The elections under the local-government act have taken place, and the management of county and district affairs, so far as in Ireland conceded by Parliament, has passed from the hands of the classes into those of the masses. The peaceful manner in which this great change has been effected is in the highest degree creditable and encouraging. There was little wirepulling, and, except in Connaught, no general popular organization. Those elected are the choice of the people. The elections to the urban councils took place some weeks ago. They did not very materially alter the constitution of those bodies, which had been, even under the old restricted franchise, mainly in the hands of the people. The elections now decided are those (1) for district councils, principally for the management of poor-relief, and (2) the important ones, those for the government of the counties. Roughly speaking, there are 2,400 urban and district councillors. Some 2,000 of these belong to the Popular party. For the county councils there have been 670 contests—of these, so far as statements have come to hand, 536 have gone Popular and 113 Conservative:

Leinster	222 Popular	22 Conservative
Ulster	86 Popular	80 Conservative
Connaught	81 Popular	2 Conservative
Munster	137 Popular	9 Conservative
	536 Popular	113 Conservative

The proportions as to differences of policy heretofore shown in Ireland are preserved and continued. 80 per cent. of the parliamentary representation has been Popular; 82 per cent. of the urban and district councillors are now Popular. 77 per cent. of the county councillors, and majorities of these last, have been elected by districts representing 70 per cent. of the population and 66 per cent. of the ratable valuation of the country. Every county has returned a Popular representative. In but four (Derry, Antrim, Down, and Armagh) are the Conservatives in a majority. In two (Fermanagh and Tyrone) there is equality between the parties. In the other twenty-six the Popular party is in an overwhelming majority. In no voting district, so far as I can learn, in which the Conservative voters are in a majority has a Popular representative been returned. In many in which the Popular party is in a majority, Conservatives have been returned. In a considerable number of the councils in which the Popular party is in a large majority, and where, naturally, a Popular chairman has been elected, the vice-chair has been given to a Conservative. In some of the northern councils in which the Conservatives held a majority of but one, they have

exercised their power in appointing Conservatives to both chairs.

These facts may be considered from different points of view—either that the Popular party is more tolerant, or that it holds more loosely to its supposed main principle, or that it is more amenable to personal considerations, or that in its personnel there is not such a large proportion of men to hold the esteem of the opposite party as there is among the Conservatives. There have been, in districts overwhelmingly Popular, several remarkable Conservative successes, showing rapidly growing forgetfulness of the land agitation: Lord Castlerosse in Kerry; McMurrough Kavanagh in Carlow, Lord Frederick Fitzgerald in Kildare, Lords Emly, Monteagle, and Dunraven in Limerick, the O'Connor Don in the West. Upon the other hand, there have been defeats such as never could take place in England, where the nobility to such a considerable degree have identified themselves with the people. Col. Tottenham, who for twenty years was on the Wicklow Grand Jury, was defeated by a tenant farmer; so was Lord Rosse in King's County, who received but 29 votes to his opponent's 191. The Right Hon. Henry Bruen, a Carlow magnate, was defeated by a tenant farmer. In Meath, Lord Longford received but 66 votes to his opponent's 251; and in Tipperary, Lord Dunally but 4 to his opponent's 195.

Ireland has now, as often before, found herself, in relation to British sentiment, in the position of the Lamb to the Wolf in the fable. She was told that by electing political opponents to representative positions on the new councils, she would show her moderation and conciliate British feeling. She well knew that the adoption of such a course would inevitably be taken as proof that she was indifferent as to her main desires. Upon the whole, the people have acted upon their own opinion and initiative, and have not been unduly influenced by their clergy; but I regret to say it has not been so in every district. In some Catholic constituencies of reputed high intelligence, a tried Home-Ruler or a popular employer of liberal principles, who received ready promises of majorities of votes, and who would undoubtedly have been elected had the people been left to themselves, has been, through the exertions of the clergy, if not by altar denunciation, defeated upon the ground of being Protestant. Cases such as this will throw some hitherto Home-Rule Protestants back into the ranks of the Conservatives, forgetful of the course hitherto pursued by Conservatives when in power, and of what has now been done where they are still in the majority. Were there not now a single Protestant elected to place or appointed to office in all Ireland, it would be a fairer state of things than that which has prevailed. There is, however, no danger whatever of such a deplorable reversion to bigotry. Upon the Council of the South Dublin Union, where the Popular party is in a majority of 48 to 10, a Protestant Conservative vice-chairman has just been elected. Dublin is four-fifths Catholic, 90 per cent. of the 3,500 sick and poor inmates of the Union are Catholic; yet the new Council finds the institution, without a single Catholic doctor, apothecary, collector, relieving officer, or other principal official. It is well to remember that these denominational divisions with which Ireland is so cursed are divisions not so much dog-

matic as they are the product of the social and family divisions brought about by dogma. Persons of the several persuasions are educated separately, brought up separately, marry separately, mix in separate social circles. They are best acquainted with the qualifications and dispositions of their associates, and naturally prefer them for places of trust and emolument. The attempt in other countries, where religious differences have not as yet developed such baneful results as in Ireland, to induce homogeneity through united education is natural and laudable.

As to the conduct of business by these new councils, allowance must be made for the degree to which the country has hitherto been unpractised in the arts of responsible self-government. We need, however, have little fear as to the results. Expenditure is more likely to be unwisely limited than extravagant. It is satisfactory that a considerable number of women have been elected on the district councils.

The result of the elections has been hailed as an overwhelming proof of the strength of Home-Rule feeling in Ireland. I cannot altogether take the same favorable view of the situation. The majority professing Home Rule profess also every other popular shibboleth. Many opponents of Home Rule have been elected by Popular constituencies. I am not aware that one opponent of a Catholic University, or the erection of cheap cottages at the public expense, has been so returned. Judging by the tests ordinarily applied in such cases, we cannot say much for the strength or solidity of Home-Rule principles. Direct organization with that object in view is for the present at an end. Popular papers, once full of the subject, now unceasingly devote their space to "sport" and ecclesiastical affairs. There is no public opinion to compel an effective attendance or united action of the Nationalist members in Parliament. There appears none to keep straight so-called representatives of Nationality at home. A few days ago the Parnellite Lord Mayor of Dublin did what none of his predecessors has attempted for twenty years—he lunched at the Castle with the Lord Lieutenant; and no protest has been heard. Accounts recently published show that Ireland at home and abroad within the last year contributed but £1,818 to keep the cause going in Parliament—much less than is often contributed in a few days for some special ecclesiastical purpose. It may be that Ireland is so settled in her convictions, so conscious of painful sacrifices made in the past and of the difficulties before her, that she purposes for the future pursuing her aim by easy paths alone; waiting rather for the apple to fall into her lap than risking time and energy in reaching after it. If the desire for Home Rule subsists to the same extent as formerly, some such reasons as this can alone explain the present position of the movement.

In any case a fatal blow has been struck at the old ascendancy. Protestants, once the masters, will, unless they come to throw themselves into the general national life of the country, fall into the position we are told they largely occupy in the Province of Quebec, where they carry on much of the trade of the country, are entirely respected, but are largely shut out from patronage and pay—their ambitious youth finding careers in Great Britain, India, and the colonies. Protestants have now lost most of what they

might have lost under Home Rule. They may yet come to realize that in a Local Assembly for Irish affairs containing a certain nucleus of Protestant members from Ulster, and feeling themselves Irish, they would really have more hold upon the country than through the collective management of local affairs by the Imperial Parliament. D. B.

TURNER AT THE GUILDHALL.

LONDON, April 14, 1899.

It is the fashion in London to find fault with the City. To the County Council, no doubt, it is a convenience to have another municipal body to distract criticism from its own performances; and so a great deal is heard of the iniquities of the Corporation of London, and very little of its virtues. And yet it has its virtues, and many of them, as it would be easy to point out, were I not to-day concerned especially with one alone, the very recent virtue—dating back but to 1890—of giving excellent picture exhibitions in the Guildhall. These, to be sure, have not been beyond reproach—that would be asking too much of any corporation whose attentions to art spring solely from a sense of duty; but they have always been interesting, and sometimes important; never more so than this year, when the Guildhall gallery has been filled with, unquestionably, the largest and most complete collection of Turners ever yet seen outside the National Gallery. Some of these very pictures have been hung in the Academy's shows of Old Masters; many similar water-colors, if not the same, have found a place in the yearly exhibition at Messrs. Agnew's Bond Street gallery; but never, to my knowledge—except in Turner's own collection—have such a number been got together, and never, anywhere, have they been so well arranged. For the chronological order one felt would add so much to the Rembrandts at the Academy and in Amsterdam, has here been observed. Pictures and drawings are grouped according to dates and periods—an enormous aid in the study of Turner; and Mr. A. G. Temple, Director of the Guildhall Library and Gallery, has compiled a most thorough catalogue, giving all possible information and every appropriate quotation from Ruskin.

In saying this I have explained, what everybody knows perfectly well nowadays, that Turner cannot be mentioned, or his work considered, without an immediate reference to Ruskin. In fact, it is very much a question whether most people, when they look at a Turner, do not see, not what really is in it, but rather all that Ruskin's eloquence has made them believe ought to be in it. I do not want to be misunderstood: I have no intention of belittling Turner. He was a great artist, and neither excessive praise nor prejudiced abuse can alter this indisputable fact. But I do think there is danger of the real Turner being lost sight of in the widespread worship of Ruskin's Turner. A superstition has grown up about the very name of Turner; it has become a fetish among English artists, even more so among English art critics—a name to conjure with. Never has there been—probably never will there be again—such an instance of a man being "boomed" into a sort of a demigod. The term very likely is vulgar, but it fits; it was Ruskin's incessant "booming," joined to Turner's ingenious "booming" of himself, that induced

a public, naturally indifferent to art, to bow down before Turner and accept him as the one genius of all time. The Guildhall show is of more than usual importance, because it will force Turner's admirers to look at his pictures, and, moreover, at many of them hung together, when the merits and defects of his work reveal themselves more unmistakably than in one or two seen separately. It may be suggested that there has always been as admirable an opportunity at the National Gallery, which is true; only the public that cares for Turner has long had the collection there by heart. But the Guildhall collection is not known as familiarly, and it seems to me impossible that any one could examine attentively each painting or drawing in turn, and, face to face with it, refer to the catalogue for Ruskin's pronouncement, without forming for himself a more dispassionate judgment than ever before. The conclusion of this study will not be, I am afraid, altogether in accord with the old pleasant superstition.

The arrangement being chronological, it is easy to follow the stages of development through which Turner passed. There is no use in adhering scrupulously to the Five Periods under which his biographers have grouped his work; a classification almost too elaborate for the present purpose. But, as you go into the Guildhall Gallery, a glance shows you that on the left-hand wall are the pictures belonging to the days when he still conformed to the old conventions, infusing into them new life by the strength of his own genius; that in front are the canvases painted when he had not yet thrown over the old formula, though he was already seeking a new one; while to the right are the brilliant, almost blazing experiments in which the final step had been taken and he was grappling with problems that hitherto had not appealed to the painter (and I need not add that it is these last his worshippers have usually ranked as his masterpieces). There is not space, even if it were necessary, to describe the thirty-eight pictures separately and in detail. One or two in each group can be taken as fairly typical.

To begin with, there is a most beautiful example of his early manner in the "Kilgarran Castle," painted in 1797, of which there are two versions, the finer being the property of Lord Armstrong. The River Teifi forces its way between the steep hills that rise on either side the canvas. On the top of one, towering above the deep chasm, are the ruins of the Castle. The light is cool and gray; the hills are dark and shadowy. The whole composition has the serenity, the breadth, and gives you the sense of completeness, of some of the landscapes of the French Romanticists. As you look, the detail gradually grows out of the shadows; you see the little village on the lower heights beyond, you see the bathers in the sombre river; but never do these things obtrude themselves—they belong as absolutely to the harmony as do the nymphs or peasants in Corot's glades and on his hillside. The color, I should imagine, has lost nothing; the conventions may be old, but the painter has made them something new, even as the poet does when he sings an ancient, threadbare theme; and the picture, you feel instinctively, will always remain one of the world's masterpieces, solemn, dignified, impressive. Within the next nine or ten years

he had painted the seas that hang on the same wall, none more wonderful than the large "Boats Carrying out Anchors and Cables to Dutch Men-of-War in 1665," with a great wave rolling mountain high across the canvas, and the little boat wallowing in its depths, the men in it pulling, with every muscle strained, towards the marvellously drawn ships, while above, like a mighty curtain rent asunder, the black cloud-masses break to show the clear sky behind. The truths Ruskin insists upon your finding in Turner—though the absence of a Ruskin quotation in the Catalogue suggests that this is not one of the canvases to which he would have sent you in search of them—are all here: truth of drawing, truth of action, truth of sea and sky, of light and atmosphere. But they never disturb the unity, the ensemble, as the French term it, of the picture. And it is the same with the other seas, with the other landscapes of his early years. They have the completeness and the perfect serenity that always distinguish the really great work of art. They are dark canvases, almost tragic in their solemnity, but always full of grandeur, dignity, repose.

Later came the pictures represented by a little group hung together at the end of the gallery, in which you must be struck by the signs of the coming change. They mark the transition stage. Color is less conventional, there is a more realistic study of light. The painter has not yet dared the fantastic experiments that were soon to absorb him, but he is less influenced by Claude and the masters to whom, at first, he gave his allegiance. Perhaps there could be no more typical example than the "Barnes Terrace" and "Mortlake," well known by reputation, and both here. They are beautiful renderings of the Thames seen from a riverside garden. There is the same tranquillity, the same repose, but the light is warmer, more glowing; and in the "Barnes," at least, with that famous black-paper dog still stuck on the parapet where it was put in order to throw back the distance, we have the beginning of the wholesale sacrifice of more durable qualities to the immediate obtaining of his effect that was to be the ruin of Turner's later work. The "Barnes" and "Mortlake" are more in sympathy with the "Kilgarran Castles" and the majestic seas. But still the light that floods them prepares us for the brilliant, dazzling, bewildering illumination of the "Ehrenbreitstein," the "Gloucester," the "Marriage of the Adriatic," from which, at the Guildhall, only a narrow stairway separates them. In time there is an interval of ten or twelve years between.

And now you find yourself in front of the pictures supposed to characterize the full and perfect development of Turner's genius; pictures in which you are expected to see the real Turner, finally freed from the traditions and conventions of the schools. Because, in them, for the first time his individuality had full play, they have been accepted by the authorities as his most perfect work. Let me be candid. To confront the few that have been brought together at the Guildhall is to experience a moment of entire disillusionment. Crude color offends the eye; garish, glaring light hurts it; and everywhere are the endless, tedious, and irrelevant details that confuse and tire it. And there are still more serious defects. In the "Ehrenbreitstein,"

half-a-dozen pictures are crowded into one composition; and, lovely as are the different parts, the little blue, hazy town floating, dream-like, on the blue river, the castle perched on the great rose-flushed cliffs—they are quite disconnected, almost conflicting. The foreground of the "Marriage of the Adriatic" is crowded with carefully worked-out little figures, and full of enough incident and story to keep the British patron of anecdote busy for a year, while the perspective of the palaces lining the long stretch of canal is simply childish. In the "Mercury and Argus," in which Ruskin was for ever, according to his temper at the time, discovering new series of truths, are trees that would disgrace an Academician; water of a cold, hard blue wholly out of relation to the color scheme, and such a spotting and dotting of the grassy slope with cattle that all feeling of rest is gone. One of the best of these late pictures, "The Wreck Buoy," a lovely arrangement of ships and sails and a double rainbow, has in the foreground two buoys lit from within in some inexplicable fashion, with legible lettering on each, that positively will not let you see the picture as a whole. You look at that other wonderful sea that faces it, its simplicity undisturbed by such an unworthy catering to an inartistic public, and you cannot but question whether Turner did not lose, rather than gain, by giving the reins to his individuality.

This is the result of a first glance, and perhaps I ought to explain that there is nothing here that can quite compare with the "Fighting Temeraire" and the "Rain, Steam, and Speed" in the National Gallery. But, as I heard an artist say the other day, there is no believing the painter of the "Kilgarran Castle" could degenerate into a mere "rotter"—there must have been an artistic intention in these pictures, though to many of us now they have become incomprehensible. And, indeed, after the first shock of disappointment, you examine them more closely, and you begin to understand that much of the original color has vanished, faded, or changed hopelessly, and that it may have been as splendid as Ruskin thought it, though now it is a matter of speculation, not of fact. Then you walk to the opposite side of the room, and the details disappear in the beauty of line and composition; the perspective somehow becomes right, and the restless and elaborated canvases resolve themselves into the beautiful impressions Turner doubtless intended to record. But, if he did, why overload them with cheap and irritating detail? you wonder. And when Ruskin spoke of the truth contained in them, what did he mean—the truth of the detail or the truth of the impression? And if the latter, must it not have occurred even to him that in this case the detail was superfluous? However, if we forget Ruskin, if we forget the place apart long since appointed to Turner, the reason of his failure dawns upon us—a more fundamental reason than his mistaken use of fugitive colors. Engrossed as he was with the problems of light which the modern student of sunshine thinks so essentially his own, Turner could not altogether emancipate himself from the old classical formula of composition, nor could he, the thrifty son of a miserly father, remain indifferent to popular taste. The modern *plein-airiste*, or whatever he may call himself, wants to show the effect of light; the objects in the landscape upon which it happens to shine are of minor

importance—a haystack answers as well as a cathedral. But Turner attempted to combine the same study with a stately classical design and the detailed telling of a story which is what the honest Briton has always prized above all else in a picture. Confusion was bound to ensue from his venture to reconcile the irreconcilable. It was only now and then, when he was carried away by the problem he had set himself, when he fell under the spell of lovely light and color, until every side issue was subordinated, that he succeeded triumphantly, as in "The Rape of Europa," now at the Guildhall; a dream of soft, golden, flame-tinged mist, through which the sea slowly discloses itself, a wide stretch of vague blue, with a dimly seen figure moving across it. Fine experiments many of the later pictures are, but, if I except this one and a very few others that I have seen, it is only the experiment, and not Ruskin's absolute truth, you discover in them. They have not the calm, the dignity, the supreme distinction of the "Kilgarran Castle" or the "Mortlake."

And so it is with the water-colors. The most satisfactory in the collection are two charming sketches on gray paper of Bonnevillie, dated 1800-10, but by no means the "insuperable" examples of Turner's "grandest manner" that Ruskin calls them; nor can you agree with him that "mountains, properly speaking, never had been drawn before at all, and will probably never be drawn so well again." In the later notes and impressions, as in the later paintings, the exaggeration of detail offends. But, though the "Splügen Pass," which Ruskin says he saw in a moment was the noblest Alpine drawing Turner ever made, and the "Red Righi," which he thought such a piece of color as had never come in his way before, are included, there are no such perfect, such suggestive studies and sketches as those little drawings in the cellar of the National Gallery which are nothing more than simple, broad washes of color. Many of the *Libra* prints are also shown; for the collection, as I have already said, is delightfully complete and representative.

Its chief interest, however, must be found in the help it gives in an unprejudiced study of an artist who has been overpraised and overestimated. If we can only shut our ears for awhile to the music of Ruskin's eloquence, and our eyes to the glamour of the Turner room at the National Gallery, of Turner's ambitious pitting of his own landscapes against Claude's in that other room, of the Turner bequests at the Royal Academy, and of all Turner's honestly meant glorification of himself; if we can shake off the Turner tradition and not be frightened by the Turner fetish, we may begin to see the real Turner—a great, a very great painter, but no greater than, if as great as, Claude and Constable and Corot; a brilliant experimentalist whose vagaries and fantastic flights would have led to destruction in a lesser man; a master of line and composition, one of the most accomplished water-colorists that have ever lived.

Correspondence.

BURKE ON THE PHILIPPINE WAR.

TO THE EDITOR OF THE NATION:

SIR: I enclose extracts from Burke's noble letter to the Sheriffs of Bristol, 1777. I

have seen no comment on this present situation in the Philippines which covers actual conditions more closely than this actual analysis.—Faithfully yours, VAGO.

SAN FRANCISCO, April 21, 1899.

"If there be one fact in the world perfectly clear, it is this, 'That the disposition of the people of America is wholly averse to any other than a free government'; and this is indication enough, to any honest statesman, how he ought to adapt whatever power he finds in his hands to their case. If any ask me what a free government is, I answer that, for any practical purpose, it is what the people think so; and that they, and not I, are the natural, lawful, and competent judges of this matter.

"But whether liberty be advantageous or not (for I know it is a fashion to decry the very principle), none will dispute that peace is a blessing; and peace must, in the course of human affairs, be frequently bought by some indulgence and toleration at least to liberty.

"Liberty is in danger of being made unpopular to Englishmen. Contending for an imaginary power, we begin to acquire the spirit of domination, and to lose the relish of honest equality.

"If we should be expelled from America, the delusion of the partisans of military government might still continue. They might still feed their imaginations with the possible good consequences which might have attended success. Nobody could prove the contrary by facts. But in case the sword should do all that the sword can do, the success of their arms and the defeat of their policy will be one and the same thing. You will never see any revenue from America. Some increase of the means of corruption, without ease of the public burdens, is the very best that can happen. Is it for this that we are at war; and in such a war?

"But America is not subdued. Not one unattacked village which was originally adverse throughout that vast continent, has yet submitted from love or terror. You have the ground you encamp on; and you have no more. The cantonments of your troops and your dominions are exactly of the same extent. You spread devastation, but you do not enlarge the sphere of authority.

"A conscientious man would be cautious how he dealt in blood. He would feel some apprehension at being called to a tremendous account for engaging in so deep a play, without any sort of knowledge of the game. It is no excuse for presumptuous ignorance that it is directed by insolent passion. The poorest being that crawls on earth, contending to save itself from injustice and oppression, is an object respectable in the eyes of God and man. But I cannot conceive any existence under heaven (which, in the depths of its wisdom, tolerates all sorts of things) that is more truly disgusting than an impotent, helpless creature, without civil wisdom or military skill, without a consciousness of any other qualification for power but his servility to it, bloated with pride and arrogance, calling for battles which he is not to fight, contending for a violent dominion which he can never exercise, and satisfied to be himself mean and miserable in order to render others contemptible and wretched.

"I know it is said that your kindness is only alienated on account of their resistance; and therefore if the colonies surrender at discretion, all sort of regard, and even much indulgence, is meant towards them in future. But can those who are partisans for continuing a war to enforce such a surrender, be responsible (after all that has passed) for such a future use of a power that is bound by no compacts and restrained by no terror? Will they tell us what they call indulgences? Do they not at this instant call the present war and all its horrors a lenient and merciful proceeding?

"No conqueror that I ever heard of has professed to make a cruel, harsh, and insolent use

of his conquest. No! The man of the most declared pride scarcely dares to trust his own heart with this dreadful secret of ambition. But it will appear in its time; and no man who professes to reduce another to the insolent mercy of a foreign arm ever had any sort of good will towards him. The profession of kindness with that sword in his hand, and that demand of surrender, is one of the most provoking acts of his hostility."

THE WASHINGTON-BRODHURST CONNECTION.

TO THE EDITOR OF THE NATION:

SIR: I have found another item of interest in the Washington ancestry, in the form of two letters from a descendant of the first marriage of Anne Pope, the wife of John Washington the immigrant.

Of this (Brodhurst) connection, little is known. The Virginia land records show a grant of 500 acres in Northumberland County to Walter Brodhurst, in 1650, probably the year of his arrival. Another grant, of 300 acres, was made in December, 1662, to his son Walter, and on the same date, 500 acres, "near the land of Nath'l Pope," were given to Gerrard, who was another son, as these letters show. The first Walter married Pope's daughter, Anne, and died between 1656 and 1658. His will was proved in England in 1658. A Walter Brodhurst, in May, 1658, witnessed the will of Henry Peyton, of Aquia, Westmoreland County, and Hugh Brodhurst was associated with him. The witness to Peyton's will cannot have been the son of Walter and Anne, who is said to have left America at a later period only nine years of age. In May, 1659, Anne, as Mrs. Washington, received a gift of land from her father, Nathaniel Pope; and in September of the same year was concerned in a lawsuit, as Anne Brodhurst, the "relict and administratrix of Walter Brodhurst." If Walter was living in May, 1658, and his widow was Mrs. Washington in May, 1659, no time was lost in unnecessary grief for the dead. It may be noted that John Washington was preparing for the baptism of his young son in September, 1659. Anne Brodhurst is described as a "young widow," which is doubtless true, as her husband was about thirty-six years of age in 1655. The interest in these letters lies in the history of the children of Walter and Anne; they fully establish the fact that Walter and Gerrard were brothers, and so stepsons of John Washington. Col. Chester found at Lichfield a record, dated April 12, 1678, of letters granted to Walter Brodhurst, to "administer on the goods of Anne Washington, alias Brodhurst, late of Washington Parish, in y^e County of Westm'land, in y^e countrey of Virginia."

A note may be added on the marriages of John Washington, the immigrant. He had married in England, and his wife and two children accompanied him to Virginia, where they died. The tradition is that he came to America in 1657. If he married Anne (Pope) Brodhurst in 1659, his wife and two children had died in the meantime. This second wife is believed to have died in 1675 or 1676. She was certainly living when her husband made his will in September, 1675; and her son, Walter Brodhurst, could obtain testamentary letters in England in 1678. The record cited by Lyon G. Tyler points to the earlier year as that of her death, for he found a marriage contract between Col. John Washington and Frances

Appleton, dated May 10, 1676. The curious feature is that Frances was taking a husband for the third time, just as Washington was taking his third wife. She was the daughter of Dr. Thomas Gerrard, and had married in 1660 Valentine Peyton. On his death, in 1665, she had appointed her "trusty and well beloved friend, Major John Washington," her attorney. In 1670 she became the wife of Capt. John Appleton, a witness to John Washington's will, who died between the making and the proving of that will, certainly after September, 1675. Yet, in May, 1676, she is about to make her third venture in matrimony, and her husband that is to be will take her as his third venture. Truly, these much-married colonists are very confusing and confused persons.

WORTHINGTON C. FORD.

Boston, April 25, 1899.

ADDENBROOKE TO GEORGE WASHINGTON.

SIR I have been informed by my Mother and by some papers in my custody find that my Grandfathers Mother a young Widdow her name Broadhurst, married a Gentleman called Colonnell Washinton of Virginia, one of your Ancestors, if so I have the Honour of being a relation to you, which makes me take the Liberty to Trouble you with an Enquiry after an Estate which belonged to my Grandfather, and an Estate left my Mother and her sisters by their Uncle Gerrard Broadhurst. After the Death of my Grandfather the Daughters sent one Pension to Virginia to manage their Affairs, and imprudently trusted him with their Writeings. He for some years made them regular remittances Afterwards took no Notice of their Affairs, by what I can learn kept possession as his Own, as the Estate I believe Joyns to yours shall take it as the Greatest favour you would inform me of the Situation of the Estate and Pensons heirs, and if you think the Estate is recoverable I am the only representative of the Family of Broadhurst, my Grandfather, left Virginia at the age of 9 years to take Possession of some Effects left him by an Uncle in Shropshire in England. As I am unacquainted with any body in Virginia, beg you will excuse the Trouble I give you in this Affair. the favor of an Answer to this will be gratefully acknowledged by Sir your most obedient Humble Serv^t to Com^d

THOS. ADDENBROOKE.

At Coalbrookdale near Shiffnall in Shropshire, England, 16 December, 1771.

ADDENBROOKE TO GEORGE WASHINGTON.

SIR In December 1771 I took the liberty to write to you requesting the Favour of you to Enquire after an Estate in Virginia that I had a right to. Not being favour'd with your Answer makes me imagine my letter miscarried.

By some papers in my Custody I find my Great Grandfather (by my mothers side) Walter Broadhurst left a Widdow who married Mr John Washington of Westmoreland County. I suppose an Ancestor of yours by which I have the Honour of being related to you. My Grandfather came to England very young left a brother whose name was Gerrard Broadhurst, at Virginia, who died after a short illness at the House of Mr Lawrence Washington in Christmas 1677, and left all his real and personal Estates to my Grandfathers children of whom I am the only descendant. His plantations were situated at Nemanie [Nomony?] in the County of Westmoreland. He left Mr Nicholas Spencer and Mr. Washington Trustees for my Grandfathers Children. Upon the Death of my Grandfather my Mother and her sisters sent one Pension to manage the Plantation and very imprudently trusted him with their papers. Pension made remittances for some time, but for a great many years past took no Notice of them but possessed himself of the Estate and as I am informd his son now enjoys it.—I shall

think myself greatly obliged if you will favour me with a line, if you think the Estate is recoverable or not, what may be the Value, and if it would answer for me to come over. I am told that According to your Laws no time takes away my right. I hope you will excuse the Freedom I take in giving you this trouble, but presuming that you are a relation occasioned me taking this freedom, and I hope you will favour me with an answer as soon as convenient. Directed to Sir your very Humble Serv^t to Com^d

THOS. ADDENBROOKE.

26 July, 1773.

Notes.

Mr. T. W. Higginson's books (school-books excepted) have been acquired of Messrs. Longman by Houghton, Mifflin & Co., who are preparing a definitive edition. In advance of this will appear a new volume, uniform with 'Cheerful Yesterdays,' entitled 'Contemporaries,' and consisting of personal sketches of distinguished Americans written for various periodicals.

Frederick Warne & Co. will shortly publish 'The Romance of Wild Flowers,' by Edward Step, with profuse illustrations, first of a series entitled 'The Library of Natural History Romance'; and a popular reissue of Anne Pratt's 'Flowering Plants, Ferns, Sedges, and Grasses of Great Britain,' edited by Mr. Step.

R. H. Russell has nearly ready 'Eden vs. Whistler: The Baronet and the Butterfly,' by J. McNeill Whistler; and an English version of Hauptmann's 'Die Versunkene Glocke,' by Charles Henry Meltzer, in rhyme and blank verse.

A volume of interesting descriptions of Rhode Island, Providence, and Newport, from 1636 to 1836, has been compiled by Miss Gertrude Selwyn Kimball, and, if sufficient encouragement be given, will be published by Preston & Rounds Co., Providence, at \$2.50, in a limited edition.

With 'Reprinted Pieces' the "Gadshill Edition" of Dickens comes to an end (London: Chapman & Hall; New York: Scribners), and Mr. Andrew Lang makes his editorial bow in a General Essay on the Works of Charles Dickens. The judgment will, we believe, stand, and it is sufficiently critical to warrant the editor in wondering how he ever came to get the job. His various prefaces have furnished ground for such wonderment in his readers. He has, he says, "played the Devil's Advocate . . . *contre cœur*, and from an odd sense of duty which seemed [in view of our general debt to Dickens] half undutiful." And so ends a liberally, almost elegantly, printed edition, rather too bulky, whose excuse for being turns out to be an apology.

No apology is needed for the "Centenary Edition" of Carlyle marketed by the same American firm, and as cheap as it is beautiful in appearance. It is now extended by two volumes of the 'Wilhelm Meister' translation. Two volumes also are given to 'Shirley' in Downey & Co.'s reissue of the novels of the Brontë sisters (Scribners), handsome and bold of letter, if again, like the Dickens, somewhat too plump for perfect beauty or handiness.

The Dent-Macmillan "Temple Edition" of Scott's novels pursues its charming and companionable way with 'Redgauntlet' and 'St. Ronan's Well,' each in two dainty volumes.

Reasons for anonymity are an author's "private business," in the Croker slang of

the day, but it is curious that the editorship of Houghton, Mifflin & Co.'s 'Bachel Guide for the Vacation Tourist in Europe' should have been concealed for twenty-seven years by Dr. W. J. Rolfe, the Shaksperian scholar and editor. His name now first appears in the issue for 1899.

It was inevitable that Lady Burton's monument to her husband, 'The Life of Sir Richard F. Burton,' should, if attempted in a popular edition, be razed. This has now been done by the competent hand of Mrs. W. H. Wilkins, the biographer in turn of Lady Burton. Omission of the appendices and other irrelevant matter reduces the work to a single presentable octavo volume of 648 pages, with illustrations. Mrs. Wilkins tells, in her interesting preface, of Burton's intention to publish, from his candid diaries, a 'Confessions,' which we may suppose would have rivalled Rousseau's in frankness. Lady Burton took care that nobody else should construct it out of his literary remains.

Five years ago we briefly noticed Mr. Samuel H. Church's conscientious but hardly inspired 'Oliver Cromwell' (Putnams). That the work has supplied a want would appear to be evidenced by its having passed to a third edition, in the preface to which the author notices the unsuccessful introduction of a monument bill in Parliament immediately consequent upon the publication of his reproach to England that it had no official monument to the Protector. Now he issues a rather sumptuous 'Commemoration Edition' in celebration of the fact of the acceptance by Lord Salisbury's Government, and the placing "in one of the corridors of the Palace of Westminster," of Bernini's bust from life of Cromwell. A plate showing this interesting effigy is one of the several which go to make up the adornment of the present issue (limited, by the way, to 600 numbered and signed copies), and include the likeness of Mr. Church himself.

The beautiful quarto volume numbered fourteen in the series of Filson Club Publications (Louisville, Ky.: John P. Morton & Co.) deals in two parts with 'The Clay Family.' The respective authors are the Hon. Zachary F. Smith for 'The Mother of Henry Clay' (Elizabeth Hudson), and Mrs. Mary Rogers Clay for the general genealogy. Not much has been achieved in elucidating the English connection, but a great body of individual biographies has been brought together, and the effort was certainly worth while. At the same time, it is to be regretted that Mrs. Clay, who edits the *Courier-Journal's* genealogical column, was not more familiar with the best mode of exhibiting pedigrees in print. There is not even a chart for Henry Clay. It is disquieting, too, to find a lax method as exemplified in No. 97, whose birth-date is given on first mention (under issue), p. 106, but not with the separate sketch, p. 153; or, vice versa (a very common negligence), in the case of No. 159. More serious are fatal inconsistencies like these: p. 105, John Clay was born February 13, 1800, but p. 148, February 15, 1800; p. 116, Green Clay Smith was born July 10, 1837, but p. 168, July 2, 1832. The catholic treatment of the Clay family is noticeable; the pseudo-abolitionism of Henry Clay, the eccentric but genuine abolitionism of Cassius M. Clay, gallant Federals and gallant Confederates, all come in for praise; and (shades of Henry Clay and Elizabeth Hudson!) Miss Laura Clay, daughter of Cassius

M. Clay, is eulogized as the leader of woman suffragists in Kentucky. The volume contains numerous valuable portraits, including one (thought to be unpublished) of Henry Clay.

Charles Battell Loomis's 'Just Rhymes' (R. H. Russell) has been gathered up in a thin volume from the numerous periodicals in which the original verse and the parody have already fulfilled a cheerful mission. The best are very good, but not better than the "Dedication to the Author" in laughable prose. Miss Cory's illustrations, also in many veins, are level with the text in humor, and now and again (as in the vignette to "Lullaby à la mode") noticeably graceful and decorative.

Kelly's Directory of the Merchants, Manufacturers, and Shippers of the United Kingdom, and Guide to the Export and Import Shipping and Manufacturing Industries of the World' (London; and New York, 5 Beekman Street) reaches its thirteenth edition in a portly volume of nearly 3,500 pages. The obvious functions displayed in the title it discharges generously, but it also contains, for the respective countries, ports, and cities of the earth, condensed commercial statistics, including tariffs. It is significant of the contrast between a country that seeks the world's trade and one that has hitherto affixed odium to international exchange, that while Great Britain's tariff fills only one page in large type, that of the United States fills fourteen in fine type. A Foreign Office circular touching the regulations to which foreign commercial travellers are subjected in European countries (p. ix) shows that no restrictions prevail in Austria-Hungary, Bulgaria, France, Greece, Italy, Portugal, Russia, and Turkey. The Scandinavian countries, on the other hand, are very stringent and exacting. The editor notices that the rubber supply keeps pace with the demands of wheelmen and tire-makers, and that the West Coast of Africa, with a capacity for unlimited production, increased its export from £671 in 1893 to £252,065 in 1897. A subsidiary use of this valuable Directory is in its geographical index as a gazetteer, and its bilingual indexes of trades and professions for convenience in translation.

'A Manual of English Pronunciation and Grammar for the Use of Dutch Students,' by J. H. A. Günther (Groningen), is in manner and matter an altogether excellent book. As its title indicates, it is written in English, and it presupposes on the part of its user at the outset a good knowledge of the language. The first part, on pronunciation, is based on Sweet and other recent material, all most clearly and intelligently presented, with an abundance of illustrative symbols that make too many phonetic works not only caviare to the general, but a weariness of flesh even to the special. The values here are English and do not, accordingly, along well-known lines, always correspond with American usage. The second part of the book, containing forms and syntax, is, like the first part, a model of its kind. The author's purpose, as he states it in his preface, is to write a grammar of the language of to-day. His syntax is thus a record of what actually is and not at all of what ideally should be. The illustrations in the majority of cases are drawn from the most recent writers: Anthony Hope, Marion Crawford, Stanley Weyman, Andrew Lang, Robert Louis Stevenson, Augustine Birrell,

Conan Doyle, Rider Haggard, John Oliver Hobbes, and many more of their day and generation, with not an Ollendorffian dummym among them. The hundreds of exemplifications of literary usage in this part of the book give a picture of the language as it is written at the end of the century that is not surpassed by any late work of the kind in England or America. The book, in point of fact, would be a valuable one in the hands of any student of English at home or abroad, since, aside from the few citations of Dutch values in phonology and syntax for the purpose of elucidation, there is nothing in it except the sub-title to indicate that it is not intended generally for English-speaking people. From beginning to end, finally, the manual breathes the whole fresh spirit of modern language-study which so conclusively shows the permanent passing of the *Sprachmeister*.

A rather remarkable educational experiment came to an untimely end in Brussels recently. The democratic university founded in that city some years ago is no more. About half a decade ago, when the free University of Brussels, which is controlled by the Moderate Liberals, refused to elect the Paris geographer Elisée Reclus as a member of the faculty on account of his anarchistic propensities, the radical and socialistic element among the students arose in protest against this attack on the freedom of scientific research. The agitation ended in the establishment of a radical university in Brussels, which was especially favored by a certain coterie of younger scholars. Wealthy men of radical and socialistic tendencies furnished the financial wherewithal, and the new university called men to its chairs from many lands, without any reference to political or religious views. The moderate liberals and the clericals fought it from the outset, and the political authorities practically did the same. The Government denied to the "Université Nouvelle" the right to grant academic degrees, and the commission intrusted with the duty of conducting the state examinations refused to respect its diplomas. Accordingly, no Belgian subject could attend the new university. Soon the necessary funds (60,000 francs per year) were lacking, and a few weeks ago the Academic Council, notwithstanding the protests of the professors and the students, decided to close the institution. The rector was Dr. de Greef.

Much credit is due to the members of the Künstlerinnen-Verein of Munich for the energy with which they have carried forward the laudable enterprise of providing first-class opportunities for art study for women. Since the 1st of April the Association has been occupying its own newly erected building in a pleasant garden near the Pinakothek, in the very heart of the city. Some hundreds of young women are enjoying, under the auspices of the Verein, the best instruction obtainable in a city which has long been one of the foremost art centres in Europe.

The trade and industry of Italy formed the subject of an interesting and encouraging address made recently in London by the Italian Ambassador to Great Britain. He did not assert that his country was rich, only that "she is on the way to become so." The revenue is equal to the expenditures, and within the past ten years a considerable amount of the national indebtedness has been paid off. The bank deposits,

including the savings-banks, amount to \$600,000,000. Since 1871 the number of mechanics has doubled, mineral exports and the production of silk have trebled, and, among other things, Italy manufactures the rolling-stock of her railways, the whole material of her navy, and 80 milliards of matches annually ("enough to set all Europe in a blaze"). Referring to her lack of coal, the speaker said that "possibly it is to electricity that Italy must look for her mechanical reorganization and emancipation, when she shall have learned to utilize the million horse-power contained in the waterfalls that course down the slopes of the Apennines."

An English expedition was organized in 1897 under Major (now Colonel) Macdonald to trace the upper course of the river which was to constitute the eastern boundary of British East Africa, according to the Anglo-Italian agreements of 1891 and 1894. Another object was to take effective possession of the eastern Nile valley, and thus forestall French and Abyssinian enterprises in that quarter. A mutiny of the Sudanese composing the expedition prevented for a time its departure from Uganda. Information has been received recently in London that a part of it, as reorganized, has succeeded in reaching a point some three hundred miles north of the Victoria Nyanza; and that Col. Macdonald has made treaties with the chiefs in a large section of country to the east of the Nile, and has apparently opened communication with Lado on that river. Another column has explored the region lying to the west of Lake Rudolf. Both columns have returned to Uganda, and preparations are being made to carry out the original plans, and, probably, to co-operate with the Anglo-Egyptian advance from Fashoda up the Sobat.

To complete a record of bills of credit issued by the colony of Massachusetts from 1690 to 1750, Mr. Andrew McF. Davis wishes to know where any may be found. His address is 10 Appleton Street, Cambridge, Mass.

—It was a happy thought for the Colonial Dames to print the early letters addressed to Washington, and the first volume has now appeared, edited by Mr. S. M. Hamilton (Boston: Houghton, Mifflin & Co.). This earliest portion of the correspondence is disjointed, and is marked by many omissions due to loss and gift of manuscripts, or by the retention of family letters by the Washington family. It is noteworthy that in this volume, with letters extending from 1752 to 1756, only two family papers appear. The manuscripts in the Department of State have been depended upon for material, and no attempt has been made by the editor to go outside of them. In some respects this is unfortunate, as such an edition as is proposed should aim at finality, and there is hardly a collection of papers, state or private, that could not have made its contribution. The material used turns largely upon Washington's military duties while connected with the Virginia regiment, and is occupied with details of army discipline and equipment. Of greatest interest are the letters on the affair of Fort Mifflin, on the question of rank, and on the charges made in 1756 by an anonymous writer against the regiment. Personal details are not wanting, the scribbles of Washington's secretary, Kirkpatrick, being particularly rich. The volume fully justifies its existence, and promises richer material as the work progresses. The notes

are not very judicious. Thus, half a page is devoted to Gist, but only two lines to Croghan, and nothing to Woelper or Bland, who deserved more than Gist.

—Admitting the importance of this compilation, it is with regret that we find the volume so carelessly prepared as to throw doubt upon the accuracy of the readings. There is a great and unnecessary affectation of minute care in the printing, and very unusual and confusing expedients are employed. Only a photograph could reproduce the peculiarities of the MS. Yet Mr. Hamilton has attempted the same results in rigid type. An inserted word or letter is given a whole line, a caret marking the place of insertion. Where the writer uses a flourish under his name, a long stiff dash is printed under the signature. A curve marking an abbreviation becomes a line over the type, sometimes dropping down and striking out necessary letters, as on p. 344. While the exact number of words in each line of the body of the letter is disregarded, the postscript is split into lines of unequal length. Arbitrary signs are used, as on page 121, where "Fred =," a meaningless mark, occurs. What is intended on page 39, where "Cliprian Dame. [+M's Nel]" is printed? Such vagaries could have been overlooked did they show a scrupulous adherence to the text, united with an intelligent exercise of an editor's judgment. A doubtful point calls for an explanation. The following are given as a few of many violations of good editing we have noticed: (p. 13) Penoney, though the note on the same page gives properly Peyronney; (p. 34) aquaint, for acquaint; (p. 101) *mercely* savages for *merciless*; (p. 183) a meaningless mention of "32 thoud to" of beef, though the proper statement is given on p. 151, where occurs another slip of *lbs.* for *lbs.* Dots, usually showing omissions, are here used without meaning (p. 341) and the bracket is employed freely for the parenthesis. We trust that greater care will be shown in the subsequent volumes, as they are too well printed to merit such defect.

—The "Beardsley craze" may not be dead, as Mr. H. C. Marillier, in the prefatory note to 'The Early Work of Aubrey Beardsley' assures us it is not, but the policy pursued in the compilation of such books as this and 'A Second Book of Fifty Drawings by Aubrey Beardsley' (both published by John Lane) cannot fail to damage Mr. Beardsley's reputation. The first 'Book of Fifty Drawings' was published in the artist's lifetime, and he himself was responsible for the selection. In the second there are "many things which would not have appeared had Mr. Beardsley been living," and at least one drawing the publication of which the artist had "vehemently prohibited." In the other and larger volume the same policy has been pursued, and immature scribbles and utter failures are mingled with the better work of the man in whose honor the book is published. In the case of a great artist there is something to be said for such a policy; it is interesting if not important to the world that every scrap from the hand of a Rembrandt should be treasured; but Mr. Beardsley was not a great artist—only a man of striking talent within a very limited range. In spite of the morbidity of his fancy and the debased nature of his types, his best work shows marked ability in the disposal of pure black and white spaces and the decorative arrange-

ment of lines. One might still have believed that his bad drawing and lack of light and shade were voluntary mannerisms if these volumes had not proved to us that he was quite incapable of doing anything else than what he did best. The quite terrible badness—the absolute ineptitude—of his productions when he attempted work in the ordinary methods, would be incredible if it were not proved to us here by many examples. Perhaps the best things in either volume are a number of designs for book-covers, consisting of pure ornament. In these his qualities of space and line composition have full play, while his horrible conception of humanity and his utter lack of pictorial power do not affect the result.

—The disposal of black and white spaces and the arrangement of lines are the subject of Mr. Arthur W. Dow's book on 'Composition' (Boston: J. M. Bowles). Mr. Dow is ambitious, and thinks he has discovered "a new system of art education," beginning with composition where the ordinary system leaves off, and introducing nature-study only as the young artist needs it for the development of his previously planned composition. That arrangement is the essence of art is undoubtedly true, but it may still be doubted how a system would work in practice which begins by getting something out of the student before he has put anything into himself. Certainly, heretofore, the apprenticeship of every great artist has been a struggle for the mastery of representation, after which has come the period of production. Taken in itself, however, not as a substitute for other art training, but as an addition to it, Mr. Dow's book and its method may prove useful. We regret that so many of the author's examples and even terms should be taken from the Japanese. The Japanese examples are good, but there is as much good to be found in classic and Renaissance work, and such work is our own by descent and tradition, not a foreign graft.

—By the nature of his profession, a portrait-painter comes into contact with many people, and often with very distinguished people. When such a painter is the son of a well-known musician and the godson of a great one, he has a personal and hereditary as well as a professional entrée into distinguished circles. It only needed, therefore, that Mr. Felix Moscheles should be able to write tolerably to make his 'Fragments of an Autobiography' (Harpers) very good reading, and he writes much more than tolerably, with a pleasant, gossip, sentimental manner, beginning each of his eleven chapters with an "I well remember," so that the only initial letter needed by the compositor is what Thackeray called "that up-right and independent vowel." Besides moralizing and reminiscences of school-days and early love affairs, we have glimpses of Moscheles the elder and Mendelssohn, Rossini and Meyerbeer, Mazzini and Browning, all of which are interesting if not very important. Mr. Moscheles was one of the first of the now long line of itinerant portrait-painters who have learned what a foreign name is worth in America, and so we have also a chapter on Grover Cleveland, and another giving the unusually pleasant impressions of a cultivated Englishman, not without "a certain condescension" to the society which received him with open arms and pocket-books. The book is illustrated with excellent reproductions of ~~illustrations~~

portraits of Mazzini, Browning, and the artist's mother. Altogether the sense is left that one has been meeting an agreeable person if by no means a great artist.

—Mr. Louis Dyer recently gave the first of three lectures on Machiavelli at the Royal Institution in London. "The Prince" and "Caesar Borgia" was his topic. The course, he said, was planned on the strength of the interest awakened in England and America by Mr. Morley's Romanes lecture of 1897. Machiavelli was a comparatively obscure personage in his day. Insulating himself in his own insignificance, he stood keenly observing the hurly-burly of the world as if in a camera obscura. "The Prince" could be accepted as the political programme of the Renaissance only if we insisted upon its specifically Italian coloring, gathered from Machiavelli's personal experience. The whole treatise occupied, in the printing, rather less than three times the space of Macaulay's famous essay on Machiavelli. Caesar Borgia was the first man of intense power with whom Machiavelli came into intimacy. As a family, the Borgias were Spaniards in whom a touch of the Blackamoors from Morocco and a strain of the Bedouin from Asia had been strangely mixed with Iberian brutality; and in the case of Caesar and Lucretia there had been added to all this a dash of vulgar Italian sensuality. More in oburgation of the Borgias the lecturer dared not say in that place, which was within the diocese of the Lord Bishop of London, the apologist, as against Ranke, of the Borgias. "It is not improbable that Alexander VI., the Right Reverend Historian of the Popes had written, 'used poison in the same way as his contemporaries, but I do not think that many of their attempts succeeded.'" Machiavelli, though decidedly at sea in judging personal character, had the painter's instinctive need of seeing ideas impersonated before he could think clearly. To him Italy said, in the words lent by Euripides to Queen Hecuba in her apostrophe of Agamemnon: "Stand off, I say, as painters do; scan me and peruse my worth in woe." In his 'Life of Castruccio Castracani,' Machiavelli personified his own view of the infantry tactics of the future, as in 'The Prince' he personified his own forecast of the government of the future and of the union of Italy. These personal demonstrations wrote themselves, but it was not so with his longer and impersonal presentations of those same topics. 'The Art of War,' Machiavelli's abstract discussion, among other things, of infantry tactics, dragged on through seven books; his 'Discourses on Livy,' containing his impersonal discussion on government, was never finished. Mr. Pater's account of the science of the Renaissance as "clairvoyance . . . seeking in an instant of vision to concentrate a thousand experiences," applied most aptly to 'The Prince.' Machiavelli conceived of the terrible political problem of the Renaissance—the fusing of disjointed atoms into one state—as a political readjuster, not as a readjustment; as a person, not as a process. Caesar Borgia interested him only while he saw him at work, atrociously but remorselessly, delivering the Romagna people from anarchy. This Romagna segment of Borgia's life he isolated, and on this foundation built up 'The Prince,' who was an utterly impossible human being; his impossibility resulting from Machiavelli's making him up out of the requirements of the de-

bauched and corrupted commons of Italy. Thus the needs of the Italian people, rather than the character of Caesar Borgia, gave the law of life and duty to Machiavelli's 'Prince.'

BRADFORD'S LESSON OF POPULAR GOVERNMENT.—I.

The Lesson of Popular Government. By Gammell Bradford. The Macmillan Co. 2 vols., pp. 520, 590.

For more than thirty years Mr. Bradford has been an earnest student of our democratic institutions, both in themselves and in comparison with other examples of popular government. Seeing clearly the shortcomings and abuses incident to freedom, he has not lost faith in the people, but has found his conviction ripening that a republic is, after all, the form of government which has secured the greatest average happiness for a community. He believes that public opinion in civilized nations is more nearly right than the opinions of any narrow ruling class, and that we shall have good government in proportion to our success in giving guidance to political action by public opinion, when this is enlightened by searching discussion and stimulated by appeals to noble motives. The thesis of this important work is, he says,

"that so far as popular government has failed, the main cause has been in defective machinery, so that public opinion is brought to bear either not at all, or so imperfectly that what is assumed to be the will of the people is, in fact, only that of a comparatively small number of political managers, more or less dishonest, who avail themselves of the forms of government to carry out their private schemes and purposes, by virtue of a nominal expression of the popular will" (I, 38).

Looking into the defects of the machinery, he finds the chief in the absorption of governmental power by the Legislature, concluding that, in the inevitable battle between Legislature and executive for power, "if the executive wins, government is possible, though it may be bad; if the Legislature wins, government becomes, in the long run, impossible" (I, 45). Following out the reasoning, Mr. Bradford concludes that "the ideal constitution of the executive is a single head, surrounded by a staff of his own selection, appointed and removed at his pleasure, one man being at the head of each department" (I, 46). In this way the proper responsibility of the head of the state is secured, and this responsibility is enforced by his election directly by the people, who thus approve or condemn his acts. But as the executive is best informed as to the working of the governmental machine, he should be best fitted to plan its future course and progress, and "must have the power to say what he wants and why he wants it"; and "that the executive shall be able thus to state and advocate his plans, it is necessary that his representatives should be in contact with the Legislature, and have at least the same right of speech as the members of that body" (I, 50). In the sharp criticisms of the Opposition in face-to-face debate, our author sees not only a continuous and salutary check upon the executive, but also such enlightened instruction of public opinion, under circumstances favorable to arresting popular attention, that the judgments registered at the elections of members of the Legislature and of the executive will grow more and more trustworthy as positive exercises of the ultimate sovereignty of the people.

Applying these doctrines to our Federal Government, the practical step Mr. Bradford advocates is, as the readers of the *Nation* well know, to allow the members of the cabinet to occupy seats on the floor in the houses of Congress, with the right to participate in debate on matters relating to the business of their respective departments, and with the duty of attending, upon notice, to give information asked by resolution or in reply to questions propounded under proper rules. By his earnest and able advocacy of his views, Mr. Bradford induced Senator Pendleton of Ohio to prepare a bill with the provisions just stated, which was referred to a select committee, and reported to the Senate in February, 1881, with a recommendation that it pass. This was the high-water mark in the history of the proposed measure, for the author very naturally says that it seems strange that it "should never since have received the slightest attention from either house of Congress or from the executive" (II, 327). He explains the untoward result by the instinctive conviction of legislators that the measure tended to increase the power and influence of the executive, and by their natural tendency as legislators to oppose whatever would diminish the relative weight of their own body. In short, it was part of the inevitable evolutionary struggle between the two departments of government. The author hopes for the growth of a strong public opinion that will overrule this opposition and command Congress to yield its pride and subdue its natural impulse. He has so deep a sense of the perils there would be in meddling with the fundamental organization of the government that he deprecates the calling of a constitutional convention for general revision of the organic law, and, therefore, limits himself to what may consist with the Constitution as it is, though he does not conceal his opinion that his ideal would include executive initiative in all public legislation.

In the government of cities whose charters may be nearly anything a State Legislature chooses to make them, there is almost free course for experiment. A new State, organized under the impulse to put most advanced ideas into practice, might also be induced to try the effect of administering by a responsible Governor and cabinet, intrusted with the initiative in legislation, and so help to work out the interesting problem in statecraft to which Mr. Bradford has devoted most of a lifetime. He is looking to these smaller governmental corporations for the earlier and more hopeful tentative applications of his principles, and has devoted interesting chapters to schemes of State and city government in accordance with his doctrines.

The author's systematic presentation of his views occupies a comparatively small part of his work, and by far the larger part is devoted to sketches of the progress of popular government in different nations, especially in the relations between the executive and legislative departments of the state which have resulted from the internal agitation that has been the ever present factor in national development everywhere. As French history has been by turns the story of most radical revolution and most despotic reaction, Mr. Bradford has given more space to it than to any other, and his chapters on the phases of French progress from the revolt against the tyranny of the old régime to the downfall of the Second Empire and the storms which have attended the Third Republic,

make a most valuable and instructive treatise upon the development of the republican idea in that nation. Considerably more than two hundred pages are given to it, with copious translations from authorities with which we need to be more familiar. The period of the siege of Paris, the negotiation with the Germans, and the struggle of moderate republicanism with communism is peculiarly interesting, and American readers will be especially thankful for the free use made of the books by Jules Favre, Jules Simon, Etienne Lamy, and others. The synopsis of the varying degrees of power and of initiative given to the cabinets of Europe by existing constitutions, from the dominance of monarchy in Germany to the complete obedience of the executive to the Legislature in Switzerland, is an excellent and useful piece of work.

If Mr. Bradford's method is suggestive of the annotations made in years of reading in many authors, brought together with the passages which have suggested his comments and discussions, it has also the advantage of very frank and adequate presentation of the views which he controverts or reinforces. He does not blink or disguise the criticisms of those who have opposed his views, and Prof. Snow, Mr. A. L. Lowell, and Mr. Speaker Reed are allowed to speak for themselves with a fulness which adds interest to the discussion. The vices which have grown up in our own politics are not ignored, and the culmination of party politics in the development of the new tyranny of "bossism" is exposed in its character and its methods of despotic rule with a realism which ought to startle every lover of his country. From every point of view, therefore, whether we wholly follow Mr. Bradford's reasoning or not, we must bear witness that he has given us a most valuable book, inspired by a noble faith in the capacity of man for self-government, and by a pure and disinterested patriotism devoting a lifetime of laborious investigation to the task of smoothing our pathway towards a pure and successful republicanism.

The writer of this review was one of those who gave public adhesion to the general plan of admitting cabinet officers to the debates in Congress, more than five-and-twenty years ago; but he has been led to doubt whether that change alone would make any material modification in the character of our government, or whether, if made, it would survive a single session of Congress. Reflection has tended to produce the conviction that the choice is between maintaining our present system of the restriction of the executive departments to administration proper, and the English system of a cabinet which is essentially a committee of the House of Commons. For the latter, a radical change in our Federal Constitution would be necessary; and, agreeing with Mr. Bradford that we must work out our governmental reforms under our Constitution as it is, the English system seems to be excluded from consideration.

THE ENGLISH HOUSE.

The Evolution of the English House. By Sidney Oldall Addy, M.A. With forty-two illustrations. London: Swan Sonnenschein & Co.; New York: Macmillan Co. 1898. \$1.50.

The author of this book begins by giving the greatest possible amount of credit to Ger-

man scholars who "describe still existing houses in northern Germany which are built, like basilicas or churches, in the form of nave and aisles; with dwelling-rooms . . . at one end," and who have shown the connection between those "remarkable survivals" and far more ancient buildings described in earlier writers. Roman imperial writers, Norwegian, Irish, French, Old English, and modern English authors are cited, and often quoted at length, continually throughout the book. A hasty observer, as one who might take up the book in a book-store with a view to purchasing it, might be prejudiced against it as if a mere compilation. Nothing, however, can be further from the fact. The English facts are mainly of our author's own determining; and his consulted authorities of so many ages and so many peoples are called upon merely to show the extraordinary minuteness of correspondence between the old English house, which is the principal subject, and the dwellings of the country people throughout Europe and western Asia, in the lapse of at least fifteen centuries. The illustrations are declared to be mainly "from photographs and measurements taken and made by the author," and they are mostly of English subjects, as it was their business to be. The plans leave nothing to be desired; in many of them, indeed, there are no scales given, but their approximate dimensions are always stated in the text, and the subject does not call for that accuracy of measurement which the monograph of an important building requires. The not very brilliant half-tone cuts, such as are familiar to us in recent English books, are made intelligible as to dimensions of buildings by a man standing erect beside the principal doorway or the like; though in one case, at least, we suspect the author of having picked out the tallest man in the neighborhood as his standard. Where this simple device is not resorted to, as in the curious instances of the "crucks of a demolished house," on page 30, the curious roof and mantelpiece at North Meols, page 51, the interesting "House Place" at Upper Midhope, page 55, and others, the scale is sufficiently obvious; and yet one does desire some facts about the height of the story depicted in the photograph on page 57, where a stair is shown of only eight risers from floor to floor, and where these seem quite unreasonably high. The views of Padley Hall, pages 138 and 139, need no scale, for what kind of building it is is sufficiently visible; and the "outshot" at North Meols, on page 43, is obviously enough a low-browed, low-timbered lean-to, which may be four or five feet high at the eaves without its dimensions concerning the reader much. The sections as well as the plans serve their purpose well, and the little pictures, which are stated to be forty-two in number, seem even more numerous, and constitute a very adequate outfit of illustration.

If any one is concerned with singularly old terms for buildings, for parts of buildings, for building materials, for processes, and for legend of every sort, he will find a supply ready made to his hand in this book. The "room in the chimney" is not primarily a "priest's hiding-hole." It is but something which came of itself, independently and inevitably, from one of the old-fashioned ways of building a chimney. The "loophole" has for its not surprising meaning that of 'lowp-hole,' 'leap-hole,' or 'aperture through which light or air could enter or through which smoke could escape.' There used to be two

bells in church towers on the Scottish border, one of them called the "Common-Bell" and the other the "Reever's Bell," because it was used to inform thieves and cattle-stealers that now, at the time of the annual (or other) fair or market, they were permitted to enter the towns and no questions asked. This is an astonishing statement, but we have learned by this time to trust our author far. The "fork" is the pair of timbers (or perhaps one of the pair of timbers) set up to determine the width and height of a building and to retain its walls and steep roof. "Crucks" these forks are called—"gavelforks" also, and "couples of syles" as well, although there is a difference between "syles" and "gavelforks," for which see page 18. This information seems dull enough until one finds the true application of it in the first chapter, but it is not uninteresting to meet with the positive and reiterated assertion of the original meaning of bay in the same chapter. The bay in modern architectural talk is, indeed, the whole space from pier to pier, from buttress to buttress, in any long building of somewhat uniform character from end to end; and the nave of a church is said to be so many bays in length. But here the word is used as representing a peremptory thing from which there is no escape, namely, a positive and essential division of the long barn or house into sections of about sixteen feet; that being everywhere the distance from each pair of crucks to the next. The old English house was sold and bought, hired and rented, by its bays; and a man could rent one bay without renting the rest of the house. The owner might leave one bay to one child and another bay to another; and a bay might be sold by itself, much as in a modern apartment-house it sometimes happens that there is a divided ownership, and each person is, in a sense, owner of his own set of rooms.

In this minute way early chapters deal with the house in its humblest type, and with that very curious form of habitation in which the horses, the oxen, the pigs, the man-servants and the maid-servants, and the proprietor's family lived under one roof without friction or without unnecessary discomfort—comfort being reckoned by the ancient standard. In the middle of the great house, between the rows of stalls, was the barn floor upon which the wagon could be dragged by the horses, but from which those horses must back the wagon out again, because at the upper end of the great nave was the chimney, and beyond it, and on either side of it, the rooms of the family. And the master of the house could "superintend the whole management of the household from the hearth, and from his bedstead hear every sound"; and, moreover, the smoke of the great fire would of necessity permeate the whole building and keep out insects and counteract the stench of the cattle. So that it appears that the need of the rooms behind the chimney was made manifest only in later and more luxurious times. "People are still living who remember how farmers' men in England used to sleep on the hay in a gallery or hayloft over the cows."

So the subject begins at this oldest and latest point of departure, and with great good judgment and great self-control is not carried beyond the early times and the simple conditions. It leads, indeed, to the castle, to the church with its defensible tower, and to the crypt; but these are all the simplest and rudest castles, churches, and crypts, and, moreover, it is their simplest and most

pular uses which are considered. The defensible character of the castle keep is not much insisted on except as the necessity of the flat roof surrounded by a parapet is made clear. The ecclesiastical arrangement of the church is not a subject taken up by the author—only the connection of the crypt with the church as a place of special sanctity; but all these subjects are treated according to the tangible and certain traditions of early times, and as expressing the needs of the people as clearly as house or barn itself. Nowhere is the small border fortress of the twelfth century brought in treatment so near to the modern student; and nowhere is the absence of the big and stately municipal building from English architectural history so simply and easily explained as here.

It is fair to say that Mr. Addy seems to be less of a builder and less of an artist in his studies than an historian and a sociologist. That is a bad slip which is made on page 29, in boldly ascribing the origin of the Gothic arch to something which certainly did not suggest it. No other such blunder has attracted our attention, but the tone of the book is generally that of a man unpractised and unlearned in the mechanical work of building. As a student of social life, he is the more fitted to write apparently the first of what will be a most valuable series, "The Social English Series," edited by Kenneth D. Cotes. There is an editorial preface at the beginning of the volume which is very readable indeed, and seems to set the pace for all the books which are to follow this one. The names of four of them already issued, and of eight more "in preparation," are given opposite the false title. If those of *The King's Peace*, *The English Manor*, and the rest are at all as well written as the one now in hand, our town libraries will be richer by a set of books giving much needed information in the simplest and yet the most trustworthy form.

Memoirs of the Duc de Saint-Simon. Translated and abridged by Katharine Prescott Wormeley. In 4 volumes. Boston: Hardy, Pratt & Co. 1899.

The first comprehensive attempt at an English translation of the *Mémoires* of Saint-Simon cuts out, condenses, redistributes matter where "it has seemed best," and offers, in four superb volumes, "the outline of Saint-Simon's career; a selection of such portraits as may be read with interest by the general reader; several of the great historical scenes; and something of the mere court gossip and intrigue." There are various ways of dealing with an historically classic text; this is one of them. Its principal recommendation, particularly to the general reader, is the comparative simplicity and coherence to which it reduces a narrative originally long and at times sadly confusing. The almost complete disappearance of a great historical framework composed of interminable campaigns, tedious questions of state, quarrels for precedence, diplomatic intrigues and manoeuvres, and other trivialities of like nature, is a small matter if the flavor of personality and gossip that gives piquancy to such memoirs as these is but preserved. In similar fashion, Saint-Simon presents himself as a high-minded noble of honor and integrity, and much more free from arrogance and captiousness than ill-disposed critics would heretofore have had us believe—may,

more so than he appeared to his own king. And, further, it must be borne in mind that a translation for English readers cannot be expected to reproduce faithfully the too masculine frankness of the Duke's stories and portraits of his contemporaries, characteristic though they are of the man and the time. Such passages as the picture of Mme. Panache, the peculiarities and misadventures of the Marquise de Saint-Hérem or of the Princesse d'Harcourt, the cynicism of Vendôme, the practical joke played on Luxembourg, and so many more, clamor for suppression. "The most luxuriant and aromatic growth of French literature in the age," as the late Henry Reeve described it, must be pruned and deodorized. Thus (vol. iv., p. 334), when Saint-Simon, on the termination of his mission to Spain, takes leave of the Princess of the Asturias, the farewell of her Royal Highness, unmindful of Don Quixote's instructions to Sancho on social decorum, is modified by the translator. The scene, comic to a gross sense of humor, becomes silly; but propriety is saved. And again (vol. iii., p. 266), the regimen prescribed by Fagon for the declining years of Louis XIV. becomes comprehensible from a clause of the original, suppressed in translation, though suggestible enough in half-a-dozen euphemisms. If, in the words of the prospectus of this "Versailles Edition," Saint-Simon is suitable for young men, it must be added that in his present well-brushed dress he is still more eminently presentable to young women.

Considered merely as a translation, the work (in so far as it coincides with the original) is for the most part careful and accurate. In the case of so markedly personal a style as that of Saint-Simon, literal fidelity, while giving an undeniably foreign aspect to the translation, renders it impossible to destroy the color, glow, and dramatic life of his unique, incomparable pages. From the rendering of the death-scene of Monseigneur (vol. ii, ch. 9), the portraits of Fénelon (vol. iii, ch. 7) and Mme. de Maintenon (vol. iii, ch. 11), and the narrative of the *lit de justice* (vol. iv, chs. 6 and 7), readers can obtain some impression of the spirit and unchecked exuberance of the original. Less superficial examination, however, reveals occasional discrepancies between this version and Chéruel's revised text on which it professes to be based; we offer no explanation of their presence. Saint-Simon, relating the trick put upon the Bishop of Noyon at an academic reception, describes the prelate's speech in the words: "dont la confusion et le langage remplirent l'attente de l'auditoire," for the listeners knew his fondness for bombast. In the English account, we find (vol. i, p. 89): "the verbosity of its language holding the attention of his auditors." Of his brother-in-law (Lausun), the Duke tells us that he was "méchant et malin par nature, encore plus par jalousie et par ambition," but the translation, presumably better informed, represents him (vol. i, p. 101) as "malicious and malignant by nature, even more than from jealousy and ambition." We understand what Saint-Simon means by calling Grammont "un homme de beaucoup d'esprit"; but we are convinced that, knowing the Count as he did, he did not mean to credit him with being "a man of much mind" (vol. i, p. 325). When Louis XIV., after exhibiting his selfishness to his courtiers by the carp-tank at Versailles, sought to relieve the tension of the situation

produced by their silence, he turned to a group of "gens des bâtiments qui ne soutinrent pas la conversation à l'ordinaire"; even these humble folk were embarrassed and shocked. But the English translation has it that "he spoke . . . to the builders who, as a usual thing, had no conversation with him" (vol. ii, p. 51). Boudin, chief physician to Monseigneur, was "si naïvement plaisant, que personne n'était plus continuellement divertissant, sans jamais vouloir l'être"; but we now discover (vol. ii, p. 229) that he was "so naively jocose that people were continually diverted by him, without liking to be so." In the charmingly life-like portrait of the Duchess of Burgundy, the "grosses lèvres mordantes" have become "thick, cracking lips" (vol. iii, p. 39). Her husband, while Dauphin, strove to preserve "la bienéance d'un rang destiné à régner, et à tenir en attendant une cour"; he is here represented as attentive to "the social decorums of a rank that was destined to reign, and was called upon meantime to hold its proper court" (vol. iii, p. 53). The Regent, say the *Memoirs*, was "fort haut en couleur, le poil noir et la perruque de même"; in his English dress, we find him "high colored on a dark skin, encased in a black wig" (vol. iii, p. 217). Speaking of the wasteful expenditure on Versailles, Saint-Simon states that the abundance of supply renders the waters "vertes, épaisses, bourbeuses," the aptness of these adjectives being clear to any one who remembers the scummy fish-ponds and mimic lakes of the palace; from the translation it would appear that "the volumes of water . . . make these gardens verdant, rank, and milky" (vol. iii, p. 305). At the *petits soupers* held by the Regent and his dissolute crew, "Rien ni personne n'était épargné, M. d'Orléans y tenait son coin comme les autres"; that is, the Duke came in for his share, but, as Saint-Simon goes on to say, the most reckless license of speech, even at his own expense, failed to produce any impression on that cynical nature. "No person and nothing was spared. The Duc d'Orléans held up his corner with the rest" (vol. iv, p. 53). In order to emphasize the excitement over the degradation of the bastards, the original tells us that an insignificant Abbé Pucelle, "bien que conseiller clerc, était dans les bancs vis-à-vis"—manifestly out of his place; the translation reads, "Abbé Pucelle, who, being a counsellor-clerk, was on the benches opposite" (vol. iv, p. 318). Dangeau, it is said, possessed "peu d'esprit, mais celui du grand monde et de savoir être toujours dans la bonne compagnie"; and for this we are offered the equivalent of "little wit, but what he had of the great world, the result of being always in good society" (vol. iv, p. 295). We had always supposed that Saint-Simon had some object in describing Cardinal Dubois's appearance in the contrasting words of "son extérieur de *furci*, mais de *cuistre*"; we had yet to learn that, in his day, *cuistre* meant *blackguard* (vol. iv, p. 362). These examples serve to enhance the value of Sainte-Beuve's words given in the introduction, but too often neglected in the work itself: "Respectons le texte des grands écrivains."

What constitutes a great writer is too admittedly Saint-Simon's possession to be safely denied him by any one; but the translator's prefatory note (p. 26) opens a challenge in another and totally unexpected quarter: "With all its great narrative merits, that style has no literary quality, and none has

been, or could be, foisted upon it in the translation." To this declaration, the only reply lies in a cordial assurance of thankfulness that no such attempt was made. Of "literary quality," in the narrowest academic sense of the word, Saint-Simon has indeed none whatever; and it is precisely the absence of such quality that singles out his work in his artificial age, and places it permanently among the great books of all time. In short, the *Mémoires de Saint-Simon* may be taken as the most brilliant verification of the paradox, "*La perfection du style c'est de n'en point avoir.*"

My Inner Life. By John Beattie Crozier. Longmans. 1898. 8vo, pp. 562.

What paralysis of speech prevented Mr. Crozier from affixing to his book the most attractive of all labels, that of Autobiography—when that is just what it is, neither more nor less—instead of a title both unappealing and inaccurate, we cannot tell. He withholds nothing of his outward life about which the reader could feel any curiosity, but only his love affairs, his struggles for moral improvement, his temptations. Much of the volume is non-autobiographical, consisting of reflections upon Carlyle, Emerson, Lord Randolph Churchill, Herbert Spencer, Macaulay, Kant, Washington Irving, Hegel, and many other prosaists. These comments are not sensationally novel; and Mr. Crozier's appraisals of literature are more sure than his appraisals of philosophy. When he speaks of metaphysicians, he is apt to be sketchy, not to say superficial. Still, what he says is in the main judicious and ably expressed. His pen is flexible and adapts itself to more than one style, which is always lively, fresh, musical, and as lucid as his thought allows. It is capable of rising to genuine eloquence. His genius is that of philosophical prose poets; but he lacks the earnestness required to rival Emerson, Carlyle, Ruskin, or Henry James the elder, each of whom was in the clutch of a great idea and struck with its superhuman force. He has only his own power of thought, which may be rated as superior, but not as great nor even profound. Both at once and at different periods of his life we find him laying stress upon an assortment of ideas that have no intimate bond of union, and are not all very thoroughly worked out into the light. The Upper Canadian estimations of his youth, his half-course at Toronto, his phrenological beginning, continue to show their tint through all the reading that has overlaid them. Perhaps that reading has been too large and weighty for its foundations.

None of the book is dull; some of it is richly amusing; every part of it is instructive either for its reflections or as a "human document"; while the reader is swept forward as in a novel upon his sympathy with the hero. The book has some faint perfume of 'David Copperfield,' without being, by many leagues, as good or as bad. More than in any writing where thorough acquaintance with the matter can be attained only with great labor, in autobiography the prime need is intense interest on the author's part in his subject; and that interest the autobiographer is pretty sure to be possessed of, or he would not have undertaken an exhibition from which another would shrink. The native delicacy that literature generally demands must in him have been largely obliterated before he could bring himself to

make public in their minutiae, as he will have to do if he aims at greatness in this line, the varying states of his spiritual and intellectual being and bowels. Our author, however, we are glad to find, does not aspire to pose "in the altogether" nor aim at an anatomical demonstration, whatever his ungraceful title might suggest.

Every book is supposed to do the reader some service. There are, of course, celebrated autobiographies that really do little more than entertain us; but the pretence always is to illustrate the conduct of life either by the author's extraordinary successes or, much more usefully, by mistakes which the result makes manifest enough and which the reader is virtually invited to study. Perhaps one of those of this autobiographer has been that he has led too isolated a life. He would seem never to have entirely corrected the faulty appreciations of a semi-education by constant intercourse on many sides with the world's splendid men, so as to study their methods. He has never been drawn into one of those useful and respectable associations which, when they were bearing their best fruit, received (in 1837) the nickname of mutual-admiration societies. Yet he has not burned to lay his comfort and consideration upon the altar of any idea. A writer who is equally indisposed to the one and the other of these courses would certainly seem to have one of the qualifications of an autobiographer.

Our author, in that first happy stage of development when man swims about freely and can look out for a snug hole in which to ensconce himself for life, chose to make himself a local medical practitioner in a growing quarter of London, which answered the purpose of giving him time for that great work on Development, with too typical a title, which he has always been writing. But modern methods of business, so fatal to the small and isolated, invaded his profession, and have hurried him into making friends with the public by the present publication, being already known to them by his 'Civilization and Progress.' A friend he will find in every reader.

Messiaints in Music. By James Huneker. Charles Scribner's Sons. Pp. 318.

Mr. James Huneker has long been known as a brilliant writer for the press on musical topics, but he never took the trouble to gather his articles into book form. At last his friends induced him to make an effort in this direction, and the result is one of the most readable and at the same time most useful books on music ever issued in this country. Mr. Huneker is an indefatigable reader of musical literature, yet his book reflects chiefly his own experience, in studio and concert-hall, and his marvellous command of language and wide general knowledge enable him to present even technical matters in a way to interest the general reader. His book includes chapters on Brahms, Tchaikovsky, Richard Strauss and Nietzsche, Chopin, Liszt, and Wagner, and an elaborate disquisition on *études* for the pianoforte.

The opening chapter is, somewhat unfortunately, headed "The Music of the Future." Fancying that it must be about Wagner, the Brahmsites will be likely to ignore it scornfully; while the Wagnerites, finding that it is about Brahms, will be apt to pass on to the next chapter in their resentment at such an abuse of language. The impulse to do so should,

however, be resisted. Mr. Huneker is a sincere admirer of the Hamburg composer, and he speaks from a fulness of knowledge which few writers on music possess. He has all of Brahms's works in his memory, and his description and characterization of them are of value even if one cannot agree with the high estimate he places on them. It may be cheerfully conceded that Brahms is "the greatest variationist of his times," but it may be permitted to add that variation is an indication of the infancy of art—a kind of *Spielelei*, comparable to the effort, in literature, to express the same idea in as many different ways as possible. No poet has ever condescended to such trifling, yet musicians do it constantly. But when Mr. Huneker says that Brahms "has appropriated the Magyar spirit with infinitely more success than Liszt," he—well, it is impossible to think that he believes this himself. Liszt, born a Magyar, reared among gypsies, has introduced their fitful ornaments, together with the capricious Hungarian rhythms and tempi, into his music, in a way which absolutely reflects the lawless Magyar spirit; whereas Brahms is the very antipode of that spirit—a typical Teuton, heavy, lumbering, symmetrical, regular, pedantic, angular, ungraceful. It is true that Brahms first won fame through his Hungarian dances; but those were mere arrangements, not inventions; and even as arrangements they lack the exotic fragrance of Liszt's rhapsodies. These rhapsodies have been vulgarized and subjected to atrocious manipulations at the hands of conservatory pianists, but, when Paderewski plays them, we realize what wonderful groups of poetic folk-songs they are—musical epics that will be played long after Brahms is forgotten.

Mr. Huneker is not always consistent. On the first page he says that Brahms is "one whom Bülow justly ranked with Bach and Beethoven," yet on page 11 he declares that "Brahms is not knee-high to Bach or Beethoven." Indeed, when one gathers together all the concessions he makes about Brahms, one wonders that he has the courage to speak of his works as "the music of the future." While convinced that many of Chopin's compositions are immortal, he says, "I am not so sure that I could predict the same of the piano-music of Brahms." He admits the "muddiness and heaviness of the doubled basses of the piano music"; declares that "Brahms is not a great original melodist," that in his techniques are included "the most trite patterns," that "the music of Brahms is often better than it sounds," and that the writer is "not a reckless Brahms worshipper." But his title is reckless.

Under the head of "A Modern Music Lord," Mr. Huneker gives a most interesting sketch of the life and works of Tchaikovsky, with fresh details garnered from foreign sources. The great Russian's courtship was certainly one of the most extraordinary on record—as eccentric and original as anything in his music. Our author fully appreciates the strong individuality of Tchaikovsky, his successful efforts to keep his skirts clear of Germany, and he justly remarks that, "despite his Western affiliation, there is always some Asiatic lurking in Tchaikovsky's scores." He dwells on this composer's predilection for the flute—Mr. Huneker calls it a weakness, but that is surely a wrong term. The flute is stupid as a solo instrument, but not in the orchestra, especially in groups, as, for instance, in the delightful "Nutcracker Suite." Tchaikovsky's piano music is orchestral, and does not pay sufficient at-

ference to the demands of players, who therefore avoid it; but Mr. Joseffy has lately discovered the beauties of the sonata opus 37, and perhaps others will follow. In a footnote to this sonata, "the composer humbly suggests the correct use of the pedal, knowing that color, atmosphere, perspective are the very essentials of his piano music." Mr. Huneker notes that Tchaikovsky disliked Brahms's music cordially, and that the feeling was as cordially reciprocated.

A brief chapter is concerned chiefly with idle speculations as to whether Wagner was of Jewish parentage—one of those paradoxes dear to Mr. Huneker. In another short chapter his great command of language enables him to give an intelligible idea of Richard Strauss's efforts to make music philosophical. "A Liest Étude" calls attention to some of the beautiful neglected music of Liszt, and "The Royal Road to Parnassus" is a chapter on *études* of exceeding value to all students of the pianoforte; it reveals amazing erudition, and could never have been written except by one who, besides being a critic, has for years been a virtuoso and a teacher. But the most valuable chapter in the book is the one entitled "The Greater Chopin." It is an attempt to show that concert-goers do not yet know how great Chopin is; that his most profound and original works are practically unknown to the public, and that their day is dawning. There is much in this chapter to open the eyes of pianists, and the only thing to be regretted is that the author, in his enthusiasm over the undiscovered Chopin, should think it necessary to sneer at the familiar Chopin. It is true that the nocturnes and the waltzes have been sentimentalized, and tortured, and done to death by pianists, domestic and public; but that is not the fault of the pieces themselves. The most hackneyed of them, if played by Paderewski, still glow with a genius that is not to be found in the newest pieces of Brahms. Mr. Huneker properly insists on the masculine side of Chopin: "more masculine, heroic music . . . than the F sharp minor polonaises, some of the ballades, preludes, and *études*, has yet to be written." It is very much to be wished that every pianist would read and take to heart the remarks on pp. 123-4 anent the prevalent vice of playing Chopin too fast. The Chopin tempi should be moderated, as Theodore Kullak has so often insisted.

Heart of Man. By George Edward Woodberry. Macmillan Co. 1899.

It is only a very general unity that Mr. Woodberry claims for his four essays, and so much may cheerfully be conceded them. "The intention of the author was to illustrate how poetry, politics, and religion are the flowering of the same human spirit, and have their feeding roots in a common soil, 'deep in the general heart of men.'" This explanation, however, does not so evidently cover the first essay as it does the other three. The first, "Taormina," is a poetic meditation on the old Sicilian Taormenium, which, founded in the fourth century B. C., has had a long and checkered history; Greeks, Romans, Saracens, Normans, Germans, Spaniards, English—each later horde trampling the earlier down. The story is too long for Mr. Woodberry to tell it all or half. He treats it in an allusive manner, his last touch reminding us that

it was from the beach which is always in the foreground of his picture that Garibaldi set out for Italy in the campaign of Aspromonte, and that hither the wounded hero was brought back. Naturally, the suggestions of the idylls of Theocritus are those on which Mr. Woodberry lingers most tenderly. He quotes the lovely passage in which Theocritus describes two old fishermen, and he goes down to the shore and finds them "still at their toil, the same implements, the same poverty, the same sentiment for the heart." Etna plays a distinguished part in the drama, and her devastation is compared with that wrought by the volcanic eruption from the heart of man: "O Etna, it is not thou that man should fear! He should fear his brother-man."

Beautiful as is the Taormina essay, it is unimportant as compared with the next, "A New Defence of Poetry," a daring venture into fields so sacred to the memory of Sidney and Shelley that to replough them seems almost a sacrilege. Yet Mr. Woodberry justifies his daring by the wisdom and the penetration of his thought and its felicitous expression. Whereas, in the first essay, we are somehow made conscious of the writer's effort to be superfluous, the hard writing in this case not making easy reading, in his "Defence of Poetry" Mr. Woodberry's whole energy seems bent on giving the most exact and satisfactory expression possible to his subtle and elusive thought. Such it appears to us, and yet he says, "What is here presented is neither speculative, technical, nor abstruse; it is practical in matter, universal in interest, and touches upon things which most should heed. I fear rather to incur the reproach of uttering truisms than paradoxes." The danger on either side seems fanciful, and his avoidance of it is complete. His first step is to show that the method of idealism is "that of all thought; that, in its intellectual process, the art of the poet, so far from being a sort of incantation, is the same as belongs to the logician, the chemist, the statesman." There is, however, a difference in the form of statement: "Science and also philosophy formulate truth and end in the formula; literature, as the saying is, clothes truth in a tale," the imagination and reason working in unison to produce the concrete effect. There are two main branches of human life as represented in literature, character and action. The former is generalized by type, the latter by plot. The study of type is carefully worked out, and the differences between different arts in representing it are clearly marked, the limitations of the plastic arts as compared with literature getting due emphasis. The essay makes the general purpose of the book plainest where it says, speaking of the type: "Its whole meaning and virtue lie in what it contains of our common humanity, in the clearness and brilliancy with which it interprets the man in us, in the force with which it identifies us with human nature." Coming to action, the second great branch of life, we are shown how it is generalized by plot, which is "analogous to an illustrative experiment in science; it is a concrete example of law." As with the type, so with the plot; the appeal to a common humanity is the chief end. "The greatest actor is he who makes the spectator play the part. So far is the drama from the scene that it goes on in our own bosoms; there is the stage without any

illusion whatsoever; the play is vital for the moment in ourselves."

It must not be supposed that Mr. Woodberry conceives the artist as working consciously on the lines of the critical analysis here laid down:

"The poet is rather directly interested in certain characters and events that appeal to him; his sympathies are aroused, and he proceeds to show forth, to interpret, to create; and in proportion as the characters he sets in motion and the circumstances in which they are placed have moulding force, they will develop traits and express themselves in influences that he did not foresee."

In this connection there is good criticism of the didactic as a deduction from the purity of art, which teaches best where it aims least at teaching, most at representing life in its practical reality. The criticism of realism is also excellent; those who hold to it in its extreme-form being compared to scientists who content themselves with mere observation. There are very attractive pages which set forth beauty, truth, and goodness as different forms of the same spiritual reality.

The essay on Democracy is a loftily ideal presentation of a matter which just now, as often heretofore, is fearfully concrete in its impact on our experience. But it is good to have a poet so enamoured of our polity and unabashed by the particular illustrations. The thought of the essay is expanded under the heads of liberty, equality, and fraternity; equality being treated as the central term in fact as in the classic trinity. The limitations of equality by education, property, and birth are fully considered, the emphasis being on education; and here it is interesting to find the practical utility of culture depreciated by one markedly possessed of it. Here and there the optimism is unconscious irony, as where, among our national characteristics, are set down "a rooted repugnance to use force; an aversion to war; a commiseration for all unfortunate peoples and warm sympathy with them in their struggles." Alas, for the inverted illustration which the passing weeks are furnishing!

The concluding essay, "The Ride," is a study of Religion, amiable enough in its ultimate analysis, but hardly satisfactory in its plea for the surrender of individual conviction on the altar of religious conformity. The study has for its setting a ride in the Far West so unique that Mr. Woodberry might have done better than to spend his time in reading his notes on religion to his young friend, to the neglect of the natural scene.

Lectures on the Fourteenth Article of Amendment to the Constitution of the United States. By William D. Guthrie. Boston: Little, Brown & Co. 1898. Pp. xxviii, 265.

Only two of the five lectures embraced in this volume deal directly with the Fourteenth Amendment. The first lecture, nominally on the history of the amendment, is of no historical importance, and, in its praise of the Supreme Court and its remarks on the responsibility of the bar, suggests the popular address rather than the serious discussion. The second, on construction and interpretation, is a somewhat loose summary of the familiar principles on that subject. Lectures III. and IV., on the other hand,

treat specifically of the amendment, under the heads of "Due Process of Law" and "The Equal Protection of the Laws." While the views of the author are not new, they are clearly and forcibly put, and are, on the whole, worth reading. Especially well done is the examination and criticism of the decisions upon the police power of the States as affected by the Fourteenth Amendment, by which the Supreme Court has at length reached the conclusion that the federal courts "will intervene and set aside a regulation of charges which is unreasonable, and that the reasonableness of the regulation is a judicial question" (p. 82). The last lecture, on rules of practice, is one of the most useful in the volume, though having, again, no indispensable connection with the main subject.

In general, however, Mr. Guthrie's book contains little for the practising lawyer, and not much for the non-professional student of constitutional law; while its occasional abandonment of exposition for admonition, as in its remarks on the dangers of unequal taxation and the tendency to subject corporations to unfair discrimination, raises a doubt as to the particular purpose the author has had in mind. We should like to know, further, how much use is ever made of the annotated text of the Constitution, such as fills twenty-seven of Mr. Guthrie's pages. With the array of digests, text-books, and collections of cases now at command, we cannot imagine a busy lawyer doing anything with the seventy-five titles cited on laws impairing the obligation of contracts, or the one hundred and twenty citations on the regulation of interstate and foreign commerce. The index to the Constitution, too, is rather meagre; but there is a good index to the volume.

History of Greece. For High Schools and Academies. By George Willis Botsford. Macmillan.

Dr. Botsford's *History* is an admirable specimen of the best type of modern school-book. The author is already favorably known to scholars by his "Development of the Athenian Constitution," and his familiarity with the ancient sources and modern authorities enables him to do the work of compilation and résumé with sounder judgment and juster sense of proportion than are usually employed on such tasks. His aim, as the preface hints, is to picture the development of the social, political, and artistic life of the Greeks rather than to summarize the unprofitable detail of their often meaningless wars. He omits as far as possible the minor mythological and historical proper names with which the pages of the old-fashioned school history bristle. No description is given of the battle of Plataea. The sea-fight of Salamis is represented only by a map and the fine description in the "Persæ" of Æschylus. The general results only of the Messenian wars are given, and the name of Aristomenes is not mentioned. The campaigns and battles of the Pentekontaetia and of the Peloponnesian war are abridged to the smallest compass. On the other hand, an effort is made throughout the book to reproduce, in very simple form of course, the views of the latest authorities on the development of institutions, the underlying real interests and aims that determined policies, and the characteristic features of the art, philosophy, and literature of successive epochs. Apt quotations from the literature,

often of considerable length, are everywhere skilfully interwoven with the text, so that as far as possible the Greeks are made to tell their own story. Abundant maps, reproductions of photographs, marginal references to authorities, suggestions for further studies, a table of dates, and a good index complete the equipment of a model text-book.

But will the model text-book yield better results than the old-fashioned story-telling compilation? Is it possible by any simplification or precision of phrase to give children really just ideas in the fields of the historical and moral sciences? Is it better to teach beginners (after Beloch) that the Spartans were simply wealthy farmers who moved into town, bought heavy armor, and subdued their neighbors, than it would be to relate in detail the legend of the Dorian migration which all Greece believed and all modern scholars have not outgrown? Is it wise to omit from a secondary text-book the names and details with which it would be unwise to burden the student's memory? Will not the secondary text-book for large classes of the population remain virtually the only book of reference in after years?

These questions, however, are for the new pedagogy rather than for Dr. Botsford, who has done excellently what he attempted. A cursory examination of the book reveals few points on which a reviewer may cavil. Is Dr. Botsford sure that the Greeks came into Greece in two-wheeled ox-carts? It is hardly true (p. 16) that "the religion of the [Homeric] time commanded forgiveness of injuries." Anaxagoras (p. 187) did not teach that Intelligence "was the power which ordained beforehand how all things in the universe should be arranged." In the map, p. 179, Olympium should be Olympieum, as on page 75. On page 216, Thucydides ii-vii should be vi-vii. "The earliest civilization of the world was, as Herodotus says, 'the gift of the Nile,'" does not say quite what Dr. Botsford means. "For of old fate went against the Persians by the decrees of heaven," etc., is hardly a correct version of Æschylus, "Persæ," 102. The statement (p. 159) that Myron "was the artist of the moment" will probably puzzle the readers for whom the book is intended. It is only half true that Plato brought the term "idea" into philosophy. Isocrates's influence on Cicero determined, not "the course of development of European literature to this day," but at the most some forms of the periodic prose style.

In the Klondyke, including an Account of a Winter's Journey to Dawson. By Frederick Palmer. Charles Scribner's Sons. 1899. xii, 218 pp. 8vo, illustrated.

As the travelling correspondent of sundry periodicals, the author arrived at Dyea with the intention of accompanying the War Department expedition to relieve the alleged starvation on the Klondyke in 1897. The fact that there was no starvation there leaked out before the party got away from the coast, and consequently the expedition was given up, after having caused the United States Government a wholly unnecessary expenditure of about one hundred thousand dollars. Mr. Palmer decided to make the trip to Dawson with dogs and sledges rather than wait with the horde of gold-seekers until the break-up of the ice. Late in March (no dates are given) he started, with two companions and seven dogs. After a digression to examine some reported diggings at Walsh Creek, and arrival at White Horse Cañon,

he came down with the measles, which caused a delay of two weeks. Making a new start, he reached Dawson in safety four days before the ice went out (some time near the end of May?). The early summer was spent in exploring the mining camps of the vicinity, and on the first steamer for St. Michael the author departed, reaching Seattle July 19, after touching for coal at Unalaksha.

Mr. Palmer has made a sensible and interesting book. His pictures of life on the trail, at Dawson, and in the diggings are obviously true to reality and infused with local color. His story indicates the possession of the sense of humor, patience, and persistence, which go far towards the making of a good comrade and successful traveller on any trail. Among the many publications on the same subject which have fallen under our notice, none has given more real satisfaction on perusal.

The disheartened feeling which experience of corrupt or incompetent American officials in Alaska or on our frontiers has often produced, finds some alleviation in Mr. Palmer's account of the Canadian officials and their ways, at Dawson. Rascality is of no country or race. Honorable exceptions stand out brightly here and there. In the seething ferment of a mining camp, the innate greed and moral weakness of the average individual naturally come to the top. People have a good deal of human nature in them on either side of the boundary line, and the value to morals of the pressure of public opinion is never distinctly realized until we have seen that pressure removed, and individual passions left free to follow the line of least resistance.

The book is not a manual for gold-seekers, and, if it were, the changes which have taken place since the author's visit would have made it obsolete. But any intending Yukoner may get from it a valuable glimpse of local conditions which do not greatly change, while the general reader will, we think, be indebted to it for a lively and truthful picture of life on the Klondyke.

Registered Trade Mark

A Fresh Supply of MIMOSAS AND ORGANDIES

For Summer Gowns.

The patterns in these, to which we now call attention, are those which sold out almost immediately upon their being exhibited at the beginning of the season and of which we have just received a fresh importation. The Mimosa Cloth is a light weight fabric, somewhat after the order of Dimity, but much more stylish in appearance. Price, 40 cents per yard.

We are also exhibiting at this time very full assortments of Madras, Oxfords, and other shirting materials for waists; Linen Lawns, Dimities, Fancy Muslins and Gingham for gowns; Piques, Ducks, and heavy materials for tailor-made suits and for golfing and cycling wear.

"THE LINEN STORE."

The Week.

Mr. Edward Atkinson's pamphlets, which have caused such a tremendous pother in the cabinet at Washington, and have been excluded from the mails going to the Philippine Islands, are three in number, the first and second being stitched together, so that they appear to be only one. The first is far from being an exciting or incendiary publication. It is entitled 'The Cost of a National Crime,' and it consists of statistical information, very useful, indeed, but of the driest possible sort, showing what the revenue and expenditures of the government were before the war with Spain, what they were during the war, from what sources the war revenue is derived, together with some argument on the question whether the new taxes will be sufficient to meet the future expenses of the government. This pamphlet was written before the war in the Philippines began. Its conclusions are that the present tax laws will not afford sufficient revenue to meet the ordinary expenses of the government, and that it is for Congress to consider whether "the holding of tropical islands by armed forces is to cease at an early day, or is to be continued under the necessity of adding by direct taxation a large sum to our present burden, coupled with a heavy increase in the future burden," etc. Nothing can be conceived of less likely to excite mutiny or discontent among soldiers than these tables of statistics, with their percentages and per capita and deficits and averages and so forth. The second pamphlet, which is stitched together with the first, has the rather exciting headline, 'The Hell of War and its Penalties,' but it is not in the least likely to cause mutiny among soldiers. It relates to a class of contagious diseases common in camp life, but of a kind which any soldier can avoid if he chooses. This is largely statistical also, the facts being derived from the experience of the British army in India.

Mr. Atkinson's pamphlet No. 3 is evidently the one which has stirred the cabinet so profoundly, and led to the issue of the order of the Postmaster-General excluding it from the mails to Manila. It is entitled 'Criminal Aggression: by Whom Committed.' It is dated February 2, with an appendix dated March 8, 1899. It begins with an allusion to the phrase "criminal aggression" used hypothetically by President McKinley to describe forcible annexation of Cuba. It then reviews President McKinley's speech at the Home-Market Club in Boston in a temperate manner,

but showing up his inconsistencies and his frequent changes of policy and of phraseology in dealing with the Filipinos. After commenting on Mr. McKinley's frequent "flops," Mr. Atkinson publishes two letters written by Consul-General Pratt of Singapore and Consul Wildman of Hong Kong concerning their interviews with Aguinaldo; also the testimony of the Rev. Clay MacCauley, a missionary, as to the character and capabilities of the Filipinos. Mr. MacCauley says, among other things, that the most intelligent and thoughtful soldiers and sailors in the American army now in the Philippines "are increasingly opposed to the proposition to incorporate the Philippine people into the American body politic." The remainder of the pamphlet is plain argument controverting Mr. McKinley's speech at the Home-Market Club, and a few extracts from the speeches of Congressmen Henry U. Johnson and Rice A. Pierce in the House of Representatives. We find in it nothing calculated to cause mutiny among soldiers. It is undoubtedly very aggravating to have one's inconsistencies set down in black and white, as Mr. McKinley's are in this third pamphlet, but it was an enormous political mistake to draw attention to it by excluding it from the mails going to Manila. Only six thousand copies of this pamphlet had been sent out, and only six copies to the Philippines, but with the advertisement that the Postmaster-General has given it, the demand for it will be increased a hundred fold. The price of the pamphlet is two dollars per hundred copies, and Mr. Atkinson asks for pecuniary help to pay for printing and mailing. Address: Edward Atkinson, Box 112, Boston, Mass. The pamphlet has not yet been excluded from the mails of this country, and Mr. Atkinson has not been arrested by any United States Marshal on a charge of high treason.

Amos Kendall was Postmaster-General in 1835 when the mob broke open the Charleston post-office and burnt anti-slavery tracts and papers found in the mails. A committee was then appointed to inspect "incendiary matter," with the postmaster's connivance. When appealed to by this official to lay down a policy, Mr. Kendall said that, upon a careful examination of the law, he was satisfied that the Postmaster-General had no legal authority to exclude publications from the mail, or prohibit their carriage or delivery, "on account of their character or tendency, real or supposed"; and he expressed the opinion that "probably it was not thought safe to confer on the head of an executive department a power over the press which might be perverted or abused." He proceeded, however, to

justify the action of the Charleston postmaster, as follows:

"But I am not prepared to direct you to forward or deliver the papers of which you speak. The Post-Office Department was created to serve the people of each and all of the *United States*, and not to be used as the instrument of their *destruction*. None of the papers detained have been forwarded to me, and I cannot judge for myself of their character and tendency; but you inform me that they are, in character, 'the most inflammatory and incendiary—and insurrectionary in the highest degree.' By no act or direction of mine, official or private, could I be induced to aid, knowingly, in giving circulation to papers of this description, directly or indirectly. We owe an obligation to the laws, but a higher one to the communities in which we live, and if the former be perverted to destroy the latter, it is patriotism to disregard them. Entertaining these views, I cannot sanction, and will not condemn, the step you have taken. Your justification must be looked for in the character of the papers detained and the circumstances by which you are surrounded."

Charles Emory Smith goes a step further in the service of imperialism than Amos Kendall in the service of slavery. He considers it entirely proper for the head of an executive department to decide what sort of matter may be circulated through the mails, and orders a subordinate to prevent the transmission of matter which he disapproves.

One of the most painful features of the expansion craze has been the readiness of many of even our foremost men to turn demagogue to please either the war inebriates or the McKinley Administration, to abandon the political principles of their lifetime, and degrade the sacred name of "patriotism." The latest illustration is, we regret to say, General Merritt's pilgrimage to Detroit in order to whitewash Secretary Alger. Four commanding officers in succession recommended Alger's dismissal from the army for apparent cowardice during the civil war; we say "apparent" or technical cowardice, consisting in absence from the front and from his post at critical moments. He was thus absent several times in succession, showing it was not due to accident, but to policy. Gen. Merritt was one of these commanding officers. Sheridan was another. Alger resigned to avoid dismissal. A fair inference was that he preferred politics or noising and lobbying around Washington to service in the field, and that he was therefore unfit for military service or military administration. We venture to assert that in any army in the world, except McKinley's army, this inference would have been drawn. We venture to assert that the English, whom Secretary Long cites as approving of the President as a conqueror, would be shocked if they knew and believed that the great man's Secretary of War was a person of this description. Alger got the place partly, no doubt, because he was an active and rich Michigan politician; partly, common

rumor says, because he advanced money to secure Mr. McKinley's nomination. The main features of his administration of the office are known to tens of thousands by results; they are known to many hundreds by personal contact with him. There is not a single incident of the late war better or more widely known than that Alger has conducted it as a politician's war. We have heard him pronounced "unspeakably base and corrupt" by a man of the very highest character, who was in close contact with him during the whole Cuban flurry.

In other words, his conduct of the War Department has been exactly what any one would have expected it to be at the hands of a man who had had to leave the army for misconduct, and had passed the last thirty years in active politics. One of the first revelations of his quality in popular estimation was his failure to give Gen. Merritt a high command. Everybody knew or guessed why, doubtless Gen. Merritt himself, among others. Gen. Merritt, when Alger's superior, with judgment unfettered, expressed that judgment by recommending his dismissal from the service. When Alger became Gen. Merritt's superior, he would not have been a good politician if he did not "get even" with Merritt. The general opinion was that he had "got even" with him. The general opinion now is that Gen. Merritt came to terms with him somehow, and was accordingly sent to Manila on an important mission. There was a general disposition to overlook this, to commend Alger for having experienced sufficient repentance to give the country the services of a soldier of the first quality. But we could not have loved Gen. Merritt so much, "loved we not honor more." It is because we rated him so highly that we are astounded at seeing him go down and unnecessarily give the Secretary a first-class politician's whitewashing, in terms so extravagant that it is hard to believe it came from a soldier.

Eagan has been expelled from the District of Columbia Commandery of the Loyal Legion by a two-thirds vote, a proceeding which is likely to be viewed with much disfavor at the White House. A great effort was made to save him, his champions in the Legion, according to the *Tribune's* account of the meeting, contending "that his punishment was severe and humiliating enough as it is at present, and that it would not be proper, considering his past services in the army, to drop him from the rolls." What is his present "severe punishment"? He was found guilty by court-martial of conduct unbecoming an officer and a gentleman, and he has been convicted before the country, together with Alger, of feeding the army with putrid beef, but he has not been pun-

ished for it. The President, instead of dismissing him from the army, as the court-martial recommended, gave him a six years' vacation at full pay, and he is at present on his way to Hawaii for an indefinite period of rest and recreation. This is not "severe punishment," and it is a credit to the Washington members of the Loyal Legion that they declined to consider it as such.

Senator Hanna has kindly announced that Mr. McKinley is already as good as renominated and reelected. It will be a waste of time and money for any one else to make a canvass for either nomination or election. Hanna himself has said it, and he knows. He is unanimous for McKinley, and that means that the country is. By thus identifying the workings of his own mind with a vast popular movement, he is able to dismiss with a smile any little troubles that would disturb a less serene and self-confident nature. There is, for example, a cloud much bigger than a man's hand right at home in Ohio. Those inveterate and implacable factions which have made Ohio Republicanism a synonym for petty quarrelsomeness and greed, are flying at each other's throats again. Mayor McKisson of Cleveland is openly calling Hanna a "traitor" for having opposed his reelection, and we know what the fate of traitors is. Gov. Bushnell and Chairman Kurtz are ostentatiously whetting their knives in public, and loudly calling upon Foraker to join them in the great work of disembowelling Hanna, or else find out what it is to have an exploratory operation, as the surgeons say, in his own viscera. Foraker is dreadfully embarrassed by the riches of faction and party treachery thus laid before him, and knows not which friend to betray or to which foe to sell himself. To crown all, there is the Republico-Socialist Mayor of Toledo, who has just triumphed over both party machines, and is now intimating broadly that he is the very man to be the next Republican Governor of Ohio. All these cares, however, do not flick the mirror in which Hanna reads the future. He has got the McKinley renomination going on such broad and national lines, and has his Southern delegates so securely bought, that he is able to face turmoil and even defeat in Ohio as a mere "local affair."

Dr. Lyman Abbott's letter to the Chicago Imperialist meeting on Sunday was thrown into the form of a series of propositions, the second of which reads: "By the destruction of the Spanish fleet the power of that Government [the Spanish in the Philippines] to protect persons and property in the archipelago was destroyed." If he had said "impaired," it might pass, but he needed "destroyed" for his argument, and so he said it. But what are the facts? Even with Dewey

still in the bay, even with an insurgent army of 30,000 men in the field, the Spaniards held Manila in perfect security for four months and a half; they held Iloilo and Cebu against all assaults. Who can doubt that, if Dewey had sailed away, as Senator Sewell besought the President to order him to do, the Spaniards would have sent on supplies and reinforcements, and asserted their sovereignty throughout the islands much more successfully than we have as yet been able to do? This may be crying over spilled milk; but what Dr. Abbott does is to go back and assert that the milk simply had to be spilled.

There is choice in courts of inquiry. The one which has just reported on the conduct of the Seventy-first Regiment, New York Volunteers, at Santiago, evidently took the strange view of its duty that it was to make a thorough inquiry, without fear or favor. It found and placed the blame with refreshing frankness. Only one of the sadly inculpated officers is now within the State's military jurisdiction, and he has been promptly ordered by the Governor to appear before a board of examination "into his moral character, capacity, and general fitness for service in the National Guard." Gov. Roosevelt, moreover, shows his difference from a certain other commander-in-chief, whom it is treason to mention by name, in not desiring everything to be hushed up; but has expressed his opinion and made his recommendations with military precision and plainness. The net result is to clear the good name of the rank and file of the regiment, while for ever disgracing its three senior officers.

According to the best information obtainable, the caucus committee on the currency who have been holding sessions at Atlantic City, have agreed upon three points in the bill which they are preparing for the Republican members of Congress. These are (1) that the currency functions of the Treasury shall be separated from its other functions, and that a fund of \$100,000,000 shall be set apart for the redemption of the Government's legal-tender notes, and for no other purpose; (2) that legal-tender notes once redeemed in gold shall not be paid out again except in exchange for gold; (3) that the Secretary shall have power to replenish his stock of gold by the issue of bonds when necessary. The last of these provisions is in the law as it now stands, and was made use of by Secretary Carlisle for the purpose of maintaining the gold reserve. We presume that the proposed new law will give the Secretary power to sell bonds on the best terms possible as to rate of interest and time of payment—the present law, which was passed a quarter of a century ago, fixing the rate of in-

terest at 4, 4½, and 5 per cent., and the time ten, fifteen, and thirty years respectively. This antique system caused the Government to incur serious loss in the several loans which Secretary Carlisle was obliged to negotiate, yet Congress refused to change the law, lest it should thereby give its assent to the effort which the Secretary was making to continue gold payments. If the committee at Atlantic City are now ready to bind the Republican party to the principle that the Secretary may sell bonds when necessary to maintain gold payments, that fact alone betokens a great advance in public sentiment since 1895.

Within the past fortnight a mob of several hundred men in Idaho made a raid on a mining town where some non-union men were working. They drove the latter from the works where they were employed, killed some of them as they were fleeing, and accidentally shot one of their own leaders, who died almost immediately. They burned and blew up with dynamite the buildings and machinery of the works where the non-union men had been employed, destroying property valued at \$300,000 to \$500,000. Then they marched back to the places where they belonged, with all the air and complacency of conquerors. The local authorities either stood mute or encouraged the rioters in their lawless proceedings. Two companies of the Fourth Cavalry, United States Army, were ordered to the place where the outrages occurred, to protect the State officials in arresting the perpetrators. The latter made a break for the mountains with all possible expedition, and the woods are now full of them. Some of them are footing it to Montana, while others are hiding in the brush. One hundred and twenty-eight arrests have been made, however, and probably others will follow. The spirit of the mob has been extinguished and their organization crushed. The non-union men are back at their work, while the rioters have lost their places and dare not show themselves anywhere in Idaho. The suddenness with which law and order were restored when the troops arrived, reminds one of the suppression of the Debs riots in Chicago. In the present case the Governor of the State called on the President of the United States for assistance. There were only two regiments of State militia within reach, and one of these, if not both, was composed in large part of the same kind of material as the rioters. So it was deemed not expedient to call them out. In the case of the Debs riot there was plenty of good State troops, but the Governor was of the same kind of material as the rioters. That was the notable difference between the two cases.

The details of the agreement between

Great Britain and Russia respecting China, as published, are commendably brief, yet comprehensive. Great Britain engages not to seek for herself, or in behalf of others, railway concessions north of the Great Wall, and not to obstruct Russian applications for concessions there. Russia enters into a similar engagement towards Great Britain relative to the basin of the Yang-tse River, and both are to communicate this agreement to the Chinese Government, with a view to the avoidance of all complications between the two Powers, to the preservation of peace, and the promotion of the best interests of China herself. Although the agreement provides only for abstention on the part of each Power from certain acts with reference to the other, the phrase "sphere of influence" is already applied to the territory designated, and this means usually something more than non-interference with each other's sphere. It comes, in the course of time, to mean something like control. Although not operative against third parties, it is apt to grow into control. It looks, too, as though space had been purposely left for a German sphere of influence in the valley of the Hoang Ho, or Yellow River, which lies between the Great Wall and the valley of the Yang-tse. Included in this space is Kiao-Chau Bay, which Germany now holds. Already we find stirrings in the German press, implying that it is time for Germany to define her sphere of influence in the vast empire between the Yellow Sea and the Tibetan Mountains. If we assume that these spheres of influence are likely to ripen into control, then Great Britain has secured the best part of the bargain. The Yang-tse River is three thousand miles in length, two thousand of which are navigable. It has also numerous navigable affluents. Its watershed embraces the province of Yunnan, which borders on British Burmah, affording entrance at some future time by rail to western China. Tin, lead, copper, and coal are among the resources of this vast region. The climate is said to be good for white men and the soil fertile.

It is generally understood that the Czar was led to make his famous disarmament proposals by the arguments of his Minister of Finance, M. Witte. That gentleman showed to demonstration how increasing armaments meant financial ruin. Be that as it may, the same official has lately taken his place among enlightened publicists by a report which he has made on the rights of foreigners in Russia, and especially on the need of foreign capital to develop Russian resources. Proposals had been made to the Russian Government to restrict the right of foreigners to hold land in the Transcaucasus, and this led Minister Witte to discuss the whole subject of the dependence of Russia upon

foreign capital. His conclusion was that "to refuse the coöperation of foreign capitalists in the exploitation of the natural riches of Russia would be tantamount to voluntary acquiescence in industrial stagnation." In the same document were frank expressions relating to the duty of Russia to cultivate the good will and confidence of England. The English market, said the Russian Minister, with a cruel disregard of the feelings of Paris, is "a much larger one than that of France," and good relations with it depended much more upon political than upon economical reasons, since public opinion in England led capitalists to back their sympathies with their cash.

From the most recent Dreyfus testimony the case would seem to have sunk into a bitter quarrel between the War Office and the Foreign Office. The latest man, Capt. Cuignet, put up by the General Staff to defend the theory of Dreyfus's guilt, threw over one after another of the former theories and tools relied on by the War Office, and came out strong on a certain dispatch by a foreign attaché intercepted by the Foreign Office. This closed with the words, as the translators of the cipher made them out, "our emissary is forewarned"—the emissary being, of course, Dreyfus. But at the very time this dispatch was turned over to the General Staff, it was with a warning that the translators were very uncertain about the version of the last sentence; later on, they sent a new and verified rendering, with nothing whatever in it about any emissary. But the Staff, in spite of this, stuck to the first version, and convicted Dreyfus partly on the strength of it. Capt. Cuignet had the effrontery to declare that he still believed the first translation the correct one, and intimated that the Foreign Office had falsified the telegram. The Foreign Minister, M. Delcassé, could not stand this, and at once sent one of his experts before the Court of Cassation, who not only completely demolished Capt. Cuignet on the particular point, but went further and demonstrated that other documents in the secret dossier, professing to have come from the Foreign Office, were not only garbled, but actually forged. Thus does every new weapon which the desperate General Staff catches up to use against Dreyfus break in its hands. The *Figaro* revelations are having a tremendous effect in preparing public opinion for a complete reversal of the popular judgment, whatever the decision of the Court may be. It is now rumored that the *Figaro* secured the documents from the daughter of one of the Ministers, who wished, by giving them to the light, to "put an end to the dangerous mystery and to attempts to mislead." This hypothetical "veiled lady" is the best one that has yet appeared in the whole case.

"INCENDIARY LITERATURE."

We have been waiting for some time for the appearance of "incendiary literature." We have been as sure it was coming as that the sun would rise this morning. "Incendiary literature" is one of the invariable properties or accompaniments of imperialism. As soon as you get people under your rule who dislike it and wish to throw it off, "incendiary literature" turns up. It was one of the most marked phenomena of American politics during the whole of the anti-slavery agitation. Nearly all Northern literature was "incendiary" at the South, and each postmaster was allowed to pass on its character and exclude it from the mails. Russia and Germany both have their incendiary literature, whose circulation has to be forbidden and whose authors have to be punished. British India has the same thing, and so has President Krüger. For our foreign possessions, incendiary literature is as necessary as soldiers and guns. You cannot rule any men against their will, or inflict on them any treatment which they consider unjust, without treating their favorite literature as "incendiary," without, in short, superintending their reading, and seeing to it that they read nothing which presents you to them in an unfavorable light. The censor is as needful to you as the drummer. No conqueror can bear free speech, or has ever borne it. Therefore, we were not surprised that Gen. Otis had to veil his great battles with a rigid censorship, that the free talk of American citizens "on the soil," to use Wendell Phillips's language, "consecrated by the prayers of the Puritans and the blood of patriots," had to be kept from the knowledge not only of the "niggers" whom he was slaughtering, but of the American whites who were doing the slaughtering. The language of freemen and the sound of conquerors' guns go ill together.

While acknowledging freely, however, the imperialist's right, if he has any rights, to gag and smother as a necessary incident in his odious trade, we must remind our "glory-crowned" Americans once more that their position is peculiar; that nice as it would be to become a great nation and to prove Washington an old fool, all at once, they have to contend with special difficulties which other imperialists know nothing of, and which are destined to plague them, just as an humble home and poor relations plague an adventurer who has been palming himself off in foreign parts as a marquis of ancient lineage.

An American conqueror, as we have more than once had the honor to point out to him, is the only conqueror who holds his authority to conquer for only four years. At the expiration of that term, as even President Low and Dr. Lyman Abbott must acknowledge, he has to step down and out, and lay all

his doings before the base multitude, explain them and justify them, and run the risk, if he does not satisfy it by open, ungagged discussion, of being dismissed from office. This is dreadfully humiliating for a conqueror. It is enough to make his patriotic sword fly from its scabbard and hit the "traitors" over the head. But so it is. Every American conqueror has to be elected every four years by the vote of people whose opinions are, both in fact and by law and constitution, formed and clarified by free discussion. This makes all censorships on American soil, all attempts to silence anything any man wishes to say, or to prevent any voter from seeing it and reading in security and at his leisure, treason of the worst kind, and any conqueror or President who orders it or sanctions it, worthy of impeachment. This is American law and polity, and has been so for one hundred and ten years. Even McKinley and his syndicate must govern themselves accordingly. We cannot be easily argued into slavery.

There is one other point to which we must call the attention of the great minds at Washington. The American conqueror is the only conqueror who has to let the army vote on his own conduct. In Russia or Germany or British India, the proposal to allow the soldiers to pass at the polls upon the object or causes or manner of conducting the campaign would excite shouts of laughter; but to this humiliation the great McKinley has to submit next year. The army in the Philippines and in Cuba and in Porto Rico will have the right to say what it thinks of him, not only as President of the United States, but as a slaughterer of foreigners who have never injured him and owe him no allegiance. In making up their minds about him, the soldiers are entitled to see not only what Dr. Lyman Abbott and President Seth Low say about him, but what Edward Atkinson, William James, Senator Hoar, J. Laurence Laughlin, and Edwin Burritt Smith say about him. What they say is not complimentary; it is humiliating for a first-class conqueror to have to listen to it, but it is the law, revered McKinley. If you do not like this sort of thing, you should not have taken the place. You knew its conditions, and you knew how the American Government was framed. You knew it was not adapted to the conquering business, and you should, therefore, never have gone into the conquering business. You should have led a quiet, sober, and peaceable life, suited to your capacity and to the laws of your country. But you are now engaged not only in slaughtering men for not allowing you to rob them peacefully, but in preventing your own electors from seeing any accounts of your conduct or comments on it, except such as you yourself have concocted or edited; and yet you call yourself an American,

and so do the members of your syndicate!

THE TRUE POINT.

The lingering among us of what we have called the "war drunkenness," or that temporary suspension of the reasoning faculty and sense of legality which always and everywhere accompanies war, is producing an almost comic outbreak of absurdity about the Atkinson pamphlets. The shouts of "treason" and "sedition" they have called forth, show how completely even a "war of humanity" drowns knowledge of our own history and Constitution. Many of these crazy shouters are apparently not aware that treason in the United States is defined by the Constitution thus: "Treason against the United States shall consist *only* in levying war against them, or in adhering to their enemies, by giving them aid or comfort. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court." Now, why was this definition made? Because, as Story explains in his book on the Constitution, "Free governments as well as despotic governments have been ready to convict, upon the most slender proof, some of their most distinguished and virtuous statesmen, as well as persons of inferior character. They have inflamed into the criminality of treason acts of just resistance to tyranny, and tortured a manly freedom of opinion into designs subversive of the government." Story here evidently had England in his eye, but though the attacks of the English Government on liberty have been more heinous than any recorded of ours, they were none of them so comic as the utterances and acts of our thoughtful Postmaster-General or of our revered President.

To commit treason under the law, Atkinson would have to render direct aid to the Filipinos, or openly adhere to their cause by "overt acts" proved, not by the thoughtful Postmaster-General, but by two witnesses. An overt act, these people must remember, is an act that can be seen and described, not an act which can only be inferred by the revered McKinley or the thoughtful Smith from language about them which they do not like. It cannot be extracted from a "manly freedom of opinion." There is no such thing in America as "constructive treason," or any longer in England, so that all that has been said about Atkinson's "treason" is pure "blatherskite."

The illustrious men composing our cabinet have apparently forgotten also that there is no such thing as "sedition" in America, any more than "treason." If, instead of inveighing against "this man Atkinson" for questioning their wisdom, they had devoted a little of their precious time to the study of American history, they would have learn-

ed that an act creating what was called "sedition"—that is, unpleasant criticism of the McKinleys and Smiths of that day—was passed by the Federalists in 1798, and there were numerous prosecutions under it. But it excited such popular indignation that when it expired by limitation in 1801, an attempt to extend it failed, after it had already ruined the Federal party beyond redemption. Free speech may, therefore, now well say to our present great men, as Cicero said to Mark Antony: "I have despised the swords of Catiline; I am not going to be afraid of yours." To face Adams and Hamilton and run from McKinley and Smith, would inflict indelible disgrace on any cause.

Do these worthies know or do they not know that the volunteers in the Philippines are voters, and will next year pass on McKinley and his war at the polls, and that, therefore, to question their right to hear, to know, and to argue freely over his fitness for his place, is a crime for which in calmer times these worthies would be impeached? Do they know that in 1864, when the Republic was in danger of which it now knows nothing, the following resolution was passed by the Democratic National Convention at Chicago?

"Resolved, That this convention does explicitly declare, as the sense of the American people, that after four years of failure to restore the Union by the experiment of war, during which, under the pretence of a military necessity or war-power higher than the Constitution, the Constitution itself has been disregarded in every part, and public and private right alike trodden down, and the material prosperity of the country essentially impaired, justice, humanity, liberty, and the public welfare demand that immediate efforts be made for a cessation of hostilities, with a view to an ultimate convention of the States, or other peaceable means, to the end that, at the earliest practicable moment, peace may be restored on the basis of the Federal Union of the States."

Do they know, or do they not, that this resolution was voted on by the soldiers in the field, without let or hindrance, under Lincoln, and that the copperhead newspapers circulated freely in the camps? If they do not know, ought they not, in common decency, to get back to their villages and acknowledge that the job is too much for them?

Gov. Thomas of Colorado, in announcing his intention to exhaust all his resources in forcing the Administration to send home the troops of the State who are perishing by inches in McKinley's war, is doing exactly what the Republicans did in 1799. When dealing with a man or a party that is, in your opinion, overthrowing the Constitution and destroying the public liberties under pretence of being superhumanly wise and virtuous, you must use such means as public opinion warrants. We ought not tamely to submit to the conversion of the Republic into an Empire by simple slaughter and plunder. Reason and law and justice are the only weapons we should ever suffer to make American revolutions.

SAVAGERY AS A CIVILIZER.

Since the Georgia Lynching, one of the most shocking and discouraging spectacles of modern times, there has been apparently a slight recrudescence of Southern interest in the "negro problem." One of the best evidences of this that we have seen is a paper by the Rev. Robert Campbell, the pastor of the First Presbyterian Church in Asheville, N. C. We say this, not because we agree with him as to all his remedies, but because he shows real and rational concern about the evil. What we need to-day in America is not so much skill in concocting cures as concern about evils. Indifference about either public or private morals is the curse of our day and nation. We too readily flatter ourselves that as long as our young men are ready to shoulder a musket for \$13 a month, and attack somebody at the order of a politician, their neglect of all the diseases of the state is of minor consequence. We have been told by an orator who was of our way of thinking, that, having to address an audience of Ohio farmers in 1884 on the charges against Blaine, he told them in opening that he was not nearly as desirous of having them believe these charges, as having them *care* whether they were true or false. It is not given to us always to *know* what is right, but caring whether a thing is right or wrong is every man's duty.

The fact that a large body of professing Christians assembled in Georgia on a Sunday and ran excursion-trains to carry sight-seers of all ages to see an ignorant savage not only burnt at the stake, but hacked to pieces with Christian jackknives, put to death by slow torture, and his carcass divided into relics to be carried to Christian homes, was one of the most awful incidents of modern times, because it seemed to be the deliberate repudiation by a large community of both its religion and its civilization. It was worse than any occurrence of the Middle Ages. The mediævals, though having much less enlightenment and education, punished crime on the same principle as the Georgia mob, but with comparative decency, in secret dungeons. The Spaniards burnt thousands of persons because of their beliefs, but they thought that burning them publicly was rendering God's service. Our lynchings, which Dr. Campbell says have amounted to nearly 2,500 during the last fifty years, have been the result, not of any theory of crime or punishment, but of a simple desire for vengeance, such as the African or Indian savage feels when he goes on the war-path. The main horror of it all is, that these attacks have gone on increasing in numbers and atrocity for forty years, and that the last was the worst.

But the worst feature of the case is that, after thirty years of lynching and of the "negro problem," nothing has

been done or planned to solve the problem by the nation whose special work it is. We have deliberately, clergy, teachers, philosophers, editors, and all, engaged voluntarily in a war, ostensibly for the benefit of a race at the other end of the earth, of whose existence we were not cognizant until last year, and who have no claim on us in law or morals. Could there be a more ostentatious admission that we had no problem at home worthy of our care or attention? If a woman went to a ball when her child was dangerously ill, would it not be regarded as an open confession that she did not care for it? Considering, in fact, the condition of a large part of our own population, both white and black, is not this war almost a denial of God?

Looking at what Dr. Campbell offers by way of remedy or solution, we see that he relies mainly on the Presbyterian Church. "The Presbyterian Church can do more for the negro than any other," "The Presbyterian Church believes that it is peculiarly fitted to give the negro what he needs," and so on. Now we say, with all due respect, that it is the eternal iteration of this sort of talk which prevents any attempt at a real national solution of the negro problem. It must be solved, if it can be solved, by the united heartfelt effort of the whole community, such an effort as carried the war of the Revolution or the Civil War to a successful issue. Congressmen, and politicians generally, are only too ready to leave it to the Presbyterian Church, or any other church which cares to bother with it, or read papers about it, or relieve them of it. The churches have had it before them for nearly half a century, and how much progress have they made with it? How much have they helped the negro, or how far have they gone in convincing the whites that something needs to be done about him? Were not many of the Georgia mob professing Christians? And, last of all, how long is it since the Church ceased to make any effort to control or purify public opinion? Were not the clergy among the promoters of the present war? Is there any monstrosity which enlists the sympathies of large numbers which does not find many of the ministers tumbling over each other in trying to make it appear that it is just or true? Why has it already come to be considered good American doctrine that even American preachers of righteousness must not say anything to annoy "the people" when they are bent on any piece of folly or wickedness? Dr. Campbell may rest assured that if he has no better cure to offer, negro crimes will be punished fifty years hence as they are to-day.

THE BEEF VERDICT.

The two leading conclusions of the court of inquiry as to the quality of the

beef supplied to our troops during the war with Spain, are in accordance with the evidence and will be accepted as fairly just by the country. The court finds that so far as the canned roast beef was concerned, the charges which Gen. Miles made against it as an unsuitable ration are sustained, but that as regards the use of chemicals in the treatment of refrigerated beef his charges were not established. If instead of saying "not established," the court had said "not fully sustained," its verdict would have been above criticism on these two points. There was evidence of the use of chemicals, but it was not conclusive and was flatly contradicted. There is no doubt whatever that the use of the refrigerated beef was a blunder, but there was very little evidence to sustain a more serious charge than that against it.

But while the court has found justly on these points, it is difficult to read its report without feeling that its members did so reluctantly, and that, if left to follow their inclinations, they would have censured Gen. Miles and allowed everybody else concerned to go free. Gen. Miles is the one person involved whom they allow no extenuating circumstance to benefit in their report. At every opportunity they take the worst possible view of his conduct, while almost invariably taking the most lenient view possible of nearly everybody else. One feels as he reads the report that, in the minds of its members, the offence of Gen. Miles in calling public attention to the bad beef and in collecting evidence which established its badness, was far greater than that of Eagan in supplying it to the army. They censure him for not making formal complaints at an earlier date to the War Department about the quality of the beef, and say he made none till after hostilities had ceased. Did not many witnesses, officers and men, testify that they made no formal complaints because they knew it would do no good if they did? And was not the main question at issue before the court, "Was bad beef supplied to the army by the Commissary Department?" If it was, is not the question of formal complaint by any officer a minor one? Yet in this report it occupies very nearly the first place.

So far as the findings of the court apply to Eagan's conduct, they are condemnatory in general terms, but they do not seek to go behind him for the reasons of his conduct. They say that though canned roast beef was very little used as a ration previous to the war, Eagan bought 7,000,000 pounds within a very brief period, taking it wherever he could find it, even in England, and thus pass judgment upon him:

"Considering the little use that had been made of this beef in the regular army, the probability that the volunteers were entirely ignorant of it, that its use as a part of the field ration had never been sanctioned by the President or Secretary of War, the court

can but characterize the action of the Commissary-General of Subsistence as unwarranted and reckless, in that he ordered the purchase of such enormous quantities of a food that was practically untried and unknown, and the court so finds. The court also finds that there is no ground for any imputation whatever of any other actuating motive on the part of the Commissary-General than the earnest desire to procure the best possible food for the troops. The court pronounces this act of the Commissary-General of Subsistence a colossal error, for which there is no palliation."

That passage is a perfect sample of the tone of the report. The President and Secretary of War are exonerated carefully from all knowledge of the "colossal error," and Eagan himself, while charged with a "colossal error," for which "there is no palliation," is exonerated with the statement that he had no other motive than to procure the best possible food for the troops. No attention whatever is paid to the evidence of several reputable witnesses that Eagan had told them that he had to buy of certain contractors; none is paid, either, to the evidence of Eagan's subordinates that he himself so altered the refrigerated beef contracts that no one could say whether they called for preservation for seventy-two hours or twenty-four. Leniency of this kind is never shown toward Gen. Miles. Why did not the court seek to ascertain what the compulsion upon Eagan was that made him commit this colossal error which was without palliation? Why did they not go more thoroughly into the contracts and see what there was in them which might be of interest?

Then, too, why do the members of the same court who take so stern and unrelenting a view of everything Gen. Miles did, go out of their way to give a certificate of character to all the packers who supplied the beef? They cannot do this without ignoring the great bulk of the testimony that the officers and men who tried to eat the beef gave before them. These witnesses declared that even when not spoiled the beef was uneatable because of its quality, being merely fat and tendons—fag ends of good beef. The members of the court admit that a great deal of it was bought by Eagan without inspection, and say that they have no knowledge of any provision in the army regulations or any requirement for such inspection. That lets out everybody who is in any way responsible for sending the foul and uneatable stuff to the soldiers, but leaves Gen. Miles still censurable for calling attention to the fact that it was sent.

The most thoroughly McKinleyish and Algerish portion of the report is its conclusion:

"It has been developed in the course of the inquiry, as recited in this report, that in some instances certain individuals failed to perform the full measure of duty or to observe the proprieties which dignify high military command, but the court is of the opinion that the mere statement in the official report of the facts developed meets the ends of discipline, and that the interests of the service will be best subserved if further proceedings be not taken."

That is to say: Let the matter drop now. Let Alger remain in the War Department, and let Eagan enjoy his six years' vacation on full pay. If anybody presumes to say anything more about it, denounce him as no better than a traitor and advise him to leave the country.

CUSTOM-HOUSE TYRANNY.

Mr. W. F. Wakeman is at the same time the Appraiser of the Port and the Secretary of the Protective Tariff League, a private organization whose sole cause of being is to get high rates of duty on imports enacted by Congress, and then higher rates than Congress has enacted imposed upon the goods so imported. The object in both cases is to enable domestic producers of similar goods to gouge the public by charging higher prices than they could otherwise get, making the machinery of government a species of engine for private gain. The duty on embroideries of linen, cotton, or other vegetable fibres is 60 per cent. ad valorem, a rate sufficiently monstrous, one would think, to satisfy the cravings of the Protective Tariff League. But it seems not to satisfy them, since their Secretary, in his capacity of Appraiser of Merchandise for the Government, is trying in various ways to make the duties prohibitory—partly by raising the valuations of the imported goods, and partly by holding back the invoices and causing delay to the importers. Delay means loss of interest on the capital invested, and perhaps loss of the market besides. Our tariff laws and tariff administration are not merely relics of barbarism in this respect; they are a steadily advancing growth of barbarism, injustice, and tyranny, organized and systematized for the purpose of private greed. Wakeman is only one of the instruments of this scheme of rapacity, but the most brazen one. He holds a public position which requires him to act with impartiality in the administration of the tariff law, but he holds another position at the same time which prompts him to exercise his public functions in the interest of his private employers. It is a public scandal that he should hold the office of Appraiser at all, and he has made the scandal all the more glaring by his method of exercising his office.

Specific instances of oppression were published a few days ago, coming from Mr. W. Wickham Smith, the counsel of the importers who have been "held up" at the custom-house by Appraiser Wakeman, and subjected to loss by his arbitrary proceedings. It is charged that although the law requires that the ad valorem duty on imported goods shall be assessed on the market value of the goods in the country of their production, and that the duties shall be uniform on all goods of the particular class, Wakeman insisted that he had the right

to inquire into the value of the goods here, and to appraise the goods accordingly. At first the requests were complied with, but afterwards the importers decided to stand upon their rights, and refused to give this information. Thereupon Wakeman delayed action on the invoices for periods ranging from one month to a whole year. He also advanced the invoices of some houses, while others, embracing the same kind of goods, were not advanced at all. "Moreover," says Mr. Wickham Smith, "when he began advancing goods according to the American selling prices, he would advance the same goods to two or three different values, because he found two or three different selling prices in America." The advances, or additions, made by the Appraiser to the invoice values of Swiss embroideries ranged from 10 to 200 per cent. It is charged also that the Appraiser had claimed that he could not appraise the importations of a certain importer unless the latter would furnish him with American selling prices, while he was appraising other importers' goods of the same character without any such information, and that he continued to assume this attitude for a period of several months, until, the importer having flatly refused to furnish the selling prices, he returned the invoices.

These charges were referred to a commission of special agents of the Treasury for examination, who reported eventually that the invoices of embroideries should be advanced about 10 per cent. average under that clause of the law which provides that the custom-house valuation may be made upon either the invoice value or the foreign market value. It may happen at a particular time that the market value abroad is higher than the cost of production at which the invoice is made out in cases where the goods are consigned to this market for sale, or where they are manufactured by American houses having factories abroad. To cover such cases the American Consul at St. Gall had recommended that an advance of 15 per cent. be made on all invoices of staple embroideries, and the importers had themselves agreed to an advance of 5 to 8 per cent. The commission of special agents decided, in the cases brought before them, that an average of 10 per cent. would cover this discrepancy between invoice value and foreign market value. Wakeman had advanced the invoices from 10 to 200 per cent., and when the commission made an advance of 1 to 10 per cent. average, he claimed that he had won a victory, and had saved the Government a large sum of money.

A difference of 1 to 10 per cent. between the views of importers and those of the Government, as represented by the tribunal before whom this question finally came, is trivial, and it is not to be as-

sured that the Government was absolutely right. At all events, the margin of difference was within the limits of allowable error; and error on one side or the other must always be expected where duties are ad valorem. Where they are specific—that is, where they are so much per pound or per yard—there is no room for error, but where foreign value and foreign cost of production constitute the basis of the assessment, some error is almost certain to creep in, and it is quite as likely to be on the side of the Government as against it. Now these importers are American citizens. Their occupation supplies the Government to a large extent with the means of existence. If there were no imports, there would be no customs revenue. The public receipts would fall off nearly one-half. Yet the men whose trade supplies the Government more than \$200,000,000 per year are hounded and hampered and slandered systematically, as in the case under review, which is only one out of many. A republican government treats its own citizens—men who furnish it with the means of existence from day to day—as public enemies. It has done so more or less for a quarter of a century past. Wakeman has been only one of a number of agents of this kind of persecution—the most brazen, however, seeing that he is an officer of the Protective Tariff League. How long such a scandal can continue we do not know, but we feel sure that it is a part of a formidable indictment that the Republican party will have to face next year.

PROF. BRIGGS AND OTHERS.

One of our "oldest readers," devoted man! asks us to say what we think about Prof. Briggs's views of the Bible and their bearing on the threatened controversy over his admission to priest's orders in the Episcopal Church. We might refuse to answer at all, in obedience to the apostolic injunction to "avoid foolish questions." For that, in a word, is what we do think of the whole affair. It is to us an instance not so much of the *odium theologicum* as of that far commoner thing, *stultitia theologica*. The folly of it is what strikes us most, and it may be that the best answer to our correspondent would be simply to send him the couplet:

"Though men by knowledge wiser grow,
Yet here 'tis wisdom not to know."

But if he will have us, after the manner described by the Psalmist, give him his request but send leanness into his soul, we say in the first place that it is a great mistake to speak of Prof. Briggs's teachings about the Bible as if they were anything peculiar or at all personal to himself. He is simply a Biblical scholar. Being the real thing, and not a bat blinking in a cavern, he naturally associates himself with the labors of other masters of Biblical learn-

ing, living and dead. Biblical studies are now as well and definitely organized as studies in the department of Greek history or Roman law. In the one field, as in the others, there is a recognized body of authorities, with whom you agree, not because they are dignitaries of the church (some of them are) or professors in universities, but because their methods are sound and scientific and their results the best that are to be had. We never ask whether a man is "orthodox" in his views of the political constitution of Athens, or of the origin of the *patria potestas*; we only ask if he is abreast of the latest researches touching those subjects. Precisely that is the test which we should apply to the Biblical scholar, *qua* Biblical scholar. Is he in general agreement with the masters of them that know in his specialty? If he is not, he may be as orthodox as you please, but he is either belated or eccentric to the point of making his opinions of no weight.

How this new wine of Biblical learning can be contained in the old skins of a seventeenth-century creed, elaborated and rigid, we frankly confess that we do not know. But it is not for us to decide. What we do know is that honorable and godly men are in all the churches who receive and defend the new natural history of the Bible, as we may call it. That is their affair. But, as Dr. Huntington wrote in his rebuke of the opponents of Prof. Briggs, the fact that such Biblical scholars—Canon Driver and Prof. Cheyne, in some respects more radical in their views than Prof. Briggs—are already in the church, and that they are not only tolerated, but honored, marks the monstrous absurdity of trying to keep out a like-minded man. Moreover, whatever the legal tests of the Episcopal Church may be—and we believe there is good authority for saying that its priests are obliged only to declare their belief that the books of the Bible are "canonical"—it is certain that, in practice, the largest liberty has been allowed. In fact, Episcopalians have long boasted of their freedom in these questions. They have quite a literature of tracts and pamphlets intended for distribution among clergymen of other denominations, all arguing the superior "roominess" and tolerance of the Episcopal Church in these very matters. Nor is there a particle of doubt that some of its most influential clergy have been drawn to it from other communions precisely because it did not lay theological burdens on the back as other churches do, or are thought to do. We have heard ex-Presbyterian and ex-Methodist and ex-Baptist clergymen dilate upon their new-found theological liberty as Episcopalians.

The facts being so, why all this pother about Prof. Briggs? Again our answer is, theological folly. Sudden zeal for purity of doctrine is one of its most

acute forms. The psychology of it has not been written, but it is closely allied to the psychology of the crowd. A mania for being more orthodox than the Pope gets going in a denomination, and soon all the clergy take to looking severe and pining for a heretic to burn. The very men whom you have heard, in some relaxed and unguarded moment, confess and even boast of their own theological irregularity and independence, will unblushingly lead the pack when one of these cries is started. We venture to say that not one of the clergymen who have come out in protest against Prof. Briggs could stand a literal cross-examination on all the Articles. The simple truth is that, except for purposes of heresy hunting, the great theological creeds are never revived as a living whole. They are not now vital in the consciousness of those who are supposed to be bound by them. Any longer to apply their minute and wire-drawn tests to a clergyman is always an anachronism, and sometimes a cruelty.

It is not a question of laxity. It is a question of letting scholars live within the church. Let the burden of subscription be thrown on them. If they can conscientiously find a way of subscribing to the creeds, either by taking them in "the historic sense," or by aid of some "declaration," in Heaven's name let them do it. They do not need to be told of the moral perils of their situation; they know them better than any other can. If they see their way to surmount these, and to do good work for Christian scholarship and to proclaim pure religion by lip and life, who will put obstacles in their path? All this questioning of motive and exacerbation of controversies about words remind us of Lessing's cry. "Lass mich, gütiger Gott," he wrote in his controversy with a raging orthodox divine—"let me never be so orthodox if it means being so presumptuous!"

MICROMANIACS AND MEGALOMANIACS.

FLORENCE, April 20, 1899.

A lecture by Francesco Crispi on Sicily and her Revolutions drew the largest audience of the year to the Luca Giordano hall in the Palace of the Prefecture yesterday, and the cordial welcome accorded to the old statesman by the élite of the Tuscan capital must have been a balsam to his heart wrung by many sorrows, to his spirit wounded by many real or imaginary wrongs. That the last four years have aged him as twenty previous ones had failed to do, is undeniable. In 1895 you would have said that he looked young for a man of seventy, so alert was his bearing, so powerful his voice, so luminous the flashes of his dark, magnificent eyes. But now the bowed form, the tremulous, hesitating voice, the dull sadness of the eyes, bring home to you the fact that he will be eighty next October, that he is the last left of the old guard who, for better, for worse, have made Italy one.

The first part of the lecture, devoted to the ancient history of Sicily, was dull for all but

natives and lovers of the neglected Isle. Its purport was to show how "this Sicily of ours, broken off by a violent convulsion of nature from the European Continent, and distant a few paces from Africa," was adapted, by its singular conformation, its sea-girt position and past history, to a "superb autonomy." He showed how the islanders defended that autonomy for seven centuries, safeguarding their independence even when their rulers were afar, nor ever, in the haughtiest days of papal Rome, yielding to the Pope's supremacy when it threatened their royal house. Sicily, he said, and quite truly, was monarchical always, monarchical to the marrow of its bones; our very priests, friars, and monks were royalists, and not Pope's men; they fought with us for our liberty and independence, and loyal they remained until 1871—"let future statesmen note that date." Only a Bourbon could have worn out Sicilian patience. Twice the speaker dwelt bitterly on the suppression of the newspapers, the arrest of publishers and printers; and after a graphic description of 1848-9, "during which years the islanders clung to their autonomy," narrating the atrocities committed by the Bourbon authorities, police, and soldiery, he said significantly, "But shootings, and hangings, and arbitrary arrests, imprisonment, and torture could not stifle, nay, as is always the case, they fanned, the flame of revolutionary propaganda." "So, to the surprise of the world and especially of her torturers, Sicily, who would not bow to a King that reigned over Naples, who in '49 had stipulated that her King should be King of Sicily alone, now talked of nothing but 'Italian life,' of fusion with the whole of Italy."

The history of the final struggle was well and briefly told; never once did the speaker claim for himself the merit of having been one of the chief actors in the daily, hourly struggle; the once so prominent Ego seemed to have vanished from his memory, though not from that of his audience, who remembered that as conspirator, rebel, revolutionary chief, leader of the Opposition, and three times pilot in stormy waters, the narrator had valiantly, if not always wisely, borne his part. Had he closed his speech with the downfall of the temporal power and the proclamation of Rome as capital of a United Italy, he would have carried his immense audience (which the large hall could not contain, and which had in part to be accommodated on the landing and the stairs leading to it) with him thoroughly, to the last; but then he would not have been Francesco Crispi, the believer in Dante's supreme Empire, in Gioberti's Primato, and, in a very different sense, in Mazzini's theory of Italy's world-wide mission. That Crispi revealed himself in the peroration, when the old heat returned, the bent frame rose up erect, some of the old fire flashed from his eyes, and his hand crashed on the table as he said:

"Alas, the Unity of Italy is undermined by the micromaniacs who aim at shutting Italy in her shell, at isolating her from the great nations, forbidding her to share the active initiatives on whose development her glorious destinies depend—menaced also by anarchists and clericals, subversive both, both renegade to the fatherland. Unity is useless if it fail to assure our force and grandeur. At times I ask myself with a shudder of despair whether it was worth while to have moulded seven states into one, if we decline to place this nation, created so laboriously, in the lofty place which morally and materially belongs to her. My calumniators, truly a numerous stalwart phalanx,

call me megalomaniac, and their accusations reach my heart as sweetest praise. Only those who have wrought nothing for their country during the last sixty years of national life, who have suffered nothing for her, nothing sacrificed, can thus fling away the noble, holy ambitions which form the common patrimony of every Italian born. Watch, therefore; let all sincere patriots unite and toll to avert the dangers that threaten the unity of our country; let them warn the plebs against wily seductions and vile flatteries; let them set Italy on the path that leads to greatness, without which she has no *raison d'être*, without which she will cease to be."

As he sank exhausted in his chair, the audience gave him one warm, genuine round of applause. Many waited for him in the court, feeling possibly that this might be their last adieu to the man who, in deadly peril, had twice traversed Sicily to give the last touch to the organized revolution that was to secure a triumphal entry in the "city of the initiatives" for the Duce of the Thousand; to one of that Thousand who had held the island as the basis of operations for the passage to the Continent; to the republican who had sacrificed his preference because "monarchy could unite, a republic would divide, Italy"; to the statesman who, during his first ministry, had grasped the helm with firm and skilful hand, secured the peaceful election of the successor of Pio Nono, removed all difficulties from the path of Humbert the First (that number insisted on to show that Italy was not annexed to Piedmont, but that Piedmont was absorbed in United Italy). That genuine, heartfelt farewell was given also to the Crispi of the second ministry (1888-1891), who did carry out most of the reforms which were promised in the programme of the party of action in opposition, and who, but for a coalition of malignants, would have carried out all those beneficent measures which must yet be enacted before the moral unification of Italy can be completed. But in that courteous, cultured throng I doubt whether one-fifth felt sympathy with the megalomaniac ideals paraded before their eyes. That mirage faded at Abba Carimma; since then the nation has sat down to count its dead, to bemoan the 400 millions squandered in Africa, which signify unsupportable taxation, its next to impossible reduction, squalor, discontent, rebellion at home, the emigration of the sturdiest, ablest, and most needed citizens from a country that denies them work or bread.

This last year of the century—tranquil so far if we except the incessant, unanimous agitation for amnesty, the triumphant elections of Turati, De Andreis, and other political prisoners, in colleges where no competitors dare present themselves—shows a quite other Italy from that of 1895, when home politics were non-existent, when, if we except the republicans and socialists, the entire nation lived in expectancy of news from Africa, not a few anticipating the hour when King Humbert should be, by a second Beaconsfield, created "Emperor of Abyssinia." Now a change indeed has come over the spirit of their dream; the public, the press, with rare exceptions, ask impatiently, "Why are we still spending twelve millions and probably more annually, for the barren title of a desert colony?" It is clear, says a clever writer in the *Nuova Antologia*, that since, for the last ten years, England, France, and Italy have vied with each other in furnishing a Menelek with arms and ammunition, we shall become his target; really, we ought to combine and rescind the permits granted for

the transit of arms through our respective territories, and even then Russia will come to the rescue; so we had better leave Africa to the Africans and come out from among them. We took the chestnuts out of the fire for England at Kassala: why burn our fingers further? Naturally, the King and the Court are not of this opinion, and a few Jingoese clamor for *vendetta*; but the one hold which the present ministry has on the country, despite the military tribunals and their victims who fill the prisons still, and still populate the "enforced domiciles" by thousands, is the conviction that no new taxes will be imposed, that not a single unnecessary item of expenditure will be admitted to the budget; and that if a cent can be squeezed out of the treasury, it will be applied to the reduction of the tax on grain and of the abominable *octroi*, the tax on the necessities of life at the gates of towns and cities.

We wonder what may have been the thoughts of Sydney Sonnino as he listened attentively to his old chief's harangue; of Sonnino, who, *molens rolens*, furnished the funds for the African folly, and who now, in his gloomy "Financial Notes," affirms, and I fear proves, that the budget of the present financial minister is that of an optimist. He foresees a deficit of seven millions in the present, and twenty millions in 1899-1900; this without calculating the burdens which the proposed agrarian and commercial credit loans, the redemption of morasses and hitherto uncultivated lands, subventions to railroads, etc., will entail on the future. Nothing finds favor in his sight. The pensions to veterans, the succor of poor families whose able-bodied sons are carried off by conscription, the increase of the wretched salaries of schoolmasters and professors in the technical schools, the equalization of the land-tax, which will reduce its proceeds by ten millions; the protection of home-produced sugar from beetroot, costing another ten by diminishing the custom-house duties on imported sugar—are all "errors"; the proposed abolition of some taxes on food, of some reduction of the tax on minimum incomes, are more than errors, "folies." He dwells on the necessary increase in the army and naval budgets, for the transformation of the antiquated artillery, for new naval constructions, and asks where is the money to come from, and classifies loans to provinces, aids to industry, old-age pensions, etc., as "so many holes dug to hide debts."

This excess of pessimism is not shared by the majority, who affirm that the income tax, even if all the minimum incomes be exempted, would produce double if properly assessed, as at present it is not; professional men not paying in just proportion, while holders of *rente* can transmit it free to their heirs, who pay no succession tax at all. Giolitti and his followers in the House promise their support to the Government on condition of a progressive income tax. *Se no, no!* The budget was presented in November, and it is not yet known whether that or the political measures for the restriction of the rights of the press, of association and public meetings will take precedence in the chambers, which reopen next week, Easter holidays having been prolonged, as several ministers and a large number of Deputies have accompanied their Majesties in their very popular tour through the neglected loyal patriotic island of Sardinia. The bright spot on the horizon is the renewal of the commercial treaty with France,

which, expiring in 1893, had been denounced by Robilant, who knew that France would have done so with the intention of offering its renewal in exchange for the breaking off of the Triple Alliance, to which he was a devoted adherent. And in fact France did offer to Crispi a highly advantageous treaty and many commercial facilities if he would abandon all understanding with England anent Egypt and Morocco, and at least slow down the Triple Alliance. Crispi refused point blank; he never forgot or forgave the capture of Tunis, or the conduct of Republican France towards the Vatican. The rupture at once reduced the commerce between the two countries from 300 millions to less than half that sum, and the market for Sicilian grapes, wines, lemons, oil, etc., was suddenly closed. Now, after six years of patient negotiations, the French see that by cutting off Italy's nose they have spited their own face, and offer the "favored-nation tariff" for wine, etc. This is beneficial for the agriculturists, as the exports to Austria, Hungary, and Switzerland do not amount to the former exports to France. Poor Spain will be the loser, as she has served as a stopgap during the intervening years. The manufacturers grumble, but unreasonably, for they have never attained to the perfection of French production of articles of elegance and luxury, which have been obtained from England and Germany during the rupture, so the renewed treaty is a boon whose full benefits will be felt in the years to come more than immediately. On the whole, therefore, the outlook is not unhopeful, and before the megalomaniacs again get the upper hand of the micromaniacs many waters will have reached the ocean.

The question of the Bay of San Mun either is treated with indifference, or is deprecated. Competent writers demonstrate its uselessness from a commercial, political, and military point of view; the radicals ask, haven't you had enough of Abyssinia? "Not a man, nor a cent for foreign colonies, but as much as you can spare for the redemption of our bays and waste land," say the home reformers, and I see that all the papers report the advice said to have been given by the Duke of Connaught, who is very popular in Florence (full of foreigners to its heart's content this year). Said Duke is of opinion that only many years hence, and after the expenditure of many millions, can the bay be rendered of utility to foreigners, and that the Italians, if they take possession, would soon be assailed by the Chinese, and that thus discomfiture would redound to their discredit. Not a remarkable prophecy assuredly, nor can one see why the Minister for Foreign Affairs should so insist on the question. If Italy is to colonize, say the more moderate politicians, let her by all means assist her large Italian population in South America, protect their interests and rights, secure a real asylum for her surplus population, a solid market for her produce. A tame matter-of-fact state of mind, indeed; but such is the mental condition of Italy to-day, and, after all, is she not at last doing Garibaldi's behest, and trying to "cut her coat according to her cloth"?

J. W. M.

GERMANY AND THE ARMENIANS.

WEST BOURNEMOUTH, ENGLAND,
April 16, 1899.

The last item in "The Week" of the *Nation*

for April 6, on the German Emperor and his influence on Turkish affairs, leads me (as I happen to have been in a position to know the true inwardness of the Armenian question as well as the present condition of things in the Balkans, which is the subject of comment in that article) to think that a plain statement of the facts may not be unworthy putting on record in your pages.

When Lord Salisbury determined, in accordance with the public opinion of England, to put an end to the malfeasance of the Sultan, he called on Austria-Hungary and Italy, under the terms of a convention established in 1887, shortly after Crispi became Prime Minister of Italy, to join England in a demonstration before Constantinople, with the alternative of deposing the Sultan or compelling effectual and immediate reform in the government of the Asiatic provinces. Crispi inquired at Berlin, the Emperor being at the head of the Triple Alliance, if Italy should take up the rôle to which she was called, and the reply of the Emperor was, "Yes, and on my imperial word of honor, I will support you to the last man." Crispi replied with alacrity by sending the fleet to Smyrna, and mobilizing a corps d'armée for operations in Asia Minor. Austria-Hungary, reluctant but compelled, made her preparations to support England and Italy, unwilling to run the risk of war for the sake of the Armenians, and a little irritated that Salisbury should have taken the initiative in a matter which concerned Austria-Hungary much more closely than England, as being at her doors and remote from those of England. Nevertheless, the accord was made, and if action had been taken instantly, there would have been no difficulty or danger of war, for the Dardanelles were not in a condition to resist the immediate entry of the fleets, not a gun being in position to fire. At this moment the United States Government brought forward the Venezuela question, and the Jingoese in the States put on their light gloves for a fight.

The position of Lord Salisbury was one of the greatest difficulty. To suppose that the English Government feared a war with the United States from purely military reasons is not to know the country and its resources, or our own as the Spanish-American war developed them; but a war between England and America could be carried on only by devastating our coasts, destroying our commerce, and preventing our farmers from exporting their grain, at the same time strengthening the defences of Canada. The bombardment and destruction of our coast cities and suppression of our trade were, in fact, the only measures which the military position permitted, and they would have been, therefore, imperative. But there is a large and influential element of the English people resolutely opposed to the aggravation of difficulties between their country and ours, not from fear of the results, but because they consider the establishment of permanently amicable relations between the two countries necessary to the advance of civilization, and a war between them comparable to murder in the family. Lord Salisbury had these (who form an important part of his support) to consider; and though the Jingo element in England would probably have met the defiance in the manner the whole nation would meet a similar attitude on the part of any European Power, the horror of an internecine war and the revivification of the antipathies of the generations gone

by was heavier than the indignation at the childish and inconsistent provocations of the United States. The possibility, therefore, of a war with us, made probable by the fact that England might be in a moment engaged with one or more of the European Powers, compelled Lord Salisbury to settle our question before entering into any other. It was not the "baseness and heathenism" of the Emperor of Germany, but those of the President of the United States, which "dried up the fountain of European pity for the Armenians," and compelled England to desist from one of the most humanitarian efforts her foreign policy has ever proposed. I cannot, without a protest, permit this attempt to deprive our Jingoos of their greatest laurel to pass unnoticed.

Before Lord Salisbury had got the Venezuela difficulty arranged, the Dardanelles were in a state to offer effective resistance to the united fleets and make probable a loss in men and ships which would have been worse than the sufferings of the Armenians; and it must be remembered that the movement for the relief of Armenia was purely humanitarian, and would have given England no exclusive advantage or any profit to justify any loss of life or property. It was a project which did the highest honor to the hearts of Lord Salisbury and the English people, and the grief in England at its abortion was great.

But the position in which this failure placed the German Emperor was very difficult. His guarantee of immunity to the new Triple Alliance in their action at Constantinople put him practically in an attitude of hostility to Russia, which Power has the highest interest in neutralizing British influence at Constantinople. It was, in fact, forbidding Russia to support the Sultan by war, and paralyzed the Franco-Russian alliance for near Eastern matters, while allowing England to employ the entire military force of the Triple Alliance to carry out her plan. To reestablish himself in the confidence of the Czar was no easy matter for the Kaiser, and it was necessary to remain practically neutral in the questions arising in the Balkan provinces and in Greece, and allow Russia to arrange them to her satisfaction as long as the vital interests of Austria-Hungary in Turkey were not assailed, these being guaranteed by the terms of the Triple Alliance. The result was that a convention was made between Russia and Austria-Hungary, binding both Powers to abstain from assisting either of the provinces or countries in the Balkans, including Greece, in case they attempted to provoke a war of emancipation with Turkey, and to maintain, while the convention is in force, the present status. The policy of Austria-Hungary is to prevent the breaking out of any war between Turkey and the Balkan States, but to encourage their development by degrees to effective political independence, not only of Russia, but of Austria, forming in this way a buffer chain of little states between the two great empires, and preventing for the future the acquisition by either of them of any more territory in the Balkans, including Constantinople. The Bulgarians are now assured, as the Greeks were when their agitation began, that they will not be supported in any aggression or assisted in any war for which they make themselves responsible, and no doubt Russia will adhere to this convention till she is ready to move on Constantinople; the hope of Austria-Hungary being

that, before that moment arrives, the states which are now forming will understand their true policy, and be ready to defend the interests they have in common with the dual Empire against any aggression.

The defection of England from the understanding with Italy and Austria, supported as it was by Germany—i. e., from the Triple Alliance—naturally provoked great irritation in the mind of the Emperor, who, one will readily conceive, held her to account for the scarcely veiled defeat which Germany suffered, and for the more positive failure to establish a concert of action between England and the Triple Alliance which would have paralyzed the Dual Alliance and made a war in Europe impossible. England would have been the President of the Quadruple Alliance, and, Germany commanding the position by land and England by sea, there would have been no resisting this pacific combination. When Greece broke out in 1897, she had been fully and officially informed that she could count on no European Power for any intervention in any case, but that she must take the consequences of her initiative; but the fatuity of Deliyannis and the King in refusing to believe the assurances of diplomacy that they would be left to themselves to fight it out, and that the spread of the conflagration they counted on would be forcibly prevented, if necessary, forced the position and led to the disasters of the war. Germany was in neither the mood nor the situation to support the action or influence of England in the Greek question, owing to the retreat of Lord Salisbury, for which we must accept the responsibility, and not the "base and heathen" German Emperor. Our foolish stone on the English track has had the effect of throwing the entire European train off the line, with immeasurable loss to humanity.

The same conditions obtain for the Balkan principalities that held for Greece. It is impossible to permit a war to break out which will endanger the peace of Europe, for the parties are now so nearly equally divided that interference becomes most probable if fighting begins. It was possible to abstain in Greece, which is after a manner separated from the other states, but in Bulgaria it may be impossible, and a war could not be assured to benefit humanity unless England and Germany, i. e., the Triple Alliance, co-operated, as they would have done but for us in the Armenian question.

W. J. STILLMAN.

AMERICANS AT THE UNIVERSITY OF PARIS.

PARIS, April 20, 1899.

The *Nation* has already given information regarding the new Doctorate established last year by the University of Paris. Since that time, a further new provision has been made for recognizing the work done at the University by foreign students. As the number of Americans pursuing literary and scientific studies in Paris is increasing, and as the attention paid to the study of modern languages in America is equally on the increase, it may not be amiss to give anew some facts regarding the opportunities for advanced study offered by the University of Paris.

The name "University of Paris" includes six of the institutions especially charged with higher education—namely, the five "Faculties" (Protestant Theology, Law, Medicine, Science, Letters), and the *École Su-*

périeure de Pharmacie. Closely akin are a number of other institutions of learning which are attached to the Ministry of Public Instruction: the Collège de France, the Muséum d'Histoire Naturelle, the *École des Hautes Études*, the *École des Beaux-Arts*, the *École des Chartes*, the *École du Louvre*, the *École des Langues Orientales*, the *École des Sciences Politiques*, and certain others. All these, under various conditions, are open to foreigners, to whom degrees and certificates of various sorts are granted under the same conditions as to natives. Each, as a rule, has its separate special library, and, if need be, laboratory.

Without discussing the obvious necessity of a sojourn in France for the student or intending teacher of the French language, literature, or history, and without discussing the point, sometimes disputed, of the superiority of Paris over other French cities as a place for acquiring a practical command of modern French, the subject will here be limited to the nature and amount of actual academic instruction offered in some of these various faculties and schools. The auditor is likely to find himself pursuing courses in several of them at the same time, inasmuch as the same subjects, or portions of them, are treated not only in that faculty of the University to which they are assignable, but also in one or more of the special schools. For instance, a student interested in the history of the French language would find courses related to this subject in the Faculty of Letters, the Collège de France, the *École des Hautes Études*, and the *École des Chartes*. Of these, the first is the only place where he would pay a fee for the privilege of attending. Three of the four, in the present case, are in different parts of the same great building, the famous Sorbonne; the Collège de France is just across the street.

The requirements of admission vary from school to school. The *École des Beaux-Arts*, which comprises the most noted school of architecture in the world, is a case apart. Admission is by a severe competitive examination, and the number of foreign students is limited to a certain fraction of the whole. Each foreigner, moreover, must have obtained a certain rank in the competition; the foreign students are not allowed to form the lower end of the list. The Collège de France, which confines its activity to lectures, and grants no degrees, is at the other extreme, and opens its doors daily to whoso chooses to enter. The lectures are in many cases of the most advanced and technical nature, by no means always of the "popular" description. Here one may hear some of the most distinguished of French scholars treating of the subjects in which they have made themselves famous; such men as MM. Ribot, Levasseur, Maspéro, Deschanel, Gaston Paris, and others. Most of the other schools mentioned are entered by the simple formality of filling out a blank application with one's name, age, birthplace, and address. One or more courses may be taken at pleasure.

In the University proper, it is possible for the foreigner to be on any one of several different footings. To begin with, many lecture courses are open to the public without discrimination, like those in the Collège de France, with no formality of any kind. Secondly, teachers of foreign nationality may, upon application, obtain cards entitling them to free entry to all classes in modern languages and literatures, and in the science and art of teaching. Thirdly, on presenta-

tion of a satisfactory diploma (which the candidate must not forget to bring with him), and payment of thirty francs for the year's tuition and library fee, the American may matriculate and become a properly constituted student, free to follow what courses he pleases in his faculty. Finally, if candidate for a degree, he must pay in addition a series of fees for registration, examination, and diploma, and must be diligent in signing attendance records. For these details and others, one should consult the official *Livret de l'Étudiant de Paris*, published by MM. Delalain Frères, 115 Boulevard Saint-Germain, and obtainable of any Paris bookseller. In this pamphlet should be sought also the subjects of courses for each year. It appears annually, a few days before the opening of the courses. The foreign student or intending student who needs still further explanation, may call on or correspond with the Comité de Patronage des Étudiants Étrangers (address, the Sorbonne), which offers him its services daily throughout the year.

The courses are, as a rule, of one hour a week each. As each professor gives only three, or at most four, he is amply able to bestow on them that perfection of form which French taste demands. Nothing could be more finished or elegant than the "form" of a French university lecture. In other courses class-room work is demanded of the student, in the way of demonstrations, essays, or translations. In the courses leading to the title of "Agrégré," the class is conducted, under the direction of the professor, by the different students in turn. The academic year begins in November and ends on the first of July, with interruptions of a week at Christmas and a fortnight at Easter.

The degrees and titles granted may be taken by foreigners as well as by natives, and by men and women without discrimination. The "baccalauréat," the "licence," and the "agrégation" are less likely to be sought by the American graduate students than the doctor's degree. The first, which is the lowest in rank, corresponds roughly to the first two years of the American B.A. course. The degree is granted only by the University, but the studies may be taken in the "collèges" instead, if the student prefer. The second requires at least four additional terms, and is required by the State of persons intending to teach in the secondary schools. As the "Licencié" is entitled to dispensation from the second and third years of military service, many men take this means of spending two years in the University instead of in the army. The practical result is that a great number of the youth of the well-to-do classes spend two more years in study than they might otherwise have done, with a beneficial effect upon the professions which they afterwards enter. The title of "Agrégré," the next in order, confers upon its holders the right to 1,500 francs additional salary as teachers, and irremovability from their office except on complaint accepted by a council of fellow-Agrégrés. The degrees of Docteur ès Lettres and Docteur ès Sciences, required by the State as a qualification for University professorships, stand at the summit of the system. The requirements are extremely severe and the expense considerable. The candidate must write and publish two theses, one in French and one in Latin, which involves an expense

of several thousand francs, and must undergo a searching public examination in which all the members of the faculty may take part. And the theses are not the thin pamphlets on narrowly limited topics which some of us associate with the word, but exhaustive works of several hundred pages, which often have taken years to write, and which often long remain as authorities—such works as Renan's 'Averroès,' Brunot's 'Malherbe,' Fustel de Coulanges's 'La Cité Antique,' Bédier's 'Les Fabliaux,' Beljame's 'Le Public et les Hommes de Lettres en Angleterre au XVIIIème Siècle,' etc., etc.

The new Doctorate (Doctorat de l'Université de Paris) requires at least two years of graduate study, part of which may be done away from Paris, elsewhere in France, or even in a different country. The accompanying fees have not yet been determined. The candidate must write and defend a thesis (French or Latin), and undergo an oral examination on questions chosen by himself and accepted by the Faculty. While it is expressly stated that this degree is not equivalent to the State Doctorate and does not confer the same privileges, it is to be assumed that the standard will be equally high, and that the absence of the Latin thesis and the accompanying expense will constitute the sole difference. Several foreign students in Paris have already set their eyes upon this degree, but so far no one has offered himself for the ordeal. The chance is open for an enterprising Yankee to become the first Doctor of the University of Paris.

The latest provision is one intended for foreigners planning to teach French in their own countries. These the University intends furnishing with a certificate of competence, after a satisfactory test. The certificate is to be called "Certificat d'Études Françaises." Candidates must present a diploma representing the bachelor's degree, but women may be accepted on presentation of a letter of introduction from the head of a college or school. The candidate must matriculate in the Faculté des Lettres (fee, 30 francs), and must attend three lectures a week for one year—one in French literature or philology, one in French history or geography, and the third according to his preferences. The examination will be written and oral. The former part will be based on the lectures, the latter will comprise the translation into French of a passage in the candidate's native language, and the summary in French of a passage from a French book read aloud to the candidate. At first sight the conditions do not seem formidable, but, to judge from the excellence of the English written and spoken by the students who take that study in the University, it may be expected that the pronunciation and syntax which will pass muster with the professors of modern languages in the Sorbonne will be good indeed. The University will be prepared to accept candidates for this certificate this autumn.

It may be added that foreign students planning to spend some time in Paris may obtain a good many useful hints, addresses, and other information from a little German pamphlet, 'Ein Studienaufenthalt in Paris,' by Ph. Rossmann, published by Elwert, Marburg.

For thirty years a steady stream of American students has been flowing to the German universities. These students have returned with knowledge and ideas which have exerted a continuous and generally beneficial

effect on higher education in America. But there are other fields in which scholarship may find a harvest. If the example of patient industry, of unwearying thoroughness and attention to detail offered in Germany has been of lasting value, American scholarship may also find an inspiration in the keen analysis, the clearness, the brilliancy, and the originality of French studies.

W. S.

Correspondence.

IF NOT, WHY NOT?

TO THE EDITOR OF THE NATION:

SIR: In the American Revolution we were unquestionably rebels in fighting Great Britain; and so were the Filipinos in fighting Spain in 1897 and 1898. France was at war with Great Britain at the time of our Revolution and aided us in our rebellion; we were at war with Spain in 1898 and aided the Filipinos in their rebellion. Now the Major calls the Filipinos "rebels" against our authority.

Suppose that in 1781, when Great Britain had practically lost her thirteen colonies, she and France had made peace and she had quitclaimed us to France for say £4,000,000. And suppose France had immediately turned against us what troops she then had on this side of the Atlantic, and had sent a large army over, giving us the choice between immediate unconditional submission and destruction; and suppose we, "misguided" like these wretched "niggers" of Luzon, had perversely preferred to rule ourselves, should we in such an event have been "rebels" against French authority? If not, why not?

I read a McKinley Syndicate organ (the *Boston Journal*) pretty regularly, but find nothing in it on this question—or, indeed, on any other political matter—beyond constant assurances of the good Major's infallibility, and the sinfulness of questioning the same. I dare not sign my name, as the horrid fate which is impending over Edward Atkinson is a great terror here nowadays, and doubtless an exodus like the French emigration of 1787-1790 will soon begin in this vicinity.

A. MUGWUMP.

Boston, May 6, 1899.

SOUTHERN LYNCHINGS.

TO THE EDITOR OF THE NATION:

SIR: I have long been a subscriber to your paper and an attentive reader of its contents, as, though sometimes mistaken, and often unjust, it has the quality of perfect honesty and the "courage of its convictions." It is a fine teacher of morals, and I should like to see it a power in the land, acting as a counterbalance against those frothy and time-serving journals which minister to the taste of the unthinking multitude and, while perhaps despised, help to form public opinion.

Though I and many of my friends quietly accept the animadversions of the *Nation*, no matter how unjust, for the sake of its sterling character and many excellencies, there is a large portion of our community which must infallibly become alienated by the implacable dislike and injustice of its editorial remarks concerning them. I allude to the wholesale denunciation of the South in which the *Nation* never fails.

In regard to the horrible crime of lynching, the accounts of which make the reader ashamed of his countrymen, there is always on the part of the *Nation* an assumption that this crime belongs wholly to the South. This is by no means correct. There are more lynchings at the South than elsewhere, because there are more ignorant negroes there, and because the crimes which especially infuriate the mob are those more usual among uneducated negroes than among white people or cultivated black ones. When a negro is educated he is apt to seek city life; the more populous the city, the better suited to his tastes and favorite occupations, and as a rule the larger cities of the Northern States and their large watering-places receive the greater number of decently cultured or gently nurtured negroes. The vast numbers left in the midst of the rural population of the South are the most degraded of the race, and although many of these are peaceful and industrious, there are also many infinitely worse than beasts.

In the Northern and Western States, as the *Nation* may learn if it will take the trouble to inquire, negroes are lynched from time to time, and white men also. This does not make the crime less heinous, but it is one shared by the whole country. Booker T. Washington, in his admirable remarks recently in Baltimore, says education is alone the remedy—education of both black and white. This is true, but we need something in the meantime to put a stop to these horrors, lest, as the *Nation* suggests, what with unjust, unequal, and ferocious war abroad, and bloody crimes and vengeance at home, our young men become a bloodthirsty race, delighting in cruelty and despising the arts of peace; sons of the dragon's teeth now being sown. If the *Nation*, instead of confining itself to denunciations of the evil, would calmly study the subject, it might be able to suggest a remedy. The whole country should act. What is to be done? Cease these unjust accusations! Help us to do better.

A VIRGINIAN.

WASHINGTON, May 7, 1899.

[We will begin by counselling the South to remove from its statute-books every law which implies that black men are something less than human beings; to mete out justice to them in every relation, from the ballot-box to the gallows or even to the fire-stake—the same measure for white offences against blacks, for black offences against whites.

This may seem to our correspondent a counsel of perfection, and we will therefore forestall a request for something more concrete. There is at Atlanta a university for the blacks named after the city, founded by Northern philanthropy, and now wholly maintained by it. In line with the methods adopted by General Armstrong at Hampton and afterwards by Booker Washington at Tuskegee, it so commended itself that the Legislature voted it an annual subvention. In a perfectly natural manner the privileges of the institution were sought by whites and not denied; and because they were not denied, and the university would not pledge itself to be exclusive, the subvention was withdrawn from it, and it has ever since been in heavy straits. Now we affirm a logical

connection between the late awful lynching in Georgia and this action of Georgia's Legislature; and the unconditional restoration of State aid to Atlanta University would, in our judgment, be both an act of expiation and a signal step towards that even-handed justice without which there will never be an end to the inherited cruelty of slavery.—ED. NATION.]

AT EASE IN METHODISM.

TO THE EDITOR OF THE NATION:

SIR: In your issue of May 4, you remark, in the course of a brief comment on the proper attitude of Episcopalians towards Prof. Briggs:

"We feel bound to say, also, that these nice points of doctrine are most unsuitable for discussion within the Episcopal fold. Its strength does not lie that way. The Presbyterians and Methodists can beat it hollow at that."

I suppose one who knew nothing of Methodist doctrine might be led by this last sentence to suppose that the attitude of Presbyterians and of Methodists toward the so-called "higher criticism" was essentially one, and that a Methodist clergyman who ventured to hold substantially the same views as are advocated by Prof. Briggs would be in imminent danger of being tried for heresy. I say nothing of the Presbyterian body, for it has been sufficiently in evidence for the past few years; but I venture to think that a somewhat wider acquaintance with the doctrines of the Methodist Church and the views held by many of its most representative clergymen would lead you to somewhat greater caution in the sweep of your implications.

The articles of religion as officially promulgated for the Methodist Church are exceedingly few and simple, and they afford very small basis for heresy-hunters to proceed upon. The actual facts are that in Methodist theological schools, in Methodist pulpits, in Methodist colleges, and in the ranks of the laity is a large and rapidly growing body of men for whom the "higher criticism" has no terrors. Some of these men are widely known, and their names are to be learned without special difficulty. I have no right to drag a list of names into this communication, but I know whereof I speak.

I am ready to admit that there are many conservative men in the Methodist Church, some of whom cannot be expected to reverse the conclusions of years of conviction; but these men are not so representative as to be ready to begin heresy trials for such of their brethren as have adopted the newer views. What is the date of the last trial for heresy that you recall among the thousands upon thousands of Methodist clergymen?

So far from accepting the implication of your remark, I venture to think that there is no Evangelical church that on the whole offers more freedom in matters of doctrinal belief than the Methodist. If there is one, which is it?—Yours very truly,

A METHODIST.

May 6, 1899.

THE ROMAN FOLK-SPEECH.

TO THE EDITOR OF THE NATION:

SIR: Your notes on Dr. Olcott's disserta-

tion in the *Nation* of April 13, 1899, convey a mistaken impression as to the status of scientific investigation into the popular vernacular of the Romans. The proposition with which your review opens, "that scholarly study of the every-day Latin of the ancient Romans . . . is only just beginning," becomes true only by the addition of the words *in America*, where, indeed, so far as published results are concerned, your reviewer is fairly correct in suggesting that it is confined to Columbia University and to the latter half of the present decade.

In Europe, however, ever since the appearance of Diez's scientific Grammar of the Romanic Languages, first in 1836-42, the scientific study of the Roman folk-speech has been rife, and so rich has been the yield for the seven years 1891-1897, to take a mere sample, that Dr. P. Geyer uses eighty-four pages of Bursian's *Jahresbericht*, vol. 98, pp. 33-117, to make his shorthand report of that interim. Even as early as 'Poggii Florentini historia convivalis,' 1538, p. 32f.; Morhof 'De Patavinitate Livii,' 1685; Pa-gendarm (*alias* Tiefensee), 'De Lingua Romana rustica,' 1735, we mark the rise of scholarly interest in the fascinating subject—an interest, however, which, owing to the strong fetters of Ciceronianism, produced no sound or substantial fruit. But, for the nineteenth century, what shall we say of the august array of names—Raynouard, 'Grammaire comparée,' etc., 1821; Dieffenbach, 'Ueber die jetzigen Roman. Spr.,' etc., 1831; Winckelmann, 'Ueber die Umgangssprache der Römer' (in Jahn's *Neues Jahrbuch*, 1833, pp. 493-509); Diez, 'Grammatik der Romanischen Sprachen,' 1836; Fuchs, 'Die Roman. Spr. in ihrem Verhält. zum Lat.,' 1849; Pott, in Hüfer's *Zeitschr. für die Wissenschaft der Spr.*, 1851, lll., pp. 113-165; Kuhn's *Zeitschrift für Vergl. Spr.*, 1852, I. 309-350, and 385-412; *Zeitschrift für Alterthumsw.*, 1853, II. 481-499, and 1854, 12. 219-231, and 233-238; Kuhn's *Zeitschrift*, 1863, 12. 161-206, and 1864, 13. 24ff., 81ff., 321ff.; Corssen, 'Ueber Ausspr., Vokal. und Bet.,' 1858; Schuchardt, 'Vokal. des Vulgärlatein,' 1866-69; and, after this epoch-making and monumental work, to mention only the more conspicuous contributors to the subject, Rönisch, Wölflin, Rebling, Sittl, Gröber, Meyer-Lübke, and Lindsay of Oxford?

It should be noted, too, that the idea expressed by your reviewer, "We are glad to observe that Dr. Olcott uses the term *sermo vulgaris* in its proper sense, therein differing from most of his fellow-investigators," etc., would have been appropriate enough when Schuchardt wrote in 1866, Vokal., I. 45; but in 1899 is a rather belated sentiment. Surely, no serious scholar in the last quarter of a century has failed to discriminate between the *sermo cotidianus* of the Roman masses and "mere slang, or low, indecent language, or that which is 'vulgar' in the modern society sense of the word."

Very truly yours,

THOMAS FITZ-HUGH.

UNIVERSITY OF TEXAS,
AUSTIN, April 28, 1899.

P. S.—In reply to your query, "Which of our universities will be first to establish a real University Press of its own, to print and publish the productions of its faculties and students?" attention should be called to the University of Chicago Press, which I have known to do such work for American universities at large.

[We welcome Professor Fitz-Hugh's

remarks if he and others were led to think that we meant to suggest that Columbia University or American scholarship had been first in this field of investigation. Such an idea was far from our meaning. Indeed, with the exception of the writers before the present century (who, we think, gave evidence of "scholarly interest" rather than of scientific investigation), almost the whole of Prof. Fitz-Hugh's useful list of contributors is included in Dr. Olcott's bibliography or in his notes. Another reading of Geyer's introductory remarks in his *Jahresbericht* ought perhaps to show Professor Fitz-Hugh that our remarks on the real nature of the term *sermo vulgaris* were not wholly unnecessary. Geyer's review, by the way, is not devoted solely to the vulgar, but covers the late Latin as well; in fact, for the whole seven years, he quotes but a small number of works devoted entirely to the former subject. As for university presses, if Chicago has really established one of its own, we rejoice to hear it. A volume of its "Studies in Classical Philology," lying before us, does indeed bear on its title-page the words, "The University of Chicago Press"; but the next page shows that the book was printed by a well-known firm in Massachusetts.—ED. NATION.]

Notes.

The Postmaster-General should take notice of Benjamin H. Sanborn & Co.'s intention to publish immediately in Boston a new edition of Burke's Speech on Conciliation with America, so often quoted by the authors of the "incendiary literature" of the present hour. This looks like an act of defiance. The fact that the speech is edited by a woman will surely not be allowed to prevent its exclusion from the mails if it cannot be arrested in the press.

The ninth volume of Harvard Studies in Classical Philology (Ginn & Co.) will embrace memoirs and posthumous papers of Prof. George M. Lane and Prof. F. D. Allen, a paper on "Hidden Verses in Livy," by Prof. Morris H. Morgan, and other interesting matter, with the usual indexes.

Macmillan Co. publish directly 'Wordsworth and the Coleridges, with Other Memories Literary and Political,' by Ellis Yarnall; 'Side Lights on American History,' by Henry W. Elson; and 'Tristram Lacy, or the Individualist,' a new novel by W. H. Mallock.

We were guilty of two lapses last week, in misnaming the American house associated with J. M. Dent of London in publishing the delectable Temple Edition of Scott's Novels, to wit, Messrs. Scribner; and in omitting to mention that the abridged Life of Sir Richard Burton bears the same American imprint.

Shortly after the death of Alfred M. Williams of Providence, R. I., his friends were favored with a memorial volume. It contained an admirable biographical sketch by Mr. Howland, some of Mr. Williams's last writings from the West Indies, some verse, a portrait, and a few illustrations. This has

now been given to the reading public (through Preston & Rounds Co.) with the general title, 'Under the Trade Winds.' The charms of West Indian scenery, and the sad strangeness of the social relations there prevailing, are vividly portrayed, and those not previously acquainted with Mr. Williams's powers of description have now an opportunity of realizing them. The portrait shows the man of later years worn down by mental toil and the loss of a beloved wife. After having, in the civil war, participated unscathed in more than one forlorn hope, he met his death through a fall from mule-back on a mountain trail, in search of folk-lore.

'How Count L. N. Tolstoy Lives and Works,' by P. A. Sergeyenko, translated from the Russian by Isabel F. Hapgood (T. Y. Crowell & Co.), is one of the most characteristic and interesting works ever written on Tolstoy. The man is set before us in a most realistic presentment; his thoughts, his habits, even his diet, are minutely described. Miss Hapgood deserves well of the great non-Russian-reading public for putting this portrait within their reach. We only wish that she had given a few footnotes. Many of the personal proper names are familiar enough to Russian students, but what do they mean to outsiders? Surely a note ought to have been given (p. 44) to the name of Count Araktcheeff (not Aratchkeeff), a man cordially detested in Russia as one of the *maîtres*, to use a convenient French term, of the Emperor Paul. When we know his story, we see the point of the anecdote told about him.

The Hatzfeld 'Dictionnaire Général de la Langue Française' (Paris: Ch. Delagrave) completes five-sixths of its total bulk in *fascicule* xxv., ending with *ruilée* on page 1984. In this instalment of an authoritative work, severely condensed, there is not much to remark beyond a few words borrowed from the English, like *rob* (*robre*), a rubber at whist, and *rôt-de-bif*, roast-beef; or characteristic French compounds like *remue-ménage*, *risque-tout*; or proverbial personages like *Roger-Bontemps*.

The *Green Bag* for April (Boston Book Co.) has a paper, by Bushrod C. Washington, on the trial of John Brown, written in no forgiving temper, and adding nothing of moment to what was already known of the raid or the trial. Those who wish to extrillustate Sanborn's Life of Brown, however, will thank the writer for a view of the courthouse, with portraits of the judge (Richard Parker), the prosecuting attorney (Andrew Hunter), the Virginia counsel (Judge Green and Col. Botts) originally assigned for Brown's defence, and finally the Sheriff who executed sentence (James Campbell).

The redwood forests of the Pacific Coast are described by Mr. Henry Gannett, in the May number of the *National Geographic Magazine* (Washington), as occupying a narrow strip hugging the coast from the southern boundary of Oregon through northern California, with an area of 2,000 square miles, in which the standing timber is estimated at seventy-five thousand million feet. As measured by the amount of merchantable timber per acre, this is probably the densest forest on earth. In the Southern States and in Minnesota, tracts containing from 5,000 to 10,000 feet per acre are regarded as heavily forested; but around Eureka, Cal., the lumber companies have realized "an average of between 75,000 and 100,000 feet per acre. . . . There is on record a single acre, near Gar-

berville, which yielded in the mill 1,431,530 feet in lumber. There was sufficient lumber on this acre to have covered it with a solid block of frame dwellings ten stories high." The reverse side of the picture is the fact that there is no young growth nor sign of reproduction from seed. This indicates that, with the clearing away of the present forests, though the supply at the present rate of cutting will last three hundred years, the redwood "as a source of lumber" will cease to exist. The progressive drying of the climate is suggested as the cause of the failure of the reproductive power, and this testimony of the forest is used by Mr. J. B. Leiberger, in a following article, to answer affirmatively the important question, "Is climatic aridity impending on the Pacific slope?"

The *Geographical Journal* for April opens with an account, by Prof. N. Collie, of two explorations in 1897 and 1898 of an almost unknown part of the Rocky Mountains lying about eighty miles north of the Canadian Pacific Railroad. A special object was the search for Mounts Hooker and Brown, discovered some sixty years ago and believed to be the highest peaks in the range. The Century Atlas, for instance, gives Mount Hooker a height of 15,700 feet. When found, however, they proved to be only 9,000 feet, "not so high as thousands of others in the main chain." An interesting climb was that of "probably the only peak in North America the snows of which, when melted, find their way into the Pacific, the Arctic, and the Atlantic Oceans; for its glaciers feed the Columbia, the Athabasca, and the Saskatchewan Rivers." Dr. H. Schlichter endeavors to show, by an examination of the extensive ruins in Rhodesia, South Africa, that these territories were, "1,000 years before the commencement of the Christian era, a gold-producing country of a large extent, and colonized by the early Semitic races round the Red Sea, viz., by Jews, Phœnicians, and Western Arabians." The proofs are mainly the character of the buildings, their astronomical ornamentation, and a supposed Semitic inscription which has been found. In the discussion which follows, Mr. F. C. Selous maintains that the natives built stone walls as late as the beginning of this century, and extracted gold from quartz up to 1870. Baron Nordenskjöld contributes a paper, with facsimiles, on "the influence of the 'Travels of Marco Polo' on Jacopo Gastaldi's maps of Asia," and Lord Curzon a note on the source of the Oxus.

The Year-book of the Royal Geographical Society contains, among other things, an interesting list of more than 400 of the 4,009 fellows composing the Society, "who may be regarded as special authorities on particular subjects," together with supplementary lists of subjects and countries, with their "referers." The illustrious roll of medallists closes with the name of Lieut. E. A. Peary, U. S. N., who received the Patron's Medal in 1898.

Petermann's *Mitteilungen*, number 3, begins with the first part of an account, by A. Gaedertz, of a recent journey made by him in the Chinese province of Shantung, in the interests of a German syndicate formed for mining and railway-building in the new German sphere of influence. It is accompanied by an admirable map. New light is thrown by Dr. R. Gradmann on the obscure problem of the curious course of the frontier of the Roman Empire in southwestern Germany. He shows, with much historical and

archæological detail and with the aid of a map, that for nearly the whole distance of a hundred and thirty miles from the southwesternmost point to the Danube the boundary runs exactly parallel to the southern limit of the Frankish pine forests. Some interesting statistics illustrating the growth of the Siberian province of Tomsk in the last thirty years are given. Manufacturing establishments, for instance, have increased from 223 to 7,570, employing 12,914 workmen, while there are 68 yearly markets against 11 in 1857. The colleges and schools number 711, with 26,409 scholars, out of a population of about two millions, mostly Slavs.

Mr. John Thomson's second Bulletin of the Free Library of Philadelphia is a Descriptive Catalogue of the works composing John Russell Smith's "Library of Old Authors," begun in London in 1856. Thus, in addition to analytic and bibliographical notes, it gives, under John Aubrey, an alphabetic list of his *Miscellanies*; under W. Carew Hazlitt a similar list of the pieces in "Remains of the Early Popular Poetry of England." An index completes the assistance afforded by the catalogue. The next Bulletin, it is announced, will consist of an index of first lines and of subjects of Herrick's Poems.

The public reading and expounding of Dante instituted in Florence in 1373, with Boccaccio (then near his end) as the first to perform this function, lasted with numerous vicissitudes till 1859, when Giambattista Giuliani had the final word. After forty years of silence, the Florentine executive committee of the Italian Dante Society restored the good old custom on April 27 in the great hall of Or San Michele. Not one scholar, but a group of seven, explained, not the first seventeen (as Boccaccio), but the first seven cantos of the "Inferno." The Mayor of the city presided, and the occasion was "solemn" in the Latin sense. The session was made the more enjoyable by Salvini's reading of the first canto.

A melancholy interest attaches to the late Prof. Edward D. Cope's paper on "Vertebrate Remains from Port Kennedy Bone Deposit" in the current number of the *Journal of the Academy of Natural Sciences of Philadelphia*, as it is the last of the brilliant series of contributions to science by that celebrated palæontologist, and was prepared during his final illness. It treats of the extraordinary accumulation of organic forms of Pleistocene age found in the so-called "bone-hole" exposed in quarrying the Cambrian limestone at Port Kennedy, Upper Merion Township, Montgomery Co., Pa. In a paper entitled "The Bone Cave at Port Kennedy and its Partial Excavation in 1894, 1895, and 1896," Mr. Henry C. Mercer gives additional information concerning this fossil deposit, and describes phenomena indicating that one or two great inundations occurred in the Schuylkill Valley in Pleistocene times. The deposit is of great variety and unknown extent, but thus far no traces of human remains have been discovered. In the same number Mr. Clarence B. Moore continues the account of his explorations among the aboriginal mounds of the South. He describes two classes of mounds—those used for places of abode or refuge, and the low mounds used for burial purposes. Certain rises in the ground known as "mounds" by the inhabitants proved to be banks thrown up by the action of the Savannah River, notably so in the cases of Little Patten and Big Patten, which are given as mounds even on the Government

chart. Mr. Moore concludes that the swamps of the Savannah were not largely inhabited in prehistoric times, and, on the whole, South Carolina appears to have little of archæological interest to offer. Half-tones and a colored plate illustrate Mr. Moore's memoir.

—Mr. Julius F. Sachse has printed in a very handsome form his recent paper on Franklin's account with the Lodge of Masons, 1731-1737. The discovery of Franklin's daily ledger among the Philosophical Society's collections enables Mr. Sachse to tell a very interesting story, and to prove that Philadelphia was the mother city of Freemasonry in America. Until Massachusetts is again heard from, the claim will hold, and, based as it is upon unquestionable evidence, the question may be regarded as settled. A number of photographic reproductions are given in this essay, among them being the pencil sketch of Franklin made by Benjamin West. Mr. Sachse believes that the "Mystery of Freemasonry," published in the *Gazette* of December 3, 1730, was the work of Franklin, who was at that time not a Mason. In 1731 he was admitted, and made some amends. Mention is made of Louis Timothee, who had aided Franklin in 1732 to print the *Philadelphia Zeitung*, the first German newspaper in America. Timothee afterwards removed to Charleston, to take charge of a printing-office equipped with a printer's outfit by Franklin. Was this Timothee the father of Peter Timothy, who did the printing for the patriots in the Revolution? Mr. Sachse has given us a very valuable fragment of history and personal information, made all the more so by his conscientious reproduction of his original material.

—Mr. Edward Sherman Wallace has used his five years' experience as United States Consul for Palestine to write a brief history of ancient Jerusalem, and an account of the modern city and its conditions, political, religious, and social, under the title, "Jerusalem the Holy" (Fleming H. Revell Co.). The chapters which deal with the present conditions of Jerusalem and the character of its population, drawn, as they are, from Mr. Wallace's experience and personal observation, are decidedly interesting. That portion of the book which deals with the ancient history of the city is of little value. The author's aim has been "to combine completeness with brevity, and thus to place in the hands of those who are interested in this city of ancient memories and holy sites, a book of such facts as are ascertainable." His aim has not been attained, apparently because his critical knowledge was not adequate; but with reference to the conditions of life in Jerusalem today, the visitor to the city will find the book an interesting and, in general, trustworthy guide. Neither the Jews, Christians, nor Moslems who now inhabit the Holy City are attractive representatives of their respective races or religions. The first mentioned, in particular, are pauperized by the contributions from without, on which many of them live in whole or in part. Christian missions, as conducted in Jerusalem, also come in for severe criticism; not that the missionaries individually are at fault, but that so many missionaries and so much money are expended in this one place, in vain and demoralizing rivalry. The holiness of Jerusalem the Holy is a thing of yesterday and to-morrow, not of to-day. Mr. Wallace looks forward to the reoccupation of

Palestine by the Jews, his expectation being based mainly on a very literal interpretation of the prophecies of the Old Testament. It is as charming as meeting a real live dodo to read that it is generally conceded "that, in the millennial age, living waters shall go out from Jerusalem, half of them toward the former sea and half of them toward the hinder sea." As a matter of fact the Jews are coming in rapidly, and to-day, in the Holy City itself, outnumber all the other elements of population put together. The Turkish Government places obstacles in the way of this immigration, but a little money overcomes many obstacles. The book is carelessly written, with much repetition and unnecessary verbiage. "Fifteen illustrations from photographs" pleasantly illumine the text.

—The article of greatest general interest in the April Quarterly Statement of the Palestine Exploration Fund is on woman in the East, by P. J. Baldensperger. The author was born in Jerusalem and brought up in the country, and as a child was often taken by his mother into their neighbors' women's quarters. His knowledge, therefore, of their secluded life is exceptional. He describes at this time women in the towns, known as Madanîé in distinction from the Fellahin or country people, their appearance at home, conversation, amusements, marriage customs, religious observances, superstitions, and care of the sick. His conclusion is that "woman in the harem is, relatively speaking, perhaps happier than the Occidental lady can imagine her to be." Dr. Conrad Schick contributes a catalogue of the "preparations made by the Turkish authorities for the visit of the German Emperor and Empress to the Holy Land in the autumn of 1898." This veneering extended to the building of a pier at Haifa, making roads passable, piercing a broad entrance to Jerusalem close to the Jaffa Gate, clearing the streets of booths and whitewashing houses, to say nothing of decorations and architectural restorations, more or less fantastic and barbarous. "The many beggars were gathered, before the arrival of their Majesties, and sent by escorts to villages some distance from Jerusalem; and it seems that even the dogs, which at night make so much noise, were diminished"—"caught and housed in cages," as another account runs. Constantinople was similarly sophisticated *pro tem.*, as regards the eddieship and the dogs. We may be sure that the German Emperor was not deceived, but one recalls the transformations effected in the Russian "military colonies" in advance of the first Alexander's inspection, to secure a smart and prosperous appearance; horses, cattle, and poultry being concentrated from roundabout, good cheer provided for "specimen" peasants' tables, and hollow wheat-ricks stuffed out with straw and rubbish to simulate abundance. In Catharine's visit to the Crimea, too, her route was thronged with an imported population.

—To M. René Doumic has been accorded the attention of translation by an American hand, as a return for his edifying lecture-tour of last year. A volume of studies on 'Contemporary French Novelists' has been done into English by Mary D. Frost, and published by T. Y. Crowell & Co. It contains critical essays on the leaders of the several schools in modern French fiction, from Feuilleton to Rostand, Hervieu, and Bazin, with the very noticeable omission of Anatole France. This

selection seems to have been made with some idea of forcing into notice M. Doumic's well-known literary predilections (not to say prejudices), for it places side by side the virulent "slating" of Zola and the glorification of Daudet. As with M. Brunetière, novelists of anti-clerical, realistic, or non-mystical tendencies find here but very short shrift; unless, indeed, as in Maupassant's case, they gallantly leave all formulation of opinions and conclusions to critics more or less authorized. The article on Daudet contains a stereotyped defence of the French Academy, the spirit of which is sufficiently indicated in the assumption that the novelist "would have been greatly at a loss himself to give a motive or pretext for his attitude" in 'L'Immortel.' We must, therefore, correct our impression that precision of introspective power was one of the positive qualities of the author of 'Le Petit-Chose.' The translator's work succeeds in preserving the prevailingly gray tones of the original; but sticklers for accuracy, even where slang is at stake, may question the exact equivalent of "cad" and *mufle* (p. 360).

—The memoirs of Jan Kilinski are very much valued by the Poles on account of the simplicity and vigor of his style and the interesting period of history about which he wrote. He was a shoemaker of Warsaw. After the diet at Grodno in 1793, when Poland was dismembered and the King Stanislas had become a mere tool in the hands of a mercenary aristocracy, a Committee of Patriotic Citizens was formed at Warsaw, of which Kilinski was one; but the ruin of Poland was accomplished, and Kilinski was carried prisoner to St. Petersburg. He was released when Paul came to the Russian throne, in one of that monarch's periodical fits of generosity, as capricious as his severities. There has recently been found in a private library a continuation of these memoirs of which little was known. It has been carefully edited by a learned historian who prefers to remain incognito under the simple initial A. This new volume, published at Cracow, is of surpassing interest. The National Committee made short work of the traitors—bishops, hetmans, and magnates—who had signed away the independence of their country. Their trials before the National Court and speedy execution by hanging are narrated by an eye-witness. One of the most appalling stories is that of Prince Michael, the brother of the King, who was the Primate of the country. He actually entered into treasonable correspondence with the general in command of the Prussian troops then besieging the city, and pointed out a vulnerable part in the defences. This letter he intrusted to a servant whose manner, as in the case of André, made him suspected while crossing the lines. On his being arrested, the plan which the primate wished to communicate was found on him. The King sent his brother a powerful poison in a lozenge, which he told him he must take. The miserable ecclesiastic obeyed, and in half an hour was no more. The only alternative was being publicly hanged as a traitor. The story, with many others, is naively and graphically told. Kilinski, on being released from captivity, returned to Warsaw and carried on his trade till his death in 1819. The editor of this book gives a picture of his house.

—Mr. Louis Dyer's second Machiavelli Lecture at the Royal Institution in London

dealt with his author's use of history, and opened with Mr. Lowell's definition of a university, 'a place where nothing useful is taught.' The ancient Romans were to Machiavelli, as to Dante in the second book of his 'De Monarchia,' a providential people predestined to universal sway. Machiavelli parted company with Dante when Caesar's usurpation came. For this the author of 'The Prince' had words of strenuous condemnation. Guicciardini, while occupying in general Machiavelli's point of view in regard to the perfections of Rome, warmly controverted his vigorous plea for the political preponderance in a well-organized state of a free and law-abiding people. Both Machiavelli and Guicciardini made of the Roman Republic something very like the Florentine polity of their own day. The former's view was colored by his leanings toward the people, while the latter had the same instinctive predilection for the nobles, his own order. Be what you are not, Machiavelli substantially said; and do what you cannot, and you shall be as the Romans were—free. Do what you cannot and be what you are, and you shall come under the sway of the Prince. Modern history Machiavelli treated with a free hand, but was always on his good behavior with the ancients. His highly embroidered version of the abortive insurrection at Prato (1470), and his propagation of the foul slander against Catherine Sforza in connection with events after her first husband's murder, give us an example of our author's deviation into Yellow Journalism—what Guicciardini censures as his predilection for extraordinary events. Machiavelli's reverence for antiquity was out of all proportion to his knowledge, but, judged by his best work, he was certainly more interested in understanding history than in using it for any purposes of his own.

SOME LATE NOVELS.

Colette. By Jeanne Schultz. T. Y. Crowell & Co.

The Man Who Worked for Collier. By Mary Tracy Earle. Boston: Copeland & Day.

Aylwin. By Theodore Watts-Dunton. Dodd, Mead & Co.

An Angel in a Web. By Julian Ralph. Harper & Bros.

Poor Human Nature. By Elizabeth Godfrey. Henry Holt & Co.

Niobe. By Jonas Lie. Translated from the Norwegian by H. L. Brækstad. Geo. H. Richmond & Son.

Old Chester Tales. By Margaret Deland. Harper & Bros.

Latitude 19°. By Mrs. Schuyler Crowninshield. D. Appleton & Co.

The Battle of the Strong. By Gilbert Parker. Boston: Houghton, Mifflin & Co.

A Hungarian Nabob. By Dr. Maurus Jokai. Translated by R. Nisbet Bain. Doubleday & McClure Co.

The Wire Cutters. By M. E. M. Davis. Houghton, Mifflin & Co.

God's Prisoner. By John Oxenham. Henry Holt & Co.

A Writer of Books. By George Paston. Appletons.

"I always did like that sermon," said the enthusiastic parishioner. The public always has liked Colette, the mischievous maiden who threw the image of her patron saint out of the window and brought down a mortal hus-

band. If one may use the word "reappearance" of that which has never disappeared, she has reappeared. Her new red-and-gold raiment, her illustrations, her fresh translation, more literal than the original one, are the badges of her enrolment in the "Falcon Series," where she will doubtless win new admirers and secure rereading from old ones.

It might be thought that there was nothing left to say in Creole or Southern speech of Creole life on the bayous, or life in the South among the negroes and the "mountain people." Yet of Miss Earle's fifteen stories there is not one which has not a decidedly original cast, scarcely one which does not contain some wholly unexpected turn or dénouement. Several are merely vehicles for a racy bit of dialect or a life-like portrait. Others are sketches of incident, episode, or character, made with marked local color, and often with an artist's touch. They are straightforwardly told, in a clear-cut style, inviting to such readers as have risen unrefreshed from superfluities and preachments. In a sincere desire to learn, we inquire, Are the "you-all" and "you-uns" of the South applied to a single person, as we constantly find Miss Earle using them?

'Aylwin' stands the supreme test of the novel, the cathedral and the mountain. Its full dimensions do not overtake the vision till one is leaving it behind and can survey it as it recedes—its lights and shades, its plan, its scope, its unity, its relationships, and its loftiness. The beginning of 'Aylwin' is unusual, but gives promise of rarity hardly more than of mere queeriness. The Cymric child enters, bringing the apprehensiveness of a novel of precocity; Welsh songs hint that a bilingual style may block the way; a drunken organist is unprepossessing; and when we reach the Moonlight Cross of the Gnostics, desire fails, for expectation is threatened with a novel of mysticism, learned but dull. But, from this point, the main elements of the story having ranged themselves in the laboratory, there is built up, or rather there grows up, as nobly beautiful a novel as the past year has produced. The mysticism, pervading but not intruding, plays a definitely appointed part in an ingeniously devised plot; the fantastic stands forth as the natural against a background of Welsh mountains peopled with Welsh gypsies; the air of Snowdon, rarefied though it is with visions and superstitions, breathes over no fabled land, but one made very real and living with its crags and waterfalls and its wandering Romany children. Briefly, themes which might have become over-subtle on the one hand and sordid on the other, have been treated simply, sincerely, and with elevation. Gypsy horse-trading, fortune-telling and begging, and the squalor of London slums do not avail to vulgarize the book; nor the supernatural in creed, the preternatural in faith and constancy, to make it absurd. Rather have we found it, although somewhat stiff reading in spots, a book to adopt, especially in its almost affectionate portrayal of the ways of Romany folk, who "alone understand Nature's supreme charm and enjoy her largesse."

Welsh Winifred, the lost love whom Aylwin pursues throughout the story, is a fascinating creation, but Sinfi, the gypsy who helps to find her, is to her as Rebecca to Rowena, or Brünnhilde to Sieglinde, a superbly glowing figure, fierce and tender, rugged and soft, warrior and maiden. Studio life in London as we have it here at "the culmination of

the neo-Romantic movement in Art," is but another phase of the spiritual and transcendental. Portraits or not portraits, sane or demented, they are interesting persons who paint in those studios and unfold their views on art and zoölogy, on this world and the next. "The Children of the Roof" and "The Children of the Air" have share and share alike in the book; but, for them all, the moral is the same—that to him who loves, materialism is impossible.

The very material spiritualism of Mr. Ralph's story offers a curious contrast to Mr. Watts-Dunton's imaginative isms. Colonel Lamont's dead-and-gone relatives—"Etherials"—they are called—meet about his death-bed to discuss and influence his last will and testament with a zeal which, if convincing, would be discouraging to the old woman who sighed for "sweet nothing for ever." They all follow the lines they had taken on earth as eagerly for their living descendants as they had once done for themselves; any virtues they may possess are obviously not the result of clarification in heaven. They succeed in delivering the Angel out of her web of dangers and into her inheritance, leading her through the low-ways and side-ways of three kidnappings, a fire-escape rescue, and a chafing-dish supper in a slangy but moral Bohemia. The expected marriage with the rescuing hero had not occurred on the last page, so that it may fairly be called an unlabeled story; but its premature cutting-off brings its own healing.

Although the title-page of 'Poor Human Nature' bears the added legend, "A Musical Novel," the reader need not be frightened by the prospect of technicalities. There is not much music in the story, though a deal about opera-singing and singers. It belongs to the school of fiction of 'The First Violin' and other Anglo-German alliances between song and story, where music is, as the psychologists say, a marginal not a focal object, and in that school it takes creditable rank. Preliminary glimpses of rustic life in a German mill village, then the fussiness of operatic management in a little German city, small talk, small cabals, small and large behavior of the artists, sketches of the Hausfrau and the prima donna at home and on the stage, are all neatly and readably presented, with flecks of humor relieving the sentiment. For sentiment is sure to predominate when a blonde, broad-shouldered Teuton is singing tenor rôles with a dark, plain, but fascinating English soprano. Music is treated from the manager's side of the curtain and the subject rather than from the audience's and the musician's. It is not so much a story of music itself as a gleaning of little facts pertaining to musical representations. Some conversations on acting are sensible, but when we read that the great tenor—the Bayreuth *Tristan*—being too ill to sing the chief part in "Lohengrin," "just put in an appearance as *Gottfried*," we feel free not to be oppressed by weight of specialized learning. The romance concerns the two singers and the tenor's uncongenial German wife, and is contrived to end romantically without crime.

Edmund Gosse writes an interesting introduction to the English translation of Lie's 'Niobe,' speaking of the author as "locally the most popular of the Northern novelists," and of this as one of his most characteristic stories. "Without reaching the intellectual passion of Ibsen or the romantic tenderness of Björnson," says Mr. Gosse, "Lie comes

really closer than either of these more inspired poets to the genuine life of the Norwegians of to-day," and he adds, "He is with Mrs. Gaskell or M. Ferdinand Fabre; he is not entirely without relation, in some of his books, to that old-fashioned favorite of the public, Fredrika Bremer." All this is certainly whetting to the appetite, and is justified by the story when allowance is made for the eternal spasmodic, the crudity, we did not quite say savagery, of the Scandinavian novel, not diminished by the alien tongue, however well translated. That this is done into good English idiom is true; but did any English reader ever fail to find in a novel of Norway or Sweden a hint of the jumping-jack—a combination of semi-barbarism with encyclopædic learning? The plan of 'Niobe' is no connected plot, but a family chronicle, which jerks along in shreds and threads, the warp and woof never getting together into a fabric—only knotted into a long dark, ever-darkening strand. It is the melancholy story of the conservative parents of a family—excellently drawn, both—driven distracted by the spirit of modernity that takes possession of one child after another. They must be artists, singers, actors; they must emancipate, illuminate, reform; they must use psychic force and submit to magnetic influences. They must leave their country home for wider fields, and (according to temperament and sex) betroth themselves manifold, influence poets, inspire spiritualists, reorganize society, or work financial havoc. In short, they "think in squares," as one of the characters puts it; "but, as it happens, the world is round." "In my time," says the distraught doctor father, "they took to drink. Nowadays they are the victims of their ever-changing fixed ideas." The aspirations and temptations of the young people do not always appeal to the understanding, but the despair of the parents is burned deep into the reader's sense. When the coil begins, the domestic troubles seem capable of adjustment, and the reader can freely admire the insight into the struggle between the spirit of yesterday and the spirit of to-morrow. But matters go from natural bad to unnatural worse; pessimism carries the day; luridest tragedy writes the epilogue. There is no more suggestion of Gaskell, but of Maupassant, of Melpomene, of Kilkenny and its exhaustive conflict. The sun that rose in Bremer goes under clouds of Ibsen, and sets invisibly to sound of dynamic thunder.

Mrs. Deland is at her best in village stories; in the tales of Old Chester, at the best of her best. Many old friends are met here, chiefly and most notably Dr. Lavendar, who figures, like Wotan in the Nibelung stories, as the real hero of the successive comedies and tragedies that go on in his parish. He is a lovable and admirable old rector, wise as a serpent and (when necessary) as stinging; irretrievably old-fogy in the administration of parish matters, unblushingly bold in freeing love matches that have caught on snags. Whether declining to institute girls' clubs, boys' debating societies, an altar and a cross, or whether cutting Gordian knots with the audacity of Alexander but with the sword of Gideon, Dr. Lavendar is a fine old figure, sturdy, human, real. There are many eccentrics in his flock, yet not more than any village fauna may show. A girl's misguided altruism lays small tax on credulity, while we must credit it to the author's skill that no improbability attaches to the sketch of a circus acrobat who turns summersaults

in the village tavern, and afterwards preaches in the bar-room; nor to that other sketch, of Miss Mary Ferris, who, being jilted, retires to a sofa, "crushed," for thirty years, to the unspeakable satisfaction of her sister Clara, luxuriating in this proof of gentility; nor to the fact that on a day Miss Mary should "acquire her legs and some clothing" and live to doubt whether, after all, her heart had been broken, "whether her fine delicacy had existed," to sister Clara's chagrin—Clara, who ever wallowed in delicacy, and who promptly fell ill of balked vicarious refinement. These are but a few out of many characters that are called into life in Mrs. Deland's pages, each individuality the more marked for the pettiness of incident round which it revolves.

It is interesting to note the difference between these Pennsylvania stories and kindred ones of New England. With the village features common to both, the Middle State conscience seems a trifle less feverish of the two; life is more juicy, humor less coy; there is more about match-making, less about the turning of old black silk gowns. To the Bible, too, is added the Prayer-Book, and the village children have lessons on the collects, with apples or jumbles afterwards. But whether Pennsylvania or the Episcopal Church or Mrs. Deland is responsible for these variations, we cannot say. It is certain that the author's comments on her village and on humanity at large are both penetrating and humorous to a high degree. In one only of the stories—that of the misunderstood little boy who, being bullied by his uncle, gets a cough and turns his face to the wall—is there a reminiscence of the morbid in situation which we have deplored in her novels. Mr. Pyle's illustrations may be classed among the happy few that really illustrate and adorn.

'Latitude 19°' begins with pirates off the coast of Hayti. It is the year 1820, during the reign of Christophe, self-styled "King Henry of the North." Like all good and proper pirate stories, this ends with rescue and a safe home-coming; but though other tales of castaways have been wild, wonderful, and anthropophagous, this exceeds them all. Possibly no other than the thoroughgoing pen, ink, and brush of woman could have furnished so ample an outfit of adventure, so strong a local color of hiky-poky-wiggery-wum. Othello would have forgotten to mention his own hairbreadth 'scapes had he read these. The Wandering Jew, reading, would have looked upon himself as old Caspar sitting in the sun.

There is no necessity at this day to direct attention to the interest, dignity, and power of Mr. Gilbert Parker's romances. In 'The Battle of the Strong' there is a captivating story and a fascinating topography. Of the Island of Jersey a hundred years ago there is a description that describes; of history and the particular freebooting French invasion of the day among the many of the centuries, there is a lively suggestion—Mr. Parker disclaiming more; and of fine writing in the best sense of the phrase there is an ever-presence. The characters we find of more varying excellence. The delineation of several strong natures battling for their various ends is done with force, but not always with persuasion. Would the high-souled Guida have consented for five years to make herself an accessory, another high-souled woman a victim, to the crime of bigamy? Despising the father, would she

have been so keen about the dukedom for the child? She clamors for it with far less restraint than she has shown in waiting for the establishment of his legitimacy and her own good name. In fact, about Guida, pure and aspiring as she is, there is a muddle of motive that discredits all that is said of her strength. Philip commits bigamy to win a dukedom, child-stealing to reattract his deserted wife; then, dying of a sword-wound, writes, in ink, alone and quite unassisted, a long and eloquently worded letter of confession and advice to his wife and son, with a quality of preaching that Mr. Day might have used in dying counsel to Sandford and Merton. On the other hand, the autobiographic letter of the reformed Détricand, romantically improbable, perhaps, is a fine bit of manly self-revelation, and carries its own justification. A little phrase—"when taking notice is supreme we call it genius"—is a good example of Mr. Parker's insight at its best. The ivory miniature of the little French chevalier, the deep-hued sketches of the fishermen and shipbuilders and undertakers of Jersey, are delightful achievements in portraiture. It is with a jar rather than a sense of contrast that one perceives, even in Jersey, the awful finality of title. From lowly kitchen interiors and breezy coasts and sea-swept rocks one finds one's self with a painful start in a world where kind hearts are not as much as coronets, nor simple faith a patch on Norman blood.

'A Hungarian Nabob,' its able translator tells us, was written nearly fifty years ago. "On its first appearance, Hungarian critics of every school at once hailed it as a masterpiece. It has maintained its popularity ever since," and "has reached the unassailable position of a national classic." We can readily believe Mr. Bain that the work of translating it into English, never done till now, has been an enormous labor, from the "difficulty of contending with a strange and baffling non-Aryan language," and from the difference in national tastes which has prompted a certain amount of condensation. The Continental European has nothing to do but read novels of pitiless length, if we may judge of demand by supply. 'A Hungarian Nabob' contains more than 350 pages, and has been shorn of a good third of its bulk to make it attractive to English readers. While agreeing with the translator in thinking this an improvement, we are less in accord with his estimate of the book. "Noble" is an adjective it would not have occurred to us to apply. Vivacious it is, with an almost Gallic swiftness, so that the pages slip fleetly by under the eye; but this is all that makes endurable the still remaining overplus of incident, often as coarse as it is irrelevant. If the descriptions are light, airy, elegant, the things described are heavy, crude, preposterous. The vices are gross, the virtues almost as much so; the horse-play, buffoonery, and riot, even the conversion of sinners, read on an alien plane of civilization, taste, and morals. To find them convincing, one must be either an enthusiastic translator or a non-Aryan of 1822.

In the early eighties the public lands of Texas, hitherto free to roaming cattle, were offered for sale, and wire fences began to be built to enclose vast tracts of land; sometimes lawfully, sometimes not, the water supply was cut off by the prohibiting wires, and the cattle perished by thousands. To cut the fences by midnight raids became a popular movement, and the excitement

reached the pitch of a wire-fence war. All Western Texas was involved, and finally, after wrongs on both sides, State legislation restored harmony. This period makes a picturesque setting for a story of adventure and love. To these the author of 'The Wire Cutters' has added some remarkable studies in heredity from one's mother's first husband, and a tangled chain of death-bed misapprehensions which lead to results frequently observed in romance, but in real life avoidable by the free and candid use of postal cards. The book is interesting reading and able writing.

Mr. Oxenham has treated the murderer topic originally, in letting his man successfully evade discovery. For once the criminal covers every trace of his deed, is enabled to disappear from the haunts of his acquaintance and begin a new life. The new life proves to be a story of shipwreck and venture, with hot and cold water and the usual piratical and devil-fish attachments. It is not often that a novel is so commodious. The unexposed irregularities sit uneasily on the reader of the good old murder tale; the crimes fester into inconveniences; the modern improvement does not improve, we venture to think. To be sure, there is conventional balm in hacking the devil-fish to bits and in finding the hidden treasure; but the thought will intrude of the loved ones in the home office and the undiscovered victim buried in a rented garden, while the slayer is living a life of perfect chivalry in Pacific islands. The sea voyages are well done, with, naturally, much present-day "slithering" and "squatting," and there is no denying to the story a vast and ingenious mechanism.

'A Writer of Books' opens attractively and proceeds brilliantly. Reluctantly does the reader at last admit that it must be numbered with cross-patch novels written by women for the emancipation of their sex and the disparagement of man. The interest is indeed maintained to the end, and the cleverness persists. The touch, too, is lighter and more reasonable than in many books of the malcontent class. Nevertheless, it is written with such definite partisanship, in a quarrel where at least one of the combatants is Nature, that it leaves a disappointing impression as a story and an unpleasant one as a sermon. All women are wronged; all men are rakes (excepting one specially provided for the heroine to fall in love with); all marriages are unhappy save now and then one between fools; all legislation is of men, therefore against women and not to be obeyed by them; woman is "kept rigorously in her 'proper sphere' by society's chief Bumble, the average man"—such are the lessons of the book, stamping it as what has been called "the novel of, by, and for the club-woman." Be it quickly added that it soars superior to its species in its style, which is excellent, its wit and humor, which are delicious, its temper, which is sharp but not shrieking, its length, which is comfortable and comforting. We must perforce think that, quite aside from the woman question, our author has not sounded human nature to its depths, from her saying, "Intelligent, imaginative children prefer true stories to fairy tales," but that she is re-creating nature as her theories would have it, in the loveless light of what the Tennessee moonshiner called "improving like hell."

BRADFORD'S LESSON OF POPULAR GOVERNMENT.—II.

The Lesson of Popular Government. By Gamaliel Bradford. The Macmillan Co. 2 vols. Pp. 520, 590.

The pride of organization which resents intrusion and feels antagonism at the suggestion of outside control or guidance in what it regards as its own province, is not altogether a vice on the part of the Legislature. The innate gregariousness of man which makes us flock together, makes us also more or less hostile to everything that opposes or tends to disintegrate the flock. We personify the organization itself, and identify ourselves with its welfare; and though this impulse has its origin in the humble tendencies which we share with the sheep and cattle, it is, after all, the condition on which human society is built, and without which social progress would have been impossible. Every private club resents any meddling with its special functions, as really as a Parliament or a Congress shows jealousy of dictation or too paternal advice from King or President. In criticising the abuse of this spirit of independence, we should be careful to acknowledge the normal value of it. Congress is a constitutional corporate body, which must do its own work according to the laws of its own organization, even though the result fall far short of perfect work. It may be helped or checked by criticism and discussion in the press, in reform clubs, or in partisan political clubs, but it could not be tolerated that Tammany or the Civil-Service Club should claim a share in its organized deliberations. Its responsible work must be done by its own members, in due order under parliamentary law, or it ceases to be a self-controlled organization. The speeches of its own members may be wise or foolish, solid or windy, but they are part of the process by which the body to which they belong reaches its conclusions—a part, so to speak, of its functional activity. Speeches from outsiders are foreign to its proper processes, are interruptions to its organic life and action, and inevitably rouse in the members a subtle repellent force, as if they implied an assumption that the body itself is not capable of doing its own work. Criticise this as we may, it is a natural phenomenon of all similar societies of men, and is not peculiar to legislative assemblies.

Testing the matter in its application to Congress and the President, we can see how it is likely to work (or fail to work) in two examples which Mr. Bradford gives: one, the effort of Washington to get the advice and consent of the Senate as a sort of privy council in negotiations prior to the conclusion of a treaty with Indians (II, 405); the other, a supposed case to illustrate the author's scheme (II, 352):

"Washington entered the chamber and took the Vice-President's chair. He informed the Senate that he had called for their advice and consent to some propositions respecting the treaty with the Southern Indians, and had brought the Secretary of War with him to explain the business. Gen. Knox produced some papers which were read. Washington's presence embarrassed the Senate. Finally, a motion was made to refer the papers to a committee."

Maclay of Pennsylvania, who made the motion, tells the story:

"As I sat down, the President of the United States started up in a violent fret. 'This defeats every purpose of my coming here,'

were the first words that he said. He then went on, that he had brought his Secretary with him to give every necessary information; that the Secretary knew all about the business, and yet he was delayed and could not go on with the matter."

Finally, the President said that he would have no objection to postponing further consideration until the ensuing Monday, but he did not understand the matter of commitments. There was an awkward pause. "We waited for him to withdraw," says the diarist. "He did so with a discontented air."

The example shows very well, when analyzed from the legislator's point of view, the impracticability of such viva-voce intercourse between the Executive and the House. The President was not a Senator, and what he might properly say was to give them information on which he asked their advice. He must give it to the organized body from without, and, when received, the Senate must act upon it according to parliamentary methods of procedure within. If Mr. Maclay was not satisfied with the information given, did not feel ready to act, thought investigation might tend to conclusions different from the President's or General Knox's, the respectful as well as the parliamentary way was to refer, as he moved. The President desired haste, and was naturally disturbed by what seemed to him unnecessary delay. Could the Senate consent that he should be judge of the propriety of such delay? Could he properly debate with them the right and sincerity of motions which were in order under their rules? As the story is told, he was visibly disturbed, and his manner implied condemnation of their procedure. Suppose Mr. Maclay had felt it due to himself to repel this implication, would a tart, unpleasant debate have been seemly or profitable? If the President had no right to debate (as was the fact), he was out of order in objecting to the motion; and, if out of order, could the Vice-President call him to order? The embarrassed silence which is described as lasting till he withdrew, is the proof that the Senate saw opening before it practical difficulties, which revealed as by a flash the mistake of thinking that the intercourse between it and the Administration could be carried on in that way. It was an *experimentum crucis*, and was enough.

The case supposed by Mr. Bradford is after the cabinet shall have been admitted to the floor of Congress. He assumes that the bill passed gives the cabinet the privileges, "*verbatim et literatim*," with neither more nor less," contained in the Senate report (II, 336). They are, the "right to participate in debate," and "to give information asked by resolution or in reply to questions" (II, 325). In stating his supposed case, Mr. Bradford recognizes the fact that the cabinet officer would not be a member of the House (II, 351).

The case, then, is this: The Secretary of the Treasury, at the meeting of Congress, appears and takes a seat near the Speaker's desk in the House of Representatives. "He is simply an agent of the Administration, having no vote, but presenting the wants of the Treasury and the effect of the existing tariff upon the financial interests of the country" (*ibid.*). He rises, and, being recognized by the Speaker, "does not embark upon a radical reform of the tariff, but proposes a few changes of detail—among others, for example, free wool—and makes these a pretext for the discussion of the whole subject. If a private member had made the same proposal,

it would be referred with a hundred others to the appropriate committee. . . . But he is a very different individual. In the course of his speech he would insist, respectfully but earnestly, upon the importance of immediate public discussion, and would close with submitting a resolution to that effect" (*id.* 352).

After commenting on the probability that this would result in the Secretary's becoming the leader of the House in financial matters, pitted against a leader of the Opposition elected in caucus, Mr. Bradford asks, "Is it not evident how the 'advice and suggestions' of the Pendleton report might develop into something vastly more important, and that such are the 'obvious advantages' which the author of that report pointed to, but did not see fit to discuss?" (*id.* 353).

It is indeed quite evident that when matters had progressed as far as the case supposed, the plan of the bill would already have "developed into something vastly more important," and something which could have become possible only when the legislative body had wholly put away that "inherent jealousy of the executive" which the author finds innate in it. It is supposed to follow from the provision of the proposed bill that the President's Secretaries should have "the right to participate in debate on matters relating to the business of their respective departments," without becoming members of either house.

Let us suppose Mr. Reed in the chair, and Mr. Carlisle as Secretary rising at the opening of the session to "propose a few changes of detail" in the "existing tariff." Mr. Speaker, with his bland but disconcerting smile, would politely suggest that no subject relating to the business of the Treasury was then before the House for debate, and that Mr. Secretary was out of order. If Mr. Carlisle then produced a bill to amend the tariff so as to put wool on the free list, and should say that he proposed to introduce it and to open debate upon it on its first reading, the Speaker, with increasing geniality of ironical deference, would call the Secretary's attention to the fact that bills or resolutions could be introduced only by members of the House, that his bill must be adopted and introduced by some actual member, be referred in usual course, and, when it was duly reported by the committee and before the House for debate, he would most gladly recognize the Secretary to discuss it. The difficulty in imagining this scene is chiefly in supposing that a veteran parliamentarian like Mr. Carlisle would take the rôle assigned him, or that he and the Speaker would not reëact the parts of the Roman augurs and laugh in each other's faces at the thought of the bill for free wool being reported back from Mr. McKinley's committee.

The truth is, that Mr. Bradford's supposed case implies that the initial velocity of the Pendleton bill had already made cabinet ministers members of Congress, and given them an effective initiative in legislation, if not an exclusive one. He and we agree that this cannot be done without amending the Constitution, which says that "no person holding any office under the United States shall be a member of either house during his continuance in office" (art. I, sec. 6). Voting is not the only distinctive mark of membership of a political body. To take part in its proper

business, to shape it by introducing measures and by amending others, to seek to guide or control it by the motions which affect its progress and continue or interrupt the sessions, are quite as necessary marks of membership as voting. The more one thinks about it, the more he may well doubt whether participation in debate can be extended to any but members, for there are times when the right to hold the floor may, of itself, defeat a measure. At least, the right to speak without efficient part in the business is apt to prove a vain show, and, after the first curiosity had worn off, would be only adding another speech to the superabundance of talk, when the measure under discussion could rarely be kept in the form selected by its draughtsman, or remain such that an administration would choose to be responsible for it. In short, we find ourselves coming back to the conclusion that any efficient parliamentary leadership is impossible without full membership of the body.

Nor is this unreasonable. Transaction of business is out of the question if an organized body is subject to intrusion and cannot keep full control of its own procedure. Its presiding officer refuses to recognize strangers by a rule which is a necessary condition of its existence, from Congress to a college debating society. Suppose Mr. Bryan had risen in the gallery of the St. Louis convention and moved that bimetallicism, sixteen to one, be added to Mr. Hanna's *chef d'œuvre* on the currency. The cries of "Hustle him out!" would have been only a rough popular assertion of a rule, quite right in itself, that only the members of the convention can shape its course or be responsible for its action. Mr. Bryan would have made a ringing speech, if permitted; the sensational incident would have attracted no end of public comment; popular interest would have been at the boiling-point; the educational effect might be said to be enormous; but, just the same, it would not work for common use.

Mr. Bradford does not escape the common tendency in debate to exaggerate the things which make for his contention. The asserted inefficiency of writing as the means of communication between the President and Congress is one of these. Experience seems to prove the contrary. Information on the state of the country is in its nature an assemblage of very numerous and multifarious facts, tending to the statistical, and demanding exactness of detail and often elaborate tabulation. Blue-books are as common and as necessary under the English system as under our own. A minister, on the floor of Parliament, is as dependent on them for the material of legislation and for the support of proposed measures, as any chairman of committee on the floor of Congress. The trouble is not in conveying information in writing, nor argument in favor of a measure; it is only in the give-and-take of rapid debate and the prompt exposure of specious objections that oral readiness is demanded. There is great room for improvement in the character of some of our executive communications to the Legislature. We, no doubt, tend too much to orating on all sorts of subjects. A study of terse statement of business and a clear and telling marshalling of dominant facts is, we may admit, a neglected branch of public education. If inaugural addresses were abolished and annual messages reduced to a bare statement of really important facts and recommendations in tersest business style, or broken into several, with a single

important topic for each, we should hear less of the hiding of ideas in voluminous disquisitions that people have not time to read. If the short summary rests upon extensive proofs, these can make blue-books for reference and study, without being embodied in a message for popular reading.

Our author very frequently speaks of the absorption by the Legislature of executive powers, but we miss a clear definition of what those powers are, and a discriminating statement of the encroachments. The law-making body certainly has, under the Constitution, the right to make laws—all the laws. These include not only the great and permanent rules which establish freedom and maintain essential rights, but the complete system of the business organization and conduct of affairs, the levying of taxes and the appropriation of the revenue, the fixing of the number of subordinate officials, their duties, and their salaries. The administration of these laws in the daily progress of business, the personal supervision of subordinates, the receipt and disbursement of moneys, the arrest of wrongdoers, the preservation of the peace, the movements of army and navy, the official intercourse with foreign nations—these are the executive duties, and which of them does the Legislature attempt to perform in fact? Is the debate not rather upon the extent to which the executive may go beyond administration proper—the faithful execution of the laws that are made—and have power in the law-making? What else is all the talk of debating the bills before Congress, of leading either house or the parties in either house, or of having the initiative in introducing public bills? Our system gives already to the executive a very important share in law-making, as it gives to the Senate apart from Congress (i. e., the official union of Representatives and Senate) two executive duties which it performs in executive session. Aside from these, what additional powers has either department obtained by encroachment? It is, of course, a perfectly legitimate aim to secure a recasting of the distribution of powers by amendment of our Constitution, if such shall seem wise, but if the odium of encroachment is used as an argument, the conquests gained should be accurately described.

The examples of executive commissions for administering certain classes of laws, the number of which in Massachusetts Mr. Bradford criticises with apparent reason, are the creation of subordinate offices for the performance of executive work, and may be unwise; but unless the Legislature appoints the persons who are made commissioners, the making of the law cannot be properly described as an assumption of executive powers. A multiple executive is very open to criticism as an institution, but if it be permitted by the Constitution of the State, the question is one of legislative wisdom and discretion, and not of power. In the interest of intelligent reform we owe it to ourselves to preserve the distinction clearly.

In dealing with the veto power, Mr. Bradford says that "it involves an absurdity. What sort of executive government," he asks, "is that which has no power to say what shall be, but only what shall not be done?" (i, 49). As the subject is that of law-making, is it not clear that the executive government which has power to say what laws shall be made as well as what shall not be made, is a pure and simple autocracy? The author cannot mean that.

Our executive has now the power to say what laws are, in his opinion, necessary or desirable, and constantly exercises it. If he chose, he could accompany his recommendation with the draft of any bill. If he does not do so, it is because there is never any difficulty in getting a party friend to introduce the bill to carry out the recommendation. The trouble is not in saying what bills shall be introduced. Mr. Bradford's idea of initiative in the executive is that he should also say what bills shall *not* be introduced. Instead of showing the absurdity of the veto power, this is a proposal for a very great extension of it.

But in treating the subject generally we must not forget that there is never a time in any civilized state when a body of laws is not existing and in force. All practical legislation may be divided into acts to provide means for carrying on the established system and acts to change that system. The power to say with the barons, *Nolumus leges Angliæ mutari*, is no vain or futile prerogative. Under our Constitution it counts not only for a complete suspension of the act, but for a final adverse vote against it equal to sixteen per cent. of the members of each house of Congress. This preservative force against new laws made by "new lords," and in favor of the laws as they stand, is the signal guarantee of deliberation and of progress in accord with matured opinion.

If Mr. Bradford's suggestion of a reform in our government by his definite plan seems to us open to sound criticism, no one can fail to agree heartily with him in regard to the need of pointing out clearly and measuring accurately the abuses of our methods and practices. Greatest of these is the perversion of party spirit and discipline into a machine run by unscrupulous men with a single eye to the power and profit of controlling the Government and its offices. The boss and his organized body of "workers" constitute a business organization as definite and complete as any railway or manufacturing corporation. The dividends in place, in money, or in both, are the stimulus to activity in the stockholders and to their devotion to the manager whose craft secures the profit, and whose cunning dupes the innocent voters of a great party into thinking that they are working for the success of important principles when in fact they are laboring only to enrich their masters. The greatest present question for the American people is not whether the executive should have a greater share in the legislation of the republic, but whether a close organization, unknown to Constitution or laws, shall continue a plainly despotic rule over us, while we are amused with going through the forms of electing presidents and congresses that are the puppets worked by the boss and his tools behind the scenes. Through the whole of Mr. Bradford's book there is a clear recognition and a strong presentation of the vital need of our awaking to the burning question whether we are to preserve anything worthy the name of freedom. His chapters are a great accumulation of evidences of the perils to which popular institutions are exposed, and he does not neglect to make the history bear both directly and indirectly upon our own condition.

Fur and Feather Tales. By Hamblen Sears. Harper & Brothers. 1899.

Mr. Sears, in his first paper ("Henry's

Birds"), describes a method for luring wild-fowl within gun-shot so novel that it cannot fail to attract the attention even of sportsmen long since divorced from all illusions. Application would be a better word than method, the point being the mechanical manipulation of live decoys to lure black ducks. To those familiar with the wariness of that species, particularly when it is closely shot day and night for months in succession, the operation will excite astonishment. Where live ducks are employed as decoys, a conventional method of tethering them is generally resorted to. No training is necessary to make them effective as lures. They are commonly slightly wounded birds that have been retrieved, or the offspring of captive wild parents. "Henry's Birds," it would appear, were of the domestic barnyard sort, coached by that ideal gunner by a system too long to describe, but which develops in ducks phenomenal intelligence. "Henry's Birds" not only were mentally gifted, but possessed remarkably robust constitutions, as the treatment to which they were subjected will discover.

On a frosty night in January, on Cape Cod, Mr. Sears and Henry, with a crate of thirty of the "Birds," proceed to a pond, evidently unfreezable, the resort of black ducks. What follows had better be described in the words of the author:

"And in this bitterly cold water, which froze on the duck's feathers as soon as it touched them, we tied those unoffending creatures by the leg to a cord which ran out on the water and disappeared in the darkness. It appeared that this glacial cord was a 'runner,' and that it extended out into the pond four hundred feet to a pulley on the end of a long pole, which was anchored in such a manner as to be held just under the surface. The line running through this returned to the stand, passed through a small hole to the inside, and out again through another, until, at the end of its eight-hundred-foot journey, it joined itself and formed a circuit. To this the ducks were tied by a leather noose. As one bird was fastened and dropped into the icy water, I pulled in on the other part of the rope and gently forced Mistress Duck three or four feet out on the black water. Thus in a few moments we had what to any wild duck, to say nothing of any tame man, would appear to be a flock of birds swimming about at random and raising a horrible racket in all this silence of the night. The thing was repeated with more ducks, on another and similar endless runner which ran to another spot on the pond. This done, Henry directed me to pull first one, then the other flock out to the pulleys."

This was rather a bad quarter of an hour for "Henry's Birds." However, they survived it, as did some of their companions that were tethered in the water alongshore. At intervals others of the "Birds" held in reserve were tossed in the air to flutter over their mates and then return to the blind. What this action had to do with the luring of the wariest of wild-fowl is not clearly explained. The dawn of day in January, on Cape Cod, is tardy and morose. With its arrival on that particular morning a flock of ten black ducks drifted in among the live decoys. Of these the concealed gunners killed eight when they had drawn together and while they were *slight upon the surface of the water*, the ninth when wounded and swimming off, and the tenth and last as it rose in flight. That Mr. Sears has a suspicion that his proceedings on this occasion were unsportsmanlike is evident in a quasi-apology which he offers in these words:

"If you are a sportsman you are saying at

this moment, "That is no sport; it is slaughter." In a measure, judged by the highest standards, that is true: but you deceived the duck while you crawled up on him, and I deceived him when I made him crawl up on me. It is not in the strictest sense the ideal of sport; but, on the other hand, it is neither mean nor unworthy of a good sportsman. And the study, preparation, time, money [the italics are ours], and excitement of it all surpass the practice of crawling up on the bird or of shooting over wooden "coys."

"Qui s'excuse, s'accuse." A record of this character is read, mainly, by youths, who, by reason of its form and imprint, accept it as authoritative. It is not surprising, therefore, that the methods of the pot-hunter are superseding rapidly those of the conservative sportsman of other days.

The remainder of the papers which comprise Mr. Sears's volume relate to stag-hunting in France; the shooting of moose in Maine, of reindeer in Norway, and over the preserves of Robins Island. There is nothing in them that calls for special notice; they are on a level with the higher average of this sort of literature. Mr. Frost's illustrations, as usual, from a pictorial point of view, leave nothing to be desired. In some of this artist's drawings of sports of the field, he is careless in maintaining the correct relative size between the game and the gunner whose weapon is directed towards it. This is indicated in the illustration opposite page 36 in the book under notice. The flying duck in this instance cannot be less than 300 yards from the gun that is being discharged at it.

Discussions in Education. By Francis A. Walker. Henry Holt & Co. 1899.

Mr. T. P. Munroe has here gathered together the addresses and essays of the late Gen. Walker which deal with educational problems. The writer's interest in special questions of education does not appear to have been marked until, in 1881, he assumed the Presidency of the Institute of Technology. The present volume, however, shows that he had very definite convictions on the subject of technical education. About a third of the 333 pages before us consists of addresses on such topics as the relation of professional and technical to general education—topics, that is to say, closely connected with President Walker's immediate interests in the Institute. His contention that the study of chemistry and physics exercises a moral and intellectual influence which "stands in strong contrast with the dangerous tendencies to plianibility, sophistry, casuistry, and self-deception which so insidiously beset the pursuit of metaphysics, dialectics, and rhetoric, according to the tradition of the schools" (p. 22), is somewhat out of date in these days, when students in the faculty of arts are no longer trained to make the worse appear the better reason. We have fallen on times when special pleading for the retention of the classics in education would be more to the point. On the question whether a technical school should be under the wing of a university, President Walker comes to the conclusion that it is more to the advantage of students of technology to be detached "in schools devoted to their own purposes, than in schools where snobbishness makes odious comparisons, and where fashions are set in respect to student life, conduct, and dress, which they have neither the means nor the inclination to imitate" (p. 50). In the group of addresses on col-

lege problems, the author expresses somewhat optimistic views on the relation of college athletics to the life of the community:

"Who shall say that the remarkable enthusiasm for physical training and the intense interest in athletic contests which have been so suddenly developed in our country, may not be clearly seen, a generation hence, to have accompanied, and that through no accidental association, the elevation of art to a far higher and nobler place than it had before occupied in the thoughts and affections of our people? . . . The vision of the Apollo may yet rise to the view of thousands out and up from the arena at Springfield, as erst it rose before the thronging multitudes of Olympia" (p. 285).

There is a paragraph on p. 270 which has a touch of Sophoclean irony in the light of recent events:

"As the United States have grown more powerful," wrote Gen. Walker in 1893, "they have grown more peaceful. To-day, Canada and Mexico repose under the shadow of our irresistible power. . . . It is even difficult to secure from an over-lavish Congress appropriations sufficient to enable us to make a decent show of naval power in the great harbors of the world. It is true, we have recently suffered an apparent brief access of jingoism, . . . but the readiness with which the affair with Chile was adjusted, and the general applause with which our flag was hauled down from the Government House at Hawaii, showed how superficial and how partial was the infection."

The volume is an interesting contribution to the history of American education, and forms a sort of supplement to the lately published addresses of Presidents Eliot and Gilman.

Fields, Factories, and Workshops. By P. Kropotkin. Boston: Houghton, Mifflin & Co. 1899.

That formerly well-known economist, Henry C. Carey, would have taken delight in this book. Its brilliant author, who, perhaps, never heard of Carey, has managed to lay hold of his most absurd fallacies, and to found an ideal society upon them which surpasses the conception of Edward Bellamy. Carey, it will be remembered, detested transportation, and its necessary concomitant, trade. He held that the products of the earth should be consumed where they were produced, and that the factory and the farm should be side by side. The idea of carrying goods across the ocean revolted him, and it is doubtful if he could have reconciled himself to the growth of our exports of manufactures. The author of this book, at all events, believes that commerce is doomed. Every nation is learning to supply its own wants, and the consequence will be that as no foreign market for manufactures will exist, the laborers now engaged in supplying this market will have to take to agriculture.

That they can do so with infinite profit is the burden of this book. The author narrates, not without eloquence, the wonderful achievements of some modern agriculturists, and concludes that all agriculture should show like results. It is not only better, but cheaper, according to him, to raise the fabulous crops which are produced in the reports of bureaus of agriculture. The character of the soil is immaterial; if it is inferior, it is easy to transform it. In fact, he observes, the reputed richness of the Western prairie lands does not exist; the land of the Eastern States is better than that of Iowa.

As for one reason Carey would have delighted in this book, so for another reason would Bastiat have rejoiced over it. The

French writer showed the wonderful gains to many industries that would arise from shutting out the rays of the sun, and Kropotkin ingeniously asserts that it is economically more advantageous to raise tropical fruits under glass in the temperate zone than to import them. Every region is to become its own producer and its own consumer of manufactured goods, and also of agricultural products. Even now grapes are grown "at less expense of human labor, both for capital outlay and yearly work," in the vineries of the London suburbs than in the vineyards of the Rhine, or on Lake Lemán; and "home-grown fruit is always preferable to the half-ripe produce which is imported from abroad."

We are also told that the high cost of growing wheat in England is a consequence of the high rents which prevail in that country, and that it is not the soil of America which causes our abundant crops, but the stimulus given to farmers by our agricultural bureaus and their distribution of seeds. By "nationalizing" the land, and by "associated labor," two or three inhabitants to the acre can be maintained, so that the most densely peopled countries of Europe could easily support twice their present population.

Altogether, we have here a really remarkable collection of exploded theories, visionary speculations, and interesting misinformation, set forth in an engaging style, and issued by the publishers in a most attractive form.

From Reecer to Rear-Admiral. By Benjamin F. Sands, Rear-Admiral U. S. N. F. A. Stokes Co.

This modest volume contains the autobiography of the late Rear-Admiral B. F. Sands, prefaced by an excellent portrait and an introduction by his son, Mr. F. P. B. Sands, a well-known member of the Washington bar. Admiral Benjamin Sands was the younger Admiral of that name; the elder one, the patriarchal Joshua R. Sands, antedating him in the naval service and exceeding him in the length of his life and naval career. Our author entered the service from Kentucky over seventy years ago, in the period between the second war with Great Britain and the war with Mexico. In this era, duelling was prevalent, and the author relates the occurrence of a number of encounters which came within his own observation. In one of these affairs the elder Sands was engaged, and when this duel was brought to the attention of President Jackson, he remarked that he was determined to stop duelling between officers and civilians, but, so far as affairs between officers were concerned, he would not interfere, since their profession was fighting and their training that of arms. In those days the youngsters of the navy were as ready to marry as to fight a duel, and the author mentions a case of a midshipman on \$19 a month who sought the hand of the daughter of an old officer, with no dread of the future provided he found shelter under his father-in-law's roof.

Admiral Sands served with the Coast Survey in its early days under the eccentric Superintendent, F. R. Hassler, a Swiss by birth and education. The time favored the development of individuality in and out of the service, and there was no more striking figure than Hassler. Sands's service dates back to the discovery of Gedney's Channel into New York Bay, which demonstrated to the merchants of New York the commercial value of this survey of the coast. ~~and~~

The Speed Escapement of the **D**ENSMORE TYPEWRITER

places it at the head of the typewriter world in this important particular. By its use the action is rendered so rapid that it is impossible for even the most expert operator to equal the speed of the machine. This device, while of great simplicity, is quite wonderful in its results.

We shall be glad to explain its workings to any who may call. Descriptive pamphlets and other information for those living at a distance.

The Week.

The subjects to be brought before the Peace Conference at The Hague are multiplying in number. A few days ago the announcement was made that the Finns in the United States had secured from President McKinley a promise that the cause of the Finns in their own country should be brought before the Conference by the delegates of the United States. This statement must be very wide of the mark. However keenly our sympathies may be enlisted for the Finns, we have no more right to bring that subject before the Conference than the Russian delegates would have to introduce resolutions deprecating the practice of lynching negroes in the United States. The Poles of the United States have sent out a pamphlet entitled, 'The Cause of Poland and its Relation to the International Peace Conference.' It presents in a pathetic manner the truths of history touching the subjugation and dismemberment of Poland by Russia, Austria, and Prussia, and it maintains that the peace of the world cannot be considered secure until those wrongs are righted, but it does not seek to have the cause of Poland brought to the attention of the Conference by the representatives of our Government. It is a temperate, well-considered, and well-composed memorial addressed to the consciences of all nations, and not to those of any one in particular. It is an appeal for nationality such as the Filipinos might address to the same tribunal. In fact, the whole argument of the Poles, except so far as it is based upon history, would be equally appropriate if sent out by Aguinaldo and his Congress. But the only Power competent to bring the matter formally before the Conference at The Hague would be one of the three which are guilty of the crime against Poland. Of these it happens that one (Austria-Hungary) has its foreign affairs directed by a Pole (Goluchowski), while the last Premier was also a Pole (Badeński). The pamphlet informs us further that the present Czar was moved to call the Peace Conference by reading the works of the Polish economist Bloch. So it seems that honors and influence are not wanting to Poland, although her nationality has departed.

It is gratifying to learn that our representatives at the Disarmament Conference at The Hague are instructed to advocate the exemption of private property from capture at sea under all circumstances; that is, the application of the same rule which governs on land. In time of war, private property is ex-

empt from capture on land, and there is no reason why a different principle should prevail on the water. When the United States was invited in 1856 to join in the Declaration of Paris abolishing privateering, Mr. Marcy replied that the Government of the United States would gladly do so on condition that the private property of belligerents on the water, except contraband of war, should be placed on the same footing as private property on land. This proposal was not agreed to. The anomalous condition remains that, when war is declared between two nations, all the property of their citizens which is afloat on the common highway of nations becomes liable to plunder, while none of their property can be seized or molested on land, even though the territory where it is situated has been overrun by the enemy. Our recent war with Spain supplied many illustrations, some of them painful and humiliating, of this barbarous rule. Spanish vessels carrying lumber from the port of Mobile, their officers being ignorant of the existence of war, were seized and brought into Key West and held as prizes of war. The cupidity of our sailors was naturally excited, and the captures became numerous as the war progressed. If this rule had been applicable on land, we should have been entitled to sell the whole city of Santiago after it was captured, and divide the proceeds among the soldiers. This would have been a transaction too monstrous to contemplate, yet, in a moral point of view, it would have been in no wise different from what was actually done in respect of the Spanish ships in pursuance of and in strict accord with the laws of war then and now in force. Let us hope that our representatives at The Hague will spare no effort to bring about a change in this barbarous custom.

It was rumored a few days ago that the Anglo-American Commission would not resume its sessions at the appointed time next August, there being no reason to suppose that the two countries would be any nearer to an agreement than they were when they separated last February. This rumor is now contradicted at Washington, where it is affirmed, apparently by authority, that very liberal views are entertained respecting trade relations with Canada and everything else except, perhaps, the question of the Alaska boundary. It is unfortunate that the latter question was not referred to arbitration. It is peculiarly suited to arbitration, especially in view of the fact that the last boundary dispute which we had on the Pacific Coast was so referred, and that the decision was in our favor. It is unfortunate that the two Powers

should enter the Peace Conference at The Hague with the declared purpose to promote international arbitration when they were unable to settle this trifling dispute in the way which both of them approve. And here we must admit that our position was not the more *défensible* of the two, if we refused the offer of arbitration unless the arbitrator were chosen from one of the countries of South America; the Canadians objecting, that since we claim a kind of suzerainty over South America, under the Monroe Doctrine, this was only an offer to refer the question to a prejudiced judge. There was ground for this criticism, although it might have been found in practice that the prejudice was the other way. The Spanish-American republics are not a little piqued by our claim of suzerainty, which looks to them like an impairment of their own independence, and it is not improbable that an umpire chosen from among them would have leaned against us. On the other hand, there is no reason to suppose that an arbitrator chosen by Switzerland, Belgium, Holland, Sweden, Italy, Russia, or France would be under prejudices in favor of England.

The immediate result and direct consequence of the Postmaster-General's order to take Mr. Edward Atkinson's pamphlets from the mails destined for Manila, has been to create an enormous demand for those documents in the United States. This demand has risen to 1,000 per day, and is far beyond Mr. Atkinson's present ability to supply them. His mail has grown to such proportions that he has been obliged to employ a private secretary to open and answer letters. Some of his correspondents want to know what were the treasonable utterances which led to the extraordinary action of the Postmaster-General, and, after reading the documents and finding nothing in them but the usual arguments against the policy of foreign annexation and conquest, are moved by the spirit of American liberty to aid as much as possible in the circulation of the pamphlets. It is altogether likely that this demand for Atkinsonian literature will increase, and that in the next political campaign it will be found in the hands of many stump-speakers, who will be asking what it was that led the Postmaster-General to issue his order requiring that the pamphlets be removed from the mail-bags going to Manila.

The reason alleged was that they tended to promote desertion or to discourage the reenlistment of soldiers. Yet the only pamphlets sent were addressed to Admiral Dewey, to three generals, and to three civilians. Now, no Cabinet offi-

cer, in his most hysterical moments, could imagine that one of Atkinson's pamphlets, or any pamphlet for that matter, could shake the loyalty of Admiral Dewey, or lead Gen. Otis, Gen. Lawton, or Gen. Miller to desert. Of course, no such consequences could flow from the perusal of the documents by President Schurman, Prof. Worcester, or Mr. Bass. Therefore, the whole seizure effected at San Francisco was a "dead-water haul." Moreover, word was given out at Washington that the order of seizure did not apply to letters, but only to pamphlets and other printed matter. It follows that if Mr. Atkinson had put his pamphlets under seal and paid letter postage on them, he could have sent them to every private soldier in the army. We have examined them with some care, and we can say with a clear conscience that the most censurable paragraph in them (the most censurable according to Charles Emory Smith's theory) is a passage quoted from Admiral Dewey himself in these words:

"These people, the Filipinos, are far superior in their intelligence and more capable of self-government, than the natives of Cuba, and I am familiar with both races."

Mr. H. H. Van Meter of Chicago recently sent an inquiry to the General Manager of the Associated Press as to the character of the censorship exercised by our Government in the Philippines, and received this reply: "There is a very strict censorship at Manila." Thereupon Mr. Van Meter addressed an open letter on the subject to President McKinley, "as an American citizen who loves his country and values his birthright of liberty above all other earthly blessings; as a Republican who voted for you for Congress in your old home district of Ohio when you were defeated there; as a man who believes in you as a Christian, a patriot, and a statesman, and who voted for you for President." He points out that the war which Congress declared against Spain to free Cuba was over before this trouble began, and that Congress has declared no other; "so we cannot call this war, but Weyerism"; and he proceeds to ask such searching questions as these:

"Is it not possible that, but for this military censorship, it would not be? Had our home Government and the American people known all, would it have been? Is not this the kind of strife we went to war with Spain to put a stop to? Have we not simply supplanted the standard of Spain with the star-spangled banner? Are not Americans now doing what they fought Spaniards for doing before? Have we not slain many times more Filipinos in a few months than Spain has slain in centuries? Have we not destroyed more homes and left far more desolation than the Spaniards? Are these the reasons for the military censorship being so very strict in Manila?"

"A Captain in the Union Army" writes an interesting letter to the Boston *Advertiser* "in regard to the new policy of a strict censorship, so rigorous and so paternal that it withholds mails in pa-

pers and parcels and telegram messages from the soldiers of this day." He himself enlisted in the autumn of 1863, and was in the army during the Presidential campaign of 1864, when the soldiers were allowed to vote, and did vote by the thousands, for McClellan on the platform that the war was a failure, and that there should be an immediate cessation of hostilities. He says:

"I recall distinctly that nothing was withheld from the soldiers of that most bitter and critical period, 1861-1865. I remember the newsboy on his pony with papers of every sort before him piled up to his chin. He furnished whatever paper was called for until the supply was exhausted. I remember, in skirmishing in the Valley campaign, 1864, the scenes of the picket line. When our lines were near together and there were periods of lull in the firing, we exchanged our coffee for the 'reb' tobacco. The 'rebs' cheered for McClellan, the Democratic candidate for the Presidency, and we responded for Lincoln. We exchanged our papers, whatever was called for, if we had it, for the papers of rebellion. We were men who had minds of our own, who liked to know all that was being done and said, and could draw our own conclusions."

That Imperialist demonstration out at Chicago on Sunday week proves, on the evidence of the local papers, to have been a very different sort of thing from what it was represented to be in dispatches sent from that city to Eastern organs of the expansion policy. Great preparations had been made for immense crowds, the First Methodist Church having been engaged for the expected overflow meeting, in addition to the Auditorium and the Central Music Hall. But the *Times-Herald*, the special champion of the McKinley Administration, admits that the Auditorium was not filled, and that "twice as many people could have been comfortably seated at the Central Music Hall," while the meeting at the church had to be abandoned because only fourteen persons entered the audience-room. The Imperialist newspapers try to "blame it on the weather," because it rained. The *Times-Herald* excuses the lack of interest on the curious theory that the Chicago people are so enthusiastic in their support of imperialism that they feel no necessity of showing their sentiments; "perhaps, even despite the rain, there would have been people enough for all three halls and for a big open-air meeting too, had it not been that everybody was so sure that everybody else would attend!"

The demonstration was as lacking in moral force as in physical impressiveness. The chairman of the Auditorium meeting laid stress upon the necessity of abolishing free speech if the nation pursues the expansion policy. He admitted, to be sure, that "every man has a right to his convictions upon public questions," but he insisted that he must keep such convictions to himself if they do not agree with those of the McKinley Administration. "No man ought to pub-

licly utter sentiments which tend to humiliate or discourage the country's defenders in the field, or to lessen his country's influence in the family of nations." It was not a long step from the position of this ex-judge to that of an active clergyman of the Lyman Abbott and Wayland Hoyt school, who "pitched into" the antiquated Declaration of Independence as "played out" in this progressive era. Said the Rev. Dr. P. S. Henson:

"And so to-day there are those that wave the Declaration of Independence in our faces, and tell us that the thing to do is to deliver over those islands of the archipelago in the East to the people who are their rightful masters, for 'all governments derive their just powers from the consent of the governed.' So wrote Thomas Jefferson. Do you remember that the Lord said to Joshua, 'My servant is dead'? And so is Thomas Jefferson. Let the dead bury the dead. As to that hallowed document that declares that all governments derive their just powers from the consent of the governed, if that is to be literally construed, there never was a greater falsehood palmed off by the devil upon a credulous world."

It having been asserted by our ardent Imperialists that all missionaries and missionary societies are with them, the Rev. Dr. Barton, one of the Secretaries of the American Board in Boston, wrote a letter to the *Herald*, in which he declared:

"I know the opinion of a large number of the missionaries of our board and of others, and I do not know one who is in favor of an Imperialistic policy; and, more than this, I have never heard this policy advocated by the officers of our board or of any other. . . . On the other hand, I have constantly heard the officers and missionaries of the American Board express regret that the policy of imperialism was likely to prevail."

The publication of this letter had a very practical sequel. It brought a gift of \$10,000 into the Board's treasury. The donor remained anonymous, simply congratulating Dr. Barton on his letter as "reflecting the true attitude of the church," saying that it had "strengthened the value of your Board as an agency for the use of missionary funds," and offering his gift as a substantial "token of this feeling." But a still more remarkable sequel came later. The *Congregationalist* had been a hot champion of conversions by killing, and the attention of its editor was called to this gift for missions and the reasons for it. But he simply informed his readers that the donation was no doubt the result of "the special season of prayer" in behalf of the American Board. An editor whom Satan hath so evidently desired that he might sift him like wheat, is himself the fittest subject we know of for special prayer.

The Manila correspondent of the *Evening Post* states that the volunteers who have fought so bravely in Luzon were sent into battle with short-range Springfield rifles, and black, smoky powder, against an enemy armed with long-range Mausers and smokeless powder. What is the explanation of the fact, also re-

ported by this writer, that the Krag-Jørgensen rifles which reached the volunteers after the hardest fighting was over, have been lying unused since 1897, as was disclosed by the date on their cases? Why were they left unpacked during the entire war with Spain? Our correspondent says of the volunteers:

"These soldiers have, hour after hour and day after day, marched up against intrenchments from which fire was being poured upon them at a range of 2,000 yards, and could not reply because their guns were inferior in range to those of the enemy. They have been fired upon by a concealed foe with deadly effect, the smokeless powder making it impossible to tell where their assailants were, and yet every time they fired their Springfields a great cloud of smoke arose to disclose their exact position to the enemy, and to obscure their own vision and prevent accurate shooting."

Is Secretary Alger the man who is responsible for this needless slaughter of our soldiers? If not, who can be held responsible?

It is interesting to observe that the section from which a soldier went to the Philippines has nothing to do with his sentiments regarding the work which he is compelled to do there. Many letters have been published from members of various Western and Southern regiments protesting against the war which our forces are now waging, as one which fills them with a sense of shame. The *Pittsburgh Dispatch*, also a Republican newspaper, prints a striking letter from a captain in the Pennsylvania regiment, who says, in so many words, that he thinks "it is a burning shame" that he and his comrades have been forced, by "so-called statesmen, that should at this particular time be in our places," to fight in order to "take from a people what the American forefathers fought for— independence." It becomes every day more plain that it is a great mistake for the American Government to try carrying out an imperial policy with volunteers who think, and who are not afraid to say what they think.

The sudden death of ex-Governor Roswell P. Flower recalls his part in the last Presidential campaign, when he surprised his critics by the independent, manly, and very able speeches which he made against the nominee and platform of his party and in favor of sound money. His argumentation had a telling effect by reason of its intrinsic merits and of his prominence in the former councils of his party. Very few such examples are found. They betoken high moral courage. Ex-Governor Flower's course in this behalf was so bold and outspoken, so free from cant and self-seeking, that even the Bryanites were compelled to respect him. Although Cleveland and Carlisle, Palmer and Buckner, and even David B. Hill (who did not distinguish himself in that campaign) came in for volleys of abuse, Governor Flower was treated with cour-

tesy, which was by no means the silence of contempt, since all the accounts received of his speech-making tour agreed that it was very effective, especially among the farmers of the West.

We are glad to see that the Bar Association has taken up the question of campaign contributions from judicial candidates, already passed upon by the City Club and the Chamber of Commerce. The Association proposes the appointment of a committee to draft the necessary legislation forbidding all such contributions, either in the form of "assessments" or voluntary. It is most fitting that the legal profession should take the lead in this reform, for they have most reason for wishing to put an end to the present practice of selling judicial nominations to the highest bidder for the benefit of the Tammany boss. Not only does Croker decide who shall be the favored bidder, but he claims the right to control the conduct of the judges after they get upon the bench. If the members of the bar did not revolt against this scandal upon their profession, it would be difficult to imagine any provocation which would cause them to revolt. All candidates for the bench should be prohibited from contributing a penny in any way, either in return for a nomination or an election, on penalty of losing their seats after election. A bill containing such prohibition should be drawn and presented to the next Legislature, and should be passed in spite of all opposition, secret or open.

Bishop Potter's quiet statement of his reasons for ordaining Prof. Briggs is as creditable to him as it is mouth-stopping to the clerical objectors. The Bishop shows that he has complete technical right on his side, and, moreover, that his head and heart go with his action. What he thinks of the leaders of the outcry against Prof. Briggs he freely indicates in his direct assertion that they have betrayed "lamentable ignorance," and that some of their perversions of Prof. Briggs's words are "as malignant as they are unscrupulous." This is official. It comes from the "Right Reverend Father in God" of the protesting clergymen, and carries apostolic authority. If anything was needed to complete the exposure of the agitation as a silly business—largely blown up into its frothy proportions by the press, never so happy as when it is scoring a theological "scoop" or flattering the vanity of a foolish cleric—it would be this judicial utterance of the spiritual ruler of the diocese of New York.

For the real and larger significance of this Briggs controversy, one need only read Prof. Adolf Harnack's little book, "Thoughts on Protestantism." One of the greatest dangers now besetting Pro-

testant churches is that of treating their creeds as legal ordinances. As Prof. Harnack says, the fact is that "no one is any longer expected to take over the old Protestant teaching in its hard entirety." In truth, it is a common experience to find that "church newspapers and men who consider themselves orthodox are guilty of gross offences against the old doctrines." Yet, strangely enough, at the same time "the demand that the creed should be authoritative is advanced all the more loudly and *sans phrase*." The creed, that is, may no longer be believed, but it must be obeyed. To question any part of it is to be hostile to the church. Now this, as Harnack says, is to Catholicize the Protestant Church. It is to make dogma a rule of obedience, not a rule of faith. And the moment the Protestants set about this, that moment the Catholics will beat them off the field. When it comes to imposing doctrine as a dose to be swallowed, whether you like it or not, the Catholic church has an experience and facility which no Protestant can hope to rival. If he cannot stand resolutely for free inquiry, and be ready to "follow the argument" wherever it may lead him, he has no real place in the spiritual economy.

A good deal of sophistical reasoning about the English Conventions with the Transvaal is coming from those who want Mr. Chamberlain to step in and make President Krüger redress Outlander grievances. The Pretoria Convention of 1881 declared an English "suzerainty" over the Transvaal. But in the succeeding London Convention of 1884 the word suzerainty was omitted. Those Englishmen who want to do as they please with the Transvaal say, nevertheless, that suzerainty was not renounced. What was not expressly given up may still be asserted. If 21,000 British subjects in the Transvaal appeal, as they have appealed, to the English Government to interfere with the Boer Government, why may it not? What is the good of being a suzerain, even by implication, unless you can order somebody about? Well, as a matter of right and law, saying nothing of policy or force, the debate is illusory. There is an official declaration of the sense in which England understood the London Convention. It was given by Lord Derby to the Boer delegates in 1884, and, of course, England cannot now retreat from it without disgrace. Lord Derby wrote specifically:

"By the omission of those articles of the convention of Pretoria which assigned to her Majesty and to the British Resident certain specific powers and functions connected with the internal government and the foreign relations of the Transvaal state, your government will be left free to govern the country without interference, and to conduct its diplomatic intercourse and shape its foreign policy subject only to the requirement embodied in the fourth article of the new draft, that any treaty with a foreign state shall not have effect without the approval of the Queen."

POSSIBILITIES AT THE HAGUE.

"Who is this Hyder Ali of whom I hear so much?" asked Frederick the Great, in his old age, of Sir Hugh Elliot. "Sire," was the reply, "he is an old man who, after spending his life in the pillage of his neighbors, is indulging in goody-goody talk." Similar retorts are being pretty thickly flung at the Czar's head on the eve of his Disarmament Conference at The Hague. *Que messieurs les assassins commencent.* Why does Russia push on her own armament so feverishly? Is it in order to make her call to an arrest of arming an open hypocrisy? "One of the most elaborate shams" of the century, Mr. Sidney Low calls it, and the German professors are not far behind in sneers. Mr. Goschen offered to curtail England's ship-building programme if the Czar would strike off three or four ships from his schedule; why was not the proposal closed with if Russia is sincere? This is what the cynics and sceptics and apologists for war are more and more openly saying as the day for the meeting at The Hague draws near. They are trying to make out the whole movement to be simply "The Truce of the Bear."

Yet even the bitterest of them do not venture to question the Czar's own sincerity. They represent him as an amiable enthusiast surrounded by wily and unscrupulous ministers. Even the outraged Finns are persuaded that if they could only get the ear of the Czar, their wrongs would be at once righted. It is his counsellors who have ridden over the sacred rights of Finland, and concealed all knowledge of it from Nicholas. A story is circulating in Europe which pathetically illustrates this view of the real source of government in Russia. We quote it from the *National Review*:

"In the course of a recent conversation with one of the leading foreign Ambassadors at St. Petersburg—not, by the way, the British Ambassador—the Czar referred to an article in the Russian newspaper *Novoe Vremya*, to which the Imperial attention had been particularly called. He recommended his visitor to read it, and, as the latter was about to withdraw, the Czar considerably said: 'You may as well take my copy in case you have mislaid yours.' The much delighted diplomatist retired with his prize and naturally commenced reading the article that had so impressed the Emperor. Though a regular reader of the *Novoe Vremya*, the Ambassador was immediately struck by the freshness of this particular article, so on returning home he turned up his own copy of the paper, and was not a little astonished to find that his *Novoe Vremya*, of the same date as the Czar's, did not contain this important article. He then realized that this enterprising organ of the Russian reactionary party publishes on emergencies two distinct issues—a regular edition for the general public and for foreign quotation, and a special edition consisting of one copy for the private and particular consumption and mystification of the Czar."

As against the extremists in cynicism who are predicting that the Conference at The Hague will turn out a farce, and also as against the extreme enthusiasts who expect it to inaugurate the millennium, some remarks by Mr. Leonard Courtney in the *Contemporary* are well

worth taking into consideration. He writes with the soberness and weight of long public experience and study, not allowing himself to indulge in extravagant hopes, but not permitting himself, either, to shut his eyes to the opportunity offered by the Conference to mark one step more in human progress. What Mr. Courtney most insists upon is the validity and power of an international sanction. Once clearly set forth, it enforces itself. It erects a sort of moral tribunal before which no civilized nation can bear to be dragged as an offender. No armed power is necessary to enforce the Geneva Convention. To observe its requirements is often a crippling thing in military operations, yet no commander of a civilized army would now dare to disregard them. The same law holds of other international agreements. Neither Spain nor the United States was a party to the Declaration of Paris of 1856, affirming the principle that free ships make free goods. Yet both countries voluntarily accepted the principle in their late war. No one compelled them, but they could not put themselves outside the family of nations.

It has been said that even if some sort of agreement is reached at The Hague, there is no guarantee that the participating Powers will live up to it. They may say they will not increase their armament, but who can make them true to their word? They may assent to a system of international arbitration, but what constraint can be brought to bear if they refuse to arbitrate in a given case? These doubts, so far as they are sincere, Mr. Courtney does much to dissipate by his historical examples. Where there is real moral force behind international agreements, they stand without the need of physical force. Under the Treaty of Ghent, the United States and England agreed not to maintain war-vessels on the great lakes. Not only has that disarmament convention been religiously observed, it has even been extended, so that the long Canadian frontier is practically unfortified. Mr. Courtney also specifies the international agreements neutralizing certain states, as Switzerland, Belgium, and the Duchy of Luxembourg. It is not fortress or army which preserves these countries from spoliation, but simply the silent moral power of an international sanction. There is such a thing as an international conscience.

The question is if this conscience can be effectually brought to bear on any of the great problems which are to be discussed at The Hague. As to many of them there is no doubt that it can be. Some proposed extensions of the Geneva Convention, new rules against bombarding unfortified seaports, the exemption of private property from capture at sea—these and other measures to make war more humane can unquestionably be agreed upon. We think they will be. And more may be done. Some added

countries of Europe might be neutralized, and so delivered from the nightmare of dread of attack and the burden of preparing to resist it. It is a significant fact that, immediately after the Czar's rescript was issued, the Norwegian Storting petitioned the King to take steps to have Norway neutralized at the Conference. Other nations might have this international guarantee thrown about them—if not now, later. There is no doubt that if Denmark and Spain and Portugal and even Italy were to be relieved of all need of supporting an army, as Switzerland is, it would be an unspeakable blessing to them. And the international sanction which would be automatic in enforcing their privileges and immunities would be equally effective and self-executing in respect to an agreement to check the growth of navies and armies, and to submit international quarrels to international tribunals. The thing for the delegates to ask themselves is, not if the Czar is sincere, but if they themselves are sincere. If he is a dreamer, let them show themselves capable and practicable men, able to snatch from this happy chance some advantage for mankind, and to further, if only a little, a humane movement whose ultimate fruits of righteousness and peace can be garnered only in the fulness of time.

IMPERIUM ET LIBERTAS.

It is curious and interesting to note that, though our republican soil seems to be the one most unfavorable to the growth of any form of government not based on popular discussion, it is in reality that one in which it is easiest, in an emergency, to get rid of popular discussion; and that it is the most ardent supporters of the Government who are most earnest in favor of the change. There has recently been a very striking illustration of this at a meeting in Chicago.

We have remarked already how soon, when war breaks out, no matter how distant, or how trifling a drain on our resources, an "incendiary literature" springs up—that is, a literature dangerous to the state and needing suppression or discouragement. We have that already. There is now a literature among us which needs to be taken out of the mails, as in Russia, and is accordingly taken out without any authority of law. But it may be said that this is due to the fact that this literature is being sent to the troops in the field on purpose to discourage them. The continued mental and moral connection of the troops in the field with the people at home, and their continued participation in home discussions of public affairs, were undoubtedly presumed when the law provided for a continuance of the franchise of the volunteers when they took the field for active service at a distance from home. The power of voting means

liberty to hear what is said on both sides to the voter, as a preparation for voting. This liberty is, in fact, one of the foundations of the state under popular government. But already, in the second war waged under the law, this liberty has been abolished. The soldiers in the Philippines who will vote at the Presidential election next year are not to be allowed to hear anything against the fitness of William McKinley for a second term, though probably some millions doubt his fitness and are able to give reasons for doubting it. All these voters are, therefore, excluded from hearing all discussions on this most important matter. But the thing goes farther, and we commend its progress to those clergymen and others who favored the Cuban war as a "war of humanity," and thought it would end with the liberation of Cuba. They will see now that, under our system of government, if the Executive is permitted to go to war for *any* purpose, the purpose cannot be strictly defined. It is always, in practice, whatever it may be in theory, a license to carry on war against anybody or for any purpose that seems good to him.

There are now strong symptoms of a disposition not to permit the discussion of any important branch of public affairs, even at home, provided it has any relation to war. The Imperialists are unwilling to have voters allowed to discuss the conduct of the war, or its cost, or the policy of its continuance, or the terms of peace. All these are to be handed over to a one-man power. The theory that any one who criticises the war is responsible for the death of the men who die in it, and not the persons who started it, has already made its appearance. Hear Gen. John McNulta at Chicago:

"If, by the acts of men living among us in peace and under the protection of our government, this war is prolonged so that my boy, fighting in the front rank there with Lawton, is killed, they have murdered him. Men like those who spoke at the anti-imperialist meeting at Central Music Hall should be held responsible for the death of every soldier who falls there by reason of their encouragement, and every man who thus encourages an enemy in time of war is a traitor."

You see you are a traitor and a murderer if you speak against the war; not so William McKinley, who set it on foot. It is for him to say how long it should last and what should be its objects. If you say anything that can possibly cheer the enemy, you make yourselves liable to the penalties of treason, in spite of the constitutional definition of treason.

All this is the more extraordinary considering the example set us by England, although a monarchical country with a restricted suffrage. She waged two important wars, which excited the keenest interest at home, without any attempt to restrict or punish discussion. One was the war of the American Revolution, in which Burke and Fox and Chatham and

so many other eminent Englishmen encouraged the "rebels" in their resistance by every legal device within their reach. The other was the Crimean war, fifty years ago. This was marked, as our war has been, by hideous administrative blunders and want of preparation. But the press never ceased for one hour to encourage the Russians by pointing these blunders out, and abusing the Government which committed them, so that it finally got turned out of office. The principal exposé of them, Russell, actually rose to eminence on his work. There never was any talk of hanging him for murder or treason. No father threw on him responsibility for his son's death, and nobody proposed to burn the *Times* office. On the contrary, the nation wept and prayed and sentimentalized, but it kept its head, remembered its liberties and its government, and went to work through its tears, reforming its army and searching for better men to carry on the war. Nothing was remitted to any one's "discretion." No one attracted reverence simply by carrying on a war. What was said to many was, "Imbecile, how have you carried on the war? You are only fit to care for sick mules. Begone."

THE MARRIAGE SCANDAL.

The public has been more than usually moved of late by a marriage scandal which happens to be conspicuous because the parties are rich, not because their conduct was unusually bad. Similar things take place among poorer people every week; but, as the culprits generally have but little money, they get little or no attention from the newspapers. Consequently, it seems as if it were only the rich and idle who were in the habit of violating the law. The rich probably furnish the larger proportion of the offenders, for we believe it could be proved by statistics, or very nearly proved, that money and idleness are the two greatest external stimulants to conjugal unfaithfulness. Money creates in our day almost the only "class" (properly so called) left, and men and women with money are more than usually in need of excitement, and are more than usually able to procure it. When they get vicious, their wealth makes their offences more than usually interesting to that immense body of the public whose means are small. When a wife runs away from a husband who has five millions, to join a paramour who has only three millions, it sets the readers of the Sunday papers nearly wild with excitement and curiosity, which are naturally increased if the husband be a decent man and the paramour a little cad, and rises to boiling-point if the cad is abandoning a wife of his own. Every detail of the wretched business is worth a round sum.

But you will not find the morality of

the matter much debated. What rouses the gossips more than expansion, or the Briggs case, is the question why the wife left a man with five millions for a man with only three. That the matter has a moral side has ceased to interest people. It is the business side which occupies them. They are not concerned about the wife's morality, but about her apparent want of business sagacity, especially if it can be shown that she is not such a fool after all, since the cad, besides his three millions, has plenty of diamonds of his mother's. As the cases in which these details are presented are of course rare, there is but little discussion of the general condition of our marriage laws, but that condition is well known to be such that the institution of marriage can hardly be said to exist among us, any more than in the fifth century at Rome, when twenty wives in succession was not an extraordinary allowance even for a Christian deacon. When you see a couple living together happily or unhappily in "God's holy ordinance," you may feel pretty sure that it is not the law of the land that is causing it, but pure inclination or strong sense of loyalty, truth, and honor. Ministers, and even judges who administer the law, have no hesitation in making the law on this point a mockery, without taking the trouble to offer any excuse but personal taste or convenience. Men and women both act as if we were dwelling on a desert island, where sense of individual duty had to do the work of lawgivers and jurists.

The reason of this is plain. We allow persons who have broken their marriage vows, or wish to break them, to use the law to enable them to break them with impunity—that is, to give what is really a state of concubinage the appearance of a real marriage, and thus to escape the social stigma which is the law's best support. Any one who is tired of his wife, any wife who is tired of her husband, finds in the law an arrangement by which the veriest strumpet can put herself on a level with the purest, bravest, most constant wife. This is the literal consequence of allowing every State to have its own marriage law; and the only remedy for it is a national divorce law. Moreover, the public, with the aid of the newspapers, is rapidly getting accustomed to this state of things, so that persons who pass their lives in lawful wedlock begin to have the air of prudes, or "fossils," or "old fogies." This makes preaching vain. It is not a wild supposition that, in another generation, we shall be in enjoyment of the advantages, in point of expense, of the régime of free love. Remarriage "across the line" is already becoming a formality; it will not take very long for it to become a useless formality.

This condition is one of those which make us feel that our activity in spreading civilization by "killing niggers" is

somewhat misplaced. Marriage, loyal and faithful as human nature will permit, is one of the foundations of human society. The men who make a great figure in the work of civilization have to go forth from pure homes, and have to feel sure who are their fathers. A nation which does not possess this institution, or is allowing it to vanish, seems to us but ill fitted for the great work of evangelization. Here is another field, besides the care and education of "niggers," in which it seems to us the missionary character sits badly on us. If charges of cavalry and the assaulting of redoubts made happy homes, the "great to-morrow" would surely be ours. But here is the rift in our lute. We once again affirm that as it is good institutions and well-administered laws which make a conquering nation, so also it is homes which legislation makes permanent that qualify people to spread their civilization.

TAXATION OF CORPORATIONS.

In the current number of the *Political Science Quarterly* Prof. F. W. Taussig considers the subject of the taxation of securities, i. e., of stocks, bonds, and other paper evidences of ownership in or claims against corporations. This is a very complex question and by no means a novel one. It is perpetually coming up for solution and is never solved. On the one hand, it is argued that this kind of property ought to be taxed just as much as real estate. On the other, it is said that it is practically impossible to tax such property because the assessors cannot find it unless the owner voluntarily exhibits it. But the owner, as a general rule, will not do this. If he makes a full disclosure of say \$100,000 of stocks and bonds, he is taxed on that amount, and more than that if the market value is above par, while real estate is commonly valued, for purposes of taxation, at not more than 60 per cent. of its value. All the States of the Union have tried to reach securities as a part of the general-property tax, and most of them keep trying in spite of repeated failures. This is a case where experience, long continued and unvarying, counts for nothing as against popular prejudice and catchwords. Equality of taxation is a most alluring phrase. If it could be reduced to practice, all good men would rejoice. But if our nearest approach to it in actual practice is the taxation of a few very honest persons, who make true returns, and a few very helpless ones, such as widows and orphans whose holdings are going through the probate court, then the phrase equality of taxation is a lie and a sham. That does not prevent it, however, from carrying the day in a popular election, or in a State Legislature, as it usually does.

The State of New York does not require citizens to make lists of their per-

sonal property, but it aims to tax such property in other ways. The Tax Commissioner or Assessor makes his own estimate of the amount of such property owned by a citizen, notifies him of it, and invites him to call and swear that it is an over-estimate, which he generally does. If, after the swearing, there is still a residuum of taxable personal property assessable against the person, the amount remains at that figure on the assessor's rolls for two or three years. Then the assessor moves it up a few thousands, by way of experiment, and watches the effect. If the taxpayer does not come around and "swear it off," he waits two or three years longer and then "gives him another hitch," and keeps doing it till the taxpayer comes in and makes remonstrance under oath. In short, the payment of taxes in New York on personal property that is not visible to the eye of the assessor is a matter of conscience altogether. Illogical as this system is, the practice in New York is better than in the States where the taxpayer is required to make out a yearly list of his possessions and hand it to the assessor—a system which does not yield any larger revenue, on the whole, but which does lead to greater perjury and demoralization.

As regards securities issued by corporations, Prof Taussig, recognizing the impossibility of taxing them in the hands of the owner, would strike them out of the list of taxables altogether, and tax the corporations themselves—that is, secure the revenue at its source. "No one," he says, "who watches the trend of our public affairs can fail to observe the growing strength of the movement by which public-service corporations are called on both to exhibit openly what is the outcome of their operations, and to share with the community the profits due to granted franchises. No doubt the movement is often headed by demagogues, and often has the marks of an unreasonable onslaught on a particular kind of property. But at bottom it is sound and healthy and is sure to continue." He then refers to and commends the franchise-tax law of Massachusetts, which provides that street-railway companies, when their dividends exceed 8 per cent. on the capital invested, shall pay, over and above the ordinary taxes on corporations, a tax corresponding to such excess, so that the increased earnings shall be shared by the public. The system requires careful public supervision over the issue of the securities, but this is by no means an impossible task.

Prof. Taussig's article does not touch the franchise-tax bill now in Gov. Roosevelt's hands, but such inferences as may be drawn from his argument are favorable to it. He holds that a franchise tax over and above the tax on corporations using public streets is just, and that the only question is as to the mode

of levying it. He would abolish the tax on shares in the hands of shareholders and recoup the Treasury by taxing the source of the dividends. The State of New York, by the way, does not tax such shares in the hands of the holder if the corporation issuing the same has paid the corporation tax of this State. It does not tax the shares of foreign corporations held by citizens of New York, the presumption being that such corporations are taxed at home. The principle being conceded that a franchise tax is just, how should it be levied? The Ford bill makes the franchise a part of the real estate, and the people who oppose this feature contend that the tax ought to be upon gross earnings, and they urge the Governor to veto the bill because it puts a dangerous power in the hands of local assessors in fixing the value of the franchise. No doubt there is a danger here, but Prof. Taussig considers this a danger which confronts us at all times—one which calls for the betterment of our civil service, rather than for a modification of our tax laws. Upon this point he says:

"Just as the method of taxing shares and bonds gives opportunity for evasions by the holder and favoritism by the assessor, so taxes on corporations give opportunity for corruption by the corporation and blackmail by the tax commissioner. No doubt an honest and capable official finds his task more manageable under the latter plan than under the former; but honest and capable officials you must have in any case. The examples, unfortunately, are many where the taxation of corporations has led to corruption, or blackmail, or both, the root of the evil being in either case a debauched public service. In whatever direction we seek reform in our public life, this same imperative need confronts us."

AMERICANIZING THE ENGLISH PRESS.

The excitement and discussions in England over the Sunday editions of the *Daily Mail* and the *Daily Telegraph* produce a curiously reminiscent effect upon those who have been connected for any time with American newspapers. We went through all that twenty-five years ago. All the arguments for or against the Sunday paper which the English are now bringing forward as novel discoveries, were threshed to dust here in the '70's. Mr. Balfour solemnly reminds the House of Commons that the work on a Sunday newspaper is actually done on Saturday, and that it is the Monday paper which is really wicked; and all the other dear old platitudes are hurled about with vigor and enthusiasm. Any American newspaper file of a quarter of a century since would show the English that their reasoning was anticipated in this country at every point.

The English have for years had Sunday papers of a certain kind, just as we had before the war. Theirs, like ours, were not newspapers in the strict sense of the word. The news element was reduced to the minimum. What passed for the Sunday paper was a collection of

stories or gossip, or chat about sports and society—just the empty stuff for a vacant laborer to nod over as he sipped his Sunday ale. It was, in fact, only among the working classes and un-intellectual folk that these papers circulated at all. They were rubbishy affairs, quite without influence on men of influence, though they undoubtedly played a certain part in the social economy. A member of Parliament tells a story that illustrates what we mean. He was in a remote part of the country the other day, and was rejoiced to find that there was no public-house within a radius of some miles. "No," said the countryman, with whom he was talking, "and no church or chapel, neither." This was less pleasing to the member. "Then," said he, in a tone of deep commiseration, "what do you do for the means of grace?" "Means of grace!" replied his friend, indignant at this disparagement of the local resources, "haven't we the *Dispatch*?"

From such unpretentious means of grace to a regular or even enlarged Sunday issue of the *Mail* or the *Telegraph* was a great transition; yet England finds herself making it almost unawares. It came as it were by stealth, and was an accomplished fact before the public clearly understood what was happening. We do not know what will be the immediate outcome of the experiment—whether the outcry and the threatened boycott will lead either the *Mail* or the *Telegraph*, or both, to suspend a Sunday edition for the present. We do know, however, that if either or both persist, the rest of the newspapers will sooner or later be compelled to follow suit. American experience is conclusive on that point. It needs but some exciting event, some great piece of news—a war, a huge calamity—and the Sunday newspaper, glorying over its six-day rivals, will speedily see them take up the challenge and likewise publish, seven days in the week. It was so here and it will be so in England. There will be protests; all sorts of shifts and subterfuges will be attempted—special summaries of "the Sunday news" for tender consciences that disapprove the Sunday newspaper, and that sort of thing—but in the end we shall see our experience reproduced across the Atlantic, and the Sunday newspaper take its place as an established institution. We shall see it, we mean, if its beginnings are allowed. When the press says A in this matter, it soon says B, and presently fetches up at Z.

What makes us fear that the beginnings of Sunday journalism will not be successfully withstood in England is the fact that the steps which have led up to it have gone without effective rebuke. There has been a steady Americanization of the English press during the past decade. The Sunday edition is only one and the last symptom of a disease now deep seated. No one familiar with Eng-

lish newspapers can have failed to note their growing assimilation to our models. With a few honorable exceptions, they have acquired more and more of the American newspaper manner and tone. They have become hysterically sensational, shrieking in big headlines over a disaster or particularly gruesome murder; they give more and more space and importance to the seamy side of life, making a specialty of "racy" divorce trials and all kinds of nameless immorality; they grow more and more credulous and silly in printing irresponsible rumors and gossip as "news," and, in short, are faithfully copying American "breeziness" and "enterprise." To us, the natural end of such a rake's progress seems a Sunday newspaper, rather more vivid and disgusting than the week-day issue.

The best view which can be taken of our own Sunday newspapers must admit that they are a nuisance. They are twice cursed: they curse him that prints them and him that reads them. They add new terrors to Sunday. On purely humanitarian grounds, and without allowing theological reasons to have any weight whatever, we could wish them all away. They cause unnecessary labor to those who must produce them, and carry intellectual and moral corruption throughout the community, making a rational, to say nothing of a religious, use of Sunday harder if not impossible for thousands of their victims. If there is any sadder sight in nature than a man deliberately sitting down to wallow in a "sextuple" Sunday newspaper, we do not know what it is. The Puritans devised no such tortures for their Sabbath.

THE DIPLOMATIC AND CONSULAR SERVICE OF GREAT BRITAIN.

BRUNSWICK, Me., April 19, 1899.

Although the need of radical reform in our diplomatic and consular service is not a wholly new subject, the discussion of the political and commercial advantages that may possibly accrue to the United States from the adoption of a new foreign policy has given the matter the character of urgency. If we are to enter into delicate political relations with the governments of Europe and Asia, and push our commercial interests abroad in directions and ways hitherto unknown, the necessity of administering our foreign service, in both its branches, on some more rational plan than now prevails is imperative. Of the abundant experience available for our guidance, that of Great Britain is most often cited; but it is to be feared that the knowledge of English administrative methods in this direction, even among many public men themselves disposed to favor reform, is general rather than specific. The recently published "Foreign Office List," an annual official publication, for 1899, exhibits some of the workings of a system having close practical interest for us.

The series of orders in council organizing the civil service of Great Britain, on the basis of examinations designed to test the

fitness of candidates, began with the order of May 21, 1855, establishing a limited system of competition for persons nominated for so-called junior positions. In 1870 the examinations were thrown open to free competition, upon payment of prescribed fees; certain positions, mainly such as were to be filled by promotion or by direct appointment by the Crown, being specifically exempted. An order of the following year fixed the probationary period at six months, during which time the conduct and business capacity of the candidate were to be subjected to tests determined by the chief of the department whose service the candidate intended to enter. Subsequent orders of 1876, 1890, 1896, and 1898 created a lower or second division of clerks, provided for their promotion and progressive compensation, and required vacancies to be filled by promotion from lower grades. By an order of 1896, retirement on a pension at the age of seventy, for persons then in the service, and of sixty-five, for those thereafter appointed, was made compulsory; reserving to the Secretary of State the right to extend the period, where public interest dictated, for five years at most.

For appointment to a clerkship in the Foreign Office, or to the position of attaché in the diplomatic service, the candidate is required to pass an examination in arithmetic, handwriting and orthography, English composition, *précis* writing, French, German, geography, and European history, with related topics in American and Asiatic history, from 1789 to 1871. As optional subjects, two of the following languages, viz., Latin, Italian, Spanish, Portuguese, Russian, modern Greek, and Arabic, are indicated. The *précis* examination consists in making abstracts or schedules of papers containing official correspondence, and drawing up a memorandum, in narrative form, of their contents. There is also a test of general intelligence, "as evinced by the manner in which the candidates acquit themselves under examination, and specifically by the quickness they may show in seizing the points in papers read by them, or read over to them, once or twice." An inspection of the specimen papers printed in the "Foreign Office List" seems to show that the examinations are longer (the time allowed for each varied from two and one-half to three and one-half hours) and more exacting than those in our own civil service with which they can fairly be compared.

The service of an attaché dates from the issuance of the certificate by the Civil Service Commissioners. The first two years, six months of which are spent in the Foreign Office, and the remainder either there or at some foreign embassy or mission, are regarded as probationary. On the satisfactory completion of the two years, the attaché, if he can speak fluently French and one other foreign language, is commissioned as Third Secretary, with a salary of £150. For such as show, upon examination, a competent knowledge of public international law, an extra allowance of £100 a year is provided. A Second Secretary receives an initial salary of £300, increased by £15 annually until the maximum of £450 is reached. The minimum salary of a Secretary of Legation is £500. Members of each of the three classes just named are further granted, in addition to any other salary or allowance, an annual allowance of £100 for a competent

knowledge, colloquial or otherwise, of either Russian, Turkish, Persian, Arabic, Japanese, or Chinese, while serving in any country where such language is vernacular. They are also allowed actual travelling expenses on first appointment, and on removal incident to promotion, and also subsistence money, when subsistence is not included in the passage money. All members of the diplomatic service, whatever their rank, are, in the language of the regulations, "expected to take their turn in whatever part of the world their services may be required"; and secretaries and attachés, whether married or unmarried, must be prepared to go to the post to which they may be appointed. Second and Third Secretaries and attachés are not, as a rule, kept more than two years at the same mission, and the appointments of heads of missions are for a term not exceeding five years; but the Secretary of State may lengthen the term, for special public reasons. Provision is further made for an allowance to such officials, not below the rank of secretary, as may, on account of war or interruption of diplomatic relations, be temporarily withdrawn from active service.

The conditions of entrance to the British consular service are, naturally, less elaborate than those for the diplomatic arm, but the aim—a competent service of permanent officials—is the same. The examinations, required of all candidates either resident in England at the time of their appointment, or passing through England on their way to their first station, include English composition, French (speaking and writing), British mercantile and commercial law, commercial arithmetic, and a sufficient knowledge, for commercial purposes, of the language current in the place to which the person is assigned, to enable him to communicate directly with the Government and the natives. For northern Europe, the language regarded as satisfying this latter requirement is German; for Spain, Portugal, Morocco, and South or Central America, Spanish or Portuguese, as the Secretary of State may determine; and for Italy, Greece, Turkey, Egypt, and places on the Black Sea and Mediterranean, except Morocco and Spain, Italian. A service of three months in the Foreign Office, for the purpose of acquaintance with the methods of business in use there, is required, as far as practicable, of all appointees to consularships on their first nomination. Consular clerks are examined in handwriting, orthography, arithmetic, and one foreign language.

The provisions for pensioning officials in the diplomatic and consular services are somewhat elaborate, and involve, naturally, details of administration not necessarily applicable to American conditions. The general outlines of the system, however, are simple. In the diplomatic service, pensions are granted, on the recommendation of the Secretary of State, to such persons as have served at least fifteen years, ten of which must have been passed in actual service, either continuous or on different occasions, at some foreign post. There are four classes or grades of pensions, the maximum amounts of each being, respectively, £1,700, £1,300, £900, and £700; but the pension may not, in any case, exceed the amount of the salary enjoyed by the pensioner at the time of his retirement. Allowances, calculated on the term of previous service and the salary received, may also be granted to invalided secretaries, officials disabled by injuries received

in discharge of their duties, and such as are withdrawn from active service on account of rupture of diplomatic relations. The acceptance of a salaried office under the Crown, however, works a suspension of the pension, if the income of the office be equal in amount to the pension; if the income be less than the pension, then the latter is diminished by the amount of such income. The pension or other allowance is free from taxes or duties, except the tax on incomes; and its acceptance does not disqualify for membership in the House of Commons.

Pensions for consular officers are provided for by the general laws regulating pensions for members of the civil service. The ordinary rate of superannuation allowance is ten-sixtieths of the annual salary and emoluments of the office for ten years of service, rising by an additional one-sixtieth for each additional year, until, upon the completion of forty years of service, the maximum of forty-sixtieths is reached. The allowance is, regularly, not granted to persons under sixty, except for disability; but, as in the diplomatic service, the right to grant allowances for short terms, and in certain special cases, is reserved. In the case of disabling injuries received in performance of duty, a gratuity not exceeding a year's salary, or such an allowance as, together with any other allowances to which the official may be entitled, shall not exceed the salary, or £300 a year, whichever is greater, may be given; and in case of death from such injury, similar grants may be made to specified dependents. For the purpose of the acts, finally, certain places or countries are, from time to time, declared to be "unhealthy," and, in computing the retiring allowance or gratuity, two years' service in such places is reckoned as three years.

How does such a system work in practice? In particular, is there a reasonable probability of rising from the bottom to the top of the ladder?

Some one hundred and eighty double-column pages of the "Foreign Office List" for 1899 are taken up with a "statement of services"—a series of brief official biographies of all persons living who have served or are now serving under the Foreign Office, either at home or abroad. As an instance of a distinguished public career which has compassed all the stages from attaché to Ambassador, I select the biography of Sir Edmund Monson, the present British Ambassador to France. Omitting items of personal rather than official distinction, this is the record. A graduate of Oxford, Sir Edmund was nominated attaché in March, 1856, passed an examination, and was appointed to Paris. In 1858 he was transferred to Florence, next retransferred temporarily to Paris, and thence, in the same year, to Washington, where he remained as secretary to Lord Lyons, the British Minister, until 1863. In that year, having previously passed a second examination, he was transferred to Hanover, still as attaché. Promoted to be Third Secretary, he was sent to Brussels, and in 1865 resigned, to contest, unsuccessfully, a seat in Parliament. In 1869 he was appointed Consul at the Azores, and in 1871 promoted to be Consul-General for Hungary. He was Second Secretary to the Embassy at Vienna in 1874, and employed on special service in Dalmatia and Montenegro during parts of 1876-77. In 1879 he became Minister Resident and Consul-General to Uruguay, and in 1884 Minister to Para-

guay and the Argentine Republic; in the latter year he was transferred to the Danish mission, thence, in 1888, to Greece, and, in 1892, to Belgium. In 1893 he was made an Ambassador, serving first at Vienna, and, finally, was transferred to Paris in 1896.

Details aside, the English system rests upon four principles: first, appointment only after a suitable civil-service examination, and with no regard to political "influences"; second, a short preliminary training in the Government Office at home, before entering upon service at a foreign station; third, regulated promotion from lower to higher grades, with corresponding increase of compensation; and, lastly, a retiring allowance or pension, proportioned to the term of service and the compensation previously received. It creates, avowedly and of set purpose, an office-holding class, not for the benefit of politicians, nor yet with encroachment upon popular rights, but solely for the reason, enforced by long experience, that in no other way can the public business be well done. Not all who enter the service attain distinction, distinction being a reward for merit and demonstrated ability; but there is assured tenure during competency, and a chance to rise according to the measure of personal worth. The system, doubtless, is not perfect, and, in any case, could hardly be copied in every detail by the United States or any other country; nevertheless, it is the most effective system of diplomatic and consular administration known to the modern world.

WILLIAM MACDONALD.

AT HONOLULU.

HONG KONG, April 6, 1899.

The Pacific is hardly to be called a sea of desolation, but it is surely one of desolateness. A three weeks' voyage from San Francisco to Yokohama showed but one sail, more literally one smokestack, besides our own, if we except small coasting craft along the Hawaiian shores. The vastness and the loneliness of the ocean that oppress the Atlantic voyager are magnified and intensified for the transpacific traveller. Eight days from California, and dawn shows the ranges of Oahu purpling in the morning light. The steamer, with the sun, enters the straight gap in the barrier reef, upon whose coral summit lies a newly-wrecked sailing vessel, and, threading the contracted harbor, reaches the excellent wharf of Honolulu.

As every one knows, the capital of the recently acquired possession is an Americanized town, through which unfamiliar subtropical vegetation flings out its banners. The trading is obviously in the hands of whites, and, to those who know the history of the missions, it is clear that the descendants of those pioneers have applied their inherited intelligence, in part at least, to the material improvement of the country, and, as far as casual observation goes, not unworthily. "Missionary" has become an epithet, not alone for those to whom it properly belongs, but for an element that, independently of active religious work, attends church and upholds outward morality in a community where circumstances make laxness of living easy; and for a political party as well. The distinctively American element is the most conspicuous, but the broadened speech, the rising inflection, and in the shops the recurring decoration of the Union Jack, testify to the frequent Briton. Fortu-

nately, the conquering Irish have not yet reached this outpost, so that the municipal and the higher governments are free from their controlling touch. The native race gives the predominating Hawaiian hue, in varying degrees of dilution, to the street population that is not white. The countenance is pleasant rather than otherwise, the hair straight, the complexion fairly clear, and varies in tone from the quadron to the gingerbread tints of our own streets. The upper lip, as has been expressed, "seems as though the skin were a little too short," and thus upturned is ever ready to break into a smile. There is a considerable Portuguese colony; the Chinese laborers are very numerous, with a few in trade; and the Japanese subjects are so many as to give color to the suggestion that the empire of Nippon may have encouraged this expatriation with the ultimate view of laying claim for control, if not for possession, by virtue of mere force of numbers.

Many of the lower races use the term "men" in designating themselves to foreigners, and "Kanaka" applied to the Hawaiian means "man." The Kanakas, like so many weaker peoples, seem doomed to go down before alien vices and diseases and exotic modes of life. Fresh air and fresh earth are sanitary advantages often abandoned when "civilized" houses and fixed habitations, with a gradually increasing soil pollution, come in vogue. The census marks a steady downward curve in the native blood, although the next enumeration may possibly show that recently imposed hygienic conditions and increasing public care have checked the decline. But remembering that leprosy has laid its unrelenting hand on one in every thirty, and that the combination of ignorance and carelessness is in league against child life, it is more likely that the vanishing point will finally be reached than that the Kanakas, using the word respectfully, will come into their own again. But whatever the physical retrogression, there has been a constant upward trend in other directions, so that at this date more than ninety-six per cent. of the children of school age (six to fifteen years) actually attend school, and, of the Hawaiian and part-Hawaiian population above the age of six, more than eighty-five per cent. read and write. This is almost exactly identical with the rate among the American and European population here, excluding the Portuguese. At Honolulu the Kamehameha schools, which are domestic and manual as well as mental in their training, make a superb monument to the intelligent and patriotic beneficence of their founder, the late Mrs. Bishop, of the royal family.

It is not to be supposed that any considerable proportion of the native population, certainly that of unmixed blood, desired annexation, or indeed that the royal government should be overthrown, weak and personally objectionable in some respects as it may have been. Nevertheless, men who would not have disturbed the Queen upon her throne frankly admit now that material prosperity, a veritable boom that seems to be substantial, has followed the change. Visitors, if not permanent new settlers, are much more numerous, so that, as one resident frankly remarked, the citizens "are overwhelmed with letters of introduction." Capital is growing. The national debt of \$4,000,000 is assured of liquidation by the United States. The volume of general trade is in-

creasing, and sugar culture has attained immense proportions. The growth of the sugar interest depends upon the duties, upon efficient labor, and upon water. First reciprocity and then annexation removed the obstacle of a tariff. Asiatic immigration afforded a perfectly trustworthy and constant service. Driven wells have brought large otherwise useless tracts under cultivation through irrigation from reservoirs. These wells are not truly artesian, as they are called, but they reach a water-bearing level, and pumps complete the work. Some of this water is too brackish for domestic use, but it answers perfectly for the crops, and by it vast new areas have been set in cane. This acquisition of water is doing for the islands what it does for Arizona and the higher table-land of our interior; it brings into service the natural fertility of the soil. But the water-supply is necessarily not exhaustless, and it is probable that each new well will diminish the flow of the older ones. Still, the sugar output is enormous now, with all the conditions for continued production and with an assured market; so that shares in the great companies mean fortunes, and active plantations are better than mines of gold.

The coupled incidents of the Spanish war and of annexation led to a show of defensive force near Honolulu by the general Government, in the form of certain volunteer organizations. A part of these have been recalled, leaving neither a fragrant nor a blessed memory. A battalion of volunteer engineers, who seem very creditable extemporized soldiers, remain; but their former uniformed compatriots do not appear, either in discipline or in personal carriage, to have impressed our newly matriculated citizens or their alien associates as guardians acceptable in efficiency or in morals. In addition to these defects of manner, to put it lightly, the blight of ill-health appears to have fallen upon their camps as upon so many nearer home, and to have added another object-lesson in the matter of military sanitation impressed by a high and unnatural death-rate. A new and better-situated hospital, a more experienced officer at the head of medical affairs, and the withdrawal of the peccant regiment have changed the situation.

Pearl Harbor, so long and so much before the public, is only a few miles further along the coast. When its mouth and approaches are properly opened (not a difficult undertaking), it seems likely to be not merely a valuable and necessary naval and military station, but the natural harbor for commerce as well as for war. It is not simply a single sheltered basin, but it embraces several deep-water bays reached through a common defensible entrance. It would not be unreasonable to find the future commercial metropolis of the islands ranged around that landlocked haven, while the political capital continues from its present slope to look out upon the roads and minor refuge that now make up Honolulu harbor.

To recur to Honolulu, water systematically introduced has transformed an occasionally dry and dusty plain, and made perpetual verdure possible. Frequent hydrants assure against fire as well as drought, and indicate pipe-lines for domestic service. In reliance on a porous subsoil, as is not new in sanitary history, there is no artificial method to carry away the waste, and cesspools down to this substratum receive the

domestic sewage. Appropriations have now been made for town sewers, and this summer will see their introduction, with the outflow entering the sea far beyond low water, according to the plans of a distinguished New York engineer.

At the time of these observations, very sincere distress oppressed the Hawaiian population, with whom the white residents thoroughly sympathized. Upon the deposition and the subsequent abdication of Liliuokalani, the theoretical succession devolved upon the Princess Kaiulani, a young woman of mixed blood, of cultivation and of attractiveness. She was the offspring of the marriage of the Queen's sister, Princess Li-ke-li-ke, with a Scotch resident; and Victoria Kaiulani Cleghorn, after the revolution, hardly represented the royalists' hopes as much as she impersonated their sentiment. Of pleasing aspect and gracious manners, accomplished in European tongues, as well as educated in the serious courses of an English school, she returned home too late to serve as a rallying-point, when affairs were yet unsettled, even if it were possible that the monarchy could be revived. But she was popular among the foreigners of the capital and beloved by her mother's race. Living quietly at her own place in the country with her father, she was necessarily an important but not an obtrusive personage, and she accepted her ill fortune with fortitude and without public repining. The remains of this interesting young woman, with whose life had expired the last breath that connected the old régime with the present, lay in state at her residence, where a mourning and respectful concourse paid constant homage. The last of the royal line, there was, for many, more than the grief of personal bereavement—there was the sad assurance that the chief of their race had fallen, with no possibility of revival. No one could cry, "The king is dead; long live the king!" whether the sentiment looked forward to the head of the state or merely to a representative of Hawaii. The graceful body, in its white robes and royal trappings, represented not rest, but extinction.

With equal taste and judgment the Government recognized this as a public occasion, and extended official assistance. The public band played dirge music in the grounds; the police arranged for not order, for there was no disorder, but system in the throng; uniformed officers represented at this bier of the past the respect of the present; and on the public buildings the flag of the republic was at half-staff for the princess in death. There was a purple velvet pall over the couch, with the royal cipher embroidered thereon in gold; officers who seemed to be of the native troops, or possibly representing the local administration, stood at the head; and the guard of honor on each side was four officials wearing certain insignia and bearing imposing feathered staves or wands of ceremony, which they lowered together midway over the body, and raised again, slowly and solemnly, in time with the strains of music. It is singular and interesting that the distinctive decorations of the royal cloaks and helmets and staves of office in the barbaric days, when the throne was founded on conquest and maintained by force, should be of delicate feathers, naturally associated with more gentle thoughts than those of war, and that these ornaments in their final office should have a

peculiar fitness in doing honor to the youthful Kaiulani. In the respectful procession that passed with reverence were manifest transient tourists, white residents, who by public policy may have been committed to the republic and to annexation, Hawaiian youth too inexperienced to have well-considered opinions, and mature and aged natives, who may have seen before them a picture of their country and their race. All were serious, and the natives were solemn and sad, with trembling faces and weeping eyes.

The apartments through which the procession moved were those lately occupied by the Princess, and were furnished with tasteful simplicity, although containing occasional signs that her birth rank had not been forgotten. In the rooms were Hawaiian and other ladies, peculiar decorations upon whom seemed to indicate hereditary or conferred right of attendance. Two large registers were opened on a veranda, where those who had paid this mark of respect were desired to inscribe their names—an interesting commentary upon the literacy of the public, to whom the ceremony was freely open, and, indeed, whose peculiar function it was. The body, after lying in state for a week, on the succeeding Sunday was to receive a state funeral from the Kawalahao church, the oldest and apparently the largest in Honolulu, one always associated with distinctively Hawaiian religious exercises, and originally built, if tradition is correct, by native offering of labor and the contribution of individual stones. As the grizzled sexton, superintending certain preparations, later in the evening remarked with some pathos: "No more kings; no more queens. Now, all Americans." The building most closely associated with the beginning of civilized life in the Hawaiian rulers was that which should see their literal exit, as Kaiulani was borne from its doors. D. Q.

CHRISTINA OF SWEDEN.

PARIS, April 20, 1899.

Baron de Bildt, the present Minister of Sweden and Norway in Rome, has taken advantage of his situation to study the letters written by Queen Christina of Sweden to Cardinal Azzolino, and has just published this correspondence, together with an historical study of an extraordinary person (Paris: Plon, Nourrit & Cie.; New York: Dyrssen & Pfeiffer). Christina has generally been rather severely treated by historians. Protestants have not forgiven her conversion to Catholicism, and Catholics have been scandalized by the behavior of the royal convert. She has offended the Swedes by her want of patriotism; she may be said to have surprised everybody by her cosmopolitan life, her endless agitation. In France, the drama of Fontainebleau is all that is remembered of her.

The documents concerning Christina are imperfect. Before her death she ordered that all her papers should be destroyed, and the greater part of her extensive correspondence has thus been lost to us. M. de Bildt offers to the public a series of letters written by her during her second journey through the north of Europe, from 1666 to 1668. "She is found in it," he says, "speaking with an entire frankness and complete confidence. We shall see her in turn proud, vain, humble, and simple; sometimes hard and wicked, more often generous and indulgent; always witty,

sometimes gay; always conscious of her greatness and full of herself, but also faithfully and tenderly attached to her friend, and in this affection showing herself the true woman." There must have been similar series of letters written during the two journeys which the Queen made from 1656 to 1658 and from 1660 to 1662; but they have disappeared, and were probably destroyed immediately after her death. Her will was opened on the very day she died, and Cardinal Azzolino entered immediately into possession of everything there was in her palace. Azzolino was ill himself, and died in the following June. The work of destruction which he began during the last days of his life was left unfinished. There remained about 10,000 letters or papers of various kinds; how 4,000 of them entered into the collections of the Albani family, M. de Bildt has not been able to find out. The Albani collection was used by the Swedish historian Arckenholtz, who published four hundred letters in 1759 and 1760 in the volumes iii. and iv. of his 'Memoirs for the History of Christina.' The documents in question are now, curiously enough, in the library of the School of Medicine at Montpellier, France (where they arrived as a consequence of the occupation of Rome by the French in 1798). Some other papers of Queen Christina and Cardinal Azzolino are still in possession of the Cardinal's family, and M. de Bildt has been able to consult them in the archives of the present Marquis Azzolino.

In 1620, when Gustavus Adolphus had to take a wife, he felt some desire to marry a handsome girl, belonging to the best nobility of the country; but, says M. de Bildt in a very Darwinian style, "this tendency to natural selection was immediately checked by the authority of his mother, who was strongly imbued with the necessity of the document." By the word document, M. de Bildt means the inscription of certain names in certain genealogical books, parchments, or papers, without regard to the physical or moral condition of the bearers of the names. "If," he says, "the document is right, though the individual may have in himself the germ of the most dangerous maladies for his successors, he is 'well born,' and seems desirable for those who wish to maintain the race." This is said in disparagement of the marriage of Gustavus Adolphus with the Princess Mary Eleanor of Brandenburg. This union left nothing to be desired from an aristocratic point of view, but the young bride had only an insignificant beauty, a more than mediocre intellect, and her nervous system was weak and diseased. She adored her husband, but inspired him only with an affection "which did not rise above the senses." It is clear that M. de Bildt wishes to invoke the laws of descent, so as to throw on the unfortunate Princess of Brandenburg the responsibility for all the defects and the vices of Queen Christina.

Christina was born in December, 1626. She was six years old when she became an orphan. She has herself given an account of her education, in a manuscript published by Arckenholtz. She showed great intelligence at a very early age. She pretends in her Memoir to have been precocious in entertaining religious doubts. Her governess was her aunt, Princess Catherine, sister of Gustavus Adolphus, the wife of the Palatine Count of Deux-Ponts. "I had much esteem," she says, "only for my preceptor and my governor." The former was a Dr. John Mathias, who be-

came Bishop of Strängnäs; the governor was Axel Banér, an intimate friend of Gustavus Adolphus. At the age of eighteen, she assumed the royal authority, and showed herself at once the true daughter of Gustavus Adolphus. Her activity, her moderation, her application were much admired, and she became rapidly popular; she was compared to Minerva and was called Pallas Nordica. She concluded two treaties of peace—one with Denmark, the other with Westphalia—both favorable to Sweden.

She chose a favorite at the age of twenty, Count Magnus Gabriel de la Gardie. She made him colonel, general, ambassador, grand marshal of the court. Was it love, was it friendship? Nobody ever knew exactly. Christina speaks of herself in these terms in her Memoir: "My ardent and impetuous disposition has given me as much inclination towards love as towards ambition, . . . but my ambition, my pride (which was incapable of submitting to anybody), my contemptuous character have been marvellous preservatives." This memoir we speak of was modestly dedicated to the Almighty. She adds: "However near I have been to the precipice, your powerful hand has drawn me from it. You know, whatever envy and malice may have said, that I am innocent of all the faults with which my enemies have blackened my life. I confess that if I had not been born a woman, my natural disposition would perhaps have led me into terrible disorders, but you have always made me love glory and honor more than any pleasure."

This extraordinary Life, dedicated to God, was written in Rome, at a time when people were talking much about the relations of the Queen with Cardinal Azzolino; it was designed to cover the Cardinal as much as herself. M. de Bildt does not take the Queen implicitly at her word; he gives us the list of her favorites (people nowadays would perhaps call them flirts); the French Doctor Bourdelot, called for a time to Stockholm (Bourdelot was among the intimate friends of the famous Prince de Condé), young Count Tott, Steinbergh, the diplomat Dohna, and others. One of them deserves special mention, namely, Pimentel, envoy of the King of Spain, who arrived at the Court of Sweden in 1652. The Queen treated him, as soon as he came, with particular favor, and to Pimentel was confided the desire which Christina felt to join the Catholic Church. This desire, which was long kept a secret, may explain their great intimacy.

Christina was not a Messalina on the throne, nor even a Catherine II.

"She was a young woman," says M. de Bildt, "of delicate health, regulating her life without regard to the laws of hygiene, over-exciting her brain and her nerves, looking for every possible satisfaction of pride and vanity, fond of flattery and applause, enjoying her intellectual superiority, . . . restless, and conducting with the same diabolical ardor study and pleasure, . . . in short, an acute neuropath."

The history of her reign is well known; the two most interesting points are her conversion and her abdication, the beginning of a second life. Christina never was a believing Lutheran. "I believed nothing," she says in her Life, "of the religion in which I was brought up." She made the acquaintance of the great philosopher Descartes, author of the 'Discours sur la méthode'; but Descartes died four months after his arrival at Stockholm (February 11, 1650). She had been struck by the fact that though he was a

philosopher, he was also a fervent Catholic. The first Catholic priest with whom she came in contact was the Jesuit Macedo, confessor of the Portuguese embassy. She entered through him into negotiation with the General of the Jesuits and with Cardinal Fabio Chigi, one of the negotiators of the Congress of Münster. She wished to know if the Pope would allow her to make herself Catholic in secret and to remain a Lutheran to her people. The answer was negative. "Then," said she immediately, "I must abdicate." She abdicated in June, 1654, leaving the sceptre to her cousin Charles Gustavus, and left Sweden immediately for Flanders, having placed herself under the protection of Philip IV. of Spain. Before leaving Sweden, she made an arrangement with her successor and the Chambers whereby she was to receive the revenue of several provinces, which she would continue to administer through agents of her own choosing. No sum was fixed; but these revenues had an annual value of about 300,000 rigsdalers of Sweden (a million francs), quite a considerable sum for Sweden; but the style in which Christina lived, and her disorder, threw her into perpetual financial difficulties, which at times became almost inextricable.

Christina made her formal conversion with great solemnity before a Legate of the Pope on the 3d of November, 1655, in the Cathedral of Innsbrück, and left that city for Italy. Her journey was very theatrical, and was a continual festival. She travelled through Trent, Mantua, Ferrara, Bologna, Rimini, Pesaro, Ancona, Loreto, Foligno, Assisi, and arrived in Rome on the 20th of December, 1655, with an enormous suite. A *coralcato solenne* took place in her honor. On Christmas Day, the Queen received the Communion from the hands of the Pope. A new life was beginning for her, but she could not be contented with feasts, operas, ceremonies. Her mind was too restless, and her ambition too great. She entered into all sorts of schemes, and made plans for the conquest of Naples by the French. She was drawn from the Spanish faction chiefly by Cardinal Azzolino, who had become her favorite, if not her lover. Azzolino was a trimmer, and went from the French side to the Spanish side, and from the Spanish side to the French.

In 1656, Christina made a journey to France, with Monaldeschi, her *grand écuyer*, and Santanelli, her grand chamberlain. The details of this journey are well known through the Memoirs of Madame de Motteville and those of Mlle. de Montpensier. Some letters of the Queen to Azzolino given by M. de Bildt furnish us new details. The drama of Fontainebleau, where Monaldeschi was murdered in the great gallery by the Queen's order, is an event which has excited the imagination of many writers—Alexander Dumas the elder and Browning among them. Of Browning, M. de Bildt says: "I confess that I have not much understood the poem of the latter poet, except that he knew nothing of the historical character of the personages of whom he spoke." Love had nothing to do with the death of Monaldeschi. Christina's action can be explained, but cannot be justified, and will always remain a terrible blot on her memory. Monaldeschi was certainly not a sympathetic character, but Santanelli, his adversary, protected by the Queen, was even less so, and it is not the least reproach that can be made against the Queen that she sacrificed a victim to such a mean personage.

We must refer to M. de Bildt for all the details of the drama, and for the attitude she took after it. His voluminous work is a document of permanent value. To the end of her life, in Rome or on her journeys, in her relations with Sweden, with France, with the Church of Rome, she continued to be the same restless, clever but irrational person. Christina died at the Riario Palace, leaving Azzolino her universal heir. She was buried in the vaults of Saint Peter. Azzolino died the 8th of June in the same year.

Correspondence.

THE UNITED STATES IN SAMOA.

TO THE EDITOR OF THE NATION:

SIR: Please allow me, in your columns, at this critical time, to speak a word for the Samoans.

I have lived in Samoa; I know the people. I also know how hard it is for those who have not lived there to think of these brown, half-clad natives other than as negroes or savages. They are neither. They are as unlike negroes as negroes are unlike the white population of America. Neither are they savages, nor have been, within the memory of man; but they are a civilized and Christian people. All the world knows in what high esteem they were held by Mr. R. L. Stevenson. Lord Pembroke pronounced them the noblest and most lovable race of people he had ever known. They are naturally independent and self-respecting. They are law-abiding and love peace. There can be no better proof of this than the fact that when Mataafa, the great hero of Samoa, their rightful ruler by birth and choice of the people, was brought back from exile during the late King's lifetime, they sought not by a single act to overthrow the existing government. They had never forgotten their rightful King in captivity, and welcomed him back with such joyful demonstrations as have never before been seen in Samoa. But it was as their loved hero they welcomed him, while they continued their allegiance to the King the whites had put over them.

It was not until Malletoa Laupepa died that they crowned Mataafa King. Then was brought forward this miserable seventeen-year-old boy, Tanu, by the missionaries and Chief Justice Chambers. I doubt even if he is a true son of old Malletoa Laupepa, as I never heard of him in all the time I lived in Samoa, and I knew the King and his family. Tanu had no native adherents but those of his own clan, who, by the ancient customs of Samoans, had no choice but to stand by him. They were the same who fought by Mataafa's side in the war of 1888. Our own native family of Vailima were of this clan, and I know their hearts were with Mataafa; and even after the conflict of the forces of Mataafa and Tanu on January 1 of this year, a duel in which the honor of the clan was satisfied, I know how peaceably they would have returned to their smoking villages and rebuilt their houses and replanted their fields.

Mr. Chambers is a Southerner. His attitude towards the Samoans was always that of a master towards negroes. He openly said once, when Land Commissioner in Samoa after the last war, "that three acres of land was enough for any native." I am glad to say that he was promptly told, and that

by an American citizen, "that he was not sent to determine how much land was enough for a native, but to whom the land belonged." I was in Samoa when he received his appointment as Chief Justice, and know with what disfavor it was received by the best whites in Samoa. His decision in regard to the kingship was based on a mere quibble and not on basic right and wrong. He founded it upon a protocol to the treaty that Germany had demanded in the Berlin Convention and later, through her consul-general, had withdrawn; a protocol never made known to the Samoans when they accepted the treaty, and about which there has ever been a question of legality.

When Admiral Kautz arrived upon the scene, there was a provisional government, with Mataafa at its head, which the three consuls had agreed to recognize until they could consult with their home governments. Within two days of his arrival, this would-be Dewey overthrew the provisional government, began shelling defenceless villages, and sending troops against the Mataafa in the bush where they had been driven. The blood of every native and white shed after his arrival, meant to keep peace and protect the interest of foreigners, is as much on his head as if he had murdered each one with his own hands.

America and England are in the same position now that Germany was in 1888-'9, when, with arms, we demanded she desist trying to force upon the Samoans a King they did not want. As Germany was wrong and America right in 1888-'9, so are America and England wrong now and Germany right.

Vailele, where the Samoans withstood the attack of the English and American forces on April 1, is the same battlefield where they repulsed the Germans in 1888. The battle of April 1 was the Lexington of Samoa.

"You know the rest. In the books you have read
How the British Regulars fired and fled—
How the farmers gave them ball for ball,
How behind each fence and farmyard wall,
Chasing the red-coats down the lane,
Then crossing the fields to emerge again
Under the trees at the turn of the road,
And only passing to fire and load."

But, to our lasting shame and dishonor, we were red-coats in that fight.

I am, very respectfully yours,

KATHARINE OSBOURNE.

MADIRA, April 24, 1899.

WOOD ENGRAVING VS. "PROCESS."

TO THE EDITOR OF THE NATION:

SIR: I am glad to see, in the illustrations of the *Century*, at least, evidence of a returning sense of the value of the pure line in wood-cut illustrations, and dissatisfaction with the process reproduction of drawings in tint, which has been debasing our book illustration so long. Cheapness does not stand for everything in any direction except the alimentary, and not always there, and I doubt if what has been gained in certain qualities of fidelity in reproduction will ever compensate us for the discouraging effect produced on the wood-cutting craft by its so large adoption. Of course this was in a measure inevitable, since there are so many cases in which the cheapness of production is the necessary condition of the illustration being produced; but wherever the artistic quality of the reproduction, especially of works of art, is important, it seems to me that every degree of utilization of "process" is accompanied by a corresponding deterioration in quality.

Taking the *Century* for April, which is the last I have, and which represents all, or nearly all, the stages of assisted work, it is impossible not to recognize the sterling value of process in such reproductions as the portrait of Admiral Montojo and that of Gen. Greene, but nothing outside of bare necessity makes the portraits of Merritt and Chadwick permissible; while if we take the best of the mixed plates, that of the portrait of Dewey, and compare it, simply as rendering of flesh, and luminous tint, suggesting at least the luminousness of the flesh, with the head by Cole in a previous number, the "Parson's Daughter" after Romney, it will be seen that the difference is radical. The luminousness of the pure line, pure black in immediate contact with pure white, is not to be attained by any graduation of tint which does not give it. The only question, and this is one which only the engraver himself can fully answer, is how far the process basis could be made use of in the production of line work like that of the Cole block. If the process gradation appear at all in the finished work, it seems to me to mean so much loss of quality; if it does not appear, it is hard to see what advantage the use of process has over the former method of working on a photographic reproduction on the block, which is that of the Cole cutting. To my taste, the "Parson's Daughter" is the most exquisite example of pure line in a head that I know of in contemporary work, and if process is going to make such engraving unattainable by lowering the technical education of our future engravers, it will be a misfortune with no adequate compensation.

And, by the way, it is a matter of interest to inquire how the mixed style is going to affect the absurd decision of our Treasury which classes wood blocks as carved wood at 30 per cent. duty, while it permits a stereotype plate, which the engraved process plate is, to come into the United States free of duty. According to the sapient logic of our Treasury, if Mr. Cole can manage to do all his work on a process plate, he can escape the duty which now prevents his sending his large blocks to be printed in America. As he still holds to his purpose of bringing out the large engravings from the old Italian masters of which there was mention in the *Nation* several years ago, this question may be important to him and us.—Yours truly,

W. J. STILLMAN.

CANDERBURY, W. BOURNEMOUTH, ENGLAND.

GALILEO'S REASONING.

TO THE EDITOR OF THE NATION:

SIR: Galileo endeavored to show by a *priori* reasoning that the velocity of a falling body cannot be proportional to the distance fallen. In my 'History of Physics' I adopt the view that Galileo's argument on this point is illogical. Your reviewer of my history tries to show (p. 317) that Galileo's reasoning is sound, but I cannot accept his position. Galileo says:

"If the velocity with which a body overcomes four yards is double the velocity with which it passed over the first two yards, then the times necessary for these processes must be equal; but four yards can be overcome in the same time as two yards only if there is an instantaneous motion."

To test these assertions, we express Galileo's assumption by the formula:

$$\frac{ds}{dt} = v = as,$$

where a is some finite constant (not zero).

If it is possible for s to attain a finite value, then we see from this formula that the velocity is finite. Therefore, having a finite velocity, the body cannot pass from two yards to four yards *instantaneously*. Hence, Galileo's conclusion does not follow. The reason why the reviewer finds the time for this passage to be zero is because (contrary to Galileo's hypothesis) he assumes *this time to be zero*.

As a matter of fact, the distance s can never attain a finite value. The correct conclusion to be drawn from Galileo's assumption is that the body can never begin to move. Since Galileo concludes that instantaneous motion is the result when really there can be no motion at all, his reasoning is fallacious.

FLORIAN CAJORI.

[Galileo's reasoning (which, by the way, is not, properly speaking, *a priori*) was intended to refute the hypothesis that the velocities of a falling body at different times are proportional to the spaces described from a state of rest. This it did by showing that that hypothesis, conjoined with the indisputable facts that neither the time occupied in falling a finite distance nor the velocity acquired is infinite, constitutes an absurdity—that is to say, leads logically to contradictory results. We gave a conjectural restoration of the complete argument of the youthful Galileo, which in his extreme old age he but imperfectly indicated (*Opere*, 1842-56, vol. xiii., p. 161), and remarked that, so understood, it involved no logical flaw.

It is this assertion that Prof. Cajori disputes. When a disputant says an opponent's argument involves a fault of logic, it is his duty to point out clearly just wherein that fault consists. Prof. Cajori does not do this when he says that the reason we find the time to be zero is because we assume the time to be zero, for we made no such initial assumption, but only proved it must be so according to the hypothesis, if the whole time of fall is not infinite.

In that proof Prof. Cajori, it seems, can find no flaw. But he offers two arguments to show that such flaw there must be. The first of these consists in showing that the hypothesis leads to a conclusion contrary to that which Galileo deduces from it. This, however, would prove Galileo's reasoning wrong only on the assumption that the hypothesis is not one of those from which contradictory conclusions can be correctly deduced; that is, it shows that Galileo's reasoning is wrong only in case Galileo's conclusion that the hypothesis is absurd is wrong. Thus, Prof. Cajori's first argument is a *petitio principii*.

His other argument is, that Galileo's reasoning must be fallacious because quite a different absurdity can be deduced from the hypothesis. This would be good reasoning only if an absurd hypothesis could lead to but a single absurd consequence. Now, this is never the case.

Every mathematician knows that the

solution of the differential equation

$$\frac{ds}{dt} = as$$

is $s = Ce^{at}$. In order that s and t should both be zero together, C must be infinitesimal. Then, for a finite value of s , either a or t must be infinite. That is, either the acquired velocity or the time of fall must be infinite. Galileo's argument first adduces the fact that the time is finite, and on that assumption concludes that the hypothesis would involve an infinite acquired velocity, which is absurd. Prof. Cajori says this argument is illogical, because the true logical procedure is first to adduce the fact that the acquired velocity is finite, and on that assumption to show that the time of fall is infinite, which is absurd. The truth is, that these two arguments entirely agree and support one another, and must stand or fall together; so that Prof. Cajori's second argument only goes to show that Galileo's reasoning is correct, while his first argument in no degree impugns it.

We must not be understood as acknowledging the logical accuracy of Prof. Cajori's remarks in points which, for brevity's sake, we leave unnoticed.—ED. NATION.]

Notes.

Small, Maynard & Company, Boston, announce that Mr. Dunne's new book, 'Mr. Dooley: In the Hearts of his Countrymen,' will be published by them next September, and 'The Dreyfus Case,' compactly presented by Richard W. Hale, a lawyer of Boston.

Lee & Shepard, Boston, announces for the early fall 'For Love's Sweet Sake: Selected Poems of Love in All Moods,' edited by G. Hembert Westley; and 'Camping on the St. Lawrence; or, On the Trail of the Early Discoverers,' a boy's book, by Everett T. Tomlinson.

Drexel Biddle, Philadelphia, has in press Ouida's 'La Strega'; a translation of Maupassant's 'Strong as Death,' by Teofilo E. Comba; 'An Atlantic Tragedy,' by W. Clark Russell; and 'Arctic Romances,' by Albert White Vorse, a member of Lieut. Peary's expedition in 1892.

Additional announcements from D. Appleton & Co. are 'A History of the American Nation,' by Prof. A. C. McLaughlin—the first volume in the new "Twentieth Century Series"; 'A History of Bohemian Literature,' by Count Lützow, in the "Literature of the World Series"; and 'Idylls of the Sea,' by F. T. Bullen.

'A Princess of Vascony,' by John Oxenham, will be published by G. W. Dillingham Co.

Mr. J. C. L. Clark's 'Two Summer Islands and Papers,' in preparation by C. de Hasbrouck, Boston, will contain sixteen pictures from photographs and old prints, and an historical map.

Lawrence & Bullen, London, who recently published 'From Cromwell to Wellington,' are about to issue a companion volume, 'From Howard to Nelson: Twelve Sailors.' The general editor is Prof. J. Knox Laughton, assisted by Vice-Admiral Sir

Frederick G. D. Bedford, K.C.B., Captain Montagu Burrows, R. N., Admiral Sir Edward Fremantle, K.C.B., Admiral Sir R. Vesey Hamilton, G.C.B., and other commanders of long and varied experience.

What the procession of alumni—plus the invisible spectrum of the absent and departed—is to a college at its commencement, the file of authors is to a publishing-house of long standing and a just pride in its function and history. To show this file is worth a book, has been the thought of a Boston house, and the result is one of the most attractive products of the Riverside Press—'A Catalogue of Authors whose Works are Published by Houghton, Mifflin & Co. Prefaced by a sketch of the firm, and followed by lists of the several libraries, series, and periodicals. With some account of the origin and character of these literary enterprises.' This full title-page leaves room for little further description of the contents; but it should be said that a brief biographical sketch of each author precedes the list of his works and editions emanating from the firm in question, so that the catalogue has on this side the value of a book of reference for foreign as well as American writers. There is, besides, an index to the publications; and Hawthorne and the five contemporary poets whose works are exclusively controlled by Houghton, Mifflin & Co. (and who yet await their peers in succession) are well portrayed in an etched frontispiece.

On April 23 Geheimer Commerzienrath Adolf Kroener of Stuttgart, Germany, completed the fortieth year of his activity as publisher in connection with the Union Deutsche Verlagsanstalt, and as the present head of the famous house of Cotta. The living authors whose works have been issued by him—Hermann Sudermann, Ludwig Fulda, Adolf Willbrandt, Paul Heyse, Hermann Lingg, Wilhelm Hertz, Otto Braun, E. P. Evans, F. Jodl, Sigmund Riezler, Richard Weltrich, and many others—celebrated this anniversary by presenting him with a "Gedenkbuch," consisting of sheets of heavy paper of uniform size and superior quality, on which each author wrote the expression of his personal sentiments in a manner suitable to the occasion, and usually in poetic form. The folio volume, composed of these autographic productions elegantly bound, possesses a unique and highly interesting character, inasmuch as it contains contributions by many of the most distinguished literary men and scholars of Germany. It is also a memorial which Herr Kroener, who for two-score years has been the warm friend and wise counsellor of German writers and an efficient promoter of German letters, richly deserves.

In 1659 J. G. Cotta, whose ancestors were Italian, and had migrated to Germany early in the fourteenth century, married the widow of the academic bookseller, Philip Brunn of Tübingen. The bookstore which his wife brought in dower now became the "J. G. Cotta'sche Buchhandlung," which, however, did not begin to rank high as a publishing house until 1787, under the direction of his great-grandson, Johann Friedrich Cotta, who stood in intimate relations of friendship to Herder, Goethe, Schiller, Jean Paul Richter, Wieland, Tieck, Voos, Zachokke, Fichte, Hegel, Schelling, Alexander and Wilhelm von Humboldt, and nearly all the most illustrious Germans of his time. This enlightened and genial spirit became traditional in the Cotta establishment, and has always characterized

its intercourse with the authors whose works it has published, and who are nearly all representative men in literature, art, politics, finance, political economy, history, biography, poetry, philosophy, and theology. It has issued numerous periodicals devoted, for the most part, to belles-lettres or to special departments of science. On the death of Karl Cotta, in 1888, the business, with the right of retaining the name of the firm, was purchased by Kroener, who had, in fact, held it by lease since 1879. Under his direction it has preserved its reputation, and even enlarged its sphere, and will doubtless exert as beneficent an influence in the twentieth as it has exerted in the nineteenth century.

A monumental labor in the cause of peace, authorized by Congress three years ago, is concluded, with good omen, on the eve of the Czar's Disarmament Congress. We refer to the 'History and Digest of the International Arbitrations to which the United States has been a party,' in six stout volumes, paged continuously, of which the fifth is composed of appendices and an index, and the sixth wholly of maps, though maps are interspersed in volumes I.-IV. This task was confided to Prof. John Bassett Moore of Columbia University, late Assistant Secretary of State, who may take a just satisfaction in it, from any point of view. The appendices give the text of the treaties relating to the respective arbitrations, together with "historical and legal notes on other international arbitrations, ancient and modern, and on the domestic commissions of the United States for the adjustment of international claims." The French indemnity, the Danish, Neapolitan, Peruvian, Brazilian, and Chinese, the Florida claims and the *Alabama* claims, are some of the heads of this portion; and the last section is "Plans for Permanent Arbitration." This invaluable work of reference is certain to play a useful part in promoting the federation of the world.

'The War of the Future' is the title of the much discussed work of Bloch which is generally credited with having exercised such marked and potent influence on the Czar in his propaganda for the Peace Conference. The work in question is such a complete thesaurus of data and discussion of the necessary character and consequences of the future war, in view of the phenomenal development in war equipments and technic, that European critics who contest Bloch's proposals fully acknowledge the exceptional value of his collection of materials. A German translation of the series is now in progress, under the title of 'Der Krieg,' to appear in six volumes, of which the first, second, and last have been issued. As these proportions will prevent the general circulation of the work, the Munich committee organized to agitate in favor of the Peace Conference has prepared a brief summary, covering seventy pages, and sold at the nominal price of sixty pfennigs. It is published by the house of Vita. The preface declares that this abstract is published "to enable every one intelligently and on the basis of the leading facts to understand the problem involved."

With its thirty-sixth annual issue the 'Statesman's Year-book' (Macmillan) makes an irresistible bid for this market by prefixing a special section for the United States prepared by Carroll D. Wright. The matter here most intelligently condensed and arranged and indexed is a statistical exhibition of the government of our country, in all its

branches; of the natural industry and growth, finances, education, labor conditions and legislation, parties and elections; of municipalities, with a novel and valuable table of city population, revenue, debt, valuation, tax-rate, names of mayors and city clerks. The personnel of the Federal Administration and of the consular service is also recorded, and in many more ways than we can enumerate this compilation will prove a remarkably convenient handbook. Hawaii and Porto Rico, Cuba and the Philippines not less, are similarly described as American territory, with maps. In the foreign portion of the 'Year-book' are timely maps of Newfoundland (with reference to the fisheries dispute with France); Africa, with Rhodes's wedge betwixt east and west Continental colonies or "spheres"; and Hong Kong, with its recent aggrandizement on the mainland.

The French Revolution has been studied chiefly as a grand political tragedy. Its social aspects have not received their share of scholarly attention, and so it is practically an unworked field which M. André Lichtenberger has investigated in his '*Le Socialisme et la Révolution française*' (Paris: Alcan). Last year M. Espinas published certain selected lectures, delivered at the University of Paris, on the same subject, but they were merely an argument against socialism, based upon a misconception of the Revolution as one long scene of disorder and ruin, a horrible example of the pass to which socialistic theories may hurry a great state. M. Lichtenberger has approached his task under the auspices of a better historical method. His previous work, on '*Le Socialisme au XVIIIe Siècle*,' had been favorably criticised. In his new volume he finds that the Revolution (particularly the latter part of 1793) is an epoch in the development of socialism, whose theories, which had usually been put forth by the philosophers, then first found their way into the speeches of politicians. Moreover, the line of social cleavage ran no longer between the privileged and the unprivileged, but between the rich and the poor. This is all that socialism owes to the Revolution, thinks M. Lichtenberger, for the people in 1789, judging from their *cahiers*, had no socialistic aspirations, and even the Jacobin leaders took only the most timid steps towards social reorganization, although their oratory glowed with a philosophic hatred of inequality.

The Boston Book Co. has put out as its sixth "Bulletin of Bibliography Pamphlets" the 'Children's Reading-List on Animals,' compiled by the Pratt Institute Free Library of Brooklyn, with the chief mammals in view. Alice's "Walrus and the Carpenter" finds a place with Wordsworth's dog poem, "Fidelity," Harris's Bre'r Rabbit, Don Quixote's Rosinante, Byron's Maseppa, Kipling's "How the Camel got his Hump," and much genuine natural history, from Darwin to Hornaday.

Two bulletins just issued from the office of the Register of Copyrights at Washington possess a wide interest. The first is the present Copyright Law of the United States, annotated and indexed by Mr. Solberg, together with lists of countries with which we have copyright relations and of Congressional acts regarding copyright from 1790 to 1897 inclusive. The second is "Directions for Securing Copyrights," with a useful list of articles not subject to copyright protection. A note states that the weekly catalogue of copyright entries is distributed by

the Treasury Department, and may be subscribed for at five dollars a year, through the nearest collector of customs.

The April issue of the *Pennsylvania Magazine of History and Biography* is noticeably rich in Franklinitiana. The opening paper, by John W. Jordan, exhibits Franklin improving his opportunities in England in 1758, as a family genealogist, and is illustrated by numerous highly interesting facsimiles. Much information is here given supplementary to that contained in the *Autobiography*, and which deserves a place in any new edition of that classic. There is a true Franklinitian flavor in a letter from a cousin, Mary Fisher, who died a few months later. The Folger pedigree is recorded among the rest. The frontispiece to this number is a valuable pen-portrait of Franklin, by Benjamin West.

John J. Boyle's seated statue of Franklin for the front of the Philadelphia post-office is the most interesting plate in the *Artist* for April (New York: Truslove, Hanson & Combs). They view selected, though said not to be the best, implies a genuine work of art.

The puzzling question how far difference of race or nationality may affect the competency of the literary critic is discussed by Dr. Marcou in his essay, "Are French Poets Poetic?" in the last number of *Publications of the Modern Language Association of America*; and now M. de Wyzewa raises it in his critique of the works of Conrad Ferdinand Meyer (in the *Revue des Deux Mondes* for April 15), which is surprisingly at variance with the well-nigh unanimous judgment of German readers and critics. On some points he is doubtless in error, as when, in speaking of C. F. Meyer's style, he considers the use of the pleonastic negation a barbarism due to French influence; but some other, more important, criticisms are just, from the French point of view, and valuable, as leading to a less biased appreciation of the eminent Swiss poet and novelist. It cannot be said of M. de Wyzewa that he lacks what Mr. Saintsbury calls the essence of criticism, viz., the ability "to appreciate what you don't like." Byron, Helne, Emerson, Tennyson, we learn from Mr. Marcou, did lack this faculty, at least in respect of French poetry—but they were only dilettanti in criticism.

Dokumente der Frauen is the title of a new monthly published at Vienna (Magdalenenstrasse 12), whose purpose is to make known the actual facts pertaining to the life conditions of the various groups of wage-earning women, more especially in Austria. It appears from the census of 1890 that of nine million women above the age of ten, in that country, six and one-quarter millions were earning an independent livelihood; the proportion of women to men of the wage-earning class being 79 per cent., against 39 in Germany, 26 in England, and 15 in this country. It is no wonder that under such circumstances the idea should have arisen among the more fortunate of the sex to seek the relief of misery by giving greater publicity to its existence.

The Imperial expansion of Great Britain is having one unexpected and undesirable result. It is depleting the country of a valuable and energetic section of its manhood, while it leaves large numbers of women unprovided for. In twenty years the surplus of women over men in the United Kingdom has increased from a quarter of a

million to a million and a quarter. The natural remedy for this evil is suggested by the fact that women are greatly needed in the newly settled districts of the Empire. These sons of poor clergymen, lawyers, doctors, military and naval officers, who are going in increasing numbers every year, need women of their own class to make homes for them. But hitherto it has been held to be practically impossible for ladies to face successfully the conditions which prevail in the outskirts of civilization. To meet this difficulty, it is proposed in the *London Times*, presumably by its colonial editor, Miss Flora L. Shaw, to establish a "training-home for lady colonists," in connection with one of the Government experimental farms in the prairies of the Northwest Territories of Canada. "Dairying, gardening, poultry-rearing, bee-keeping, breadmaking, cooking, washing, and other household arts would form part of the course." While it is possible that in some instances women thus instructed may purchase and work land for themselves, it is believed that in the majority of cases "they will, in the first instance, work in cooperation with their farmer brothers on a system of mutual profit." It is hoped that the Canadian Government will favor the scheme, which, if successful, will probably be aided by private subscriptions and endowments.

Señor Navarro Reverter, who, as Minister of Finance, framed the budgets of 1896 and 1897, comes forward as critic, and gives a forecast of what is essential to restore the credit of Spain. The most weighty circumstance is the extraordinary increase in the interest charge on the debt. Before the war, a nominal capital of 6,688,000,000 pesetas paid interest to the amount of 311,500,000 pesetas. The debts contracted during the war and the assumed debts of the colonies were 5,000,000,000 pesetas, but draw an annual interest of 334,340,000 pesetas. Nearly three-fourths of the entire annual income of Spain is swallowed up by this interest, leaving nothing for reducing the capital of the debt, and an insufficient sum to meet the running expenses of a costly and not over-honest administration. The remedy suggested by Señor Reverter is characteristic: the bond-holder must be mulcted. As the debt cannot be paid, it must be scaled, and as the rate of interest is usurious, it must be reduced. The taxpayer must be squeezed and his charges increased.

At Oxford a public lecture has just been delivered by Professor Earle on Alfred's jewel preserved there in Ashmole's Museum, and found in Somersetshire near the eyot of Athelney, where Alfred "burnt the cakes" and subsequently founded a monastery. This jewel consists in the archaic figure of a saint done in colored enamel. This enamel, the lecturer said, was not of Saxon workmanship, and he opined that the figure might be one of the gifts sent from Rome or Constantinople to Alfred. The figure is seated on a sort of throne and holds two palms. It is encased in a setting of gold filigree-work which ends downward in a carefully wrought boar's head. A disc of crystal fronts the seated saint. The whole is about two inches in height. The setting bears witness to the skill in the goldsmith's craft encouraged by Alfred in Wessex. The mouth of the boar's head at the bottom of the whole jewel evidently implies some dowel by which it was attached. Various suppositions

have been made as to the use of the jewel and its appendages. Prof. Earle mentioned several, and inclined finally to dwell upon the notion that the jewel formed the central decoration, rising up just at the middle of the forehead, in the rim of Alfred's helmet, used, not in battle, but as a crown on state occasions. The boar's head figures frequently as the characteristic decoration of the helmet (cf. *Beowulf* vv. 303, 1112, 1286, and 1454). The lecturer then spoke of two other Saxon jewels familiar to Alfred's age and still preserved, the ring of Ealstan, Bishop of Sherborne, through the reigns of Alfred's grandfather, father, and two elder brothers, and the ring of Elswitha, Alfred's Queen, now in the British Museum.

It has all along been supposed that the *Codex Vaticanus*, the leading Biblical manuscript extant, was of Egyptian origin, but practically conclusive evidence of it has not been furnished until recently. This is found in a thoroughly scholarly study by Alfred Rahlfs, printed in the *Nachrichten* of the Göttingen Gesellschaft der Wissenschaften (1899, Heft I.), and entitled "Alter und Hermath der vaticanischen Bibelhandschrift." The mode of investigation is by comparison with the famous Festival Letter, No. 39, of Athanasius, which, in the order in which the Old Testament books are given, presents features found in common only in the *Vaticanus* and not shared by the *Sinaiticus*, *Alexandrinus*, or other leading Bible manuscripts. This is true both of the Canonical and the Apocryphal books. Only in one respect is there a disagreement between the *Codex* and the letter of Athanasius; but for this Rahlfs offers a satisfactory explanation, the point at issue being the position assigned to Judith next to Esther. In the case of the New Testament, too, this same agreement is found—all the more noteworthy in the case of Hebrews, which is here placed ahead of the Pauline writings. Rahlfs is convinced that the *Vaticanus* is dependent on Athanasius, and not vice versa; and as the letter in question was written in 367, the *Codex* itself must be younger. These are the first data at hand for settling the age of the latter work, although it has generally been assigned to the fourth century.

—The *Atlantic* for May contains the seventh instalment of Prince Kropotkin's "Autobiography of a Revolutionist." In this he gives an account of Nihilism, saying that "the movement is wholly misunderstood in Western Europe." It had nothing to do with terrorism, or republicanism, or assassination, but should be regarded as a philosophical movement directed against "the conventional lies of civilized mankind." The Nihilist broke with the superstitions of his fathers, and was a positivist, an agnostic, a Spencerian evolutionist, or a scientific materialist; while never attacking genuine religious belief, he fought against hypocrisy. He objected, especially, to all social hypocrisies. A Nihilist, when he met a person in the street who was indifferent to him, remained outwardly indifferent; he smiled only on meeting those whose approach made him glad. "All those forms of outward politeness which are mere hypocrisy were equally repugnant to him, and he assumed a certain external roughness as a protest against the smooth amiability of his fathers." He objected to sentimentality, and also to domestic tyranny; so that sons became Nihilists while fathers remained of the old faith. Carlyle

and Thoreau in their respective spheres led movements which Russian Nihilists might have approved in some respects, though apparently they had never heard of either philosopher. Among the things that the Nihilist disliked was "continual talk about beauty, the ideal, art for art's sake, aesthetics"; one of his assertions being that "a pair of boots is more important than all your refined talk about Shakspeare." This leads us back to politics through the door of socialism, for the reason why the Nihilist so disliked aesthetics seems to have been because art and literature were among the pleasures of the luxurious classes who lived on the labor of those who went barefoot.

—In *Scribner's* the "Letters of Robert Louis Stevenson," edited by Sidney Colvin, grow more interesting than heretofore. The current instalment carries Mr. Stevenson to California and gives a vivid picture of the man. The American lady whom he was afterwards to marry returned with her children to California in the autumn of 1878. He determined to follow. Asking for no supplies from home, but resolved to test his power of self-support by means of literature, he made the voyage in the steerage, and afterwards crossed the continent in an emigrant-train. He arrived at his destination with his health shaken, and later on broke down altogether. His life was saved by his future wife and the physician to whom a characteristic letter of thanks is here printed. Until his strength gave out, he led a life of great frugality, "amounting to self-imposed penury," and his letters reflect the misery and poverty which he suffered. But they reflect also the indomitable courage and determination of a man who throughout the greater part of his life faced a rapidly approaching fate with a smiling front. Almost every one remembers some book of Stevenson's (his writing was more multifarious than that of most men) the reading of which marked an epoch in his life. To one, 'Dr. Jekyll and Mr. Hyde' is a most illuminating allegory; to another, the 'New Arabian Nights' is a memorable imaginative feat; to others, 'David Balfour' and 'Treasure Island' are never-to-be-forgotten stories of adventure. But to a critic in search of the original, singular, individual thing in his writing, the curious dominant note of death in life must constantly recur—not the *memento mori* of the moralist, but the ever-present shadow of the grave, ready to open and welcome him to an eternal rest, from which, with all his love of life, he does not flinch. To enjoy life as keenly as Stevenson did, with death at one's elbow, and yet to think of death as one's friend, may give a sense of romantic exaltation, such as certainly seems to show itself in these letters. "But death is no bad friend: a few aches and gasps, and we are done; like the truant-child, I am beginning to grow weary and timid in this big jostling city, and could run to my nurse, even though she should have to whip me before putting me to bed." This is the voice of the man whose strange face is preserved for posterity in Sargent's portrait, and whose writing, to our mind, is at its best when it deals with topics that to most of us are only to be shunned.

—The *Century* for May makes the unexpected announcement that it is getting to the end of its Spanish war series. In the current number it felicitates itself on being

able to offer to its readers "The Climax" of it—in other words, some sixty-eight pages called "The Story of the Captains"—personal narratives of the naval engagement near Santiago July 3, 1898, by nine officers of the American fleet. To these should be added "A Note on Cervera's Strategy," by Capt. Clark of the *Oregon*, in which the latter maintains the opinion that, assuming that the Spanish Admiral "had to come out," he would have done better to come out of a dark night than by day. This opinion is, we believe, widely shared by naval experts. The editor of the magazine promises an absolutely final *bonne bouche* in "a few papers, of a special character." And so this great war series passes out of sight, carrying with it into the belly of devouring time the captains and the shouting. Was it overdone? Did it verge on comic opera? Were there too many photographs and personal narratives in proportion to the casualties on the victorious side? "Intercivic Humor," by Tudor Jenks, is an account of that species of newspaper humor which flourished twenty-five years ago much more than it does now, and which consisted of gibes invented in one city, say Chicago, at the expense of another, say St. Louis. The motive of it might be rivalry or mere malice, or a fitting editorial pride, but it always seemed very American, though no doubt jokes of this sort were made before Columbus was born. Like all jokes involving a sense of personal superiority on the side of the inventor or teller, they are often less amusing in print than when repeated by word of mouth. We miss one or two invented at the expense of Boston—as that "Boston is not a place, but a state of mind," and the story of the Bostonian over whose admission to Heaven St. Peter hesitates, finally saying, "Well, you may go in—but you won't like it." Mrs. James T. Fields's illustrated article on Charles and Mary Cowden Clarke ("Two Lovers of Literature and Art") should not be overlooked.

—In *Harper's*, Henry Cabot Lodge's "Spanish-American War" holds the place of honor. What seems to have attracted most general attention in this chapter is his philosophical reflections on the causes of what he refers to as "a vast crop of delays, blunders, and what was far worse, of needless suffering, disease, and death, to the brave men in the field." The common way of explaining these is to attribute them to Alger, McKinley, Eagan, Corbin, and Shafter; but, in the eyes of the Massachusetts historian, only superficial people such as edit newspapers will be satisfied with an explanation so shallow. He plunges to the bottom—behind the "shows of things," as Bacon would have said—and brings up the following great thought: "The fundamental fact was, that the chief, predominant cause of all the failures, blunders, and needless suffering was a thoroughly bad system of military administration." Two other propositions follow which are also noticeable: "An inferior man can do well with a good system, better than a superior man with a bad system," and "The men of genius, the Pitts, the Carnots, and the Stantons, . . . are very rare." Finally, "To-day the system stands guilty of the blunders, delays, and needless sufferings and deaths of the war," and, oh, shame! "Reforms are resisted by patriots who have so little faith in the republic that they think an army of 100,000 men puts it in danger." These pregnant sentences dispose of

the matter, and dispense us from the stupid and profitless inquiry, in which so many are engaged, into the question of human responsibility for the things complained of—blunders, disease, and needless deaths. Who was to blame for the bad beef? The system. How did McKinley happen to appoint Alger? It was owing to the system. How do you account for Shafter, Corbin, and Eagan? The system stands convicted of them. This view is all the fashion with latter-day historians, but Mr. Lodge outdoes his predecessors, and may claim a place to-day at the head of the school. Curiously enough, his Massachusetts critics say that the system stands guilty, too, of Lodge; that is to say, that, so far as human will and the desire of the electorate go, Massachusetts is opposed to Lodge, but the system, working with the blind force of a machine, keeps him firmly on top of them. No wonder he is a fatalist. Julian Ralph has a readable illustrated article on "Keeping House in London," in which he discusses the question of the comparative cost of life there and here. Service and rent are admitted by everybody to be higher here, and the general verdict would probably be that "money goes further" to-day in England than in America—at least we have never heard of people coming to live in New York for the sake of economy. But when we go into the details of the cost of housekeeping, so much depends on the individual standard and habits of the housekeeper that there is room for much argument.

—Volumes iv. and v. of the Oxford English Dictionary (New York: Henry Frowde) advance together in the April quarterly double issue; Mr. Bradley carrying his G to *Grasscloth*, and Dr. Murray his H to *Horizontal*. In the one case, *get*, with seven or eight pages, and *give*, with eight or nine, are the weightiest items, both being words of Scandinavian origin or influence. Noticeable here is that while the perfect *have got* for 'have,' 'possess,' is as old as Shakspeare in the "Merchant of Venice," *have got* to in the sense of 'to have to,' 'to be obliged to,' is of recent use, in literature at least, and the earliest citation is from Ruskin in 'Fors Clavigera.' Our *get there* has found a foothold in England. Under *get over*, only transitive uses are cited, but lovers of Bewick will recall his vignette of a tombstone with the cheerful inscription, "Good times, and bad times, and all times get over." The Gallicism *give on* (as, a window upon a park) was adventured by Theodore Hook in 1840. While the rubric *giveable* retains the *e* of the verb, the only quotation is of *giveable*, and usage in analogous cases appears likely to remain fluctuating. So with *gibber*, in which soft *g* is given precedence of hard, while *gibberish* is allowed the hard only—the latter word being of earlier occurrence, and the former perhaps uniting two parallel formations. Our *gerrymander* is often erroneously spelt "jerrymander" in England, and perhaps even more commonly thus mispronounced. Caxton gave us the *h* in *ghost*, which became the established spelling in 1590. "Gipsy" is now the prevalent spelling of this protean word. The first vowel of *glacial* is preferably long, with *c* sounding *sh* in either case, however; in *glacier* the short *e* predominates, when *c* sounds *s*. Obscure is the derivation of *ghetto* (perhaps *borghetto*), and of *girl*, in connection with which Mr. Bradley remarks that "boy, lad, lass, and the numerous synonyms in the modern Scandinavian languages, are all of difficult etymology:

probably most of them arose as jocular transferred uses of words that had originally a different meaning." *Glamour*, introduced into the literary language by Scott, is a corrupt form of *grammar*, as will be explained hereafter. Carlyle invented *gigman*, the type of respectability, referring to testimony given at Thurtell's trial. Mr. Bradley goes to the *Times* for its contemporary report, which differs a little, but not materially.

—By humorous-historic or honorary commercial association, *Gladstone* denotes a portmanteau, a carriage, and a cheap French claret. The citations under *Gladstonian* show no bias on the part of the associate editor, and Dr. Murray is equally undemonstrative in defining *Home Rule*. But he cannot refrain, in the note prefaced to his portion, from this "little dig" in another field of controversy: "The article *honorificabilitudinitas* may be usefully consulted by Baconianists, who have 'discovered' that the long word (which was coaxed many centuries earlier into a Latin dactylic hexameter, 'Plenus honorificabilitudinitatibus esto!') was invented by Bacon and inserted in *Loose's Labour's Lost* (v. l., 44) as an elaborate anagram recording his authorship of Shakspeare's plays!" Hold is Dr. Murray's longest article. One of the most curious is *hadden*, a coarse woollen handmade cloth, of any color. Ramsay, in 1724, clad his shepherds in grey *hadden*, or, by poetic inversion, "*hadden grey*." Burns imitated him, and the combination became a stock phrase. Scott hyphenated it, and the ignorant world at large inferred that *hadden* qualified *grey*, and that the compound meant color only. Longfellow, Whittier, and Christina Rossetti fell into the pit. *Hogmanay*, the Scotch designation of the last day of the year ("Cake-day"), its oatmeal-cake gift, and the begging cry for it, apparently came from the highly analogous French word and custom called *aguilanncuf*. Why *hogshead* was so compounded is uncertain, but in passing over into Scandinavia and Germany the *hog* suffered a transmigration into *ox*; *hoguette* is the Old French adaptation of our English word. *Hog*, English slang for a shilling, is attributed to the United States in the sense of a dime, but without an indication that it is obsolete if not beyond living memory. There is a suggestion that to *go the whole hog* remounts to Cowper, but Galt in 1830, and Halliburton in 1837-40, first firmly led the way. Our plain *honor* is encountered beside *honour* abundantly till the seventeenth century, and is twice as frequent as *honour* in the Shakspeare Folio of 1623. *Honor bright* is traceable to Tom Moore in 1819. Dr. Murray does not overlook, under *hollow*, Lowell's "A marvellous Providence fashioned us hollow." The dialectic adjective *huddy*, "in good health and spirits," recalls the Sea Island negro *huddy*, a form of greeting which purists pronounced *howdy* (as if *how-do?*), perhaps by a false etymology. "Tell my Jesus huddy O," "Bro' Quash sen' heap o' howdy," are two examples recorded by the late Prof. W. F. Allen in 'Slave Songs of the United States.'

GREEK AND LATIN SYNTAX.

Grammaire Comparée du Grec et du Latin: Syntaxe. Par Othon Riemann et Henri Goelzer. Paris: Armand Colin & Cie. 1899.

Riemann, who died August 16, 1891, of the effects of a fall from the Morgenberg, left

behind him the name of a good grammarian, an honor much coveted by scholars, and seldom conceded by those whose opinion is worth having. He made his début with an excellent monograph on the language of Livy, and followed up his success by a number of studies in the domain of Latin grammar. In Greek, also, he showed a praiseworthy activity, chiefly, however, in connection with translations and adaptations of German work; but his personal contributions attracted attention and extorted admiration even on the right bank of the Rhine. Goelzer made his bow to the learned public with a treatise on the Latinity of St. Jerome, and is, as Riemann was, a *maître de conférences* at the École Normale Supérieure. The two scholars had long been collaborators, and Riemann's notes enter into the fabric that bears their joint names.

As a friendly sponsor of the book has said in advance of criticism, the title is a misnomer. The book is a *parallel syntax*, not a comparative syntax, and does not escape the dangers of parallel syntax. Some wrestling of the phenomena is almost always necessary in order to bring about the parallel. The same function may be performed in entirely different ways, not only in different languages but in the same language. *That* and *who* both serve as relatives, but the genesis is different, and comparative syntax has to do with genesis, and Windisch speaks harshly of those who confound Greek and Latin relatives. The cases are on especially slippery ground. Then the silences of language are as significant as the utterances. The idiomatic absence of the relative in English, the lack of the article in Latin, mean more than pages of parallel constructions. It is true that our authors do not ignore the work that has been done in comparative syntax, and the results of that new science (not always certain) are brought to bear (not always successfully) on the explanation of the phenomena; but there is too much parallelism of Kühner the Latin grammarian with Kühner the Greek grammarian for those who do not admire Kühner unreservedly.

Of course, outside of Kühner and Madvig there are school-books enough prepared for both Latin and Greek by respectable scholars, and parallel syntaxes have been brought out before Riemann and Goelzer, some of them ludicrous performances; but the work under consideration is by far the most elaborate. It is the result of years of labor, both in the Latin domain and in the Greek, and deserves and will repay respectful study. At the same time (in spite of the Greek work they have done) Riemann and Goelzer are predominantly Latinists, and the book is of unequal value on the Greek and on the Latin side. It is true that Latin studies have of late years developed a wonderful activity, due in large measure to the impulse of Wölfflin and to the pressure of the great Latin Thesaurus, the first article of which, the work of an American scholar, has already seen the light. It is also true that the *Archiv* makes the results of these studies much more accessible. The Greek syntactician has to go further afield in search of monographs, and often finds it cheaper to gather his material himself. Then, Latin has not lost its hold on real life, and though Latin versification and Latin prose composition cannot be said to flourish, and though the whole official power of the German Empire is employed to flatten and cheapen all that

pertains to the formal mastery of the classic tongues, still a knowledge of Latin has its practical side, and the handling of it in the grammars shows that the tradition of grammar as the art of writing correctly is maintained. Students are warned against certain constructions as so many evil communications. Cicero's *hoc factio, hoc ne feceris* is much more common than the corresponding Greek injunction. Hence the Latin part of Riemann and Goelzer swarms with *pecu correct* and *in correction*, whereas Greek prose is for the most part left to its unabashed naughtiness. True, the languages themselves are partly responsible. Latin is a language of conventionalities, of social observances, so to speak. It is a game which has to be played according to rules. It is an art, like fencing, like riding, like swimming. A Roman spoke Latin as he played ball, sometimes as he played dice. Cicero cheats, has always cheated, but it was very long before anybody dared expose his little game. Nowadays, however, the youngest Latinist does not hesitate to point out Cicero's misplays, and to show how he undertakes to correct Fortune like a very dice-cogger. Indeed, it is to be feared that in time he will be sent to keep company with poor Xenophon, the retired Attic bee, and that the sole merit that Mommsen found in him will be cancelled. Ciceronian Latin is no longer a phrase to conjure with.

This traditional Antibarbarus vigilance has been enhanced by historical studies. Author after author has been dissected and the facts carefully sorted. Usage after usage has been pursued throughout the centuries, and there is always a certain subconsciousness of moral delinquency in every syntactical aberration to quicken the senses of the student. Latin becomes a pathological museum, and Riemann and Goelzer abound in specimens. When we come to the question what evil communications have corrupted good manners in this or that case, we find that our authors are often unable to decide whether the Roman culprit has been playing with vulgar boys of the neighborhood or with naughty Greeklings, and, in conformity with recent tendencies, the vulgar boys are made to bear a large part of the blame.

In Greek our authors do not show the same vigilance or, at any rate, the same sensitiveness. The men who do not lump *priusquam* and *antequam* lump *ἵνα* and *ἵνα*. Meticulous Grecians would not have constructed a paradigm with *ἵνα* *ἵνα* *ἵνα* *ἵνα*. *ἵνα* with the infinitive is not a mortal sin like the *ἵνα* *ἵνα* of which a popular Greek Composition is greatly guilty; but *ἵνα* with the infinitive is, after all, exceptional, and a sensitive Hellenist would not have used it in a paradigm, just as he would prefer *ἵνα* to *ἵνα* with Demosthenes rather than *ἵνα* to *ἵνα* with Thucydides. There is too much of the obsolete ellipsis business, ellipsis of *ἵνα*, ellipsis of *ἵνα*, ellipsis of a verb of hindering. We go back to the days of Lambertus Bqs. *ἵνα* is set down in one place as a possible aorist subjunctive, but, as a prominent Grecian recently professed faith in *ἵνα*, one must be indulgent. *ἵνα* is said to be used sometimes instead of *ἵνα*. It is a very formidable rival, as might have been learned from Joost. The equivalence of *ἵνα* with accusative and *ἵνα* with genitive is supported by a traditional example, which, rightly interpreted, fails to sustain the point. The Latin reflexive is treated in conformity with

Riemann's studies in Livy, which, according to Goelzer, show "the results that may be reached by grammatical method applied with rigor as well as delicacy"; but Dyroff's elaborate monograph on the Greek reflexive, though contained in Schanz's series and cited in Goelzer's Introduction, has not been used to the same extent as Riemann's treatise. The latest sweet thing on *lect*, which we owe to the industry of a young American scholar, finds a place in the 'Syntax Comparée,' while important German studies in Greek are neglected.

French authorities are quoted freely, and it is well; but perhaps too much reverence has been shown to the teachings of Charles Thurot and his 'Notes autographées.' The nomenclature employed by Thurot, his *génitif épithète* and *génitif attributif*, seems to be purely arbitrary, and some of his recalcitrancies are amusing. Thus he maintained that the difference in the so-called kind of time, the *status actiois*, is not rigorously applicable to the infinitive. Imperfect and aorist indicative might be used with exactness, but the Greek author had occasion to use the infinitive so frequently that he did not take time to consider which tense he ought rightly to use. This "just observation," which was anticipated by Bäumlein, is applauded by Riemann and Goelzer. In fact, Riemann wrote a paper about it. The curious fallacy, of which this is an illustration, that the Greeks and the Romans were puzzled by our puzzles, haunts all grammars, but seems to be peculiarly conspicuous in this 'Comparative Syntax.' Prof. Lawton's cry of despair, in a recent number of the *Nation*, as to the future infinitive passive in Latin, comes out of the same thick darkness that shrouds for us the workings of Cicero's mind when he encountered a verb that did not form the future participle active. It is true that the Romans had to grapple with problems similar to those which confront us, for much of their literary work consisted in translating Greek into Latin; but they solved these problems in an airy way, gave the thing another turn, and did not feel the same moral responsibility that rests upon some of our modern grammarians who insist on exact English equivalents for every phase of Latin thought. We shall never know how a Roman would have rendered modern English slang any more than we shall ever know how deft Ovid solved the linguistic problems that he encountered at Tomi. We must not lose heart because we cannot be certain how Cicero would have inflected the plural of *cor*, or mourn because of the rarity of heathen supines as we mourn because of the rarity of Christian charity. Whitney's end was not hastened because a German hates to form a plural to *Mund*.

That the examples in Riemann and Goelzer lack freshness, except when we get on ground that the authors have made their own, is not to be wondered at in a grammar that is made up out of other grammars. The good examples have not all been preoccupied, but there is a certain sacredness about the standbys, and to the end of time *Pætus* will make a present to Cicero of the books that his (*Pætus*'s) brother has left him (*Pætus*). When Lane retains the old example, it is to give it a fresh rendering, and to delight us by some idiomatic or quaint English turn, but there are few Latin grammars, or Greek either, that minister to literary enjoyment. When a solitary example recurs in every grammar, one becomes suspicious, and

it is pleasant to note that some hoary sinners which have lived for generations on the corruption of manuscripts have disappeared from Riemann and Goelzer. Of course, it is not to be expected that there should be any systematic effort to record the proportion in the occurrence of the parallel phenomena in the two languages. Matching two pennies does not prove that the matchers have the same bank behind them. Occasionally a note of warning is sounded, but that is all. And yet without something of the sort the survey is necessarily imperfect. Alphonse Karr, the florist, has, in his 'Autour de mon jardin,' a jest at the botanists who leave size out of account in giving the botanical names of two plants of the same family, and he who studies a language from the artistic point of view cannot help sympathizing with Alphonse Karr. One wishes to know the relative bulk of the phenomena. "It is useless to multiply examples" is not a comforting phrase to one who has spent hour after hour in hunting after such and such a phenomenon in such and such authors.

But enough of fault-finding that must seem petty in comparison with the magnitude of the undertaking. The book is full of information, full of suggestion from beginning to end. It is a most valuable repository of facts. It bristles with sharp points to prod the sleepy student. It is a book to be owned by every one who has a professional interest in Greek and Latin, and its imperfections are those which are incident to every living sphere of human knowledge.

THE ART OF WRITING.

Elements of Rhetoric: A Course in Plain Prose Composition. By Alphonso G. Newcomer, Associate Professor of English in the Leland Stanford Junior University. Henry Holt & Co. 1898.

L'Art d'Ecrire enseigné en vingt leçons. Par Antoine Albalat. Paris: Armand Colin et Cie. 1899.

The Arte or Crafte of Rhetoryke. By Leonard Cox. A Reprint, edited, with an introduction, notes, and glossarial index, by Frederic Ives Carpenter, Ph.D. [University of Chicago, English Studies, No. V.] Chicago. 1899.

These three works have in common the quality of readability not often associated with their class, and the first two are noticeably unconventional in their mode of developing their subject. Cox's treatise is attractive both as a literary curiosity and as a good sample of the classic tradition. It is "the first Rhetoric published in the English language; . . . is one of the earliest English schoolbooks, and is significant for the history of English prose in the first half of the sixteenth century. It is, moreover, a work connected in many interesting ways with the humanistic movement and the revival of learning in England, and with Erasmus, Melancthon, and their associates." Melancthon was, in fact, Cox's main dependence, partly in direct translation from his 'Institutiones Rhetorice' and from his 'De Rhetorica,' so that Dr. Carpenter appends Mosellanus's digest of that portion of the former treatise which relates to Invention, for purposes of comparison and as a serviceable analytical table of contents for Cox. Cicero is next most largely drawn upon, with many other Greek and Latin authors, and Erasmus (Cox's friend and

correspondent) freely, with one or two other contemporaries. These illustrations are the good reading of which we spoke above, but Dr. Carpenter is far from dry in his learned account of the author and his book, for Cox resided much on the Continent, where he had a wide reputation as a scholar, and his life in England was marked by not a little vicissitude. We will quote only an instance of the use of Narration in an oration, after Livy. Hannibal is addressing Scipio:

"It had been beste for bothe parties if it had pleased the goddess to have sent our fore faders that mynde that you of Rome wolde have ben content with the Empryre of Italy & we Caraginoys with Affryke. For neyther Sissil nor Sardynya can be any suffycient amendes to eyther of vs for so many nauels so many armies so many and so excellent capitaines loste in our warres betwene vs, but thynges passed may soner be blamed than mended. We of Cartagene (as touching our parte) have so coueted other dominions that at lengthe we had busines ynough to defende our possessions."

Prof. Newcomer discards the order usual in text-books of rhetoric and composition. He begins with Invention, "with the determination of a subject and the selection and organization of material," and works down through the paragraph, the sentence and its clauses, words and phrases, to mechanical processes. Three appendices deal with disputed and faulty diction, and present selected examples of defective and of good composition. Prof. Newcomer's style is, if not vivacious, free from dulness, and he often effectively stops to criticize by revision a careless sentence hot from his own pen. From dogmatism he keeps refreshingly aloof. A characteristic remark is (p. 255): "There is much more that might be said upon this subject, but satisfactory working rules cannot be deduced, and so we must be content to let the matter rest." And this conclusion on the lax positioning of *only* is commendably liberal: "If the adjustment [of sense on the part of hearer and reader] is made unconsciously, we can hardly ask for more. The sentences are not obscure; and the rule, usually valid in rhetoric, that everything should be not only finally clear but immediately clear, can hardly be insisted upon in this case, . . . yet . . . the word will always bear watching." Fluency (Prof. Newcomer's "so easy") lies at the bottom of the general misplacing of *only*, and this (together with euphony and stress) at the bottom of the split infinitive, which Prof. Newcomer tolerates for the sake of clearness alone. His "personal equation" naturally asserts itself in the catalogue of faulty diction, and in his incidental "don'ts," e. g. (p. 211): "Do not write, 'He lives in the lower portion of the city.' *Portion* implies division, allotment. Do not write, 'He was hit by a ball.' Write *struck*, for *hit* implies aim." These prohibitions read like the street-car advertisements of a certain popular dictionary. ("Es ist ein armer Stadtheil," say our German cousins, though *Theil* "implies division, allotment.") The section on *shall* and *will* is on the whole inadequate. For the benefit of teachers especially, a reference to Sir Edmund Head's unrivalled treatise on the subject should never be omitted. The rarity of this work, of which the second edition is more than forty years old, warrants citing the author's testimony that Shakspeare is a safe guide to the proper use of the future auxiliaries. "Very few passages," says Sir Edmund, "in that writer are really at variance with mo-

dern usage in the employment of 'shall' and 'will.' I think that it would be difficult to select half-a-dozen such in the whole of the plays." Prof. Newcomer's examples are too meagre, and we miss an enumeration or suggestion of verbs which are essentially non-volitional, and which therefore cannot be coupled with *will* in the first person. Finally, we should like to rewrite the section on Restriction (pp. 163 seq.), touching the use of *that*, *which*, and *who*. And after all we find this book a very welcome addition to those already in use for practical instruction.

If the art of writing is to be taught in twenty lessons, one must expect a swift movement in the teacher conscious of his task. With M. Albalat there is, in fact, no lagging, and the reader soon catches his pace. His own literary product consists of at least two novels, and two works in line with the present 'L'Art d'Ecrire,' both critical studies of the workmanship of French writers of the present century, living and dead. What he now undertakes is a "demonstration of the art of writing from the artists' side," and he maintains that writing is as natural as speaking, and that any one who can write a letter can learn to write a piece for print. Let it be said at once that his doctrine is not exclusively or mainly for the benefit of those whose native language is French, though his examples are confined to the literature of his own country, so that, for instance, he recommends reading Homer in a translation (preferably Leconte de Lisle's), as quite sufficient for insight into the Greek poet's processes. His insistence upon the avoidance of repetitions of a given word may be French in its extremity; he is necessarily French when recommending the formation of a style upon the classic French tradition, while expecting originality to show itself in modifying the mould. But, in general, any novice writing in any language is capable of profiting by M. Albalat's guidance and encouragement.

Reading, he says, stimulates one to write, and is a wise preparation for writing, but choose the authors you can assimilate, and whose processes you can observe. Such are Homer, as above, Montaigne, Guizot, Balzac, St. Evremont (but not too much), Bossuet, Rousseau, who is very assimilable (but with an amusing moral caution that warns against the Savoyard Vicar's profession of faith in 'Emile,' while opening the gates, by implication, to the 'Confessions'), and Chateaubriand, our author's special admiration. Next, read with notes and note-books, and abandon those "banalités d'appréciation," called analyses, exacted of schoolboys. It is good discipline to translate verse into prose, and prose into verse. In judging of style, do not say the substance is good but the form defective; "that means nothing. Say rather, the substance might be excellent if the form were good, for it is the form that lends value to the substance." Avoid ready-made expressions, such as we deprecate in Mérimée, whose work is "a triumph of stereotype," in George Sand, Feuillet, and others; and the commonplace phraseology censurable in Béranger—M. Albalat gives a piquant list of "expressions banales," sometimes a little forcing the critical note. Yet do not fall into deadly periphrase and circumlocution:

"Acquaintance with Shakspeare," he remarks, "and especially the Romantic revolution inaugurated by Victor Hugo, have all but rid our literature of the self-imposed obligation not to call things by their right

names. Men hesitated to translate 'Othello' for the stage for fear of employing the word handkerchief (*mouchoir*), and Alfred de Vigny had cause to repent of having risked it in spite of Duclis. Jean Alcard alone dared to write a good translation of 'Othello.'"

Naturalness is the result of effort, witness Lafontaine recasting each fable ten or a dozen times. Originality, by the same token, is incessant effort. "It consists in saying better, in saying forcibly, in seeking the fit word, in finding the new image. If you have that quality, though you write like the devil, as did Saint-Simon, you will be a writer, in defiance of courses in literature, grammar, and orthography."

For conciseness go to Racine only for proximity to be shunned, but study Pascal, La Bruyère, and Flaubert. Seek harmony, and test what you have written by reading aloud. Here your models are Chateaubriand, Bossuet, Buffon, and Flaubert. For aid in revising the first draught, numerous standard texts are examined and criticised by texts proposed. Description receives a chapter, and while Chateaubriand is honored as the father of description in our century, Zola (who "has only a very brutal gift for writing, without elaboration") is held up as a specialist in the abuse of description. Finally we examine dialogue, literary and realistic. "Nothing," says our author, "is more difficult than the art of balancing these two extremes. Novelists like Flaubert, Daudet, and Goncourt, who have rendered very well the sound of the spoken word, have never succeeded on the stage, the scene of the triumphs of Scribe, Feuillet, Sardou, the younger Dumas, and Augier." And again:

"It is very true that the dialogue of our contemporary dramatic authors is often only a stage dialogue, in which the reply is *calculated for the effect*; in which the retort is begotten by the last word of the interlocutor, and not by the veridicity of the personage and the logic of emotion. It is a dialogue whose concatenation lies solely in *esprit*, and has regard only to *esprit*. This kind of pyrotechnic dialogue comes to us straight from Beaumarchais. It scintillates in the plays of Dumas the younger and Sardou."

We have merely skimmed this lively and informal, but not unmethodical treatise, which we recommend without reserve, as well as (by anticipation) two others announced as in preparation by the same author, 'La Formation du Style par l'assimilation des auteurs' and 'Guide critique à travers la littérature française.'

The Journal of Jacob Fowler, Narrating an Adventure from Arkansas through the Indian Territory, . . . Kansas, Colorado, and New Mexico, to the Sources of the Rio Grande del Norte, 1821-22. Edited with notes by Elliott Coues. Francis P. Harper. 1898.

Dr. Coues's tireless roundup of original sources relating to the "American" pioneering of our Far West—the literary tatters of those trappers and traders who penetrated every corner of that unprecedented wilderness in the first third of this century, thousands of miles ahead of the outposts of the civilization whose scouts and path-makers they were—shows no sign of flagging. Such competence and such momentum, honorable in any line of research, are here of the keenest value; for here, as with the ethnography of our aborigines, most of what needs doing must be done quickly or never. In both cases the human documents are dis-

appearing with a rapidity which to the student is nothing short of appalling. Even when not destroyed, the living parchment is so overwritten with civilization that the palimpsest has little worth in either sort. As to the scant records of the white plain-men of our old frontier, they are every day in greater danger; while the atmosphere of their day and circumstance—without some actual breath of which not even written journals can properly be elucidated—is already so far behind us as to be growing unreal. A little more, and the whole epoch will have receded into the Bad Lands, and we shall see it only in mirages.

Luckily, Dr. Coues is himself a veteran of that frontier—in a later generation, it is true, but still before the great change came. He is familiar with the scenes, the modes of thought and action of that vast stage upon which the lonely actors played that rude, mean, heroic drama of the opening West. Probably no one has a better understanding, too, of the players themselves, all and several. His translation of this half-forgotten idiom of a nation's youth is as unlike the paraphrasing of those who have only the documentary tools, as a translation by a man born to both tongues is unlike that by the novice who has to plough every line with a lexicon. With a hearty appetite, a keen eye for the trail, large patience, and a generous humor, Dr. Coues rides the range to good purpose. It is a dry *rodeo* in which he does not run down, "rope," and bring in some sterling unforeseen maverick of the old broadhorns, and give it the brand of print and permanence. Amid the curbstone history and myth-in-idleness which grow already in the West as the facts draw back to the horizon of fifty years, his genuineness, patience, and impulse, his sharp eye for shams—and as sharp for mislaid and buried truths—have set enduring monuments from which we can determine many a datum plane that else were lost in the sand-drift of general carelessness.

Not the most important of Dr. Coues's manuscript finds, but none the less one of distinct value (and, perhaps, most piquant of them all), is this Journal of a man hitherto unknown, but always hereafter to be reckoned with. Major Fowler was a surveyor, born in Virginia in 1765, early transplanted to Kentucky, and of service on that border. He died in Covington, Ky., in 1850. His "voige" in 1821-22 compels us to recast several formulas of Western history. From our present data we must give him the credit of building the first habitation where Pueblo now stands; of being the first American to traverse the later famous trail to Santa Fé, and to approximate the sources of the Rio Grande. His whole itinerary was, as the editor justly observes, unique; and there can be no disputing the claim that his remarkable journey had direct and potent effect in launching that picturesque and epochal traffic which soon after him began to stream along the Santa Fé Trail.

With that wilful humor which so often stands him in good stead, the editor, after deciphering Major Fowler's impossible MS., has given it to us *en bruto*. It is fairly safe to presume that no book has heretofore been printed with spelling quite so egregious as the gallant surveyor and trapper marks his trail withal. Since his eye is good for direction and distance, as well in his narrative as upon the plains, his positive genius for cacography does not obscure the story,

but rather gives it a certain homely humanity of him, thereby lending a quaint side interest to a book already of substantial worth. An example of the Major's straight story and uncurving words may be taken from his account—perhaps the earliest by an American—of a fatal encounter with a grizzly bear:

"It Sprung up and Caught Lewis doosen and Pulled Him down in an Instant Coni glanns [Col. Glenn's] gun mised fyer or He Wold Have Releved the man But a large Slut Which belongs to the Party atacted the Bare With such fury that it left the man and persued Her a few steps in Which time the man got up and Run a few steps but Was overtaken by the bare When the Coni maid a second attempt to shoot but His [gun] mised fyer again and the Slut as before Releved the man Who Run as before—but Was Son again in the grasp of the Bare . . . the Coni again Run Close up and as before His gun Wold not go off . . . the Coni . . . Run up Stopping tree—and after Him the Wounded man and Was followed by the Bare . . . but a tree standing in Rich [reach] the Coni stepped on that and let the Man and Bare pass till the Bare Caught Him [Dawson] by one leg and drew Him back-wards down the tree While this Was doing the Coni Sharpened His flint Primed His gun and Shot the Bare down."

Dawson heard his own skull crack in the bear's jaws, and so told his comrades, who thought his injuries less serious. He died on the third day and was buried there on the "Picketwire" River (Purgatoire) Nov. 16, 1821, probably the first American to find a grave in Colorado.

Dr. Coues's notes are of his usual crispness and authority, and leave little to be desired as to topographical identification and historic comment. Two unnecessary misprints—"Tenaja" for Tinaja, and "Una de Gato" for Uña de Gato—occur in footnotes to pp. 146, 147, and are repeated in the useful index. "By and large," however, Fowler's "Journal" is a distinct contribution; and Dr. Coues's services renew our long debt to him.

On the South African Frontier: The Adventures and Observations of an American in Mashonaland and Matabeleland. By William Harvey Brown. With illustrations and Maps. Charles Scribner's Sons. 1899. 8vo. Pp. xxii, 430.

A problem of surpassing importance at the present time is, how to deal with the savage or half-civilized peoples who stand in the way of our eager search for new sources of wealth. Its solution affects us all, not merely, as in our heedlessness we are tempted to believe, the persons actively concerned. The moral stamina of the whole nation is increased or diminished according as righteous dealing or selfish greed characterizes its representatives in Africa or Asia. Viewed from this standpoint only, the value of the book before us depends entirely upon the aid which it gives us towards the solution of this great problem. Some aid the author is well fitted to give. One of the pioneers who laid the foundations of a white state in the country of the most independent of South African races, he shared its fortunes for seven years as miner, farmer, sportsman, and soldier-scout. These occupations gave him a large and varied experience with the natives, and hence his observations upon the treatment best fitted to raise them from savagery are entitled to careful consideration. Their value, even though we may dissent from his conclusions, is heightened by the fact that he went to Africa, not drawn

by the thirst for gold, but in the interest of science.

Mr. Brown served as naturalist to the eclipse expedition sent out by our Government to Portuguese West Africa in 1889. On the return voyage the vessel touched at Cape Town, where the Chartered Company was recruiting an expedition for opening up the "fabulous gold-fields" of Matabeleland. With one of his companions he obtained permission to join these "Pioneers" in order to make collections in zoölogy and ethnology for the Smithsonian Institution. After the settlement of Salisbury, he hunted, prospected, tried his fortune at mining, and worked for two years on a farm, which was allotted to him in part payment for his services as pioneer. This latter occupation was interrupted by the rising, first of the Matabeles, and afterwards of the Mashonas, during which he was actively employed as a scout. After a number of exciting encounters with the savages, he was wounded, and with his removal to the hospital at Salisbury in the summer of 1896, his narrative ends.

His hunting adventures naturally occupy a large part of the book—too large for a sustained interest in them. It is to be feared that the legitimate desire to collect specimens gradually became a passion for killing. He acknowledges in one place that "fresh trophies accumulated so rapidly that it was actually impossible to preserve them all" (page 127). At another time he, with two companions, killed one hundred and fifty head of big game in a six weeks' hunting trip.

Mr. Brown writes excellent English, and if the sketches of pioneer life are not always edifying, they are graphic. His descriptive power is well illustrated by this scene in Mashonaland, perhaps the most favorable picture of native life in the book:

"As I proceeded, the path wound through fields of mealies, Kafir corn, rukwaza (a sort of millet), sweet potatoes, pumpkins, peanuts, and then across rice-beds in the marshes. The people working in the fields greeted me with 'Molla, Inyamazona,' ('Good day, Inyamazona'). Inyamazona, which means 'game' or 'wild animal,' was the name which they had given me because I had killed much game. Others were already on their way to the villages, which were at some distance, and from all about came the plaintive melodies which they sang as they trudged homeward. The men were armed with guns or assegais swung across their shoulders; while the women, each with a babe on her back, and upon her head a bundle of fire-wood or a basket of produce, carried over one shoulder a large-bladed hoe with a short curved handle. Small boys were driving homeward herds of little Mashona goats and cattle which they had been minding during the day in the meadows between the fields of grain. As we approached the villages, groups of girls and women, bearing on their heads black earthen pots, passed us on their way to the spring for water" (p. 191).

Another interesting incident is a visit to Free Town, where the *Pensacola* was

"surrounded by boats filled with men and women, shouting, jabbering, laughing, quarrelling, and even fighting. . . . Without exception it was the most confusedly excited and noisy lot of humanity I have ever seen. Not even the soft strains of music from our Italian band seemed in the least to soothe the pandemonium until 'God Save the Queen' was heard, when, like magic, the noise ceased; those who wore hats lifted them, and silence reigned until the tune was finished; then the hubbub recommenced greater than before. I said to Jack Robinson, 'Why do you lift your hats? Do you consider yourselves Englishmen?' He replied, 'Sierra Leone peoples, black Englishmen!' " (p. 8).

It is evident that Mr. Brown holds no brief for the Chartered Company, as he joins heartily in the criticisms upon its policy towards both the natives and the white settlers of Rhodesia. It is with some surprise, therefore, that in respect to the treatment of the natives we find him saying "that there has been gross mismanagement is perfectly true; but the mistakes in dealing with the Mashonas, as well as with the Matabeles, have been in the line of too great leniency and too little severity" (p. 383); and he proceeds to prove his case by an appeal to facts. During the occupation of Mashonaland the murder of whites by natives was promptly and severely punished. But, in consequence of the pressure of public sentiment in England, this treatment was changed so radically that, though there were several murders, "up to the time of the outbreak of the rebellion not a single Mashona had been sentenced for the murder of a white man! As a natural result of such lame modes of procedure, murder and robbery increased in frequency, and finally culminated in the awful massacres of 1896." In the district of Victoria alone was rigid discipline maintained for any considerable length of time, and there only were the natives loyal to the whites. There is undoubted truth in his conviction that for the government of these savages "there can be but one maxim, and that is rigorous justice. They must learn two important lessons. The first is obedience to law, and the second, the dignity of labor." To teach the latter, imperatively necessary for their development, he does not hesitate, for fear of the charge of advocating a kind of slavery, to say that he would exact forced labor—with punctually paid wages—from those who will not work voluntarily. He goes farther than this in upholding the "dignity of labor," for in view of the evil effects of the refusal of many whites to work with blacks as degrading, he would prohibit by law "the employment of black labor of any sort except in regions unhealthy to white men." To make room for the white laborers whom such a policy would bring, he would remove the natives to the Zambesi valley, where there are "immense areas of unoccupied and extremely fertile land, too unhealthy for European habitation, but where the native African can live and thrive." In closing, he contrasts the condition of the land, which in 1890 was "possessed solely by wild beasts and menacing savages," with the Rhodesia of to-day, where, "in substantial towns, which form the centres of large agricultural and mining districts, we find churches, schools, libraries, clubs, the Salvation Army, daily and weekly newspapers, courts of justice, jails—in short, all the components of modern civilization." He could add now also that it is a practically self-governing colony with a constitution and suffrage for every man, Englishman or Kafir, who works for his living and is able to write his name.

There are some interesting illustrations, two useful maps, and an excellent index.

Early Chapters in Science. By Mrs. W. Awdry, edited by Prof. W. F. Barrett. New York: E. P. Dutton & Co. 1899. xviii, 348 pp. 8vo. Illustrated.

This book has been written by the wife of the English Bishop of Japan, and has had the careful editorial supervision of the Professor of Experimental Physics in the Royal

College of Science for Ireland. Its object is to provide young people—especially the junior classes in schools—with an introduction to natural and physical science. The first part is intended to lead the boy or girl to observe, the second to question nature. While her intention has been to bring the reader merely to the threshold of scientific knowledge, the author has aimed to make her work accurate as far as it goes, so that the student, however much there may remain for him to learn, will not in his further progress find much to unlearn. She hopes to awaken a desire to know more of the procession of life and unfolding of phenomena in the world in which we live, which it is the business of science to arrange in comprehensible order.

Eight chapters are given to the animal and two to the vegetable kingdom in the first division of the work, and eleven chapters in the second to the forces of nature. The illustrations are original, and, though their artistic merit is but moderate, they are clear and comprehensible. As in any similar manual, it would be easy to point out cases in which the desire for simplicity of diction has led to statements whose exactitude, from a scientific standpoint, is open to question. The English used is also occasionally liable to criticism; but, on the whole, the author

and editor have produced a useful little volume, well calculated to attain its object, and free from serious errors in matters of fact.

BOOKS OF THE WEEK.

Anstey, F. Love Among the Lions. Appletons. \$1.
Aubin, Eugène. Les Anglais aux Indes et en Egypte. Paris: Colin & Cie.

HENRY HOLT & CO., N.Y.

HAVE JUST PUBLISHED:

WOODHULL & VAN ARSDALE'S
CHEMICAL EXPERIMENTS.

By Prof. JOHN F. WOODHULL, author of a "First Course in Science," and Miss MAY B. VAN ARSDALE, instructor, both of the Teachers' College, New York. 136 pages. 12mo, 60c. net.

This elementary manual should be supplemented by lecture and quiz work. It is the outgrowth of several years' experience and deals with general fundamental principles. Problems and queries accompany the experiments. It deals with the chemistry of every-day life—air, water, combustion, bleaching, acids and alkalies, soaps, etc. The equipment need not cost over \$2 per pupil. Apparatus, chemicals, etc., are noted in the appendix. There are blank pages for notes.

AUGIER ET SANDEAU

LE GENDRE DE M. POIRIER

Comédie en Quatre Actes. Edited by Prof. STUART SYMINGTON of Amherst. xviii + 95 pp. 12mo, Boards, 80c. net.

"The model modern comedy of manners."—*Brander Matthews*.

The introduction gives an interesting account of Augier and his works. The notes are brief and to the point.

MAKLUYT SOCIETY (President, Sir Clements MARKHAM, K.C.B.).—The second volume for 1908, *AZURARA'S CHRONICLE OF THE DISCOVERY AND CONQUEST OF GUINEA*, Part II. Translated and edited by C. RAYMOND BRASLEY and EDGAR PRESTAGE, is now being distributed to members by Mr. Quaritch.

The annual subscription is \$5, which may be remitted through Messrs. Morton, Bliss & Co. of New York. A new series commences with the present year.

WILLIAM FOSTER,

BORDER, HOLLY ROAD, WAINSTEAD (England).

FOR SALE.

A GENERAL GEOLOGICAL COLLECTION, containing several thousand specimens collected mostly in the upper Miss. Valley in Minn., Iowa, and Ill. Also other relics. Must be sold on account of the death of my husband. Address Mrs. J. H. BREESE, Lyons, Iowa.

Ready June 1.

"Mary Cameron:"

A ROMANCE OF FISHERMAN'S ISLAND.

About 250 pages, illustrated and attractively bound in cloth. A new novel, "bright, entertaining, good."

For sale by all booksellers, or sent, *postpaid*, on receipt of price, \$1.00.

BENJ. H. SANBORN & CO., Publishers, Boston.

GENTLEMEN, HUNTING

A BEAUTIFUL—AND SPECIALLY USEFUL
DURING THE SUMMER—PRESENT
FOR A LADY, 17-70, WILL FIND

THE BETHLEHEM
SHOULDER-SHAWL

almost appropriate and stylish Birthday or Wedding Gift. They are entirely handwoven (about 40 inches square, with 6-inch fringe) at Bethlehem by expert Saxon weavers. Softest wool and silk—warp silk and wool—rich light green, delicate pink, *recherché* red, pure white, or black color. When ordering, state color wanted.

(Appetizing Moravian Sugar Cake—German Kaffee Kuchen—recipe sent with every shawl; or recipe alone for stamp.)

Postpaid and Registered on receipt of \$7.50—check, draft, or money order—to

The Susacuac Weaving Co.

12 Moravian Church St., Bethlehem, Pa.

New Novel by the author of
"Derelicts."

Idols. By W. J. LOCKE.

Crown 8vo. \$1.50.

A new volume of poems.

The Nation.

NEW YORK, THURSDAY, MAY 25, 1899.

The Week.

The Conference at The Hague opened a week ago in a curious atmosphere of aspiration tempered by insincerity and cynicism. Every individual delegate professes himself heartily in favor of peace, of checking the terrible cost of national armaments, of meeting halfway the efforts of the most powerful ruler on earth to stay the ravages of militarism. Then why cannot something be done? Well, this is a wicked world. You wouldn't have the millennium come too suddenly, would you? But the delegates are good men in a wicked world. They may not be able to make the lion and the lamb lie down with sides actually touching, but is that any reason for their giving up trying to induce them to live peaceably in adjoining fields? If not absolutely perfect, why should we not try to make the world as good as possible? Ah, comes the hypocritical sigh, in which many of the delegates to the Conference furtively join, that is entirely impracticable! Individually, we all favor every plan for peace; but collectively, you know, the thing is impossible.

More significant, perhaps, than anything said in the first meeting of the Conference, was the Emperor William's birthday toast to the Czar at Wiesbaden. He took occasion to express the hope that the German delegates, acting with the Russian, on "identical instructions," might help to bring out of the Conference results that would "satisfy the Czar." This is of more value than many sneers. The truth is, that the ends aimed at by the Conference are so humane and enlightened that no responsible ruler dares pose before his people or the world as opposing them. They compel, like virtue, the hypocritical pretence of admiration and approval even from those who in their hearts rage against them. It has always been so. War as such has never had a frank and open defender. Even Napoleon had to protest from St. Helena that he had deluged Europe in blood reluctantly, and only in order to establish "the beautiful ideal of civilization"—peace. So stout a warrior as Moltke, before age had hardened him against his youthful ideals and hopes, expressed his belief in "the idea of a general European peace," and declared that an agreement to disarm might be reached after a few decades. So that Nicholas, just past thirty-one, commander of more troops than any other sovereign could put into the field, in turning away from war's "gloire san-

glante" to urge upon the nations a peaceful ideal, is but doing his best to bring about what the greatest military heroes have admitted to be the true end of war itself.

The one thing which everybody will believe, in Mr. McKinley's renewed and more conciliatory offers to the Filipinos, is the statement that "the President earnestly desires that bloodshed cease." In this, if in no other part of his Philippine policy, it is certain that the President faithfully represents the sentiment of Americans. In whatever else we may differ, we are a united people in the amazement, indignation, and horror with which this long-drawn torture in the Philippines has come to be regarded by all. Even the Irishman who professed his readiness to do a certain thing "even if I have to go to my grave without a single fight," would be willing to forego every unnecessary hour of such a warfare. As for the plan of government which the President now proposes, it is on its face but a stop-gap. But if it proves to be also a stop-slaughter, we shall not quarrel with its terms. Final decision must in any case rest with Congress. We might remark that the reservation to the President of the right to appoint all the judges is precisely the feature in the Spanish offer of autonomy to Cuba which called out our finest scorn two years ago; but why open old sores? We are all wiser if sadder now. Let us have peace!

It appears that the censorship which is practised by the Administration in regard to the war in the Philippines does not stop with the refusal of the authorities at Manila to send to the United States, or to deliver in the Philippines, dispatches of which they disapprove, nor with the refusal of the Post-Office Department to allow printed matter of which it disapproves to be sent by mail from this country to the Philippines. While no attempt has yet been made to prevent the transmission by mail from the Philippines to the United States of letters written by soldiers who express their disgust with the war which they have been forced to wage, there is already evidence that the volunteers have been warned not to make public any views which do not suit the Government. Mr. H. H. Van Meter, whose character is vouched for by the *Chicago Record*, publishes in that paper an open letter to President McKinley in which he quotes the protest of more than one old soldier against the publication of his letter, for these reasons:

"Some of the boys are getting into all kinds of trouble over their letters, and I hope no one will publish any of mine."

"The letters I write are for the ones to

whom they are addressed, and not for the entire public."

"Wait until we get back, and I will tell you all. Why in the world do the people publish our letters?"

"Remember that all the letters I write are for you and the folks at home only, and are not written to be published. Some of my letters to friends were published, and one of them cost me a great deal of trouble."

Such virtual censorship over the mails as this is without a precedent in the history of the United States. As Mr. Van Meter says, "It amounts to a virtual suppression of free speech among Americans." Even newspapers which support expansion feel constrained to condemn this policy. Thus, the *Detroit Tribune* remarks that "it has been more than suspected for months that the censorship of cable dispatches was being conducted in accordance with a foolish and short-sighted policy which aimed to deceive the public as to the true state of affairs," and says that now, through the communications quoted, "it is revealed that the commanding officers in the islands exercise a sort of terrorism by which it is sought to prevent soldiers from writing the truth about the campaigns and the manner of their conduct." The *Tribune* is a journal which has justified the war upon the Filipinos, but it cannot defend the suppression of the truth about the war. It says:

"The Government can gain nothing by attempting to conceal the facts. Censorship of cables and mails, and punishment of soldiers who tell the truth, will not avail when the volunteers come home and are mustered out. The truth will be made public, and even from the narrow view-point of the Administration it were wiser to have it known now than that it should come later, and nearer to the approaching campaign, which is ever uppermost in the Administration mind. That sudden and superficial sympathy which declares itself first and thinks afterward, if at all, would have time to spend itself if the facts were before the public to-day, while the very fact that strenuous endeavors have been made to curb freedom of speech, writing, and publication will, when the truth is finally known, increase its sinister significance many fold. The world is no longer wide enough to furnish a safe sepulture for facts, and the disinterred remains will smell worse and look more horrible than the fresh body, however gory."

A large proportion of the journals which advocated expansion have pronounced the stories of no quarter in the Philippine campaign "incredible," the soldiers who tell them "liars," and the *Evening Post* "treasonable" for giving circulation to what the *Chicago Times-Herald*, as recently as last Thursday, called "roorbacks," declaring that "no orders to shoot prisoners or non-resistants have been issued by American commanders in the Philippines." But this policy of denouncing as liars Kansas soldiers who have been known all their lives as truthful men, is coming to be bitterly resented by the Kansas press. The *Topeka Capital*, the leading Repub-

ican newspaper in the State, says that, "so far as the Kansas boys are concerned, the *Capital* is not prepared to admit that they exaggerate or misstate what they testify to seeing with their own eyes"; that "in stating that Capt. Bishop ordered certain Filipinos to be shot rather than to remain as prisoners during the battle of Caloccan, Private Brenner reported from personal observation"; that the testimony of Corporal Maxwell of the Topeka company, that "this led to an order to take no prisoners, but to shoot all," must be accepted as equally true; and that, therefore, "it would appear that during or before this engagement, owing to the treacherous conduct of Filipino prisoners, as described by Corporal Maxwell, costly experience having taught the General commanding that these insurgents could not be trusted, he gave an order to shoot all prisoners." The *Capital* justifies such orders to American troops under such circumstances.

We have received the original manuscript of a soldier's letter, forwarded to us for use from the town in Colorado where it was received. It is one of the most interesting and significant in the long series from which we have quoted. Written without a thought that it would ever appear in print, it gives a vivid picture of the frame of mind in which a patriotic American finds himself who enlisted to give a suffering people freedom from the supremacy of Spain, and who has been forced to fight in order to deny other former subjects of Spain the independence for which they also have long been struggling. This Colorado soldier feels the same way as the soldiers from Kansas, Nebraska, and other States, and nobody has put more forcibly the un-American character of the present war than this "thinking bayonet," who pronounces it "wrong from start to finish," says that "my heart is not in this war as it was in the one I enlisted to fight in, and I go into it simply because I have to," and concludes: "To be a soldier in such a cause as we are now engaged in, is nothing to be proud of. I am chagrined and ashamed to think of it as it is."

One thing which the censor at Manila ought to keep from reaching the Filipinos is the call just issued by Congressman Hull of Iowa, the Republican from the Des Moines district, for an examination of candidates for appointment to the Naval Academy at Annapolis. The proclamation issued by the President's Commission "guarantees an honest and efficient civil service, in which, to the fullest extent practicable, natives shall be employed." Of course, the only way that the natives have of judging what civil service we should give them is by the sort of civil service we have at home. Mr. Hull was chairman of the commit-

tee on military affairs in the last House, and must be considered an authority as to the principles which ought to govern the selection of young men as cadets. He announces that candidates for the vacancy at Annapolis must be between sixteen and twenty-one years of age, and bona-fide residents of the district; and, "in addition to this," each comer "must present credentials of his parents belonging to the Republican party." The Des Moines statesman explains that "I have limited the contest to Republicans for the reason that in all sections of the United States represented by a Democrat a Democrat is appointed, and I believe in this district the party is entitled to representation from here in the Academy." But of course the Hulls will see that non-partisanship is made the rule of the civil service in "our new possessions."

The modest, self-contained man who destroyed the Spanish fleet at Manila last year is now on his way home. The newspapers which are using his back as an advertising board for themselves, the politicians who are seeking office on his merits, and the vendors of goods and wares who are using his name on their signboards, are getting themselves in readiness for all kinds of hysterics on his arrival. One man, who manufactures tandem kites, proposes to send up the highest kite that ever was flown, with a flag mounted upon it, so that the first thing Dewey sees when he approaches the shore of his native land shall be the stars and stripes. The rival newspapers which are tolling and molling to get subscriptions for a house for Dewey in Washington, report the large sum of \$3,000 already raised by their joint and several efforts. Meanwhile, nobody knows whether Dewey wants a house, or whether he prefers Washington as a place of residence, or whether he would accept anything as a gift in any event. In such a state of dublety, we suggest that the house-buyers, if they must make a present to Dewey, make it to him in money. In that case he can dispose of it as he chooses. If he wants a house he can buy or build with the proceeds, or he can invest it, or give it away, as suits him best. All the accounts which reach us through his most intimate friends signify that he is averse to the personal display and lionizing of which he is the subject; but that fact will not deter the kite-flyers and self-advertising classes from playing the pranks they have laid out for themselves. They can make themselves ridiculous, but they cannot make Dewey so.

A dozen years ago we said of the Grand Army of the Republic that "it is no longer a benevolent institution working for unselfish ends; it has become a machine for the procuring of pensions and offices." The truth of this charac-

terization has become more clear during the interval, and is now put beyond the possibility of dispute by the raid which this machine has organized upon a thoroughly efficient Commissioner of Pensions, simply because he has enforced the laws. The New York department of the organization held its annual encampment at Syracuse last week, and on Thursday adopted a resolution declaring that "it is the sense of this department that the administration of the Pension Department by H. Clay Evans meets the emphatic disapprobation of this department and of every veteran who is entitled to a pension under the law; and we ask that he be removed and the office filled by a man who will administer the pension law according to the intent of the framers of the law, the Congress that passed it, and the President who signed it." There is absolutely no excuse for this assault. Commissioner Evans is warmly in sympathy with all just claims of the old soldiers, and he has administered the pension law with fairness alike to the deserving applicant and to the Government. But such fairness has of course compelled him often to reject claims which were neither meritorious nor justified by the law. The consequence is that he has incurred the enmity of the pension attorneys, who have grown rich upon the laxity of administration which has prevailed in the Pension Bureau in the past. These attorneys have organized a "combine" to secure the removal of Mr. Evans, and they are going to "work the Grand Army for all it is worth."

It begins to look as if Secretary Alger had been made the victim of a Heathen-Chinese trick in the Michigan Senatorial controversy. If the whole thing turns out a bit of Ohio intrigue to get him out of the Cabinet by a side wind, it would not surprise those who know the school of "smooth" politics in which the President's trusted advisers have been trained. That Mr. McKinley has been consumedly anxious to get rid of Alger in some quiet way has long been clear. Reversing Burke's maxim, he has borne with crimes till they festered into inconveniences, and that Alger is now a positive political inconvenience to the President is obvious to the wayfaring man though an office-seeker. So, it seems, the Secretary was lured out to Detroit, fooled with banquets and adulation into thinking himself the favorite son of Michigan, and flattered into announcing that he would be a candidate for the United States Senate. Then snap went the trap. Senator McMillan, whom Alger understood to wish to retire, suddenly declared himself a candidate, and cruelly added that he was the McKinley candidate. Hence Alger's dreadful predicament. He is too far committed to the Senatorial contest to withdraw except ignominiously. But, of course, Mc-

Millan will have all the patronage, and pose as the President's friend, and if Alger tries to pull a single wire, or use his department for his own ends, the impropriety of his remaining in the Cabinet will be brought forcibly to his attention. Already, in fact, Republican organs are telling him that the rules of the game now require him to resign.

The *Evening Post* published on Friday some extremely interesting correspondence which has passed between Mr. J. L. Brower of this city and the Treasury Department upon the subject of duties upon personal clothing. Mr. Brower endeavored, quite unsuccessfully, to get from the Department an exact ruling as to what, in the language of the law, *ad valorem* means. It was interpreted in various ways by the Assistant Secretary, Mr. Spaulding, and by Collector Bidwell. One said it meant cost price; the other said there would be a reduction in case the clothing showed signs of wear, and that if it were not suitable to the season, it would be dutiable at rates not specified. Mr. Brower insisted that *ad valorem* meant market value—that is, value as second-hand clothing—and that the various statements made to him by the minor officials of the Department had no authority in law, and demanded a final ruling from the Secretary himself. To this demand he received no reply whatever. Why? Surely he, as an American citizen, had a right to make the demand, for no one can read the correspondence and escape the conclusion that his contention is the only tenable one. Thousands of Americans are interested in this matter, and the Secretary of the Treasury should be impressed with the necessity of giving them a plain and intelligible answer—something his subordinates seem incapable of doing.

A Washington dispatch says that the caucus committee on the currency that has been holding sessions at Atlantic City has agreed upon a measure which provides for the redemption of all obligations of the Government in gold; also that greenbacks when once redeemed in gold shall be reissued only for gold; that national banks may issue notes to the par value of the bonds deposited by them in the Treasury, and that national banks may be established in small towns with a capital of \$25,000, the legal minimum at present being \$50,000. This is a more contracted programme than former reports from the same quarter had led us to expect, since it does not include Secretary Gage's recommendation that the currency functions of the Treasury be separated by law from its other functions. While we shall be thankful for the measure of reform now promised, it will be a cause for regret if the Secretary's recommendation has not been followed. He recommended

that an Issue and Redemption Department be established in the Treasury, to which certain funds should be transferred, and that these funds should be applied solely to the purpose of keeping the currency of all kinds at par with gold. Now if Congress is to commit itself to the principle that all the obligations of the Government are payable in gold, why should it not take the step which the Secretary deems most useful for giving effect to that principle?

It may be, as Dr. Parkhurst says, that the public conscience has not been deeply stirred by the revelations thus far made by the Mazet inquiry, but something scarcely less potential has been not only stirred but startled, and that is Platt's sense of security as a political power. He is so alarmed that he is making overtures to the independents, and is quite ready to yield to them in regard to nominations for office this fall. Part of this panic is undoubtedly due to the harm which the franchise-tax bill has done to his contribution business, but a great deal of it is due to a realization of the loss of moral standing caused by the Mazet revelations. These two influences working together are so powerful that they are likely to break him down as a political leader, and thus rid us of him and his machine. The Mazet committee and the Governor seem to be co-operating for this end, and if they succeed, they will confer a priceless boon upon the city and State. We can dispose of Croker and Tammany at the next municipal election if we can break for ever the combination between them and a corrupt Republican machine.

The sudden demise of the Sunday edition of the London *Daily Mail*, after only six weeks of unlovely existence, is a great triumph for decent public opinion in England. It shows what the British matron and the Philistine Nonconformist can do when thoroughly roused. When Mr. Harmsworth announces that he suspends his Sunday newspaper as a "frank concession to the religious feeling of the public," he means, of course, that he has found the experiment a losing venture. All the solemn talk, in England and this country, about the law of demand and supply being responsible for the Sunday newspaper, is solemn nonsense. The Sunday paper is printed simply and solely to make money for its proprietor, and if the public shows him, as the English public has so speedily shown Mr. Harmsworth, that he will, on the contrary, lose money by the operation, he will become as enamoured of a day of rest as the next man. The *Telegraph* has not been slow to follow suit in withdrawing. It is an older paper than the *Mail*, presumably with more capital behind it; and its owner is not exposed to so many flank attacks as Mr. Harms-

worth was through his other publishing interests. It had cautiously announced that it would "bow to public opinion" (i. e., pounds, shillings, and pence), and it appears to have got public opinion in such large and fatal doses that it suddenly discovered unsuspected dregs of conscience in its bosom, and abandoned the expensive experiment of a seven-day paper.

A novel suit was brought against an author by a firm of London publishers a few days ago. They had employed him to write a sort of gazetteer of Great Britain, had printed it, and then the critics had exposed so many errors in it that the sale had been practically ruined. Accordingly, they brought suit against the compiler for his manifold inaccuracy. The defendant admitted the blunders, though he ingeniously accounted for them by saying that he had read so many authorities that he had got mixed up. He confessed that there was really no valid excuse for setting down Pretoria as the capital of British Zambesia, for suppressing the Isle of Man entirely, for classing earthworms among "reptiles," and soda, arsenic, and Epsom salts among "building-stones." But his legal defence was, practically, *caveat emptor*. The publishers had taken his work, errors and all, and had printed it without any real "reading." If they had read his book they were responsible for its mistakes; if not, what right had they to complain? This view prevailed with the court, and the author got off with one shilling damages, while being awarded £25 as his due on final payment. It certainly would be a dangerous thing for historians and ready writers of dictionaries if they were to be held pecuniarily liable for their blunders.

The "British officers" arrested in Pretoria for treasonable plotting against the Transvaal Government are shown not to hold present commissions in the British army, as was asserted. But it is not at all strange that British subjects should be caught plotting the overthrow of Krüger. The thing has been in the air for a long time. There has never been any genuine repentance for the Jameson raid, except that it failed. Look at the rapid recovery of his position by Cecil Rhodes. He was the real backer of the Jameson raid, yet he is to-day negotiating with the Kaiser on equal terms, and with the City of London at his feet. Why should not this example encourage roving and reckless Englishmen in the Transvaal to believe that all they have to do to win fame and fortune is to get up an assault on the Boer Government which, this time, shall not fail? Filibustering and secret scheming against governments with which you are nominally friendly, are the natural accompaniments of Manifest Destiny and Imperialism.

SUPPRESSION.

One of the most interesting occurrences of late is the excitement created by the publication of soldiers' letters from the Philippines and by Mr. Atkinson's pamphlets. The hostility to both has its origin in the same source, and it is one of the oldest sources in history. The wonder about it is, not that it exists, but that it exists among us, as it is one of the political agencies of the Old World of which we supposed we were for ever rid. No matter how far we go back, we find that the keeping of the knowledge of certain things from the public was considered one of the most important aids to a proper management of the people. But the construction put on this reluctance to have things known, has apparently never varied among decent people.

The most familiar form of this precaution is, of course, the "censorship," which still prevails in certain despotic countries like Russia and Turkey, and which we are trying to imitate in our "conquered territories"; one of the "responsibilities" which we are apparently so eager to assume being responsibility for what our "subjects" read. Another form of the same thing was what, in the old days before the Reform Bill, used to be called in England the "taxes on knowledge"—that is, taxes avowedly intended to make the publication of cheap literature or newspapers difficult. Another with which every one is familiar is the Papal Index. The object of all these is essentially the same. The difference between them is simply one of degree. They are all intended to prevent people from knowing certain things which, if left to themselves, they would seek to know and would think they had a right to know. There lies under it all the assumption that the ruler who imposes these restrictions, is a better judge of what a man ought to read than the man himself. This is perfectly comprehensible in the Old World. All the Old World governments which still retain the censorship, are based on the hypothesis that the Government can decide better than any one who lives under it by what rules and regulations his life should be shaped. Our Government, on the contrary, is based on the hypothesis that each man is as good a judge as any other man of what our legislation and administration should be. It is from this theory that universal suffrage derives its moral authority to make war or peace, or to put the revered McKinley in the chief executive office. When, in face of this theory, either McKinley or Charles Emory Smith makes his appearance and tells large bodies of voters that he finds that they are reading a good many things which are bad for them, and, therefore, bad for the State—that he stands, *pro hac vice*, in the place of the Czar and the Pope—you can no more argue with him than with the Rev. Mr.

Jasper of Richmond, who happened to know that the sun went round the earth. Joker for joker, however, we must admit that we enjoy Smith more than McKinley.

"Oh, but," it will be said, "the eminent Smith only undertakes to proscribe the reading of soldiers in the field which advises them not to reenlist." It may be proper to withhold such literature from soldiers, but what we must point out to the learned Smith is that, advisable as this may be, our law—and we live by law—makes no provision for it, as long as the soldiers are voters. The Romans had a provision in their Constitution which enabled them, when pressed hard in war, to create a dictatorship by the simple passage of a resolution, "that the Consuls must take care that the Republic suffers no damage." McKinley and Smith evidently have the idea that there is a similar provision in our Constitution, something like this: "Smith will give notice when the country is in danger, and will act accordingly." But we have made diligent inquiry, and can find nothing of the kind. On the other hand, we find that the very first amendment made to the Constitution was that "Congress shall make no law abridging the freedom of speech or of the press." In spite of this, Smith says it is his solemn duty to abridge Atkinson's freedom, by taking his pamphlets out of the mails; and without mails there can be no freedom, either of the press or of speech.

In fact, the Imperialists are, through the learned Smith, introducing into the American government two perfectly new doctrines. One is that even in a government which assumes the voter's freedom of speech, there can be no discussion of the expediency of a war once begun, or of the manner in which it is or has been conducted; that the conditions and time of peace have to be settled exclusively by Smith or some person of whom he shall approve; and that all persons doubting Smith's competency shall be held guilty of treason without trial by jury. No more important change has been introduced into any government since the French Revolution. But we shall maintain, nevertheless, until such time as Smith puts us in jail, that the existing provisions of our Constitution are such as to unfit us utterly for the work of conquest, that our Constitution was framed for an entirely different purpose, and that the need of getting Smith to help us in our first war of subjugation proves that we can continue on our new road only by permitting Smith to burn us or pinch us with red-hot irons.

We admit, however, that the Government is powerfully aided and stimulated in the policy of silence by the press. There is a popular impression that the best services rendered either to the Administration or to the Opposition, by a partisan press, are rendered by an open

advocacy of its views. There cannot be a greater mistake. The open articles in a partisan press rarely produce much effect. People all know in advance what a partisan newspaper will say about any question or event of the day, and thick-and-thin advocacy is a kind of work which writers of some value can rarely be induced to undertake. In fact, purely partisan writing is probably the feeblest and most ineffective writing the country produces. It generally furnishes even the party it serves with amusement, rather than instruction or justification.

The reader will then ask why so much importance is attached by politicians to party newspapers, why they give them advertising, why they distribute them widely, why they make much of the editors, why they give them offices, for which as a general rule they are totally unfit, and why they sometimes lend them money? Well, the reason is very plain, and well known to everybody connected with the press. This reason as applied to a newspaper seems a little grotesque, but it is nevertheless true. The reason why partisan newspapers are valued is for their silence. Nobody cares much for their able articles about either home or foreign policy. Nobody cares twopence what they think or say about war, or about Aguinaldo, or about peace, or about the Emperor of Russia, or about England. Their "views" generally emanate from a gentleman who would just as soon maintain the opposite if it were made worth his while.

The service they render is mainly one of suppression. That is, they refrain with care from publishing news which seems to reflect discredit on the party or man that they serve. In other words, it is their silence which makes them valuable. It is not because something is to be found in their columns, but because it is not found. Herein lies their importance. But the importance would not be so great if it were not that few Americans read more than one newspaper, so that if you succeed in shutting facts out of one newspaper even, you probably conceal them from all its readers. The chances are a hundred to one that the facts will never reach them, no matter how grave may be their bearing on some serious public question. Their appearance in other papers will make no difference, because what appears in the journals of the other side makes no impression on a good party man. He feels quite sure it is not true, even if he sees it, or his own paper would have published it. This credulity, too, is so deep-seated that it has become hereditary, and goes from father to son for generations. There are great numbers of men and women who believe everything they see in the *Tribune* to-day, for instance, simply because their fathers or grandfathers believed everything in it in the days of Horace Greeley, and for like reasons disbelieve everything which has not appeared in the *Tribune*.

It is this difficulty of getting at the American public with facts which makes it so hard to overthrow a party in power. No matter how rascally or ignorant it may be, it will take about fifty years to reach the public with the things which make this folly or ignorance manifest. In like manner, suppression favors the seizure by any Administration of powers, legal or illegal, of any kind which call for immediate exercise. The matter in hand, in such a case, might be a war with England, like the Venezuela affair, or a war with the Filipinos, calling in both cases for prompt action. There would be—there was—in neither of these cases time or opportunity to reach the people of either party through their favorite papers. In other words, there was no time to discuss the question of the day in the slow American fashion; the easiest thing, then, was to hand it over to the first man who seemed to understand it—that is, either Cleveland or McKinley. Neither of them did understand it, but it would have taken two years to prove it, and the party papers maintained that they were the only men to lead us, so we got ready to fight, or fought, without the slightest opportunity of finding out whether we were making fools of ourselves or acting wisely. All the facts which tended to show that these two Presidents were just the men for the crisis, were laid before the party in power by its newspapers every day, while the facts which proved the contrary were carefully withheld.

It will be easily seen how important suppression is. In fact, the larger part of a partisan editor's activity and usefulness to his employers consists in keeping things out of his sheet. Smith of the Post-Office Department is the editor of a newspaper of exactly this type, and it is not surprising that he was shocked at Atkinson's indiscretion, and instantly bethought him of using on his lucubrations the art which he himself has been practising for forty years. A man who put such things into the Philadelphia Press would be promptly "fired." Atkinson could not be "fired." The next best thing was to prevent his documents from reaching those for whom they were intended. But this does not look as if we were not afraid of "responsibilities" or were seeking them. On the contrary, all suppression looks as if somebody was afraid to be called to account.

GOVERNMENT.

It is greatly to be desired that the reports of the present investigation of the way in which our municipal government is administered should have a wide circulation and a wide reading. Nothing more instructive could be imagined. There is no text-book on popular government in existence which can for a moment be compared with the report of a single day's session as a source

of exact information as to what the science of government has become in a great city. We had on May 16 the Mayor and several of his most important subordinates on the witness-stand, and they gave us personal expositions of their methods and principles which were simply invaluable. The Mayor showed us himself freely, as he always does, but he showed us also much of the hidden machinery of government at the same time. Quite incidentally he betrayed how close the connection was between our two bosses, Croker and Platt, immediately after the memorable election of 1897, when Platt helped Croker to carry the city. How did he happen to think of Mr. Abell for Police Commissioner? "Mr. Lauterbach told me that Mr. Platt would like to have him appointed." Why did he look upon Mr. Platt as the man whose wishes should control in the matter? "I thought he was the boss of the Republican party. Whatever he said they all agreed to; when he took snuff they sneezed. I do not mean that as anything offensive. I have a very high regard for Mr. Platt." Again: "I appointed Mr. Murray, and what is the name of this Alderman that I made an Aqueduct Commissioner?—those two gentlemen were appointed because Mr. Quigg recommended them." These selections were all made soon after Mr. Van Wyck became Mayor, and they were justly regarded at the time as made in payment of a debt which Croker owed to Platt for the candidacy of Tracy.

After the Mayor came other witnesses scarcely less useful as instructors. We had two Tammany Police Commissioners who revealed with perfect clearness their methods of administration. Alleging ignorance of the existence of the gambling industry in the city, they manifested a callous indifference to its suppression. They admitted, in one way or another, that police officers and men who had presumed of their own accord to meddle with favored gambling-places had been "transferred" to other fields of activity. They admitted that they had deposed one man as Chief of Police and put another in his place because the latter was a Tammany man. A valuable witness was the deposed Chief of Police, Mr. McCullagh, who confirmed the reluctant admissions of the two Police Commissioners as to their conduct in protecting gamblers and other lawbreakers, and who gave us subsequently the first complete and adequate picture we have had of the extraordinary Police Commissioner, Parker, whom Mayor Strong, under the advice of Jimmy O'Brien, inflicted upon us for several years. Ex-Chief McCullagh swore that Parker had asked him to "go into a corrupt scheme with him to hold up the department, as he [Parker] had held it up for two years and three months"; and that he refused,

having looked upon Parker as "an ordinary criminal" to be "caught by a resort to all the police methods" used towards such persons.

The illustrations of our system of government given at the session of May 17 were no less valuable than those which had preceded them. Mr. Moss's most interesting witness was Jake Hess, probably the best living specimen of the famous old type of Republican Boy. Jake was one of the most conspicuous and efficient of that band of Republican leaders who were created by Chester A. Arthur, and whom we were wont to speak of as the Mikes, Jakes, and Barneys of politics. Mr. Arthur was the inventor of the species, having conceived and put in operation the idea of taking from the ranks of the Democratic party men who had learned the business of "practical politics" there, and making them pioneers in the same business in the Republican party. He succeeded so well with it that within a few years he had a Republican organization which was capable of fighting Tammany with its own weapons, and with such efficiency that Tammany was frequently compelled to "deal" with it in order to save itself from harm.

"Dealing" was, in fact, the chief business of the Boys. The old open-ballot system gave them wonderful opportunities, for they controlled all the ballots and could "bunch" them in the interest of a "deal" so effectively as to make it succeed in nearly all cases. The exploits of the Boys on election day occupied large space in our political annals for many years. Everybody familiar with those times recalls how the late Mike Cregan "took the money," \$5,000 in cash, of the editor of the *North American Review*, who was a candidate for office, under promise of working for him at the polls, and then "bunched the ballots" against him by leaving out his tickets and putting in those of his Tammany opponent. That was a famous stroke of Boy business, and added greatly to Mike's reputation. Then there was the case of the very first of all the Boys, the late Johnny O'Brien, who took Jay Gould's check for \$50,000 to be used in getting votes for Blaine in the election of 1884, and, instead of doing that, put the money into his own pocket.

These were typical instances of what, in the past, we denominated the Mikery and Jakery of politics. Most of the Boys have passed away, and we miss them sadly. An almost solitary survivor is Jake Hess, now Police Commissioner, who was on the witness-stand last week. His testimony shows that the old Boy instinct survives with him. He was selected by Mayor Van Wyck as an old-time Republican who filled completely the bi-partisan idea of a Republican official. His first act as Police Commissioner was to vote to put out a Republican Chief of Police and replace him

with a Tammany Democrat. When he was asked by Mr. Moss why he did this, he replied frankly that he needed the \$5,000 salary attached to the position of Police Commissioner, and knew that the way to secure and retain it was to vote as the Mayor wished him to. That is the traditional Boy view of public duty. Jake was formerly a butcher, and he did not leave that business and go into politics "for his health." He went into politics for what there was in it for him, and he has been acting on that principle ever since. Nothing could be more logical or regular than Jake's course. Every true bi-partisan Republican that we have ever had in the Police Board has acted in precisely the same way.

The other parts of the lesson in government on the same day were also in accordance with long-established usage. Mr. Moss produced a great volume of testimony, to which the Chief of Police listened in person, establishing beyond dispute the existence of 117 pool-rooms and gambling-houses in the city, all running at full blast under the eyes and noses of the police. It did not "faze" the Chief a particle, though he had testified only a few days before that he had no knowledge of the existence of such places. Why should he have "knowledge" of such things? Why should any of his subordinates have it? They are not on duty for such purposes as that, and every one knows they are not. If there is any well-established, general knowledge in this community, it is that under Tammany government vice and crime are not suppressed, but are fostered for purposes of revenue. This was perfectly well understood when Tammany was put back into power in 1897, and nobody was surprised to have it proved to be the fact by Mr. Moss now. It may be of some advantage to have the proof set forth so clearly that denial of it will be impossible, but what will come of the demonstration? Will Devery be deposed as Chief, and will the police be reformed? Will this old established form of government by rascals for the benefit of rascals be supplanted by real government by honest men? If so, when will the transformation be made? Certainly not till Croker and Platt and their kind pass out of our politics.

A HUNDRED YEARS OF TRACTS.

The centenary of the English Tract Society was celebrated in Exeter Hall on May 5, and statistics covering the hundred years' activity were read. A total circulation reaching the giddy figure of more than 3,000,000,000 was reported. Before such a stupendous whole the ablest affiants of newspaper circulation must pale their ineffectual lies. As a specimen, take that well-known tract, "The Swearer's Prayer." First issued in 1806, it has attained the neat circulation of 4,649,000 copies. Where's

your Wully Shakspeare now? Even in these times which are not for the tracts, the Society goes on printing 80,000,000 copies annually. But the imagination simply rebels at such meaningless magnitudes, just as it does at the ingenious calculations how many years it would take a cannon-ball express train to reach Alpha Cygni.

The end and aim of tract-distribution was never more clearly defined than in the very first tract issued by the Society. This was a tract to advocate tracts. Said the author:

"Every one has not the talent of talking to others on subjects of religion. Some have a diffidence which they cannot overcome. But it is not so hard to take a tract and say, 'My friend, read that, and tell me what you think of it.' It is a cheap way of diffusing the knowledge of religion; it is not so likely to give offence as some other methods of doing good; it is more extensive in its use than any other method, and it forms an excellent accompaniment to other methods of doing good."

The idea was taken from the admirable Hannah More. Some of her minor religious publications fell like good seed in an age barren of literature. This "most powerful versificatrix in the English language," as Dr. Johnson called her, was not more proud of her forgotten poems—"Sir Eldred of the Bower," and the rest—than of her "Moral Sketches," in each of which, she boasted, there was to be found the delineation of "an exemplary parish priest." But where her "Cheap Repository Tracts" circulated by the thousand, the Society's publications have been scattered abroad by the million; and it remains for Leslie Stephen, who is not exactly a person one would expect to meet at a May Anniversary, to give the excellent Hannah the credit due her as the originator of the modern tract.

No one can question the benevolent intentions of the founders and supporters of the Tract Society, and many of its publications are far from contemptible intellectually. Wholesale sneers are usually sneers of ignorance, and before sneering at the writings issued by the Tract Society one should pause to note the names of able scholars—including some not especially identified with religious activities, like Prof. Mahaffy and the Marquis of Lorne—whose pens have been enlisted in its service. Yet, when all is said, one cannot help a feeling as of standing in the presence of an anachronism, when one contemplates presses turning out 80,000,000 of tracts every year. The conditions of all literature and the habits of reading have been so revolutionized during the past hundred years, that the industrious manufacture of tracts in this age seems very like a huge factory whose only output should be a thousand stage-coaches a week.

At the same time we are not at all prepared to deny that there are strata of society and sections of all countries where the tract may still find readers

and do good, in its way. Some minds, even in the midst of civilization, retain a sort of heathen, or Arab, reverence for the printed page. Anything, they think, considered worthy of print, must be of great importance; and so it is that in remote and bookless cabins, in mining camps, and along mountain trails, the colporteur finds people willing not only to "take one free," but to ponder over a tract containing solemn warnings against the corruption of the fashionable and luxurious world. We suspect, however, that there is a good deal of fallacy lurking in the Tract Society's colossal figures. In the first place, their enormous circulation is practically a free circulation. Now, the passion for getting something for nothing is one of the most fundamental of human passions, but it is not strictly religious. Certainly it is not limited to orthodox religious literature. Dr. Channing's works have been extensively circulated as a free gift, and so have Swedenborg's. We are not sure that one of Ingersoll's lectures, if issued and distributed free by a great society, might not run the "Swearer's Prayer" hard. Ready acceptance of literature gratis does not necessarily imply a fondness for the particular thing given away. And the second ground for fearing that the Tract Society would do well to rejoice with trembling over the immense distribution of its publications, is that to accept a tract is one thing and to read it quite another. If a tract can be offered without offence, it can also be taken to avoid the offence of a refusal and then quietly thrown away as soon as the giver's back is turned. Thus the gratulations of a successful tract-writer may be only on a par with the boasts of a soldier who knows he has killed 150 of the enemy because he has fired 150 rounds. It may be doubted if as high a proportion of tracts as of Mauser bullets reach their billets.

THE POISON IN OUR FOOD.

An eminent French chemist wrote a book not long ago in which he made a forecast of the time when human beings would cease eating meat or vegetables, and would take all their food in the shape of compact chemical tablets of diverse flavors. It is possible that the day may come when chemists will be able to manufacture nutritious and wholesome food out of the elements; but if we are to judge the future by the present, it is to be hoped that the era of chemical food may be postponed indefinitely. It has long been known that a very large percentage of our food is more or less adulterated with substances that can be made to resemble it in appearance and flavor, and which are often harmless. If they were all innocuous, the question would be merely one of commercial honesty, competition, and price. But many of them are injurious

to health, and therefore call for more vigorous measures.

As early as 1820, attention was called in England to the dangers from adulterated food through Accum's treatise, "Death in the Pot." In 1851 the *Lancet* declared war against dishonest manufacturers, printing every week a list of culprits, with chemical analyses of their products, and continuing this for three years. Repeated legislative enactments since that time have given the English considerable protection, but that it is still far from complete may be inferred from an article in the *Lancet* of April 22, on "Meat Extract of Vile Origin," which shows that such extracts are occasionally made of putrid liver and offal. "It might be thought impossible," it remarks, "that such filthy material could be fabricated into a toothsome paste, but so it is, the use of deodorizers and subtle flavoring materials having been placed at the disposal of offal-mongers by the advances (alas, that it must be so confessed) of chemical knowledge. . . . Of course, cooking would destroy most noxious germs, but their products, the poisonous ptomaines, would remain. . . . Their presence in an extract would cause very serious symptoms of poisoning."

In this country many State legislatures have enacted laws making injurious food adulterations illegal, and Congress has set aside an annual appropriation for use in investigating such adulterations, partly for the sake of protecting honest producers. The proceedings of the War-Investigating Committee have resulted in a fiasco for the Government, but they have at least done good in calling the nation's attention in a sensational way to this subject of "Death in the Pot." By a fortunate coincidence, official reports regarding the alarming extent of food adulteration and poisoning have been recently prepared in several States, and the result is that the press all over the country is discussing this matter.

In Pennsylvania the Food and Dairy Commissioner, Levi Wells, has ascertained that chemical companies have had agents travelling regularly in the State to sell to butchers chemicals for preserving meats, the favorite being apparently boracic acid, which "is certainly deleterious to health." The packages are labelled, telling how the chemicals are to be used on meat. In Connecticut the Agricultural Experiment Station issued on May 1 its annual report on the adulteration of foods. It gives a summary of the extent to which frauds are practised on consumers, thanks to Yankee ingenuity combined with modern advances in chemistry. Of sixty-three samples of fruit jellies, two-thirds were adulterated, not only with starch and glucose, but with aniline dye and poisonous salicylic acid. Out of forty samples of marmalades and jams only three were

pure. Of forty-seven samples of beer and ale, twelve contained salicylic acid, and nineteen samples of sausages and oysters were found "embalmed" by boric acid.

"The use of antiseptics as preservatives of food is becoming alarmingly great," says Prof. Mitchell, analytical chemist of the Wisconsin Dairy and Food Commission. Farmers mix them with milk and butter, and they act disastrously on the tissues of the stomach. Nearly every butcher in Illinois, he says, makes use, especially in the preparation of "Hamburger steak," of preserving chemicals, including sulphide of soda, a compound which checks fermentation and therefore makes it difficult to digest the meat. A Government expert has testified that this chemical had been used by medical students to preserve cadavers, and by physicians to disinfect houses where there had been smallpox. At the recent sessions of the United States Pure-Food Investigating Committee in Chicago, the testimony of several other experts was taken, all of whom agreed that the antiseptic chemicals so freely used in the preservation of food and drink are deleterious, and in many cases poisonous. Dr. Wiley, chemist to the National Agricultural Department, declared, among other things, that no food which contains preservatives is fit to eat, and that probably the one most commonly used, because of its cheapness, is salicylic acid, which should be forbidden because it is very bad for the health, especially in the case of weak stomachs. A pamphlet published by the Department of Agriculture at Washington states that "the use of salicylic acid as a food preservative has been forbidden by several European governments." Here it is used to a large extent, both by native canners and by foreigners who take advantage of our situation. The Department found it in fifteen out of twenty samples of string beans, in ten out of twelve samples of baked beans, in twenty-four out of forty-one cases of corn, and so on.

This testimony, from so many expert and unbiased sources, fully justifies the heading given to our article. The chemicals used to preserve our food and drink have become a serious menace to health. There are thousands of invalids whose chances of recovery and life depend on their getting the purest drugs and food, and there can be no doubt that some of these are killed every day by the poisons in milk, butter, and meat, put there by farmers, grocers, and butchers to save trouble or avoid the risk of goods spoiling on their hands. To perfectly robust individuals these chemicals may be comparatively harmless, but Americans are a nation of dyspeptics, and salicylic acid, the favorite preservative used here, has been pronounced by the Paris Academy of Medicine especially injurious to dyspeptics. Their life is made

wretched by the systematic food poisoning for the profit of dishonest dealers; salts of zinc or copper in a dish of canned peas, for example (put there to give them a pretty green color!), may result in a sleepless night, colic, headache, loss of a day's work, and general misery; and this may go on indefinitely, rendering life a burden, without any suspicion in the victim of the real cause. Last summer a Western hotel lost hundreds of guests, who left, one after the other, because they all became ill for some mysterious reason. The water and ice were held responsible, but careful experiment showed that the illness was due to the use in the kitchen of cheap coal-tar flavoring extracts. In saving \$10 by buying this stuff the proprietor of the hotel lost \$10,000. These coal-tar extracts are used to a very great extent in confectionery, ice-cream, soda-water, etc., and to many persons they are poisonous. They deserve a special investigation.

To remedy this state of affairs it has been suggested that a national food commission should be organized with powers to examine manufactured products and testify as to their quality. The most important thing to remember, if this is done, is that fines are of little use, imprisonment of the real culprits being the only effective deterrent. This was proved in Munich, where the law that only hops and malt must be used in the manufacture of beer was ineffectual as long as the brewers were simply fined, for they found that it was more profitable to make poor beer and pay a fine than to make good beer and pay no fine. But when the Government began to imprison the rich brewers, they began to make honest beer. Pending the enactment of similar laws in this country, covering drink and food, there is a method which can be applied at once by honest manufacturers and dealers. Let them print the contents of their cans on the labels, offer rewards for discovery of adulterations, and advertise on a large scale in the newspapers, and they will become as prosperous as the Munich brewers.

THE AMERICAN LIBRARY ASSOCIATION AT ATLANTA.

ATLANTA, May 15, 1899.

After holding twenty meetings in successive years in various places in the North, this Association last year selected Atlanta as its place of meeting for 1899. Two subsequent events tended to give singular interest to this gathering: first, the establishment by the Legislature of Georgia last winter of a State Library Commission, the first in the South; and second, the recent gift of \$100,000 to Atlanta by Andrew Carnegie for a library building. Mr. Carnegie's gift was made in recognition of the intention of the Young Men's Library Association to present its entire property, valued at \$100,000, to the city for a free library, and was conditioned on the city's accepting the proposition, furnishing a site, guaranteeing

municipal support to the extent of \$5,000 annually, and maintaining the institution as a free public library. All these conditions having been met, the meeting held in the Grand Opera-house on Tuesday evening, May 9, to extend a welcome to the American Library Association, was made the occasion for the formal passing of the deeds, and for felicitous speechmaking in recognition of the importance and promise of the transaction, not only to Atlanta, but to the entire South; such a movement here foreshadowing quite clearly similar efforts in the whole tier of States.

The attendance at the sessions of the Association, May 8 to 13, was a truly national one, among the places represented being Bangor and Brunswick, Me.; Lincoln, Neb.; Minneapolis (six delegates from its public library), San Francisco, Los Angeles, Denver; Austin, Texas; and New Orleans, as well as the whole intermediate country. An interesting paper on "Libraries in the Gulf States" was presented by Mr. William Beer, librarian of the Howard Memorial and Fiske Free Libraries of New Orleans. Briefly summarized, its facts are as follows:

	Libraries.	Volumes.	Free Libraries.	Circulation.
Florida	21	48,000	1	4,188
Alabama	47	128,000	0	0
Mississippi	61	180,000	0	0
Louisiana	41	220,000	1	100,000
Texas	90	158,000	0	0
Totals	260	732,000	2	104,188

By free libraries is meant those actually free for circulation. Others reported as free are free for reference only. The State libraries are nearly all in a neglected condition and of little use. The above statement does not include school and college libraries, the list being made up mainly of small subscription libraries having an average of 3,800 volumes. Only about one-half possess over 1,000 volumes each. The percentage of books in libraries to population in the group of States is about ten; in Massachusetts it is two hundred and four, counting only free public libraries. Such a statement shows that, in the Southern States, public libraries, using the term in a true sense, are practically nonexistent. Not only were they out of harmony with the institutions and conditions of life in the old South, but they could naturally gain ground but slowly in the new South. This is essentially a new country, hardly distinguishable in its modes of life from the remoter West; the population is scattered; village life, so characteristic of New England, is almost unknown; and the wealth which, through endowments, has been the mainstay of the library movement in the North, does not exist here. Hence that movement, in order to take root and have a natural growth in this soil, must adapt itself to entirely new conditions.

It is quite within bounds to say that, at this meeting of the American Library Association, it has been made apparent that such adaptation is taking place, and that already the public-library movement has made a real start in the South, in a conformity to existing conditions which augurs well for its future. It is through the women's clubs mainly that this is being done. It is not within my province to make a study of the development of the woman's-club movement in this part of the country. It is certain that it is "here, and here to stay," as the saying is; and these clubs have been led to take up as almost the first "cause" to be advanced by them that of the free library. Here in Atlanta it was largely by the work of the wo-

man's club, well directed by Miss Anne Wallace, the energetic librarian of the Young Men's Library, that the subscription library has been made free and has attracted Mr. Carnegie's handsome gift. By the same influence an act was carried through the Legislature of Georgia last winter establishing a State Library Commission. Very recently the women's clubs of South Carolina have been federated, and their first united action was the preparation of a similar law for that State, which it is hoped will be passed the coming winter. These commissions are likely to prepare and secure the passage of bills permitting towns to establish and maintain free libraries by taxation, and encouraging such action by State aid. The legislation common to the Northern States must be modified to suit Southern conditions, and these commissions represent the first effort to study those conditions and meet them.

But the women's clubs are not limiting their library work to the procurement of proper legislation. They are actively promoting the beginnings of libraries in many towns and the use of travelling libraries for the scattered population. One of the most interesting papers read at the convention was that of Mrs. Eugenie Heard, of Middleton, Ga., describing the work she has been carrying on, on behalf of the federation of women's clubs, in sending travelling libraries to stations on the Seaboard Air Line. Nine of these libraries are now out, being moved from place to place once in two months. Each contains about fifty good books, selected with special reference to the population to be reached, and they are already arousing, in the section traversed, a great interest, which will speedily be turned to the formation of local libraries for the free use of the public. Within four years just that number of free libraries have been established in South Carolina, and they are in close touch with the women's-club movement. In Texas, too, as Mr. Beer said in his paper, "the wave of library creation, under the inspiration of the State federation of women's clubs, has struck Waco, Dallas, Sherman, Abilene, Victoria, Belton, Tyler, and Denison."

I have thought it worth while to give space to this résumé of library matters in the South as preliminary to what is to be said about the meeting itself, which will doubtless give an immense stimulus to all these efforts, by bringing earnest Southern workers into acquaintance and fellowship with those from other parts of the country. The presiding officer was Mr. William C. Lane, librarian of Harvard University, to whose intelligent efforts, on behalf of the Association, was largely due the recent appointment as Librarian of Congress of Mr. Herbert Putnam. The Association passed a vote recording its gratitude that, in such an appointment, eminent fitness had been made the chief qualification, and its sense that librarianship had thus been distinctly honored. Dr. Cyrus Adler, librarian of the Smithsonian Institution, gave to the Association a summary of his report, soon to be published in *Science*, on the second international conference on the cataloguing of scientific literature, held in London in 1898. It appears that this matter has now been carried so far that it is hoped that the work contemplated, i. e., the furnishing of complete current catalogues of all scientific books and papers, through the medium of an international bureau, to be supported by

the Governments of the cooperating nations, may be begun with the twentieth century, in 1901. If prepared in the form of a card catalogue, it is estimated that 160,000 cards annually would be issued. This enormous addition to the card catalogues would, even in the largest libraries, be too great to be contemplated otherwise than with dismay, and it seems likely that the card form may be found acceptable only to those (and it is supposed there will be many such) who desire to collect the titles in some particular branch of science. Annual (possibly semi-annual, or quarterly) volumes will probably be issued as the form most acceptable to libraries. It is estimated that the book form may cost about \$80 per year, the card form (complete) over \$200. The question of classification is still undetermined by the international committee, but they are reported to have agreed upon the safe principle that no one scheme of classification shall be imposed on the whole field of science, but that each department shall be arranged with reference to its own natural categories. Meantime, the place of the proposed international catalogue is being fairly well filled in a general way by the cards furnished by the publishing board of the American Library Association, which are coöperatively prepared by five of the largest American libraries.

No remark is more commonly made about library work than that its methods are constantly changing, and in the nature of the case it is very natural that this should be so, for it is quite evident that the library system of this country is as yet in its infancy, and but just escaping from its swaddling-clothes. Nothing could better illustrate this than the result of the discussion at the Atlanta meeting of the question of free access of the readers in a public library to the shelves. This result, which certainly deserves to be called astonishing, was that of the 150 librarians present, representing the entire country, not one voted, when a show of hands was called, against the principle of "safeguarded open access" (as our English cousins have dubbed it) to at least a very considerable share of the library. The rather singular fact was also brought out that in the large cities where the system has been applied to nearly all the books in the library, e. g., in Philadelphia, Buffalo, and Cleveland, while the annual loss of books runs up to 200 or 300, their value is saved several times over in the reduced number of attendants required to serve the public.

But the most important bearing of this new principle of public library administration, which has wholly come to the front within the last fifteen years, is upon the much-mooted question of library architecture. The vaunted "stack" system for the close "storage" of books is by no means adapted to the access of the public. Especially as applied in the new building of the Boston Library, it renders such access impossible except for a small minority of the books. Such stacks as those of the Library of Congress could possibly meet the new requirement, but it will be much better met by a return to open halls and alcoves. Nothing seems clearer than that the public library building of the future must provide space enough (and a large library can do it by a succession of floors, with elevators) for most of its books to be displayed where readers can freely handle them, and make their own

selections, only a minority of the volumes, those of special value and calculated to tempt the book-thief, being "stored" away and subject to use only on special call. Even these exceptional books will be more and more collected in "special libraries" (one fine feature of the Boston building), where even they can be made quite freely accessible under supervision to those admitted as scholars to their use. Library building committees and architects must have their attention called to this new development, which makes all "model" buildings yet erected a delusion and a snare if copied in working for the future.

I cannot bring this already too long letter to a close without a few words about one peculiar aspect of library work in the South. Undoubtedly the establishment of free libraries in which all citizens are to have equal rights has been, and will still be, greatly hindered by the race difficulty. But a somewhat careful inquiry as to the way things are going in several Southern States gives me a good deal of confidence that this difficulty is a bugbear rather than a real hindrance. As a bugbear it will hinder, but it seems bound to yield to the logic of events. Southern people say, when asked about it, that the whites will not use the same books that are taken by the negroes, and that therefore the negroes cannot be admitted on equal terms. There is force in this view, and it will have to be recognized, and to some extent met by the establishment of branch libraries in those wards or those villages and hamlets where the negroes most congregate. But the better class of negroes will expect to use, for a higher kind of reading than these branches will afford, the best facilities offered by the larger and the central libraries. In some libraries in this section, where the population is about equally divided, the question seems to be settling itself along these lines. The presence of negroes in the central library excites no remark, as negro servants are constantly sent for books. Hence any difficulty that might be raised would have to turn on the question, "Are you here as messenger or on your own account?" As to the reading of the same books by the two races, there can be no real difficulty. White people whose food is prepared, and whose children are nursed, fondled, and kissed by negro servants, cannot long maintain so artificial a race separation as this of the books. As in the North, so here (and with more or less of distinction based on race), the books freely taken from the library by the "low-down" classes, and rapidly acquiring the marks of such use, will not be drawn by the more fastidious. This is very largely provided for by the natural division between classes of readers as to the authors read and the subjects on which books are consulted. With the further provision of branches and of special collections of books for use in the schools for colored children, it may be hoped and expected that any trepidation as to difficulties arising from the race problem as affecting the free-library movement will disappear in the light of common sense and enlightened public spirit.

W. I. FLETCHER,
Librarian of Amherst College.

FARCE OR TRAGEDY?

LONDON, April 29, 1899.

The conditions are changing so rapidly in

London that I have come away from the Royal Academy and the New Gallery asking myself how much longer even the conservative British public can be made to believe that these are the two great art exhibitions of the year. In the old days there was a definite reason for the existence of the New Gallery. It inherited the traditions of the older Grosvenor as the haven of refuge, the headquarters, the temple of all those artists who were distinguished, not humiliated, by the neglect of the Academy. To its managers and directors the distinguished artists meant chiefly Burne-Jones, together with all his followers and imitators and admirers. Burne-Jones had sufficient individuality to give the gallery a very decided character, and sufficient fame or notoriety to insure its popular and financial success. But now that, unfortunately, with Burne-Jones it has lost its chief attraction, its chief support, what is there left? It is not worth while to depend upon Mr. Watts and Mr. Holman Hunt, two of the Gallery's other principal upholders. Both exhibit this year, but of their contributions I shall say nothing. They are men who, in their time, have done great things or played an important part in historic movements, but they are no longer young, and it is better to remember their accomplishments in the past than to consider seriously their mere echo of them to-day. To turn from them and from the sham primitives is to find the collection made up of the sentimental banalities of one of the managers—canvases which, the chances are, would not be accepted elsewhere; the work of an occasional stray foreigner of no great note; and the overflow from the Academy. This is, absolutely and without exaggeration, all. For really great work, even for strange or striking experiment, you will search in vain.

The one canvas which appears to me worthy to be mentioned specially is Mr. Sargent's portrait of Col. Ian Hamilton, and it really is not so much a finished portrait as a good, vigorous study. In a show devoted solely to Mr. Sargent it would not call for any particular attention; it would be easily surpassed. In the New Gallery it stands out too prominently to be passed over. Where so many things are dull and lifeless, this tall, spare figure, with the gaunt, keen, bony face, and the sensitive hands, seems all alert and alive, all energy and force and character, though it seems, too, cut out of the cold, uninteresting gray background instead of forming a part of it. It is an admirable study; the picture has yet to be painted. But one Sargent, and that not a very remarkable Sargent, will not make a good or representative exhibition. If the New Gallery can do no better, it would be wiser and more dignified to bring its career to an end and rest on its laurels.

The Royal Academy, within my knowledge of that institution, has never seemed so conscious of its inefficiency. To begin with, for the first time in many years it is beginning to listen to criticism and to make at least an appearance of concession. For long, the rule regulating the sending in of work to the yearly exhibition has been found fault with. This rule is that members of the Academy can exhibit eight works of art, and outsiders submit eight. The increase in the number of contributors has also increased the task of the selecting committee—a more powerful argument than public dissatisfaction—and, by way of helping themselves, under a show of generosity, it has been suggested that,

henceforward, Academicians and Associates should exhibit six works and outsiders submit four. But though outsiders, with cheerful blindness to the fact that the new rule is a trifle more unjust than the old, have been rejoicing, I do not think the concession amounts to very much, one way or the other, but for the interpretation artists have given to it. Far more noteworthy are the signs of discouragement, of fear, or hesitation—I hardly know what—within the Academical ranks. For weeks before the opening of the Academy, one heard of the various misfortunes and accidents that would prevent Academicians from finishing their important pictures in time. Now the Academy has opened, one finds that, on the one hand, men, like Mr. Dicksee and Mr. Fildes, who, in the old days, sent what were politely called the pictures of the year—pictures that drew the crowd as surely as Mr. Frith's "Derby Day"—are apparently afraid to venture upon anything more compromising than a portrait; that, on the other hand, men, like Mr. Abbey and Mr. Herkomer, who still try to rise to the occasion, either betray their own artlessness in the effort, or else show so lamentable a falling off from a once high standard that it would be better if they did not exhibit at all.

The failure of Mr. Herkomer need not, perhaps, be taken very seriously. His work in any medium—and he has tried many—has never been distinguished for its refinement or its feeling for beauty; but this year one simply stands amazed before his huge metal shield, in form not unlike a tea-tray, covered, hardly adorned, with enamels, that in some quarters is being spoken of with bated breath as literally and in truth, "The Triumph of the Hour," which Mr. Herkomer calls it. In this, he is supposed to have carried the art of enamel farther than ever it has been carried before, and, if to do something that has never been done because it should not be done, is a merit, then Mr. Herkomer deserves all possible credit—or discredit. Elaborate pictures in strident and many colors, but quite guiltless of good drawing, each with a little text below it, are scattered over the shield, fitted into the space much as editors of illustrated papers sometimes fit in a number of drawings on the same page, without any special thought for the design or effect of the collection as a whole. For the sake of a novelty, Mr. Herkomer has disregarded all the artistic limits of an art which is lovely only within these limits. But, remembering a succession of novelties by him in the past, this last departure is, after all, not so much of a surprise.

It is when we come to Mr. Abbey that we have more genuine cause for regret. Mr. Abbey's distinction as an illustrator has led us to expect only great things from him. Whether it is, however, that the necessity of turning out a huge canvas every season has become too much of a burden, or whether he, like so many others, is not strong enough to resist the benumbing, the deadening influence of the Academy, it is not easy to say; but certainly, year by year, his painting seems more and more perfunctory, more and more a mere exercise in studio properties. In the two pictures he now shows, "Who is Sylvia?" and "O Mistress Mine, Where Are You Roaming?" figures and costumes we remember in his very beautiful pastels and drawings reappear in canvases far too large for them, telling the story they have to tell

with a grace that will probably appeal to the public taste, but with none of the qualities that would delight the painter.

As for the other Academicians and Associates, they exhibit nothing of the slightest interest if I except the portraits by Mr. Orchardson and Mr. Sargent; and, while Mr. Orchardson varies his pleasant color scheme and general treatment so little that what you say of his work one year, need only be said again the next, Mr. Sargent is not particularly good, that is, for him. In his "Lady Faudel-Phillips" he has added to his rapidly increasing gallery of Jews, the type seeming to fascinate him as it did some of the old masters; but he has scarcely repeated his success of last summer. The new portrait is not marked by the wonderful realization of character that simply appalled one in the Mr. Wertheimer, nor has it the flamboyant gayety of the Mrs. Carl Meyer. You can see that it amused him to paint this large, smiling, prosperous woman, in her gorgeous gown and jewels; but the dog with pink tongue sitting in her lap only reminds one of the finer opportunity found in Mr. Wertheimer. Mr. Sargent, for the moment, succeeds better in a very different type—the type of the elderly schoolmistress in his Miss Jane Evans, whose severe black tailor dress has given him small chance for audacious cleverness of handling and interpretation, but who herself has a dignity and sober charm he has expressed very admirably.

However, I think the best portrait is not this one by Mr. Sargent, but rather Mr. McLure Hamilton's much smaller and more unpretending presentment of Mr. Cosmo Monkhouse. It is insignificant enough in size to have been hung in the gallery devoted to the small canvases, but it is so full of character, so harmonious in its beautiful silvery grays, that it is actually the most striking portrait in the exhibition. And so it is with the landscapes. There are, it is true, two or three large, rather stately compositions by Mr. Alfred East, the new Associate, who has improved enormously within the last twelvemonth; but by far the most accomplished, by far the loveliest is a quiet little canvas by Mr. Mark Fisher that hangs in the same gallery with Mr. Hamilton's portrait—a simple stretch of green country, devoid of incident, but transfigured in the golden glow of the summer afternoon. Mr. Fisher's sunlight sometimes is too harsh in its glitter, his pastorals sometimes are too restless with many details, but this picture has a serenity, a calmness, a repose that recall the triumphs of Barbizon.

If the New Gallery contains nothing of note but a vigorous study by Mr. Sargent, the successes of the Royal Academy, it is seen, must be reduced to two small pictures, a portrait and a landscape—both, it should be remarked in passing, the work of Americans and outsiders. Of course there may possibly be other good things; the hanging is so atrocious that there is never any telling what may be hidden up under the ceiling or down by the floor, or else overshadowed by unsympathetic surroundings. But I can speak only of what is visible on the walls, and I have by no means overstated or understated the case.

All the fashionable world crowds to the Academy's private view, Royalty eats its dinner, and the Prime Minister, in fireworks of rhetoric, sings the praise of the horrors in its galleries as if he really believed them

to rival the Sir Joshuas and Gainsboroughs they have replaced. It would be farcical if it were not so tragic for the artist. But curiously, though the public faith continues unshaken, doubt seems to have sprung up within the Academy itself. As I have said, Academicians no longer have the old cheerful confidence in their own popularity that permitted them to expose, without a tremor, the vulgarity or banality of what they were pleased to call their art. There is that recent concession—concession in name at all events—to exhibitors which is significant; but more significant still is the fact that the universal condemnation of the decorations now in progress at St. Paul's has called forth the protest of the President of the Royal Academy of Arts against one of its members, Sir William B. Richmond, the decorator appointed by the Dean and Chapter. This looks as if all were not well at Burlington House, and I can understand the dismay the President's action has created among Academicians. N. N.

CHATEAUBRIAND.

PARIS, May 4, 1899.

Nobody has made a deeper mark on French literature in our century than Chateaubriand. He first may be said to have broken with the dry and conventional literature of the Empire and to have been the founder of the Romantic school. He was a poet in prose. The richness of his imagination, the ardor and violence of his passions, his incurable sadness and melancholy, gave him something of the character of a prophet. His account of his youth in the stern castle of Combourg will always be among the most impressive pages of our modern literature; his "Mémoires d'Outre-Tombe," in which these pages appear, are becoming more and more admired as they grow older. The present generation has become indifferent to the political quarrels of the Restoration; it reads in the "Mémoires" only the parts which Chateaubriand devotes to his youth, to his life during the emigration and during the Empire, which he refused to serve after the execution of the Duke d'Enghien.

M. Edmond Biré has just published in three volumes a new edition of the "Mémoires d'Outre-Tombe," with an introduction, notes, and commentaries. It may be considered as definitive, for M. Edmond Biré has made for himself a sort of specialty, which consists in the most minute and elaborate study of all the original documents and manuscripts. Nobody is better informed, more careful, more painstaking. He has published most interesting and documentary works on Victor Hugo, on Honoré de Balzac. He can be compared, for minuteness and exactitude, careful analysis of memoirs, letters, articles in old reviews or even old papers, only with M. de Spoelberch de Lovenjoul. The text of Chateaubriand's Memoirs, like that of Saint-Simon, has great need of a perpetual commentary. So many people are mentioned in them, so many figures appear simply in the background, so many events are merely alluded to, that the modern reader often needs to be instructed. M. Biré's commentary is very complete and very precise, and has been written with the care which M. de Boislisle shows in his magnificent edition of Saint-Simon now appearing, volume by volume, too slowly for our curiosity.

Chateaubriand began his Memoirs in 1809, on his return from his journey in the East.

He often afterwards retouched them, made changes, additions, not always for the better—according to the passion of the moment. The work may be said to have been written in fragments, and unfortunately we do not possess the original manuscripts of these fragments. In 1826 the first part of the Memoirs was finished, and Madame Récamier, so devoted to Chateaubriand, made a copy of the first three books from the manuscript; this copy has, in consequence, great value, and M. Biré shows by extracts that it is sometimes a little different from the text which was printed in 1848. This copy was published only in 1874, under the title, "Remembrances of the Infancy and Youth of Chateaubriand: Manuscript of 1826." Chateaubriand retired from active politics in 1831, after the Revolution, and could devote more time to his Memoirs; in 1834 seven volumes were already completed, and it became his habit to read parts of them to a chosen few at the Abbaye-aux-Bois, in the salon of Madame Récamier. The scene has often been described: Chateaubriand seated in a chair, like an old lion; Madame Récamier watching every movement of his eyes, every emotion in his face; M. Ampère and sometimes M. de Laménie reading. Sundry fragments were, at the time, given to reviews and to newspapers. They were put together in a volume, now very rare, entitled "Readings from the Memoirs of M. de Chateaubriand." Our National Library possesses some manuscript fragments of Chateaubriand which were in the possession of one of his secretaries and left by him to a friend, who made a copy of them. Both manuscripts and copies are in the Library's department of manuscripts.

"It was in Rome," says Chateaubriand, "that I conceived for the first time the 'Memoirs of My Life.'" In a letter addressed to Joubert in 1813, he explains himself on the subject in these terms:

"My only happiness is to snatch a few hours during which I can occupy myself with a work that alone can bring solace to my pain—the 'Memoirs of My Life.' . . . Be easy; there will be no confessions painful to my friends. If I am to be something hereafter, my friends will have a name as fine and respectable. I will not speak to posterity of my weaknesses in detail; I will only say of myself what is suitable to my dignity as a man, and (I dare to say) to my elevation of spirit. One should present to the world only what is beautiful; and it is not being false to God to show in our life only what may incite others to noble and generous sentiments. It is not that I have really anything to conceal; I have not caused a servant to be discharged for a stolen ribbon, nor abandoned a dying friend in the street, nor dishonored the woman who had sheltered me, nor sent my natural children to the Foundling Asylum."

You recognize the allusions to Jean Jacques Rousseau. It is clear that Chateaubriand often had him in mind when composing his Memoirs. One of the reasons why he was anxious to paint his own portrait was that he was afraid it would be painted by others in a less flattering way. In the Preface to the edition of 1834, he says on this subject: "I consider that, as my life belongs on one side to the public, I could not have escaped all the composers of memoirs, all the venal biographers who in the evening put in the papers what in the morning they have heard in the ante-rooms. . . . Every man who has played a part in the society of his time owes to the defence of his memory a monument by which he may be judged."

It was idle for Chateaubriand to give us

his reasons for writing his *Memoirs*. He was, above all, an artist, with extraordinary powers of imagination and description. The book was in him, it was his own life—he could no more help writing it than an apple-tree can help bearing apples; especially as his was a very tormented, agitated, pessimistic mind, and he had to seek in himself the cause of his perpetual melancholy. It is this pessimism, finding such varied and eloquent expression, which gave to Chateaubriand a new place in literature. The literature of the *grand siècle* is optimistic; the literature of the eighteenth is gay and frivolous. After the great drama of the Revolution, the great epic poem of the Empire, France needed a Chateaubriand; she found in him the expression of her own emotion, her own regrets, her own fears, her own admirations.

The great and in many senses magnificent movement of the Romantic school was a departure from all conventions; it was, so to speak, a leap in the dark, just as the Revolution and the Empire had been. The *Memoirs* may be considered a poem in prose. They have not the dryness, the precision of ordinary memoirs. Every event, every incident of life becomes the subject of or pretext for a lyrical effusion. Chateaubriand says truly, "My solitary, dreamy, poetical life went on through a world of realities or catastrophes, of tumult, of noise, with the sons of my dreams," Chactaw, René, Eudore, etc., "with the daughters of my chimeras," Atala, Amélie, etc. The work is so personal that George Sand calls it, in a letter to Sainte-Beuve, a work devoid of morality. But lyric poetry is perforce personal, and it is because the *Memoirs* are so personal that Chateaubriand preferred them to all his other works. He spoke of them as "this poor orphan who will remain after me in the world." He never ceased to amend them, to add, to suppress; and M. de Loménie tells us that, during the last months of his life, he gave himself the melancholy pleasure of having them read to him once more from beginning to end.

The history of Chateaubriand's reputation as a writer is instructive. It was founded at first on the 'Genius of Christianity,' a work which prepared and accompanied the revival of the Catholic religion after the implous days of the French Revolution. This work served the purposes of Bonaparte and was a sort of support for the Concordat. Though it contains some fine pages, it has no value from a theological and argumentative point of view; nevertheless, it had an immense success, as it corresponded with the state of mind of those in France (and they formed the immense majority) who regretted the excesses of the Revolution, and wished to see the churches reopened. As a work of art, its arrangement leaves much to be desired, and the Classicists of 1803 criticised it not without reason. It proved a tie between young Chateaubriand and Napoleon: the neo-Christian ambassadorial secretary was sent to Rome. We know how the tie was suddenly severed when Chateaubriand learned of the execution of the Duke d'Enghien.

Chateaubriand's first novels were as successful as the 'Genius of Christianity.' They gave to the French the first vision of the wild West, of the red Indians; they opened, also, new vistas in the land of sentiment, very different from those to which the eighteenth century had been accustomed. Chateaubriand's reputation as a writer came to

its apogee during the Restoration, not only because he was one of those for whom the Restoration was a sort of personal triumph, and because he became one of the chief political leaders of the time—minister, ambassador—and was thus brought into the focus of popular admiration; but also because he became, if not the most important, one of the most important promoters of the great literary revolution which goes under the name of Romanticism.

The Revolution of 1830 was a great blow to Chateaubriand. He had at various times been driven into the opposition under the Restoration, but his opposition was always constitutional. When the edifice which he had helped to build was overthrown, his natural sadness and melancholy became a sort of dark and aggressive misanthropy. His literary reputation could not suffer from the violence of this misanthropy; he made a great number of enemies by his diatribes, by the expression of a contempt which became almost universal. The men of 1830 whom he disliked and despised, took their revenge by trying to ignore him, or by attacking his style, his manner; they found the weak spot in the man, and denounced him as an egotist, as a charlatan of sensibility, as a comedian. All that can be said against Chateaubriand has found the cleverest expression in a work of Sainte-Beuve's. Sainte-Beuve the critic is unsparing, but Sainte-Beuve was too much of an artist also not to feel the greatness, the loftiness of the genius of Chateaubriand. We are now so far from the passions which divided the generation of the Restoration and that of 1830, the followers of the Bourbon and the followers of the Citizen King, that Chateaubriand's reputation is having a sort of revival. I will, as a proof of it, allude only to the very remarkable, sympathetic, one might almost say, enthusiastic articles written of late years on Chateaubriand by the Viscount Melchior de Vogüé, and to the publication of the new and very conscientious edition of the 'Mémoires d'Outre-Tombe' by M. Edmond Biré.

Correspondence.

BENEVOLENT ASSIMILATION.

TO THE EDITOR OF THE NATION:

SIR: With an area of 2,500,000 square miles acquired in the last ninety-five years, we, in quest of additional territory, are butchering on their native islands in tropical seas the Filipinos, who have nearly fifteen times as many people to the square mile as we have in said area. Even with the present population of the region constituting the original thirteen States thrown in, the inhabitants of the Philippines are more than three times as many to the square mile as those of the United States. In other words, we must have 250,000,000 of people before our country will be as thickly settled as Luzon, and 500,000,000 before it is as populous as Cebu. This alone should deter us from pursuing further the course marked out by the present Administration, to say nothing of the self-evident fallacy of thinking that people of the temperate zones could long thrive in the deadly tropics of an Oriental, sea-level country—unless, indeed, it is the deliberate purpose of our Administration to exploit Asiatic labor by compulsion.

For its relevance to this point, I append the

following letter just received from a Hollander. It is the third communication of similar tenor that I have received from natives of that country:

"Your pamphlet, 'Imperial Democracy,' has attracted a great deal of attention. The United States certainly will have a great task before it to develop the Philippines as Holland developed Java, and your question as to how this can be accomplished by annexation and bringing the islands under United States laws is one that cannot be easily answered. The labor question will, I think, be the hardest problem for the government of the Philippines to solve.

"I have worked in the tropics of Africa, Surinam, and British Honduras, and conducted the most productive and valuable sugar estates in Surinam. After the emancipation of laborers to freedom in the tropics, agricultural enterprises were ruined. Calcutta and Madras labor imported into the British West Indies has brought relief to England's possessions there, but bring even negroes from Barbados and Jamaica to the mainland, Guiana, and one will see the failure. While in Surinam, we tried to get consent from the European Powers to import negroes from Africa under the same conditions as coolies are imported from Calcutta and Madras, to save our large agricultural interests there. Our petitions were endorsed by the most prominent public men in England and Holland, but we failed, and we had to see our sugar estates go to ruin. We also tried white labor from Holland, Belgium, France, and Portugal, but met with such disastrous sickness among our men that our labor accounts were more than tripled. The contract labor for Surinam under Government supervision brought some relief, especially to the small coffee and cocoa-planters, but sugar suffered, and how the United States will make the Philippines produce regular labor under American laws is a question which will take some time before it is answered. I do not think that the Americans who may embark upon agricultural enterprises in the Philippines will have the natural patience of the Hollander, which is always essential in dealing with the laboring classes of the tropics to make a success there.

"As you justly say in your paper, tropical climates, no matter where, are demoralizing. I remember well the first day I set foot in the tropics, being then very young, and how much I deplored the lack of wisdom displayed by my family in sending me to such a zone. It is not only what a man suffers physically in the tropics, but the severe moral deterioration which is sustained, and how disgusted he feels in his surroundings. Any one who has not been there and whose higher feelings are not developed cannot understand it. All the tropics are described as luxuriant as a paradise, but I wish many times I had never been in such paradises—they are a real hell on earth."

Upon this question of labor, Special Commissioner E. W. Harden says in his report on the 'Financial and Industrial Conditions of the Philippine Islands':

"The question of labor is a serious one. The natives are not to be depended upon as laborers. They work only when they see fit, and their work is far from being satisfactory. The best workers in the Philippine Islands are the Chinese coolies; most of them, however, are in and around Manila. The Spanish Government had a law in force under which Chinese coolies were allowed to land on the payment of a tax of \$50 a head. Under the military occupation of Manila no more Chinese have been allowed to land at that port. Planters and business men believe the Chinese should be allowed to come in, under proper restrictions, as they make the best servants and in many ways the best laborers that can be obtained in the islands."

The Chinese are, in fact, the best laborers that can be obtained in the Orient, but are the masses of the American people ready to invite race troubles by an influx of Asiatics—either by unrestricted immigration or as citizens of the United States under the annexation of the Philippines?

As to retaining these islands, the whole

scheme is one of forcible annexation, dictated by commercial greed. Commissioner Denby, who is popularly supposed to dominate the commission now in the Philippines (and doubtless does), after stating the proposition as a purely "business" one, has said:

"The cold, hard, practical question alone remains: Will the possession of these islands benefit us as a nation? If it will not, set them free to-morrow, and let their people, if they wish, cut each other's throats or play what pranks they please. To this complexion we must come at last, that, unless it is beneficial for us to hold these islands, we should turn them loose."

If this does not dispose of the last semblance of altruism, the last vestige of benevolence, I do not know what further evidence is needed. We cannot assimilate alien races, and the invitation, however presented, to bring Oriental peoples under the government of the United States, with freedom to come and go as citizens, means more just such happenings as have disgraced this country in the brutal murders of Chinese on the Pacific Coast and of negroes in the Western and Southern States.

JOHN J. VALENTINE.

SAN FRANCISCO, May 16, 1899.

NO ESCAPE FROM MCKINLEY.

TO THE EDITOR OF THE NATION:

SIR: Having lately stated my firm belief that Mr. McKinley will be renominated next year without much if any opposition, let me give some arguments, drawn mainly from experience of the past, for my assertion.

Nineteen men have been elected to the Presidency before McKinley, only sixteen of whom lived out the first term. Three of these (Polk, Buchanan, Hayes) declined another term; of the other thirteen, twelve were renominated; the thirteenth (Franklin Pierce) got a majority of votes in the Cincinnati convention, and failed only through the working of the two-thirds rule—a rule which cannot be invoked against a Republican candidate. The reason why the incumbent was nearly always put up by his party for reelection, was not alone nor mainly his power to reward friends and to punish enemies compelling the action of the old Congressional caucus or of the modern convention in his favor, for John Quincy Adams was renominated without lifting a finger in the use or abuse of patronage; Van Buren, in 1844, when out of power, secured more than one-half of the delegates, and Cleveland in 1892, when out of power, was renominated by two-thirds of the delegates and elected. No, the main reason was this, that, by not putting up the last President of its choice for reelection, a party would admit not only his failure in office, but to a great extent its own error and its own failure.

Passing from the sixteen elected Presidents to the four Vice-Presidents who succeeded to power on the death of their chiefs, I admit that none was renominated; but two of the four, Tyler and Johnson, having left their old friends, put themselves out of the range of possibility. Fillmore and Arthur alone remain to be considered. The former drew on himself by one distinct act, that of signing the Fugitive Slave bill, the hatred of all the Northern Whigs, excepting a few "Silver Grays"; in one word, he was objected to not on personal but on political grounds—not for weakness, or unfitness, or dishonesty, or in-

efficiency, but simply because the majority of the Whig party disagreed with him on a fundamental question. Mr. McKinley cannot be beaten on any such ground, for the great majority of his party is with him on the only new question that has come to the front during his term. Mr. Arthur, who was on all public measures in full accord with an undivided party, was beaten in convention, but he was beaten by a man who for eight years had been the overshadowing figure in his party. Mr. Blaine had really been the choice of the majority of the delegates in 1876, and it took great skill and much manoeuvring to down him in 1880. At present there is no such figure as that of the Man from Maine threatening to thwart Mr. McKinley's ambition. There lives another and better "man from Maine," but he has voluntarily taken himself out of the path of his old successful rival.

Thus I cannot see how McKinley's enemies in the next convention (if there should be any) will find a candidate willing to sacrifice himself by a futile show of opposition. As to the faction fight in Ohio, it will result in the end in nothing more than a struggle between two or three sets of delegates, all of whom alike will claim to be original McKinley men. I have watched political play too long to ascribe any importance to the squabble between Hanna and McKisson.

D.

LOUISVILLE, KY., May 14, 1899.

YOU-ALL.

TO THE EDITOR OF THE NATION:

SIR: In your issue of May 11, a short review of Miss Earle's stories closes with this question, "Are the 'you-all' and 'you-uns' of the South applied to a single person, as we constantly find Miss Earle using them?"

I have not seen Miss Earle's stories, and I do not know what part of the country, or, indeed, of the world, Miss Earle hails from; but I venture to say that, if she makes use of "you-all" as the reviewer says she does, she is not a Southerner by birth.

It may be stated without fear of successful contradiction, that the Southerner never says "you-all" unless he has two or more persons in mind. It is a very common mistake of the Northerner to suppose that he does, and the Northerner is not entirely without grounds for his mistake. The Southerner meets him alone and greets him: "Good morning! How are you all this morning?" The Northerner supposes the Southerner means himself alone, and he smiles; whereas the Southerner means: "How are you and your wife and children—your household?" And in every other case, when the Southerner says "you-all" to a single person, he means to include some other persons or persons associated in his mind with the one he addresses. This is a fact the Northerner never seems to learn, no matter how long he may be with Southerners; and it is so natural to the Southerner that he seems never to suspect that he is misunderstood by the Northerner.

The most curious use of the expression is in its possessive form, "you-all's"; and this I have heard cultured Southerners say. "You-all" is used by the educated as well as by the illiterate; not so "you-uns," if it is used at all at the South. I was bred and born at the South, and have lived most of my life there; yet I cannot recall that I have ever heard "you-uns" used by any one, white or black.

I do not, however, say it is not heard back in the "cracker" regions.—Respectfully,

MATTHEW F. STEELE.

ST. PAUL, May 20, 1899.

THE OLDEST HISTORICAL SOCIETIES.

TO THE EDITOR OF THE NATION:

SIR: At the suggestion of Mr. Charles Francis Adams, I repeat to you, as of possible interest to your readers, two or three facts which I was led to mention to him by a recent query in your pages. In his recent presidential address at the opening of the new building of the Massachusetts Historical Society, Mr. Adams suggested that the Society, besides being the oldest such organization in the United States, was perhaps also the oldest in the world. He tells me that his suggestion was based upon the following passage in some remarks made by his predecessor, the late Hon. Robert C. Winthrop, at the Society's centennial celebration in January, 1891:

"Until this Society was organized a hundred years ago to-day, by our eminent and revered founder, Dr. Jeremy Belknap—prompted, as we may not forget, by Mr. John Pintard, of the St. Tammany Society of New York—no historical society existed in America. I am not sure that there was such a society in any part of the world." (Proceedings of the Massachusetts Historical Society, Second Series, vi., 273.)

The facts which your query brought to remembrance were, that the Royal Academy of Portuguese History was founded in 1720, the Royal Academy of History at Madrid in 1738, the Royal Society of History and Danish Language at Copenhagen in 1744.

Very respectfully yours,

J. F. JAMESON.

PROVIDENCE, May 22, 1899.

Notes.

G. P. Putnam's Sons will publish immediately 'Vassar Studies,' by Julia A. Schwartz, A.M. ('96)—impressions of college life; also, 'Miss Cayley's Adventures,' by Grant Allen, 'Nature Studies in Berkshire,' by John Coleman Adams, with illustrations, 'Ornamental Shrubs,' by Lucius D. Davis, and 'Our Insect Friends and Foes,' by Miss Belle S. Cragin.

'The Solitary Summer,' by the author of 'Elizabeth and her German Garden,' and 'From Comte to Benjamin Kidd: the Appeal to Biology or Evolution for Human Guidance,' are in the press of Macmillan Co.

Harper & Bros. will shortly bring out 'Japan in Transition,' by J. Stafford Ransome, special correspondent in this country of the London Morning Post.

Prof. N. P. Gilman, author of 'Profit-Sharing' and 'Socialism and the American Spirit,' is preparing a volume on employers' institutions for the benefit of workmen, which will be issued by Houghton, Mifflin & Co. in the fall, under the title 'A Dividend to Labor.'

Among the Translations and Reprints from the Original Sources of European History published by the University of Pennsylvania and set down for 1899, are 'The Early Germans,' by Arthur C. Howland, Ph.D., and 'Laws of Charles the Great,' edited by Dana Carleton Munro, M.A.

The beginning of wisdom, historically, politically, geographically, and commercially, about the Philippine Islands had been (be-

fore Dewey's exploit) the work of John Foreman, F.R.G.S. In his own language, it "is not a History, nor a Geography, nor an Account of Travels, in the strict sense of the word; it is a concise review of all that may interest the reader who seeks for a general idea of the condition of affairs in this Colony in the past and in the present." His authority caused his services to be availed of by the American Peace Commission, and he gladly joined in what he took to be "the noble efforts of a free people [pace Charles Emory Smith] to raise the weight of monastic oppression from millions of their fellow-creatures." His minutely descriptive and statistical chapters, already bulky, have now been swelled by about one-fourth, taking up the parable at the Tagalog rebellion of 1896-'98, and bringing the narrative of a change of oppressors down to date, with a map of the revolted province of Cavité and another of Dewey's engagement. This second edition bears the imprint of Charles Scribner's Sons. It has a number of excellent photographic and other illustrations, and it is in large measure readable, as relating the author's experiences.

We have already acquainted our readers with the contents of M. Jusserand's 'Shakespeare in France under the Ancien Régime,' which now comes to us in a handsome dress in English (London: Unwin; New York: G. P. Putnam's Sons). The translation is anonymous, a little stiff, and questionably not extended to the notes when corroborative citations are given—though this will not seem a fault to readers who know French. There is an index and an annotated list of the valuable and curious illustrations, among which none is more interesting than Roubillac's statue of Shakespeare, ordered by Garrick, and the second one ever made.

Eight years ago we welcomed the first report of the Free Public Library Commission of Massachusetts, and now its ninth appears, a volume of nearly 500 pages. The Commission can announce a wonderful expansion to 687 secular libraries, possessing more than 6,500,000 books and pamphlets. Less than one-half of one per cent. of the population are denied free-library privileges, but there are travelling libraries even for this minority, with circulatory photographs of the world's great sights for exhibition. The report tells in alphabetic order the history of each library, and oftener than not (we should judge) gives a photographic view of the building; and this series of prints offers an extraordinary interest. For the most part the structures are permanent, carefully and often beautifully designed, but no type is evolved. A town hall or other public building is not seldom arranged to include the library. Of the many libraries which are the fruit of private benevolence, the sentiment for one's birthplace and the desire to commemorate relatives are the dominant motives in the founding. We commend the report to all would-be benefactors of this order in other States—for hints as to building models, for the text of the Massachusetts library laws, for the descriptive letter-press, and for the list of founders whose names here go down to posterity in just honor.

A limited edition has been printed, in this city, of 'General Orders of 1757, issued by the Earl of Loudoun and Phineas Lyman in the Campaign against the French.' The orderly book, here produced faithfully under the supervision of Mr. Worthington C. Ford,

was that of General Lyman of Connecticut, now in the possession of William Seward Webb, at whose expense this dainty book has issued. Dr. Webb's interest in it apparently connects itself with an ancestor, Major-Gen. Daniel Webb, who figures in it to some extent. For the rest, we have the customary mirror of camp life and discipline, with glimpses of the hell that war is. Corporal "Henry Dorman" and private "Luelen Rice" were fortunate in being sentenced, September 3, 1757, to suffer death for desertion, in comparison with "Frances [sic] Fleming" and four other privates, guilty of the same offence, and John Anderson, guilty of mutiny, who were "to receive 1,000 Lashes Each with a Cat of nine tails." Private John Rider got 500 for sleeping on his post.

A book has just been published on the 'Story of our Flag' in which Mrs. Weaver, the writer, again tells the old story of Washington's visit to Mrs. Ross, a "known expert at needlework," and the consequent evolution of the flag of the United States. Of course witnesses are produced, and they are eminently respectable—Robert Morris and George Ross, an uncle of the sewer. She is, as naturally, young and beautiful, a widow, and lives in a little house. When it came to the number of points on the stars, Washington preferred the number on the stars of his coat-of-arms, and much more is related and published by a patriotic publishing company, for consumption among the patriotic societies of the land. Legend is thus converted into history. On the other hand, Sir George Otto Trevelyan discredits the boast on Washington's part of his pleasure at the whistling of the bullets in his first encounter. "Of course," says the author, "there was nothing of the sort in the dispatch, which, in its business-like simplicity, might have been written by Wellington at six and forty." Unfortunately for this statement, the boast was actually written in a letter to his brother, and this letter, travelling across the ocean, was printed in the English magazines. It is, therefore, an authentic utterance, though never intended to be part of an official dispatch. A rather severe reviewer of Trevelyan's book in *Blackwood's* asserts that Washington used a cipher in writing to his friends because of the insecurity of the post-office. It would be impossible to name or point out a single instance in which he resorted to a cipher, except in some communications to the French allies, a precaution justified by war.

The *Renger'sche Buchhandlung* in Leipzig has just issued the first part of a 'Bismarck Lexikon,' by A. von Schladen, in which the utterances of Bismarck on various topics of public interest and his opinions of prominent persons are arranged in alphabetical order. In connection with each subject are given the sources of information, among which his conversations with Lothar Bucher, hitherto unpublished, are of special interest. The 'Lexikon' will be completed in six parts, each averaging about 125 pages and costing two marks (fifty cents).

A modest venture in the way of its literary features, but one deserving of much commendation for its illustrations, is *Dietz*, a new member of the class of magazines which are to be had at ten cents for the single copy. It starts up at the same time with the *Conservative Review*, and is an interesting indication of the intellectual activity of two Southern cities. The portraits of Clinton

Peters, most of them works of remarkable fidelity and artistic charm, with the taking sketches of the city of Charleston, make the April number the best that has yet appeared.

The May number of the *Berea* (Ky.) *Quarterly* is notable for a large number of "Hymns of the Slave and the Freedman," amassed by William E. Barton, D.D., in continuance of a similar collection contributed to the *New England Magazine* for December, 1898; and a third is yet to come. We infer that Dr. Barton may not have met with the pioneer (and still unsurpassed) collection entitled 'Slave Songs of the United States.'

That eminent authority on games, Mr. Stewart Culin, Director of the Museum of Archaeology and Palaeontology, University of Pennsylvania, addresses himself to Hawaiian Games in the April number of the *American Anthropologist*. Among those still persisting, he says, is cock-fighting, which we have suppressed in our new Spanish territory, and which the sons of the missionaries should be glad to have our assistance in putting down in Hawaii. Discussion of the origin and ethnological relation of the games in general is deferred. Both Asia and the American continent have, of course, contributed largely. Mr. Culin singles out the guessing game of *pu-ke-ne-ke-ne* for its resemblance to "certain [North American] Indian games in which a stone or other object is hidden in one of four places."

In the *Geographical Journal* for May Col. Sir T. Holdich makes an earnest plea for the more thorough study of geography, demonstrating its practical use from his own experience in determining the boundaries of India. He states his belief that the great part of the political difficulties which have arisen in connection with boundary demarcation, during the past twenty years, "have been due to a want of appreciation of the necessity for a sound geographical basis to the text of treaties and agreements." Dr. Thoroddsen gives a brief survey of the geology and geography of Iceland, together with a description of some of its remarkable physical phenomena, as, for instance, the "petrified" lava fall, consisting of "four curtains hanging one beside the other, 820 feet high, at Selvogur." This is accompanied by some illustrations and an admirable map. Under the title, "The Eastern Gateway of the United States," Prof. A. P. Brigham of Colgate University gives a physiographical description of the Mohawk Valley, together with the principal facts of its commercial development through canal and railways. There is also a note upon the recent Anglo-French agreement, with a useful map, showing approximately the line of delimitation of British and French spheres in Central Africa.

The first number for the year of the *Bulletin de la Société de Géographie* contains a detailed review of the progress of geographical research during 1898, accompanied by fourteen useful sketch maps, showing the most important explorations, and a description of some valuable geographical antiquities, globes, and maps, in Zurich and Basle. Of more general interest is M. Loiseleur de Lobel's lively account of a journey to the Klondike last summer by way of the Chilkoot Pass. He confirms the testimony of other travellers as to the order which prevails on this route through the admirable service of the mounted police. In this region, he says, "there is more security than in

some districts of Seine-et-Oise." But of Manok, a town of 1,500 inhabitants on the Yukon in Alaska, he makes this surprising statement: "It has a church, a hospital, some stores; but there is neither police nor authorities. The miners govern themselves. A man condemned for murder or theft is put on a raft in the middle of the river, which is equivalent to a sentence of death, for the unfortunate wretch can but perish of hunger or otherwise." It is evident that he found few, if any, of his countrymen in the gold fields, for he exhorts them not to neglect their opportunities, as they did in the Transvaal, to make their fortunes and at the same time to extend the commerce of France. We may add that he says he preferred to land in Montreal "in order to avoid the annoyances of the American custom-house."

Prof. Angioletti, Director of the Observatory at Naples, has recently shown, by minute and careful computations, that the astronomical conditions described by Dante as prevailing at the time of his imaginary journey through the three worlds beyond the grave, correspond perfectly with those which existed on March 25, 1301, and, further, that in no other month than March either of the year 1301 or of the years immediately preceding or following, could these conditions have been fulfilled.

The rapidity with which the comparatively new ideas of university extension and summer sessions in higher institutions of learning are gaining ground, on both sides of the Atlantic, may well engage the thought of the sociologist as well as of the educator. Both these movements are the outgrowth of the modern tendency to lessen the inequalities of social conditions by bringing the advantages of higher education within the reach of the largest possible number. More and more European and American universities are making the midsummer session a regular feature of their annual programmes, extending thereby the use of their plants and costly educational outfits to many whose circumstances debar them from following courses during the established academic year. In Germany, university extension courses—*collegiumliche Hochschulkurse*—are of more recent origin than in England and America, but several have for some years been successfully carried on; and, during the Easter vacation, representatives of all the universities met at Berlin and unanimously recognized the new institution as a necessity. Another meeting for the furtherance of the movement will be held at Easter, 1900.

—A correspondent writes:

"The volumes which have thus far been published in the Temple Classics series by J. M. Dent & Co. are so uniformly pleasing and attractive, that it is especially unfortunate that they should offend in any one particular. But the marginalia with which they are provided do seem to furnish this one particular, for on a small 12mo page, where the print is necessarily fine and close, it cannot prove otherwise than tiring for the eye to have constantly before it three or four marginal words in very black type. There are instances where marginalia are doubtless a very definite aid, but surely they are out of place in such a book as 'Henry Edmund.' In a novel where we follow the progress of the hero from early boyhood to his prime, there must be very many pages which record the merest trivialities of daily life, and for which marginalia seem entirely superfluous even when of the best character. How much more so, then, must they prove when they are seldom put and often

the grave she will see him no more'; and again, when his lady reproves him, 'Better dead.'"

—It is stated in *Science* that money has been secured for a second expedition by Mr. J. M. S. Moore to Lake Tanganyika. Some ten years ago a true medusa, similar to some of the marine jelly-fishes, was discovered in the waters of this lake, and naturalists were thus led to believe that it might contain other evidences of a former connection with the ocean. The result of Mr. Moore's first expedition is to show that, in fact, this vast and remote inland sea holds, side by side with an ordinary freshwater lake fauna, a second fauna of purely marine character. Moreover, the molluscs of this fauna show an extraordinary resemblance to forms occurring in the fossil condition in the inferior coelites of Europe. Twenty-six of the fishes brought home by Mr. Moore were wholly new to science. One is led to believe that an expedition more thoroughly equipped, and provided especially with a steamer (which Mr. Moore had not the chance to obtain), will yield results of proportionally increased importance. In particular, it is expected that light will be thrown on the great geological problems of the history of this lake basin, and of its connection possibly with the Nile or a northward sea, and possibly with an estuarine Congo.

—'Danish Fairy and Folk Tales' (Harpers) is a translation, by J. Christian Bay, of stories from the collections of Svend Grundtvig, Tang-Kristensen, Ingvor Bondeson, Molbech, and others, with here and there, the author says, a personal memory. With but one or two exceptions, this is a thoroughly representative selection from a singularly rich store. It is always one of the most fascinating phases of the comparative study of folk-lore to trace the specific national embodiment of material which fundamentally is common to the Indo-Germanic people. Most of these tales, from the inherent nature of the case, are but old friends with new faces: "Greyfoot," for instance, is the "König Drosselbart" of Grimm; "Brave against his Will" is "Das tapfere Schneiderlein"; "Saucy Jesper" is "Die goldene Gans"; the "Coffee-mill which Grinds Salt" is King Frodi's mill Grotti of the Edda, which, it is interesting to note, also localizes the story in Denmark; and there are many others of more or less striking similarity to the well-known stories of other nations. One and all they have taken on in Denmark, however, their own distinctive shape, that is born of the soil in which they have grown and flourished as they have come down from generation to generation. It would not be possible, it may be, to reconstruct along very close lines actual Danish life at any single period of its history from "this train of Danish kings and queens, wise men and fools, princes and beggars, peasants and burghers, soldiers, fairies, and trolls," as the translator describes his *dramatic persons* in his preface; but there is here such an undeniable record of the nation's stage of culture as a whole that he who runs may read it. "What the Christmas Star Sees," although a good story well told, does not belong in this collection of folk-tales, where it is a disturbing element. The book makes no scientific pretensions as a contribution to folk-lore, but

its mission. The translation, be it said, is well done, and the numerous illustrations are spirited.

—A brief sojourn, say in the Carrillos mining district, may enable but can hardly entitle one to put forth another book on New Mexico—particularly one which claims to be "a true picture of life among the Pueblos." R. B. Townshend's 'Lone Pine' (Putnam) hinges on a "lost silver mine" secreted by the Indians. There are precisely as many lost mines or hidden mines among the Pueblos as diamond diggings in the Onondaga Community. After this, it is not surprising to learn from Mr. Townshend that "Cortez slaughtered Montezuma," and that Cabeza de Vaca was "a comrade of Ponce de Leon." The American prospector, "Stephens," is not a bad type; "Backus," the Indian trader, and logical villain, is still truer. The Mexican characters are drawn with creditable tolerance if scant intimacy. It is when he comes to the Indians, upon whom his book is built, that the author becomes hopelessly involved. Not one of his aboriginal types, Navajo or Pueblo, is real; most of them are congenital absurdities, like the cacique anxious to make his "term" popular, and the Pueblo boy and girl who alope. Certain verisimilitudes encourage the belief that Mr. Townshend has read—sometimes wisely and sometimes too well—and that he has also become somewhat acculturated in some part of New Mexico remote from Indians. That he has ever been among the Pueblos is denied by his own pages all unconsciously. That he has ever set eyes on them is made most unlikely by the statement (p. 39) that the women "cut their hair short," because, if it were not trimmed, "the care of it would take too long from household duties." Fray Marcos did not see in 1539, nor has any one since seen, a Pueblo woman with her hair cut. The story, not altogether ill-conceived, and in general run interesting, is told in stark journalism.

—Prof. G. H. Palmer's rendering of the 'Odyssey,' while it cannot be said to rival that of Messrs. Butcher and Lang, secured him a respectful hearing as a translator. In his 'Antigone of Sophocles' (Houghton, Mifflin & Co.) he has repeated the experiment which he made with his 'Odyssey,' i. e., the employment of iambic rhythm in a "prose" translation. His aim is "to suggest to the ear that we are traversing a region of poetry and not of prose." We confess to a strong prejudice against his "rhythmic chant." In reading this version of the "Antigone" we are reminded more than once of Longinus's objection to an over-rhythmical style—that it does not communicate the feeling of the words, but rather the feeling of the rhythm. The introduction of verse rhythm into prose was a favorite rhetorical device of the later Greek sophists, who chanted rather than spoke their flowery declamations. Their excuse was that in their displays the subject-matter was of the least importance—the form and the setting being nicely calculated to divert the attention of the audience from the inanity of the theme. Prof. Palmer's version is not addressed to scholars, who will remain faithful to Prof. Jebb's simple and accurate translation into plain prose, with no attempt, in Prof. Palmer's phrase, to "thin out Sophocles." The present version, from the un-English order of

ter effect might have been obtained if, here and there, the long Greek periods had been broken up. For instance, the sentence, "For to my thinking he who ordering a great State catches at plans not through their being best, and then through fear holds his lips locked, appears and ever has appeared most base" (p. 35), has little rhythm to lose, and in its present shape is precisely as it would be construed by a schoolboy into translation English. It is impossible to translate Sophocles. His love of allusion, his psychology, his complexity, when transferred from the subtle medium that he used, inevitably give a bald or stilted effect. Prof. Jebb, in his versions, wisely made no attempt to reproduce the poetic effect of the plays of Sophocles. Let those, therefore, who wish to appreciate the Greek masterpieces realize that, though they may gain some grasp of Plato's philosophy (not of his exquisite prose) in Jowett, or of Homer's imaginative powers (not of his poetry) in Butcher and Lang, for Sophocles and Æschylus, as for Pindar, they must go to the originals. Those, however, who are content with knowing something of the characters of the "Antigone" and of the action and structure of the play, will find in Prof. Palmer a useful and sympathetic interpreter.

—The fourth series of M. Adolphe Brisson's "Portraits Intimes" (Paris: Armand Collin) offers its readers a glimpse into the private lives of several persons of diverse ranks and pursuits obliging enough to grant an interview to the editor of the *Annales Politiques et Littéraires*. In the search for "copy," the author's range is wide—from princes of royal blood down to bull-fighters and soothsayers of various kinds—and much is doubtless of merely passing interest; but M. Brisson's information obtained in person from such distinguished contemporaries as Henri Lavedan, Mme. Michelet, Joris-Karl Huysmans, and several *sociétaires*, of both sexes, of the Comédie-Française, will have permanent value for future biographers. The portraiture possesses the further advantage of being presented in light and chaty form, with here and there touches of characterization that show the practised hand of the journalist. For example, at the conclusion of his visit to Huysmans, M. Brisson exclaims: "D'une part, ce qui rappelle les bas-fonds du vice, et tout à côté les envolées de la vie spirituelle. . . . Ce sont bien là, en effet—étroitement unis l'un à l'autre—les deux Huysmans"; and readers of the *Annales* can certainly see the ethical lacuna for themselves. In addition to these sketches of persons, are pictures of German and other travel, and one noteworthy excursion into a well-trodden field of literary research, where an enthusiastic Moliériste glories in finding what he believes to be the veritable human original of "Tartufe." Le sieur Charpy de Sainte-Croix, says M. Bonnet, was the celebrated model of seventeenth-century hypocrisy; ingeniously adding, however, that moral proofs alone are forthcoming, but these are sometimes sufficient to clinch a question. M. Brisson cautiously recommends the demonstration of their validity to the exercise of professional critics, and charitably omits reminding M. Charles Bonnet that his great Swiss namesake would probably have called for evidence of another order.

—Mr. Louis Dyer's third and last lecture at the Royal Institution on Machiavelli dealt

with that author's idea of Morals. Correspondence with his son Guido and his nephew Vernaccia was cited and contrasted with Machiavelli's letters to Vettori and Guicciardini. In the former there is a somewhat simple-minded conformity to the average workaday morals of the Florentine people of that time; in the latter a somewhat uneasy and rather unconvincing assumption of the rakishness of the grandee. The first was more characteristic, but neither of these moods was in any close relation to the idea of morals implied and expressed in Machiavelli's writings. He was not in his own opinion a person of sufficient consequence to dream of being aggressively vicious. A more constant and energetic interest on his part might perhaps have made his family concerns more complicated and also more successful, but it is probably unfair to hold him responsible for the violent and unsavory careers of his two oldest sons. As he conceived them, Machiavelli's family concerns left him exceptionally untrammelled, and his chief energies were concentrated upon the study of his new Science of State. Such attention as he there gave to morals was closely allied to a medical metaphor of which he is everywhere inordinately fond. He never tires of considering what he calls the corruption of the body politic, conceived of as a disease, to cure which cautery and the knife must be used by the Prince. In Mr. Chaupernowne's skilfully wrought and workmanlike parody on the "Prince," entitled "The Boss," we chiefly discover that the Boss in American politics is not the analogue of the Prince, but personifies rather that corrupting disease which the Prince was predestined to cure. The eighteenth chapter of the first book of Machiavelli's Discourses on Livy contains a passage strikingly applicable to the problem of American municipal government. Our author maintained that there was political soundness in Germany, Switzerland, and England; but France, Italy, and Spain, he said, were the "dry rot of the world"—*la corruela del mondo*. Religion of the right sort for strengthening political power was a cornerstone in Machiavelli's Science of State. For good reasons given, he objected to Savonarola's political behavior, but was nevertheless more influenced by the friar than he knew. His picture of the Duke of Athens shows the Prince as an avenger of the moral law, and implies a vague semi-religious mysticism. Like Dante, Machiavelli and Guicciardini denied that the meek could inherit the earth. Our author's "paganism" has, however, been overstated. We of the Anglo-Saxon brotherhood must heed Machiavelli's express warning that the "Prince" does not specifically concern us. Our debt to Machiavelli, as the founder and framer of the modern Science of State, can hardly be overestimated, but we must remember, most especially in these millenary years, that King Alfred, the father and founder of the body politic of our Saxon race, lived 500 years before Machiavelli's "Prince" was written.

A POPULAR HISTORY OF FRANCE.

The Story of France: From the Earliest Times to the Consulate of Napoleon Bonaparte. By Thomas E. Watson. 2 vols. Vol. I. To the End of the Reign of Louis the Fifteenth. The Macmillan Co. 1899. There is a well-known but instructive story

of Oxford and Cambridge combination-rooms which runs as follows: Some years ago, a convinced and voluble Englishman began publicly to prove certain paradoxes in argument with mathematicians and students of physical science. Among his theses were several of the old friends which Mr. Fiske first catalogued in Harvard Library under the head of "Insane Literature," and then under the gentler title of "Eccentric Literature," e. g., perpetual motion, the flatness of the earth, and the possibility of squaring the circle. By dint of plausible and copious words the English apostle of these views succeeded in convincing several large audiences, despite the protest of his scientific opponents. Finally he reached Cambridge, challenged the dons to a contest, and found his antagonist in William Garnett. On previous occasions the champions of correct ideas had neglected to analyze the propositions of the debater with sufficient care. They knew, of course, that his results in each case were wrong, but they could not lay finger on the precise flaw in his reasoning. Garnett proceeded in a different manner. He stipulated that point by point should be discussed and settled in due sequence; the circle-squarer consented, and the argument began. Very soon Garnett disputed an assumption in the catena of syllogisms, and drove the challenger into a corner on it. "Well, after all, that's quite immaterial," said the circle-squarer. "Then you don't mind, I suppose," rejoined Garnett, "if I write on the blackboard opposite the point. 'Given up.'" "Not in the least," said the challenger, and the result was duly registered. At each step Garnett succeeded in confuting the heretic until a long table of entries, "Given up," appeared in full view. After a while Garnett asked the stranger if he didn't feel checkmated. "Oh, no," he said cheerfully, "there is much more to be urged," and he at once resumed the line which he had originally taken. "But," exclaimed Garnett, "you have given that up once," and he eventually downed his man by dint of pointing to the propositions which had been one after another surrendered.

The processes of historical and mathematical demonstration are so different that the illustrious De Morgan has placed them in direct contrast, yet we have been strongly reminded of the above story in reading Mr. Watson's book on France. If, for instance, the author were to engage in public debate with those French scholars who have contributed articles on their national past to the 'Histoire Générale' (e. g., MM. Langlois, Luchaire, Giry, Coville, and Pingaud), we imagine that "Given up" would be written after many of his facts, and therefore that his inferences might suffer. Unfortunately, in history, one cannot, as a rule, prove a fallacy to the public by ocular or other equally cogent test, but professional students can quickly distinguish what is well grounded from what may be termed, in scholastic language, *fusus vocis*. Tried by the standard of solid erudition, Mr. Watson's work is decidedly lacking, and this we shall now try to show by several examples, leaving aside for the moment one or two other important matters which must be noted before we close.

P. 20. Lactantius, "the Christian Cicero," author of the 'Institutiones Divinæ,' and a universally celebrated writer on apologetics, lived in the reigns of Diocletian and Constantine, but that does not prevent Mr. Watson from making him a contemporary of Au-

gustus. P. 21. Nero is styled "the last of the twelve Roman emperors called 'the Cæsars.'" P. 25. "After a while, some Goth, like Odoacer, will tire of the farce; and he will take the crown off the head of the worthless Roman, and put it on his own." We waive the question which might arise here over the statement concerning Odoacer's origin, to point out the notorious fact that, when Romulus Augustulus abdicated, the imperial crown was sent to Constantinople. Odoacer never assumed it. P. 96. Charles Martel did not turn back the onset of Mohammedanism "for all time," as the careers of John Hunniades and Scanderbeg, the battle of Lepanto, and the sieges of Vienna testify. P. 104, *et seq.* Mr. Watson calls Charlemagne's son and successor "Louis the Handsome," as though the common English term "Pious" were not the equivalent of the French "Débonnaire" and the German "Fromm." P. 110. The statement that Charles the Bald got his kingdom only at the cost of "a million of men butchered in battle," is utterly extravagant. Mr. Watson places a maximum estimate on the losses at Fontenay (p. 109) when he numbers the dead at 100,000, and were there ten Fontenays or their equivalent? P. 110. The Northmen did not "pillage Paris" during the Frankish civil wars prior to 843. P. 118. "The long period of time stretching from the death of Charlemagne to the reign of Louis the Fat is known in history as the 'Dark Ages.'" We imagine that there are few historians who begin the Dark Ages so late as 814. Certainly Maitland, the author of the most celebrated book in English on the Dark Ages, runs back to at least the period of Dagobert. P. 180. Jacques du Molay summoned Clement V. to meet him "before the judgment-bar of God" within forty days, not within a year (Ferretus Vicentinus). P. 199. Referring to the way in which the Salic law affected the claims of Robert of Artois, Philip of Valois, and Edward III., Mr. Watson observes: "If the law applied to the case of Robert of Artois was good, then Isabella's son was rightful heir to his grandfather's throne." On the contrary, Edward III. had no right to the French crown whatever. Louis X., Philip the Long, and Charles the Fair had all left daughters, and, even assuming that females might transmit where they could not succeed, Jane of Navarre's son came before Edward III. P. 204. Mr. Watson assigns the origin of the Flagellants to the period of the Black Death. Here he is not far from a century astray in his computation. P. 234, *et seq.* The account of Joan of Arc contains at least five striking mistakes, of which we may mention two. P. 247. "The man who took her, carried her to his master, a noble called the 'Bastard of Vendome.'" Here the Bastard of Wandonne (a very different matter) should be written; and, besides, Joan was not carried to him by her captor. A Picard archer seized the Maid and pulled her from her horse; Wandonne himself secured her. P. 248. Mr. Watson says that John of Luxembourg sold Joan to the English for "two thousand dollars." He received £10,000, a sum which then represented anything but \$2,000. P. 318. Mr. Watson thus alludes to the claims of Louis XII. on Milan: "However, Louis thought that he had at least as good a title as that of Ludovico Sforza, who had usurped the duchy after poisoning a nephew who had usurped it previously." Gian Galeazzo Sforza, Ludovico's nephew, was a usurper only in the general sense that every Italian despot ruled unjust-

ly. His father and grandfather had reigned before him. P. 372. Savonarola was not a priest, but a Dominican friar. P. 373. Albert of Brandenburg was Elector of Mainz, not Metz. P. 392. William III. of England was not a grandson of William the Silent, nor, p. 503, was Louis XIII. the "great-great-grandfather" of Louis XVI.

Such errors as these seem to us characteristic and not to be mistaken for slips of the pen. Of the latter, too, we could draw up a fairly long list: e. g., p. 4, Hannibal's passage of the Alps in 278; p. 300, the ascription of independence to Brittany in 1586; p. 325, the location of Leo IX. in the sixteenth century; p. 369, the date of 1438 for Wyclif; p. 373, the arrangement between Albert of Brandenburg and "Pope Julius" to share the proceeds of Tetzels indulgence; p. 387, the statement that William the Silent gained his title by keeping quiet when Henry III. of France by accident disclosed the plot against the Protestants. Verbal slips count for little unless their number becomes unreasonable, but mistakes of the kind which we first registered prove, in the aggregate, a want of sound historical information.

Now we should not have been at the pains to discover so many shortcomings in point of accurate statement as we have done (for we have by no means exhausted our list in the foregoing recital), were Mr. Watson less cocksure and declamatory in style than he is. What shall be said of the writer who, at this time of day, declares that he stands against the world in maintaining the greatness of Louis XI.? P. 238: "Historians have denied that Louis was a great man. With one accord they decry him as a beast unclean. I judge this monarch by the work he did, and I dare to say that I find him great." Is not Commynes a historian? And he credits Louis with having possessed more of good and less of evil than any prince of his age. Martin calls him "ce redoutable génie," and M. Pingaud (in recently recapitulating the opinion which has been held of him at different periods), says that while the moralists have uniformly attacked him, "les politiques, plus indulgents, depuis Commynes jusqu'à Duclos, ont dit de Louis sous diverses formes, sans oser ni l'estimer ni le haïr, que c'était vraiment un roi." Mr. Watson has made no discovery and has vindicated no paradox. He simply indulges himself in what to a large majority of modern historians will seem a noisy platitude. Louis XI. was confessedly a cruel and perfidious man, but he did much to unify France. If Mr. Watson were really seeking for novelty, he might defend the morals of this sovereign. Elsewhere there is no chance of working out fresh conclusions.

An author who is by no means sure of his own footing should not be gratuitously anxious to set his predecessors right. We have cited one passage wherein Mr. Watson discovers a mare's nest. Other examples of the same tone towards former historians might be easily brought together. For instance, apropos of the battle of Crecy, p. 202: "Those writers who fight battles in their libraries tell us that Philip should have surrounded Edward and starved him out. They tell us that in two days the English would have been so reduced by famine that they would have sued for peace. The present writer does not know so well about that." We are less concerned with the particular view advocated in each passage of

this sort than with the attitude of mind which such a tone implies. It would appear as though Mr. Watson were quite dissatisfied with our present conception of French history, and is bent on dispelling the night of ignorance. One cannot, however, afford to be jaunty unless he is very secure of his own position.

Mr. Watson's obvious aim is the quickening of popular interest in history, and a praiseworthy one it must seem in the eyes of all, but there surely must be more effective as well as more artistic ways of reaching this end than through the use of intense language varied by satire and colloquialisms. Here is a comment on Jean Bart's presentation at court, p. 545: "How my Lord of Frogwallow and the Duke of Battercakes must have winked to the Marquis of Poodle-doodle as they noted the appalling fact that Jean Bart did not wear the proper thing in laces, nor the latest elegance in wigs, nor the choicest tint in ribbons!" The toilet of Louis XIV. evokes the following observation: "The Duke of Duck-puttle contended eagerly with the Marquis of Bootlick, and the Baron of Boesh for the precious privilege of holding the candle while some other proud scions of the nobility pulled off the imperial breeches." We are far from defending Louis XIV. or "the dignity of history" when we withhold our praise from such history of the hustings. The essence of a narrative which is bent on being "popular" must always be exaggeration. No true friend of historical studies can let pass uncensured such attempts to be graphic at the cost of moderation.

Up to the present point we have been passing rather severe judgment on Mr. Watson's book without describing its scope or outline. It begins at the earliest period and ends with the death of Louis XV. According to the preface, it represents "enormous labor," and among other acknowledged motives it seeks "to illustrate once more the blighting effects of superstition, ignorance, blind obedience, unjust laws, confiscation under the disguise of unequal taxes, and the systematic plunder, year by year, of the weaker classes by the stronger." The Merovingian period illustrates some of these sombre features admirably, and so the progeny of Clovis, plus their wives and families, from 561 forward, get forty-two pages of notice, while the reign of Louis XIII. gets only sixteen—a singular proportion, considering the relative importance of Brunhilda *et al.* on the one hand, and of Richelieu on the other. The survey is almost entirely political, with a few glimpses of social and commercial conditions interspersed here and there. For literature and art Mr. Watson has no space, and of historical geography he thinks so little that, p. 109, he can define Lothar's portion after the Treaty of Verdun as "Italy and the Low Countries."

There is no denying the fact that the history of France abounds with object-lessons of cruelty, wretchedness, and systematic oppression, but these are not the only things which a writer in telling the story of the country should accentuate. Mr. Watson finds his

"music centred in a doleful song
Steaming up, a lamentation and an ancient tale of wrong.

Chanted from an ill-used race of men that cleave
the soil,
Sow the seed, and reap the harvest with enduring
toll."

But, even under the feudal system and dynastic despotism, the French people had a

great deal of liveliness and spontaneity. Mr. Watson, by keeping this consideration in the background and harping constantly on the sins, vices, and follies of the ruling classes, makes his work seem (to quote the line omitted above) "like a tale of little meaning tho' the words are strong." At rare intervals he presents a hero or heroine who is struggling valiantly for righteousness or progress amid baffling obstacles, and of such he does not stint his praise, but the impression which he leaves is one of extreme misery, broken at times by an act of bravery or sacrifice. One would think that, under the conditions which he describes, the French must have come to hate life, yet Renan was probably right when he said:

"La France n'est, par son caractère essentiel, ni poétique ni mystique; l'essence de la poésie et de la mysticité consiste à dépasser le monde; or l'esprit français est de tous le plus parfaitement en harmonie avec les proportions de notre planète; il en a mesuré les dimensions d'un coup d'œil, et ne va pas au delà."

There are few traces of this elastic, mundane spirit in Mr. Watson's "story."

We are prevented by our limits from saying more, although several striking points still remain unnoticed. We shall endeavor, in conclusion, to give a brief account of the chief impressions which we retain after a careful revision of the book before us. Mr. Watson is not an accomplished historian, his lights and shadows are too sharp, his style is too declamatory on the one hand and too "racy" on the other, he is too much bent on emphasizing a single aspect of his vast subject, and he is over-anxious to establish new conclusions. Nevertheless, he has read widely, and infuses a vigorous personality throughout his pages. He is an enthusiastic friend of liberal ideas and humane actions, he has a considerable share of that valuable quality, the historical imagination, and he knows his own mind. Perhaps we should show less antagonism towards some of his palpable mannerisms if we did not feel the presence of personal power behind them. At any rate, we have followed his narrative with greater interest than has been awakened in us by more solid and more sober volumes.

FIVE BOOKS ON MUSIC AND MUSICIANS.

The Perfect Wagnerite. By Bernard Shaw. Chicago: H. S. Stone & Co.

La Musique à Paris. Par Gustave Robert. Paris: Ch. Delagrave.

The Orchestra and Orchestral Music. By W. J. Henderson. Scribners.

Music and Musicians. By Albert Lavignac. Henry Holt & Co.

Voice and Violin. By T. L. Phipson. London: Chatto & Windus.

A reader unfamiliar with Mr. Shaw's personality and record might suspect here and there that his "Perfect Wagnerite" is to be taken as a *jeu d'esprit*. But from a man who has been for fifteen years or more a political pamphleteer and active socialist agitator, it is natural enough to expect a book the thesis of which is that Wagner's "Ring of the Nibelung," "with all its gods and giants and dwarfs, its water maidens and Valkyries, its wishing-cap, magic ring, enchanted sword, and miraculous treasure, is a drama of today, and not of a remote and fabulous antiquity." The Rhine Gold is an allegory, as the author illustrates with reference to the Klondike. Such dwarfs as Alberich, he de-

clares, are common in London. His story is frightfully real, frightfully present, frightfully modern. "You can see the process for yourself in every civilized country to-day, where millions of people toil in want and disease to heap up more wealth for our Alberichs." The dwarf's cave need not be a mine; "it might just as well be a match-factory, with yellow phosphorus, phossy jaw, a large dividend, and plenty of clergymen shareholders." As for the magic helmet, it is a very common article in our streets, where it generally takes the form of a tall hat. "It makes a man invisible as a shareholder, and changes him into various shapes, such as a pious Christian, a subscriber to hospitals, a benefactor of the poor, a model husband and father, a shrewd, practical, independent Englishman, and what not, when he is really a pitiful parasite on the commonwealth," etc.

To those who demur to this theory of the "Ring," Mr. Shaw responds by pointing to the fact that Wagner was a socialist agitator, "a politically dangerous person," as he was officially stigmatized, and that he wrote a number of pamphlets and manifestoes on social evolution, religion, life, art, and the influence of riches. All this is true, and Mr. Shaw might have added that Wagner's own unfortunate tendency to find allegorical or mystical meanings in his plots and characters justified the present attempt. Luckily, Wagner was too great a dramatist to allow much of this sort of thing to creep into his dramatic poems themselves. Mr. Shaw, as he proceeds with the "Walküre," "Siegfried," and "Götterdämmerung," finds fewer and fewer props for his fancies, and in the last-named he collapses entirely, though he takes his revenge by declaring that work to be an opera pure and simple, having been begun before Wagner had become an agitator, and ended after he had ceased to be one.

There is much that is ingenious and entertaining in Mr. Shaw's little book, and perhaps it will help his commercial and philistine countrymen to an appreciation of the great Tetralogy if they look at it as a modern allegory. Apart from that, Mr. Shaw illumines some of the dark corners of the plot, and many of his incidental observations are excellent, as, for example, on page 155, where he shows how impersonal were Wagner's attacks on Meyerbeer, and on p. 159, where he estimates Brahms as a man "whose absolute musical endowment was as extraordinary as his thought was commonplace." Wagner had for him the contempt of the original thinker for the man of second-hand ideas." It may be added that Mr. Shaw thinks Shelley's "Prometheus Unbound" is an English attempt at a "Ring of the Nibelung."

M. Gustave Robert's "La Musique à Paris" is a very useful little annual for those who wish to keep informed regarding the musical movement in the French capital, but have no opportunity to read the journals. The volume now before us is the fourth, and it comprises no less than 360 pages, including a good index, a bibliography of new musical books and pamphlets, and complete sets of programmes of the principal societies. Perhaps the most remarkable thing about the present volume is the large amount of attention and space given to orchestral conductors. This is due partly to the fact that the conductor has taken the prima donna's place, partly to the large number of visiting musicians. Richard Strauss, Mottl, Wein-

gartner, and Hans Richter in succession gave Parisians a chance to judge their interpretative genius. Without manifesting any chauvinism, our author nevertheless subjects these Germans—or rather Austro-Hungarians—to a thorough scrutiny, and does not hesitate to express his occasional disapproval. He does not indulge in the mere "I like this" and "I don't like that," to which so many critics resort, but gives the reasons for his censure, displaying at the same time a thorough knowledge of the scores under discussion.

While granting supremacy to the other side of the Rhine in this field, M. Robert is convinced that Paris is quite able to hold its own as far as conductors are concerned. Lamoureux, unfortunately, gave up his orchestra, partly, it seems, because of troublesome criticisms, partly because he wanted to devote all his energies to the furtherance of his pet project, the production of Wagner's Tetralogy and "Parsifal" in the Exhibition year. The orchestra, luckily, did not disband, but chose for its leader M. Camille Chevillard, of whom our author has a high opinion. The new conductor has aimed at greater variety in the programmes, and has paid more attention to the new French school and the Russians. As for Colonne, he made it a point to put in each programme specimens of Beethoven, Schumann, and Wagner; nor did he neglect the Russians. M. Robert devotes considerable attention to Rimsky-Korsakoff, analysing two of his symphonies, "Sadko" and "Antar," in detail, with musical type. It seems that another Russian—the youngest of them, Rachmaninoff—has captured Paris as well as London and New York with his "Prelude" and other works. M. Robert notes, in two places, the surprise expressed in the *Nation* that he does not like Tchaikovsky's "Pathetic Symphony," but he confesses that he is still sceptical after hearing it as interpreted by Winogradsky, Lamoureux, and Richter. For Brahms, he has no sympathy at all. He finds *d'énormes banalités* in his songs, and, as regards his symphonies, he agrees with Weingartner that they "produce the same impression as a man who says the simplest things in the world with an air of great importance"; they are learned but artificial, and do not move our feelings.

Messrs. Charles Scribner's Sons, who have for some years made a specialty of musical publications, announced some time ago their plan of issuing a "Music Lover's Library," comprising works by W. J. Henderson on the orchestra, H. E. Krehbiel on the piano, W. F. Apthorp on the opera, H. T. Finck on songs and song-writers, and Arthur Mees on choirs and choral singing. The first of these has appeared, a volume of 233 pages. The author says that all other books on the orchestra which he has seen are for the professional musician, while his is for the amateur. As a matter of fact, there are pages in the book which an amateur will find difficult to comprehend unless he knows at least as much about the subject as Mr. Henderson does. On the whole, however, he has succeeded in his attempt, his clear style being an important factor in his favor. He has studied his Berlioz, Gevaert, and Corder faithfully, and has industriously gathered together many interesting facts not known to ninety-nine per cent. of concert-goers. The last chapters contain a number of dry details, which will hardly interest amateurs. In the opening chapters the

instruments constituting the orchestra are treated separately. Our author seems to have a special predilection for the viola, concerning which he writes with enthusiasm. He thinks that "it may be fairly said that first-rate writing for the strings, which is the foundation of orchestration, depends largely upon the treatment of the viola part." When he says (71) that Méhul used the viola so much that Gretry exclaimed, "I'd give a guinea to hear a fiddle-string" (not first string, as a printer's error makes it), he is evidently quoting from an English writer who forgot to add that it was only in one of his operas, 'Uthal,' that Méhul used the violas so much, excluding the violins entirely.

The French school is duly appreciated from the point of view of orchestration, not only in the case of Berlioz, but of Gounod and of Saint-Saëns, who is pronounced "at once the model and the despair of young composers." Of Brahms we read that "he is one of the moderns who did not master the technic of orchestration. He wrote heavy parts low in the bass in his piano music, and he carried this practice into his orchestration, with the result that his scoring is almost always thick and heavy in the middle voices. Wagner, on the other hand, knew how to write deep and sonorous basses without disturbing the clarity of his work." The author thinks that while Wagner is the great model as regards writing for numerous voices in the strings, etc., he occasionally abused the practice. "In the accompaniment to Brangäne's song of warning in the second act of 'Tristan und Isolde,' he divides the strings into fifteen parts, but I am quite sure that no human ear can hear all of them." This remark shows a queer lack of insight into the very essentials of orchestration. What is aimed at (and secured) in such a case is a general emotional atmosphere. It is no more necessary for a hearer to distinguish all the separate voices than it is for him to know just what colors Turner mixed on his palette to produce the air or sea tints in his pictures.

For the chapter on the "Evolution of the Conductor" Mr. Henderson has culled a number of interesting facts from various sources. We cannot agree with him, however, in the opinion that there is a tendency to exaggerate the conductor's function as interpreter. It cannot be exaggerated, any more than the actor's. Time-beaters have had their day. Nor is it true that the conductor "works entirely on the technics of the performance, and leaves the temperament and enthusiasm of his men to do the rest." No matter how much or how little may have been done at rehearsal, the success of an orchestral concert depends on the conductor's magnetism, or power to sway his players, which varies with his mood. To leave the performance at the mercy of the "temperament and enthusiasm" of the mere mechanics who constitute the bulk of every orchestra, would be to invite sure disaster.

M. Albert Lavignac, whose book on the music dramas of Wagner was reviewed in these columns a few months ago, has again been made accessible to English readers in a translation, by William Marchant, of his 'Music and Musicians.' The title is comprehensive, but so is the book, which aims at being practically a condensed cyclopædia of every branch of music, including even 66 pages on acoustics—the production, transmission, and perception of sound, tonality,

acoustic qualities of halls, relations between acoustics and rhythm, etc. Under the head of "The Materials of Sound" he describes the voice and all the orchestral instruments, from the violin to the triangle and castanets. Orchestration is then discussed, and about 200 pages are devoted to harmony, counterpoint, fugue, composition, and improvisation. That this work is correctly done (in spite of a few slips) need not be said, for M. Lavignac is professor of harmony at the Paris Conservatoire and a well-known expert. The last hundred pages of his book discuss the music of ancient nations and the composers to the present day, with very brief biographic sketches of the more important ones. An appendix contains a disquisition, with brief biographies, of the leading American composers, by Mr. H. E. Krehbiel. The value of the book is much increased by 94 illustrations and 510 examples in musical type. For students of music who want to know something about all branches of the art and can afford to buy only one book, this is the thing.

While M. Lavignac's book is thoroughly up to date, the final one on our list would arouse the suspicion of having been brought out forty years ago were it not for the date attached to the title-page and the preface. Dr. Phipson must have been keeping company with Rip Van Winkle, or Brünnhilde, or the Sleeping Beauty. He gravely informs the inhabitants of London, who, in these degenerate Wagnerian days, do not have a chance to hear three of Rossini's, Bellini's, or Donizetti's operas a year, that the best way for young people to acquire a good style is to attend these operas as often as possible. "La Sonnambula," he declares, is "the most beautiful by far of all lyric dramas," which it would be as foolish to eulogize as Shakspeare. Its popularity, he says—and here he transgresses the rules of morality—"is greater than that of any other lyric composition," and "the greatest singers never fail to make choice of it when they are anxious to produce an extraordinary sensation." Fortunately, not all of Dr. Phipson's book is as antediluvian and unreliable as these specimens. He writes entertainingly, though naively, of a multitude of matters of interest to violin-players particularly, for he is the author of a book on 'Famous Violinists and Fine Violins'; indeed, the present volume contains, chiefly, episodes and reminiscences for which he had not space in that book. Of the jokes interspersed, the best is Rossini's remark to a violinist who persisted in playing F sharp instead of F: "I should prefer to hear the F there, my friend. Your F sharp, it is true, is also very beautiful, and no doubt we can find a place for it elsewhere in the opera."

Excavations at Jerusalem, 1894-'97. By Frederick Jones Bliss, Ph.D. London: The Committee of the Palestine Exploration Fund.

Dr. Bliss's scientific work at Tell el-Hesi, and his admirable publication of the results of that work, under the title, 'A Mound of Many Cities,' rendered it morally certain that he would make the most possible out of the dry and unpromising material at his disposal in excavating for the south wall of the city of Jerusalem. That was practically the work of these three years—to trace the old wall or rather walls of Jerusalem from the Protes-

tant Cemetery, south of the southwestern extremity of the city, around almost to the Haram enclosure at the southeastern corner. It was a laborious and uninteresting task, pursued with scientific conscientiousness. Beyond a wall and its towers, a couple of streets, aqueducts, and sewers, the Pool of Siloam, a church or two, and some rock-cut chambers, it may be said that nothing was found. There was no statuary, practically no inscribed objects, and of pottery and tools very little. It is amazing with what success out of this barren-seeming material Dr. Bliss has contrived to reconstruct the southern walls of the city and to trace their history through many destructions, reconstructions, and changes of position. By careful comparison of historical notices of the walls and their vicissitudes with the remains found *in situ*, he has been able to fix period after period, beginning with the prehistoric Jebusite city and its rock-cut dwellings, and to determine the position of the walls and the limits of the city southward in each of these periods so conclusively that it will probably never be necessary to do the work again. Incidentally, and in a most modest and civil manner, he has upset not a few pet theories. Thus, in regard to the determination of date by masonry, he shows that backsetting, which had been considered an indication of very high antiquity, is actually found in some of the late Turkish work; that while "boss and margin work may have been used in early Jewish times," they were certainly used in "Roman times and afterwards"; that "comb-pick margin with pick-centred dressing was certainly used contemporarily with the boss and margin, and may have been used before," etc. His conclusion is that "dressing is an indication; combined with particulars of setting or joining, its evidence becomes most valuable; but unless backed by some such auxiliary as inscriptions, pottery, or the like, simple masonry is a frail basis on which to found archaeological deductions in Jerusalem."

It was probably necessary that this particular work of excavation should be done at some time, and yet whoever reads the book and sees how much money and labor have been spent here for very small returns, while much more important ones might have been obtained elsewhere in the way of inscriptions, pottery remains, and other objects capable of throwing light on the early life and history of Palestine, cannot but feel a sense of disappointment and regret. But Dr. Bliss is not to blame because the Palestine Exploration Fund decided to devote itself to determining the exact boundaries of Jerusalem on the southward at different periods of its history, and he certainly accomplished the work assigned him, both in excavating and in interpreting and publishing his results, in an exemplary manner. It is, nevertheless, a pity that the Fund did not choose a site more interesting and a work of larger scope.

One criticism on Dr. Bliss's excavations has been made, and apparently justly, by Clermont-Ganneau, namely, that he failed to search in the most probable locality for the ancient tombs of the kings. The discovery of those tombs would have been so vastly more important than anything actually accomplished that one cannot but criticize Dr. Bliss for not having devoted more time and effort to the search. What he did in that direction was insignificant, and he did

not excavate at all at the spot which such an archaeologist as Clermont-Ganneau had suggested as the most likely one.

The maps and drawings executed by Mr. Dickie, Dr. Bliss's companion in the excavations, are numerous and illustrate admirably the work done.

The Gambling World. By Rouge et Noir. Dodd, Mead & Co. 1898. 8vo, pp. 373.

The History of Gambling in England. By John Ashton. London: Duckworth & Co.; Chicago: Herbert S. Stone & Co. 1899. 8vo, pp. 286.

Good for their kind are the several chapters of 'The Gambling World,' and that on the London Stock Exchange may even bring some persons to their senses. But, at the best, books that, without being works of art, have no higher aim than to amuse, almost regardless of the exact truth, are dreary things, especially when they address themselves to a class of readers who are not fond of reading. "Rouge et Noir" may imagine that he aims to instruct; and indeed he declares that gamblers are morally certain to lose in the long run. But when an author stuffs a volume with stories that verge on the incredible, without vouchsafing any authority whatever—not even his own name—the reader is driven to judge of his seriousness by such of his statements as he is himself in a situation to test. Now, exclusive of facts that might be culled from any good encyclopedia and of facts that have been thoroughly ventilated in the newspapers, we have found other assertions here so frequently erroneous as to indicate a very jauntily attitude towards accuracy. The number 1,592,814,947,068,800 is given as "the number of combinations possible by the distribution of fifty-two cards." That it is not the number of arrangements of a full pack any person acquainted with probabilities will instantly see, from the short row of figures and because that number ends with twelve zeros. In order to find out whether it is the true answer to any problem, we have separated it into its factors, and can testify that it is the scrupulously exact number of distributions of a piquet pack among the two hands and the two parts of the *talon*; but it has nothing to do with fifty-two cards.

The innate simplicity of the gamester appears in the statement that Government lotteries and great gambling casinos are honestly conducted. Will any man of sound judgment who knows how affairs connected with Government go on in Spain and Italy, hold their lotteries to be materially more trustworthy than if Croker or Quay or Platt managed them? Or will any expert in legerdemain say that it is impossible by a combination of interests to secure the drawings of predetermined numbers? As for keepers of roulette, they are not intelligent enough to be honest; for they have themselves risen from the ranks of gamesters, and no gamesters are sound reasoners. A private gentleman who ordered a roulette from a house in New York whose business it is to make such things, found that, without special directions to the contrary, it would be furnished, as a matter of course, with a contrivance for correcting the luck. A man who was, and had for many years been, employed in a well-known gambling-house near Madison Square, confessed that in all his experience he had never known a player to carry away \$200 of winnings. The limit which is every-

where put upon the martingale shows the stupidity of the management. A comparatively low limit upon initial bets may be set down to extreme conservative caution, if this seems compatible with the gambler's nature. But a limit upon the continuation of martingales is simply ridiculous, since the bank is perfectly secured against any heavy loss, and the higher the martingale is pressed the greater the proportionate winning of the bank. At an ordinary roulette-table with a double zero, against a player whose fortune is 1,023 times his initial bet, and who doubles his bet whenever he loses, the bank wins 411 francs for every 613 francs risked; while if the player's fortune is 1,048,575 times his initial bet, the bank will in the long run make a profit of 672,676 francs on every 375,900 francs risked. The banker ought, therefore, to encourage martingales as much as possible; for at ordinary betting the bank's profits amount only to one franc on every eighteen risked. Yet even if the player bets the same amount every time on a simple chance, which is his most advantageous course if he will play, it is unlikely that he will ever be able to net a gain of seven times that amount, though he have the fortune of Rothschild at his back. Even if there is but a single zero, he is not likely ever to net a gain of thirteen times his bet; so that should he lose thirteen times his bet, he had better give up all hope of regaining it.

The most advantageous course of all is not to play at all, and the next to that is to make but a single bet. Thus, for every hundred players who should each make a single bet of 100 francs on a color at single zero roulette, 48.65 would gain 4,865 francs in all, while 51.35 would lose 5,135 francs. If, however, each player were to make one-franc bets until he had either won 12 francs or lost 100 francs, 52.15 players would win their 12 francs, making 626 francs, while 47.85 would lose their hundred francs, putting 4,785 francs to the other side of the account. We need hardly say that "Rouge et Noir" falls into most of the usual pitfalls which the doctrine of chances has prepared for those who have but a slight acquaintance with it.

The book is very prettily got up, and does not weigh a kilo, which ought to be the limit for a book to be read continuously.

Mr. Ashton's 'History of Gambling in England' is a beautifully printed volume and a work of sufficient research. Of its host of anecdotes, almost all are supported by contemporary testimony and the majority by good testimony. This is the only branch of history that is in an entirely satisfactory condition or about which we know all that a reasonable curiosity could, for the present, desire to know. But there is no other so blank for those who seek in history some consolatory or elevating aspects of human nature. Of the two classes that walk its stage, the sharpers are engaged in a business a good deal like other sorts of business in which great fortunes are amassed, and some readers may accord them some measure of esteem for not founding hospitals and universities or otherwise advertising their compassionate hearts. But there can be no doubt they would do so if it could in any way further their interests. They are really as unestimable and uninteresting a class of bankers as can be found. On the other hand, the pigeon is a simpleton so intent upon gaining some inequitable advantage that his small stock of good sense completely deserts him—a creature who seems put into the

world by a beneficent Providence in order to serve as prey for business men, without offering any handle for benevolent regard.

The book will divert us all with its pictures of the manners and morals of worlds not too remote from our own, and by contrast brings into view the greater self-control to which modern conditions of middle-class life are training men. One regrets that the history should break off at the year 1845; but Mr. Ashton has rightly judged that it would be "inexpedient to give any modern instances." It would, indeed, be exceedingly inconvenient to publish an unvarnished picture of life in a high gambling circle.

The Dawn of Reason, or Mental Traits in the Lower Animals. By James Weir, Jr., M.D. Macmillan. 1899. 12mo, pp. xiv, 234.

This is a modest little book which will interest many persons besides professional naturalists, and may instruct some of the latter. The title raised in our mind some vague fears that we might find physiology and psychology mixed up inexpertly with metaphysics; but we see in the writer a close observer, who takes his stand on firm ground, and goes into the objective world of animals for his facts. The "lower animals" are all animals except man; but how "low" some of them are in the scale of organization is fully appreciated by few persons. Insects and worms are lowly creatures in comparison with man, but vastly complex organisms in view of such animated simplicities as infusorians or protozoans. Mind is regarded by Dr. Weir as a resultant of nerve action, or neuropsychic action, "through which and by which animal life in all its phases is consciously and unconsciously, directly and indirectly, maintained, sustained, governed, and directed" (p. 1). No one denies an amoeba the sense of touch at least, and it would be rash to deny this animalcule a kind of conscious volition, as in the choice of food. If we accept Dr. Coues's definition of nerve in the widest sense as "a line of least resistance to molecular motion in any organism," an amoeba has some sort of a nervous system, apparently what Dr. Weir calls neuropsychic, and thus a mind. True nerve tissue is demonstrable in all metazoa, from coelenterates upward, and the author is inclined to believe that it is present in some animals below the hydrozoans, having verified H. James Clark's observations ('Mind in Nature,' p. 64) regarding the protozoan *Stentor polyphemus*, and seen "unquestionable acts of conscious determination" on the part of this little creature (p. 41). However the case may be in the border land of nascent nerve, no doubt of mind enters the regions, however lowly, where a nervous system, however simple, is an accomplished fact; and Dr. Weir's book proceeds to explore this whole region to discover, if possible, what sort of minds are possessed and utilized by animals lower than man.

This distinctly raises the question of instinct versus reason, and Dr. Weir's strongly supported contention is, that the two faculties differ only in degree, not in kind. We say strongly supported, for the author adduces an array of facts, derived from actual observation, which are alike indisputable and astonishing. Just possibly, here and there, he reads into the actions of some insect or other humble fellow-creature something that such an animal never thought of and could not understand; but the evidences

of dawning reason are clearly, concisely, and forcibly presented, so that the reader may evaluate them for himself. The chapter on the senses in jellyfishes, mollusks, insects, etc., gives some curious facts not generally known. "Conscious determination" is defined, its evolution from sensory impressions illustrated, and it is attributed even to protozoans. Memory is discussed under four heads of recollection of locality, of friends, of strangers or enemies, and of events; it is attributed to almost all animals. The emotions are as recognizable and identifiable in insects as in monkeys or men. A chapter on aestheticism shows us spiders susceptible to music; and many another curious case of like significance. Reason itself is discussed in connection with insects. Once more, our lowly fellow-beings have some faculties we have lost, such as one which Dr. Weir rather queerly calls "tinctumutation," or the faculty of adapting one's coloration to surroundings, like the chameleon; and another term he seems to have coined is "letismulation," or the feigning of death, which he finds not confined to well-known cases, but extending even to rhizopods. The homing sense is another faculty but feebly retained by man, few individuals being able to orient themselves satisfactorily.

The author's main conclusion may be stated in his own words (p. 215):

"Judging wholly from the evidence, I think that it can be safely asserted and successfully maintained that mind in the lower animals is the same in kind as in man; that, though instinct undoubtedly controls and directs many of the psychical and physical manifestations which are to be observed in the lower animals, intelligent ratiocination also performs an important rôle in the drama of their lives."

We advise those who may differ with Dr. Weir in this conclusion to read his book carefully; and we are sure that any one who cares to recognize our "poor relations" will be interested in the stories Dr. Weir tells in support of his views, whether they agree with him or not. He writes in admirable temper, and his writing is extremely suggestive.

A Short History of the Saracens. By Ameer Ali. Macmillan. 1899. Pp. xix, 627.

Nowadays we hear much of the other sides of things, and many very queer other sides are asserting themselves. The patient East is shaking off its lethargy and deep disdain, and the supposedly self-righteous West is becoming introspective and developing a conscience. The Oriental Congresses have brought to us apologies written by reverend Muslim Shaykhs—some of them amusing enough—for Islam and its institutions. Mr. Kipling's "demonstration products" of the educational system of the English government in India are learning that there are people in the West eager to hear any new thing and ready to pay for it. Not long ago we were told by Prof. Arnold in several hundred pages that Islam was a religion relying on peaceful missionaries, and that it had spread by their efforts only. Now "Syed" Ameer Ali, M.A., C.I.E., Judge of her Majesty's High Court of Judicature at Fort William in Bengal, has written 'A Short History of the Saracens' to eulogize the conquests, civilization, and science of the Arabs. His book is most curious and interesting; but as a scientific contribution to history it is worthless. Regarded even as a popular compila-

tion, it is misleading to a dangerous degree. The "Syed" holds a brief for the Arabs, and he easily outdoes in partisanship the early European books on Muslim history—which is saying a good deal. He has read Dozy, Von Kremer, and others of the modern school who strive after facts and objectivity, but they have had slight influence on his methods. Indeed, his naïve onesidedness affords a curious commentary on the success of European education as applied to the Oriental mind.

A very few examples will suffice: 'Ali did his best to protect 'Uthmân against his assassins; the constitution of 'Umar was based on solicitude for agriculture; the Mu'tazilite Test Act of al-Ma'mûn and its consequences for Ahmad Ibn Hanbal are passed over; the Fâtîmids were certainly descended from 'Ali; it was only the Tartar invasion which prevented the ultimate success of Rationalism in Islam; all the science and civilization of Islam is Arabian (yet the great majority of its scientific men were not of Arab blood); if the Saracen conquest had included Europe, civilization would have appeared there eight centuries earlier than it did. These are somewhat dubious propositions to set before the English-reading population of India, for which the book is principally intended. European readers will take them at more nearly their true value. Nevertheless, to the student of the East, the book is exceedingly interesting. It is not only an apology for Islam; it is an apology also for the House of Muhammad. The author is a "Syed," a descendant of Muhammad, and thus a Shi'ite; and that dictates his attitude throughout. The twelve "Apostolical Imams" were saints and philosophers and the true lights of their times. This is all in most curious contrast with the views reached by modern European historians. To them the greatest influence for evil in Muslim history lay in the unending endless revolts got up by the 'Alids or by others in their name.

This spirit, then, is the real kernel of the book, and the only thing that gives it a claim to any notice. But if we are to have a defence of the House of Muhammad, under the guise of a history of Islam, why should the thing not go further? Will not some educated descendant of the old Khârijites in the Mazab or in Oman hurl back the aspersions of the "Syed," and write for us a history from the point of view of the Puritans and Republicans of the Muslim world? We would listen to such a one gladly. Then we might also hear from some member of the community descended from the Assassins, which still survives in India. A history written from their point of view could not fail to be interesting; the history of the Assassins generally is still very imperfectly known, and perhaps they could be whitewashed. All this would afford, at the least, lively reading. But it may be that after all the European historians are on a better path.

The Redemption of Africa; A Story of Civilization. With maps, statistical tables, and select bibliography of the literature of African missions. By Frederic Perry Noble. In two volumes. Fleming H. Revell Co. 1899. Portraits. Pp. xxv, 856, 8vo.

The debt which the Christian world owes to Africa is incalculable by any human methods of computation. It is a debt incurred by centuries of the slave-trade and the liquor traffic, and is still added to daily by the

greed of the European nations and of multitudes of traders for territory and for gold. Is the Christian world which owes so much also of its material wealth and well-being to the negro doing anything to pay off its indebtedness? An answer can be found in this volume with its hopeful title. Mr. Noble has here brought together, in a compact form, the material facts in regard to modern missions in that continent, so that his work is at once a chronological history and an encyclopædia. In introducing his main theme, he describes the influence of Africa on the ancient world, and gives a brief sketch of the early and mediæval Christian history of North Africa, and of the advent and progress of Mohammedanism. Then follows a condensed account, bristling with statistics, dates, names, and incidents, of modern missions, grouped, not according to nationality, "but by kinship in creed or polity." Separate chapters are devoted to the missions of Anglicans, Baptists, Congregationalists, Lutherans, Methodists, Presbyterians, Roman Catholics, Moravians, and undenominational societies. Our author sums up the entire work in the following statement:

"Over two hundred agencies are carrying on African missions; neither China nor India, though each have a vaster population, receiving more attention. Some of these organizations work only in one quarter of Africa, but most of them in two and a few in all. Their forces consist of twenty-five hundred Protestant missionaries, including ordained ministers, laymen, wives, and other women, with ten thousand native helpers; and of seven hundred and fifty Romish priests, with a number of other papal missionaries whose statistics are not given."

In addition to these particulars we are told briefly of the work among negroes in the United States, and have enumerated the principal obstacles (especially from climate and disease) with which the missionary must contend. The founding of a station is illustrated by Mackay's experience in Uganda, and there are graphic pen portraits of representative men, such as Robert Moffat and Cardinal Lavigerie, and devoted women like Mary Livingstone.

Not the least valuable part of Mr. Noble's work—evidently a true labor of love—is the appendixes, containing educational, literary, medical, philanthropic, and cultural statistics. Among the most cheering of these are the lists of versions of the Scriptures in more than a hundred African languages and dialects, and of the one hundred and thirteen industrial schools in all parts of the continent, in addition to the still more numerous colleges and training-schools. There can be no question of the author's painstaking and untiring efforts to obtain accurate information, and, so far as it has been possible to verify his statements, we have done so without finding him in error. We do not always agree with his conclusions, as, for instance, in the encouragement which he derives from Abyssinian Christianity. He takes, in our opinion, a too roseate view of the condition of the Uganda church, and is too confident of the speedy downfall of Mohammedanism, as indeed in regard to the civilization of all Africa. We fear that evil days are yet in store for the black continent at the hands of Christian peoples. With Mr. Noble's criticisms of Roman Catholic methods, especially as illustrated by the mission to Uganda, we heartily agree.

The spelling of African proper names in this book—the scientific accuracy of which

Vassar Studies

By JULIA A. SCHWARTZ, A.M.
With 11 Illustrations. 12mo, \$1.25.

Miss Schwartz's collection of studies has been planned to reproduce, by means of emphasizing in each paper a characteristic element or quality of student life, a faithful impression of the spirit and the personality of modern Vassar. The author states her aim thus: "To embody in literary form for the alumnæ memories and impressions of their college days, and to present before the public a truthful picture of the life in such a community." She has treated of character rather than incident; yet her stories are not lacking in action nor in the picturesque background of college pastime as well as that of college work.

Miss Cayley's Adventures

By GRANT ALLEN, author of "Flowers and Their Pedigrees," etc. With 80 Illustrations by Gordon Browne. 12mo, \$1.50.

This is the obverse of the old story of the youth who starts forth with a sound heart and tuppence in his pocket to win his fortune. Mr. Allen's youth is a girl, a graduate of Girton, who is left penniless, and who is compelled to make her own way in life. Her varied experiences are told in Mr. Allen's old-time graceful manner, which won for him an international reputation.

Industrial Cuba

Being a Study of Present Commercial and Industrial Conditions, with Suggestions as to the Opportunities Presented in the Island for American Capital, Enterprise, and Labor. By ROBERT P. PORTER, Special Commissioner for the United States, Cuba, and Porto Rico. With 62 Illustrations and 4 Maps. 8vo, \$3.50.

This volume deals with the economic and political condition and outlook in Cuba. It deals with the live questions in that Island which are interesting every intelligent citizen in the United States. There is literally no chapter in it that does not have some bearing and which does not give useful information on the problems which the Administration is endeavoring to solve, and which Gen. Brooke and his staff of provincial governors are at this moment working to solve satisfactorily to the people of Cuba.

We supply Public, Private, School, College, and Club Libraries with all current Books promptly and cheaply. It is our specialty. We deal in nothing but books. Our Monthly Bulletin of all the publishers' new, noteworthy, and popular books mailed on application.

The Baker & Taylor Co.
5 and 7 East 16th St., New York.

BOOKS, SECOND-HAND AND NEW,
Standard and Rare. Books bought, Catalogue
issued. E. W. JOHNSON, 3 E. 43D ST., N. Y.

The Densmore Typewriter

To those interested in a beautiful exposition of correct mechanical principles, we shall be pleased to demonstrate the workings of the axe-helve stroke of the Densmore type bar.

It is this, in connection with its ball bearings, which gives the Densmore its acknowledged light stroke, also its remarkable powers as a manifold.

The Nation.

NEW YORK, THURSDAY, JUNE 1, 1899.

The Week.

The worst blow administered to the cause of reform in the Federal civil service since the enactment of the law of 1883 was dealt by President McKinley on Monday, when he issued the long-talked-of amendments to the civil-service rules. That some places which might wisely have remained outside the classified service were brought under the operation of the rules by the sweeping order issued by Mr. Cleveland in 1896, has been frankly admitted by the Civil-Service Commissioners and other candid students of the subject. There would have been no ground for criticism if Mr. McKinley, after careful canvassing of all the questions involved with the Commissioners, had withdrawn the comparatively small number of such positions from the scope of the competitive system. But he has gone very much further than this. He has released from the operation of the rules more than 4,000 places, and, in far the greater proportion of cases, no defence whatever is possible. Especially reprehensible is the amendment of rule ten, so that transfers may be made without any limitation, and a harness-maker be given a position as physician, or a laborer the salary of a high-grade clerk. The only restriction is the requirement that a man shall pass a non-competitive examination, which will be no obstacle to the change. Thus, instead of only 4,000 places being exempted, the way is opened for putting several times as many outside the operation of the rules.

The most shameful feature of this order is the fact that Mr. McKinley issued it without any conference whatever with the Civil-Service Commissioners. "In June last," said President Proctor on Monday, "the Civil-Service Commission recommended to President McKinley that certain exceptions be made to the classified service and certain amendments to the rules. Since that recommendation was made, the Commission have not been called into consultation, and the Executive order made to-day was without previous reference to the Commission." President McKinley has violated the most solemn pledges given by his party and himself. The platform upon which he was elected declared that "the civil-service law was placed on the statute-book by the Republican party, which has always sustained it, and we renew our repeated declarations that it shall be thoroughly and honestly enforced and extended wherever practicable." His own letter of acceptance quoted this engagement, declared that it "will be

faithfully observed," and announced that "the Republican party will take no backward step upon this question. It will seek to improve, but never degrade the public service." The whole performance is disheartening. At the very time that we are taking in "new possessions," and attempting to carry the blessings of civilization to "inferior races" abroad, we remove safeguards from an inferior race at home, we turn over the government of Alaska entirely to the spoilsmen, and we make the proclamation of the Philippine Commission, which "guarantees an honest and effective civil service," a laughing-stock.

The determination of a committee of importers to bring suit against the Treasury Department, in order to test the legality of the removal of Mr. Shurtleff from the office of General Appraiser, is a patriotic and most commendable proceeding. It is precisely the same in principle as the proceedings which have been carried on successively in our city courts against the illegal efforts of Tammany heads of municipal departments to get possession of places which are under civil-service-law control. President McKinley's course in regard to Mr. Shurtleff is not one whit better in morals than that of the Tammany Commissioners of Accounts, or that of the Tammany Fire Commissioner, Scannell, in relation to their objectionable subordinates. He removed Mr. Shurtleff without cause, without giving a reason even, in the same way that these Tammany officials removed employees. He wanted the "place" for Platt to fill; they wanted the "places" for Coker to fill. The courts have condemned them for their conduct and have ordered the reinstatement of the removed employees. It remains to be seen whether the President's course has any more legal justification than that of the Tammany officials, but it certainly has no more moral justification. The only difference between the two is that the President pretends to be a friend of civil-service reform, and consequently an upholder of good government; whereas no Tammany man ever pretends anything of the kind. Mr. Shurtleff was put out because he insisted upon doing his duty without regard to the wishes of Platt, and because, in the performance of his duty, he ran counter to the doings of Appraiser Wakeman. If this fact can be established in court, thus showing the true nature of the President's conduct in the matter, an object-lesson of much value will be afforded to the country.

The report of the Commission of Special Treasury Agents on the conduct of Appraiser Wakeman towards the import-

ers of Swiss embroideries convicts him on all the charges brought against him. The report says that he acted honestly. It was never charged that he had acted dishonestly, but merely that he had acted oppressively, illegally, and wantonly, causing heavy losses to merchants, without any justifiable excuse. It was charged that he had taken as a basis of the appraisement of embroideries the selling price of such goods in the United States, whereas the law requires him to take either the selling price abroad or the cost of production abroad. On this count he was found guilty. He was charged with unjust discrimination, and he was found guilty on that count also. He was charged with unreasonable delay in coming to a decision upon certain invoices, and was found guilty upon that point also. It was proved that the invoices of one importer had been exposed to another importer by an assistant appraiser, and that business secrets had been revealed, in violation of the rules of the department. In short, the Appraiser's office had been perverted to an instrument of tyranny and oppression against citizens who are engaged in a lawful calling, and who contribute largely to the support of the government. In any other civilized country such a report would be followed by the removal from office of the person who had committed the offences. But since Wakeman represents the Protective Tariff League, which holds the act of importing to be little short of criminal, even when conforming strictly to law, he will probably be "vindicated" by retention in office, if not promoted to a higher position.

Every now and then the censorship at Manila lifts the veil a little and lets us see the disagreeable facts. Just when all seemed fairest, and the fraudulent peace jubilee at Washington was but well over, came the dispatch saying that "a much larger army" was needed; that the Filipinos were fighting, in their way, with as much spirit as ever, in spite of their heavy losses, and in spite of the fact that a majority of their wounded die through lack of medical care. All this is but confirmatory of what those best informed about the situation have told us from the first. Gen. Lawton has said that it would take 100,000 men to conquer the islands. We happen to know that officers of the *Raleigh* declared in this city that 150,000 soldiers would be needed to subjugate and hold the Philippines. But we can do it! Of course we can—we can make fools of ourselves if we want to. But what a delightful preparation for Mr. McKinley's campaign in Ohio this fall it would be for him to be obliged to call out 35,000 volunteers to fill more Filipino graves. In

no other way, however, can the President get his "much larger army." Every regiment of regulars which can be spared from this country and Cuba is now en route or under orders for the Philippines. Just one other alternative is open to the President. Let him promise to treat the Filipinos as we have promised to treat the Cubans, and instead of having to double his army he could at once reduce it one-half. He professes to be anxious for Congressional guidance. Let him recall that the Bacon resolution, guaranteeing the Filipinos parity of treatment with the Cubans, was defeated in the Senate only by the casting vote of the Vice-President. There is the guidance, not only of Congress, but of common sense. Mr. McKinley has been gradually sliding down from the conqueror's throne which he mounted last December. He has grown more conciliatory as he has grown more anxious. Now let him get off of that throne altogether, stand on his feet like a man and a brother, tell the natives that they may have their independence as soon as they show they can maintain it, and offer to help them to maintain it.

Even the Washington Mark Tapleys no longer find the Philippine situation so extremely jolly. Newspaper correspondents in the confidence of the Administration admit that the President is not so cock-sure of speedy peace as he was a few days ago. He is hopeful that Aguinaldo's delegates will soon come back for more banquets and palavering, but it begins to look now as if those gentlemen meant to stick to the jungle. But Mr. McKinley is in no slight jungle of his own. He wants results, but is unwilling to use the necessary means. "Push things," he orders Gen. Otis, but Otis replies, "Give me troops enough and I will." This brings the President squarely up to the need of calling for volunteers, but he tells his friends that he is most averse to issuing such a call. In the first place, there is the "pang" involved of ordering more graves to be decorated; then there is the cost; finally, there are "political reasons." Yet, more troops there must be if more fighting there must be. Every military authority asserts that. There is reason to think that Otis let the statement that a much larger army is urgently needed pass the censor at Manila, in order to force the President to act one way or another.

Senator Davis of Minnesota has taken an early stand in favor of perpetual retention of the Philippines. In a speech at St. Paul week before last, he said that he considered it the duty of the United States towards the Philippine archipelago "to retain sovereignty over there permanently and not provisionally." This sentiment he qualified by saying: "I would give to the Philippines, just as

I would any other people, as complete autonomy as, from time to time, they show themselves capable of exercising." This plan leaves no place or room for the Filipinos to become American citizens. It offers them no opportunity for becoming a part of the American republic, or for forming a republic of their own. However much they may rise in the social scale under our guidance, they are to be held permanently and not provisionally. That Mr. Davis's proposal does not contemplate their escape from our control at any future time is plain from the context, in which he says that we must have our share in the commerce of China, and that "the nation which hopes to be a factor in China has no right to relinquish possession of the Philippines." That is, we must hold them because there is money to be made by doing so. We have expected to see the pretences which have hitherto masked our policy in the Philippines dropped after the next election, but hardly before. The chairman of the Senate Committee on Foreign Relations is to be commended for his frankness. It leaves no room for skulking or for half measures. We apprehend that it leaves no room for the revered McKinley. Any policy which is clear-cut and decisive will have terrors for him till after the next election. What he wants to play continuously is the waiting game. He ought not to be allowed to play it longer. He ought to be compelled to show his hand, and we are glad that Senator Davis means to force his hand. The greatest political need of the day is a sharp division between Imperialism and its opposite. The greatest danger is the undefined policy and the fatalistic tendency of the Republican party, coupled with the silverism and the Bryanism of the Democratic party. Perhaps Senator Davis's speech may help to bring both parties to their bearings on the main question of the day, and save us from going into the next campaign on dead issues.

Judge Gray, in his reluctant defence of the Philippine policy in Philadelphia last Thursday, spoke contemptuously of the political aspirations of the Filipinos, and sneered at the idea of applying the doctrine of the consent of the governed in their case. Government, he said, is a practical affair, and "not a thing of phrases." No mistake could be greater. A phrase which embodies the dearest traditions and sentiments of a nation is mightier than laws or constitutions. Is Judge Gray, is President McKinley, willing to turn over all the watchwords of liberty to Mr. Bryan? Shall he, or some other agitator with a great popular following, be permitted to traverse the country next year, declaring that the Administration has forsaken the American principle of government, and that the rough riding down of the Filipinos is only the preliminary to the

shooting down of American laboring men? The Filipino delegate who said in Manila, on the day of Judge Gray's deliverance, that McKinley's offers were all very fine, but were, after all, in the teeth of all boasted American doctrine, used an argument which it is easy to sneer at in his mouth, but which, heard on the stump in every American State next year, and made an instrument in the hands of political passion and political ambition, is capable of shaking this nation, and of leaving the bewildered McKinley at the bottom of a gorgeous wreck.

Senator Platt praises Mr. McKinley's "wonderful foresight," and gives it as one of the reasons why he is "the only possible Republican candidate for the Presidency in 1900." We commend the saying to the prominent New York merchants who recently visited the White House to protest against a Platt appointee as General Appraiser. The President said he was very anxious to consult their wishes, but, of course, "foresight" would not allow him to do so. He clearly foresaw that Mr. Platt would have the seventy-two delegates from New York in the hollow of his hand, and what were seventy-two, or seventy-two hundred, merchants in comparison? So the merchants got the fine words and Platt got the appointment. His proclaiming that McKinley is certain to be renominated and reelected is only common gratitude for favors received, into which an extra amount of fervor is thrown as a reminder that he also expects favors to come. A Platt Speaker of the House and a lot more of Platt postmasters and appraisers would be uncommonly handy to the boss just now when he is getting such ugly blows at Albany and in New York. President McKinley's wonderful foresight will teach him, no doubt, that this Platt interview will have to be paid for with more patronage. Disraeli said of Peel that his whole political life had been "one vast appropriation clause"; but that is a feeble phrase for describing the way in which Platt appropriates every office in sight. The more evident it is to him that McKinley is the only possible candidate, the more clear he must make it to his machine, by his control of Federal patronage, that he is the only possible boss.

Mr. Bryan is quoted, in an interview at St. Louis on Thursday, as saying that silver must be kept in the forefront of the battle next year, yet in his public speech he distinctly put it in the background. He gave the first place to the anti-Trust doctrine, and he brought in the silver question as one variation of the Trust, which he designated the "Money Trust." What he said on this branch of the subject was very meagre and very

unsubstantial. It shows plainly that silver will not be the paramount issue of the next campaign. The only comment needful to be made upon Mr. Bryan's definition of the "standard money Trust," which he declares to be the parent Trust, is to point out that, in his estimation, "it is in the hands of foreigners." If that is true, how are we going to hit it? We can reach all other Trusts with one kind of club or another, because they are subject to the jurisdiction of our courts and legislatures. But we cannot reach a Trust that is in the hands of foreigners except by conquering the foreign countries where the "parent Trust" has its domicile and lurking-place. The State of Texas is now attacking Trusts by prohibiting the sale of goods manufactured or produced by Trusts; but nobody, not even Mr. Bryan, would think of prohibiting the introduction of money into this country from abroad, however hateful may be the Trust which controls it.

Gov. Pingree of Michigan is not only the author of sensations himself, but the cause of sensations on the part of others. Last week he took action which led to the refusal by the legislative department of the Government to receive a message from the Executive. There had been an investigation by a committee of the House into the expenditure of the State's war funds, and majority and minority reports were submitted from the committee a few days ago. Gov. Pingree was disgusted with the findings of the minority, and sent a special message to the House to express his feelings. After the clerk had finished reading it, the Speaker ruled the message out of order, and directed that it be returned to the Governor. He pointed out that the Constitution provides that the Governor "shall give to the Legislature information by message of the condition of the State, and recommend such measures to them as he shall deem expedient," but declared that this message did not pretend to set forth the condition of the State, or to make any recommendation, and consequently maintained that the document had no proper standing, and ought not to be received. "Parliamentary authorities" are quoted as supporting the Speaker's contention.

The new Franchise-Tax bill has passed the New York Legislature and will become law on the 1st of October next. The amendments made since its introduction are few and slight. One of these exempts from taxation the property of municipal corporations. As a municipal corporation is a minor part of the State government, it is not to be supposed that the franchise tax would have been levied upon such corporations in any event, but it is as well that the exemption should be made in express terms. Another amendment prescribes a new form

of oath to be taken by local assessors, making them swear more solemnly than before that they have assessed the real estate in their respective districts "at the full value thereof, according to our best judgment and belief." The intent of this probably is to jog the consciences of the assessors, and intimate to them that the practice of assessing real estate at 50 or 60 per cent. of its value must now come to an end. This will be necessary unless grave injustice is to be done to the corporations subject to the franchise tax. Since the franchisees are now to be taxed as real estate, and the valuation of them is to be put as nearly as possible at their actual value, all other real estate should be assessed at its actual value. The amount of tax to be paid by the owner will be no greater by reason of the raising of the valuation. It ought to be less by reason of the new law and of the swelling of the general list.

By a process of natural selection, Prof. Arthur T. Hadley has come to the top of the candidates to the succession of Yale's presidency. His age and health hold out every promise that, at forty-three, he may look forward to an administration of a quarter of a century. He has had twenty years' experience as tutor, lecturer, and professor. He has won recognition, both in this country and abroad, in his specialty of political economy; but he has an inherited breadth of knowledge and of view consonant with the whole range of learning in a great modern university. He combines with the scholar's tastes much of the equipment for a successful man of affairs. He supplements his other qualifications with that most valuable of all, the ability to interest young men in serious work. Finally, he understands that the highest obligation laid upon the educated man is to serve the republic, and that the best tribute which can be paid to an educational institution is the fact that its graduates are good citizens. Yale University is to be congratulated upon what we believe to have been the best possible solution of a grave problem.

The New England Free-Trade League some time ago offered prizes of \$100 and \$50 each to the competition of students in our educational institutions, for essays on the subject, "If all foreign products should be admitted into this country free of duty, what proportion of persons would suffer direct injury?" When announcement of the awards was made the other day, it came out that a first prize and a second prize had gone to students in the University of Pennsylvania. This news has caused a shock in Philadelphia, and the press of the city is beginning to protest. The *Inquirer*, the chief supporter of Quay, "doubts the economic and moral honesty of the offer of such a prize," and it also

"doubts whether university authorities should permit the name of their institution to be brought in this way for the booming of a dead issue, which should never have been a political issue, and never would have been, since the death of slavery, but for the importunities of the importers." It excuses the offending young men, on the ground that "the student will hardly stop to consider that this particular prize is in the nature of a business bribe, and that the offer has a shady appearance," but it holds that "there is evidently a point where the college authorities should step in to say whether such an offer can properly be considered." The truth is, that altogether too much freedom of thought has been allowed students in the past, and it is time to put on the screws. The next thing we know, somebody will be offering them prizes for essays "On the Importance of Maintaining the Principles of the Republic," and getting them to write stuff which Charles Emory Smith will have to keep out of the mails because of its "incendiary" nature.

Reluctance, amounting to dread lest it get another "case" on its hands, is what most strikes one in the Presbyterian General Assembly's treatment of Prof. McGiffert, Prof. Briggs's colleague. The whole procedure has been most hesitant and gingerly. Last year the Assembly besought Prof. McGiffert either to revise his theological opinions or withdraw from the church. The Professor, in a very manly letter to the Assembly, intimated that its method was entirely irregular (as it certainly was), but said that his brethren must have gravely misunderstood his views, and that he had no intention of withdrawing from a church in which he was born and bred and to the interests of which he is devoted. Of course, the only way in which a man's theology can be decided to be heretical is by a formal trial. Opinions of other clergymen, however dogmatically proclaimed, are only their opinions and have not the slightest effect in ecclesiastical law. This seems to have dawned on the Assembly, which last week ordered the New York Presbytery to take up Prof. McGiffert's case. But many voices are saying that there will be no heresy trial. Prof. McGiffert, they aver, is too much of a gentleman to stay where he is not wanted. He will peaceably withdraw. But that depends. He maintains that his views are consistent with the Presbyterian standards. Why, then, should he withdraw? Why is he not wanted? He may also feel it a duty to make a test of the question whether there is room in the church for men of progressive liberality and scholarship like his own. Altogether, therefore, we think that the New York Presbytery will either have a heresy trial on its hands, or else will have to go on tolerating Prof. McGiffert and other suspected heretics among its membership.

ARBITRATION AND DISARMAMENT.

A decided advance towards an international agreement of some sort in favor of international arbitration was made at The Hague Conference on Friday, when Sir Julian Pauncefote laid before the delegates a proposal for the formal establishment of a permanent arbitration tribunal. The suggestion is not a new one, writers on international law having discussed it before now; its chief recommendation is that it seems at first sight easier to introduce arbitration in this way than by a general treaty. Critics of the plan, however, dispute this.

When the attempt is made to establish a general system of arbitration by treaty, the difficulty must arise, as we found two years ago, (1) that every country is reluctant to agree in advance to arbitrate all disputes, and (2) that no line of division can be found to separate those which seem fit for arbitration from those which do not seem so. Each country imagines that there are some things which must be fought for, but what they are, no man can precisely define in advance. They are usually said to be questions involving the national honor and the integrity of the national territory; but any boundary dispute involves the national integrity, and any dispute whatever involves "honor," if those who have the decision of peace or war happen to think so or to be willing to say so. Down to the year 1898, it never occurred to any one that an injury to the vessel of one nation in the harbor of another with whom it was at peace, by persons unknown, was a ground for war between the two nations. Yet it became a *casus belli* with Spain last year, in spite of an offer by the Spanish Government to arbitrate the question of responsibility, which the President in his message on the subject admitted "remained to be fixed."

Two generations ago, a large party in this country wanted to go to war with England over the Northwest boundary; to-day most people see no objection to arbitrating the Alaska boundary. No means of settling what a question of "honor and integrity" is, exists, and consequently an "honor and integrity" clause inserted in an arbitration treaty would be nugatory. To us it seems obvious that such a clause is of no sort of use, because it means nothing more than that there are always cases in which, no matter how nations bind themselves, they will fight, and this will be true whether it is put in a treaty or not. But, for some reason which is not very intelligible, it seems to be thought in many quarters that an agreement of two or more countries to settle all their differences amicably would involve the dreadful risk that it might lead to a peaceful settlement of some controversy which, for the credit of one side or the other, required a war. Demonstrate as you will that treaties by the

score have been torn up for the sake of war, there seems to be still a lurking suspicion that it would be really dangerous to agree to arbitrate everything. Yet no one can point out in advance what should not be arbitrated.

To get over these and other difficulties, it is suggested that two or more nations establish a permanent Court of Arbitration, to which any nations may refer disputes. The court would derive its authority from the repute of its members, who would be judges or legal writers of high rank; and it would be always ready for any business which might be referred to it.

The first criticism of this suggestion that occurs is, that the plan meets and overcomes a difficulty which does not exist. No two countries which wanted to arbitrate ever had much difficulty in forming a court. The great difficulty is in agreeing to refer the question in dispute to arbitrators, not in finding the arbitrators. No doubt the conferees at The Hague might take steps which would lead to the creation of such a court, and, if good salaries were given, no difficulty would be found in getting judges. Indeed, it would be easy to get them, because they would, until something was referred to them, which might not be for some time, have nothing to do. But the obstacles in the way of referring to this court any new international question which might arise, would be very much what they are now. The mere existence of a court does not remove them.

Again, admitting that the plan of creating a permanent international court is good, as far as it goes, its existence alone does not give it power. Its powers it can derive only from an international agreement to submit questions to it, and the creation of the court must, therefore, either be supplemented, after its creation, by an agreement of two or more nations to submit disputes to it, or reinforced by such an agreement among two or more nations in advance.

Those who take this view of the matter contend that if The Hague Conference results in the establishment of an arbitral tribunal alone, the real difficulties surrounding arbitration will be masked rather than removed. But they, as well as all interested in the matter, admit that if it results in the establishment of an arbitral tribunal, reinforced by an international agreement, signed by even two leading Powers, it will have accomplished the most beneficent work of the age.

The question of disarmament is more closely connected with that of arbitration than many people suppose. The introduction of a really effective system of arbitration would do more to make disarmament permanently feasible than even a present reduction of land and naval forces. A reduction of these diminishes the number of persons to

whom war may be profitable; an arbitration treaty removes the main causes which lead to armament, *i. e.*, the constant expectation of war as the usual means of settling international differences. When two or more nations have provided a peaceful means of settling all quarrels, there must seem less and less reason for keeping themselves armed to the teeth in order to settle them by violent means. With every new arbitration, the reasons for disarming would grow. Historically, arbitration and disarmament have gone hand in hand. Some sixty instances of arbitration have occurred since the close of the Napoleonic wars, and to more than half of these the United States has been a party, Great Britain coming next with twenty cases. Now, the United States and Great Britain happen to be the two countries in the world which have refrained from arming their entire male population.

We are not among those who are sceptical as to good coming of The Hague Conference. But we trust to see it go much further than the mere creation of an arbitral tribunal, ready for business which might never come to it. We hope to see this reinforced by a determined effort at an international agreement to make use of the tribunal as constituted. It is on such an agreement that the introduction of arbitration will hinge at The Hague in 1899, exactly as it did at Washington in 1897. The suggestion has been made that, besides the arbitral tribunal and the agreement to use it (binding on any nations which choose to make themselves parties to it), there should be a third feature—that of compulsion. This was the idea advanced by Mr. D. D. Field in his proposals for an international code in 1872. He would have had not only a permanent arbitration agreement, but a provision that if any nation, which was a party to it, should fail to arbitrate, all the other nations should at once make war upon it. In theory there is, perhaps, no objection to this, but practical reasons for not endeavoring to go so far will readily suggest themselves.

CIVILIZATION VS. BARBARISM.

There was one passage in the serene and sane and thoroughly wise speech of Admiral Sampson last week, at the celebration of Queen Victoria's eightieth birthday, which we commend to the thoughtful consideration of Gov. Roosevelt. In paying a personal tribute to Admiral Dewey, he said:

"But does sea power or any other power promote a fraternal bond? I think not. Sea power suggests a fight, the exercise of destructive force. It is naturally in order to question whether exercise of power of any kind promotes brotherly love. It may be for the well-being of the naughty small boy to be whipped by his larger brother. It may be for the good of the bullying senior to get a drubbing at the hands of his little but valiant junior; but it is not brotherly love that is built upon this fight, though I do not deny that brotherly love may result from the bet-

ter state of mind engendered thereby. The boys become men, their points of view alter with their growth. Respect and faith once established, they can afford to forget small differences of earlier days; their mutual good depends upon their being on the best of terms. And I believe the day is fast coming when England and America—no longer boys, but grown-up men—shall lead the voice of peace, of grown-up experience, to the opinion now being represented by the Peace Conference at The Hague. Not fighting, but peace among nations, is to bring the world on fastest toward the millennium of prosperity and true living which we all long for."

Let us contrast this with some of the many passages in Gov. Roosevelt's recent speech in Chicago, in which, as is his wont, he glorified war and fighting as the only remedies of a nation against what he is fond of calling on all occasions "ignoble peace." This phrase is repeated again and again with tiresome iteration, which shows the hold it has upon his mind and the deep contempt that he feels for all opponents of war as war. We quote a few samples:

"I wish to preach, not the doctrine of ignoble ease, but the doctrine of the strenuous life."

"A life of ignoble ease, a life of that peace which springs merely from lack either of desire or of power to strive after great things, is as little worthy of a nation as of an individual."

"We cannot sit huddled within our borders and avow ourselves merely an assemblage of well-to-do hucksters, who care nothing for what happens beyond."

"A war, too [the present one in the Philippines], in which our brave men who follow the flag must pay with their blood for the silly mock-humanitarianism of the prattlers who sit at home in peace."

"I preach to you, then, my countrymen, that our country calls not for the life of ease, but for the life of strenuous endeavor. The twentieth century looms before us big with the fate of many nations. If we stand idly by, if we seek merely swollen, slothful ease and ignoble peace, if we shrink from the hard contests where men must win at hazard of their lives, and at the risk of all they hold dear, then the bolder and stronger peoples will pass us by, and will win for themselves the domination of the world."

This is the gospel of war for the sake of war, of fighting, not merely or necessarily for a just and righteous and inevitable cause, but for the effect upon your own virility. Whatever you do, you must fight. The worst thing that can happen to a man or a nation is to remain long in peace. That is to become "despicable," "ignoble," "slothful," an object of contempt to yourself and to the world. This is the view of the savage, the barbarian. If Governor Roosevelt had lived seven centuries ago, Richard the Lion-hearted and his associate Crusaders would have had an effective and congenial ally. His sentiments about war and peace are precisely those which Richard and his contemporaries had, and one wonders every time our bellicose Governor makes his now so familiar speech on the subject, how it happens that he was born so late in the world's progress, how it happens that he is so belated a "left-over." One searches in vain through his utterances for any recognition of despised peace as the promoter of civilization. Peace is well enough in his eyes if it be not too long maintained. A world in permanent

peace, to his mind, is a world peopled with cowards, sloths, weaklings, and silly prattlers.

As against a view of life like this, the calm utterances of a professional and veteran warrior—a man of high courage and valiant deeds—such as we quote from Admiral Sampson, are timely and reassuring. No nation ever needed such words more than we need them now. We have passed through a thoroughly childish war, and have been in a condition of childish exultation over it since its close. The time has come when, as the Admiral says, we should be, as a nation, "no longer boys, but grown-up men," should "lead the voice of peace, of grown-up experience." The Roosevelt view of life is essentially a boy's view, and if it were to become the permanent basis of a national policy, would make us the most turbulent people the world has ever seen. Our national life would become one perpetual Donnybrook Fair, with "rows" with every Power that got within range of us, for no other purpose than the development of our "virile strength," lest we become a nation of sloths.

Happily there is no danger of such a future for us. Our Governor is not taken seriously by anybody except himself when he talks "war." He has so many useful qualities as a political force that people condone the barbarian side of him, and try to keep faith in him as an effective agent for the reform of political abuses. It is, nevertheless, a great pity that he is so constructed mentally as to be unable to see the harm which this boyish glorification of war does to his own reputation as a sane and safe public leader and administrator. Already it may be said that he has a political future of great promise, perhaps greater than his ambition. But will the people of this country ever trust him in a station in which he can carry out his views of war as the great instrument of human progress?

A GOLD CURRENCY.

There has been a shortage of paper currency in the United States for more than a year, and the question how the deficiency should be made good has engaged a great deal of discussion. The reason why the shortage exists is that there has been an increase of business, which has called for a larger number of instruments of exchange. These instruments are of various kinds, but mainly two, bank checks and circulating notes. The latter consist of national banknotes and several kinds of Government notes. There is no limit to the amount of bank checks except the amount of bank deposits and bank credits. Consequently, any increased demand for this kind of instruments of exchange is immediately and automatically supplied. Not so with the other kind of circulating medium.

This is rigid and unchangeable. Government notes cannot be issued in any larger amount than now exists, nor is it desirable that they should be. Banknotes might be issued in larger amounts, but evidently there is no profit in such issues. If there were, the bankers would put them out. The only remaining resource is gold. This is always available and we have plenty of it in stock. We have imported \$217,000,000 within three years, and have produced at least \$100,000,000 more. But we are not fond of carrying gold in our pockets or in belts strapped around our waists. Its weight is an inconvenience. The need of a paper medium to take its place is strongly felt.

Leaving aside for the present the larger and more scientific plan of the Indianapolis Currency Commission, which has the approval of the leading economists of the country, we invite attention to a mode of relief already available, which can be put in force without new legislation and at a moment's notice. It is embraced in section 12 of the act of July 12, 1882, in these words:

"That the Secretary of the Treasury is authorized and directed to receive deposits of gold coin with the Treasurer or Assistant Treasurers of the United States in sums not less than twenty dollars, and to issue certificates therefor, corresponding with the denominations of United States notes. . . . Provided, that the Secretary of the Treasury shall suspend the issue of such gold certificates whenever the amount of gold coin and gold bullion in the Treasury reserved for the redemption of United States notes falls below \$100,000,000."

The first clause of this law was enacted in 1863, and was in continuous operation until April, 1893. The second clause (the proviso requiring its suspension whenever the gold reserve should fall below \$100,000,000) was enacted in 1882 and was put in practical operation for the first time in 1893, under Secretary Carlisle, when the gold reserve in the Treasury did fall below the sum named. Previously any holder of gold could take it to the Treasury, deposit it, and receive gold certificates in denominations not less than twenty dollars. The Bank of England is under the same requirement to receive gold in any amount and at any time, and issue its notes therefor in denominations not less than £5.

Secretary Carlisle suspended the operation of the law when the gold reserve fell below \$100,000,000, but he did not resume it when the reserve rose above that sum. During the greater part of his term of office, being engaged in an almost daily struggle "to keep his head above water," he might have been excused for construing the word "suspend" as though it were the equivalent of "discontinue" or "cease." As a matter of fact, he did so construe it. He made an order that the issue of gold certificates of deposit should not be resumed, no matter how high the gold reserve should rise. His successor, Mr. Gage, finding that order in force, has sim-

ply left it in force, although he might change it if he should see fit to do so.

If Congress had intended that the issue of gold certificates should, in the contingency named, cease and determine, it would doubtless have said so. The word "suspend" does not convey such meaning. The Century Dictionary defines it, "To cause to cease for a time." This is the common acceptation of it. The time during which it should cease was clearly fixed, *i. e.*, until the gold reserve should again be above \$100,000,000. Anybody who will take the trouble to read the debate in the Senate (June 21, 1882) when the proviso in question was adopted, will find not a word implying that the suspension of the issue of gold certificates was to be continuous and final.

If citizens have a legal right to deposit gold in the Treasury and to receive certificates therefor in certain denominations, endowed with certain attributes, and if this right has been taken from them without the authority of law, there is not much more to be said. It will be well, however, to glance at the matter in its financial and economical aspects. The Treasury Department, like all other departments of the government, exists for the benefit of the people. Its first duty is to conform to the law. Its second is to construe the law in any case of doubt for the benefit of the people. It would be a great public advantage if there were some way of converting our superfluous gold into a more convenient medium of exchange. The goodness of the gold certificates is not in question. Indeed, one of the arguments advanced against them is that they will be considered better than greenbacks, and that there will be a tendency to draw gold from the Treasury by means of greenbacks and to redeposit it in exchange for gold certificates, the latter being considered a preferred claim upon the Treasury.

This view savors of timidity. It bears the contagion of panic and is calculated to create the very distrust which it apprehends. All experience teaches that the banker or financier who shows perfect readiness to redeem his paper, is the one least likely to be called upon to do so. On the other hand, the one who betrays any doubt as to his own solvency, breeds distrust instead of allaying it. It took a long time to educate the American people and their rulers to the knowledge that all kinds of currency, including silver certificates, stand on the same broad, infallible basis, and must be maintained at par with gold, but that fact is now so well understood that no discrimination is made between them in the minds of the people. Everybody is glad to get the certificates because everybody knows they will be kept at par. It is impossible that any form of Government issues should be better than any other form, except in case of complete national

bankruptcy and financial ruin. It is impossible that gold certificates should be better than greenbacks or any other kind of circulating medium unless the Government itself encourages the opinion that they are so. At the present time the amount of gold in the Treasury (\$228,398,312) is so enormous that nobody can imagine any preference being given to gold certificates over greenbacks in the estimation of depositors, or of bankers, or of the public generally.

It may be said that if we relieve the pinching of the shoe now by reopening the door for gold certificates, we shall postpone the time for a thorough reform of the currency like that proposed by the Indianapolis Commission. We believe in the Indianapolis plan, but we see other dangers to arise from the pinching of the shoe. Public impatience may take the form of a demand for a worse kind of currency instead of a better—for more greenbacks, or the free coinage of silver, or the "sub-treasury plan," or any other specious folly. Gold certificates are always as good as gold. There is no danger of having too many of them. They are not an element of inflation or of distrust. They can never create a panic. Of all forms of paper currency they are the least open to criticism. General reform of the currency will take place when all shoe-pinching has been eased and forgotten, and probably not before.

MORE ANTI-TRUST LAWS.

As thorough-going an anti-Trust law as any that we have seen since the legislative anti-property craze set in, is that passed by the Texas Legislature, by an overwhelming vote, and just signed by the Governor. The following are some of its provisions: Section 1 provides that any corporation which becomes a member of a pool or Trust designed to regulate or even to fix and maintain the prices of anything whatever, including insurance premiums, shall be deemed guilty of a conspiracy. Section 2 defines a "monopoly" as any "union" of anything, including "acts" by anybody, whereby the "results described are calculated to be produced"; any one "engaged in" a monopoly is to be deemed guilty of a conspiracy to defraud. By sections 3 and 4 any manufacturer who sells at less than cost, or gives away, for the purpose of driving out competitors, is to be deemed guilty of a conspiracy to form a monopoly or Trust. Section 5 fixes the penalty for violating the act at not less than \$200, and not more than \$5,000, for any such offence, and for every day of its continuance. By section 6, if two or more merchants agree to limit trade or competition by refusing to buy from or sell to any person or corporation because corporations are not members of the "combination," they are subject to the penalties of the

act. Section 7 provides for the forfeiture of the charter of any concern violating the act. Other sections provide that any corporation which, owning a manufacturing patent, shall use it and at the same time fail to put it on the market for sale, "shall be adjudged a monopoly." Section 12 provides that the sale of anything in violation of the act shall be void, and the purchasers shall not be liable for payment. Section 13 makes any business such as that carried on by the Associated Press a monopoly. The act goes into effect on January 31, 1900.

This is far more drastic than the Donnelly bill, just passed by our Legislature, and signed by the Governor, which merely makes agreements creating a monopoly or restraining competition illegal, and provides machinery to secure evidence.

The Texas law is no doubt all the more relished in Texas because an Arkansas statute, based on similar principles, has just broken down in the courts. The Arkansas statute provided—so the Attorney-General maintained—that any foreign insurance company doing business in Arkansas which became, anywhere in the wide world, a member of a pool or Trust to fix the price of insurance, should be subject to a penalty of \$5,000. This act promised well, for on the day it was signed sixty-three insurance companies in Arkansas suspended business. But the Supreme Court has now handed down a decision to the effect that the Legislature could not have intended that an agreement made by an English or German Insurance Company in Hong Kong to fix the rate of insurance in that locality should create a liability to pay \$5,000, as a penalty for the act, in Little Rock. This decision may be right, and was followed by the immediate resumption of business by the sixty-three insurance companies; while the Attorney-General is led by it to a gloomy view of the future, and to declare that he will at once—if costs are paid—dismiss all pending suits, and will not in future prosecute a Trust, "if it should organize in front of the State-house with a brass band." It remains to be seen whether the Texas law, which also includes a provision against crimes committed by insurance companies, will fare any better.

One section of the Texas anti-Trust law is aimed at the Roller Baling Machine. This is one of the most important inventions of recent years. Instead of taking a great mass of cotton and squeezing it, and the air contained in it, into a small but very elastic cubical bale, and then binding it with iron or steel hoops, the machine draws the fibre between rollers, which squeeze all the air out of it, and then delivers the cotton itself in the form of a tight roll, with no more elasticity than a roll of calico, and requiring no iron clamps to

hold it. The chief advantage of this method of handling cotton is that the liability to fire is greatly reduced. The owners of the Roller patent seek to make their profit out of the invention by leasing machines, or by rolling the cotton themselves, instead of selling the machines. In other words, they "sell territory." The Texas Legislature wants them to sell machines, and accordingly puts the following section into the anti-Trust law:

"Every corporation, copartnership, firm, or individual who may be the owner or lessee of a patent to any machinery, intended, used, or designed for manufacturing any raw materials or preparing the same for market by any wrapping, baling, or other process, who shall lease, rent, or operate the same in their own name and refuse or fail to put the same on the market for sale, shall be adjudged a monopoly and subject to all the pains and penalties provided in this act."

It is scarcely necessary to say that no State can override or alter in any manner the patent laws of Congress, or limit or curtail their operation. The subject of patents was committed to Congress by the Constitution in Article I, section 8, clause 8, which says that "Congress shall have power to . . . promote the progress of science and the useful arts by securing for limited times to authors and inventors the *exclusive right* to their respective writings and discoveries." Congress has legislated on this subject. It has not restricted the rights of patentees to the sale of the machines invented by them. It has not required them to put machines on the market. That would not be an exclusive right to their respective writings and discoveries. The only restriction imposed by Congress is that a patent shall not continue in force more than seventeen years. While it is in force, the holders of the patent can use it in whatever way they please in New York or Texas, and no State Government can molest them or make them afraid. Moreover, the law of Congress says that the courts of the United States shall have exclusive jurisdiction of patent cases. So the courts of Texas could not be invoked to pass judgment on any case arising under the section quoted above.

Thus far, the campaign against the Trusts in the State courts cannot be said to have been marked by much success. Nor has it triumphed, except in a barren way, in the Federal courts. The recent decisions of the United State Supreme Court to the effect that railway combinations to maintain rates are illegal, as in "restraint of trade," were made under a Federal anti-Trust statute, and the judges went as far as they could in latitudinarian construction to bring cases affecting railway rates under it at all. But the decisions have been almost without practical effect. They did indeed break up the existing agreements, but this simply made some new means of fixing and maintaining railway rates more necessary than ever; and consequently a new era of railway consolidation has set in.

which promises to end in a dozen "combinations" owning the whole railway system of the country. It is also a fact worth noticing that never in the history of the country have such stupendous combinations of industrial capital been made as in the present heyday of anti-Trust legislation.

Such facts as these ought to be carefully considered by those who imagine that "anti-Trust" can be made an effective battle-cry in a Presidential campaign. Hitherto the anti-Trust legislation has been, in great measure, non-partisan—even the Donnelly act, though a Tammany measure, was passed by a Republican Legislature, and signed by a Republican Governor—and has generally proved futile. It would be difficult to divide the country over an issue in which each party seems anxious to outbid the other. And it will probably be still more difficult to arouse enthusiasm over it, unless you can show that legislation, where laws have been passed, has been effective. As we have often pointed out, some Trusts are bolstered up by the Tariff; but those who are managing the present campaign against Trusts seem always disposed to avoid this question. Their idea, so far as they have one, seems to be that "combinations" of capital exist only for purposes of oppression, and, therefore, ought to be broken up. The economic ideas of a Populist agitator and legislator are not very different from those of the mob he dupes with platforms and laws.

THE ARCHÆOLOGICAL INSTITUTE OF AMERICA.

NEW YORK, May 25, 1899.

About two years ago it was arranged that the Council of the Archæological Institute and the Managing Committee of the American Schools of Classical Studies at Athens and in Rome should hold their annual meetings at the same time. The two committees, while *de jure* creatures of the Institute, were not such *de facto*, and it was felt that all the organizations would be more closely drawn together and would receive mutual benefit if their officers could meet together at stated intervals for the interchange of ideas. The plan has proved a success, and now, each year, the three last days of the second week in May witness the gathering of a goodly number of persons from different quarters to discuss the condition of the Institute and to provide for the needs of the coming season. The meetings of the present year were held on May 11, 12, and 13, in the rooms of the Department of Architecture, Columbia University, and I venture to hope that some account of the proceedings will be of general interest to those who care for the study of antiquity.

The session held on Thursday, May 11, was that of the Managing Committee of the School in Rome, and Prof. Hale of Chicago, the chairman, presided over the deliberations. The most serious difficulties for those who have had this school in charge since it was founded in 1896 have been of a financial nature. Enough money was gathered through a general subscription to start work and to

keep the School in operation for three years, but the hope that before this time had passed a permanent fund might be established has not been realized, and it has become necessary to raise the annual income by subscription. Another year of prosperous life has indeed been assured the School under this system, but of course no such method of gathering resources can give that feeling of permanence which is necessary to a lasting success. The officers of the School are seeking, with characteristic enthusiasm and energy, to raise the needed funds, and various colleges and universities are beginning to lend aid by making small annual subscriptions, as they have done in the case of the School at Athens. Such support through the coöperation of various colleges is truly an admirable thing from many points of view, for it establishes very close relations between the foreign school and the educational system at home, and it at the same time brings the colleges together to work for a common end; but, as the experience of the School at Athens has proved, it is permanently valuable more as an auxiliary than as a main source of income. The subscriptions are not always easy to raise, and few boards of trustees feel justified in assuming responsibility for the annual contribution.

But, even if the Roman School is forced for the moment to depend on faith as its banker rather more than is quite comfortable, this has not deterred its active managers from taking the much-needed step of establishing a more permanent directorate, and they have wisely elected Prof. Richard Norton Director of the School for five years. Prof. Norton has already been for two years a professor in the School; he has studied at the Athenian School for as long a period, and, besides this, he has passed some time at the University of Munich in archæological work. In this country he has had experience in teaching at the Harvard Summer School and at Bryn Mawr College. Certainly the Roman School is fortunate that he is so situated as to be able to accept its directorship. It is, however, very desirable that the School should be kept closely in touch with the colleges and universities at home, and to this end an annually appointed professor will be sent out as heretofore. For 1899-1900 the committee elected Prof. Platner of Western Reserve University; for 1900-1901, Prof. Kelsey of the University of Michigan; and for 1901-1902, Prof. Abbott of Chicago.

After providing for the archæological and educational work of the School, the committee proceeded to the no less important duty of electing a Chairman of the Managing Committee. Prof. Hale has occupied this responsible position since the foundation of the School, and has expended time and energy without stint in responding to its exacting demands upon him. For a year or more past, however, he has felt that he could not carry the burden much longer, and he therefore presented his formal resignation. To succeed him the committee chose Prof. Minton Warren, formerly of Johns Hopkins, now of Harvard, and as acting Chairman and Secretary, Prof. E. T. Merrill of Wesleyan. Both of these gentlemen have been actively engaged in the conduct of the School from its beginning, and both have had a term of service in Rome. The resignation of the Treasurer of the School, Mr. C. C. Cuyler, was referred to a committee, and the hope was most ear-

nestly expressed that he might consent to reconsider it. Mr. Cuyler's energy and unflagging interest have already placed the friends of the School under great obligations to him, but that only makes them the more loath to dispense with his generous services at this critical period.

In the case of the meeting of the Managing Committee of the School at Athens, which took place on Friday, the second day of the sessions, there is perhaps less of immediate importance to chronicle. This school is now nearly twenty years old, its Director, Professor R. B. Richardson, is completing his sixth year of continuous residence, and tradition, therefore, tends to regulate the deliberations of its officers. Prof. Seymour of Yale, the chairman, was able to report a very successful year of work. The number of students has been larger than ever before, and the evidence of their better preparation for work in Athens is becoming increasingly apparent. Smith College has joined the league of supporting colleges during the past year, and the Agnes Hoppin Fellowship for women, which was recently established for a period of three years by Mrs. Courtland Hoppin, Miss Sarah Hoppin, and Dr. J. C. Hoppin, has been continued during the lifetime of the donors. The School may therefore hope for the present to award the fellowships annually, a School fellowship of \$600, one maintained by the Archaeological Institute of the same value, and the Hoppin fellowship of \$1,000. The chairman also reported another successful season at the excavations in Corinth, where the location of the chief centres for topographical research seems established with certainty. It is greatly to be hoped that, with this much accomplished, the work may not be brought to a standstill through lack of money.

Prof. B. I. Wheeler of Cornell, as chairman of the committee on fellowships, announced that the fellowships for the ensuing year had been awarded to Mr. Benjamin Powell (Cornell, 1896), Mr. James Tucker, jr. (Brown, 1897), and the Agnes Hoppin fellowship to Miss H. A. Boyd (Smith, 1892), who has previously held one of the other fellowships. Miss Leach, professor of Greek at Vassar, succeeds Prof. Wheeler as the head of the committee on fellowships. As annually appointed professors, Prof. Smyth of Bryn Mawr will go out next year, and in 1900-1901 Prof. E. D. Perry of Columbia.

The financial condition of the School at Athens, even though this school is older and more firmly established than the sister institution in Rome, is still a source of some solicitude to its managers. Its current income is very largely derived from the contribution of the various supporting universities and colleges, and, as such contributions are to a great extent made up of small subscriptions by individuals, the permanence of the revenue may at any time be put in jeopardy. Through economy and careful financing, and by the readiness of many to work for the School without remuneration, it has been possible to begin gathering a permanent fund, but the increase of this fund is each year becoming a more pressing necessity to the School. Surely these two American institutions in foreign lands may reasonably appeal to the many benefactors of learning in our country for help in raising the comparatively small endowments which are needful to their success. They have become

really a part of our educational system, and they have already markedly affected the study of classical antiquity in the colleges; they are about the only educational undertakings which have called forth a real co-operation between different institutions, thus helping to counteract the unfortunate tendency of our colleges and universities to let local interests and prejudices interfere with that which is for the benefit of all; they often lend a hand also to the chance traveller, and give him the little guidance in two of the world's great centres of civilization which makes to him all the difference between the profitable employment of his time and mere aimless sightseeing. As a possible form of endowment it might perhaps be suggested that the two School libraries, or either one of them, could for no very large sum be made to perpetuate the name of some friend of sound learning.

Saturday morning, the final day of the sessions, witnessed the assembling of the Council of the Archaeological Institute, under the presidency of Prof. John Williams White of Harvard. Some thirty members were present, and ten more were represented by proxies. The President opened the meeting by giving an account of his management of the affairs of the Institute during the last year. This was followed by the regular reports of the chairmen of the two School committees, and by the interesting report of Prof. Seymour, as chairman of the committee which has in charge the publication of the results of the excavations at the Argive Heraeum. This promises to be much the most important publication which the Institute and the Athenian School have yet issued. For the general oversight of the work, Prof. Charles Waldstein, under whose direction the excavations in Argos were conducted, is responsible, but he is to have a company of worthy helpers associated with him. The different topics will be distributed as follows: Mr. Tilton, Topography and Architecture; Prof. Waldstein, Sculpture; Mr. Chase, Terracottas; Mr. DeCou, Bronzes; Prof. Richardson, Inscriptions; Dr. Hoppin, Vases; Prof. R. Norton, Gems; Mr. Lythgoe, Scarabs. There will be, in all, more than a hundred plates, and between three and four hundred illustrations in the text. A pleasant event of the morning session was the graceful speech of Prof. Waldstein, proposing that this Heraeum publication should be dedicated to Prof. C. E. Norton, as the founder and first President of the Archaeological Institute. Prof. Norton made an appreciative and sympathetic reply.

It had been hoped that this year would see the establishment of a school in Palestine by the Society of Biblical Literature and Exegesis, under the auspices of the Institute, but the necessary preparations are not yet complete, and final action awaits the return of Prof. J. H. Thayer, who has the matter much at heart, but who is now absent in Europe. The report on this plan was made by the Rev. Dr. John P. Peters.

There is also another direction in which the Institute desires to extend its activity, this time not to seek "fresh woods and pastures new," but to resume a temporarily neglected line of work—that of the archaeological study of this continent. Since the publication of the series of investigations by Mr. Bandler, nothing, or almost nothing, of this kind has been done, and when President White came into office two years ago he rightly felt that it was a great mistake

for the Institute to be turning its attention so exclusively to classic work. A committee was therefore appointed to consider the question, and its first step was to recommend that the board of editors of the *Journal of Archaeology* be increased by the addition of an editor who should represent the study of American antiquity. Prof. Henry W. Haynes of Boston was accordingly chosen to this office. The committee next recommended the election of a councillor whose special interest was in the archaeology of America. The Executive Committee of the Council at once adopted the recommendation and elected Mr. Charles P. Bowditch of Boston as a Vice-President of the Institute to succeed the late Dr. Pepper of Philadelphia. No one who knows of the work that Mr. Bowditch has done in Honduras—his own work and that which he has made it possible for others to do—can doubt the wisdom of the committee's selection. Mr. Bowditch made a vigorous speech before the Council, urging the revival of interest in American work, and it was voted that a special committee on this subject be appointed by the President in consultation with Mr. Bowditch. Mr. Edward Robinson of Boston also spoke urging the essential unity of the study of prehistoric antiquity in all countries, and pointing out its value to classical archaeology in throwing light upon the Mycenaean and pre-Mycenaean periods.

The report of Prof. Wright as editor-in-chief of the *American Journal of Archaeology* showed that publication to be in a prosperous condition. When he took charge of it the issue was much behindhand; now, however, the first number for 1899 has appeared, and by the end of the year there is every prospect that all numbers will be issued on time. President White asked that he be authorized to arrange in the name of the Institute for the reproduction in facsimile of the *Codes Ravennas* of Aristophanes. The work, he said, was likely to pay for itself, as the facsimiles of the Laurentian Sophocles and Aeschylus published respectively by the English and Italians had done, and in any case he was himself willing to assume the financial risk. The authorization was, of course, promptly given, and we may now expect that the Institute will add another noteworthy publication to its lengthening list. The old officers were re-elected for the ensuing year, with one or two slight changes in the roll of Vice-Presidents, which now reads as follows: President Gilman of Baltimore, Mr. C. P. Bowditch of Boston, Mr. M. A. Ryerson of Chicago, Prof. Seymour of New Haven, Mr. Talcott Williams of Philadelphia.

The day was now far spent, and the session was appropriately brought to a close by the passage of a resolution that the Archaeological Institute should make arrangements to hold, during the next Christmas recess, its first meeting for scientific discussion and for the reading of papers.

J. R. WHEELER.

THE MERIT SYSTEM IN THE BRITISH COLONIES.

BRUNSWICK, Me., May 9, 1899.

In a former letter to the *Nation*, I called attention to some of the characteristics of the merit system as exemplified in the consular and diplomatic service of Great Britain. The details of the system there noted have application, of course, mainly to so much of

the foreign service as is conducted by officials sent from England and holding direct relations with the Colonial Department. In the purely internal affairs of the respective colonies, however, the primary conditions are different. Most of the colonies have a preponderant native population of but a moderate degree of civilisation, while the diversity of situation, interests, and natural resources is very great. On the surface, the British possessions might seem to promise a rich harvest for the spoilsmen. How far the promise is fulfilled may be seen from an examination of the 'Colonial Office List,' an annual official publication similar to the 'Foreign Office List,' and of which the volume for 1899 is just to hand.

The portion of the colonial empire of Great Britain under the immediate supervision of the Secretary of State for the Colonies (India has a separate administration, and is not considered here) comprises forty distinct and independent governments. Eleven of these have elective assemblies and responsible governments; sixteen have a legislative council nominated by the Crown, with the power reserved to the Crown, save in British Honduras, of legislating by orders in council; nine have legislative councils partly elected and partly appointed; and four have no legislative council, the law-making power being delegated to the officer administering the government. In the responsible or self-governing colonies, the concurrence of the home Government in appointments is not necessary, administrative control being vested in officials dependent upon the support of representative assemblies. There is an executive council, appointed by the Governor, with whose approval appointments are made. This form of administration, familiar in our own country, calls for no further comment.

The governor of a British colony—known also as governor-in-chief or governor-general if his jurisdiction embraces several distinct colonies—is appointed during the pleasure of the Crown, but the term of office is usually six years. Besides general executive functions, the Governor has such powers and duties, and is subject to such restrictions, as are laid down in rules emanating from England, or in the laws of the colony which he serves. Where there is no representative assembly, the initiation of laws belongs in general to him, and in all cases his veto power is absolute.

The appointing power of the Governor is modified by the local circumstances of the colony and by the nature of the office. In the self-governing colonies, as has been said, appointments to public office are made by the Governor with the advice of the executive council, and are neither authorized nor confirmed by commission or warrant from the Queen. Elsewhere, offices are generally bestowed in the name and during the pleasure of the Crown; but in some cases local law confers the appointing power upon the Governor, with or without the concurrence of the council, while a few places are held during good behavior. As a general rule, however, all public offices "of considerable rank, trust, and emoluments" are granted, either provisionally or absolutely, under royal commission. For the purpose of determining what are and what are not places "of considerable rank, trust, and emoluments," offices are divided into three classes. The first includes those whose emoluments do not exceed £100 per annum; the second,

those in excess of £100 but not over £200; and the third, those worth more than £200. Places in the first or lowest class are usually at the disposal of the Governor, who must, however, make report of the appointment at the earliest opportunity. Vacancies in the second class are filled by the Colonial Secretary on the recommendation of the Governor, the recommendation being almost uniformly followed. In the case of a vacancy in the third class, the Governor may, as in the second, make a provisional appointment and a recommendation; but the latter has less weight with the Secretary than in cases of the second class.

While no attempt is made to state in advance the precise circumstances under which the recommendations of the Governor will or will not be followed, certain principles are, nevertheless, observed. In general, recommendations in the way of promotion are more favorably regarded than suggestions of persons new to the service; but appointments to new offices are likely to be made directly from England. Appointments of relatives of the Governor, and even of private secretaries and other intimate associates, are rarely confirmed. In all matters of appointment each colony is considered by itself; and while the filling of vacancies by promotion is the rule observed wherever practicable, only the higher officials are likely to be transferred from one colony to another. Further, regard is had to the general state of the colony—its population, wealth, and political condition—as affecting the probable number of persons from whom the local authorities may make selection. Especial importance is attached to local qualifications and experience; and in order that the Colonial Office may have proper knowledge in the premises, the Governor is required to make annually a confidential report on the claims of candidates, whether in the service or not. An exception to the rule of local preference occurs in the cases of chief judicial and financial officers, where "local connection with the colony by birth, family ties, or otherwise, will be considered, generally speaking, to render a candidate ineligible."

In practice, therefore, the patronage of the Colonial Secretary is very small. Minor offices are filled by the appointment of local candidates, where such can be found, and higher offices by promotion, so far as practicable. Only in the case of new offices, high positions, or positions demanding technical or professional qualifications not to be found in the colony, are appointments likely to be made from England. While persons already in the service, accordingly, have a chance to rise, those who wish to enter must commonly do so by way of a minor place. In Ceylon, Hong Kong, and the Straits Settlements, including the Malay States, cadetships have been established, with competitive examinations, for the training of officials for the higher posts; subordinate positions being filled by local appointment, as in the other colonies. There are a few cadetships—non-competitive, but with preference given to graduates of the universities—in the Gold Coast colony, and a few in Fiji; these, with an occasional clerkship in the customs service on the west coast of Africa, complete the list of so-called "junior" clerical positions open to candidates in England. Occasional educational appointments, if of lower grade, are made by advertising for applicants, or through a teachers' agency; higher positions are filled by promotion. Higher

medical places, also, are usually filled by transfer or promotion, save in the case of positions calling for administrative as well as professional ability, when selections from outside the service are sometimes made. It is announced that eventually all candidates for medical places will be required to undergo a course of training at the School of Tropical Medicine, now in process of establishment in England.

The power of dismissal is not quite co-extensive with the power of appointment. In the self-governing colonies, the power, like that of appointment, is vested in the Governor and executive council, if the office be held, as nearly all are, at the pleasure of the Crown. The executive council itself, in these colonies, holds office at the pleasure of the Governor; but it is "understood that councillors who have lost the confidence of the local Legislature will tender their resignation to the Governor, or discontinue the practical exercise of their functions, in analogy with the usage prevailing in the United Kingdom." In the Crown colonies, the power of dismissal is much restricted, although temporary suspension is allowed, pending inquiry and decision by the Colonial Office. Dismissals of officials receiving £100 or less a year, however, do not require the approval of the Colonial Secretary; but the official is, in every case, entitled to a written statement of the charges against him, and an opportunity to clear himself; and there is also a right of appeal.

A few general provisions, designed to insure honest and effective administration, should also be noted. All salaried public officers are forbidden to engage in trade or commerce without permission from the Governor and the approval of the Secretary of State for the Colonies. In cases where the salary or emoluments of the office are fixed on the assumption that the official gives his entire time to the Government service, the prohibition is usually absolute. Further, no public officer may act as private agent in any matter connected with his official duties. He may not be the editor of a newspaper, nor actively concerned in its management. He is at liberty to discuss in print, over his own signature, matters of general interest, but he must avoid political topics, and refrain from criticising either the Government or its agents. No official may receive gifts or presents from the natives of the colony in which he is serving, save where a refusal would give offence, in which case the present is to be turned over to the Government. Ceremonial presents from natives, whether chiefs or others, become the property of the Government, and return presents are at Government expense.

Even this brief sketch is, I think, sufficient to show the general principles governing British colonial administration. So far as the civil service is concerned, each colony is treated as a unit, and its administrative service is organized to meet its special needs. Wherever possible, offices are filled by the appointment of local candidates, who, though holding nominally at the pleasure of the Crown, enjoy in practice a permanent tenure during good behavior, and are advanced to higher stations as vacancies occur. With rare exceptions, only such officials as are charged with duties touching broad lines of policy, or whose positions demand a training which the colony cannot provide, are sent from England; and, even here, transfers from other colonies are fre-

quent. Where a system of competitive examinations has been introduced, as in Ceylon, Hong Kong, and the Straits Settlements, the tests are the same as in England, and are under the charge of the Civil-Service Commissioners. Finally, the use of official position as a means to private gain is absolutely prohibited. It is because the colonial service aims at an intelligent, judicious, and stable conduct of affairs, and not because of its novelty or its "spoils," that it has become, for English subjects, an attractive and worthy career. WILLIAM MACDONALD.

Correspondence.

"PIAZZA."

TO THE EDITOR OF THE NATION:

SIR: In a letter written August 20, 1867, J. L. Motley said to a friend that "he has put a broad verandah (what we so comically call a piazza) all around the house." Our use of the word is certainly singular, and the present is the first attempt that has been made to account for it.

The word *piazza* has, by English-speaking people, been used in three senses. First, for over three centuries, it has been employed by writers and travellers in the sense of a square or open place. To the examples of this, its proper Italian meaning, given in the Stanford Dictionary, could be added other early ones from J. Florio (1598), T. Coryat (1611), and Sir D. Carleton (1616).

Secondly, in England the word has for over two centuries been used to mean an arcade or portico. The explanation of this usage is as follows: Between 1631 and 1634, Inigo Jones laid out Covent Garden for the Earl of Bedford in the form of a square, with an arcade running along the north and the east sides. The square was called Covent Garden Piazza, a term which first occurs in 1634. Writing from Leghorn under date of October 21, 1644, J. Evelyn said: "The piazza is very fair and commodious, and, with the church, . . . gave the first hint to the building both of the church and piazza in Covent Garden with us, though very imperfectly pursued" (Diary, 1889, i., 96). If this is correct, it doubtless explains why a square in London came to be called by an Italian name. But the word *piazza*, at first a designation of the square, was soon applied to the arcades; that on the north side being called the Great Piazza, and that on the east side the Little Piazza. Hence the word came to mean any arcade or portico under which one could walk, and has long been a well-recognized term in English architecture. This change in meaning was accompanied by a change in pronunciation, and *piazza* was corrupted into *piache*, pronounced like the letters *p* + *h*. The following examples illustrate this particular usage.

"Piazza (Ital.) a Market-place or chief street; such as that in *Covent-Garden*, which the vulgar corruptly call the *P.H.* The close Walks are not so properly the *Piazza*, as the ground inclosed within the Rail." 1661, T. Blount, *Glossographia* (3d ed.).

"Well, Madam, I'll take one turn here i' th' *Piazza's*. 1667, J. Dryden, *Sir Martin Mar-all*, Act i., *Comedies, Tragedies, & Operas* (1701), i. 191.

"I have quitted my old lodging, and desire you to direct your letter to be left for me with Mr. Smibert, painter, next door to the King's Arms tavern, in the little piazza, Covent Garden." 1796, G. Berkeley, *Life & Letters, Works* (1871), iv. 183.

"London is really dangerous at this season; the

pickpockets, formerly content with mere *flicking*, make no scruple to knock people down with bludgeons in *Fleet-street* and the *Strand*, and that at no later hour than eight o'clock at night; but in the *Piazas*, *Covent-garden*, they come in large bodies, armed with cutaneous, and attack whole parties." 1743, W. Shenstone, *Letters, Works* (1769), iii. 83.

"He [C. G. Cibber] carved most of the statues of kings round the Royal-exchange, as far as king Charles, and that of Sir Thomas Gresham in the piazza beneath." 1763, H. Walpole, *Anecdotes of Painting in England* (1789), iii. 147.

"Elgin has what in England are called piazzas, that run in many places on each side of the street. It must have been a much better place formerly. Probably it had piazzas all along the town, as I have seen at Bologna. I approve much of such structures in a town, on account of their convenience in wet weather." 1785, J. Boswell, *Tour to the Hebrides* (2d ed.), 122.

"Piache, a, for a piazza, or more properly, an arcade. Though this is now a mere vulgarism of the lowest order, it seems to have been formerly deemed more respectable, since Coles has admitted it into his Dictionary [1723]. Those who now use it pronounce it like *p* and *h*." 1822, R. Nares, *Glossary*, 375.

"We proceeded by the magnificent aqueduct bridge of the Elismere Canal, along which Sir W. and I walked,—I think the greatest human edifice I have seen,—and so to Chester, in which ancient city we had barely time to stare a little at the galleries and piazzas of which we have all heard or read." 1835, J. G. Lockhart, in Sir W. Scott's *Familiar Letters* (1894), ii. 335.

In the same sense the word was also employed by J. Macky (1724), J. Ralph (1734), D. Defoe (1753), H. Fielding (1754), B. Franklin (1770), R. Southey (1795), and others. It may be added that St. James's Square, planned about 1663 by the Earl of St. Albans, was alluded to in 1676 as "the Piazza" (H. B. Wheatley's 'Round about Piccadilly,' 1870, p. 356); but it soon lost this name. It has also been stated (in *Notes and Queries*, 7th Ser., i. 463) that to Soho Square, built in 1681, was originally applied the term Piazza; but of this I find no confirmation.

Thirdly, in this country the word *piazza* has undergone another change, both in meaning and in pronunciation. It was introduced here two centuries ago, and was at first employed in its English architectural sense. It soon, however, was used to designate any gallery on the exterior of a building, and so a veranda, either with or without an overhead covering. Exactly when our common pronunciation of the word came into vogue it is impossible to say; but the examples which follow show the history of the term in this country before 1800. First used in the Southern colonies, it apparently did not reach New England until late in the eighteenth century.

"And be it further enacted . . . That the said building shall be made in this form, and figure H, . . . That the two parts of the building shall be joined by a cross gallery of thirty foot long, and fifteen foot wide each way, according to the figure herein before specified, raised upon piazzas, and built as high as the other parts of the building; and in the middle thereof, a cupola to surmount the rest of the building." 1699, *Virginia Statutes at Large* (1823), iii. 420-421.

"And for the further encouragement of the owners of the front lots, *Be it also enacted*, That every owner that hath or shall hereafter build a brick house at least two stories high, are hereby permitted and empowered to build piazzas, not exceeding six foot, in the said wharff or front lots, with steps in the said piazzas up to the said house." 1700, *South Carolina Statutes at Large* (1840), vii. 17.

"[The College of William and Mary] is a lofty Pile of Brick Building adorn'd with a Cupola. At the North End runs back a large Wing, which is a handsome Hall, answerable to which the Chapel is

to be built; and there is a spacious Piazza on the West Side, from one Wing to the other." 1794, H. Jones, *Present State of Virginia*, 26.

"It [an Orphanage in Georgia] is now weather-boarded and shingled, and a piazza of ten feet wide built all around it: which will be wonderfully convenient in the heat of summer." 1741, G. Whitefield, *Works* (1771), iii. 483.

"The publick Works in this Town [Savannah] are 1st, A Court-house, being one handsome Room with a Piache on three Sides: This likewise serves for a Church for divine Service, none having ever been built." 1741, P. Talifer, &c., *True & Hist. Narrative of the Colony of Georgia*, 104.

"There are also on the Premises a neat handsome Brick House, a large Frame Kitchen, Piazza, &c., with a fine Avenue of English Cherry Trees, leading to the Road." 1761, *Pennsylvania Gazette*, 24 Sept., p. 1-3.

"There are about eleven hundred dwelling-houses in the town [Charleston], built with wood or brick; many of them have a genteel appearance, though generally incumbered with balconies or piazzas; and are always decently, and often elegantly, furnished." 1763, *Short Description of the Province of S. Carolina*, in B. R. Carroll's *Hist. Colls. of S. Carolina* (1836), ii. 484.

"[Indians] can also distinguish the different ways of making camps and fires; for instance; . . . a Chactaw makes his camp in travelling in form of a sugar loaf; a Chickasaw makes it in form of our arbours; a Creek like to our sheds, or piazzas, to a timber house." 1776, B. Romans, *Natural History of Florida*, 65.

"From the back piazza of our habitation, we command a truly picturesque view into several fertile counties." 1776, W. Eddis, *Letters from America* (1792), 334.

"The tavern . . . stands on the bank of the Delaware, and has a most delightful piazza on the side next the river, which extends the whole length of the house, and is entirely over the water, affording a most beautiful prospect up and down the majestic river." 1787, M. Cutler, in *Life, Journals & Corr.* (1888), i. 261.

"I was in the forenoon busy in my apartment in the council-house, drawing some curious flowers; when, on a sudden, my attention was taken off by a tumult without, at the Indian camp; I stepped to the door opening to the piazza, where I met my friend the old interpreter." 1791, W. Bartram, *Travels through North & South Carolina, &c.*, 260.

In its American sense, the word is unknown in England, while its English meaning apparently long ago became obsolete in this country. Finally, attention may be called to two instances of the use of the term in a figurative sense. In 1644 Milton spoke of "the Piazza of one Title page" (Stanford Dictionary); while about 1862 Thoreau wrote: "This was a part of the furniture of Cape Cod. We had for days walked up and down the long and bleak piazza which runs along her Atlantic side, then over the sanded floors of her halls, and now we were being introduced into her boudoir" (*Cape Cod*, 1894, p. 233).

ALBERT MATTHEWS.

Boston, May 9, 1899.

Notes.

'A Short History of Freethought,' by John M. Robertson, will be published immediately by Macmillan Co., along with 'The Development of the English Novel,' by Prof. W. L. Cross, of Yale. Also, a new edition of the 'Handbook of British, Continental and Canadian Universities, with special mention of the courses open to Women,' compiled for the Graduate Club of Bryn Mawr College by Dr. Isabel Maddison. The object of this book is to give in brief form all the information necessary to assist men or women students intending to study abroad, in the choice of a university or college.

G. P. Putnam's Sons have nearly ready 'How to Swim,' by Capt. Davis Dalton, chief inspector of the United States Volunteer Life-saving Corps.

Brentano's announce 'A Silent Singer,' by Clara Morris, the actress.

J. B. Lippincott Co. have in press a "History of America before Columbus," by P. De Roo, in two volumes; a Life of Bismarck, by Frank Preston Stearns; and 'Lessons in Graphic Shorthand (Gabelberger),' prepared for the American public by C. R. Lippman.

A new edition of De Morgan's 'Elementary Illustrations of the Differential and Integral Calculus' will be issued by the Open Court Publishing Co., Chicago.

Lawrence & Bullen, London, are about to publish 'Bearers of the Burden: Being Stories of Land and Sea,' by Major W. P. Drury of the Royal Marines.

'Appletons' Annual Cyclopaedia' for 1898 will long be a volume set apart for reference. In it, under the rubric *United States*, is to be found a succinct account of the war with Spain, and an alphabetic-numerical statement of the "progress and participation of every regiment, battery, and vessel." Cuba has no long article to itself, but Porto Rico and the Philippines are treated by themselves, with maps and illustrations. The larger portraits of the volume are of Dewey, Gladstone, and Bismarck—the two latter in connection with their obituaries. The Omaha Exposition is another article of importance; and, finally, there is an index to the volumes 1896-1898.

The thirty-second volume of Wilhelm Müller's 'Politische Geschichte der Gegenwart' (Berlin: Springer) gives a clear, concise, and thoroughly impartial survey of the political history of 1898. Considerable space is devoted to an account of the origin and conduct of the Spanish-American war, ending with the peace negotiations at Paris and the purchase of the Philippines. This admirable annual was founded by Wilhelm Müller in 1867, and since his death has been continued by Dr. Karl Wippermann. It is a very useful record of contemporary events, and will be a valuable source of information to future historians.

Our judgment of the 'Dictionary of the Bible' edited by James Hastings, M.A., D.D., and published in this country by Charles Scribner's Sons, has already been carefully given at considerable length, on the appearance of the first volume. It is enough, therefore, to say of the second that it extends from Feign to Kinsman, and contains one map in connection with the article on Jerusalem by C. R. Conder—one of the longest, 18 pages. That on Jesus fills 51; that on John, his Gospel and Epistles, 63.

'On the Edge of the Empire' (Charles Scribner's Sons) is a fair specimen of much of the Kiplingese literature now current. It consists of stories of British military life in native regiments on the Indian frontier. There is not much in it to attract, but the book is not without its lesson to us, as illustrating the complications and moral decadence involved in taking upon us "the white man's burden" in the Philippines and elsewhere. If we believed the spirit of contempt displayed in this volume for all but the military natives were general among the British in India, our wonder at the success of British rule would be greater than it is. We light upon such passages as: "The native of India, like the ape, is at his best in

childhood, and deteriorates as he grows older"; "In Bengal, where the blethering of crazy ideas is the valor of an abject a race of cowards as ever walked abroad in the guise of men," etc. Now that the "superior races" command weapons that place the "subject" entirely at their mercy, to what may not their hauteur, uncurbed as it was of old by an uneasy half-held belief in possible reprisal, yet lead? And what will be the end of it all?

The Doubleday & McClure Co. publish a translation of Cottin's compilation of the 'Memoirs of Sergeant Bourgogne,' illustrated. The original is an authentic narrative of a soldier's personal experience in the burning of Moscow and Napoleon's ruinous retreat. Bourgogne was a non-commissioned officer in the *Velites* attached to the Guard, who were selected from men of some property and education. His intelligence and his natural literary capacity made his recollections and his narrative of them much more trustworthy than those of an ordinary enlisted soldier. His story corroborates the opinion that the *grande armée* lost cohesion from its own weight, and was from the first hardly manageable under Napoleon's system of living on the country. Discipline was already broken and the army half famished when Moscow was reached, and the Sergeant's own conduct, as he tells it, is conclusive proof that even the *corps d'élite* had degenerated into uncontrolled marauders. The horrors of the retreat were in no small degree traceable to this loss of discipline and the helpless disorganization consequent upon it. For continuous and blood-curdling details of prolonged agony, and for variety of incident in the hell of war surpassing fiction, the story of Bourgogne goes beyond what had been told by others of that astounding chapter in the history of imperial ambition.

'1812,' Napoleon in Russia,' by Vassili Verestchagin, the Russian artist (Charles Scribner's Sons), is a study from original sources of the whole campaign of 1812, and of the military and diplomatic policy on both sides. It has enough of the Russian point of view to impart freshness to the treatment of the subject, and though it has been written to accompany the view of Verestchagin's series of paintings based on the campaign, it shows historical research and grasp, both of larger features and of picturesque details, which give the book a good right to stand on its own merits as a literary production. An introduction by Mr. R. Whiteing sketches the career of the well-known artist, and we may assume that the good English dress of the whole has been assured by the same editing. Essays by the author on the Progress of Art and on Realism give us his artistic ideals and principles before he displays his graphic tableaux of war. The illustrations are half-tone reproductions from his own paintings, with spirited little marginal sketches in the text. A good photogravure portrait of the author in national costume is the frontispiece. It may fairly be doubted whether any other so brief treatment of the Moscow campaign makes, for the general reader, a more satisfactory and intelligible presentation of the subject.

'J. Chamberlain,' by Achille Viallate (Paris: Colin & Cie.), is the subject of a recent biographical study, to which Émile Boutmy contributes a preface. "Is he a statesman, or only a politician?" is, accord-

ing to M. Boutmy, the question which naturally arises in one's mind after a survey of Mr. Chamberlain's varied career. The answer given by Boutmy is that the Colonial Secretary deserves to be called a statesman, though not, he hastens to add, in the French sense of a public man whose opinions are based on principles which are for him the object of a "glowing and tenacious worship."

Dr. George Polonsky has made a German translation of a work on the economy of Russia since the emancipation of the serfs, but has incorporated in it some of the most extraordinary passages of English it has been our misfortune to meet. Thus, Col. Wright is made to say: "The whole industry has now become greatly specialized separate factories bring engaged exclusively in the manufacture of bond and her cut stock and uppers also in making of slittings, heels insoles, linings, tips clasps, strings staples and varipus other articles" (p. 112). Even this is eclipsed by the note printed on p. 449: "It may, and if it lat long enough it will surley produce a fundamnntal agrarian revolution. J mean a revolution in the condition of landed property-wtich will and both the pomestschik and the mutschik and replace them," etc. One might reasonably expect at this day that the large publishing-houses in Germany would pay more attention to the correct printing of English than to permit such unnecessary errors as New Gampahir, Massasussets, Rod Anland, and Yermont—all in two lines (p. 146); while the "manufacture cleese in beinpridegated more and more" is intended for a quotation from an official report that any library of size would possess. The book bears the imprint of a Munich firm, and is entitled 'Die Volkswirtschaft in Russland nach der Bauern-Emancipation.' The author is Nicolai-on.

In *McClure's Magazine* for June, Mr. Cleveland Moffett describes the latest miracle in science, Marconi's wireless telegraphy, with the aid of numerous illustrations of apparatus and stations, a portrait of the inventor, etc. Dispatches were transmitted and received by the writer himself, as here recorded. The world-thrill occasioned by the first messages sent over the luckless cable of 1858 was not repeated when, in July, 1898, the Dublin *Daily Express* published bulletins of the Kingstown regatta from its observation steamer while the yachts were beyond the range of the telescope. Yet the new prospect is far more marvellous than the old, and the medium of communication, the Hertzian rays, even more "psychic" than the electric or the X-rays. Mr. Moffett reports some of the speculations he heard from one of Marconi's staff, including possible telegraphy from on shipboard through a submarine cable terminating seaward in a receiver. Marconi's "coherer" is the pivot of his system; by it the gentle ether impulse is made to call into play the power of the home battery, very much as, in automatic regulation of steam-heating, the feeble electric current determined by the set thermometer releases compressed air to operate the steam-valves.

M. Loewy, director of the Paris Observatory, in a timely and sympathetic sketch of Prof. Newcomb, in *Nature* for May 4, where a most excellent portrait appears in the galaxy of "Scientific Worthies," says of him, in view of his mathematical researches of the last forty years: "Newcomb must be considered, without contradiction, as one

of the most celebrated astronomers of our time, both on account of the immensity of his work and the unity of view which makes the choice of the subjects treated by him. All is linked together in our solar system. . . . Not only has he given a great scope to the intellectual movement of his country, but he has also contributed in a very successful manner to elevate the level of the civilization of our age, enriching the domain of science with beautiful and durable conquests."

From the New York agency of Boussod, Manzil, Joyant & Cie. we receive the customary annual issue (Part I.) of *Figaro-Salon*, the illustrated folio of the current Salons, edited by Arsène Alexandre. A portrait of Paul Deschanel, President of the Deputies, is among the full-page plates. The colored print (double-size) is Benoit-Lévy's "Morning of July 14, 1789."

Among the very varied contents of the Consular Reports for May, those of most general interest are reports upon the dairy product of Canada (from which it appears that 196,703,323 pounds of cheese, valued at \$17,572,763, were exported in 1898, and of butter 11,252,787, valued at \$2,046,686) and upon the commerce and industry of Brazil; and information in regard to the collection of debts in several countries, including Germany and England. An article upon rubber plantations in Guatemala gives figures as to the original cost of land and preparation of the crop. These show that "one crop, after ten years, will produce double the amount expended during that time." The consul at Tuxpan, Mexico, gives an interesting description of the modes of cultivating the vanilla bean in that country.

The difference between China and Japan in foreign trade is becoming more marked each year. The returns for 1898 have just been published for each country, and are suggestive when brought into contrast. China's imports gave an increase over 1897 of about 7,000,000 Haikwan taels, due to opium, coal, raw cotton, kerosene oil, flour, and sugar, certainly necessary articles except opium. The exports decreased 4,500,000 taels, mainly in tea and silk. Japan increased its imports by more than one-fifth, or by 57,700,000 yen, owing to the partial failure of the home rice crop, and to larger imports of sugar, raw cotton, and alcohol. The exports increased only 1.5 per cent., but, on separating the raw materials from the manufactures, it is seen that the movement of raw products fell from 117,771,632 yen in 1897 to 106,197,206 yen in 1898, while that of manufactures rose from 45,363,445 yen to 59,465,098 yen. Cotton yarns, now the most important of the manufactures exported, silk goods, and straw braid, are the leading items of increase, and the movement shows no tendency to diminish in volume. As to the future of the raw materials, the *Japan Weekly Mail* says: "Tea, rice, and camphor may be set aside at once; tea, because the market for it is limited, and shows no sign of growing; rice, because the domestic demand will probably keep the quotation at such a point that profitable export will be impossible; and camphor, because, whatever Japan's produce might become under careful husbanding, it tends at present, and has for many years tended, to diminish rather than increase." Silk is being injured by the competition of the newly established flatures and originally better product of China. Whatever expectations might be based on

the coal exports must be modified as the demand of the domestic factories grows, and the seams are neither large nor widely distributed. The same condition applies to copper. It would seem that Japan aims to be a great manufacturing nation, possibly drawing the raw material from China.

While the statement recently made that the cable connection between Denmark and Iceland had been determined on is not true, there is reason to believe that the consummation is not far distant. The Great Northern Telegraph Company of Copenhagen is willing to undertake the enterprise in case at least fourteen meteorological institutes in Europe and America agree to subscribe for daily weather reports. As the advantages to be gained by such information are very great, and the charges will be put at the lowest possible figure, there should be no difficulty in reaching a satisfactory agreement. The proposed cable will pass over the Faroe Islands, from which reports will also be received. It is believed that the plan will specially commend itself to countries engaged in the Icelandic fisheries, which will be made much safer by this extension of weather observations.

According to the *Berlingske Tidende* of Copenhagen, a new hospital for the use of French fishermen was opened in April on the east coast of Iceland. During the past two years, medical and surgical aid has been given to the 5,000 French fishermen who spend the fishing season, from April to October, along this coast by two hospital ships, with a physician on each. Experience, however, proved that the incessant motion of the boats interfered with the comfort even of sailors when sick or disabled. These boats will be retained, but will hereafter be used only to bring patients from different points to the building on Faskrudsfjord. The whole enterprise is under the direction of the French Government, although the hospital attendants are Danish.

April was a propitious month for German women striving after the higher education. In the Empire, obstacles in the way of the admission of women to the examinations for physicians, dentists, and pharmacists were removed; in Prussia, the entrance conditions for female "hearers" in the universities were simplified; and at Hanover and Stuttgart two new *Mädchengymnasien* were opened. If we add to these the slap given by the university authorities at Halle to the youngsters who tried to shut their sisters out from the clinic, we have five distinct steps in advance in a single month. Who will say that Germany is not bestirring herself?

At the first conference of Latin teachers of Vermont and adjoining States, held at Middlebury College a year ago, under the auspices of the department of Latin, a Roman chorus was presented with marked success by the class in Horace. At the second conference, May 19 and 20, 1899, the crowning feature was a Roman drama, a presentation of certain scenes in the life of Cicero centring about the conspiracy of Catiline. As in the chorus, fidelity to fact was the prime consideration in every detail of costume, scenery, and stage appointments. The scenery, by Mr. Charles Witham of New York, was of exceptional beauty; the temple of Jupiter Stator, the Forum, and the house of Quintus Cicero being given especial praise. The cur-

tains closed on a chorus of youths and maidens singing in the Forum a hymn to Diana of Catullus. Prof. Myron R. Sanford of the Latin chair was the author of the drama, compiled largely from the texts of Cicero, Sallust, and Plutarch, ingeniously interwoven.

The ninth summer meeting of the Oxford University Extension will be held at Oxford from July 29 to August 23. Among those who have promised to take part in the meeting are Sir W. Anson, Bart.; Hon. George Brodrick, Lord Strathcona, Lord Farrer, Sir Alfred Lyall, Sir William Richmond, Canon Sanday, Professors Dicey, Jebb, York Powell, Sayce, Percy Gardner, Messrs. Arthur Sidgwick, Frederick Myers, Geoffrey Drage, M.P., Churton Collins, Estlin Carpenter, and many others. There will be lectures on the history, literature, art, science, and economics of the period 1837-1871. An outline of the programme may be had gratis of Mr. John Nolen, No. 111 South Fifteenth Street, Philadelphia; tickets and all information from J. A. R. Marriott, M.A., University of Oxford.

The Chautauqua Assembly announcements for 1899 include a number of courses in literature. Among the most notable is that to be given by Mr. Walter H. Page, editor of the *Atlantic Monthly*, whose five lectures will deal with "The Practical Aspects of Literature."

The Harvard Summer School of Theology will hold its first session from July 5 to July 21, at Cambridge, Mass., offering courses in the Old Testament, church history, and theology, with occasional evening lectures of a more general character, *e. g.*, "Dürer's Biblical Illustrations," by Prof. Francke; "The Anti-Slavery Preachers," by the Rev. J. W. Chadwick; "The Abbey of Cluny," by Prof. Norton, etc. Both sexes may attend. Inquiries may be addressed to the Rev. Robert S. Morison, at the Divinity Library.

The Marine Biological Laboratory will hold its twelfth session at Wood's Holl, Mass., beginning June 1, and the announcements show that it will be of more than usual interest and importance. Besides the courses hitherto offered, others will be given this year on cytology, physiology, and psychology. The extent of the work now carried on may be inferred from the fact that there are thirty names on the list of officers of instruction, and fifty-four on the list of lecturers. Among them are the names of two women, Prof. Clapp of Mt. Holyoke College and Prof. Cummings of Wellesley. The evening lectures on matters of general biological interest are a marked feature of interest, and the annual volume which is made up out of them presents the recent trend of biological opinion in a form as fascinating as it is accessible.

The Twelfth International Congress of Orientalists will meet at Rome on October 12, 1899. Cards of membership (\$4) may be obtained from Mr. Cyrus Adler, Smithsonian Institution, Washington, D. C.

A committee has been formed for the purpose of presenting Dr. Richard Garnett with his portrait upon his retirement from the post of Keeper of Printed Books at the British Museum. During the forty-eight years that he has held office at the Museum he has won the regard of thousands of students by his unfailing courtesy and devotion to their interests. At the same time he has made a wide reputation as a man of letters,

and has taken an active part in promoting the efficiency of public libraries throughout the country. All who are acquainted with him and his varied work, will, it is believed, welcome an opportunity of giving some practical expression of the esteem in which they hold him. Subscriptions will be received by the Hon. Treasurer, Mr. A. H. Huth, Bolney House, Ennismore Gardens, London, S. W., or by Mr. W. C. Lane, Librarian of Harvard University, Cambridge, Mass. The committee desire to learn as early as possible what subscriptions they may depend upon, in order that they may be able to give a commission for the portrait without delay. The amounts subscribed will not be published, but a list of the names of the subscribers will be presented to Dr. Garnett.

The death of Eduard von Simson on May 2 at Berlin removes another of the men who took a leading part in the Revolution of 1848 and in the subsequent political evolution and consolidation of Germany. Simson was born November 10, 1810, at Königsberg, studied law and political economy, and habilitated as privat docent in 1831 in the university of his native city. Three years later he was appointed to the position of judge in the royal tribunals of Prussia, and gave up his academical career. His political activity began in 1848, when he was sent as a delegate to the Frankfort Parliament, of which he was soon chosen president. Indeed, it is a conclusive proof of his eminent ability in this direction that he always became the presiding officer of the several legislative bodies to which he belonged, such as the Prussian House of Deputies, the Parliament of the North-German Bund, and the Imperial Diet. He was the head of the deputation which offered the imperial crown to Friedrich Wilhelm IV. at Berlin, in 1849, as well as of the deputation which made the same offer with better success to Wilhelm I. at Versailles in 1870. He presided over the German Imperial Diet till 1874, when he declined a reelection on the ground of ill health. He withdrew entirely from public life in 1891, when an hereditary order of nobility was conferred upon him by the Emperor Friedrich III.

—Perhaps the most interesting pages of the last number of the *Psychological Review* are those which fall under the head of discussions. Prof. Hyslop deals some keen blows at Prof. Münsterberg's recent utterances on the subject of psychical research; for a man who is himself so devoted an "idealist" as to believe that as subjects of will we are immortal—that, to the philosophical mind, which sees the difference between reality and psychological transformation, immortality is certain, the denial of immortality is even meaningless—it would seem as if that form of the non-materialistic which is embodied in the phenomena of mysticism would also have its attractions. But Prof. Münsterberg will have nothing of it. As Prof. Hyslop points out, the wonderful triumphs of invention and discovery in the field of science have destroyed the ordinary criteria of the limits of human knowledge, and have deprived us of our moorings, so that we are rapidly coming to think that hardly anything is impossible. Mr. Hiram M. Stanley discusses Mr. Marshall's theory of religion. Mr. Kirkpatrick brings out an interesting instance in support of his thesis that voluntary action arises not so much out of chance impulsive action which is seen to be efficacious, as upon the actual physiological de-

velopment of the cells in which it has its seat. Mr. Judd advances our comprehension of certain geometrical illusions by pointing out that the eye has a tendency to follow lines, that distances seem shorter when the eye is thus allured in a certain direction, and that the over-estimation of acute angles and the under-estimation of obtuse angles is a case of actual triangulation which is exposed to error from this allurements of the eye.

—Under the title, 'Völkerpsychologisches in der Philippinenfrage,' Ferdinand Blumentritt, in the *Deutsche Rundschau* for May, throws a welcome ray of light on the real significance of the desperation with which the Filipinos are resisting a professedly benevolent conquest. The Malays of these islands, says this eminent authority, are very intelligent, and bear a striking resemblance to the Japanese. So eager for education are they that their percentage of illiterates is two-fifths that of Spain. Not only this, but they have artistic capabilities of no mean order—witness the gold and silver-smiths and wood-carvers of Manila, and the distinguished performances of such painters as F. Resurreccion Hidalgo and Don Juan Luna (a pure Ilocano), brother of the insurgent general, whose picture "Spoliarium" was crowned in Paris, and who decorated the Hall of the Spanish Senate in Madrid. In engineering, too, natural science, and literature they have gained distinction. General Luna himself was a pupil of Pasteur, and, under the pseudonym "Taga-ilog," has published stories and sketches of European life which, from their subtle irony and deftness of workmanship, deserve comparison with the work of Maupassant. In Manila the professions of law and medicine are crowded with natives.

—Under the Spanish rule, such men, however able or cultivated, felt the sting of the contempt of their rulers, whose cruel mockery sometimes denominated them "Anthropoids." No high political career was open to them. Their resentment at this assumption of white superiority deepened as travel and reading dispelled their illusions and disclosed the reverse side of the boasted white civilization. They learned, too, that wherever white men are in control, a dark skin is an insuperable barrier to equality of rights and opportunities. Consequently, however alluring the promises of American control, these leaders and their educated followers are resisting it with heroic desperation. It is not only a political control which they repel, but also the hopeless lot of the "inferior race," a maddening prospect for men of culture and ambition. In brief, the fact is, as Blumentritt says in conclusion, "dass die Herrschaft des amerikanischen Angelsachsen, der schon die Creolen als eine Art Nigger betrachtet, von den gebildeten Philippinen aller Kasten als eine *capitis deminutio maxima* angesehen werden würde." The tragic pathos of this situation must appeal to every humane American whose eyes have not been dazzled by the imperialistic vision, and who realizes the pitiful condition of the educated colored man in our own country.

—The first translation of Miss Austen's 'Northanger Abbey' into French dates from 1824; M. Félix Fénelon now supplies another under the auspices of the *Revue Blanche* Publishing Company. English readers who remember the purpose of this novel and the conditions of English sensational fiction

against which it was directed in a spirit of gentle, and essentially feminine, satire, may doubt whether either of the translators fully perceived the feline *coups de patte* thus aimed by Jane Austen at more than one of her rivals, living or dead. In any case, the effect of the work in French is singular, almost disconcerting; for ironical satire, in whatever shape, is one of the least readily transferable—and consequently translatable—of literary forms; the less so when presented in definite pictures of social conditions foreign to the translator's country. Nevertheless, M. Fénelon, while taking but few liberties with the text, has produced a translation that is French in expression, if in nothing else. As might have been expected, certain peculiarities in Jane Austen's diction, admitting of no adequate reproduction, are entirely missed. In chapter xi. we read that Catherine Morland "meditated by turns on broken promises and broken arches, phaetons and false hangings, Tilneys and trap-doors." Here the translator, not content with evading the difficulty of humorous antithesis conveyed in the alliteration, offers a substitute both tame and inexact: "Elle pensait tour à tour à des promesses rompues et à des voûtes croulantes, à des phaetons et de mystérieux huis, aux Tilney et à des oubliettes." When Henry Tilney sarcastically banter Catherine (ch. xiv.) on her use of the word "nice" (then considered as slang), it will hardly be maintained that "joli" meets the situation. But slips of this nature are rare in M. Fénelon's version. So well equipped a translator might wisely turn his attention to the more carefully elaborated pictures of English life in its peaceful days, which give to Jane Austen her undisputed place in English fiction. We venture, however, charily to note that in 'Northanger Abbey' we have on this occasion detected what resembles the inaccuracy which, as a biographer tells us, long vexed the soul of the late James Spedding. Emma, it seems, ate *strawberries* in Mr. Knightley's garden "under apple-trees in blossom," and the editor of the "Institution Magna" relaxed his philosophical toil in truly Baconian quest of the possibility of such coincidence. But, in Jane Austen's novels, seasons are not forced by fruits alone, since Eleanor Tilney is reported to have been seen promenading the Bath Crescent, at the end of February, "in a very pretty spotted muslin."

—Prof. Alberto Magnaghi, in 1897, brought to the notice of readers of the *Rivista Geografica Italiana* an interesting map of the European world drawn in 1530 by Angelinus de Dalorto. This map has now been issued in an admirably legible photostriographic reproduction, through the generosity of its owner, Prince Tommaso Corsini of Florence, who presented it to the Third Italian Geographical Congress as an offering to the memory of Toscanelli and Vespucci. The facsimile is accompanied by a thoroughly adequate study—a model of what a cartographic essay should be—by Prof. Magnaghi. Further examination of the inscription on the original parchment map has shown that the date should be 1525, and that the author's name should apparently be read Dalorto. The latter correction is especially interesting, in that it seems to connect the cartographer with the Genoese family of Dall'Orto or Dalorto, several of whose members took a prominent part in the establishment of Italian commercial colonies in the East, especially at Caffa. The map itself is of the

utmost value for the study of geographical history, because it is one of the very earliest which represent a serious effort to record the actual facts as far as they were known at the centre of the mediæval world. Surprisingly few of the fantasies of the earlier cartographers appear on this map, and those which Dalorto retained serve only to emphasize the absence of more exact information. Beyond the familiar borders of the Mediterranean countries, which are very accurately laid down, the limits of the commercial trade routes can be easily traced by the relative correctness of the seacoasts and river courses. In connection with this last, it is worth noting that Dalorto's map is, perhaps, the earliest real attempt to represent the facts regarding the configuration of the interior of the various countries with the same truthfulness which the necessities of navigation had some time before demanded of cartographers in the drawing of coast lines. The information derived from the rapidly extending intercourse with the regions beyond the Straits of Dover is visibly represented here, also for the first time, perhaps, so far as can be learned from the surviving maps. The Low Countries are, of course, shown with much fulness of detail in names, etc., and the coast seems to have been well known as far as Denmark. Beyond that point, the second-hand reports of returning traders and shipmasters apparently gave Dalorto some trouble, but he succeeded fairly well in harmonizing the doubtless conflicting and disproportionate accounts of Scandinavia and the Baltic gulfs. Ireland was much better known than its larger neighbor, for even the accessible English coasts opposite Picardy and Normandy are not as thickly studded with names as the Irish coast from Belfast to Cork, and even around to Galway. Scotland, Norway, and Iceland were not to be really known until the Continental fish markets demanded supplies from the farther north.

HALE'S LOWELL.

James Russell Lowell and his Friends. By Edward Everett Hale. Boston: Houghton, Mifflin & Co. 1899.

The agreeable personal qualities of Dr. Hale, his easy and familiar style, and his abundant opportunities of acquaintance with Lowell's personal circle, will secure many readers for this well-printed and well-illustrated book. On the other hand, its colloquial air will repel some readers, whose further confidence in its methods will scarcely be secured by the occasional intimation that it was partly written at railway stations (p. 63), or while actually travelling in the cars (p. 61). As a whole, it presents a combination of qualities readily recalling to memory the biographical work of the late James Parton, whose popularity in this respect was immense but rather short-lived. He, like Dr. Hale, was always readable, was ardent and indiscriminating in loyalty to his friends, and sharply criticised his opponents; but it could be said of neither of them, as was said of Edward Everett by Emerson, that "for a man who threw out so many facts he was seldom convicted of a blunder" (p. 69). The mere comparison of this book with its successive chapters as they were published in the *Outlook* will show how much it has already gained by revision; and future editions will be likely to gain yet more. It may, of course, be urged on

the other side that the author writes mainly to express his own feeling about Lowell himself; yet so far as "his friends" were concerned, the range filled is a very large one, and includes a good many collateral disquisitions, sometimes leading on quite insecure ground.

It is a curious survival of youthful training that Dr. Hale, who can never quite forget the early traditions of the *Daily Advertiser*, must have his hit, even in writing of Lowell, against the early abolitionists. He says (p. 51) that Lowell's class poem had a "bitter invective against abolitionists who talked and did nothing," whereas Lowell did not at all object to them for doing nothing, since the time had not yet come when they could do anything but talk. Afterwards Dr. Hale says of Dr. Palfrey's emancipation of his slaves: "He had opposed the 'abolitionists' with all his might, with pen and with voice. But he knew how to do the duty next his hand better than some men who had talked more about theirs" (p. 60). This doing of his duty consisted in emancipating slaves which he had inherited; and inasmuch as most of the abolitionists had never inherited any, it is difficult to see how they could have set them free. All this suggests not the Dr. Hale who worked for liberty in Kansas, but rather him who once described George Thompson and Harriet Martineau as "foreign carpet-baggers," because, after coming to America, they ventured to speak their minds about the institution of slavery.

It must always be remembered, however, in justice to Dr. Hale, that it is a part of his free-and-easy method to satirize himself and his own particular friends as impulsive as he does everything else. Thus, in this volume he jeers at "namby-pamby philanthropists attendant on international conventions" (p. 251), while himself laboring to organize universal peace; and he ridicules "the madness . . . which forms a 'society' to do the work of an individual" (p. 57), as if he himself had not established more such societies than any man now living. One who spares himself so little cannot be expected to spare other reformers a great deal.

There could hardly be a more curious instance of Dr. Hale's untrustworthy way of treating historical facts than his delineation of the alleged revival of Boston bookselling by Phillips & Sampson "about the year 1843." As he says: "All of a sudden, as a wave of water might sweep over a thick, rotten ice-floe in one of Nansen's summers, a marvellous inundation swept over this decorous imbecility [of the publishers]. That is to say, two young men formed a 'publishing firm'" (p. 153). He then proceeds to tell you what enormous results these young men were accomplishing in 1852, and does not tell you that in that very year John P. Jewett & Co. were issuing 'Uncle Tom's Cabin' in Boston, of which they sold in five years nearly half a million copies—a sale such as Phillips & Sampson had never dreamed of. Moreover, he gives the full account of the launch of the *Atlantic Monthly* by Phillips & Sampson in 1857 without the slightest reference to the fact that the magazine was fully planned four years before, and its contributors engaged, by Mr. F. H. Underwood in concurrence with Jewett & Co. It was postponed, not because the Jewett house was too inert, but because it was too enterprising, having been tempted into too

many risks by its own success. Undoubtedly Phillips & Sampson saved the project from destruction, although they also handed it over in a few years to still another house. But the fact that eight pages of Dr. Hale's book are devoted to the laudation of Phillips & Sampson, as the projectors of the *Atlantic*, while the name of Jewett does not appear at all, and Mr. Underwood appears only once as "our literary man," is a curious illustration of the uncertainty of fame.

A few minor errors may be pointed out. Dr. Holmes has certainly not described in print (p. 13) the school of Mr. Wells, where Lowell was fitted for college, as the school was not established till 1837, when Holmes was half-way through his Harvard course. The school which Holmes described was a more juvenile one, at Cambridgeport, which he and Margaret Fuller attended. Mr. Wells was not chiefly known by his edition of Tacitus (p. 13), but by his more elaborate edition of Cicero in twenty volumes. The Harvard College Library did not consist of "about 50,000 volumes" in Lowell's time (p. 16), but, as stated by the College Catalogue in Lowell's senior year, of 38,000. Of the "Brothers and Sisters," White, as well as Story and Lowell, had been at Mr. Wells's school (p. 70). Dr. Hale says (p. 180) that Lowell "had five young relatives who died in the service" during the civil war, whereas Lowell himself, in the privately printed edition of his "Commemoration Ode" (p. 7), mentions eight. To say that there was no exaggeration in the dialect of the 'Big-low Papers' (p. 98) is what Lowell himself would not have ventured, since he reproached himself with having begun with too much misspelling (Letters, I. 119). The definition of a proper lecture-fee—"F.A.M.E.—Fifty And My Expenses"—has been more commonly attributed to Dr. Chapin than to Starr King (p. 107). President Sparks can hardly be included among the representatives of larger views at Harvard, inasmuch as it was he who secured the abolition of the temporary elective system established in 1839-'40 (p. 129). Nathaniel P. Rogers was not the first editor of the *Anti-slavery Standard* (pp. 173, 174), nor did he ever edit it. He declined the editorship and was simply an editorial contributor. It is quite impossible to imagine Mr. Lowell as writing, "I used to know some about Pennsylvania Dutch," unless in reference to some antecedent here omitted (p. 272). It would have inspired in him the same emotions created by "I don't know us," so vividly recorded by him in one of his letters.

In conclusion, it may be said that the main merit of this work consists in its being a loving picture of Lowell in early life, viewed as he appeared to a man a few years younger, and encircled by that halo with which youth endows its elder brother's friends. The great demerit of the book is in the utter absence of all real delineation of the extremely composite and interesting man that the actual Lowell was. There are rarely two men less alike than Lowell and Longfellow, and yet most of what Dr. Hale says of the one's character would be equally applicable to the other, and sometimes much more so. When he says (p. 5), "If to this loving-kindness you add an extraordinary self-control, you have the leading characteristics of his nature as it appears to those who knew him earliest and best," you have an excellent characterization of Longfellow, but no portraiture at all of the variable and

impetuous Lowell, "the incurable child" (p. 263)—the man who would walk the streets with tears in his eyes because the people he met did not love him, and then go home to impale Percival or Thoreau on the point of his pen. This child of a Puritan father and a Norse mother, in Dr. Hale's phrase, had a mingling of qualities of which the least visible of all was "an extraordinary self-control." Again, there is hardly a more characteristic contradiction in this book than where the author says of his subject (p. 274), "To the very end of his life, his conversation and his daily walk, indeed, were swayed by the extreme tenderness for the feelings of others which his sister noticed when he was a little boy. He would not give pain if he could help it." Then follows, on the opposite page, a description of the "fun" of a dinner party at which Lowell "tortured" a young man for pronouncing the word "clerk" in the English way as if it rhymed with "lark." "Lowell just pounced upon him as an eagle might pounce upon a lark, to ask why he did so" (p. 275); regarding it as an English affectation. And yet this youth's only offence appears to have been in pronouncing the word precisely as some of Lowell's own classmates did, who had been very little in England; as, for instance, the late Judge Devens, who, as Attorney-General to President Hayes, was largely influential in sending Lowell himself to London. The man who "would take pleasure in snubbing" (p. 275) could hardly have been the man who "would not give pain if he could help it." The two qualities of temperament were easily combined in the actual Lowell, who was, as he once said of himself, "curiously compounded of two utterly distinct characters"; but they are not reconcilable in the man of calm and inexorable self-control whom Dr. Hale proclaims to us. On the whole, the actual Lowell was the more interesting, since, in the wise Goethe's phrase, it is a man's inconsistencies which are apt to make him attractive.

MORE FICTION.

Roden's Corner. By Henry Seton Merriman. Harpers.

"If I Were a Man": The Story of a New-Southerner. By Harrison Robertson. Charles Scribner's Sons.

The Conjure Woman. By Charles W. Chesnut. Houghton, Mifflin & Co.

The Gospel Writ in Steel: A Story of the American Civil War. By Arthur Paterson. D. Appleton & Co.

The Stolen Story, and Other Newspaper Stories. By Jesse Lynch Williams. Charles Scribner's Sons. 1899. Pp. 291.

The Short-Line War. By Merwin Webster. Macmillan Co.

Men's Tragedies. By R. V. Rialley. Macmillan Co.

Nothing is safer or apparently more profitable than to satirise Society; the sharpest barbs seem only to excite an agreeable titillation in that thick-skinned animal. Mr. Merriman's cleverness, although directed against what might be conceded a vulnerable spot, will win him no enemies. When Society dabbles in Charity, and both wear capitals, the result is fair game for anybody. Roden's Corner was in Malmagite, a product which comes to have a convincing reality for the reader, and the book itself is

a pleasantly pungent setting forth of what might happen in industrial circles if philanthropy were to lay a blundering finger on the delicately poised scales of supply and demand. But philanthropy, as practised by Lord Ferriby, is already outdated—its flabbiness cowers before sociology, severe and scientific; and while Joan, with her Nuxine tabloids of disinfectant, of which it was fashionable in her world to smell, her Nuxine dentifrice and Nuxine cigar-holder for the sanitation of her lover, might claim a place under either régime, Lord Ferriby might as fairly be said to represent neither. The Hooley revelations have evidently complicated his character. A curious variant is effected by the manner of his taking off—dropping dead at the moment of his exposure—a climax for which the easy composure of his hypocrisy has not at all prepared one. The same inconsequence is exhibited in the career of the heavy villain, Von Holzen. This patient plotter of a lifetime, the beguiler of others to their undoing without criminally complicating himself, suddenly takes to the crudest stabblings and smotherings. Flesh-and-blood realities are not, however, to be looked for in the book; the manipulation is too evident. The puppets are taken to pieces, explained and commented on by the showman himself, who utters in his own person most of the good things. One is persistently interested in the showman—one does not tire of his neat strokes; but such an atmosphere is fatal to illusion.

"If I were a man," was the challenge flung by a girl to the lover she was not ready to wed. It roused him from inglorious ease and sent him into political life. Then follows the struggle of the man against the machine, the individual thinker against the party boss. The fearful power of these two engines of oppression is well brought out in the story of the Senatorial contest, a fierce effort to make Spurlock cast his vote for the unprincipled party candidate and so break the legislative deadlock. It is a situation of genuine heroism, for which, it is well to remind ourselves, modern civic life affords opportunities. As a study in practical politics, written with abundant dash and revealing shrewd insight into conditions which prevail, not in Kentucky alone, the book is good to read. There is nothing rosily optimistic in it all. Spurlock loses his office, loses his fortune in an attempt to found an independent newspaper, and the cause he champions goes down with a crash. But the note of despair is never struck; at the end the hero is full of fight, and one is left with the feeling that if, either in the New South or the New North, such ideals obtain, the republic will be justified of her children.

The half-dozen tales of Aun' Peggy, the "cunjuh 'oman," told by an old plantation dandy, are delightfully frank in their supernaturalism and lose in effectiveness only by the deep policy imputed to their relater. That the marvellous tale of the goophered grape-vine was concocted by Uncle Julius only to secure his own enjoyment of the vineyard, is a discovery which calls his own credulity in question. The thrill of the "Gray Wolf's Haunt" evaporates on finding the legend to be but the guardian of Uncle Julius's bee-tree. But in the current of the stories one has no thought of such a rude jar against the actual. The conjure woman "wuks" her roots, and Po' Sandy becomes a tree, Primus turns into a white mule, and

Hot Foot Hannibal, by the agency of a doll-baby with red-pepper feet, is brought low. Uncle Julius's scepticism cannot rob one of the belief that this was the real religion of the old plantation; the goopher "mixtry," not the overseer's lash, the dreaded power.

Were it not for the frankness of the subtitle, it would seem almost indiscreet in the reviewer to reveal the fact that the 'Gospel Writ in Steel' harks back to the remote period of the civil war, so exactly does the title indicate a description of present military undertakings. The book is, in fact, a reversion to a type popular in the early seventies. Less apropos at the present time is the relation, among other improbabilities, of a horrid Confederate plot to blow up three hundred Yankee prisoners in the event of Sherman's attempt to rescue them. The Wisconsin hero, after surprising exploits, receives his reward in this world (truly a comfortable gospel), and Lincoln tells a story or two, without which no book of the sort would be complete; but there is little to reconcile one to the spilling of a title for the Filipino novelist.

Young men with an ambition to enter life through the doorway of a newspaper office will do well to read Mr. Williams's little volume of newspaper stories. While the author treats his subject sympathetically, as becomes an ex-reporter, and is apparently ready to accept unreservedly the current opinion of our enterprising journals as to what constitutes "legitimate news," he is too conscientious a workman to paint his unlovely pictures in any but their true colors. "Billy" Woods, the hero of the two principal stories in the volume, represents the consummation of most newspaper virtues. Drunkenness is his one failing, and when this unfortunate weakness prevents him from publishing information which he has wheedled out of an ingenuous girl at the cost of a series of lies, in order to ruin her father's business standing and make good "copy" for his own paper, the moral of it all is that drink is an evil which interferes dreadfully with one's duties; which, is, of course, quite true.

Not that Mr. Williams is a supporter of yellow journalism. He would bar the prurient as well as the prudish from the columns of an ideal American paper, but he would by no means disappoint the pleasant curiosity of the public by respecting the claim of a few private persons to the exclusive possession of private news. Mr. Williams sets forth the reporter as he is, friendly, versatile, proud of his paper, and of himself as its representative, entirely unscrupulous, with space-rates and a *beat* as the summit of his ambition. His life is a hard one, and he grows old in middle age. His ambition weakens and his health declines. Even murder assignments cannot keep him young.

As a story, the tale which gives its name to the volume is by far the best in the collection. The absent-mindedness of a veteran reporter is made the basis of a rather unlikely incident, but the story becomes plausible as Mr. Williams surrounds it with realistic detail, and one follows the adventure to the end with lively interest. But, unfortunately, among the stories that follow are several so slight as to suggest the padding in a Monday morning's paper that has slipped by a city editor careless of space bills. The background of the stories—newspaperdom—is given with capital effect, which is heightened by the alert, reporter-like style of the descriptions. Mr. Williams evidently thinks

the office of a daily paper a great training-school for life; but his measure for life is the unit of quantity.

Mr. Merwin-Webster founds a romance upon the fight for the possession of a branch road connecting two great trunk lines. The opposing forces leave nothing untried to win their ends. They first use strategy, then bribery, then violence, and the difficulty culminates in a pitched battle. There is a good story here, but unfortunately the author does not perceive that the real possibilities of his subject lie in fitting his romance squarely within its realistic frame. The middle of the volume is not past before he transgresses all legitimate bounds, and dashes off on a windy career straight towards the impossible. One other error he makes. Anxious not to frighten the reader by unmitigated "business," he makes a frank concession to the conventional taste of the public, and drags in a love episode, which graces the story as naturally as the pretty heroine might her father's railroad office. Mr. Merwin-Webster is familiar with the details of railroading, and his brisk style catches the attention and holds it. His romance will shorten a journey or a dull evening, but it scarcely deserves a permanent place on the bookshelf.

Under the rather lurid title of 'Men's Tragedies' are grouped nine "fictional essays," as the author chooses to call them. Cast in the mould of short stories, their real aim is to delineate men at moments of intensest excitement. In order to make the plot subordinate to the intellectual character of the story, the tragedies all bear a certain external resemblance. Their heroes are all Germans, as befits their psychological tendencies. They are generally men of mature age, and to each comes the particular catastrophe most sure to break the barriers of his moral being and unloose his wildest passions. Of their nature, these stories are quite divorced from life. They are psychological orgies in which the author revels in the dissection of brutal emotion. Man is not as you see him, he would argue; he must be hurt, wronged, stung where the soul is most sensitive, then you shall know him. The years that have gone before count for nothing; the moment of despair for everything. In that instant all that was hid is brought to light—the man is as he is. If this thesis be true, these neurotic tragedies do not help one to believe it. One is everywhere sensible of the author's hypothesis, and the surcharged emotion of description leaves one cold. The passion is not human, but the calculated effect of what is meant to be art. This struggle for effect is never absent; it is manifest in the repetition of selected phrases, the frequent tableaux, the measured pause before each climax. The tragedies are terrible, yet they do not terrify.

CESARESCO'S CAVOUR.

Cavour. By the Countess Evelyn Martinengo Cesareco. [Foreign Statesmen Series.] Macmillan. Pp. 222.

Countess Cesareco's sketch is extraordinarily good. Into 220 not large pages she has distilled the essence of all that has been printed about Cavour. The reader who comes to her epitome without previous acquaintance with the subject, will find in it a lucid and unfailingly interesting story of a statesman

whose achievements do not grow dim through the lapse of years; other readers will wonder, in proportion as they are familiar with the field, how the author could pack so much in so small a space. She is the first person to write in English the biography of the man whose genius and personality will fill, along with those of Lincoln and Bismarck, the political annals of the last half of our century.

Although Cavour still lacks an exhaustive biography, his life has already been the subject of several important short works. Nothing better of its kind could be desired than the personal recollections, a fine blending of character analysis and reminiscence, which his friend William de La Rive published in 1862. Fifteen years later Masade, one of the acutest French political writers of his generation, made a study of Cavour that cannot soon be outworn. A little earlier, Treitschke issued his monograph, which has been much overpraised; for Treitschke could not refrain from using Cavour's career as a text from which to preach how much better Prussians do everything than any one else does anything. Mammi's biography, the standard in Italian, is rather commonplace, but it possesses the value which attaches to the opinions and reminiscences of a participant in many of the events he describes. More important than all these put together is the substance of the introductions with which Senator Chiala prefaced the six volumes of Cavour's letters edited by him. That work will remain a thesaurus of information to which students will go back, as to the fountain-head, so long as Cavour and the unification of Italy are remembered; but the salutary plan on which those introductions were written—four volumes being added to the original two, as new material turned up—leaves them without that artistic symmetry which every biography should possess.

Countess Cesareco's epitome sums up, as we have said, all this material, in a small volume in which form and substance are alike excellent. Her previous books, 'Italian Characters' and 'The Liberation of Italy,' had many merits, but they did not reveal that power to grasp and describe a whole period which is here so remarkable. Nor is this power sufficient alone to insure success. No one can doubt that the late E. A. Freeman had mastered the Norman Conquest, yet when he came to write the Life of William the Conqueror on a small scale, he produced one of the most unreadable books by an historian of ability which we have ever struggled with. For Countess Cesareco, condensation does not mean dedication. She has the gift of making the personages she describes living realities; without it, erudition may petrify, but cannot vitalize. From first to last, she never allows you to feel that you are dealing with abstractions, principles, theories, instead of with human beings. Her dramatic personae have flesh and blood, reason, volition, passions, and are not—as is so often the case in modern scientific histories—mere corks or pickered-weed to be floated hither and yon by the stream of tendency. Of Cavour himself she gives a full-length portrait in miniature, but it is in her rapid sketches of secondary personages that she shows her capacity for catching a likeness in a few lines. Take Massimo d'Azeglio, for instance; he actually appears on the scene very seldom, but his essential traits have been so vividly defined from the first, that his probable conduct throughout the

course of the drama is foreshadowed. Countess Cesareco's interpretation of more puzzling characters is worthy of attention. Thus, she explains Napoleon III.'s fast-and-loose policy, not on the assumption that he was deep and astute, but that he was fundamentally irresolute, an ignoble Hamlet; thereby reducing him to a common level, from the bad preeminence of a first-class villain to which Kingslake and others have raised him.

In no part of her treatment of personalities is she more skilful than when she deals with the relations of Cavour and Victor Emmanuel. To imagine that the monarch was a mere figurehead, is wholly to misunderstand the share which Victor Emmanuel took in redeeming Italy. He felt himself every inch a king, and never consented to be merely a silent partner in the great enterprise which his minister directed. More than once, notably after Solferino, his rugged common sense prevented Cavour's outburst of fury from damaging the cause they were both working for. No doubt it galled so haughty a king even to seem to be under the tutelage of a minister who never played the courtier; but Victor Emmanuel regarded this as a sacrifice required of his patriotism. The magnitude of that sacrifice can be measured only when the facts hinted at by Countess Cesareco on p. 125 are understood. About 1857, the King seemed determined to marry his mistress, Rosina Vercellani. Cavour, believing that such a marriage at that juncture would be not only a public scandal in Italy, but also the cause of alienating foreign goodwill, especially that of England, determined at all hazards to prevent it. Accordingly, he employed detectives to convince Victor Emmanuel that the woman was not faithful to him. The King raged, and swore that were he not King he would challenge Cavour to a duel; there was a ministerial crisis, but Cavour remained in the premiership, and Victor Emmanuel did not marry Rosina until seven years after Cavour's death. A king less patriotic would never have suffered the minister to remain who had dared so personal an affront against him.

Countess Cesareco has given throughout what we believe to be the true description of Cavour's position with the King—a sufficient test of her insight into character. What is, perhaps, a higher achievement, she neither extenuates nor moralizes. As every one knows, there were passages in Cavour's diplomacy which can be defended only when we admit that the end justifies the means. Great as is her admiration for her hero, she wisely refrains from pronouncing the best course both public and private, the aim of the testis frame its own way. Every American the British red and Bunker Hill of their liberty; United States as liberty ten million bought without apices by the F review our opinion our ancestors. sible with praise historian's prude Cesareco does :

such debatable matters as Cavour's coalition with Rattazzi, or his invasion of the Marches in 1860, or his disingenuous overtures to Francis II. of Naples. She states each position clearly, hints at the dilemma involved, and passes on.

One does not expect novel disclosures in so brief a work; nevertheless, we could point out much that appears here for the first time—at least, in English; but the real originality of the book lies in the excellence with which it presents all the material at hand. We must not omit to say, however, that although Countess Cesaresco writes from the standpoint of the Cavourians, who represented the resultant of the antagonistic forces that were working to control Italy, she has too hearty a sympathy for Garibaldi and many of the Republicans to be narrowly partisan. Her candid account of Cavour's relations with the Church might be read without irritation in the Vatican; and she certainly expresses an intelligent admiration for Mazzini. Napoleon III.'s admirers, if any still survive, might complain that she does him scant justice, but do not the facts warrant her conclusions? Palmerston, on the other hand, she draws in his ideal rôle of antagonist of Continental despots. In certain respects, her running exposition of the influence of English party politics on Italy's struggle for independence is among her most valuable contributions. More than once, we judge from internal evidence, she has had access to the private records of Sir James Hudson, the British Minister at Turin, than whom no other Englishman was more trusted by or helpful to Cavour. Like her countrywomen, Jessie White Mario and Linda White Villari, Countess Cesaresco has been placed in an exceptionally favorable position for interpreting Italian affairs in terms easily understood by English readers; and this fact explains why her opinions on the relations of the two countries have unusual weight.

At a few points only have we had cause to question, not her accuracy, but her emphasis. Would a stranger get from her account of Cavour's "apprenticeship" an adequate idea of his wonderful versatility? By the time he entered public life he had been an agriculturist on a large scale, a manufacturer, a banker—in other words, he had had practical training which made him invulnerable when he came to discuss finances in Parliament. But this was not all. He passed from months of seclusion among his Leri rice-fields to the salons and clubs of Paris, mixing in turn with equal ease with the literary, the political, the fashionable, and the fast sets; drawing from each that knowledge of human nature and of individuals which he afterwards applied for the redemption of Italy. We doubt whether his love affair had quite as much influence on his development as is implied in Countess Cesaresco's statement, "It found him in despair, and it left him self-reliant and matured." His infatuation for the Incognita seems to have culminated before their reunion at Turin. Cavour, by the way, was "exiled" to the fortress of Bard six weeks before Charles Albert came to the throne, a fact which should absolve the King from direct responsibility in an episode which Cavour looked back upon as odious.

Two other matters concerning Cavour's public acts may also be mentioned. First, the best evidence shows that he gave the Garibaldians more aid while fitting out their

Sicilian expedition than one might gather from Countess Cesaresco's report; and, secondly, she seems to underrate the risk to which Cavour's policy was constantly exposed through Mazzinian conspiracies. Cavour did not fail to appreciate Mazzini, but he recognized that Mazzini could not be tolerated if Italy was to be redeemed on a monarchical basis. The great agitator, from this standpoint, could do little good; he might do irremediable harm.

But to pursue such considerations further would give a false idea of the book, which is neither controversial nor dull. Countess Cesaresco has *esprit*, a quality rarely found outside of France. In her language she is swift, terse, and direct; in her thought, clear and judicious. She has to tell the most romantic story which European politics in this century can furnish, and she tells it with the art of a born story-teller. She has made her biography what every biography ought to be—as readable as fiction. How rare a feat this is those will realize who have noted, not without misgiving, the tendency to set up the bulging theses of candidates for the degree of Ph.D. as the standard, in style and form, for historical composition. We count it an important thing that Cavour's biography should thus be set forth so that it may be widely read. This is a time of reaction, similar to that in which Europe was plunged after the fall of Napoleon. Germany and Bismarck have been the great reactionaries lately as Austria and Metternich were then. But Cavour stands out with Lincoln as the very incarnation of liberty—which was the ideal of the last generation—and the story of his genius and achievements cannot be too often told.

We regret that the publishers do not provide an index to the volumes of this series. Since foot-notes also are excluded, it would be well to insert in the text the dates of important events.

The Philippines, and Roundabout. By Capt. G. J. Younghusband. Macmillan.

This well-known English officer has a good deal to say on the burning question of the hour. In the opening chapters he sees to it that the islands are properly discovered and occupied by Spain; he speaks of their capture by the British, of their cession again to Spain, and then, with a jump to the present day, touches upon the revolt of '96 which brought Aguinaldo into sudden prominence. He puts the causes of the revolt down to (1) the habitual extortion practised by the Spanish officials, (2) excessive and unequal taxation, and (3) extortion and interference in the affairs of state by the priests. His short accounts of the systems of pocket-lining adopted by the Governor-Generals, and of the monstrous iniquity of the priests of the Philippines, embody facts now pretty familiar, but do not concern us so much as the later portions of the book, in which he speaks from actual experience rather than from information culled out of John Foreman's writings.

After Capt. Younghusband has helped us along through the attempts of the poorly fed Spanish troops, led by over-fed commanders, to put down the revolt, ending in failure, and the subsequent buying off of the rebels for \$800,000 by Primo de Rivera, who is supposed to have put an equal sum into his own pocket, we come to the battle of Manila Bay, the capture of Manila itself

by our land forces, and the setting up of a native government by Aguinaldo. At this point the reader is suddenly brought up with a turn on finding that the author has not yet reached the Philippines, but is doing his best to get there, in a breezy chapter which describes the voyage to Manila from Singapore via Iloilo. This seems to be the natural beginning of the book, and what has gone before a rather lengthy historical preface.

In a chapter on the Manila of to-day is a really clever description of this Eastern metropolis in the hands of our troops, most of whom had come to the tropics for the first time. Capt. Younghusband, being an Englishman, dwells on the lack of bathing facilities in Manila, and regards the "lick and a promise" method adopted by the Spaniards as a poor substitute for the "tub." He finds native hotels filthy, the drainage everywhere abominable, and native servants worse than useless. "American newspapers recently started," he adds, "have a very good service of foreign telegrams, and contain many useful and instructive articles on local and American topics." The advertisements in some of them are as remarkable as amusing. "Holy Gee!" exclaims one new organ, "200 new subscribers in one hour. Walk in, boys; beer ain't in it with newspapers." From which we are to judge that the present prosperity in the saloon business is the standard of success that all are striving after.

Coming to Aguinaldo, the author speaks of him as a man who has, "in the face of every disadvantage, and at the early age of twenty-nine, placed himself in the ranks of great and acknowledged leaders of popular risings which, when unsuccessful, are stigmatized as rebellions, but which, when successful, bear the honored name of revolutions." In discussing the capture of Manila he says that our troops were not such as would have been "fit" under the rapid conditions of modern warfare, to meet an army highly organized and highly trained and ready to take the initiative at a moment's notice. Of the 21,000 men . . . 18,000 were in training, tactical efficiency, and shooting power, . . . according to a European standard, raw or almost raw recruits." Speaking more personally, "the American soldier," says Capt. Younghusband, "as seen at Manila, must not be taken seriously. . . . They are men in most cases who have had no connection in the past with soldiering, and have no intention of having any future connection with the profession. . . . The greatest difficulty prevails in inducing these free lances to wear any clothes, . . . and nine-tenths of the men are to be seen . . . dining at hotels and restaurants in their shirt-sleeves"—truly, a most horrifying spectacle to the Britisher, who is as punctilious about his evening dress in the tropics as in the Arctic Circle. Physically, however, he says, "the American soldier as seen at Manila yields the palm to no one. . . . Taken all around, a more powerful and hardy set than are now to be found in a British line regiment."

The pathetic story of the Philippine hero Rizal, who was tried and shot for treason, is given at length in chapter xi., and right after it, in peculiar contrast, comes a discussion of the merits of the Manila cigar, which the author considers to be most excellent and worthy of all acceptance in this country. Perhaps the most noteworthy chapter is that which discusses the future of the Philippines.

France, Germany, Russia, and England, the author contends, are "the Powers most interested in the Eastern question. France is probably not so seriously interested, however, as the other three, and perhaps does not object to the entrance of America on the scene, except that, behind the veil of America's protectorate, lies an advantage to Great Britain. Capt. Younghusband believes Germany would have liked to annex the Philippines, but he thinks Russia was not interested, except in raising a mild protest against any such change of status as might directly or indirectly strengthen the British power in the East. Japan, he adds, is friendly to both England and America, and probably does not object to America's coming into the Pacific. "Army officers at the seat of war," continues our author, "appear to be almost unanimous in deprecating the annexation of the Philippines on military grounds, while the naval opinion seems to be in favor of it on the ground that increasing commerce in Eastern Asia needs the fostering influence which the display of power in any quarter is supposed to bring."

"It may perhaps . . . be prophesied that when the cold fit which will in due course follow the warmth of the present enthusiasm, falls on the nation, America will discover the true parting of the ways was not in the actual act of annexation, but in having allowed Admiral Dewey to do more than defeat the Spanish fleet and exact a heavy indemnity from the city before sailing away, thus leaving the Philippine problem for the Spaniards and their friends to solve. The new masters of the islands have, in fact, been faced by two separate and distinct problems, the one connected with the external bearings of annexation and the other with the internal. The former problem has . . . been settled, but the latter still faces the American authorities, and will require the most careful handling, bound up as it indissolubly is with the attitude of the Philippine Islanders towards the new masters of their territory. . . . To an observer on the spot it was apparent that not only were the authorities in the distance hardly alive to the complication which existed, but those in actual touch with them took . . . a very sanguine view of the situation."

In regard to the "rebellion," Capt. Younghusband believes that if Aguinaldo could somehow be disposed of, the rebel army would melt away and the opposition collapse. He believes Aguinaldo has his price, as he had once before, but doubts "whether the Americans will care to pay it." Concluding his chapter on the future of the Philippines, the author remarks that prophecies are dangerous, but he foresees that, if the accounts are called in within ten years, the experiment of taking the Philippines will in all probability be found to have been a very costly one. "Colonial enterprises," he adds, "often take generations and sometimes centuries to mature into valuable assets." If a reaction in popular feeling should occur, it would then be a question of disposing of the islands to the best advantage, and England might have seriously to consider whether it would be advisable for her to work to the acquirement by purchase or exchange of this eastern archipelago. Finally, Capt. Younghusband believes that the exercise of any other than a despotic or semi-despotic government in the Philippines would not be subservient to the general welfare of the people, and thinks we might take lessons from the Dutch in Java, however much the idea of forced labor and government monopolies would be repugnant to Americans.

The reader's interest in the book will probably and with the chapters on the Philippines,

although there is one on the French province of Saigon, and another on Java. There are seventeen illustrations and a map.

The Alcestis of Euripides. By Herman Wadsworth Hayley, Ph.D. Boston: Ginn & Co. 1898.

This is a very solid piece of work, and, in its way, a unique example of American scholarship. Prof. Earle's "Alcestis" contained much original labor and many valuable suggestions; but Dr. Hayley's is the first mainly critical edition of a Greek play that has appeared in this country. The reason of this is obvious enough: critical editions must be finally based on manuscripts, and we have few if any important manuscripts of the classics in our libraries. Nor is it likely that we shall acquire any except scraps from the papyrus and papyrus of Egyptian papyrus and kindred sources. Hence the compiler of a critical text works by preference in the great European libraries, though the photographic facsimile is a valuable aid when accessible. There is, besides, a real pleasure in tackling an entirely new bit of Menander or of Hyperides, or in bringing within our ken the new planet of a Herondas or a Bacchylides; but the appalling task of threshing out once more the twenty times threshed readings and questions of an "Alcestis" requires a stout heart and head for the undertaking.

This is what Dr. Hayley has done. He has provided a satisfactory apparatus, he offers a selection from four thousand readings or emendations, and he has endeavored, as he says, "to bring Monk up to date," by incorporating what is valuable in the labors of Nauck, Kirchhoff, and Prinz, and the discussions of scores of special dissertations. He asks modestly for the lenient consideration due to the tyro; but there is nothing immature or amateurish about his work. It shows a sound and independent judgment, based on adequate learning and a nice literary instinct. As samples of his scholarship, acumen, and independence we can refer only to such notes as those on lines 57, 132, 173, 261, 291, 520, 879 and 880, and 1050. Dr. Hayley follows the late Prof. F. D. Allen in the belief that the curious dialogue between *Apollo* and *Thanatos*, which offers so many puzzles and contradictions with the body of the play, is a later insertion not written by Euripides; or, possibly, as our editor suggests, foisted in by the poet himself, together with the passages in which *Heracles* appears, in order to dish up hastily the fragments of a tragedy, and serve them up as a tragi-comedy in place of the regular satyric drama. No modern reader—least of all an Englishman or American—can reconcile himself to the sorry figure cut by the sniveling hero *Admetus*, as he accepts the sacrifice of his wife. Browning throws a modern light on his interpretation of this and also on the character of *Heracles*. Hayley hits the mark more nearly when he says,

"that *Admetus* cuts a contemptible figure, it would be vain to deny; but we must not forget that (in spite of some brilliant exceptions) the Greek sense of personal honor and personal responsibility was less keen than that of modern people. What person ever read the story of the typical hero *Odysseus* without partly despising 'the man of many wiles'? Macaulay has pointed out that an Italian audience of Machiavelli's day would have felt more sympathy for *Iago* than for *Othello*. I will not say that an Athenian audience of the time of Euripides would have been in full sympathy with

Admetus; but it would certainly have felt less repugnance for him than modern readers necessarily feel."

An observation so illuminating is enough to show that Dr. Hayley has penetrated the world of ancient Greek thought and life. He shows, besides, the literary sense and feeling that are needed to inform and guide the mass of learning which must be steered carefully through any critical edition of a poet. The rigid grammarian tends to give us, instead of the breathing *Alcestis*, that frigid form wrought by the cunning hand of artificers with which her husband proposer to console his longings and regrets; the flowers of poetry when restored and emended by the pedant become waxen and artificial. Euripides must mind his p's and q's and his . . . ; he must commit no anachronism; he must erect a mound over his heroine because a tombstone cannot be ready at a few hours' notice. As to this habit of judging things, our editor well remarks, apropos of a reading in line 197: "This constant effort to plane away all that seemed irregular and reduce everything to one 'dead level' of monotony, was one of the worst failings of the Byzantine scholars, as it is of some modern critics"; and again:

"Nauck would read *τετραπύλη*, as the tragedians do not elsewhere use *τετραπύλη*, and the mention of a *τετραπύλη* in *Thessaly* in the heroic age is an anachronism. But I suspect Euripides did not think of this point. Does not Shakespeare make *Hector* quote Aristotle? It looks as if the use of the word 'tetrachy' for a political division of a country originated in *Thessaly*, and, if so, Euripides is probably using the technical *Thessalian* word."

In the coming century, perhaps, the spirits of the great departed may turn the tables on their redactors and critics; and we may have authenticated editions of the classics issued with the cooperation of learned "mediums," with no various readings and no conjectures. Then will ensue confusion of face, and many amusing and delightful revelations. We shall know the answer to such conundrums as "the third day of the month" (line 321), and the "heaven-high noose" (230). Meantime, Dr. Hayley's emendations in these passages are as good as any recorded. His work will furnish a very convenient manual for the use of special students in the so-called seminary; and indeed a useful introduction for any student of intelligence to the methods and the fascinating subject of textual criticism. The value of the book is enhanced by Dr. James M. Paton's thorough dissertation on the Myth of *Alcestis* in Ancient Art.

The Letters of Thomas Carlyle to his Youngest Sister. Edited by C. T. Copeland. Boston: Houghton, Mifflin & Co. 1899.

"The world awakens in me either piety or else despair," said Carlyle. From the sombre *journal intime* in Froude's 'Life' we all know too well Carlyle's black moods of despair, when the malady of being, added to the tortures of indigestion, left him only the exhilarating hope of "getting honorably out of this heart-breaking affair pitted by the Eternal Powers." From the present volume it appears that, during these long intervals of genuine night, at least in his home letters to his Scotch kindred, Carlyle exercised the gentle art of *savoir faire*. His brothers and sisters on their barren farms were working for their daily oatmeal and bacon as only the Scotch peasant can work, and, in his comfortable house and agreeable

ing circumstances in Chelsea, Carlyle must have perceived the irony of recounting his dyspeptic troubles to the peasants of Scotsbrig. Hence it is that the tone of these letters, especially of those addressed to his mother, is often almost optimistic, though the partition between the phases of grim serenity and grim despair is usually thin enough. His letters to his mother and sisters are necessarily those of a man who is leading a separate moral and social existence. In 1842 he writes to the former: "To myself my poverty is really quite a suitable, almost comfortable arrangement. . . . I am perhaps among the freest men in the British Empire at this moment. . . . Truly we have been mercifully dealt with, and much that looked like evil has turned out to be good" (p. 121). Writing to his sister in Manchester—"that huge den of reek and cotton-fuz"—he exhorts her to "particularly endeavor to keep a good heart and avoid all moping and musing, whatever takes away from cheerfulness. Sunshine in the inside of one is even more important than sunshine without" (p. 67).

The letters here collected were for the most part addressed to Janet Carlyle Hamling, Carlyle's youngest sister, who emigrated to Canada in 1851, and died there in 1897. This is the sister whom Emerson visited at Hamilton in 1845: "Mr. Emerson placed her in a chair near the window, so that he might the more readily examine her features, and, looking into her eyes, exclaimed, 'And so this is Carlyle's little sister!'" Mr. Copeland reproduces her portrait at the age of eighty-two, and points out that Froude confused her with an older sister, Jean. A few letters from other members of the Carlyle family, including Carlyle's mother, are included; they range in date from 1832 to 1878, and so form a series almost continuous with those published in Professor Norton's volume, 'Early Letters of Thomas Carlyle' (1814-1826), which was published in 1886.

Jeffrey once complained that Carlyle was "so dreadfully in earnest," a remark which gives point to the following: "I spent a forenoon with Jeffrey, who is very thin and fretful, I think. . . . Poor Jeffrey! he does not make a nice old man; he has too little real seriousness in him for that" (p. 158). There are no revelations in these homely letters, but Carlyle's admirers will value them for the pleasing light they throw on the character of one who, for all his uncomfortable characteristics, was consistently, in Disraeli's phrase, "on the side of the angels." Mr. Copeland's introductory essay on Carlyle as a letter-writer is interesting; the illustrations of Ecclefechan, of the house in Cheyne Row, and of the Carlyles themselves add much to the attractiveness of the book. There is a pathetic contrast, for one who should compare them, between the portrait of Jane Welsh Carlyle (1826), which forms the frontispiece of Professor Norton's volume, and that reproduced by Mr. Copeland from a "Talbottype" taken in 1851.

The History of Yiddish Literature in the Nineteenth Century. By Leo Wiener, Instructor in the Slavic Languages at Harvard University. Charles Scribner's Sons.

Mr. Wiener has performed a useful task in enlightening the English-speaking world as to the history and significance of "Yiddish Literature." Hitherto scholars have turned

with disdain from that Judeo-German dialect, written almost exclusively in Hebrew characters, which is the only language of millions of Jews in Russia, Galicia, and Rumania. Indeed, the very existence of such a literature, in the proper sense of the word, has been unsuspected by literary historians, those of the Jewish faith—with rare exceptions—included. Mr. Wiener has endeavored to pierce the dense cloud of ignorance and prejudice which has hitherto enveloped this subject, and he has brought to its elucidation a vast fund of curious, and in many ways interesting, information. He has ransacked the libraries and bookstores of Oxford, London, Amsterdam, Berlin, Jassy, Lemberg, Cracow, Warsaw, Kiev, Odessa, and especially St. Petersburg, where the assistant librarian of the Imperial Library, Prof. Harkavy, presented him with one thousand Judeo-German volumes out of his own private library. Mr. Wiener estimates the number of Judeo-German works published in this century at from 4,000 to 5,000 volumes, and he succeeds in impressing his readers with the intrinsic value of not a few of the more recent contributions to this literature.

The Judeo-German dialect, or at least its perpetuation through centuries, is clearly the outcome of that intolerance which has pursued the Jews in so many lands. Wherever they were free to mingle with citizens of another faith and to share in their pursuits, they contributed to the literature of their country, as witness Spain before the expulsion of the Jews. Judeo-German literature may be said to date from the beginning of the sixteenth century, when a large number of Jews emigrated from the region of the Middle Rhine to Bohemia, Poland, and Russia. They were, and they and their descendants remained, German in their language and mode of life, having little in common with the Slavic-speaking Jews who had preceded them in these countries. Their first printed books dealt with the folk-lore of the German fatherland, and it was only later that the Rabbis prompted the publication of specifically Jewish legends and ethical treatises. The Jews who had remained in Germany, shut up in their ghettos and excluded from any share in the intellectual activity of their country, had to look to Slavic lands for their literary sustenance, and thus Judeo-German literature was introduced into Germany itself.

With the advent of Mendelssohn began a new era in the history of German Judaism. It was the object of his reform to free the Jewish religion from the traditions of superstitious ages, and to bring the Jews back to the realities of modern life. Through his influence the Judeo-German dialect was discarded for pure German; but while the German Jews thenceforth took their place in the literary life of Germany, the Jews in the Slavic countries and elsewhere became completely estranged from them in language. Comparatively untouched, as a mass, by Polish, Russian, or Ruman influences, on the one hand, and inaccessible, on the other, to the Mendelssohnian reform, the Jews in Galicia, Russia, and the Danubian principalities were thrown back on their Judeo-German; and this dialect, of which the Lithuanian variety of speech is closest to pure German, forms the body of what is known as "Yiddish Literature."

Mr. Wiener sums up the main characteristics of Judeo-German as follows:

"Its vocalism has undergone considerable

change, varying from locality to locality; the German unaccented final *e* has, as in other dialects of German, disappeared; in declensional forms, the genitive has almost entirely disappeared, while in the Lithuanian group the dative has also coincided with the accusative; in the verb, Judeo-German has lost almost entirely the imperfect tense; the order of words is more like the English than the German. These are all developments for which parallels can be adduced from the region of Frankfurt. Judeo-German is, consequently, not an anomaly, but a natural development."

Now, while we believe that few philologists will agree with Mr. Wiener in considering Judeo-German as a "natural development" in the sense in which the numerous South and North German dialects are so considered, and while the admixture of wholly foreign (Hebrew and Slavic) words points to Pennsylvania Dutch as perhaps the closest analogue of Yiddish, Mr. Wiener might have cited from purely German sources instances of license in grammatical, orthographical, and syntactical construction curiously corresponding to those considered characteristic of Judeo-German. The disinclination of Viennese, Styrians, Bavarians, and other South Germans to use the genitive is well known (the colloquial "dem Vater sein Kind" being preferred to "das Kind des Vaters"); and the vagaries of German pronunciation and orthography find expression in numberless old rhymes and inscriptions, in such "Yiddish" spellings as *kümt* (for "kommt"), *krenck* (for "krank"), *frimmer* (for "frommer"), etc. *Wann* or *wan*, and *als* or *alls* (instead of "wenn"), are likewise frequent instances of a "Yiddish" turn in the German of the days of Hans Sachs, as in writers of the last century. As for the indiscriminate use of the dative and accusative, we find in a little volume of 'Deutsche Reime' before us examples like the following:

"Den lieben Printzen woll Er geben"
(A. D. 1649).

"Wer Gott fürchet und helt sein gebot,
Den wirst wohl gehen hier and tort" (1677).

"Ach Gott hilf mich erwerben" (1684).

"Ist sie in der hell, das hilft sie nicht"
(about 1700).

Constructions like "So baldt ich das schwert auf dube heben," "Bin ich beyg'standen dreysseig Jahr" (about 1720) are frequent parallels to the Yiddish inversion of the normal order of verb and object.

As for the subject-matter of modern Yiddish literature: satire, allegory, and fable have always had a peculiar fascination for the Jewish mind, and they have doubtless proved a safe and effective vehicle of dissatisfaction with existing conditions in countries where plainness of speech would have been dangerous. Naturally, much has been borrowed from German literature, Schiller and Lessing being especially popular, while even writers on science, like Bernstein and Brehm, are represented by creditable adaptations. Russian writers are very freely drawn upon, and Jewish cosmopolitanism is attested by numerous translations from such authors as Scott, Thomas Hood, Jules Verne, Victor Hugo, Longfellow, and Harriet Beecher Stowe. Mr. Wiener assigns a very high rank to several recent Yiddish writers, particularly to Spektor, Rabinowitsch, Dienesohn, and Perez. Of Perez he says: "With him Judeo-German letters enter into competition with what there is best in the world's literature, where he will some day occupy an honorable place," and one is disposed to agree with Mr. Wiener after reading the powerful sketch,

"Bontsle Silent," in the highly interesting chrestomathy which forms part of the book. The profound pathos and delicate humor of this description of a departed soul unconscious of its worth, and about to be rewarded for its sufferings on earth, remind one of Andersen at his best. Not a few talented Judeo-German writers have been driven from Russia to these shores, preëminent among them M. Rosenfeld, whose 'Songs from the Ghetto' Mr. Wiener had already previously introduced to the American public. It may be that Mr. Rosenfeld, who we believe is applying himself to the study of English, will justify the unstinted praise which Mr. Wiener bestows upon his literary ability. On the whole, however, in this country a Judeo-German literature, in all its various manifestations as journalism, the Bowery "drama," and crude socialistic agitation, is an anachronism, and Mr. Wiener considers it so. In fact, he hopes—speaking of Mr. Rosenfeld's verses—that "in another twenty-five years the language in which he has uttered his despair will be understood in America but by few, used for literary purposes probably by none." In Europe, Yiddish seems destined to survive as the only language of the downtrodden and ignorant of the Hebrew race. Some of the productions of this literature will always appeal to the admirers of literary genius, whatever its garb, and to the lover of his kind, regardless of creed. For this reason Mr. Wiener's book has an interest quite apart from its scholarly value, which is considerable. He has dealt successfully with the maze of Russian, Hebrew, Polish, and Yiddish spellings, and, with one or two exceptions, has been consistent in his transliterations.

Francis Turner Palgrave: His Journals and Memories of his Life. By Gwenllian F. Palgrave. Longmans.

The noble and beautiful face which furnishes a frontispiece to this attractive volume excites that double emotion inspired by so many memoirs of highly educated Englishmen, and sometimes even by their portraits. There is a sadness often suggested by their combination of high motive, superb outfit, and inadequate result. In the present case, the reader can discover little happiness in the intellectual career of one who sincerely holds that "art (despite a few reactions) has had one long downward career for 2,000 years" (p. 181), and who is always oppressed with contemplation of "the cursed Reformation" (p. 203). One feels that Palgrave's brother, William, who was twice converted to the Catholic Church, who spent his life as a world-wanderer, and who wrote the interminable and unreadable Dantesque poem, 'A Vision of Life,' must have been really the happier of the two. Sir Francis Palgrave tried hard to retain his comprehensiveness of taste and even his friendship with Mr. Gladstone, but his heart was with Cardinal Newman. His literary judgments were so extreme as to be almost whimsical. Thus, he found Tennyson to be "ten times the wider and deeper thinker as compared with Browning" (p. 103), and placed Scott's 'Bride of Lammermoor' above all other novels, "like a play of Shakspeare above all other plays." "Indeed," he adds, "in astonishing truthfulness and variety in creation of character, in power and pathos, I cannot see how this, at least, is inferior to Shakspeare" (p. 134). This element of whim was felt at first, it may be remembered, in his

"Golden Treasury," and especially in the second series, which gave such extreme prominence to the poetry of O'Shaughnessy and of Barnes. He writes, curiously enough, while preparing this, to Mr. W. M. Rossetti, "Can you give me Swinburne's address? I want, of course, some of his work." When it is considered that he had already been occupied three or four years on this second volume, and had "gone over everything several times in the hope of doing justice to all" (p. 259), it does not seem at all strange that he should also have written, the year following, "I have been unable to persuade Swinburne to let me have any specimen of his work" (p. 260). It was certainly testing severely the presumed humility of Mr. Swinburne when he was invited to send in his magnificent 'Song in Time of Order,' for instance, at the last moment, to fill a casual gap in a collection made up after an editor's four years' careful study of Barnes and O'Shaughnessy.

Sir Francis Palgrave's own poems, as published here, give a slight sense of mediocrity, but there are many interesting letters from eminent men, and many pleasant suggestions. Gladstone, Tennyson, Browning, Lecky, Ruskin, W. M. Rossetti, Newman, Temple, Matthew Arnold, and Lady Eastlake were among his correspondents. The one controlling and invariable charm of the book is in his relations to his own family. As a husband and father it is impossible to imagine any one more admirable and delightful than Palgrave; but it is pathetic to notice, on the very last page of the book, that he nevertheless, in his old age, "hated speculations on the after-life," and "particularly disliked the complete assurance of freedom from pain and sorrow after death which is expressed in so many religious poems."

A Prisoner of France: The Memoirs, Diary and Correspondence of Charles Boothby, Captain Royal Engineers, during his last Campaign. London: Adam & Charles Black; New York: Macmillan. 12mo, pp. 282.

Captain Boothby was severely wounded in the leg at the battle of Talavera, in Spain, July 27, 1809. He had to suffer amputation, and, being unable to endure the rough transportation, was left behind when, a few days later, Wellington marched back towards Portugal to meet Soult. He thus fell into the hands of the French. He remained a prisoner of war in Talavera till the middle of October, when he was sent to Madrid. In the former place he was allowed to remain in a Spanish family on parole; but on reaching the capital he was put in a French military hospital and closely imprisoned. At the beginning of January, 1810, he was allowed to travel to the French boundary, on parole, but accompanying bodies of troops and being under control of the commandants. Crossing the border after twenty-five days of rough experience, he got fuller benefit of his parole, and journeyed to Paris as a private traveller. In midsummer he was exchanged and went home. The loss of his leg prevented his resuming service in his corps, and he retired from the army. He afterwards took orders and was Rector of Sutterton in Lincolnshire till he died in 1846.

He had unusual opportunities to learn the true spirit of the Spanish patriots in their great struggle with France, and to contrast their affectionate devotion to a wounded friend with the merciless guerilla warfare

against the French. His observations of the French soldiery were keen, and he draws the differences of classes among them with instructive clearness. Among the officers, he was fortunate in finding friends who were chivalric in their attention to him, though he also met some of the type of vulgar fire-eaters who were cruel in war and coarse tyrants over those in their power. The whole story becomes, unintentionally, a tribute to the noble and cultivated humanity of that stout soldier Marshal Mortier, Duc de Trévise, into whose hands Boothby fell. From others he received passing attentions that were kind and graceful, but Mortier, having once interested himself in him, followed him up with his good offices, and thought no pains too great to take to soften the rigors of captivity to the young Englishman, or to help on his exchange when hundreds of miles away.

The quaint style of the narrative and of the letters is well supplemented by little sketches from Captain Boothby's pencil, and the book is a welcome addition to the original sources of history in a great epoch: the more so because English memoirs of the kind have been comparatively few.

BOOKS OF THE WEEK.

Anna Ruina. London: David Nutt.
Baumgartner, Andreas. William Wordsworth, nach seiner Gemüthsverfassung. Seite Dargestellt. Zürich: Orell Füssli.
Bernhardt, W. Stille Wasser. Erzählungen. Boston: D. C. Heath & Co. 80c.
Christian, Rev. J. T. Baptist History Vindicated. Louisville: Baptist Book Concern. \$1.

The Nation.

NEW YORK, THURSDAY, JUNE 8, 1899.

The Week.

A letter from Columbus to the *Tribune* brings the gratifying news that absolute harmony prevails in the Republican ranks in Ohio, but the writer does not explain how it came to pass. The accounts received shortly before the late convention opened, and even after the delegates had begun to arrive, were to the effect that a bitter feud existed between the Hanna and Foraker factions. The *Tribune* writer himself makes mention of this bitterness. "The condition," he says, "was chaotic in the extreme during the preliminary canvass and after the larger part of the delegates had assembled in this city, but the evolutions of the factions resulted in the nomination of a splendid ticket; there is not at this time the semblance of the old factional strife," etc. What could have happened in that brief interval? What magic word put an end to all that strife? Our advice is that the magic word was uttered by William McKinley, in the shape of an executive order taking 10,000 or more federal offices out of the competitive list of the civil service and making them loot for the politicians. As soon as this order was made known, George B. Cox, who had arrived with the Hamilton County delegates as trading material in his breeches' pocket, became a Hanna man, and harmony ensued as a matter of course. But for the civil-service order he would have remained a Foraker man, and harmony would have been more probable in the Philippines than in Columbus.

The declaration of the Ohio Republican platform, "We commend the President for the judicious modifications of the civil-service rules recently promulgated," will, in all probability, be accepted as the keynote of the party in other States on the "backward step." It will be vain to look for anything like censure of his course in any party platform. The Republican press, as a whole, has either approved the "backward step" or has refrained from comment upon it. We are glad to see that the indiscreet utterances of Congressman Kerr in the Ohio convention have moved the *Tribune* to break silence upon the subject. Its assertion that "if Mr. Kerr and his Ohio friends have the correct view of the new rules, they are a political blunder and a moral wrong," puts the case in precisely the right light. Mr. Kerr unquestionably reflects the views of every Republican politician in the country in his explanation of what the changes mean. No matter what ex-

cuses the President may make for his course, no matter how plausibly his defenders may seek to "explain it away," every intelligent person in the country knows that the politicians are accurate in their estimate of his conduct. He has delivered himself into their hands, and they will make the most of their victory.

The President's friends are "pained" again. His motives in eating his own words and devouring the party platform in this civil-service business are so cruelly misunderstood. It is only the faithful wounds of a friend which he has been dealing civil-service reform. No warmer advocate of purity in the public service exists to-day than William McKinley. There stands his own confession of the fact, in his own speeches, to prove it. As for his deeds, we are to remember two things. One is that reform must go hand in hand with "common sense." That is, while serving the Lord, we must not wholly forget the Devil. The President is perfectly orthodox on the doctrine of a personal devil, and believes thoroughly in giving him his due. In this case, his due was 10,000 offices, easily expandable into 40,000. Then we must bear in mind the urgent need there was that Mr. McKinley execute a flank movement on the Republican spoilsmen in Ohio. They were ravening for the destruction of civil-service reform in toto. With true Napoleonic (little-Napoleonic) strategy the President prevents them from demanding all by granting them a part in advance. Thus he is really a great defender of the system. He has thrown only one child to the wolves, and is driving off as fast as he can to save the rest of the family. It is a well-known fact in natural history that wolves are always satisfied with a taste of blood. So there will be no more of their howling at the President's heels.

Touching the real nature of the President's order, a correspondent who is in a position to know the facts, writes to us as follows:

"The order, as I read it, seemed designed to cover up what had been already and illegally accomplished. In one case within my knowledge, an incumbent was removed and a successor was appointed as an emergency case. He was relieved of the examination required by law, has been reappointed at intervals of ninety days, and now gains a clear record under the McKinley rule. There are a number of such, and, strange to say, nearly all under Gage—whom reformers thought such a remarkably good appointment for McKinley to have made. Since the order has been issued, in one of the Auditor's bureaus twenty-five clerks have been dropped, and instead of beginning with the temporary clerks, the older force has been dropped, and the new ones (mainly from Chicago, and known as 'Vanderlip's corps'), drawing \$720 under the temporary appointment, have been advan-

ced, and without examination, as the new order permits this. In fact, the service is in for a good debauch, and I shall be very much surprised if Gage and Vanderlip have not been the prime movers, in spite of their loud protestations for reform."

Along with very much that was irredeemably bad in the President's retrograde order was one change in the rules which is in the right direction. Two years ago Mr. McKinley encouraged the friends of reform by establishing a new rule, which provided that "no removal shall be made from any position subject to competitive examination except for just cause, and upon written charges filed with the head of the department or other appointing officer, and of which the accused shall have full notice and an opportunity to make defence." The reformers had long urged the adoption of this principle, and were greatly pleased at its acceptance by the President. But in practical operation the new rule has proved to be a farce in the Government Printing-Office, where it was especially needed. The habit of the Public Printer has been to thrust a typewritten page of malicious charges at a person removed when he asked for the reasons, accept his indignant denial as conclusion of the case, and thereupon summarily make the removal without giving opportunity for an answer in writing and without any official record of the answer. The amended rule provides not only that no removal shall be made except for just cause and for reasons given in writing, but also that the person sought to be removed shall have notice and be furnished a copy of such reasons, and be allowed a reasonable time for personally answering the same in writing; and that a copy of such reasons, notice, and answer, and of the order of removal, shall be made a part of the records of the proper department or office. It further provides that reasons for any change in rank or compensation within the competitive classified service shall also be made a part of the records of the proper department or office. This is a distinct improvement, so far as the letter of the law goes, but it remains to be seen whether its spirit cannot be violated by cunning spoilsmen.

Gen. Otis's report, which the nervousness of the War Department leads it to give out, leaves little doubt that the Filipinos were the aggressors in the first fighting on February 4. What it does not satisfactorily answer, however, is the question why the previous negotiations for a peaceful settlement failed. We have not before been told so clearly of the nature and extent of the conferences between the Americans and the native representatives during January.

The sessions extended over three weeks. Both sides professed to desire to come to an amicable understanding, but Gen. Otis says he was compelled to break off because the proposals of the Filipinos were so vague. They wanted independence under an American protectorate, but the nature and scope of such protection they "could not explain." One would infer that the American counter-propositions were clear-cut as crystal. But we know, in fact, that they were vaguer than anything the most dreamy Oriental could have urged. What the Filipinos were told they must do was, in effect, to trust the good McKinley, trust the American Congress, and trust to luck. Vagueness for vagueness, we think they might have retorted on Gen. Otis with considerable asperity. As against the possibly prejudiced representations of either side, we quote what an old English resident of Manila said on April 4 to the Philippine correspondent of the *Paris Temps*: "If the Americans had continued, as on the day when they were welcomed at Cavité as liberators, to treat the Filipinos as brothers in arms, this fatal conflict would have been avoided. Their protectorate would have been accepted enthusiastically, for it was both expected and desired." This is the fact which makes the world think the whole Philippine horror due to blundering diplomacy. Otis did the best he could; but his instructions from Washington tied his hands, and left him helpless to prevent a war which all on the spot foresaw.

The contest over the Speakership of the next House is settled about six months before the time for its meeting in the natural order of things, and within about six weeks after the announcement of Mr. Reed's probable withdrawal from Congress. There have been a number of cases where the reelection of a man who had held the office was assured half a year before the choice was made, but there is no precedent for so early a decision of a canvass for the place when it was open to competition. There is reason for satisfaction in the result of the contest. Gen. Henderson of Iowa is not by any means the ablest member of the House, or the one best qualified in all respects for the Speakership; there are men in the Massachusetts delegation, to mention only a single State, who are clearly his superiors. But it is equally true that he is the best of those who entered the canvass with any prospect of success. It was not to be supposed that Western Representatives would take kindly to the idea of having one Speaker from New England succeeded by another, especially by a member of comparatively brief service. Between Gen. Henderson and Messrs. Sherman and Payne of New York, and Mr. Hopkins of Illinois, the only men who have been seriously his

rivals, there was no room for doubt as to the proper choice. The Iowa Representative is not a great man, and will not stand in the first rank among Speakers; but he is a man of good ability, high character, and uncommon independence for a partisan, whose instincts and tendencies are on the right side in the matters of a large standing army, wars of conquest, and the other new issues which have arisen during the past year.

The Republicans of Delaware continue to suffer the just penalty for the favor which they have lent in the past to a rich vulgarian who offered to purchase the Legislature for their party. They were ready enough to let Addicks spend his money profusely in buying votes so that there might be a Republican Legislature, which he expected would give him the United States Senatorship that he wanted. But after they had got the Legislature in this way more than once, they refused to recognize any obligation on their side, and Addicks was thus repeatedly cheated out of what he supposed he had fairly bought. This made him so indignant that he vowed that no other Republican should get a good office, and he carried out the threat on Saturday by turning over the city government of Wilmington to the Democrats, simply because he could not abide the idea of seeing a Republican succeed who is a man of high character, but has always refused to train with the Addicks crowd. This is hard on the people of Wilmington, but, so far as the Republican party is concerned, there is poetic justice in it.

Pingree evidently thinks that the Governor, like the King, can do no wrong, if only he declares himself an anti-monopolist. The Michigan Executive is a member of a great shoe-manufacturing firm in Detroit. When the State troops for the war against Spain were equipped a year ago, their shoes were bought from Pingree & Smith. The shoes were very good, but the minority members of a legislative investigating committee hold that the principle of the State's purchasing goods from its Governor is very bad. "The committee cannot but condemn as a vicious precedent," says their report, "the selling of goods to the State by the Governor or the firm of which he is the senior member, at their own price, and without inviting bids from competing firms." They also point out that the law now prohibits members of the Board of State Institutions from being interested in or selling to these institutions any supplies, and they recommend that a similar law, applicable to the Military Board and to all State officials, be enacted, and that employees in any department be debarred from traffic with that department. Pingree would doubtless agree that such criticism would be all

right in the case of a Governor who was not an anti-monopolist, but it struck him as insulting when directed against an Executive who is a friend of the people.

The best immigration argument for the proposed hand-book advertising the resources of Georgia is the recent action of the community in the case of the outrages at Griffin. It has become a common thing in parts of the South for worthless white men to run industrious black men out of the town. Some roughs of the superior race recently set out to do this at Griffin, warning members of the inferior race who had offended them by working in the mills to leave, on penalty of losing their lives. Too frequently in such cases the white rowdies have their way, but the decent people of Griffin refused to sit still under this outrage. They have encouraged and sustained the authorities in enforcing the laws, with the result that eight of the toughs have already been lodged in jail and others are threatened with arrest. Georgia newspapers contrast this honorable action with the outrageous course pursued by the Governor of Illinois towards the colored miners from Alabama last fall, and they are entirely justified in thinking that the contrast is sadly to the discredit of Abraham Lincoln's State.

The inquiries which Mr. Moss made last Thursday about the methods pursued in the Tax Department led to a good many interesting revelations as to what goes on under the head of "equalizing taxes." Some taxes are "equalized up," and others are "equalized down," and, by a curious coincidence, the names of Tammany statesmen and their friends who own property appear quite regularly in the latter category. Quite incidentally, Mr. Moss showed what a beneficent thing Tammany government is to the members of the Feltner family. Mr. Feltner is the President of the Tax Department, and enjoys a salary of \$8,000. His brother-in-law, Mr. Moore, is his Deputy Commissioner, and enjoys a salary of \$3,000. His sister-in-law, Miss Moore, is his private secretary, and enjoys a salary of \$1,700. Mr. Powell, who lately became his son-in-law, is Chief Clerk of the Borough of Queens, and enjoys a salary of \$2,500. There may be other sons-in-law and brothers-in-law quartered in other branches of the municipal service, but \$15,200 a year makes a tidy family income as it stands. There seems to be no immediate danger that the Feltner family will suffer want so long as Tammany holds the reins of government.

Dispatches from The Hague affirm that the plan of the American delegates has been unanimously accepted by the Arbitration Committee, and that it will certainly be adopted, with, perhaps, some

amendments in its working features. If this prove to be the case, it will be a great triumph for the United States, and a still greater one for the cause of peace. The plan provides for a permanent international tribunal, to which any and all questions of disagreement may, by mutual consent, be submitted for decision, "but every such submission shall be accompanied by an undertaking to accept the award." The number of judges shall be as many as the litigating nations agree upon, but not less than three in any case, no one of whom shall be a native or a subject of the litigating nation. The plan is to become operative when ratified by nine sovereign Powers, four of whom shall have been signers of the Declaration of Paris. The British plan, as reported, differs from the American in not requiring the parties litigant to agree beforehand to abide by the decision of the tribunal. According to this plan the tribunal would be merely a court for finding facts, and the law (international law) in the cases submitted. As to this point of difference, the American plan is much to be preferred. What is the use of taking so much pains to establish a court and submit a case if the decision is not to be binding? Inasmuch as the submitting of cases, in the first instance, is purely voluntary, it would seem that where any nation has gone so far as to appeal to the international court, it ought to agree to obey the decision. Italy would go a step further and would require that all disputes of a minor character (to be specified), which cannot be settled in the ordinary course of diplomacy, shall be referred to the court compulsorily.

It is an apt coincidence that Esterhazy, on the very day when Du Paty de Clam was sent to prison, should have made a confession that he wrote the bordereau upon which Dreyfus was convicted. That he was the author of this document, and that he imitated the handwriting of Dreyfus in order to convict the latter of a crime of which he was himself guilty, has been known for a long time, but the villain has told such a great variety of lies about it that the public had ceased to give heed to anything further that proceeds from him. Nobody expected that he would ever tell the truth about anything, yet he has actually done so. His statement, in the office of the London *Chronicle* last Friday, may be relied upon implicitly in so far as he acknowledges that he committed forgery. In so far as he implicates others, his unsupported testimony is not worth a rush, although there is a strong probability that his charges against the French general staff are true. Esterhazy, it should be remembered, was tried in 1897, at the instance of the brother of Dreyfus, before a council of war, on the charge that he was the author of the bordereau. Du Paty de Clam was very active in de-

fending him. He was acquitted amid great popular enthusiasm and cries of *Vive l'armée*.

Now that the Dreyfus battle has been fought through, and we all complacently feel ourselves victors, we should not forget those heroic men who in France flung themselves without apparent hope against the fury of a maddened nation. First among those we should place Col. Picquart, who, from the very ranks of the army, in the name of which such crimes had been committed, rose up to confront and expose forgers and lawless officials. From him the impulse passed to M. Scheurer-Kestner, President of the Senate, who became convinced that a terrible error had been made, and did all he could, first to clear himself from all complicity in it, and then to have it undone. But it took a sterner and more audacious challenge than his to really rouse the country, and this was blown on Zola's horn. His bold attack upon those guilty of a monstrous injustice must, in all fair minds, suffice to cover a multitude of novels. It was not long before men of light and leading—like M. Pressensé of the *Temps* and Prof. Seignobos—came rallying in great numbers to the cause. It was then only a question of time when it should be triumphant. But we who see the satisfying end of the long struggle, should not withhold out tribute from those who entered upon it with no reasonable prospect but scorn and failure.

The ridiculous assault made upon President Loubet seems to have had its origin and principal seat rather in the ranks of the anti-republican forces of France than among anti-revisionists or the anti-Semites. Of course, the pretext for it was the decision of the Court ordering a new trial of Dreyfus, but the real animus of the titled rioters was their hatred of the republican government. The Republican party of France has been gradually coming around to the belief that Dreyfus was the victim of a villainous conspiracy, and is now practically unanimous in that belief. The royalists have seized the present occasion for an *émeute*, because they can secure the coöperation of other groups calling themselves League of Patriots, Anti-Semites, etc., in the common purpose of overthrowing the present form of government. It is a rare coalition that finds Count Christiani and Rochefort working together. There is no danger to be apprehended, however. The republic is too strong for the coalition; and the cause of justice, after a period of doubt and danger, has won a victory which the motley horde of royalists, imperialists, *intruséants*, and common blackguards will not be able to disturb.

That fifty-one members of the House

of Commons should have opposed on Monday the grant to Gen. Lord Kitchener, was obviously due to their feeling that national rewards to a man who had shocked national sentiment by his treatment of the Mahdi's remains at Khartum should be resisted. No other ground of objection was made by anybody, and even Mr. Balfour, while maintaining that the whole question was one of military merit, had to admit that he wished the thing had been done differently. It was left again for infidel John Morley to speak for the humane and Christian feeling of the country. He led in the House, as he had previously done on the hustings, the protest against permitting English soldiers and civilians to be barbarized by "the savages they are sent out to kill or civilize." However politic Gen. Kitchener may have thought it to desecrate the Mahdi's tomb, so that it might not remain a shrine of superstitious reverence, the deed was done with quite unnecessary brutality, outraging the feelings of the very officers and men detailed to do the work. Mr. Morley has recalled with much point and force the example of the English General in Spain, who ordered decently reinterred the corpse of a French officer which the Spaniards had dug up and decapitated. That was in 1812, and the question is if Imperialism has since coarsened the moral fibre.

Affairs in the Transvaal are evidently moving to a crisis. The correspondence between Mr Chamberlain and President Krüger respecting the dynamite monopoly has reached a deadlock, the former assuming that the monopoly is in conflict with the London convention, and the latter contending that it is not. As neither of them is willing to yield, it would look as though force were the next remedy to be applied. The exclusive right to deal in dynamite was granted by the Transvaal Government to a private person, or firm, many years ago, without any adequate compensation to the Government itself. It is of the same nature as the monopolies granted by the Stuarts in England two or three hundred years ago—monopolies to sell salt or soap, or to import some indispensable article. Since the mining of gold grew to be a great industry in the Transvaal, the dynamite monopoly has become an intolerable burden of the Outlanders, who are oppressed and overtaxed in other ways, and not allowed to have a share in the government which their contributions chiefly support. If there should be a new collision between England and the Transvaal arising out of these grievances, we are assured that the Americans, large numbers of whom are engaged in gold-mining there, would be among the first to revolt. But negotiations between President Krüger and Sir Alfred Milner are in progress.

TO WHOM DOES MCKINLEY APPEAL?

That the President of the United States should be, by virtue of his position, constantly exposed to hostile criticism and attack, has come to be looked upon as quite a matter of course; and President McKinley has proved no exception to the rule. In one respect, however, the criticism to which he has been subjected has peculiar significance and force. Other Presidents, also, have had to endure the disparagements of an opposition party and an opposition press, the factious sneers and taunts of those bent on finding fault, and the personal denunciation of individuals whose selfish plans have been thwarted. But the criticism of President McKinley cuts deeper. He is charged, more or less openly, by influential men of his own political household, with having broken his solemn pledges to his party and to the country; with having promised one thing and done another; with having deceived those who put their trust in him; and the charges are accompanied by the citation of chapter and verse in proof thereof. Other Presidents have been accused of politic dealing, of leniency towards the shortcomings of their subordinates, and of concessions to strong opposition, but none within the present generation has called out, from the ranks of his own supporters, such a growing volume of protest and remonstrance directly impugning his honor as the chief magistrate of the nation.

Criticism of such a sort, striking straight at the foundations of personal truthfulness and integrity, raises a question as to the class of persons to whom President McKinley makes his appeal. It is difficult to believe that a man of experience and personal uprightness, elevated to the Presidency under solemn obligations and responsibilities, can, as a result of argument and pressure, surrender his convictions on critical points without first convincing himself that he is thereby getting an equivalent for what he gives up, and assuring himself of equal justification in the eyes of the world. In bending his course somewhat with a view to a second term, Mr. McKinley is only doing what his predecessors have done. But how is he doing it? Wherein do the successive steps in his timorous and deceptive policy—a policy at once the grief of his friends and the amazement of his enemies—make in that direction? Precisely how does he expect, doing as he has done, to make himself his own successor? To whom does he appeal?

The recent civil-service order may well raise this very pertinent question. If there was anything in regard to which the platform Mr. McKinley was elected on was definite and emphatic, it was the approval and support of civil-service reform; and the declaration of the party was reaffirmed in the personal pledge of Mr. McKinley himself. The attitude of

the better element of both the great parties on the subject is so well known that it would be idle to restate it. Yet President McKinley was hardly warm in his chair before word was given out that considerable exemptions from the civil-service rules were shortly to be made. The instant rebuke from the press of his own party was stern enough, one would think, to have convinced most men that on that point at least good faith must be kept. But the rebuke was not enough. For nearly two years the proposed order has been imminent, and its immediate appearance several times announced; and, now that it has come, a single glance shows it to be the worst assault on administrative purity and efficiency since the civil-service law went on to the statute-book. Whatever the motive, here at least is no haste, no sudden yielding to extraordinary pressure, but a long-considered and deliberately planned step. We cannot assume that the President has knowingly weakened his position, or is satisfied that the order will cost him support in the directions in which he deems support most valuable. What are those directions? Upon whose support does President McKinley count?

It is clear enough, we think, that the appeal is not to the so-called "better element"—to the voters of education, property, social position, and public spirit. With few exceptions, indeed, these are the men who have formed the solid support of the movement for civil-service reform, and who are the head and front of every forward movement, whether in politics, education, science, religion, or philanthropy, to be found in the United States at the present time. Without regard to party, and with no chance of personal reward, they have labored to bring about a clean political life and secure the adoption of business methods in the Government service. It is not to them, therefore, that President McKinley appeals; they had repudiated the action before it was taken. The late executive order can have but one effect in this direction, and that is to array against the Administration, in a solid column, the voters whose approval has always been, in the long run, best worth having, and to destroy what little confidence was left in the good faith of a President who deliberately undermines a structure he solemnly promised to maintain.

On the other hand, we are persuaded that President McKinley has made a grave mistake if he thinks his latest action will strengthen his hold upon the masses of the people. There is one thing that the American people, without regard to party, creed, or social position, utterly abhor; and that is a moral coward. They have, indeed, ceased to expect that the President of the United States will always be a great constructive statesman, or a leader without a single selfish

aim. But they are disposed to insist that he be a man of truthfulness, courage, and "backbone." They demand that he shall lead, and not follow; that he shall sturdily resist pressure; that he shall show, in his public acts, the virtues of positive character; and that his political philosophy shall be arrived at by some more worthy process than keeping his ear to the ground. President McKinley, we are confident, has made nothing but enemies among those of his supporters, thousands in number, who claim no special knowledge of the merits of this particular matter, but who will see in the recent order one more proof of essential moral weakness, even where the finer honor of the nation is at stake.

There is left the relatively small number of men, many of them little in evidence ordinarily, whose business it is to bring political things to pass. They are the men who run the machine, raise campaign funds, dictate nominations, engineer elections, control appointments to office, and live upon the spoils. These are the men who make and unmake Presidents; and it is to them that Mr. McKinley appeals. From the day when he put the patronage of the government into the hands of Platt, and Hanna, and Quay, and all the rest, to the present time, no single public act of his has failed to show the trained hand of the political boss. It is the skilled manipulators of votes who are the determining factors in practical politics. They alone, from the President's standpoint, can give him what he wants—a second term; and he must pay the price. The "better element," mainly scholars and 'dudes," can go; the "masses" can be hoodwinked, bought, or bullied; but to offend the boss is death. It is a melancholy spectacle, this opening the gates to the hungry crowd of spoliemen. It must have caused the tender heart of the President a pang. But the men who placed him where he is, and who are willing to try to keep him there, must have their way; and it is to them that he appeals.

GOOD MEN IN BAD BUSINESS.

Secretary Gage's limping defence of the President's indefensible civil-service order, like his silent though shame-faced acquiescence in certain scandalous appointments and removals in the Treasury Department, shows that he is rapidly becoming what the sneering politician called "a good man in the worst sense of the words." That is to say, he brings himself to lend his respectability as so much sheep's clothing for wolves to wear. Of the details of Mr. Gage's feeble apology for McKinley we shall speak in a moment, but the pity of it is that he allowed himself to be seduced into making any apology at all. By consenting to come forward at this juncture as the President's whitewasher, he irreparably damages his own reputa-

tion without sensibly helping his chief's. For the time being, it is true, he throws dust in the eyes of the credulous. "There, you see," silly people will say, "it can't be as bad as the reformers and the Civil-Service Commission think, for good Mr. Gage approves of it."

The Secretary's omissions are fully as significant as any of the assertions in his statement. He has not a word to say of the fact that the principal changes were made without consultation with the Civil-Service Commissioners, who already, as in duty bound, have spoken out against the concession to the spoils-men. Mr. Gage does not mention the circumstance referred to in the condemnatory resolutions of the Maryland Reform Association, that the President is deserving of the graver censure because he persisted in his course "with full warning as to its consequences, and despite earnest remonstrances from patriotic citizens and from the press." Not a syllable, either, do we get from Mr. Gage about the President's tricky manipulation of the rule governing transfers, by means of which any boss can now put any heeler in any office. Nothing does he say about the suspicious exception of gaugers and storekeepers, who hereafter will keep store and gauge as in the good old times, with an eye single to delegates and the nomination which the boss orders. Silent about all these tricks and scandals is Secretary Gage, unless he may be covertly referring to them when he drops into that old shibboleth of the spoils-men, and says that the order is not "understood," and cannot, in fact, be comprehended "by persons not close to the administration of public affairs."

Mr. Gage makes an elaborate argument to show, from the standpoint of one close to the administration of public affairs, why deputy collectors of internal revenue should be exempt from the rules. Of this the best that can be said is that it is an amazing exhibition of political simplicity. The Secretary solemnly reasons that it is neither proper nor legal to take away from collectors, by means of civil-service rules, the right to choose their own deputies. Imagine Platt and Quay and Hanna and McKinley chuckling over this! They know the kind of freedom they will leave their collectors in the matter of deputies. In what Nephelococcygia has Mr. Gage been living all this time? Does he not know that the appointment of every collector will hereafter necessarily carry with it a "slate" for all his subordinates, whom he will be bound in advance to choose as a condition precedent of getting the office? If it is undesirable to make a collector take his appointees from the eligible list, what will it be to compel him to take them on the dictation of a boss? Really, Secretary Gage's innocence in this business is too much for us. Yet we must say that in bucolic simplicity an-

other part of his apology runs this part hard. He says that it was necessary to turn the Alaskan service over to the spoils-men on account of "the great distance from Washington." If spoils thus necessarily increase as the square of the distance, what becomes of that "honest and effective civil service" which the President has promised to give to the Philippines?

The truth is that, in the long run, Mr. Gage will be found only to have hurt himself without helping the President. This thing has not been done in a corner. Mr. McKinley knew what he was about. He petulantly remarked to a protesting reformer that he had done so much "for you" that it was really shameless to ask him not to do something now for the politicians. The good of the public service? That may go hang. Don't you hear the roar of the Ohio convention, insulting President Harrison for his extensions of civil-service reform, and falling down before their own Nebuchadnezzar's image of a President because there was none of that nonsense about him? There is the true explanation of McKinley's spoils order, let Mr. Gage say what he may. But one good thing, we believe, will yet come of it. It will make it more difficult, if not flatly impossible, for people to talk longer of the President's "good intentions." Even Mr. Gage cannot fool the public on that score. The image, all men can now see, not only has clay feet, but is clay in the hands of the potter all the way up.

What we most deplore in the attitude of men like Mr. Gage and Secretary Long is that they throw away the only chance a good man in the cabinet has to make himself a power. We know perfectly well what they say. They want to accomplish something. They believe in their party as a whole, and think they must be silent or apologetic about many things they do not like for the sake of the good they hope to do. The politicians ask nothing better. A good man who will not be ugly, who will not kick, who, like charity, suffereth long and never faileth, is the joy of their hearts, one of their most efficient tools. Suppose Mr. Gage had put his foot down in the Shurtleff removal—told the President that if it was made he would resign, and not only resign, but expose the whole scandal, who doubts that he could have blocked the scheme? So of the civil-service retreat. Secretary Gage could have prevented that. A good man in the cabinet, ready to get out of it on the first sign of political villany, and ready to tell the public frankly why he goes out, could frighten a man like McKinley into all kinds of unintended virtue. That is the only use that we know of for a good man in public life. It is always Gambetta's alternative over again—either to "soumettre" or "démètre." Secretary Gage, however, has succeeded in doing

both: he has submitted to a bad policy and has demitted his own repute in apologizing for it.

THE NICARAGUAN CANAL REPORT.

The recent statement that the members of the Nicaragua Canal Commission were still divided in judgment as to the cost of constructing a practicable canal, is now officially confirmed. Although they are agreed as to a route, the difference between the estimates of cost made by Rear-Admiral Walker and Prof. Haupt on the one hand and by Col. Hains on the other exceeds \$16,500,000, or more than 13 per cent. of the average of the two estimates. This is a very wide disparity, and it will be noted that the higher estimate is made by an officer of the army whose rank and professional standing make him a formidable candidate for Chief of Engineers at the next vacancy. One fact which will strike the reader with force is the approximation of the figures given by Col. Hains to those given by Gen. Ludlow before a committee of Congress some years ago. Ludlow, though a highly accomplished engineer, was denounced at that time by the promoters of the canal scheme as an ultra-conservative and an enemy of American progress. What will the same critics say of Col. Hains?

So much of the Commission's report as is unanimous puts it out of the question for the Government to give further aid or comfort to the Maritime Canal Company. If Congress decides to build a canal through Nicaragua under exclusively American auspices, it may be willing to pay for such tangible assets as the company has on the ground, including tools, records, drawings, and a few borings which the official engineers would have been obliged to make if no private hand had made them. But the value of these things should be assessed only by disinterested experts, of such repute that the whole country will accept their judgment without question. No account whatever should be taken of worn-out franchises or conditional concessions. After its fruitless struggle for Government aid, and with its manifold promises to the public still unfulfilled, the company may consider itself well off if it can sell for cost those things which it is actually able to deliver. It cannot lay claim to the discovery of a route, for the greater part of its survey had been anticipated by other prospectors, and the only remaining feature which it could fairly claim as its own seems to be regarded by the Commission with distrust. This is the proposed cut through the crest of the Eastern Divide, and the impounding of a mass of water with a surface of perhaps 90 or 100 square miles and a depth of some 70 feet between walls which in some places would have to be artificially constructed,

and which are believed to be without a precedent in engineering. Of course, no scientific expert would venture to say that this plan could not be carried out, for nothing in it is essentially impossible. But the proposed experiment of walling in so large a lake, under conditions such that a weak point anywhere would mean ruin for the structure, and for all the canal route below it, has drawn no little criticism from engineers in private life, and thrown a veil of hazard over the whole plan of which it forms a part.

The aim of the Commission to use nature's channel from Lake Nicaragua eastward to the sea, except for a few short cuts here and there to straighten a horseshoe bend or reach a natural wide water in the midst of a fairly level country, will commend itself to the unprofessional reader who can apply to his study of the map only the tests of common sense. If we grant at the outset the proposition that we must have an interoceanic canal, and that Nicaragua offers the best country through which to cut it, the Commission appears to have presented as good a plan as is likely to be devised, and one infinitely preferable to that of the Maritime Canal Company. But the main question is in the hypothetical stage still. When so competent an engineer as Gen. Abbot advocates the Panama route against the Nicaragua route, it is not surprising that Congress checks the whole undertaking until it can obtain the comparative data it needs.

The Nicaragua Commission has not gone out of its way to suggest any contrasts; but the President has decided to make the members of this Commission also members of the larger Commission which is to report on the relative advantages of the two routes. The Nicaragua Commission appears to have made a pretty thorough inquiry into conditions in Nicaragua, for the short time it could devote to its task, and its fund of information will be available when the larger Commission reaches the Nicaragua branch of its work. Moreover, if first impressions count for anything, the larger Commission will be fairly balanced, Admiral Walker and his colleagues having made their first study of Nicaragua, and the rest of the Commissioners making their first study of Panama. But, after all the engineering reports are in, there will still remain a phase of the general question for settlement by experts in diplomacy. In Panama, apparently, our Government would be less liable to international entanglements than in Nicaragua, where the Clayton-Bulwer treaty and the rights of Costa Rica would have to be considered, even if the local Government were ready to sell or lease a strip of its territory.

THE DREYFUS DENOUEMENT.

John Quincy Adams wrote in his Diary that the continued outward success of a tricky politician seemed to him "a slur upon the moral government of the world." If many have felt that the conviction and punishment of Dreyfus for crimes which he never committed tended in like manner to impair belief in divine justice, they must now confess that Providence has "done something" in his case, in striking and dramatic enough fashion to satisfy even Carlyle. Never was there a more notable demonstration of the truth that there is a power in human society which makes for righteousness. Every circumstance conspires to make the righting of the great wrong impressive and solemn. The injustice was committed theatrically in the face of the whole world; the reparation is now made with all mankind looking on. Power, passion, national pride, army, courts, newspapers, public opinion—all were in league against one insignificant victim; but he, catching at "the skirts of God" as his only resource, sees them all fall back ashamed and defeated.

The Court of Cassation has followed the recommendations of its "reporteur" and the public prosecutor to set aside the Dreyfus verdict, and grant him a new trial; he will be sent before a new court-martial, which will not dare resort to the monstrous methods of its predecessor in 1894, and from which he will come off triumphantly acquitted. He is already acquitted in the judgment of the civilized world, and now, we may add happily, of passion-torn France herself. The precautions taken by Prime Minister Dupuy have not been in vain. His bill, irregular and suspicious as it seemed, for having both branches of the Court of Cassation sit in the hearing, is now seen to have had a valuable effect in conciliating public opinion and making anti-Dreyfusite charges ridiculous in advance. "The Jews" might buy one judge, one court, but hardly all the judges of appeal in a lump. Then the calculated indiscretion of some one in authority, through which all the evidence taken by the Court in secret was laid before the grand jury of 40,000,000 Frenchmen, has had a most felicitous effect. It prepared and persuaded the general mind to accept quietly the verdict of the Court. Instead of mobs and shouts and a national panic and crisis, we see the Court of Cassation compelled to send out its officers in order to get enough spectators present to comply with the terms of the law.

It is late in the day to dwell upon the tangled web of perjury, forgery, conspiracy, and credulity which made up the case against Dreyfus. The reporter of the Court cut his way through all this, and showed convincingly that there was before the judges an abundance of the "new facts" necessary to induce them to

declare for revision. Ten such facts were specified, each notorious. It is not necessary to go into all this, but it may be worth while to dwell for a moment upon the documents of the "secret dossier" used against Dreyfus so illegally and so fatally.

A member of the original court-martial has testified to the way in which these documents were laid before it. The evidence previously submitted—the now discredited *bordercau* and all—had left the members in doubt. Then Gen. Mercier secretly handed them seven documents from the War Office, which he said completely established the guilt of the accused man. The officers of the court turned pale at the illegality demanded of them—that is, condemnation of a man on evidence of which he was left in ignorance—but bowed to the supposed "necessity of state" and voted Dreyfus guilty. But the moment these documents are brought to light and scrutinized, they turn out to be only a mass of irrelevance, misinterpretation, mis-translation, and outright forgery.

Document No. 1 was the letter containing the famous phrase "*ce canaille de D.*" This it has been conclusively shown could not possibly have referred to Dreyfus. The second document was an intercepted dispatch from the German attaché, Col. Schwartzkoppen. But it used the German military term, "*Patent*," a title which could not be applied to Dreyfus. In order to make it apply, the General Staff deliberately mistranslated it. Then there were two cipher dispatches involving the Italian attaché, Panizzardi. One of these was used by the War Office in a version which the Foreign Office notified it was wholly mistaken; the other was given an absurd and impossible reference. Two other documents relating to military organization and plans had no necessary connection with Dreyfus at all. Seventh and last came the most damning evidence of all—nothing less than alleged letters of Emperor William himself to Dreyfus!

The huge credulity which could believe in the possibility of such letters is illustrated in a conversation which a witness swore to having heard between Gen. Boisdeffre and Princess Mathilde. The latter expressed doubts about Dreyfus's guilt. "Ah," said the General, "if you had seen what I have!" "What, pray?" "Well, I have seen with my own eyes a letter from the Emperor of Germany to Dreyfus." The Princess replied: "General, I am only a woman and a mere princess, but I know enough about the practices of royalty to know some things that cannot be. You may, perhaps, have seen what you say, but what you saw could not have been authentic." So, of course, it turned out. The Foreign Office disavowed and repudiated the letters, and their authenticity was indignantly and categorically denied by the German Ambassador. They were probably only

another wretched forgery of the wretched Henry.

So the long tragedy approaches its end. Dreyfus may not live to reach France; there may be long delays in the legal processes necessary to make him a free man. But for him and for the interested world the agony is over. Even slow and faltering human justice has at last caught up with the divine judgments which are true and righteous altogether. We cannot, of course, rest our faith in Providence upon such dramatic retribution. We shall have to go on seeing truth upon the scaffold and wrong upon the throne, but it is a great help to our trust in a moral order of the world when we see so plain an instance of justice shining out like the sun.

PROFESSOR DICEY ON THE TEACHING OF LAW AT HARVARD.

OXFORD, May 17, 1899.

In the Hall of All Souls' College, the Vinerian Professor of English Law has just delivered a public lecture on the "Teaching of Law at Harvard." He began by reverting to his own inaugural lecture of sixteen years ago, in which he had affirmed that the principles of English law "could be taught by duly qualified teachers to duly intelligent students." This speculative contention that law, being a science, must be amenable to the same professorial methods of teaching used in the case of other sciences, had now been practically proved to be correct by the general experience of American universities, and, in particular, by the teaching of law at Harvard. The Harvard Law School went back to the days of Story, and was really of more ancient origin than the present teaching of law at Oxford. Dane, inspired by the spirit of Mr. Viner, who founded Blackstone's chair in Oxford, made a chair at Harvard which was first filled by Story, and in which Story was followed by other able men. Nevertheless, Prof. Langdell was the second founder, the restorer of law teaching at Harvard, and had found in such men as Thayer, Gray, and Ames indispensable and able coadjutors, men whose writings were familiar to every educated English lawyer. The Harvard Law School had won by tangible success the gifts of many benefactors, and formed a sort of university within the university. Here Prof. Dicey dwelt at some length on the Law Library at Harvard, "the most perfect collection of the records of the law of the English people to be found in any part of the English-speaking world." It was noteworthy as something which visibly typified the spirit of enthusiastic study that informs the great Law School. The students, the professors, and its most admirable teaching constituted the glory of the school itself, as might be gathered from the increase in the numbers resorting to it, which had almost quadrupled, increasing under Professor Langdell's new régime from 120 to 550 or thereabouts. At present their real difficulty lay in the fact that the numbers of the pupils almost go beyond the possibility of teaching them.

The greatest triumph of the Harvard law professors in fact was that they had finally dispelled the "deep-seated delusion" which regards law in the light of a "handicraft,"

to be learned only by apprenticeship in chambers. The lecturer quoted the testimony of Mr. James C. Carter, who had been convinced that the Common Law of England was a science resting on principles best acquired through the teaching of men who have mastered them, and announced his present purpose of setting forth the principles and character of the Harvard teaching so as to make comprehensible its success.

The school was a professional one for the teaching of students whose aim was to become successful practising lawyers, and who had already received an adequate general training represented by the B.A. of Harvard, Yale, or some other American university. These students were in the position of men beginning to read for the Oxford Jurisprudence School, so far as knowledge of the law was concerned. Otherwise, they were in no way as Oxford undergraduates are. They were men of twenty-two or twenty-three, ready to join the Law School with the practical object of acquiring knowledge of the law, and thus occupied the position of young men here beginning to read in chambers. At the Law School three years were required to obtain the law degree. Fifteen courses had to be taken, and at the end of each year the student was examined in the topics of each of his lectures by the professor giving the course, who had to be satisfied before a further stage could begin. The lectures of the first year were fixed for all, but there was a free choice of subjects in the second and third years. The degree was obtained by success in each and all of the yearly examinations. Especial merit was recognized in something analogous to a class list. Still, the obtaining of a degree was not a student's primary object, but rather to learn English law and leave a high reputation among fellow-students and professors. The lecturer then gave, as a specimen, the fifteen courses taken by a very distinguished student, and remarked that one who had mastered the principles underlying the subjects enumerated in that list began his professional life "with an amount of knowledge rarely possessed by an able student from our universities on his call to the bar."

Young Americans were, he said, alive to the importance of actual success. How, then, comes it, he asked, that they are willing to spend the years from twenty-two or twenty-three to twenty-five or twenty-six in this preparatory professional study? As to this willingness, which must strike Englishmen as "something of a paradox," he gave two points in partial explanation. First, the reputation gained at Harvard for knowledge and dexterous argument promoted a young man's success, quite apart from the degree obtained. This helped him in a way in which no University reputation to be gained here could help a man. In America, where the distinction between barristers and solicitors was unknown, law business was often carried on by great law firms. A highly rated student easily gained admission into the office of one of these firms, and his fame, spread by fellow-students (often practically in the position of English country solicitors), won business for the firm. The case of Lord Bowen, whose unique gifts were so slow in receiving recognition that it seemed at one time as if he would be drawn away from the law to literature, would not have been possible under American conditions. Thus the practical value of a re-

putation gained in the Law School was one reason why Americans were willing to devote to it three of the best years of their manhood.

The second reason was that the teaching they received exactly met their needs. This teaching, being strictly professional, was also definitely professorial. The lecturer quoted from Prof. Langdell's address on the Harvard Law School, given on the two hundred and fiftieth Founder's Day of Harvard College, and pointed out, as the fundamental conception of the Harvard professorial teaching of the law, the idea that "English Law is a science to be deduced from a limited number of principles which are to be learnt from books." Strict adherence to these principles had given to the Harvard teaching a stamp which was at once scientific (logical) and practical, the whole aim being to explain the principles of English Law. At Harvard they rated low the good to be got by reading in chambers—perhaps they rated it too low—for law was partially a handicraft. The prominence lent by the masters of the Law School to the logical aspect of law could, however, only work for good, since the uses of legal apprenticeship had been vastly overrated. Teaching might be logical and professorial without being in any degree abstract. From abstractness the Harvard professorate were preserved by their pupils' definite professional purpose and by their intense enthusiasm for the Common Law of England, or rather of the English people. Emphatically teachers of English law, they did not illiberally underrate the value of the comparisons between it and other systems. Yet their successful insistence upon the fundamental principles of English Law gave a remarkable color alike to their mode of thought and manner of teaching, in which Roman Law played a subsidiary part only. Prof. Dicey referred to Holmes's 'Common Law,' Langdell's 'Law of Contracts,' Thayer's 'Introduction to the Law of Evidence,' and Prof. Ames's essays in the *Harvard Law Review* as exhibiting speculative powers of no common kind. Yet these writers had not, like some English writers of note, become interested in the theory of English Law from their interest in legal philosophy, but rather had become expounders of the philosophy of law through their intense interest in the Law of England. This he illustrated from Prof. Langdell's book on 'Contracts,' for which the author's immense logical power had been obviously trained and stimulated by study of the Common Law. Upon this study he depended for teaching his pupils to think for themselves. Thayer's 'Introduction,' "the latest and most perfect production of legal speculation sent us from Harvard," was almost oppressive in the weight of its legal learning, and the captious reader might regret time and space given to citing, explaining, or criticising the dicta of judges and others, some of whom had not half the author's intellectual powers, none of whom had explored, as he had, the foundations of the Law of Evidence. Prof. Thayer, had he affected new and unintelligible terms like some philosophic Germans, would be acknowledged to be a great jurist. But "he is immersed in the History of the Common Law," said the speaker, and his subtle power of analysis is likely to be underrated because of his clearly expressed conclusions. His thorough and lawyer-like mastery of the Common Law has forced him to become a master of legal philosophy.

Some jurists, Sir Henry Maine, say, or Prof. Maitland, had begun with the study of philosophy or of historical problems, and were led on to study the principles of Common Law; but American lawyers, such as Langdell and Thayer, began with the Common Law and were led on till they became masters of the philosophy and history of law.

Attachment to the concrete existing law of England and America, of the English people in fact, determined, the lecturer went on to show, the peculiar form of law teaching at Harvard, which was at once scientific and professional. Actual legal facts as stated in the reports were never lost sight of. Thus generalizations gained a reality sometimes missed by the theories of eminent jurists, and the pupils—though they learned to think—achieved a knowledge of cases "infinitely useful" to a practising lawyer. The grounding of the Harvard teaching on the study of cases was then dwelt upon as its peculiar mark, distinguishing it from all other methods. After a detailed account of one of Prof. Ames's lectures had been given, the peculiar stimulus of the catechetical method employed was dwelt upon. "It is," said Prof. Dicey, "the Socratic method applied to law." The Law of Contracts and the Law of Torts were, he said, obviously well adapted to this method, which had to alternate with dissertation, in a proportion regulated by the nature of the topic in hand. Yet at Harvard the method applied to all branches of the English Law was substantially the same, and a case-book was in every instance required. At this point the fifty volumes of case-books presented by the Harvard faculty of law to the All Souls' Law Library were appreciatively dwelt upon. These books, as used at Harvard, forced students "to learn rather than to let themselves be taught," and gave them a stimulus like that afforded to the novice in chambers when law papers are first placed in his hands and he is required to draft a claim or write an opinion. Moreover, the Harvard method roused and utilized the disputatious instincts of learners. The art of contradiction played a great part in all education.

The masters of the law at Harvard realized, as competent teachers ever did, how a man's true education was bound up rather in what he thought and talked of outside the class-room than in what he heard while in the class-room. Their method absolutely required the pupil to be "perpetually engaged in the examination and discussion of cases." Hence had arisen their law clubs and their moot courts, the system of which was most minutely and vividly described by the lecturer at some length, and to the great entertainment of his audience. Thence, also, the institution of the *Harvard Law Review*, which was in turn carefully and adequately set forth.

Prof. Dicey then asked what lessons for America and for England could be learned from a comparison between the law schools in England and that of Harvard. He dissented from the conclusions of Dr. Birkbeck Hill, who deemed that Oxford should go and do likewise, and, by making changes that seemed slight to the outside observer, raise up an institution to rival the Harvard Law School in numbers and in prosperity. No lawyer either in England or America could share this view, if he examined from the inside the law schools of either country. Each could learn from the other, neither

could adopt the other's methods directly. Scientific legal education was alike the aim of both; but while the aim of the Harvard Law School was also definitely professional, this was not true of the Oxford and Cambridge Law Schools, which were, and must be, in the main, educational. The stimulus to work at Harvard was professional success, whereas the stimulus to work in the other case was the desire to obtain a place in the class list—a perfectly legitimate aim for youths going through a course of university training. Essential differences such as these could not be overlooked, and necessarily determined the course of instruction pursued in each case. Oxford could as little copy Harvard, maintained Mr. Dicey, as Harvard could copy Oxford, yet the law school of each university might learn much from the other.

As to what Harvard might learn from Oxford, he spoke with diffidence, being conscious of better qualifications for admiring than for criticising the American system. What, however, an observer from abroad might properly remark was that, the educational element of law being inevitably in the forefront of Oxford teaching—the educational and the speculative element, that is—a leaf from the Oxford book might, perhaps, be taken in this regard with profit to the Harvard system, where the practical study of the law of England might also ally itself more intimately and concretely with that of Roman Law. In their comparative inattention to the law of Rome, the Harvard teachers were following, no doubt, an English tradition, but it was one of dubious excellence. Even in a professional school of law a greater encouragement of the comparative method would be appropriate. Furthermore, the tutorial and collegiate system of Oxford had merits not easily attainable in a university without colleges. Also, the catechetical method in use at Harvard required for its fullest usefulness small classes and many professors of eminence. They are at Harvard embarrassed by their very success, and have to face the problem of multiplying their teachers without decreasing their intellectual quality. Here the lecturer spoke feelingly of the welcome extended to him at Harvard as a representative of the English system of tuition, and then turned to consider what Oxford could learn from America.

The first lesson was one of "immense encouragement" to be derived from the demonstration that English Law could be taught by university professors "with almost unlimited success." This teaching, "by a curious paradox," was far older in America than in England, and the condition at Harvard was what might have been in England if Blackstone had been followed by a line of succeeding professors as eminent as himself. The merits of the Harvard catechetical system should also be taken to heart. The most that could be said in candid criticism of this system would be that its effect might be enhanced by supplemental lectures of the kind in use here. The eminent expositors of law and legal theories at Harvard were too admirable as teachers to make us easily submit to their somewhat exclusive practice of catechetics. But this practice was so admirable that some effort should be made here to induce students to perform their part. The difficulties involved in this were decried upon by the speaker with inimitably telling humor, and then he added that the

students themselves ought to find a way to create societies for the formal hearing of legal arguments, although such a scheme brought us close upon the line dividing a professional from an educational school.

Another question, as to the possibility of creating at Oxford a school which should be at once professional and scientific, was then raised. Undergraduates going in for the Jurisprudence School were still in the educational stage, but B.A.'s reading for the B. C. L. examination were in the position of the students of the Harvard Law School entering upon the actual profession of the law. After a passing tribute to Profs. Holland and James Bryce, the able organizers of the admirable Oxford B. C. L. examination, Prof. Dicey called attention to the fact that candidates for the B. C. L. rarely resided at Oxford, and did not form a class to whom post-graduate instruction could be given. He suggested possible changes which might keep in residence "a small but select body of earnest students to read for the B. C. L." Could this be achieved, we should, he declared, have laid the groundwork of a school which might combine with the excellencies of Harvard the special virtues of the Oxford method.

In closing, the speaker dwelt upon the wonderful enthusiasm kindled in the students of the Harvard Law School. The School was greater than the method, and the teachers were greater than the School.

LOUIS DYER.

THE DUKE DECAZES.

PARIS, May 18, 1899.

M. Ernest Daudet, brother of Alphonse Daudet, devotes himself chiefly to historical labors, in the modern field. The family of the Duke Decazes, the minister of the Restoration, has allowed him to use the Duke's papers, and with the help of these inedited documents M. Daudet has been able to publish an interesting work, under the title of 'Louis XVIII. and the Duke Decazes—1815 to 1820.' The documents which he used are preserved at the Château de la Grave, near Libourne, where the first Duke Decazes began to assemble them after he had fallen from power. The great favorite of Louis XVIII. (for Decazes was a favorite as the first Duke de Luynes had been a favorite of Louis XIII.) had intended to write his memoirs; he never realized this intention, and left the papers which he had collected during a period of twenty years to his son, the second Duke, whom we saw Minister of Foreign Affairs from 1873 to 1877.

The jewel of the collection preserved at La Grave is the correspondence of Louis XVIII. with his minister from 1816 to 1822. There are no less than two thousand autograph letters of the King to his minister, which constitute truly a history of the reign, written from day to day, during that period.

"Successively," says M. Daudet, "Minister of Police, Minister of the Interior, President of the Council, Decazes, in order to gain the confidence of the King, thought to keep him acquainted every day with every affair, even the least important. He sent him every morning, in a portfolio of which each of them had a key, the letters and reports which reached him from all sides. After having taken cognizance of them, the King returned them to him, with a letter, sometimes long, sometimes short, in which he exercised his wit without reserve on men and things."

This explains in a certain way the character of the affection which he felt for Decazes. He had discovered him to be a safe man, spoke to him as to himself, and found in him a very intelligent and sympathetic echo. He sometimes wrote to him three times a day. The King was excessively witty and mordant; he felt the necessity of a confidant to whom he could say without danger all the clever things that came across his mind. The character of Louis XVIII. is a very complex one. The part which he played in the years that preceded the Revolution is certainly not to his credit. He was one of the enemies of Marie Antoinette; he was engaged, as Count de Provence, in many intrigues—among others in the conspiracy of the Marquis de Foudras, the true object of which has remained a mystery to this time. When the Revolution broke out, he emigrated. He left a short account of his flight, which was more fortunate than the flight of the unfortunate Louis XVI. to Varennes. The Count de Provence crossed the frontier with D'Avary, who remained with him during the long years of the emigration, and whom he made Duke d'Avary when he returned as King of France. On the death of the son of Louis XVI., the Count de Provence assumed the rôle of Pretender. He lived in exile, surrounded by a small court, without taking any part in the great events which changed the face of Europe.

Decazes, who was to become his great favorite, was born in Libourne and educated at Vendôme; he became Secretary of Madame, the mother of the Emperor Napoleon, a place which must have been a sinecure. Madame received every year 480,000 francs from her son, and young Decazes kept her accounts. He became Secretary to King Louis, the brother of Napoleon, when Louis became King of Holland. In 1810 he was named Councillor of the Court of Paris. His relation with the Bonaparte family continued; he was very agreeable and very handsome, and a great favorite of Queen Hortense and of Pauline Borghese.

During the Hundred Days, he received an order to retire to La Grave. He returned to Paris when Louis XVIII. was on the point of entering the capital. The King was kept at Saint-Denis by Fouché, who wanted him to confide to him the two ministries of the Interior and of the Police. Decazes had an interview with Fouché, and accepted the post of Prefect of Police, whose functions were particularly grave and difficult at the time. The foreign armies occupied Paris, the allied sovereigns were expected, the King was coming back with only the remnant of his guard. The new Prefect of Police undertook to guarantee the security of the sovereigns, to reinstate all the authorities which had been dispersed during the Hundred Days, to send the imperial troops across the Loire, to dissolve the Chambers, composed chiefly of Republicans and of Bonapartists. He had no other force at his command than the National Guard of Paris. He closed the doors of the Palais Bourbon, and succeeded in preserving order in the capital. The King made his entry on the 8th of July, through the Faubourg Saint-Denis. The enthusiasm was universal; the King posed as "a father happy to find himself again among his children."

The cabinet which he chose was formed of Talleyrand, Minister of Foreign Affairs; Marshal Gouvion Saint-Cyr, Baron Louis, Pasquier, and Fouché in the Ministry of Po-

lice. M. de Vitrolles was Secretary of the Council. Vitrolles and Fouché tried to prevent Decazes from working directly with the King and seeing him. They did not succeed, and as soon as Louis XVIII. saw the new Prefect of Police, he was charmed with his manners, his intelligence, and his moderation. The King was himself very moderate, in comparison with the Count d'Artois, his brother, and the most prominent Legitimists, who had been greatly infuriated by the return of Napoleon and the events which followed it during the Hundred Days. They breathed vengeance, and found a complaisant instrument in Fouché, who was always ready for any sort of work. On the 24th of July, Decazes received from Fouché an order to arrest many people, among them Lavalette, who had been Director-General of the Post-Office, Marshal Ney, Bertrand, Rovigo, Labédoyère, Cambronne, Pajol, and many other officers of the imperial army. The same letter of Fouché's ordered Decazes to expel from Paris fifty-five persons whose presence was supposed to be dangerous; among them were Marshal Soult, Exelmans, Bassano, Carnot, Davoust, Benjamin Constant, Marbot, Réal, Montalivet. These lists were made up by Fouché, who had received full powers from the Council. Decazes, with the approbation of the King, did all that was in his power to help some of these persons to leave France so as not to be arrested. Montalivet was a personal friend of Decazes, who asked the King to strike his name from the list. "If not for my feeble services of the day," said he, "let it be for my future services." "You are a good fellow," said the King; "embrace me," and, laying the ministerial list upon his table, with his own hand he struck off the name of Montalivet.

Decazes also obtained the pardon of Benjamin Constant, who was on the list for proscription. He was not so fortunate with those who were on the first list, and who were to be arrested. Lavalette, Ney, Labédoyère might all have escaped from France: they had been advised on many sides that the order for their arrest had been given. They all remained in France. Ney was arrested in Auvergne.

"When the news came to Paris, the emotion was great in the government. The King said to me, 'Unfortunate man, to allow himself to be arrested. He will do us more harm than he did on the 15th of March by going over to Bonaparte.' This sentiment was shared by the Ministers, by all the enlightened friends of the dynasty and of the constitutional government. A sentiment inspired by the desire of vengeance was dominant in the party which pretended to be the exclusive representative of the monarchy and which demanded scaffolds. I had," continues Decazes, "on my arrival at the Prefecture and the Conciergerie, a conversation with Ney, in which he spoke to me with a sort of effusion, saying with what a desire to do his duty he had left the King, and how afterwards, fascinated by the memory of so much common glory, and carried away by his troops, he had forgotten his oath and the flag which, in too energetic terms, he had sworn to defend."

Ney had said to Louis XVIII. that he would bring him back Napoleon in an iron cage. The King did not desire the death of Ney. Reminding Decazes of the words, "I will bring him back in an iron cage," he added: "He left my room faithful to me; he had the intention to be so to the end. But the situation was stronger than his soul." Ney's execution was a very great error. The pathetic drama of his trial before the House of Peers and of his death in the garden of

the Luxembourg made an immense impression not only in France, but in Europe. The ultra-royalist party felt triumphant and began its campaign against the moderate royalist party. Fouché, who had never been liked or respected by the King, and had been imposed on him by the Allies and by Talleyrand, was dismissed after the general elections. After him, came Talleyrand's turn; he was replaced by the Duke de Richelieu, who, fortunately, was a man of noble character and of moderate views. Louis XVIII. pressed Decazes to accept the Ministry of Police in the Duke de Richelieu's cabinet.

The fragments of the memoirs of Decazes given by M. Daudet come, unfortunately, to an end when Decazes entered the cabinet. To follow him afterwards, Daudet found only notes, but these have much interest. The Chamber of 1816 has been styled the *Chambre introuvable*; it was ultra-royalist. Decazes was in constant fear of its imprudence and its violence. "The ultras did constant violence to the generous intentions of Louis XVIII.; they obliged him to proscribe, notwithstanding the testament of Louis XVI., the judges of Louis XVI." Every incident became a weapon in their hands. When the Chamber heard of the escape of Lavalette, it fell into a great rage. "Louis XVIII. had predicted it. On the news of the escape, he said to me: 'You will see that they will say that we helped him.'" The ultra-royalist majority of the Chamber had for its irresponsible leader the King's own brother, the Count d'Artois, and the Count d'Artois had with him the Duchess d'Angoulême, the Duke d'Angoulême, and the Duke de Berry. The opposition which the King met in his own family and in the court was the great calamity of his reign and a source of perpetual disquietude to him. Decazes was his confidant. The King foresaw the dangers of the monarchy when the royal power should pass from his hands into those of his brother. By degrees, he succeeded in winning over to his views the Duke d'Angoulême, but the Duke was a very ordinary man and did not have much influence.

M. Daudet's volume is a long account of the intrigues of the Count d'Artois and of his partisans, of the divisions of the monarchic party, of the perpetual attempts made by the ultras against the liberties of the people and against the Constitution. The ultras stopped at nothing—they even tried to use the influence of the foreign sovereigns in favor of their views; but in this they never succeeded. Decazes advised the King to dissolve the Chamber; the King took his advice, which was also that of the Duke de Richelieu. The *Chambre introuvable* was dissolved on the 5th of September, 1816, after having done as much harm as could be done in a short time. In the rest of his volume, M. Daudet gives a very interesting account of the struggles of Decazes with his political adversaries, with Chateaubriand, with Talleyrand, who could not console themselves for not being in the cabinet and in the King's favor. Decazes, who had become the daily adviser and friend of the King, remained in power till 1820, when the Duke de Berry was assassinated. This event gave his enemies an occasion for hurling him from power. Chateaubriand dared to write: "Les pieds lui ont glissé dans le sang." The cry of the extreme Royalists against him was so loud that, much to his regret, Louis XVIII. had to sacrifice him. A new cabinet was formed, and Decazes retired for a time to La Grave.

Correspondence.

"YOU-ALL."

TO THE EDITOR OF THE NATION:

SIR: In your issue of May 25, I notice a letter from Matthew F. Steele of St. Paul, discussing the use of "you-all" and "you-uns" in the South. I had not seen the review which called out the letter, but, having read it now, I beg to answer the question with which it ends, and to question the answer given by Mr. Steele.

It is an odd fact that different observers, in all good faith, so often reach different conclusions in regard to the same things, but I have studied the question of "you-all" and "you-uns" so carefully that I cannot help feeling sure of my own accuracy. Mr. Steele may never have heard an educated person use "you-all" in the singular, but I have heard it constantly in the every-day speech of cultivated people who would not have used it in formal conversation or in writing. Exceptionally precise people might never use it in any case, but in the ordinary give-and-take of greeting and gossip it is as characteristic as the accent of the South.

Mr. Steele states that when a Southerner says, "How are you-all this morning?" he means, "How are you and your wife and children?" But suppose there is only one of you? In my experience the greeting would still be the same, even among educated people, and, when it comes to the uneducated, I cannot see in what part of the South Mr. Steele has lived that he has not heard either "you-all" or "you-uns," in the singular, in constant use. "Go 'way, you-all's in my road," a cross cook will warn you when you go into her kitchen, even though you are not attended by your wife and family, and a negro or a poor white will scarcely speak a sentence without intensifying and broadening the sweep of his "you's," when there can be no question that he is addressing one person alone. "You-all's hat" and "you-all's coat" are not usually common property.

It is true that I was not born in the region where "you-all" is in use, but perhaps I have not been a worse observer on that account. The expression rang oddly in my ears when I first heard it; I expected to make use of it in writing, and I watched carefully in order to be accurate. As for "you-uns," I have been familiar with it always. It is seldom or never heard in that part of the South where "you-all" prevails, and, as Mr. Steele suggests, it is distinctively a "Cracker" expression. It is never used by cultivated people, no matter how carelessly they speak, but it may be heard among the "Crackers" and their brethren—that is, among the illiterate whites of almost pure English descent—all the way from Florida, through Georgia and the mountain regions of the Carolinas and Tennessee, to Kentucky, Southern Indiana, Southern Illinois, Missouri, and as much farther as the emigration of poor whites toward the Northwest, in the days of slavery, chanced to carry it. I have heard it in California, where it has been familiar since '49, and I would risk a good deal on the chance of hearing it to-day in the Klondike, after a little patient search. It is being educated out of use, though; except in isolated, primitive regions like the Tennessee and Carolina mountains, where Miss Murfree heard it and recorded it for all time.

And now there is a question which I should like to ask. Where do the two expressions come from? "You-uns," as I have already said, is heard among people of pure English descent who use many archaic expressions dating back to Shakspeare and the earlier English writers; but has any one ever seen "you-uns" in early English? "You-all," I am inclined to think, has come in with the French influence spreading from New Orleans and the Huguenot settlements in the Carolinas; but I am not certain, for it is used in Virginia, too, and I should like to know.—Respectfully yours,

MARY TRACY EARLE.

NEW YORK, May 29, 1899.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, Mr. Matthews, is correct in regard to "you-all" and "we-all," and correct also in his surmise as to "you-uns." "We-uns" and "you-uns" are confined to the descendants of those English emigrants who drifted south from Pennsylvania, through the valley of the Cumberland, to the western slope of the Blue Ridge. They are to be found in Miss Murfree's mountain country, and in northern Alabama. On the eastern slope of the Blue Ridge and in the Piedmont region the locutions are seldom heard. But those who use them never make the mistake of applying them to one person. All forms of real dialect are amenable to a grammatical construction of their own, from which there is no haphazard variation.

I saw somewhere, not long ago, a discussion of "so long," the phrase of farewell, which, preserved by the negroes, has had a revival in all parts of the country. Is it not a survival of Shakspeare's "Sola"? It certainly is, if "Sola" itself originated from "So? la!" as thus: "Well, I must be going." "So? la!" an expression combining regret, surprise, and farewell.

J. C. H.

ATLANTA, GA.

TO THE EDITOR OF THE NATION:

SIR: I think it may be said, without fear of contradiction, that no educated Southerner ever uses "you-all" as applied to one person. On the other hand, I think it is perfectly possible that the illiterate, particularly the negroes, may use "you-all" for both singular and plural. From Mrs. Louise-Clarke Pyrenelle's charming and pathetic little story of "Diddle, Dumps and Tot," which, by the way, I would recommend to all our Northern friends who would like to know something of the old Southern plantation child-life, I think I can cite an instance of its use in the singular. Daddy Jake is telling the children how the peafowl came to have "eyes" on his tail: "Well, yer see, de owl one time wuz in his kitchen er cookin' uv his dinner, wen hyear come de peafowl er struttin' by." The owl wishes to "take him down," so he calls out:

"Whooo cooks fur you-oo-a?
Whooo cooks fur you-oo-a?
I cooks fur my folks,
But who cooks fur y'all-ll-ll?"

Daddy Jake continues: "Now he jes done dat out'n pyo' sass'nness, caze he knowed de peafowl felt hiss'f 'bove cookin'."

The whole context here seems to indicate that "you-all" is intended to apply individually to the peafowl, and not to him and his "fo'ks."

It may be of interest to state that, while in this neighborhood "you-all" is used by both the educated and the uneducated, the

latter more commonly say "all-you," with the possessive adjective "all-your." So also "all-we"; but I don't remember to have ever heard "all-our." I well recollect how I was struck with the novelty of these expressions when, some years ago, I moved to this place from lower Maryland, where the negroes and "poor white trash" say "we-dem" and "you-dem."

I am puzzled to know the origin of this enclitic particle *-dem*; whether it is the third person plural *dem* for *them*, or whether it might not have been started by some strippling who, coming home from college and wishing to show off his Latin, began jocularly to tack on to his pronouns the strengthening particle *dem* of *idem* (=to-dem). This would be probable only in case "we-dem" and "you-dem" should prove to be localisms. Whatever may be the origin of this *dem*, it is a curious illustration of what seems to be a psychological want felt by some peoples for a particle to strengthen the pronouns of the first and second persons plural. This may be seen in the Spanish *nosotros* and *vosotros* (literally, *we others* and *you others*), and to some extent in French when *nous* and *vous* are followed by a noun in apposition. For instance: *nous autres modernes*, *vous autres Français*.

I should like to hear from some of your correspondents as to whether "we-dem" and "you-dem" are current elsewhere in the South.—Respectfully,

SAMUEL GARNER.

ANNAPOLIS, MD., May 28, 1899.

TO THE EDITOR OF THE NATION:

SIR: The present writer is a diligent student of the mother tongue, both as "she is spoke and wrote," and looks into every new species of colloquialism, dialect, and patois that comes under his eye. Situated as he is, surrounded by darkies of high and low degree, and in occasional touch with the "Cracker," he is conversant with many of our linguistic oddities that charm or madden the ear.

"You-all" is used by people of the utmost refinement. In truth, I venture there is not an infallible exception in our Sunny Land. As for myself, I contend for its recognition and establishment as good form, on the ground of its precision, distinguishing unmistakably the "you" of an addressed individual and the "you" of addressed collectiveness. The suffixing of "all" saves separate inquiries after "his sisters, his cousins, and his aunts," while it takes sufficient cognizance of them. There is a novel called "At You-All's House," I think. This possessive use is confined to children, white and black, refined or otherwise. If used by adults with much frequency, I have not noticed it.

I make an acknowledgment of guilt. My own rapidity of speech (and this is a common failing with many of us, due, maybe, to our Gallic strain) leads me often into saying "yaw!" or something near akin thereto. This is execrable, I know, and cannot be shrived away by even the editor of the Dictionary of Americanisms as confessor.

As for "you-uns," it is in use only among the most isolated rural illiteracy, and with us scarcely heard. It is said to be extant in the mountain settlements of the Blue Ridge States.

Very respectfully yours,

JOHN MILTON DABNEY.

MATHERVILLE, Miss.

TO THE EDITOR OF THE NATION:

SIR: The answer to your question as to the strict meaning of "you-all" given in your issue of May 25 being the reverse of what I expected, and further, the expression "you-uns" being entirely repudiated, I send you illustrations of these peculiar forms which may be of service.

While on duty with Burnside's Ninth Army Corps, in East Tennessee, in 1863, I found among the many peculiarities of native speech "you-uns" and "we-uns." Upon coming East and joining the Army of the Potomac, in service in Virginia, I heard instead of "you-uns" the vernacular "you-all." In a desperate charge against the field defences of the Fifth Corps, at Bethesda Church, the Confederate line crossed a broad, open clearing without firing a shot, arms at "right shoulder shift," in a style that compelled the applause of their enemies. Exhausted by the distance and pace, to say nothing of the adverse fire, they entered our lines only as prisoners. As one of their officers was hurried over the parapet with, "Come along, Johnny!" he burst out indignantly: "What you-alls call we-uns Johnny fo'?" This plural would seem to imply a singular "you-all."

While the Ninth Corps lay at Burkesville, after Lee's surrender, a delegation of neighboring farmers came to the headquarters of the Second Division, where the spokesman addressed General Griffin: "Giner'l, we jest come down, suh, to see if you'd be kyind enough to fu'nish us with a guyah'd, suh; you-all's men are treatin' we-uns ridik'lus, suh, ridik'lus!" Here is the possessive noted by your correspondent. Possibly this gentleman may rate the East Tennesseans as "Crackers," in which case their use of "we-uns" proves nothing. S. W.

A COUNTRY POLICE.

TO THE EDITOR OF THE NATION:

SIR: The lawless condition of the outlying districts of our country, as exemplified not only in the Georgia lynchings and accompanying atrocities, and the Idaho riots, but also in the daily life of most of the small villages and towns everywhere, seems to call for some more effective reprisal against the offenders than the existing laws of the various States now offer. With these offences in mind, one cannot help instinctively turning to the splendid material, some resting on their laurels, others actively engaged, regulating the conduct of the citizens of our new possessions.

Through the testimony of eye-witnesses, we undoubtedly have in the volunteer in the Philippines and in Cuba as good a subject for a national police as any country can offer. His native common sense, intimate appreciation and support of a system which he thinks he is perfecting by his coöperation, once he believes in the honest purpose and conduct of the system, make him too valuable a trained public servant to allow his splendid force to dissipate through inactivity. Our various States, inasmuch as it cannot without constitutional changes be made national, should not lose the opportunity of turning a part at least of this material into a means for a broader and more effective policing of the country. The picture of two mounted police recruited from the kind of men who composed the "Rough-Riders" patrolling the unprotected districts of the country, is in itself

suggestive of an air of security that would bring relief to every peaceful citizen, while the concentrated stand of a few determined men of this kind against a body of lynchmen would awaken enthusiasm abroad and undoubtedly act as a most effectual deterrent.

Looking from the window of a house in New England, the writer has seen seven or eight lazy, unlicensed tramps lined up along a convenient fence, waiting for supper-time, in order more effectually to exploit the place for an evening meal. And what counterforce did the laws of the State offer? Nothing except the conditional services of a shiftless, cowardly sheriff or his drunken assistant. Naturally, having intimidated the inhabitants into supplying a good meal, the miscreants turned up at the lockup and were provided with a night's accommodation; the brave Falstaff pocketing his fee for each one.

With a State police formed out of the very material which now forms, perhaps, part of its disreputable element, we might at least draw some tangible good for home defence and add a saving grace to our war of aggression.—Yours truly,

EDWARD BROOKS.

STUDLAND, WARRENHAM,
ENGLAND, May 23, 1899.

THE PROOF-READER AT LARGE.

TO THE EDITOR OF THE NATION:

SIR: The errors in modern printed books are at times curiously like those that are to be met with in ancient written ones. Suppose that one has been worrying over a multifariously garbled text of a Greek author, and takes up for diversion that most modern book, Mr. Kipling's "The Day's Work." It is with a certain melancholy pleasure that he notes at p. 323 the obvious error "We'll lay by till day" (for "we lay," etc.), followed four lines below by "she'll be fillin' aft" with the "ll" rightly placed. In the lines entitled "To the True Romance," as printed in the Messrs. Appleton's edition of "Many Inventions," and also in their edition of "The Seven Seas," the words "Beyond the bounds our starring rounds" are fairly meaningless to me. Has the form "starring" (meaning the solar system) been robbed of a "gemination" and a hyphen?

As I am on the subject of Mr. Kipling's text, I venture to call attention to a delectable version of "The Last Chantry" in Mr. Stedman's 'Victorian Anthology.' "Ho, the ringer and right whale, And the fish were [for "we"] struck for sale" is, perhaps, not very serious. But what shall we say to "Stringing ringing spendthrift and the fulmar flying free"? I am reminded of an edition of Shelley in which we read in "The Cloud": "And wherever the heat of her unseen feet"; which a friend of mine capped from another edition with "may have broken the woof Of my tent's tin roof."

I am, sir, very truly yours,

MORTIMER LAMSON EARLE.

HARVARD COLLEGE, June 8, 1899.

Notes.

Small, Maynard & Co., Boston, have taken over from the dissolved firm of Lamson, Wolfe & Co. four books of verse by Elias Carman, including 'Low Tide at Grandpré' and 'Behind the Arras,' which are now out of print, but will be immediately reissued. They announce further 'The Pedagogues,' a novel

by a new writer, Arthur Stanwood Pier, who has found a subject for study in the Harvard Summer School.

G. P. Putnam's Sons will publish in the early autumn 'Famous Homes of Old England and their Stories,' edited by A. H. Malan, with nearly 200 illustrations (mostly full-page, royal octavo) for the twelve homes selected. Several of the writers are women.

The Clarendon Press, Oxford, will publish at once the second series of Dr. Edward Moore's 'Studies in Dante,' and ere long a large-type reprint of the 'Divina Commedia' from Dr. Moore's "Oxford Dante."

'Landmarks in English Industrial History,' by George Townsend Warner; 'A Source-Book of American History,' by Prof. Albert Bushnell Hart of Harvard; and 'Man, Past and Present,' by Prof. A. H. Keene, are soon to appear with Macmillan's imprint.

Little, Brown & Co., Boston, announce 'Kate Field: A Record,' by Miss Lillian Whiting.

Among seasonable reprints are two volumes of travel by Mrs. Anna Bowman Dodd, 'Cathedral Days: A Tour in Southern England,' and 'In and Out of Three Normandy Inns,' both illustrated, and now published by Little, Brown & Co., Boston; the first being in its second decade of popularity.

Mr. Andrew Lang's 'Myth, Ritual, and Religion' (Longmans) passes to a new edition, in two volumes, that it may form part of the publishers' "Silver Library," and also because it has been long out of print. In the meantime has appeared the author's 'Making of Religion,' to which, as embodying his maturer thought, the earlier work is made to conform by excision and rewriting; but his main thesis he still adheres to. Some controversial matter has been stricken out, but more has been introduced in the new preface, nearly half of which is given to a discussion of the God Abone, as "evidence for an early pre-Christian belief in a primal Creator, held by the Indian tribes from Plymouth . . . to Roanoke Island . . ." Here Mr. Lang stands by William Strachey, gent., though "a manifest plagiarist" who made insertion in the work of "a detected liar," to wit, Capt. John Smith.

From Macmillan we have volumes III. and IV. of the commendable "Eversley Edition" of Shakspeare presided over by Prof. C. H. Herford, with historical and critical introductions and footnotes.

The work of many hands is 'Republic or Empire? The Philippine Question' (Chicago: The Independence Co.). Mr. Bryan and Mr. Carnegie, ex-Senator Edmunds and Senator Hoar, President Jordan and Carl Schurz, Samuel Gompers and Charles Francis Adams, are some of the public characters whose expressions against throwing our patrimony to the dogs are here grouped, with portrait and other illustrations. Both the Bacon and the McEnery resolutions are printed in the publishers' preface; and the volume forms a very convenient repository of arguments which leave little to be said on the burning question of the hour. The honor of being represented here will, in time to come, make brighter not a few reputations which have suffered in other connections.

A collaboration in the proper sense has produced the two-volume 'Life of Gladstone,' edited by Sir Wemyss Reid (London: Cassell; New York: Putnam). The laboring oar has been assigned to Mr. F. W.

Hirst, for the political narrative; Canon MacColl presents Gladstone the Theologian; his oratory is estimated by Mr. H. W. Lucy, and so on. There are numerous illustrations of varied quality; many curious. Here, for instance, is Leech's Lord John Russell chalking his No Popery on Wiseman's door and running away. For reference this work, which is continuously paged, is to be prized, especially as it is indexed.

We have been slow to notice the sumptuous yet admirably refined and enjoyable edition, in the original Spanish, of 'Don Quixote de la Mancha,' of which vol. I., comprising the First Part, with notes and an introduction by James Fitzmaurice-Kelly and John Ormsby, also in Spanish, has appeared from the press of David Nutt, London (New York: G. P. Putnam's Sons). We reserve until the appearance of the concluding volume more extended notice of this welcome work, whose significance is due largely to a judicious collation of the text with that of the earliest editions.

We have from the Macmillan Co. a translation of Dr. Ahton Menger's work on 'The Right to the Whole Produce of Labor,' by M. E. Tanner, with an introduction by Prof. H. S. Foxwell. This treatise is too well known to students of economics to need description, and it is enough to say that it is essentially an historical and critical examination of Socialism. Prof. Foxwell's introduction is very long, being devoted to an account of the English socialistic writers, and he adds an equally long appendix containing a bibliography of this school.

The Philadelphia Free Library of Economics and Political Science publishes a 'Handbook of Labor Literature,' compiled by Helen Marot. While there may be some advantage in classifying this literature, the attempt to characterize a book in a dozen words is not likely to produce satisfactory results, and in this case we observe that some of these characterizations are altogether incorrect. Such a handbook is really nothing more than an index, inferior in most respects to the library catalogues.

The well-known publishing-house of F. Bruckmann in Munich has just issued a work entitled 'Das literarische München,' by Dr. Paul Heyse. It consists of portraits with brief biographical sketches of twenty-five of the most prominent literary men now residing in the Bavarian capital. The portraits are drawn from life by Paul Heyse, who wields the artist's pencil with the same skill as the poet's pen, and are admirably reproduced in the exact size of the original drawings. All are of Germans except our countryman E. P. Evans and the Norwegian Björnson. It is to be regretted that Paul Heyse, who is by far the most distinguished representative of "Literary Munich" at the present time, was too modest to include his own portrait, which ought to have figured as a frontispiece.

Prof. Dr. Julius Dieffenbacher's 'Deutsches Leben im 12. Jahrhundert' (Leipzig: Göschen) is a succinct description of the public and private life of the Germans in the twelfth century, embracing social intercourse, domestic affairs, courts of justice, castles, cities, methods of furnishing, heating, and lighting rooms, military organization, navigation, hunting and other sports, festivities, forms of salutation, superstitions, etc. The contents of the little volume, with its thirty illustrations in the text, serve to elucidate the two great epic poems of that

period, the 'Nibelungenlied' and 'Götteran,' and explain many things which might puzzle the ordinary reader.

The account of Kamchatka by Mr. G. E. H. Barrett-Hamilton, in the *Scottish Geographical Magazine* for May, is noteworthy for the condensed history of the exploration of this land lying "at the back of godspeed," and the bibliography of works and articles upon it. A region "still in all the violent activity of a vigorous volcanic youth," and where fog and storm reign almost perpetually, Kamchatka is attractive only to the naturalist and to the anthropologist; to the former, largely because of the intermingling of Arctic with southern forms. "The weird drawing cry of the Arctic fox and the tapping of woodpeckers salute the ear in strange incongruity, while the reindeer browses contentedly in a country which supports cattle and wild sheep." The natives, as a separate race, whose "mild and primitive habits and strange dwellings are of the highest interest," are fast passing away "under the combined influence of intermarriage with the Russians, of drink and disease." The best part of the peninsula is the middle region. "a land of fish and fowl in abundance, of bears and berries, and richly furred sables, of birch and larch woods, of peaceful, well-watered meadows, and hot springs overshadowed by awe-inspiring live volcanoes; a land full of romance and variety, where every nook and rock and corner is peopled each by its own presiding spirit in the imagination of the simple Kamchadale aborigines." Some attractive illustrations and a map accompany the article.

Recent numbers of the *Times of India* contain an interesting series of articles on a journey in western Tibet. This country is not a desert waste, but a land of superb Alpine scenery, crowned with mountains of eternal snow, studded with beautiful green valleys, and abounding in monuments of Buddhist antiquity. The town of Leh on the Upper Indus is a veritable Babel of high Asia. Here the caravans from China and Russian Turkestan meet those from Bokhara and the Punjab and effect the exchanges of a large and prosperous trade. The Tibetans are interesting for many things: two very palpable facts are that they almost never bathe, and that polyandry prevails among them. The polyandry is of the same kind as that which is so notable in the 'Maha-bharata,' to wit, the woman is married to three or four husbands; but those husbands are brothers or near of kin, and a single one among them acts as the real head of the family. One of the principal objects of this journey was the investigation of the famous Himalayan 'Life of Christ,' about which so much was said a few years ago. Careful inquiries of the abbot of Himls, the principal monastery of western Tibet, proved that the alleged "discovery" of Notovitch was naught else than an impudent forgery. Further particulars may be found in the number for April 1. page 292.

'Aboriginal Carvings of Port Jackson and Broken Bay,' by W. D. Campbell, forms No. 1 of the Ethnological series of Memoirs of the Geological Survey of New South Wales. It treats of the rock-carvings and cave-drawings which abound in the coastal districts north and south of Sydney. The numerous bays and creeks among wooded hills in this neighborhood provided unusual facilities for the sustenance and development of the abori-

ginal population, while the intricate waterways afforded protection and a means of communication. The tribes became numerous and powerful, individually robust and of large stature, and their leisure evidently enabled them to devote themselves to ceremonies and amusements. The surfaces of soft, fine-grained sandstone were extensively availed of by them for the depiction of animals and fish, weapons, deities, ghosts, and dances, and picture-stories of combats and incidents of the chase. It is remarkable that while so little attention was paid to habitations or personal comfort, so much labor should have been devoted to cutting these figures, sometimes sixty feet long, in the solid rock. The localities selected for these carvings include the tops of cliffs, the table-lands, which are here about 700 feet in height, and the ridges of hills along which the natives travelled. The caves and rock-shelters ("Gibber Gunyas") were utilized for drawings in charcoal, red ochre, and other substances. The evidence thus far collected is insufficient to fix the age of either drawings or carvings, although many of them were probably made centuries ago. Much of their meaning, too, has been lost with the rapid disappearance of the natives, as no attempt was made in the early years of settlement to put on record the folklore of these races. The memoir is illustrated by twenty-nine photolithographs, and a map of Cumberland County, showing the locality of the carvings.

In the last issue (vol. VI., No. 1) of *Euphron*, Hedwig Wagner establishes interesting relations between the poems of Tasso and the Norse heroic legends. Tasso's long sojourn in Northern Italy, whose aristocratic families prided themselves on their Germanic descent, and his early familiarity with the historians of Germanic races, seem to have awakened in him a sympathetic interest in the heroes and heroines of the barbarous peoples of the North. It was this partiality, according to the writer, which led the poet of the 'Jerusalemme' to endow two of his finest characters, Sueno (*che porta lo spavento negli occhi e in man la morte*) and Clorinda, with traits borrowed from historical and mythical beings in the 'Historia Danica' of Saxo Grammaticus.

It was a graceful act on the part of the Royal Geographical Society, and one which will contribute to prolong the "era of good feeling" between France and England, to confer its highest honors for this year on Frenchmen. The founder's medal is given to Capt. Binger for his explorations in 1887-'89 in the region included in the great bend of the Niger. The significance of the choice is heightened by the fact that he endeavored to extend the French control over territory claimed by the English. M. Foureaux, well known for his extensive travels in the Sahara during the past twelve years, receives the patron's medal. The only Frenchmen who previously to this time have received these honors are M. François Garnier, the traveller in Indo-China, and M. E. Reclus, the famous geographer.

The *Tour du Monde* announces the gift by a person, who desires to remain unknown, of five travelling scholarships for students, to be awarded by the Council of the University of Paris. To each successful competitor will be given \$3,000 for the actual expenses of his journey, \$100 to buy the books essential for a preparatory study of the route to

be followed, and a further sum of \$200 for the purchase of souvenirs of the journey. The total amount of the gift is \$16,500.

—In *Scribner's* for June, Theodore Roosevelt brings his "Rough Riders" to an end. It is a minute account of the doings of his regiment, and suffers from having been anticipated by the newspapers. It is impossible to escape the conclusion that he has avoided printing much that would have lent interest to his narrative. For instance, his account of the proceedings which led to the recall of the regiment from Cuba is extremely tame; we almost get the impression that "round robins" to generals, and letters from officers in the field demanding the recall of troops, are commonplace matters, such as are constantly met with in military literature from Cæsar to Jomini. The most interesting literary paper in the number is again the instalment of Stevenson's letters, which this time come from Davos-Platz in the Grisons. His letters often contain characteristic criticism of books, written *currente calamo*. For Zola (he was very fond of French) he says, "I have no toleration, though the curious, eminently bourgeois, and eminently French creature has power of a kind. But I would he were deleted. I would not give a chapter of old Dumas (meaning himself, not his collaborators) for the whole boiling of the Zolas. Romance with the smallpox—or the great one; diseased anyway, and black-hearted and fundamentally at enmity with joy." The mock-Horatian ode to G. Dew-Smith contains some good verses.

"Me, whether evil fate assault,
Or smiling providences crown—
Whether on high the eternal vault,
Be blue, or crash with thunder down—

with the classical anti-climax that follows, could hardly be improved.

—Among the illustrated articles in *Harper's*, perhaps the most readable is Dr. Henry Smith Williams's "The Century's Progress in Scientific Medicine"—one of a series to which we have referred before. We are still accustomed to contrast our happy therapeutics with those of Sangrado or the Chinese system; but we need not go so far either in time or space. The marvellous progress made in our own practice in a hundred years is quite enough. In running through the list of discoveries described by Dr. Smith, one is equally surprised at those which, it would seem, ought to have been known from the earliest ages, and those which are so recondite as to have rendered discovery impossible except at a late scientific period. That our fathers and mothers should not have been able to see through solid matter, or their physicians to detect bullets imbedded in their bones, seems natural enough; perhaps more natural than that we should be able to see our own skeletons. But that the procedure of "tapping the chest of a patient to elicit sounds," indicative of the condition of the interior, should have waited for discovery till the time of Napoleon, is hard to credit; when introduced, we are told, the profession was not easily convinced of its value. Auscultation and the stethoscope followed. Again, why should the pain-dispelling power of the vapor of sulphuric ether have remained unguessed, or at any rate unused, till the middle of this century? Antiseptics in surgery, too, sounds now like something that might have been hit upon at least before 1860, though we should not like to undertake to prove it. Of course any one can under-

stand that bacteria and bacilli were not to be seen behind every bush, and here we get into regions where the reader begins to lose his grasp of popularized medicine. We seem to be on the eve of discoveries which might revolutionize not merely therapeutics, but life itself. In view of the magical revelations of the last hundred years, nothing is any longer incredible, and the elimination of disease altogether suggests itself as the goal to be kept in view.

—The *Century* has an instructive and curious article on "The Tramp and the Railroads," by Josiah Flynt, who made the subject his own some years ago. In his view the tramp nuisance was, upon its introduction into this country—those whose memories go back forty years can recall a time when the word and the creature represented by it were both almost unknown in the United States—fostered by the loose discipline of the railroads. In other countries the tramp had had to travel by the help of his own legs, on the hard high road. He found here a country where not only were people permitted to walk along the railroad track, but good-natured brakemen and conductors were rather amused at "stolen rides," and apparently had no orders to prevent them. Consequently, the tramp rode instead of walking, and in a few years this country was the paradise of tramps. A vagrant could make his way without difficulty in a "side-door Pullman" from New York to San Francisco, or from Portland to New Orleans, living on the country, and, at the worst, ejected from one train only to take the next. Tramps are, according to Mr. Flynt, "discouraged criminals," and for discouraged criminals the railroad system of the country as it then was, offered something hitherto undreamt of—a locomotive haven of refuge. So the railroads multiplied the tramps, and rendered the general work of policing the country more difficult; tramps readily turning into criminals, and criminals back again into tramps, as opportunity offered and occasion required. But now a change has come. The railroads have begun to police their lines. They object to giving discouraged criminals free transportation, and, with the co-operation of the local authorities along the line, have begun to "corral" them, and hand them over to the authorities. Mr. Flynt has been invited by one line operating two thousand miles to inspect its system, and he pronounces it very good. Thus time brings about its revenges, and it begins to look as if the United States of the next generation might be, if not free from tramps, at least policed against them. But the railroads cannot do the whole work. What they do must be supplemented by a good country police, such as exists all over Europe.

—The *Atlantic* has an article on Robert and Elizabeth Browning, by Harriet Waters Preston, who complains of Mrs. Sutherland Orr's Life of the poet as being "neither a very thorough nor a very pleasing performance." The critic points out that it was by an accident of "astrological moment" that Browning was born outside the pale of the Established Church, and thinks that a similarity of early traditions had much to do with "the instinctive and complete comprehension of each other's mental processes which the Brownings always evinced." As to immediate heredity in the case of the poetess we are left more in doubt, for her mother "seems to have left no trace what-

ever upon her daughter's mind," while her father was a "degenerate." Properly speaking, neither Browning nor his wife "had any regular mental training"; Browning having had a little schooling in childhood, and some French, but "little beside." For one year he was a member of the London University, and was "well instructed in music, for which he had a great natural gift." He was a self-made poet, and so was she; and it is idle to generalize about them, for there will be no more such. One was a master of "the divination of individual human character as an organic whole"; the other was Mrs. Browning. We may "thank Heaven there will be no more Aurora Leighs," and even recognize an "hysterical note" that jars in her poetry as a certain other note—shall we say that of barbarism?—jars in his. But in the end we see that they must remain for ever among the *ames d'élite* of the nineteenth century—"true minds" actually married. "The Outlook in Cuba" is a paper by Herbert Pelham Williams, whose trouble is that he has Destiny on the brain, though he writes as if he knew more or less about the island. The true mark of the Destinarian is that he does not reason or argue about what it is best to do, but lifts up his voice and predicts. "We shall stay and take care of our own, and thus, by imperceptible stages, the present situation will glide into permanent control." Of course, there is an historical idea at the basis of this—we always have stayed in other cases; *ergo*, we shall stay in this case. But, stated in this way, the argument seems to have no attraction for the Destinarian, perhaps because he sees the opening which is given to the logical anti-annexationist to say, But this case is wholly different from the others. At any rate, he never discusses; as a prophet and the son of a prophet, he is above discussion. He describes and foretells. The Cubans, by the way, he describes as mainly liars, which, if true, cannot be considered as an argument in favor of their being taken into the United States. Liars should, we suppose, be "permanently controlled"—this is part of the white man's burden—but not naturalized. "Swapping lies" used to be considered good sport in the West, but the Cubans do not swap lies in the right way. They lie in a poor, slavish, inferior, Dago way, and not like free-born American liars. All Cubans, it seems, further, have "villainous faces," but good manners.

—The Graduate Club of Bryn Mawr College has recently published, through Macmillan, under the editorship of Dr. Maddison, a new edition of its useful handbook for graduates, first published in 1896. The revised edition is entitled "Handbook of British, Continental, and Canadian Universities," which is a modification of the original title, due to the fact that, since practically all European universities and colleges are now open to women, the information collected is of equal value to men. Students intending to work at a foreign university will find here many useful facts as to expenses, etc., that are not included in the *Minerva Jahrbuch*. There has been a decided advance, in the last two or three years, in the extension of privileges to women studying in Continental universities. In the case of German universities, however, the permission is usually restricted by the phrase "in special cases"; at some universities, *e. g.*, Strassburg, only "exceptional cases" are admitted, while at Halle a protest has been lodged by the doctors and

students attached to the hospitals against the action of the medical faculty in admitting women to the courses in medicine. It is to be regretted that, though even Berlin has recently admitted a woman to the doctor's degree in the philosophical faculty, Trinity College, Dublin, which is renowned for the quality of its teaching, still maintains its cautious conservatism. The reorganization of higher education in France receives, of course, special attention in the 'Handbook,' and it is noted that the recent arbitrary Russanizing of Finland may affect the position of women, hitherto unrestricted in Finnish universities; Russia, as is well known, having closed all its universities to women. The 'Handbook' is well and clearly arranged, and is encouraging reading for the friends of women's education; it should be of interest to many outside the field of regular student life. In not a few cases, the individual caprice of a Minister of Education or a professor can still exclude women; in more, they have no rights, and must put up with privileges, but the field of opportunity that now lies open is wide, and the fact that this 'Handbook' is no longer for the use of women only is an encouraging omen of the time when the question of "women's education," together with certain other "women's interests," will cease to have a separate and hence somewhat invidious existence.

—The Germans have, by the establishment of "Arbeiterkolonien," which offer to every man in need a temporary home and the opportunity to work for average wages, done much to counteract the evils of the tramp system, and especially to draw a line between the worthy and the unworthy poor. The central committee of these colonies, at a recent meeting held in Berlin, reported that there were now thirty-two such establishments scattered over the country, all managed by private societies and without Government aid; the majority under religious organizations. The city of Berlin has two colonies, and nearly every one of the Prussian provinces, as also the other larger political divisions of the Empire, such as Baden, Württemberg, Bavaria, etc.; the only exception being Mecklenburg. The largest is that at Wilhelmsdorf, near Barmen, under the leadership of the indefatigable Pastor von Bodelschwingh, who has about two dozen institutions of various kinds for the benefit of the poor and the needy under his control, with an income of one and a half million marks per annum, although there is not a cent of endowment. The number of working places in these 32 colonies is about 3,500, and up to the present time 105,000 colonists have been received. During the year 1898, the number admitted was 8,935. The applications have decreased in number during the present season, which is accepted as an indication that times have improved in Germany. These colonies are not for profit, but for the good of the poor, and it has been computed that each colonist costs 20 pfennigs a day in addition to what the colony gets from his labors, and that the 105,000 colonists have cost the friends of the cause an additional 8,100,000 marks. But as these men, if they had been allowed to tramp their way and beg, would have cost society at least 18,000,000 marks, there has been a financial saving of about 10,000,000. These figures were furnished at the Berlin meeting.

NEW LIGHT ON RUSKIN.

Ruskin; Rossetti; Pre-Raphaelitism. Papers 1854 to 1862. Arranged and edited by William Michael Rossetti. With illustrations. London: George Allen; New York: Dodd, Mead & Co. 1899.

Mr. William M. Rossetti has again dipped into the store of materials in his hands, and they have proved ample for the furnishing forth of another entertaining and valuable volume concerning his brother Gabriel and the Pre-Raphaelite movement. He has preferred to the method of autobiography or reminiscence that of "presenting, duly ordered and annotated, the solid documentary materials by which his reminiscences are confirmed, or on which they rest," and he has confined the annotation to the strictly necessary, so that he here provides us with the raw material of history, and his characters are portrayed for us in their own words.

The relative importance of the material of the book is reflected in the order of the three words of the title. We have something here additional to our previous information on the history of Pre-Raphaelitism, but nothing vitally important; we have a good deal of new matter about D. G. Rossetti, but it shows us the same Rossetti, brilliant, erratic, and untrustworthy, that we have already learned to know. But of John Ruskin we learn a deal that we had not known before, and the main interest of the book is to be found in the light it throws upon his nature and character. The matter of the volume is composed of letters, fragments of journals, and other manuscripts, to the number, in all, of 158, and of these 66 are letters of Ruskin, some of them of great importance, against forty letters by Rossetti and various smaller numbers by others, of whom Ford Madox Brown is one of the most important. In the author's own words, "Either Mr. Ruskin in relation to my brother, or my brother in relation to Mr. Ruskin, counts as the principal figure in this compilation"; and the first of these alternatives seems to us the true one.

It is always gratifying to know what an interesting man thinks of himself, and in one of these letters Mr. Ruskin has drawn his own character for us. We have "Ruskin by himself" at full length, and may well start with that as the basis of our picture, supplementing or correcting it by the testimony of others and of himself when not consciously engaged in self-revelation.

"You constantly hear a great many people saying I am very bad," says he, "and perhaps you have been yourself disposed lately to think me very good. I am neither the one nor the other. I am very self-indulgent, very proud, very obstinate, and very resentful; on the other side, I am very upright—nearly as just as I suppose it is possible for a man to be in this world—exceedingly fond of making people happy, and devotedly reverent to all true mental or moral power. I never betrayed a trust—never wilfully did an unkind thing—and never, in little or large matters, depreciated another that I might raise myself. . . . If you hear people say I am utterly hard and cold, depend upon it it is untrue. Though I have no friendships and no loves, I cannot read the epitaph of the Spartans at Thermopylae with a steady voice to the end; and there is an old glove in one of my drawers that has lain there these eighteen years, which is worth something to me yet. . . . My pleasures are in seeing, thinking, reading, and making people happy (if I can, consistently with my own comfort). And I take these pleasures. And I suppose, if my pleasures were in smoking, betting, dicing, and giving pain, I should take those pleasures."

This is Ruskin as he saw himself. Now let us have a *per-contra* of Ruskin as seen by a sturdily honest man, Ford Madox Brown. The scene is Rossetti's studio:

"There, while I was smoking a pipe in my shirtsleeves, 'enter to us' *Ruskin*. I smoke, he talks divers nonsense about art hurriedly in shrill flippant tones. I answer him civilly, then resume my coat and prepare to leave. Suddenly upon this he says, 'Mr. Brown, will you tell me why you chose such a very ugly subject for your last picture?' 'I, dumbfounded at such a beginning from a stranger, look in his face expectant of some qualification, and ask, 'What picture?' To which he, looking defiantly, answers, 'Your picture at the British Exhibition. What made you take such a very ugly subject? It was a pity, for there was some nice painting in it.' I, from his manner, coupled with the knowledge of his having praised the subject to Gabriel a few days before, being satisfied that he intended impertinence, replied contemptuously, 'Because it lay out of a back window,' and, turning on my heel, took my hat and wished Gabriel good-bye. Ruskin seemed by this time in high dudgeon, and would not look at me as I left the room. So much for my first interview. . . . It would appear that his vanity was hurt at my not hanging longer on his skirts, and vented itself in impertinence."

Of course, Brown was touchy and too sensitive to a real or fancied slight, but when we remember that he was the first to practise Pre-Raphaelite doctrines, a most conscientious artist, and, perhaps, the real founder of the school, and that Ruskin never once found occasion to mention any of his works in public, we do not wonder that this interview was never repeated, and that Ruskin became for him "the great prohibited," whose name he would not have mentioned. Add to this the other known fact, that Ruskin could never see any merit in the work of Millais after their personal quarrel, and we are led to think that while he was right in thinking himself "very resentful," he was singularly wrong in considering himself "just." Of justice or of moderation he is alike incapable. He is, as Brown called him before their meeting, "the incarnation of exaggeration." "I am very positive about a great many things," he says of himself; but he is superlative always. Miss Siddal's drawings are "better than Rossetti's," and some little Gothic reliefs at Rouen, "the finest things I know in all the world." How many different things we have learned, at different times, are the very finest! And how infallible he is, whether in praise or blame. "There was nothing noticed in the pamphlet that was out of the way. My business is to know all sorts of good—small and great, no matter how small—and to attack all sorts of bad, no matter how great. I am going to run full butt at Raphael this next time." You see he is quite sure that he knows this business of his.

That Ruskin was really "fond of making people happy," there is here much evidence to show. He was tirelessly kind and generous in his relations to Rossetti and Miss Siddal, supplying them with money and help, and doing it in the most delicate way; constantly striving, as in this very letter, to make it seem that there was no obligation, and that everything was done for his own pleasure and advantage. Some of the letters to Miss Siddal, in which he tries to convince her that she need have no hesitation in accepting all that he offers, and need feel bound to nothing in return, are entirely charming. And yet it is easy to see how he was continually "sticking pins into" Ros-

setti, as the latter phrased it. He felt that he must regulate all the affairs of the couple in whom he was interested; tell Rossetti what he must paint and how he must paint it; tell Miss Siddal just where she must go for her health, and decide whether or not Rossetti is to be allowed to join her. He thinks Rossetti a genius, and tells him so, but tells him also that his "taste is as yet unformed in verse"; asks him to "show me some things in color," yet lays down the law to him as a master might, perhaps, do to the humblest of his pupils. Here is his style on practical matters: "I don't say you do wrong, because you don't seem to know what is wrong, but just do whatever you like as far as possible—as puppies and tomtits do. However, as it is so, I must think for you—and first, I can't have you going to Paris, nor going near Ida, till you have finished those drawings, and Miss Heaton's too." And here is his style on the technical practice of art: "Just remember, as a general principle, never put raw green into light flesh. No great colorists ever did, or ever wisely will." This tone of *ex-cathedra* instruction becomes so noticeable that one feels it is not all a joke when the critic writes to the artist: "You are a conceited monkey, thinking your pictures right, when I tell you positively they are wrong. What do you know about the matter, I should like to know? You'll find out in six months what an absurdity that St. Catherine is."

Rossetti was not the most docile of men, and must have fretted and fumed under all this. It is not in nature for a poet and a painter to enjoy being lectured like a school-boy about his art, or, for that matter, about his debts and his habits; and so we are somewhat prepared for the note of pathos in one of the last letters here given: "I wish Lizzie and you liked me enough to—say—put on a dressing gown and run in for a minute rather than not see me; or paint on a picture in an unsightly state, rather than not amuse me when I am ill. But you can't make yourselves like me, and you would only like me less if you tried." "No friendships and no loves," he has said, and one begins, perhaps, to understand why.

NOVELS AND SHORT STORIES.

The Maternity of Harriott Wicken. By Mrs. Henry Dudeney. The Macmillan Co.

Strong Hearts. By George W. Cable. Charles Scribner's Sons.

The Span o' Life. By W. McLennan and J. N. McIlwraith. Harper & Brothers.

Bonhomme. By Henry Cecil Walsh. Toronto: William Briggs.

It takes courage to open a book called "The Maternity of Harriott Wicken." A scientific lady novelist might by accident be gay over "The Motherhood of Harriet," but with "The Maternity of Harriott" we know that she must be deadly. The prologue to the drama justifies this premonition, and the last scene does not shame it. Close upon this last scene a conversation is recorded between Dr. Owen, an old-time lover of Harriott's, and Mrs. Megson, her maternal aunt, who had borne her infant niece away from the horrors of the prologue and brought her up as her own child, in Brixton, never doubting that prosperous suburban circumstance could coerce a dreadful Wicken into a perfect counterfeit of a respectable Megson. "Before her marriage," says Dr. Owen, "I

spoke to you as plainly as I could. She ought not to have married." "Fiddle-dee-dee," responds Mrs. Megson; "when I was young, people never thought of such things—it isn't decent." We have so long been familiar with public discussion of the sort of things on which Mrs. Megson thus peremptorily laid taboo, that we believed her species to be extinct, and the fact that a suburb of London still harbors beings with a fatuous worship for decency does something to explain the extreme bitterness with which suburbs are always spoken of by English novelists who have achieved escape from them. Without wishing to pose as an apologist for criminal squeamishness, it still seems but fair to Mrs. Megson to say that the "things" behind Harriott Wicken were so bad that her aunt's reticence might be attributed to a quality poetically known as the milk of human kindness, and to surmise that all the nerve of all the lady novelists of the last decade might not suffice for a bare statement of such things to a young girl very much in love and wanting to be married. Further, it may be urged in Mrs. Megson's behalf that no ghost stories about decadent Wickens (idiots, drunkards, harlots) could have compelled this particular Wicken, who by instinct loathed suburbs and Megsons, to renounce a rich, good-looking, well-mannered lover ready to lead her out of Egyptian darkness into an enchanted land of promise—that is, prosaically, bear her away from Brixton and plush-covered chairs and tea with jam (it is amazing how these escaped suburban novelists hate tea with jam), and set her down in an artistically furnished West End flat with a choice of all the market affords for dinner. At all events, Harriott does marry Daniel Damril (probably to intensify an ominous situation, she is never spoken of as Mrs. Damril), cuts Brixton, and may be considered equipped to imitate or expiate the sins of her fathers. For imitation she shows but a weak capacity, and for that reason, perhaps, is called to a rather thorough expiation by becoming the mother of a daughter who at two years of age is declared to be a hopeless idiot.

Up to this point the author shows no originality. She writes better than most of her sisters, with more vitality and probability. For acrimonious precision in description of English suburbs and suburbans she excels Mr. Giesing. May they be forgiven if they have set down anything in malice! But when Harriott awakens to her child's condition and feels that the Wickens are to blame, that there is nothing of the normal, healthy Damril about it, then the author grasps the tragic possibilities of an ill-balanced, untrained nature, and uses them in a way that gives her preëminence in her group. Hereafter the dead Wickens count for nothing in Harriott's tragedy; she, a woman of small mind and no spirituality, becomes the unthinking slave of the most normal feminine instincts, love and jealousy, and both instincts combine to develop that overwhelming maternal passion for her wretched baby which is the cause of her worst mistakes and irretrievable disaster.

For the moment, at least, the gift of writing tragedy of high, poetic strain is withheld from a thankless people by resentful gods. We live for the most part physically if not basely, and any impulse to sing about the spirit soaring triumphantly above disaster and pain and wrong is probably blighted by the feeling that few would listen to the song. The only

model that life appears to offer to literature for tragedy is harsh and narrow; a spectacle of human nature impoverished in spirit, battling doggedly and hopelessly towards inglorious defeat, ignoble extinction. The almost exclusive use of physical nature as a figure for fate and retributive justice announces a generation that has lost faith and fine ideals. Much of the literature thus inspired is pseudo-tragic, more of it is weak, foolish, immoral, unquestionably ephemeral—born dead. But a number of foreign authors and a few of our own have spoken for their generation in words that will last and by which posterity must judge us. It is just possible that 'Harriott Wicken' may thus survive, because it has directness and coherence and intensity, which are among the qualities that make for long life in letters. Facing such possibility, we may take comfort in the reflection that Mrs. Megson's unthinkable things have been uttered as decently as they can be, that hideous vice is mentioned only historically (though in scorn of the injunction to speak nothing but good of the dead), and that Harriott's last supreme sacrifice to her husband, so smooth, so shallow, so unequal to pain, suggests that there may be a spirit of man that goeth upward different from the spirit of the beast that goeth downward to the earth.

By way of introduction to his volume called 'Strong Hearts,' Mr. Cable says: "This cluster of tales is one, because from each of its parts, with no arguments but the souls and fates they tell of, it illustrates the indivisible twinship of poetry and religion." Here is a declaration that *Lied und Trüm und Glauben* have not disappeared from the world, and, so far as Mr. Cable's instances go, the declaration is made perfectly good. One, and not the least, of Mr. Cable's claims to distinction as a writer of fiction is that he has pulled manfully against the stream of tendency, and has chosen for representation chiefly people who are pure and lovely, and character of good report. This is not to say that he depicts immaculate creatures above temptation, but only that he finds people with enough inward strength or grace to resist and conquer temptation. His first subject here is common—a man's fight with a devouring passion for drink. "The Solitary" is not dramatic, not heroic in any striking fashion; but he touches the heart and the imagination. Beaten or victorious, one would remember him and admire him as a man who had put up a good fight. The second tale is delightful, because the "Taxidermist" is so exquisitely good, and his wife not a whit behind. In this and in the "Entomologist," Mr. Cable returns to the Creole quarter of New Orleans, and touches it with that tender grace which captured us all many years ago. The third tale is more complex, both in incident and in emotion. A silly woman very nearly succeeds in bringing about scandal and crime, but the strong heart of the stupid moth-hunter's wife averts danger without so much as a scene. She gets timely aid from the yellow fever (for the time is during the scourge of 1878). Most of us get our notions of what goes on in a fever-stricken town from the newspapers, but Mr. Cable seems to have neglected that source of information. He does not speak of any one who stood at his gate aiming a shot-gun at intruders, nor of husbands and mothers who forsook infected wives and children. On the contrary, he tells about people who opened their gates to the sick,

and about one who feared the sickness so little in comparison with moral disaster that she could say, "Thank God it is only the yellow fever."

During the eighteenth century the writers of realistic fiction had their innings, but in the nineteenth the Romantics have scored nobly with fiction about the eighteenth. Two episodes at least are inexhaustible—the expulsion of the Stuarts and the fall of New France. In *"The Span o' Life"* we make the acquaintance of Hugh Maxwell of Kirkconnel, the Chevalier Maxwell who fought and was beaten at Culloden, yet lived to fight and be beaten again at Louisbourg and Quebec. His tale is in three parts, the first and last told by him and the middle by his sweetheart, Margaret Nairn, an adventurous lady who followed her lover across seas and kept up her courage by singing:

"The Span o' Life's nae lang enough,
Nor deep enough the sea,
Nor braid enough this weary warld,
To part my love frae me."

The authors have blended history and romance ingeniously and smoothly. If there is a fault of manner, it is that Maxwell's narrative is a little too bland and circum-spect; it savors rather of the "gentleman of the desk" with whom he disclaims affinity, than of a blustering soldier presumably full of strange oaths. Miss Nairn's contribution is a trifle chilly, but her correct composition checks any inference of personal impropriety that the cynical might wish to draw from her unconventional behavior. But, after all, it is only in the very best historical romances that the people count for much apart from the happenings; and to have told so many dramatic events, to have painted so many picturesque scenes, as well as the authors of *"The Span o' Life"* have done, is to have come out second best in their class. The illustrations are admirable; they illustrate the tale and adorn the book.

The Canadian habitant is receiving much attention, in both verse and prose—enough, perhaps, should he hear of his vogue, to make him learn to read English, or even that unscrupulous broken English which some of his interpreters put in his mouth. In a volume of sketches and stories entitled *'Bonhomme'* he would recognize himself with pleasure. The author, who combines in an unusual degree the powers of accurate observation and sure, sympathetic intuition, has presented several common phases of *Bonhomme's* outward life with graphic fidelity, and his heart with unpretentious frankness and probability. He does not appear as a curiosity, or a freak; he is just an average man, who has retained through centuries a primitive naturalness, sometimes pathetic, sometimes passionate, much affected but not set apart from his species by the accidents of ancestry, of a tongue foreign to surrounding communities, and of not knowing how to read. Mr. Walsh shows him in common characteristic occupations, and elects to show him (as a writer of fiction, however realistic, must elect) in interesting and crucial moments. Being able both to see and to divine and to estimate the interchangeable debt of circumstance and character, his people and their *milieu* appear inseparable; they explain and complete each other. The sketches are better than the stories, in which the development is sometimes awkward and the drama a failure. This is probably because the author has not settled down to a

narrative method, but is groping and experimenting. His dialogue is perfectly vivacious, being an almost literal translation of *Bonhomme's* native phrase, but, speaking in his own person, he is at times uncertain, obscure, and in grammar imperfect. Nevertheless, *'Bonhomme'* is an entertaining volume for the story-reader, and a very hopeful one for those concerned to catch a fresh, strong note in fiction.

A Life for Liberty: Anti-Slavery and Other Letters of Sallie Holley. Edited, with introductory chapters, by John White Chadwick. With illustrations. G. P. Putnam's Sons. 1899.

The splendid anti-slavery tradition of the Jays and the Adamsses does not rob this biography of its unique distinction in being that of an anti-slavery worker in the second generation. Myron Holley did not commence agitator, and his early eminence grew out of his official part in the construction of the Erie Canal; but Eliza Wright's Life of him is, after all, properly classified with abolition literature. He was a large factor in the formation of the Liberty party, whose objects possessed his mind to the time of his death. He did not give up everything for the cause—few Liberty party men did or could, as few politicians except journalists ever do. His zeal, however, he imparted to his daughter, the subject of this memoir, and she ended by devoting herself wholly, at first to the propaganda of Garrisonian anti-slavery doctrine, and in her beautiful old age to the elevation of the freedmen on the soil of the Old Dominion.

Mr. Chadwick opens his introduction with a legend of good women to whom Sallie Holley became a coadjutor and companion. Without magnifying her natural gifts or her ability, he estimates justly her services as a lecturer and a teacher, and finds the essential worth of her correspondence in its imaging the domestic side of the abolition circle in all grades of culture and condition. We perceive her to have been fond of the refinements of living, distinctly elegant in her dress and in her color sense, of marked literary taste and interest (she was a graduate of Oberlin), a welcome guest in the home of affluence and intellect, yet readily accommodating herself to the poorest and most slovenly hospitality accorded her in the name of humanity, and for the last twenty years of her life dwelling among Virginian blacks in a mission which, had it been in Africa itself, would have been deemed heroic by all the churches.

"I recall," says Mr. Chadwick, "no other letters and journals of the period that furnish us with so vivid a conception of the work done by the agents of the Anti-Slavery Society. As we read, it is as if we, too, were going to and fro in the land, and up and down in it, enduring many hardships, enjoying much delightful hospitality, alternately elated and depressed, pathetically pleased with very modest contributions, sitting in heavenly places with some of the best people in the world, and in others less celestial with some of the most peculiar and fanatical. There were even those who seemed to think with Tolstoi that cleanliness is inimical to social equality, and that the dirtier they were the better."

She had a buoyant temperament and much humor, saw truly, charged her letters with good anecdotes, to which her editor sometimes adds equally good, as when he tells of Lucretia Mott permitting him to advertise her speaking in his pulpit, contrary to the

Quaker notion of inspiration, saying, "The Spirit always gives me about twenty-four hours' intimation."

In Rensselaer County, N. Y., Miss Holley wrote to her *alter ego*, Miss Caroline Putnam, in 1854:

"You would laugh to hear all the criticisms these Quakers are guilty of regarding me. One said she thought I dressed too gay; another that I laughed too much; a third that I did not visit enough. A fourth wished I would speak oftener, and a fifth said I did not eat enough, and that I had large self-esteem. Still another said I ought not to receive money; to her mind it was just the same as a 'hiring ministry.'"

All these counts were characteristic except that of self-esteem. She was undoubtedly a very effective speaker, having a fine deep voice and excellent delivery, with a great capacity for pathetic expression, but she could never bring herself to take the platform in the presence of the elders in the cause. The Rev. Samuel May, general agent of the Massachusetts Anti-Slavery Society, who laid out a considerable part of her work for her, writes: "I am told that her New Testament readings and comments were of wonderful force and beauty, and that her lectures invariably moved to tears." But he adds, "*I never heard her speak!* So sensitive was she that, even when she lectured in Leicester, she made a point that I should not go, though my wife was going."

It was another sort of sensitiveness that she herself chronicles in writing from Bucks County, Penn., in 1852:

"I heard a touching story the other day. A poor colored man, who has lived a few years in this State, joined the church one year ago, but has not yet partaken of the sacrament. His minister secretly asked him why he had not. 'Oh,' said the poor fellow, 'I once had a brother, and he was sold to buy Communion plate, and, somehow, I can't partake.'"

The large part of the memoir which relates to Miss Holley and Miss Putnam's self-denying labors among the freedmen at the mouth of the Potomac we earnestly commend to any Southern man or woman truly concerned about the "problem." These Christian ladies were not deceived by any philanthropic glamour. In December, 1878, Miss Holley writes from Lottsburgh to Gerrit Smith's daughter, one of their most generous benefactors:

"We celebrated Christmas in our school-house, and shall also New Year's Day. These poor white as well as colored people flock to our doors to get a present holiday times. Last Wednesday, more than three hundred souls came, and to each one I had the pleasure of giving something off our gay Christmas tree. It is pitiful to see these poor whites with their blank, lean faces. Too silly or proud to attend, or to allow their little children to attend, our colored school! And to grow up without knowing the alphabet!"

"The religion of these colored people is very demoralizing. It has no connection with moral principle. They have just had a 'three days' meeting' in the old stolen schoolhouse, and made night hideous with their horrible singing and prayers, and dancing in a wild, savage way."

And again (August, 1879):

"This whole summer long I have had nobody to talk with but Miss Putnam and these poor colored folks! These white women who hold themselves high, are sick with bilious fever or rheumatism a great part of the time. Their habits of living are horrible. Fat bacon, poor black coffee, and bread made with saleratus and eaten hot from the fire. It is awfully rainy, and the colored people are holding their 'protracted meeting.' I expect nothing less than that all will be down sick with chills after it is over. They use immense quantities of tobacco—men and women both smoke—then

hold all-night meetings, and shuffle and scuffle and sing and scream in the greatest excitement, and call it being 'happy in the Lord.'"

For a final quotation, take this in comment on a new teacher who had, before Miss Holley was aware of it, taught the children to sing a hymn,

"How sweet to rest
For ever on my Saviour's breast."

"The colored people are already a great deal too much for 'rest.' They are disinclined to effort, and the prospect of an eternity in heaven where all is 'rest' is amazingly alluring. It is only by immense and long-continued effort that I can rouse them to a very moderate degree of labor, and it seems to me a positive injury to minister to their laziness by teaching such hymns. I greatly prefer those that inculcate the truth, that life here and always must be a battle," etc.

Miss Holley alternated with Miss Putnam in leaving their Inferno for a rest in New York, where among her latest pleasures was listening to Prof. Davidson's Dante lectures. The Rev. W. C. Gannett, who ministered at her funeral in 1893 (the good woman had nearly filled out her seventy-fifth year), remarked aptly upon "her own Dante-like face as she lay in the casket." This resemblance can hardly be inferred from the full-face portrait, one of many in this volume which reinforce the anti-slavery gallery. Miss Holley herself made a striking comparison when, on hearing Frederick Douglass speak in the Boston Music Hall, she wrote: "He looked very well; in no way an unfit companion for the Beethoven stationed behind him." His picture, too, is here, for the adornment of Mr. Chadwick's pious and altogether admirable labor of love, over which we might easily linger.

Women and Economics. By Charlotte Perkins Stetson. Boston: Small, Maynard & Co.

The As-Suchness of Woman is a well-worn theme, and confession to a weariness of it as a topic is a suitable preface to saying that Mrs. Stetson's book seems to us the most significant utterance on the subject since Mill's 'Subjection of Women' reached a class of thinkers never before touched by any views later than those of Noah. This is far from agreement with all of Mrs. Stetson's conclusions or even premises, or from always finding logical connection between the two. What is asserted is that the subject is approached from a new point of view, with a new largeness of outlook, both backward and forward; a new business capacity, so to speak, in arraying the pros and cons on the field of debate; a new imaginativeness in interpretation, and finally a temper which, being good, is perhaps newest of all. While it would be easy to ridicule some of her propositions and caricature some of her arguments, it is still easier not to do so, but to dwell and ponder upon their serious and lofty aspirations. It is a book which invites and should lead to reasonable and scientific discussion.

The main argument is that the long economic dependence of woman on man as her source of food constitutes a false economic relation between them, and hence is responsible for an exaggerated and mischievous differentiation of the sexes beyond what is seen in any other animal creature, causing, through mal-apportionment of the world's work, a distortion of human rela-

tions and human qualities. It would be simple to reply in the old couplet that man has not a microscopic eye, "for this good reason, man is not a fly"; but such retort is promptly disarmed by the proclamation that, evil as have been the effects on woman, it is this very process which has made of man a higher being than the fly, by evolving the paternal qualities. From the purely utilitarian male carried about in the wings of the clipped in extra numbers for fear of loss, the masculine half of creation in man has risen to the man-mother, performing the world's duties, his own, and many of woman's. Here, after her natural sex functions, are, according to Mrs. Stetson, too exclusively those of dependent nurse and house servant. But before the reader has time to suggest that practically all industries and all professions are now open to women, our author meets us with the exultant admission that the change is here, brought about by neither the will nor seeking of man or woman, but by the force of social evolution, working as painfully now as it has worked before, yet, as she enthusiastically believes, bringing us out into "better motherhood and fatherhood, better babyhood and childhood, better food, better homes, better society." "It is already happening. All we need do is to understand and help." So, then, woman's long servitude has helped to form certain fine traits in man, yet has encouraged him too in hardness and the lust for power. Upon herself the effect has been dwarfing and enslaving, promoting "a feverish, torturing, moral sensitiveness, without the width and clarity of vision of a full-grown moral sense." She may rejoice over what she has accomplished, but the reaction is at hand in which alone full development lies.

The argument is an interesting one, and full of suggestion, that, as women have become over-sexed through sons of economic dependence on man, so, through becoming in greater measure their own providers, they will lead the whole race, both men and women, back to simpler living and simpler relationship, and thus forward a higher life in which the worst evils of humanity will shrivel out of existence from sheer non-nutrition. "Not the sex-relation, but the economic relation of the sexes has so tangled the skein of human life." The new order is to bring about "a union between man and woman such as the world has long dreamed of in vain." As Mrs. Stetson's search for causes goes back to the beginnings of life, so her conclusions reach forward to a millennium which she firmly believes is having its inauguration.

A few chapters are given to detailed suggestions of improved ways of living. These are to include the abolition of the private kitchen, even as the private laundry and bakery have largely disappeared. The kindergarten and the ballot-box are taken for granted as essentials for which no arguments need be adduced; the one ill-natured sentence of the book, indeed, occurs in this connection, where the writer alludes to "that crowning imbecility of history—the banded opposition of some women to the advance of the others." She feels it necessary, however, to make a special plea for the outside day-nursery, where the babies can spend some hours of each day in being "a baby" and not "my baby"—realizing, doubtless, that many a woman reader (like the husband

who plumed himself on never praising to his wife his mother's pies—"except mince") will consent to the banishment of the kitchen stove, the family dining-room, the domestic broom, but will draw the line at the baby. It would be unjust, however, to this dignified book to try its cause by extracted sentences. In such wise, one might make easy inference that the home and the family are of lessening importance; that "mother's doughnuts" are necessarily indigestible, and cousinly affection a fast-dying relic of patriarchal days. Such criticism would be nearsighted. The book is one to be read with one's best historic glasses on. But even so it must be added in candor that we think not enough value is attached to the educational influences of family friction, of doing what one does not want to do, of the bondage to duty which, after all, is humanity's only freedom.

Field, Forest, and Wayside Flowers. By Maud Goings (E. M. Hardinge). Baker & Taylor Co. Pp. 411.

This work is illustrated by three types of pictures: full-page reproductions of photographs, copies of well-known botanical figures, and certain drawings from life. The photographs are mostly very good, but many of the drawings are altogether too large; in fact, they do not bear a right proportion to the size of the page, and therefore they present an unpleasant appearance. They may even prejudice the casual reader against the volume. It is probable that almost all who take the volume in hand will deplore the unattractive character of the majority of the illustrations. But if the reader will forgive this lack of judgment on the part of the publishers, it is more than likely that the work will later heartily commend itself on account of the excellent text. Here and there little slips will be observed, such as the persistent misspelling of Delpino's name; but these errors are, perhaps, to be laid at the door of the proof-reader. To leave these imperfections aside is an easy matter, for the greater part of the text is exceptionally interesting. The reader is guided along, without fatigue, through faithful accounts of the structure and behavior of many groups of our common plants. In a very successful manner, the author takes up point after point in the history of the plants under discussion, and places the readers in possession of the modern views respecting the subject. Many of the descriptions of structure are admirable in every way, and in a few instances, where the author has had occasion to present the very latest aspect of the case, the proportions have been well kept.

With a few substitutions, where the phraseology savors of kindergarten instruction, the work is one which can be profitably studied by amateurs of every grade of advancement. To beginners, the work is a safe guide, because the errors, on the whole, are trifling and not likely to mislead. To more advanced students, who have not kept up with the times, the pages are worth careful perusal. Nearly all of the more important phases of plant-life are considered in their succession as regards time, from spring to winter and the winter's sleep. The treatise has been well planned upon a modest scale, and the aim set before the author has been reached. Success in the execution of the plan fully justifies her in unveiling her pseudonym.

Explorations in the Far North. By Frank Russell. Being the Report of an Expedition under the Auspices of the University of Iowa during the years 1892, '93, and '94. Iowa City: Published by the University. 1898.

Premising that by the term "Far North" is meant that portion of British America which lies "beyond the Great Slave Lake," we have in this volume an account of the series of explorations made by our author in that region for the purpose of obtaining specimens of the larger arctic mammals, especially musk-ox, and incidentally of "picking up everything he could lay his hands on." Broad as were the instructions, they seem to have been liberally interpreted, and it is but scant justice to add that, in carrying them out, Mr. Russell made good use of his opportunities. Certainly, when we consider the character of the region in which he labored, the means, necessarily somewhat limited, that were placed at his command, and the fact that, constituting, as he did, the entire personnel of the expedition, he was obliged not only to secure his specimens, but also to prepare and care for them, we can but admire the pluck and persistence which enabled him to prosecute his work under circumstances that would have daunted a less resolute spirit. It is all very well, as we can easily understand, to gather specimens of this kind in fine weather, and it cannot be much of a hardship to prepare them, when gathered by others, over a good fire and amid comfortable surroundings; but it is quite another thing to carry on either or both of these operations at the close of a hard day's work with the paddle, or amid snow and ice, with the thermometer at from 20 to 60 degrees below zero, a blizzard blowing without, and for fuel only a tent pole. Such, in fact, were some of the experiences that befell our author in the course of the different expeditions, not always successful, that he was obliged to make after buffalo, musk-ox, etc.; and though he was too much of an enthusiast to flinch from his task or complain of its hardships so far as he was personally concerned, yet he sounds a note of warning when, at the close of a most successful hunt after musk-ox, he advises sportsmen, *qua* sportsmen, to keep out of the "No-wood country," as the Indians call it, if life and health are valued.

In making these local expeditions (and, roughly speaking, the same may be said of all travel in that region), the only mode of conveyance is by canoe or dog-train, according to the season of the year. With both of these our author became more or less familiar; and to any one interested in a story of adventure, told in a simple, straightforward manner and without any beating of tom-toms, we can commend this account of his experiences by flood and field. Without going into particulars, it will be sufficient to say that, in the course of his expeditions, sometimes alone, but oftener with a band of Indians, he travelled over 2,200 miles by dog-train; and what makes the feat more remarkable is the fact that he had but one team of four dogs, and that there were times when the load averaged over a hundred pounds to each dog and the path was over an unbroken waste of snow. This, however, is but a part of the record, for, leaving out of consideration the occasional lift in one of the few steamboats by

means of which the Hudson Bay Company keeps up an intermittent communication with its more northerly posts, it is probable that the distances covered in the course of his summer excursions, in canoes, were not less great. In fact, one of the longest, as it was one of the most venturesome of his expeditions in these frail barks, was made on his way home, when he descended the Mackenzie to its mouth, and then, turning westward, he skirted along the shores of the Arctic Ocean to Herschel Island. In the first part of this journey he was alone, but from Fort McPherson onward he had three companions, among whom was the Count de Salville. At Herschel Island he was lucky enough to find several American whalers that were not yet free from the ice. Upon one of these he took passage, and on the 27th of October, 1894, he reached San Francisco, having thus completed, for the first time, the descent of the Mackenzie to its mouth, and the return to civilization around Alaska.

For the scientific results of this expedition a word of commendation may not be out of place. In round numbers, they consist of some two thousand specimens, catalogued in the University Museum under 1,300 heads, and embrace certain of the mammals, birds, fishes, and insects peculiar to the region traversed. To this is added a collection of ethnological material from the Eskimo and the various Indian tribes with which our author came in contact; and though he modestly tells us that, when engaged in this work, he did not understand the Indians as well as he has since come to do, and was not, therefore, in sympathy with them, yet when dealing with these people he most interests us so far as he throws light upon their present condition. Of course, we do not expect to find among them any great amount of aboriginal material, for they have been in contact with the whites for a hundred years and more, and have lost many of their arts and industries; and as many of them can read and write and all are nominally Christians, they may be said to be semi-civilized. And yet, when we see how persistent are some of their beliefs and customs, we may well doubt whether they have made any real progress. Thus, for example, we find that on Easter Sunday, before setting out on their hunt for musk-ox, they assembled in the chief's lodge for prayers, after which they had a feast, in which the meat was divided in Indian fashion—the best pieces to the leaders and the poorest to the women. Before, however, beginning their festivities, "grace was repeated in concert," and then the chief "threw a tongue and a small ball of pemmican into the fire," just as was the custom among our own Indians when the whites first came among them. Instances, like this, of the persistence of savage belief crop out, more or less frequently, in the report, and give it a value independent of its other merits. The ethnologist will find in it much to repay careful study.

Throne-Makers. By William Roscoe Thayer. Boston: Houghton, Mifflin & Co. 1899.

Mr. Thayer's "Throne-Makers" are four in number, Bismarck, Napoleon III., Kossuth, Garibaldi; and to the essays on these great historical characters he adds four more, entitled "Portraits," which have for their subjects Carlyle, Tintoret, Giordano Bruno, and Bryant. The space of the volume is

almost evenly divided between its two distinct parts, but there is this superficial difference between them that whereas the "Portraits" have already been printed in the *Atlantic Monthly* and other magazines, the "Throne-Makers" now become public property for the first time. To make a further analysis, Mr. Thayer has already disclosed his interest in the large political movements of the century, and also his enthusiasm for Italy. This remembered, a glance at the table of contents brings out the persistence here of the same tastes, for the papers on Carlyle and Bryant are the only ones which deal neither with modern politics nor with the Italian nation, and both of them were suggested by centenary occasions.

Even in a volume of short and somewhat miscellaneous essays one naturally casts about for a certain unity of purpose which shall hold the scattered pieces together. Mr. Thayer does not write as the champion of a synthetic philosophy, whether historical, political, or social, but we find a few clear motives pervading whatever he says, and to these we shall restrict our notice. First of all comes an unwavering love of the ideal. A passage at the close of his essay on Giordano Bruno expresses his attitude not merely to that bizarre representative of the later Renaissance, but towards the roots and sources of human action. "By his death Bruno did not prove that his convictions are true, but he proved beyond peradventure that he was a true man; and by such from the beginning has human nature been raised towards that ideal nature which we believe divine." A second strong note which Mr. Thayer sounds is reverence for personal power wherever it can be discovered in subjection to elementary moral restraints. He has been deeply affected by Carlyle, and defends his master from the charge that, "in his exaltation of the strong man, he worships crude force."

"Let us grant," continues Mr. Thayer, "that on the surface the accusation seems plausible; but when we seek deeper, we shall discover that he exalts Cromwell and Frederick, not because they were despots, but because, in his judgment, they knew better than any other man, or group of men, in their respective countries, how to govern. Their ability was their justification; their force but the symbol of their ability."

By an easy corollary Mr. Thayer detests the "Bham Force" of Napoleon III. without the least attempt at disguise, and we cannot imagine him countenancing the 2d of December had it been executed by the genius which planned the 18th Brumaire—or indeed under any circumstances whatever.

Lastly (and the point is connected with the foregoing one) Mr. Thayer's essays have no savor of the democratic styles Massini "the ind his comment upon the ge France to make Napoleon for Sedan is, "A free pe ruler than it deserves"; ing the value of Bismar phasizes the Prussian is nation, or rather the P progress towards the union without deriving ciple of monarchical loys

"Bismarck knew that men might talk eloque they loved to be gover their genius was mecha umphed by directing the their genius. He would

appealed to the love of liberty, by appealing to which Cavour freed Italy, or to the love of glory, by appealing to which Napoleon was able to convert half of Europe into a French province. Bismarck knew that his Prussians must be roused in a different way."

The literary style of the volume, while in no sense sinking to tameness, is free from conspicuous and unpleasant mannerisms. At rare intervals a word like "transcience," or expressions like "Platonic aversion" and "levy in mass," intrude themselves upon one's notice, creating an impression of slight irregularity; but our criticism of Mr. Thayer's manner is that it suitably expresses his mature and thoughtful reflections.

George Borrow

The Life, Writings and Correspondence of George Borrow, 1803-1881. Based on Official and other Authentic Sources. By WILLIAM I. KNAPP, Ph.D., LL.D. With 22 illustrations. In 2 vols. 8vo. \$6.00.

George Borrow was born in East Dereham, Norfolk, England, in 1803. He was noted for his eccentricities, his fondness for the gypsies, his passion for athletic exercises, his scorn for the gentilities of life, and his vigorous advocacy of the doctrines of the Church of England. Borrow was the author of many works and translations, the most important of these being "Lavengro" and "The Bible in Spain."

The Nation.

NEW YORK, THURSDAY, JUNE 15, 1899.

The Week.

The more the President's betrayal of civil-service reform is defended, the worse it looks, both for him and for his apologists. Poor Mr. Gage is rapidly adopting the melancholy hypocrisies of the spoliemen. Unable to break the force of the damaging attacks of veteran reformers like Mr. E. P. Wheeler, he falls back on that hoary old shibboleth of the looters, that he is in entire sympathy with the merit system, but that he is no "bigot" about reform, and desires above all things to make it "practical." This is the precise defence of the drunken temperance lecturer. He was a prohibitionist, he told the astonished deacon who found him embracing the lamp-post, but not a bigoted one. Unluckily for Mr. Gage, on the same morning that his dodging reply to Mr. Wheeler appears, Senator Hanna comes along to upset the whole apple-cart by brutally declaring that the President's order was intended to get rid of the appointees whom Cleveland "saddled upon the Republican party." This makes it needless for Mr. Gage further to hurt his own reputation by writing more whitewashing letters.

It was not simply the pledge which Mr. McKinley made to the people of the country generally that the President broke when he issued his recent order, but a further personal promise which he made to one of the leading civil-service reformers of the country. Mr. William D. Foulke of Indiana testifies that when he called at the White House with other reformers a year ago, and after the President had spoken of the necessity of excluding some places from the operation of the rules, he (Foulke) said that they hoped that, if he did this, he would at the same time include in the classified service some other places, at least equal in number and importance to those excepted, so that it would appear in the order itself that no backward step was taken; and that the President answered that he "intended to include a great many more places than those which were excepted." But despite this promise, not a single office was included in the order when it finally came, and, naturally enough, to Mr. Foulke "the failure to include these places seems to be more surprising than the exceptions actually made." By the way, speaking of this evidence from Indiana to Mr. McKinley's faithlessness, does not the present situation call for the revival by Mr. Lucius B. Swift of his *Civil-Service Chronicle*, which he suspended because he thought the time had come when there

would be no "backward step" in this matter?

The civil-service order has stripped the mask from the President. We see him now in his true character. He is the same man who, as Governor of Ohio, spoke the clergy and philanthropists fair, but turned over the charitable institutions of the State to the spoliemen as no Democratic Governor had ever dared to do. He is the man who said he was against Hawaiian annexation, but put it through; against a war with Spain, but allowed a group of Congressmen to "hold a stop-watch" on him till he brought it on; against taking the Philippines, but took them. In all, his method has been one and the same—to start with a mind absolutely blank of conviction, and a will wholly without the power of initiative; to say little except to agree heartily with both sides; to put off decision till the last moment, but finally to go with the crowd. The only satisfaction—and we confess it is a melancholy one—to be got out of the exhibition of himself which the President has made in this violation of personal and party pledges, is that his adulators will hereafter be dispensed from their nauseous task. If crawling on their bellies before him no longer deceives the public, they may fairly beg off from the job.

"No Civil Service for Hershey." Such is the head-line over a dispatch from Harrisburg, Pa., and the story which this dispatch tells is one that is duplicated from many another place in every part of the country where there is an important federal office. Hershey is Collector of Internal Revenue at the capital of Pennsylvania. When he succeeded to the office by Quay's appointment (his commission being signed by William McKinley as the Senator's clerk), he found a number of gaugers and storekeepers who had been appointed during the Cleveland administration. Hershey wanted their places for henchmen of Quay, but they were honest and efficient, so that there was no ground for their removal, and even if they had been removed, the men who wanted the offices would not be likely to pass the competitive examination required. But within forty-eight hours after the President issued his order turning over these places to the spoliemen, Hershey had turned out three of these Democrats and installed three Quay workers, and the rest will have to go as soon as it can be decided whose claims for their places are strongest.

An element of truth there undoubtedly

ly is in all the rumors about friction between the members of the Philippine Commission, given now as a reason for President Schurman's early home-coming. The trouble has been not in the personnel of the Commission, but in its contradictory instructions. President McKinley has bidden both warriors and peace-makers a hearty godspeed. Otis was to push things, while Schurman was to soothe and conciliate the natives. No such combination of peace and war was ever known before, and it is no wonder that the wires from Manila have been kept hot with inquiries which policy was to prevail, peace or war. McKinley, with characteristic large-mindedness, has ordered both policies to prevail. He strongly approves of Otis and tells him to go on with his killing, but just as strongly approves of Schurman and urges him to go on waving the olive branch. If this looks like a policy of drift and muddle, the moral is that it is well to have an Executive who can make up his mind. The President's orders to Otis and Schurman, as we gather them from results, must have been modelled upon the famous softening down of the Ten Commandments:

"Thou shalt not kill, but need'st not strive
Officiously to keep alive."

The *Tribune's* Washington correspondent is doing excellent work in exposing the topheavy, job-ridden organization of the War Department. We do not know if the Administration will consider itself "knifed" by such articles in such a paper, but we do know that a knife was never more clearly called for. A simple comparison of records shows how absurdly overgrown the Department is. The Secretary may not have known how to organize victory, but he did know how to organize a bureau stuffed with favorites and incompetents. In 1863, with a million men in arms, Secretary Stanton was able to do all the work of his office with a clerical force of 665 men. But the numbers had grown to 1,366 in 1897, when the entire military establishment amounted to only 29,000 men. How the war "emergency" enabled Alger to swell the rolls still further, and with questionable legality, the *Tribune's* correspondent shows convincingly, and with abundant specifications. But the magnificent Alger waves all this aside, and, with a significant glance at McKinley, as much as to say, "Turn me out if you dare," asks, "What of it?"

Ex-Minister Barrett, who represented the United States at the court of Siam under President Cleveland, and afterwards spent two years in the Philippines, addressed the Union League Club of Chicago last week on the subject of

the political and commercial importance of those islands. Before commenting on his speech, it is well to glance at a former utterance of his on the subject of our policy in the Philippines. On the 12th of January last, in a speech before the Shanghai Chamber of Commerce, he said:

"May I humbly go on record as declaring that it would be far better for the United States to treat this leader [Aguinaldo] and his people with caution and consideration, eventually obtaining the end to be desired without serious loss of life and great expense, rather than peremptorily demand his absolute surrender, be forced into a most unhappy conflict which would, from its guerrilla nature, mean the loss of hundreds of good lives, the expenditure of large sums of money, and, saddest and worst of all, the development of a feeling of hatred and revenge towards Americans among eight millions of subject natives which the kind treatment of a hundred years cannot remove?"

The unhappy conflict against which Mr. Barrett warned the authorities at Manila and at Washington has taken place and is still in progress. It has entailed the loss of hundreds of good lives, and the expenditure of large sums of money, and undoubtedly it has provoked a feeling of hatred and revenge which will outlast the present generation.

Now Mr. Barrett says that if he were asked what was the great signal result of the last war with Spain, and which has amply repaid us for all the difficulties brought upon us by our assumption of sovereignty over the Philippines, it is simply this: "That it has suddenly and unexpectedly made us the first Power in the Pacific." It is this which compensates us not only for all the American blood shed in Cuba, but also for all that has been, or is yet to be, spilled in the Philippines. Now, what is meant by being the first Power in the Pacific? It means having the power to kill the largest number of men, burn the largest number of cities, and destroy the largest amount of property in a given time. This is what every speaker and every hearer of such words understands by them. Sometimes the phrase is varied a little, as, for example, when the newspapers of Paris talk about making the Mediterranean a French lake. That means having the power to sweep off, destroy, or drive out all other naval forces. Two questions properly follow Mr. Barrett's assumption. One is whether the acquirement of the power to do the most killing, burning, and destroying in a given time in the Pacific Ocean can be considered an advantage to the American people. The other is whether this power came to us by reason of the war with Spain and the seizure of the Philippines. If both of these questions must be answered in the negative, then Mr. Barrett appears to us to have deteriorated as a teacher since he addressed the Shanghai Chamber of Commerce last January.

The kind of war that is now going on

in the Philippines was described by a French writer, André Bellesort, in 1897. His article in the *Revue des Deux Mondes* telling what he saw there, when the Spaniards were trying to conquer a people fighting for their liberty, is republished in *Littell's Living Age*. The Spanish officers with whom he talked said that they saw no probable end to the insurrection; that even if they succeeded in buying Aguinaldo, the whole thing would break out again in three months, and that if they would not buy him, Spain would eventually be exhausted; that European soldiers could not stand the climate, and that they were in a very bad strait. "The spectacle of these men, whose courage is unimpeachable, stranded there, and spent with fatigue and homesickness, was heartrending." In short, these Spanish soldiers were undergoing the same tortures that ours are suffering now, and for the same cause—i. e., in order to subjugate a free people. A lieutenant-colonel entertained M. Bellesort with tales of his skirmishes with the insurgents, expressing his hearty detestation of a campaign of snares and ambushes. They were perpetually harassed, he said, by invisible foes, who never would stand up to a fair fight. The insurgents knew to a man how many soldiers were operating against them, but the Spaniards never knew whether there were five, or ten, or a hundred thousand men opposed to them. Moreover, the Filipinos were brave men. They would dance and brandish their bolos at the very muzzles of the Spanish guns. Neither pain nor the fear of annihilation could daunt them. These are the kind of men that we send the flower of American youth, descendants of Revolutionary sires, to kill and be killed by. Oh, Liberty, how many crimes are committed in thy name!

A telegram from Washington says that a private cablegram from Admiral Dewey to a friend in that city expresses his unwillingness to accept the donation of a home, but adds that he would be glad to have any money collected for his benefit used in the establishment of a soldiers' and sailors' home. It is added that the committee having charge of the fund will continue their collections, and that when the sum originally intended to be raised has been secured, a decision will be made as to its disposition. This is equivalent to an abandonment of the undertaking. The sums contributed daily had fallen so low that the project had almost passed out of the public mind. In order to give it a fresh start, a plan was proposed of asking the National Banks of the country to pledge themselves for the moderate sum of \$25 each. Such a call, backed by a high official of the Treasury Department, it was thought, would produce the amount required. Most probably the movement will now collapse, for, however worthy

may be the alternative charity proposed, such a project does not meet the intentions of the original donors. The whole scheme was nonsensical, and, to use a much-abused word, un-American. Buying houses for military and naval heroes is not wholly without precedent in our country, but such donations have been extremely rare and have never been bestowed upon the winner of only one fight, however meritorious he may have proved himself to be. Admiral Dewey has shown all the qualities of naval greatness that his limited sphere of action permitted, but that sphere was not sufficiently wide to call for a public subscription. Even if it had been wider, Admiral Dewey is not the man to accept gratuities on account of it.

One of the pleasing little assumptions of Imperialists has been that the main thing is to seize territory, and that the settling and civilising will attend to itself. The theory has already had a good deal of a shock in our experience in the Philippines. We have the islands fast enough, but if there were any good way to let them go, how gladly would we do it. But for this deepening conviction that the United States is now completely stocked up with tropic islands, we should have undoubtedly heard a great outcry over the acquisition of the Carolines and the remaining Ladrones by Germany. As it is, no one is most predatory calling upon the war-ship "call" to help along A by seizing the B them taken by G mur. We know Pacific islands n so happy. Yet ample page befo had not been so filled with the ne we could not sto tures of other n ficial has been describe the con region for the France and Eng of going to war. tory between L Tanganyika, he s reigns." Almost Congo has a "p hand all the time or even so-called exceed a mile be venture even a m mean to be m eaten." Here is seamy side of In

Next to Platt, disappointed at the ship contest. The vanilla machine has been made, through

the support of the State's delegation to some candidate whose friends in the Senate would in return help Quay in his struggle to be seated upon the appointment of the Governor. Moreover, Quay, like Platt, wanted a man in the Speaker's chair who would feel under obligation to the bosses, and who could be depended upon to recognize that obligation whenever they should "put on the screws." Incidentally, he hoped to get the clerkship of the House for a personal follower. But, as things have turned out, Gen. Henderson gets the place without any help from Quay, and there has been no chance even to trade the clerkship for the support of the Pennsylvania delegation.

Gen. Henderson is so strong a partisan that he will not stand out stubbornly against any policy upon which the Republican Representatives in Congress shall agree. His instincts and tendencies, however, have been so plainly manifested in the past as to indicate that he will not push forward the cause of imperialism. So recently as last winter he declared that "I look with aversion upon increasing the regular army of my country," that "I have the gravest doubts of the wisdom of this country taking the Philippine Islands, to govern them as United States territory"; and, further, "If you ask me would I enforce a government upon the Filipinos against their will, I answer, 'No.'" It is reassuring to have a Speaker who, upon the testimony of so good a civil-service reformer as Representative McCall of Boston, "has been outspoken for civil-service reform when it showed little signs of popularity in the House." On another important issue Gen. Henderson has earned from the same good judge the commendation that "he is sound upon the money question." The new Speaker has progressive ideas in matters outside the ordinary range of legislation. He was an earnest champion of the movement to establish a free library in Washington, and he was active in securing the passage of the law to prevent prize-fighting in the Territories and the District of Columbia, defending the severity of the punishment proposed—imprisonment from one to five years—by saying that it was "the judgment of the best people in America that severe penalties should be enforced to break up this practice."

That the affair at Coney Island on Friday evening was a genuine prize-fight is universally admitted. It closed with the defeated contestant insensible in the ring—completely "knocked out." Chief Devery sat close by during the contest, but in no way interfered with it, nor did he express any disapproval of its violent ending. Before he started for the scene, he favored the public with a frank expression of his views, "The law is

plain," he said. "It is meant to allow younger men to familiarize themselves with the manly art. We are living under a liberal government, and it will be liberal as long as I am here." There is no doubt whatever about the "liberality" of our present police dispensation of law. The Mazet inquiry has shown that to us, though it was perfectly well known before. Few things are more universally obvious than a "wide-open" city. Devery's view of prize-fights is identical with Capt. Price's view of "dives" and "hells," expressed on the witness stand: "There should be such places in all large cities." They are needed for the education of our youth in the manly and kindred arts. They are part of our "liberal government" as administered by Croker and his kind. What more appropriate under such a government than prize-fights at regular intervals? Who opposes prize-fights any way? Why, nobody except reformers, and the people of the city have decided, by the kindly assistance of Platt and Tracy, that Crokerism is preferable to reform rule.

It is an interesting coincidence that the same year should witness the cleansing of the pest hole in Cuba which has been the chief source of yellow-fever infection in this country, and the taking of the first step along the road of thorough-going sanitary reform in the city of the United States which has always done most to spread the disease after it secured a lodgment. Havana has bred the pest by the shameful neglect of the fundamental rules of public health under Spanish rule, and New Orleans has cultivated the epidemic by a neglect only less discreditable. It seems incredible that in this country a city of over a quarter of a million inhabitants, at the close of the nineteenth century, could be without a system of drainage and sewerage, but such is the condition of New Orleans to-day. Last week an election was held to decide whether the property-holders of the city would vote a special tax of two mills per annum, above the ordinary State and city taxes, to be levied for forty-three years, to raise the necessary funds to drain and sewer the city, and to provide municipal waterworks. The agitation had been under way for nearly a year, and at first the reformers were not sanguine of success, but a combination of public-spirited men and women carried on a campaign of education which finally converted almost everybody of either sex, women taxpayers having the right to vote on such questions in Louisiana. The whole country is to be congratulated on this result, as it means that within a few years New Orleans will stand among the most progressive cities in point of public health, and that the United States will no longer maintain in one of its chief ports a breeding-place for epidemic diseases.

The upset of the Dupuy Ministry looks like fresh evidence of the frivolity that has made a sport of cabinets and parties in France during the past ten years, yet it was time for M. Dupuy to depart. He had taken the position that although Dreyfus had been convicted on false testimony, yet the chiefs of the French army, who were responsible for all the injustice that had been done, should not be prosecuted or disturbed. This was an impossible position. It was impossible to say that Dreyfus was innocent and that Mercier and Boisdeffre were innocent also. The Republican party of France, which had committed itself to a new trial for the prisoner of Devil's Island, could not stop short with that. It must go on to the logical consequences of so grave a decision. It must finish the job by trying not merely Esterhazy and Du Paty de Clam, but the men in higher places above them. It was this necessity which drove a sufficient number of the supporters of President Loubet over to the opposition when the vote was taken on the resolution, which was practically a vote of want of confidence. Unsettled questions have no pity for the repose of prime ministers.

The great interest taken by the Prussian royal family in the recent congress at Berlin for the prevention of tuberculosis, and the message which Queen Victoria sent to it, expressing her warm approval and blessing, have been referred to by European correspondents as striking proof of the attention now given to disease problems. But it would be strange indeed if, after the revelations which have been made in recent years regarding the ravages of the deadly tubercule bacillus, sovereigns did not take an interest in the war which medical men have declared against it. If by the invasion of some savage horde more than 70,000 men, women, and children were killed in one year in Great Britain alone, it would be considered the paramount duty of the Queen and Parliament to give every minute of their time to the extermination of the invaders; all the more if it were certain that the same number would be killed every year following by the same enemy. Why, then, should not some attention be given to the enemy that slays those 70,000, even though that enemy be invisible and so small that hundreds of him could find place on the point of a needle? Germany has at present about 1,300,000 sufferers from phthisis, according to the estimate of Prof. Leyden, and 170,000 die annually from this disease. In fifteen years the United States lost over 2,000,000 by tuberculous diseases; and from figures carefully compiled for years it is known that one person in seven or eight dies in America and Europe of tuberculosis, a preventable disease if we but knew, a curable disease, no doubt, when we know more.

PARLIAMENTARY GOVERNMENT.

The editors and statesmen who, having relegated the Declaration of Independence to obscurity, are now insinuating that a different kind of Constitution would be a good thing, may well ponder the observations of Prof. A. V. Dicey in an article in the June number of the *Harvard Law Review*. It was early pointed out, when the acquisition of the Philippines was under discussion, that the form of government prevailing in the United States was, in some important respects, ill adapted to imperialistic schemes. As long as the treaty with Spain lacked final ratification, however, discussion of this question was tabooed as academic; but now that the thing is done, and old men have seen visions while young men have dreamed dreams, the matter is up again. So representative a paper as the *Boston Herald* has lately, in a leading editorial, announced its conviction that a parliamentary system is what we need, and that the sooner we get it the better off we shall be. It seems to be assumed, without argument, that the English system is the only one that will help us out of our difficulties. Prof. Dicey, whose authority on the subject will not be disputed, gets at the matter from an unexpected quarter by raising the question, Will the form of parliamentary government be permanent?

The prevailing belief in the superiority and permanence of the parliamentary type of government rests mainly upon two grounds—the success of the system in Great Britain, and its spread throughout the world. Of the truth of both these facts there can, of course, be no doubt. Whatever may be thought of her policy or her methods, no one can deny that England is, in the judgment of the world, an extraordinarily successful nation. Moreover, with the exception of the United States, every great Power having a constitutional form of government has followed, more or less closely, the English model. It is not the facts, however, but the inferences hastily drawn from them, that Prof. Dicey calls in question. Has the situation, he asks, the significance commonly attributed to it, after all? Is Great Britain prosperous because she has a Parliament and a responsible ministry; and are her competitors prosperous, also, in proportion as they have imitated her? Is the parliamentary system an essential characteristic of a civilized or progressive state?

On this point Prof. Dicey's observations are worth considering. To begin with, as he points out, the constitutional history of England is quite exceptional. Physically detached from the continent of Europe, its insular position has been its political salvation. It is difficult to believe that a people compelled by their geographical situation to maintain large standing armies as a protection against powerful and hostile neighbors, could

ever have developed the free institutions which go to make up political liberty, but to which a military force at the command of the sovereign is a constant menace. Furthermore, while the parliamentary system in England has been the product of long and slow growth, its adoption by other countries has been very recent. Much of the form of the English Constitution was settled under Edward I., who died in 1307; but until the outbreak of the French Revolution, in 1789, the system remained, in general, the exclusive possession of Great Britain, and not until after the middle of the present century did it become practically universal in Europe. But why its spread? Largely, Prof. Dicey thinks, because the patent success of England has made it fashionable, and partly because nations, after a revolution, are prone to indulge in political imitation. It is the fashion to have a Parliament, a Ministry, and an Opposition. Countries as unlike as Canada and Japan have copied the virtues and the weaknesses of the system. But it is largely a fashion, after all, and, like "style" and "good form" in other things, is petted and praised while in vogue, and liable to be discarded when its novelty has worn away.

But there are deeper grounds of doubt. "Faith in Parliaments," says Prof. Dicey, "has undergone an eclipse; in proportion as the area of representative government has extended, so the moral authority and prestige of representative government have diminished." The faith in the saving power of parliamentary institutions, so manifest during the first half of this century, has given way to scepticism and distrust. Seventy-five years ago the people's dearest interests were cheerfully intrusted to the wisdom of a legislative assembly; to-day, we frame constitutions of portentous detail, denounce the party system, and clamor for the referendum and proportional representation. The fathers fought for representative government as the only guarantee of civil and political liberty; the sons cry out that the blessings are small and the evils very great. Parliaments are no longer a novelty, nor are their proceedings secret, and the combination of frequency and publicity has worked to their discredit.

The severest criticism of parliamentary government, however, comes from the acknowledged failure of parliaments to do successfully the work now demanded of them. For destructive work they are well fitted. The abolition of feudal privileges and class distinctions, the demolition of governmental forms and legal codes, and the punishment of enemies and traitors, are operations which representative assemblies have shown much skill in performing. But the legislation demanded at the present day is essentially constructive; and it is here that parliaments and con-

gresses alike have thus far earned small measure of gratitude. The reason, as has often been shown, lies in the inherent unfitness of a large and miscellaneous body of men for the performance of work primarily demanding knowledge, experience, and skill. The protection of property, the assurance of personal rights, and the uplifting of the masses of the people, are the tasks of modern parliaments; they are also the tasks that no parliament has yet performed in any but a bungling way.

Prof. Dicey modestly suggests that his reflections have speculative rather than practical interest; but their significance for us in this country is not altogether remote. Parliamentary government has through centuries become part and parcel of the whole political habit of mind of the English people; but it is not part and parcel of ours, nor have we, historically, any sufficient preparation for it. Seriously to advocate such a change is to demand a form, trusting to luck to give us the substance later on. The whole argument, indeed, rests on the assumption that henceforth we are to do as England does, which is sheer nonsense. If we set out to become an empire, we may very likely have to further amend our Constitution to bring that about; but until we have secured purity in elections, a sound civil service, and a President who will keep his word, we can anticipate no greater success from a parliamentary form of government than we can have whenever we will from the government we now possess.

TRUE EMPIRE-BUILDERS.

Mr. John Morley, in his speech to a Liberal Association on May 25, said that we heard a good deal nowadays about empire-builders, but that we did not always discriminate the true ones from the sham. "Is the only empire-builder," he asked, "the man who goes into Africa or anywhere else, makes a syndicate, takes land from the natives, kills them if they object, acquires a new patch on the map and colors it red?" Mr. Morley proceeded to answer his own question by speaking of Cobden and Bright and those who worked with them to extend English commerce and to spread abroad in the earth the arts of peace, as the men who really laid the foundation of the present British empire.

There is a very simple and conclusive test which can be applied to this matter, in this country as well as in England. Who pays the cost of empire? Whatever else is true of Imperialism, British or American, it is an expensive luxury. It cannot be run on the cheap. The budget swells as glory increases. The Chancellor of the Exchequer, like the chairman of ways and means, has to find his additional millions every year to meet the bills which Imperialism sends in with unfailing re-

gularity. Where does the money come from? Not from new territory annexed or colonies or protectorates; they are a drain on the Treasury, not feeders. It is the home industry that is taxed to pay for enterprises abroad. It is the impost upon foreign trade and upon domestic commerce, the tax on merchant and banker, upon manufacturers and corporations, which alone enable the Government to pay its sailors and soldiers and ministers and consuls and special agents of expansion. Empire is founded on taxation, and therefore the men in any country who build up its wealth, extend its commerce, develop its industries, carry on its business, are the true artificers of its imperial power.

It is perfectly true, then, as Mr. Morley said, that the statesmen who struck off the shackles from English trade contributed more to make the British empire strong and enduring than any general or explorer or annexer of them all. In like manner is it true of the United States that we are not to look for our real empire-builders to Congress or cabinet, to army or navy, but to our workshops and counting-rooms, ships and railways, and wheat and cotton fields, inventors and captains of industry. There are the sources of our wealth, and what is more, the sources of our national prestige. Who are the men who to-day are doing most to impress the world with the potency of this nation? Not our Admirals or Generals, least of all our Congress, but the manufacturers who are snatching away from all competitors contracts for bridges and steel rails in Egypt and India, and who are selling locomotives in England and ships' plates in Scotland. These are the men who, by their enterprise and skill, are making Europe "sit up" as it recognizes the commercial giant across the sea.

Here we have suggested to us the proper way for the United States to "take her place among the nations." According to our upstart Imperialists, this phrase means going in for a lot of undesirable territory inhabited by undesirable people, keeping them in order, and entering in general upon a course of international swagger and quarrelsomeness. This is very like the parvenu's idea of the pleasure of being rich—to get drunk often and to make a beast of himself. But to take our place among the nations to show them what organized industry can do, what diffused intelligence can make a people capable of, what invention and education and humane reforms can achieve—this is a very cheap thing in the eyes of our Washington vulgarians, who reckon up national power by guns and colonial syndicates and conquered peoples; but it is, nevertheless, the true patriotic ideal to work and live for.

Another overlooked element in imperial strength is peace. In the mouth of

Napoleon III., the phrase, "L'Empire c'est la paix," was tricky and insincere, yet there is a great truth in it. Nothing is more remarkable in the long reign of Victoria, under whom the British empire has grown to be what it is, than the Queen's ardent and constant desire and labor for peace. Some one has lately unearthed a sermon preached in St. Paul's by Sydney Smith, at the time of her Majesty's accession, in which occurred the following passage:

"A second great object which I hope will be impressed upon the mind of this Royal lady, is a rooted horror of war—an earnest and passionate desire to keep her people in a state of profound peace. The greatest curse which can be entailed upon mankind is a state of war. All the atrocious crimes committed in years of peace—all that is spent in peace by the secret corruption or by the thoughtless extravagance of nations, are mere trifles compared with the gigantic evils which stalk over the world in a state of war. . . . I would say to that Royal child, Worship God by loving peace—it is not your humanity to pity a beggar by giving him food or raiment—I can do that; that is the charity of the humble and unknown—widen you your heart for the more expanded miseries of mankind—pity the mothers of the peasantry who see their sons torn away from their families—pity your poor subjects crowded into hospitals, and calling in their last breath upon their distant country and their young Queen. . . . Extinguish in your heart the fiendish love of military glory, from which your sex does not necessarily exempt you, and to which the wickedness of flatterers may urge you. Say upon your death-bed, 'I have made few orphans in my reign; I have made few widows; my object has been peace. I have used all the weight of my character, and all the power of my situation, to check the irascible passions of mankind, and to turn them to the arts of honest industry; this has been the Christianity of my throne and this the gospel of my sceptre.'"

This reads almost like unconscious prophecy—a sketch of the real policy the Queen has steadily pursued. She and her Ministers are to-day ruling an empire vastly greater than that of 1837, but they know that peace is essential to its continuance in unabated strength, and so the more England's might grows in their hands, the more they strive to make its every display peaceful. Industry and commerce and peace—these three are the great empire-builders, and the greatest of these is peace.

BIMETALLISM ABROAD.

The Gold-Standard Defence Association of Great Britain has issued a pamphlet giving a summary of the bimetallic controversy to date. The last chapter supplies information concerning the present views and doings of the bimetallics in England, derived from the testimony of Lord Aldenham and Mr. Robert Barclay, the President of the Bimetallic League and the chairman of its executive committee. Both of these gentlemen consider the subject still alive. Both of them think, however, that the battle ought to be fought hereafter on a basis of a ratio of 22 to 1 between silver and gold instead of 15½ or 16 to 1, and, what is still more singular, they think that the United States would cooperate

in that plan. The only evidence offered is a personal letter from Secretary Hay to Lord Aldenham (published some time ago) in which the writer says: "Our cabinet, like your own, is considerably divided in opinion upon the question of practical bimetallism. Neither the President nor a majority of my colleagues have in the least changed or modified the views which they held last year in regard to the great desirability of an international agreement on the subject." He added that the Government of the United States was "open to consider the question of the ratio," and that he had no doubt that France was equally so, but that the present Government of the United States would not initiate new negotiations. This letter was evidently intended to shelve the question, but it appears to have conveyed to the minds of Lord Aldenham and his colleagues the notion that, if England herself would initiate new negotiations, the United States would assent to a ratio of 22 to 1. The magic of this ratio is that it would make the metallic value of the rupee equal to 1s. 4d., or the price which the Government of India seeks to maintain for it. Hence these tears of joy.

The pamphlet of the Gold-Standard Defence Association then considers the attitude of the Democratic party of the United States on the subject, holding that this country is the most important factor of the bimetallic movement, if there is still such a movement. It presents evidence on the one side showing that silver as a political issue among us is dead, and on the other that it is still alive. It leans, however, to the opinion that, if not dead, silver has ceased to be the dominant issue, and hence that the English bimetallics are deluded if they expect help from the United States in the near future.

This is a safe conclusion, and it may be added that if the English bimetallics are "banking" on the conception that Mr. Bryan and his supporters will join them in favoring the ratio of 22 to 1, they are vastly mistaken. They do not understand the force of catchwords in American politics. The words 16 to 1 have grown up with the present generation of silverites. Very few, indeed, know what they mean, or what any ratio means. Hence their suspicions will be aroused by any attempt to substitute new words in place of them. To introduce such a change it would be necessary to explain to the masses, first, what is meant by 16 to 1, and then what is the significance of the change, and why it is deemed advisable. No large proportion of them could ever be brought to a clear understanding of the reason; but if it could be made plain to them that the "dollar of the fathers" was to be sacrificed in order to meet the views of the Hindoos, a howl of derision would be heard from one end of the land to the

other. Not even Bryan could hold his party together on such a platform.

The truth is, that the life has entirely gone out of silver as a political issue in this country. All the talk that is now heard of it is a formality. It is uttered for the sake of appearances and to keep up a pretence of consistency. This is especially true of Bryan's talk. He prates about silver in order to keep himself in evidence as a candidate for the nomination, but there is no heart in what he says. The Democratic *hot polloi* are for Bryan, not because he is for silver, but because he was their standard-bearer in 1896, their hero and martyr. Mr. Bryan himself does not put silver in the foremost place in his speeches and magazine articles, but he introduces just enough of it to keep the campaign of 1896, and himself as the central figure in it, before the people. He does not mean that the old platform shall be forgotten, but neither does he mean that the campaign of 1900 shall be fought on that issue. He knows that a repetition of the campaign of 1896 would be another defeat for him, because the silver issue is not the one which people are now thinking and talking about. What the chief issue may be is not yet certain. It may be Imperialism, it may be Trusts, it may be McKinley's surrender to the spoilsmen, but it cannot be silver, for the reason that fresh interest cannot be pumped into it.

As regards international bimetallism, neither Bryan nor his party ever took any interest in it, or cared anything about it. They never contributed any votes or influence to the promotion of it. They have always looked at it askance. They have considered it a manœuvre of the Republicans when hard pressed, a trick adopted to gain time and stave off a decision. For this reason, in their platform of 1896, they cut themselves loose from all such devices, and demanded free and unlimited coinage of silver "without waiting for the aid or consent of any other nation." If English bimetallicists are looking to the Bryanites for aid and comfort in the future, they are relying on a party which never had any sympathy with them in the past, and would consider the ratio of 22 to 1 as a laughing-stock if not an impiety.

The pamphlet of the Gold-Standard Defence Association gives a résumé of the bimetallic movement on the continent of Europe since the collapse of the Wolcott Commission. The silver propaganda existed in only three countries, France, Germany, and Belgium. No new steps have been taken, and only one meeting has been held since the failure of the Wolcott negotiation. On the 13th of December, 1897, the German Bimetallic League held a meeting and passed a resolution saying that while the opposition of the English bankers might delay bimetallicism, it could not be permanently prevented. In France M. Méline

made a speech of no particular importance, and since then the question has been allowed to slumber.

GREAT BRITAIN AND THE TRANSVAAL.

The breaking off of the negotiations between Sir Alfred Milner and President Krüger, with the admission that they were fruitless and will not be resumed, is taken in England as a very serious event. Such it undoubtedly is, though the hot-heads who are jumping to the conclusion that it means war are likely to be disappointed. Lord Salisbury has found a way out of more than one seemingly hopeless diplomatic *impasse*, and it will be strange indeed if he does not devise some means of peaceable adjustment of the Transvaal difficulty. Yet the British Government is bound to do something. Mr. Chamberlain has gone too far to retreat. He has taken the position that the situation of thousands of British subjects resident in the Transvaal is intolerable, and if renewed diplomatic pressure does not induce the Boer authorities to make it tolerable, force will be resorted to in the end. There can be no doubt about that.

As to the points at issue between the two countries, a fair outside judgment would be that the Boers are technically right on all, but morally wrong on all. In strict legality, and by the hard-and-fast terms of the London Convention and international law, we do not see that Mr. Chamberlain has any case. He is estopped, in the first place, from asserting any right to interfere with the internal government of the Transvaal. Whatever verbal disputes may be raised over the precise terms of the London Convention of 1884, the broad fact remains that Lord Derby, in an official English interpretation of that convention, explicitly declared that under it the Boer Government would be "left free to govern the country without interference." The only reservation was that any treaty negotiated by the Transvaal with a foreign state "shall not have effect without the approval of the Queen."

But Mr. Chamberlain argues, or at any rate his friends argue, that England, by the very fact of enjoying a suzerainty over the Transvaal, has the legal right to demand, on behalf of British residents, a redress of grievances. This is an unsound argument. It is like a farmer insisting that because a neighbor has no right to cut a road through his land without his consent, therefore he is entitled to compel his neighbor to repair a barn or drain a pond. On the bare terms of the convention, England is not in a position to exact anything relating to the internal government of the Transvaal as a matter of pure legal right. Because a man owes you \$10, you cannot reason, from the general ground of your being his creditor, that he is bound

to pay you \$20, or whatever you please to demand. Krüger is as strenuous as Shylock in pointing to the letter of his bond and the law, and is legally in an even more impregnable position, since there is no likelihood of any Portia arriving on the scene.

On one point—the dynamite monopoly—Mr. Chamberlain has openly maintained in the House of Commons that the Boer Government has been guilty of a breach of the London Convention. He bases this contention upon the clause guaranteeing that there shall be no interference with the commerce of British subjects in the Transvaal. But the point is strained. The dynamite monopoly does not discriminate against the British as such. In effect it hurts them, but it is not a measure specifically directed against them as Englishmen. A heavy tax on beer, or on the mineral water which the unlucky dwellers in Johannesburg are compelled to drink to escape being poisoned, would bear hard on the English, yet it could not be held to be a breach of the Convention. In fact, though Mr. Chamberlain asserted that the law officers of the crown sustained him in his contention, the weight of legal opinion is decidedly against it. Krüger has not been asleep. He has solicited the opinion of eight distinguished international lawyers—one of them Prof. Westlake of Cambridge—and all are unanimous in holding that he is quite within his legal rights, so far as the dynamite monopoly is concerned. So he is, undoubtedly, in the other burning question of the naturalization laws of the Transvaal Republic. These are outrageous and oppressive, yet the legal competence of the Boer Government to enact them cannot be questioned.

Yet with narrow legal right on his side, as respects every point in dispute, President Krüger and his Government are taking a position which cannot be morally maintained. As Mr. Balfour said last week, the Boers are denying "the elementary rights of civilization." The grievances of the foreign residents of the Transvaal are great. They have a large part of the property, and pay much more than half the taxes, of the country, and yet are left almost absolutely without representation in the Government. Full citizenship can now be acquired, we believe, only after a residence of fourteen years, and even then under onerous and humiliating conditions. The inhabitants of Johannesburg are not even allowed a voice in municipal affairs. The city is wretchedly governed, is, in fact, a "death-trap"; yet the dwellers in it have no way of exerting political power to bring about a sanitary reform and remove a constant peril to life. To all appeals and remonstrances, the stolid Boers return a Papal *non-possumus*, or a Tweedie "What are you going to do about it?" and go on taxing and vexing and poisoning their Outland-

er victims, and forbidding them the right even to educate their children as they would. Now this, all must agree, is a situation to which an end should be put in some way. By urging upon Krüger and upon the world, as it is evident from Mr. Balfour's speech that the English Government means to do, the duty of having some regard to natural human rights, as against technical legal power, it will be in a position to secure general sympathy and support if, later, it has to extort by force what should have been yielded to reason and the larger justice.

HEINRICH KIEPERT.

Last year, when Heinrich Kiepert celebrated his eightieth birthday, his friends and former pupils, as well as geographers who had come under his wide-reaching influence, presented him, in characteristic German fashion, with a stately volume, a *Festschrift*, to which each had contributed an article on some subject near to the heart of the aged and beloved scholar. But even then Kiepert had so far succumbed to the maladies arising from extreme old age that he could take but little part in the festivities held in his honor, and now he has passed away, having failed to round out his eighty-one years.

Kiepert was a born worker, and in consequence the range of his knowledge became marvellously wide. His devotion to truth was absolute, and he was fired by an unflagging enthusiasm for his science which nothing but death could quench. Now that death has claimed him, his passing leaves a peculiar gap in the ranks of the devotees of the science of geography, which at present none may fill—certainly not as the master filled his post. He was a thoroughly rounded geographer; there was absolutely no corner of the globe, however remote, about which he could not give every detail known to science up to date. In so far, he will have successors. But Kiepert was more: he was an archaeological geographer, if the term be allowed, and as such he stood alone and unapproachable. As archaeological geographer, Asia Minor was his hobby, his pet, his peculiar delight, upon which he expended much time in a variety of ways. He made journeys in Asia Minor at four different periods of his life, the last falling in his seventieth year (1888). The simple statement that he had collected every scrap of knowledge that bears upon Asia Minor, however sweeping it may seem, has a much wider implication than most readers will imagine. Of course Kiepert had at his fingers' and his pencil's ends Greek and Roman literature relating to Asia Minor; of course he was thoroughly at home in the mighty 'Acta Sanctorum,' the 'Acta Conciliorum,' the mass of Greek and Latin inscriptions which are profitable for geography, not to mention such minor things as the Byzantine lists, Hierocles, the Itineraries, and all that modern travellers of European nationalities have had to say upon the subject. But after he had learned all that down to the bottom, and had drained from all these sources every fragment of knowledge in a measure unattained before by any man, he found that he needed much more of which he knew nothing as yet, much that was sealed to him.

He determined to unseal the sealed. This involved the learning of modern Greek, Turkish, and Arabic, in order to find out what the writings in those languages might have to tell him in regard to the geography of his beloved Asia Minor, and to this task he set himself, and set himself successfully. By this means he became possessed of a kind of knowledge unattainable by the average geographer. For instance, he knew what the Turkish archives, Turkish lists, and Turkish so-called maps could tell him. This knowledge he used not only in his cartographic work, but also to control the vagaries of ignorant but well-meaning travellers. The present writer's road-notes on Asiatic topography have a host of marginal annotations by Kiepert, whose accurate information made him able to say (to choose two out of many instances): "No, this is incorrect; you have wrongly heard *Allah* when the word spoken was *Ala*," or, "The Turkish lists do not bear you out."

His knowledge was not held as a hidden treasure; he had much, and he gave freely. He had gained it, however, in order to add to it, and though he gave freely, he was but sowing the seed, and he expected some return in kind for every geographical gift. No one ambitious of exploring remote and unfamiliar corners ever applied to him for an up-to-date map of the region without getting one that included every known detail; for at once the untiring worker betook himself to that mighty table in the big room in the Lindenstrasse, and in due time the traveller had his trusty guide. But much of this sort of work brought no return to Kiepert, for selfish, thoughtless, or lazy men failed to make those additions to knowledge which the master had finally hoped for—failed often to make any report to him; and the otherwise so genial man was full of bitterness in speaking of such cases. But when some return, however imperfect, was made to him, then every single word was weighed with the greatest care, and every single compass-bearing was made to do its part in shaping the mighty map upon the mighty table. He shirked no toil in utilizing for science the returns thus made, and when one traveller entered the aforementioned big room, he was greeted with the words: 'Ach, mein lieber, theuerer Herr, Ihr Journal hat mir so ziemlich ein Vierteljahrchen meines Lebens gekostet.' As they stand in print, these words might be regarded as reproachful; but as they came from his mouth they conveyed to the mind of the hearer the greatest compliment, and in hot haste the good wife was summoned to come and help welcome the man who had robbed him of three months of his life. And warmly affectionate the welcome was.

What Kiepert has done for Asia Minor cannot be measured; he has done everything, and much that goes under the name of other men is in the end Kiepert's. When he began to study the country, its geography was where Ritter had left it; with the exception of the seaboard, which might be reached by European ships, it was practically an unknown land, whereas now there are few regions that have not been explored and mapped, and this state of affairs is due in greatest measure to Kiepert, either directly or indirectly. As a member of the Central-Direction of the Imperial German Archaeological Institute, he has been the immediate and inspiring cause of many of the recent

explorations, just as he was the indirect cause of much that was done in the preceding decades.

The purpose of this note is to emphasize one phase of his manifold nature; to praise him is really impertinence. An outline of his life and a list of his works may be found in any encyclopædia.

FRANCISQUE SARCEY.

PARIS, June 1, 1899.

The death of Francisque Sarcey, the theatrical critic of the *Temps*, has been quite an event, and has for a few days distracted the public mind from the too famous and engrossing *affaire Dreyfus*. Parisians have always been passionately fond of the theatre, and this taste is universal; you will find it in all classes of society. It is even more strongly marked in the people and in the small bourgeoisie than among the wealthy classes and the aristocracy. With the small bourgeoisie the theatre replaces all the amusements of society. Our shopkeepers, after having worked all day, delight in going with their wives to some restaurant, and, after a good dinner, hearing a good play. Without having had any classical education, they acquire a sort of taste, not of the highest sort, to be sure, but still sufficiently accurate and refined. They have their favorites, their likes and dislikes; they are, as a rule, very indulgent, and never show their discontent by hissing, notwithstanding the old rule of Boileau:

"C'est un droit qu'à la porte on achète en entrant."

Francisque Sarcey may be said to have been the idol of this numerous theatrical public, chiefly composed of the French bourgeoisie. He had himself received a very high culture, having been a distinguished pupil of our Normal School; but he was essentially what we call a bourgeois, a word of difficult definition, which connotes some of the best attributes of the French mind—common sense, poise, judgment—as well as some defects, such as a certain want of imagination, of exaltation, of enthusiasm. The intellectual ideal of the bourgeois of the Francisque Sarcey type is a combination of Epicurean wisdom, of the gaiety of Rabelais, of the moral sanity of Molière, of the clever and witty rationalism of Voltaire. Francisque Sarcey received at the Normal School the solid education which forms our best Latinists; but the Normal School forms very few Hellenists—the idealism of Greece is wanting in its pupils. They are all more or less Romans, and their literary productions, full of substance and of logic, are lacking in grace and imagination. It would be difficult to find more finished types of the state of mind and intellect which I am attempting to describe than Francisque Sarcey and Edmond About. These men were together at the Normal School and became very intimate friends. Sarcey was eminently a "Classic" (such was the name given to those who stood by the ancients, by Boileau, Racine, Corneille, Molière, the great writers of the *grand siècle*). The French University was the stronghold of the Classics, the fortress which had to be defended against the Romantics. The war between the Classics and the Romantics, which was very bitter at one time, ended finally in a treaty of peace; even the most ardent Classics could not fail to recognize the genius of Lamartine, of Victor Hugo, and of Musset.

The French Theatre, which is a state institution, governed by the famous decree signed by Napoleon at Moscow, is naturally devoted to the Classics, and their plays form the "repertory." It was impossible that modern plays should not from time to time be played at the French Theatre, especially as, after 1830, there came a succession of dramatists who formed a very remarkable phalanx. Sarcey did not oppose, on the contrary, he gave great encouragement to, the modern school of dramatists; but he insisted all his life long on the necessity of continuing to play the "repertory." He maintained that Racine, Corneille, and Molière should always be played for the débuts of new actors and new actresses at the French Theatre, and that they should never be allowed to appear in modern parts before having shown themselves at home in the great plays of our best classic authors. This was, in his eyes, a necessary discipline. He had, of course, some difficulty in defending his ground against the new artists, who find it so much easier to play modern and amusing parts than to give their full value to the beauties of a literature which is not exactly the representation of modern life and the echo of modern sentiments. It is, however, to the credit of Sarcey that he succeeded in imposing on the French Theatre a discipline which has greatly contributed to make it the model theatre of our time.

He was not so fortunate in other points. He made a perpetual crusade against the exaggeration of the importance given in the modern theatre to what we call the *mise en scène*—that is to say, the scenery and all its accessories. He maintained that this excessive devotion to purely material details was not favorable to real art; that the interest of a drama or of a comedy was to be found in the dialogue, in the development of a situation and of characters, and that the attention of the spectator was not to be absorbed by a show of furniture, of costumes, of palaces, of fine rooms. In the Middle Ages, in the great mysteries which were played before the people, the scenery was of the simplest. There were great boards behind the actors, on which were written in big letters: "This is Jerusalem," or, "This is Constantinople." The tragedies of Corneille and Racine did not require much scenery; fidelity to the old rules of Aristotle's three unities implied unity of place during the five acts of a tragedy. The actors played all their parts in the costume of their own time. We can now hardly imagine *Phèdre* or *Iphigénie* in powder, with silk gowns and hoop-petticoats, or *Augustus* and *Nero* in the dress of the courtiers who came to applaud them; but there is very little doubt that the spectators of the seventeenth century felt as keenly the beauties of the tragedies of Racine and Corneille as we ourselves do. The antique world which is shown to us is, after all, also a conventional world; the Greeks of the time of Pericles, the Romans of the time of Augustus, would probably not recognize themselves at our French Theatre, careful as we may be of our scenery.

One of the reproaches which Sarcey directed against the exaggerated care we now take of the scenery, is the long time required for the arrangement of the stage between the different acts—an interval so long that modern representations become a real fatigue in Paris, lasting as a rule as late as midnight, so that the worn-out spectators

cannot be in their beds before half-past twelve or one o'clock.

The best part of Sarcey's life was spent at the time of the great triumphs of Augier, of Meilhac, of Sardou, of Alexandre Dumas the younger, of Palleron. He had the pleasure of witnessing and of fostering the triumph of a dramatic school which realized his conception of art: the study of life, the observation of the play of human passions, presented to the public by classical methods. By this I mean that the development of the plays of these dramatists is methodical, that there is a certain unity in them, that all the incidents converge towards a definite object. The analyses which Sarcey made of the dramas of these authors are marvellous when you consider that they were always written the day after their first representation; their clearness, their lucidity, their criticism cannot be sufficiently praised. They were always written *con amore* even when the critic felt the necessity of being severe. He was often severe towards Sardou. Though he admired the infinite cleverness of this extraordinary *metteur en scène* and the ease with which he found his way out of the most complicated plots, he could never quite forgive his excessive preoccupation with the scenery, the dress of his personages—the picturesque part of the drama—which, in his opinion, became too great a distraction for the public and absorbed too much of the attention of the author himself.

Sarcey had a great partiality for Meilhac, and always took pains to find even in his farces some elements of high comedy. Meilhac was essentially a Parisian; his work may be compared to a glass of champagne—there will soon be little left of it, but it gave much pleasure to the generations who understood all its allusions and criticisms. How long will the works of these writers be played? I remember a feuilleton of Sarcey's in which he prophesied that two plays only were sure to remain in the "repertory," to take rank among the classics, the "Gendre de Monsieur Poirier" and the "Demi-Monde," because they both struck a new chord and dealt with passions which are permanent in the human heart.

Sarcey was much surprised and perplexed when he had to give an opinion on the production of a new theatrical school which affected to ignore or to despise all the rules of the past. The "Théâtre Libre" was founded by an actor of great talent, named Antoine. It did not pretend to anything except to give the public what the disciples of the new method (or rather want of method) called *des tranches de vie*, slices of life. No real drama, no real plot, no complications, no intrigue, nothing but dramatic photographs, something in the style of a living cinematograph, in which people not only move but talk. It is undeniable that this "Free Theatre" has had its utility; it accustomed the public to realism on the stage; it broke through many conventions; it was no longer necessary for the drama to end with a marriage or a death. The devotees of the new school set forth the incidents of life and its situations, but many such situations have no issue. Sarcey was very conscientious. He was horrified by some of the productions of the Théâtre Libre, which, in its worst development, became the "Théâtre Rosse" (a word I find hard to translate). He was indignant with its coarseness, its indecency, its impudent contempt of all propriety. He nevertheless

took the trouble to follow, night after night, the representations of the new school, and, when there was a pearl on the dunghill, he was honest enough to pick it out.

It would be interesting to show the influence which the Théâtre Libre has had on the new dramatists, such as Donnay, Hervieu, and the rest—Sarcey did not attempt to deny it. The present school of our best dramatists is decidedly purely realistic; it is also pessimistic, and deals by preference with social subjects. It does not adopt the old motto, "Castigat ridendo mores"; it is marked by a certain sadness, even in its gaiety. Sarcey encouraged its efforts, though he was himself of a robust, healthy, and cheerful disposition. He will not be replaced, in my opinion, for many years to come, as a theatrical critic. He thought he had a mission, and he fulfilled it with an earnestness and a zeal beyond praise.

THIS YEAR'S SALONS.

PARIS, May 1, 1899.

It is impossible to come away from the latest Salons without feeling just a trifle depressed and discouraged. One thinks of the immense activity during the last hundred years, one remembers the endless movements and schools and revolutions that have come and gone since the National Assembly of 1791 made an end for evermore to the old tyranny of the Academy; and then, in the face of this spring's exhibitions, one cannot help asking to what purpose has been all this agitation, all this energy, all this striving, all this struggling. A few thousand artists may exhibit in the place of the few hundred of a century ago, but the greatness of art depends not in the least upon numbers. Indeed, it is one of the most melancholy features of this huge collection that such acres of canvas and paper, such a wilderness of plaster and marble and bronze, should yield such an absurdly small crop of good, or interesting, or even irritatingly bad work. Now that the two Salons, as last year, are sheltered under the single vast roof of the Palais des Machines, one is more than ever impressed by the mere size of these two annual shows, by the army of men and women who have chosen art as their profession. But more amazing still is the fact that, as one makes one's way through the labyrinth of galleries, there should be so little to arrest or hold the attention. There is much that is workmanlike and able, most of the exhibitors prove in their performance the excellence of their training. In any other profession, in any business or trade, the same amount of ability and knowledge would be of inestimable advantage and lead surely to success. But the artist stands in need of higher qualities, of more original virtues—qualities and virtues not to be manufactured even in the studios that turn out competent workmen by the dozen. We are disappointed only because we expected too much, and the present Salons are really nothing more than useful reminders of the century's folly of expectation.

Of course, the exhibition of the Société des Beaux-Arts (or the Champ-de-Mars Salon) is by far the stronger and pleasanter of the two. In the first place, it is smaller and therefore not so wearisome. The hanging and arrangement are much more to be commended. As a rule, there is but a single line of pictures—never, except in the case of very

tiny canvases, more than two; and the pictures that are thus more easily seen are distinctly better worth seeing. I can imagine that any one who visited the Salon for the first time would be positively amazed at the high level of accomplishment attained; but to all those familiar with the artists and their work there are signs, if not of exhaustion, certainly of fatigue. Naturally, the loss of Puvis de Chavannes is very seriously felt. His large decorative panels may not always have been of equal merit, but they were never entirely without charm, distinction, and, above all, the repose that could not but prove a relief in the midst of the sensations of the year. And his absence is the more keenly realized because in their place now hangs only the little portrait, simple, sombre, reticent, that he painted of his wife when she was still the *Princesse Cantacusène*, while the large decorative work by other artists seems to violate every canon of his artistic creed. It comes as something of a shock to find Dubufe consecrating to his memory a canvas of gigantic scale, on which the dead master sits, with appropriate sadness, among nondescript symbolical figures in emerald-green draperies and violet wings, color and design both as completely out of sympathy with his aims and methods as well could be. Nor do I see much hope of his mantle as decorator falling upon the shoulders of those who evince most desire to wear it—upon either Anquetin or Boutet de Monvel, for example. There is astonishing vigor and force in a big allegorical "Battle" by Anquetin, a mass of men and horses with impossible arching manes, wrestling and grappling together in deadly combat, but so violent, so confused, you can but regret the misdirected energy of a painter of whose power there can be no question. I see that a French critic makes much of the fact that the work was done in some forty days, but the merit of a picture has absolutely nothing to do with the time and labor bestowed upon it. As for Boutet de Monvel, he has apparently taken one of the small colored illustrations from his "Jeanne d'Arc," enlarged it, and given precisely the same composition in colossal proportions, but worked out with the minuteness and elaboration of the old illuminator. Brilliant reds and yellows and purples that were amusing on the printed page of a small book become offensive and glaring when made to cover vast spaces. The decoration is for the church at Domremy, which is so dark, I am told (I have never been there), that exaggerated brilliancy is absolutely necessary, if the decoration is to produce its effect. This may be so, though I doubt it, and, in any case, I think it a mistake to show the design in the uncompromising light of a well-illuminated gallery. I also think it a pity that a ceiling by Besnard should be hung up on the wall like a picture, where you can tell nothing about it. Dark foliage and rose-colored draperies set against the deep blue of a starlit sky suggest an agreeable harmony, but I should not venture to answer for it until I saw the ceiling in place, nor do I feel that I can appreciate the panels he exhibits with it in their present surroundings.

These are some of the most striking works, principally, if I except the Besnards, because of their size. To turn to smaller canvases is to find men like Carrière, Aman-Jean, Lhermitte, Picard, Raffaëlli, Gandara, and Blanche repeating more or less the same subjects or same designs or same effects we have had

from them in the past: M. Carrière becoming more vague, more mystical, more tragic than ever, though his theme may be one in itself so joyous as the morning greeting between mother and children; M. Aman-Jean's refinement, for the moment threatening to dwindle into feebleness. Then M. Simon, once so promising, grows more photographic in his portrait groups with every year; M. Cottet, once so original, is degenerating into a mere slave of his mannerisms. With regret, one discovers that Mr. Whistler sends nothing; nor is there anything by Mr. Sargent or Mr. Dannat. Mr. McLure Hamilton has but two little portraits—characteristic and accomplished—in the place of the group of several he exhibited last spring. And Mr. Alexander's ingenuity seems to be failing him, for his favorite model appears upon but one canvas, there twisted in a new and graceful curve over a violoncello. Even the sensationists have come to an end of their resources. M. Jean Béraud's hitherto fertile invention has carried him no further than a theatre rehearsal, and this year, at any rate, he must retire before M. Jean Veber, whose rather loathsome fight between two naked women, with hideous old hags for on-lookers, fascinates the crowd; and also before M. De Groux, M. Louis Legrand, and M. Piot, who, each in his way, makes a bid for notoriety by madness of method, a perfect saturnalia of paint. The religious picture, too, is disappearing. M. Dagnan-Bouveret, recently the most enthusiastic exponent of the Scriptures, now confines himself to a portrait, and it is chiefly M. Carolus-Duran who keeps up the tradition by a Crucifixion, melodramatic, bituminous, ineffective. Really the best and most genuine work comes from the landscape painters—from M. Cazin and his follower, M. Billotte, from Ménard, Griveau, Mouillé, and several others, more or less strong, whose canvases reveal a curious romantic tendency. The reign of Realism, of Naturalism, of *Plein-airisme*, of Impressionism, is clearly at an end—that is, for the present generation.

In the section of drawings and prints, I am conscious of the same fatigue, the same exhaustion. I looked in vain for the old gaiety of experiment, the old triumphant solution of new problems. Men like M. Helleu, M. Florian, M. Renouard are not represented. Fine woodcuts and wood-engravings, some printed in color, are still sent by M. Lepère, color etchings by M. Raffaëlli, color lithographs by M. Gottlob and M. Heidebrinck, remarkably clever etchings by M. Louis Legrand; but the greater number of exhibitors are content to copy or imitate men already acknowledged as masters. Perhaps it should be noted that many artists are beginning to show the sketches and studies for their pictures, a capital plan, helping one, as it does, to understand their aims and intentions. But interest centres chiefly about a roomful of drawings by M. Cazin, as refined and individual as his paintings, wonderful little studies of towns—a street or a *place* charmingly suggested—or else of the quiet, uneventful sketches of field or open country, where he so often seeks his inspiration, or of women and children; studies these that make one wish he had not devoted himself so exclusively to landscape. The drawings are mostly in chalk or pencil on white paper, sometimes on gray paper, when they borrow something of the tranquil, tender color of his twilights and his moonlit nights.

There is never very much sculpture in the Champ-de-Mars Salon, but what there is, usually, is good. This year the greatest success is scored by Mr. Saint-Gaudens with his "General Sherman." In its quiet dignity, it impresses one, the moment one's eyes fall upon it, after passing, as one must to reach it, all the flamboyant, restless, contorted, posing statues of the other or Champs-Élysées Salon. There is so much character, so much authority, in the gaunt, spare figure, erect and alert in the saddle. The cloak, flying back in the wind, gives just the right suggestion of movement, though I understand that Mr. Saint-Gaudens means to modify it slightly, thinking that, as it is, it detracts somewhat from the fine sobriety and reticence of the whole composition. It is interesting to find another American, one hitherto known only as a painter, making his appearance as a sculptor: Mr. McLure Hamilton, whose bust of his mother is so able, so expressive in its simple severity, one might think it the work of the master sculptor, rather than the apprentice. M. Rodin, probably to his own great satisfaction, has not created the excitement of a year ago. The now famous "Balsac" is succeeded by a life-size "Eve" in bronze—an Eve after the fall, sad and ashamed, her arms crossed over her breast, her head bent low. It is beautifully conceived, full of emotion, subtle and strong in the modelling, but it seems to me that M. Rodin never succeeds quite perfectly in his larger designs. I like better the small, spirited bust of M. Falguière which he is also showing.

One wonders if the exhibition of this bust is not M. Rodin's way of explaining to the public that he does not in the least resent the fact that the commission for the Balsac monument has been handed over to M. Falguière. The new Balsac is, for me at all events, what the French would call the *clou* of the Champs-Élysées Salon. M. Rodin's Balsac was so indisputable a failure, and yet, at the same time, so fascinating, so exasperating because it came so near being the work of genius he meant it to be, that it is inevitable curiosity should mingle with one's desire to see the attempt of the man who has had the temerity to come after him, and so challenge comparison. M. Falguière, evidently, has been overwhelmed by the delicacy of his position, and, as if convinced that imitation is really the sincerest form of flattery, has made his Balsac as much like M. Rodin's as a sculptor of so opposite a temperament could. The new Balsac sits, where last year he stood, his hands no longer concealed, but crossed comfortably and inelegantly over his knees; he wears the same indefinite garment, partly dressing-gown, partly great coat; he is quite as shapeless and still heavier; and if there is less of melodrama in his pose, there is more of clumsiness. M. Falguière is commonplace, colorless, while M. Rodin's fault was an excessive individuality or daring of treatment. The latter tried to express too much—the whole history of romance, so his admirers insisted, instead of the character of one man. M. Falguière has tried to express too little, and has let the great genius go masquerading modestly as an amiable bourgeois taking his ease by his own fireside. If he but succeeded, M. Falguière is reported to have said, "Cela en fera deux de beaux." But he has not succeeded, and the result is two failures, not two masterpieces. M. Frémiet,

too, I think, has lost a fine opportunity. To him has been intrusted the statue of De Lesseps to be set up at the entrance of the Suez Canal, and he has imagined nothing nobler and more dignified than a man—no doubt the portrait is irreproachable—in a dress-suit, one hand holding the map of the canal, the other outstretched in the most conventional and theatrical of gestures.

If, for the rest of this exhibition, though the larger of the two, I have left myself but little space, I have done so intentionally. There is little to be said that has not been said before many times. Again one is confronted with the enormous canvases, the big *machines*, meant to capture by sheer force the attention they could not claim by merit alone. M. Jean-Paul Laurens is always an exception. His large historical compositions are designed for a definite purpose. This year he shows a ceiling for a public building in Toulouse, scholarly, but, with its persistent reds, less restrained and sober in color than usual. Of the others, even M. Tattgrain, who once knew how to put a picture together, is beginning to sacrifice everything to the gruesomeness of his details, so that, in his "Saint-Quentin pris d'assaut," the eye wanders aimlessly from group to group, from figure to figure, as in a "yellow" journalist's picturesque report, never by chance taking in the effect of the dramatic scene as a whole; and, unfortunately for the painter, a picture of this kind is forgotten as promptly as the printed report. The work that tells, in the only fashion an artist should care to have it tell, is found rather in the melancholy gray landscapes of M. Pointelin, who may keep on for ever painting the wide, desolate moorland, the long barren hills he loves, but who does it with such feeling for the poetry of light and air that they have all the variety of Nature herself; in the stately, formal compositions of M. Harpignies; in the little idylls of M. Fantin-Latour. These are, as they have been so often before, the few good things that reconcile one to such a waste of paint. I thought, too, that the work of a few American exhibitors—a delightful little Dutch baby by Mr. MacEwen, the well-drawn cattle by Mr. Bisbing, the low-toned pastorals by Mr. Truesdell—were, in their refinement, pleasant contrasts to the typical Salon picture. The seas of Mr. Boggs and the tulips of Mr. Hitchcock also stand out with something like distinction.

The prints and drawings here have always been dull and unimportant compared to the series at the Champ-de-Mars, and now, with M. Fantin-Latour and M. Willette both absent, they are more forlorn than ever; an occasional innovation in the shape of an experiment in color, a single lithograph by M. Dillon, two or three worth noting by M. Huvey, and M. Leleu, and the wood-engravings by Mr. Wolf are not quite enough to compensate one for wading through such a large collection of indifferent interest.

Perhaps I ought to add that in both Salons more and more attention is being paid to the purely decorative arts, and that in the New Salon a prominent and distinguished place is given to Mr. Tiffany's glass, which is also, by the way, being shown just now in London. N. N.

Correspondence.

TEMPERANCE AND EXPANSION.

TO THE EDITOR OF THE NATION:

SIR: The United States having emerged from the smoke of the Spanish war, with Cuba, Porto Rico, and the Philippines more or less attached to her, it is pertinent to ask what effect these new and (to the United States) strange relations will have on the temperance question.

Our inquiry need not take us far afield. Expansion means forcible subjection of the countries over which our self-appointed authority extends; forcible subjection means the maintenance of a large army, and, notwithstanding the plain prohibition of Congress, the beer canteen, according to the opinion of the Attorney-General (an opinion fearfully and wonderfully made), is allowed to attach itself like a leech to our army under a pretext of the shallowest and emptiest sort. It is not necessary to picture here the evils that follow in its wake. The mere fact that the best and most experienced officers of the army, such men as Gen. Miles, Gen. Shafter, and Gen. Brooke, are stoutly opposed to the canteen, is sufficient to condemn it in the eyes of the average layman. Yet this curse bids fair to be a permanent adjunct to our army, and therefore to our new idol, expansion.

But there is another and quite as atrocious a way in which expansion is affecting temperance. One of the chief pretences with which we have apologized for the shooting down of the Filipinos in cold blood is that we intend to convert them from barbarism and to make them moral and upright. Nevertheless, during the American occupation of the Philippines, between three hundred and four hundred saloons have been established in Manila alone. It seems incredible that such a revolting condition can be possible, and yet so undeniable is the fact that our comic papers have begun to picture the bar-room and the free-lunch counter as the sort of American free institutions that we shall give the Filipinos.

The worst of the matter is, that there is no promise of improvement for the future. Our uniform treatment of the Indians in supplying them with "fire-water," contrary to treaty stipulations and to the instincts of morality and humanity, and the recent repeal of the prohibition law in Alaska, augur badly for the needed relief.

HENRY FREDRICKS.

PHILADELPHIA, June 10, 1899.

AN ENGLISHMAN IN RUSSIA.

TO THE EDITOR OF THE NATION:

SIR: Prof. Kittredge has directed my attention to a postscript of William Smith's letter of the 15th of May, 1873, sent from Yaroslav in Russia to his brother James Woodcock in Kent, contained in Thomas Wright's "Queen Elizabeth and her Times," vol. 1, p. 422. It runs as follows:

"Brate Yakobe possaldie peregottoui pro mina Jonnisko gottory Crosshinko ye mollo-dinko. protiuo ya preyeado doma I possalli Cholombite ut misna barbara Wode ye velly onna ys doute mina golli te take. Displesse pro mina brate boudes dessinaert.—Pro brat weyo, WILLIAM SMITHE."

In a footnote the editor says: "This postscript was no doubt intended to astonish all

his friends in Kent." In this statement he is, however, mistaken, for the postscript was meant as a confidential note to his brother, as the translation of it will soon show us.

Ever after the discovery of Russia by the English in 1553, English merchants and their agents and military adventurers resided in Russia. Mention of this fact is made in Smith's letter, by which we are also informed that his brother had been there before: "This country of Unslund [mistake for Rusland] is greatly changed since you were here, and things goeth not so convenient with Englishmen as it hath done." During their long sojourn in Russia, many Englishmen acquired a speaking knowledge of the Russian language, and to one of them we owe the earliest collection of Russian ballads in existence, made in 1613. To this matter I shall return at some future time. The passage given above is written in Russian. After making various allowances for misprints, incorrect readings of the editor, and superficial knowledge of the language of the writer himself, we get the following intelligible translation:

"Brother James: Please procure for me a wife, one that is pretty and young, against the time of my return home, and please make my obeisance to Barbara Wood, and tell her to wait for me. If you succeed in doing this for me, you will be unto death the brother—Of your brother,

"WILLIAM SMITHE."

This pretty sixteenth-century romance of which we get a glimpse through the Russian language is probably unique in English history. It would be interesting to know whether Smith ever was united to his lady-love.

LEO WIENER.

CAMBRIDGE, MASS., June 7, 1899.

THE OSCITANT PROOF-READER.

TO THE EDITOR OF THE NATION:

SIR: Not many more amusing misprints are likely to be found than one in Saintsbury's "Short History of English Literature" (1898, p. 262), where the well-known line of Sidney's first Sonnet is quoted:

"Fool! said my nurse to me, look in thy heart and write."

W. H. B.

Notes.

Dodd, Mead & Co. will shortly publish the only authorized edition of the early novels of Henry Seton Merriman, which have been revised, condensed, and in part rewritten. They have nearly ready the "Autobiography of Mrs. Oliphant."

Henry Holt & Co. announce "The Hooligan Nights," reminiscences of Alf. Hooligan, thief and counterfeiter, edited by Clarence Rook, a London journalist.

D. Appleton & Co., The Century Co., and the Doubleday & McClure Co. are to publish in conjunction the fifteen-volume edition of Kipling's works, which is to be marketed by the Book Department of the H. B. Claflin Co.—altogether a very unusual enterprise.

The Macmillan Co. have in hand the authorized translation of Clara Tschudi's "Life of Eugénie, Empress of the French," and the "Reminiscences" of Clement Scott, the veteran dramatic critic of the *Daily Telegraph*.

Small, Maynard & Co., Boston, are issuing "The Yellow Wall Paper," an early

magazine story of Mrs. Charlotte Perkins Stetson; and 'On the Birds' Highway,' by Reginald Heber Howe, Jr.—coast bird-studies from Maine to Maryland, with some 60 illustrations.

'The Martial Graves of Our Fallen Heroes in Santiago de Cuba,' by Dr. Henry C. McCook, will shortly be issued by George W. Jacobs & Co., Philadelphia, with photographs, charts, and maps.

William Ellis Jones, No. 5 South Twelfth Street, Richmond, Va., invites subscriptions to the 'Word-Book of Virginia Folk-Speech,' by Dr. B. W. Green of Warwick. Only 300 copies will be printed.

A new work on 'Embroidery,' by Lewis F. Day and Miss Mary Buckle, will be brought out in London by B. T. Botsford, and in New York by the Messrs. Scribner.

The latest volume in the new edition of the writings of the late John Addington Symonds is the fourth appearance of his 'Introduction to the Study of Dante' (London: Black; New York: Macmillan).

Mr. Brett's 'Cumulative Index to a Selected List of Periodicals' for 1898 (Cleveland: The Helman-Taylor Co.) forms the third annual volume of this important key to "authors, subjects, titles, reviews, portraits"—the last item not the least. We need only add that the periodicals here indexed number one hundred, and that especial pains have been taken to make the year's necrology complete.

Mr. John Coleman Adams's 'Nature Studies in Berkshire [Mass.]' (Putnam) will not secure him the literary rank of Burroughs, Bradford Torrey, or Thoreau, and his text pales in quality beside the photographure illustration of Mr. Arthur Scott, his collaborator in the making of a handsome volume. These views are all charming and characteristic, and unusually successful in catching cloud effects.

Mr. R. P. Porter confesses to the haste with which his 'Industrial Cuba' (Putnam) has been compiled. Yet as a record of information, as distinct from the author's opinions (some of which seem to have been even more hastily put together than his facts), the book is of considerable value. The existing Cuban tariff printed in full, the account of internal taxes and of the apportionment of public revenue, with the chapters on sanitation and transportation, furnish the best portion of Mr. Porter's statistical exhibit.

There is unaffected modesty in Burr McIntosh's title, 'The Little I Saw of Cuba' (F. Tennyson Neely), and the author, a newspaper correspondent, who left the island as a yellow-fever convalescent, makes no pretensions of any kind. His journalistic style is not commendable, but his observations with the Rough Riders are a respectable contribution to the material for that history of the Santiago campaign which has yet to be written. Mr. McIntosh leaves us in no doubt as to his likes and dislikes, and among the latter he, with a mind devoid of sectionalism, includes equally Gen. Shafter and Gen. Wheeler. His own photographic views give a better idea of the country than most we have met with, and much enhance the value of a narrative of some hardship and personal disappointment.

F. Anstey's 'Love among the Lions' (D. Appleton & Co.) is clearly by the author of 'The Tinted Venus,' is characteristically ingenious in concealing the plot, and is brief enough not to weary. If it adds nothing to the author's reputation for humorous extravagance, it cannot fail to provoke a smile in the reader.

The Jewish Publication Society of Ameri-

ca, Philadelphia, is ably carrying on the task of popularizing Judaism and keeping its best spirit alive. It has issued some books of high scientific value, such as the translation of Graetz, Schechter's 'Studies in Judaism,' and Dembitz's 'Jewish Services,' along with others of much lighter weight which need not be particularized. Their last publication, Abrahams's 'Jewish Literature' (275 pages, including an excellent double-columned index of twelve pages), takes medium rank. It is an introductory sketch of Jewish literature from the Mishna to Mendelssohn, and is brightly written, clear, and accurate. Of course, the treatment is of the slightest—within such limits none other were possible—but the arrangement is good; each of the twenty-five chapters has a pointed heading and closes with a little English bibliography guiding to further study. The references to Arabic thought and literature might be more exact, but that lies off the writer's track, and, besides, there are few English books in which such references even approach exactness. His little book fairly accomplishes its claim, and will take a useful place in the strange but just and healthy Jewish *renaissance* which is upon us.

Volume ix. of the Harvard Studies in Classical Philology (Boston: Ginn & Co.) is largely devoted to the memory of the two great and well-beloved teachers whom Harvard lost in the summer of 1897. The memoir of Prof. George M. Lane is written by his former pupil and literary executor, Prof. Morris H. Morgan, while that of Prof. Frederic D. Allen is the work of his colleague and friend, Prof. Greenough. The two memoirs, which are accompanied by excellent portraits, together with a number of posthumous papers, now furnished with revisory notes, make this volume of the Studies of particular interest to many classical students. The influence of Prof. W. M. Lindsay of Oxford, who was an instructor at Harvard in 1898, is shown in a series of seven studies in Plautus, mostly the work of his American pupils. Other articles are "Hidden Verses in Livy," by M. H. Morgan, and the "Nonius Glosses" of the late J. H. Onions, with note by Prof. Lindsay; while the last two-score pages of the volume are taken up with a careful and painstaking analysis of the "Versification of Latin Metrical Inscriptions except Saturnians and Dactylics"—the work of Prof. A. W. Hodgman of the Ohio State University.

Karl Dieterich's 'Untersuchungen zur Geschichte der griechischen Sprache von der hellenistischen Zeit bis zum 10. Jahrhundert nach Chr.' (Leipzig: Teubner) is a late addition to the constantly increasing list of German studies dealing with the history of the Greek language. This work has special reference to such inscriptions, papyri, and manuscripts as have come down to us from the period 300 B. C.-1,000 A. D., and deals especially with the *συνή* or Greek of the Hellenistic period, and its relation to the dialects of to-day. The connection of ancient with modern Greek, a language long despised by philologists, has now been assured by the works of such scholars as Krumbacher, Hatzidakis, and Thumb, whom Dieterich follows; and future investigations into the Greek of any period can hardly be made without some reference to the modern *Gemeinsprache* and dialects. The importance of modern Greek as a development of the ancient, and the fact that it is able to throw light on many difficulties of ancient Greek investigation, explains the extraordinary ac-

tivities of German scholars in this direction during the last decade.

Mr. Charles F. Lummis is about to print in his *Land of Sunshine* (Los Angeles, Cal.) an accurate translation of the Viceroy Revilla Gigedo's report on California, the clearest and closest summary of Pacific Coast affairs and explorations from San Blas to Nutka, 1767-1793, that we possess. It has not been printed heretofore in English. It will run for about four months in the magazine.

A map of the theatre of military operations in Luzon, on a scale of nearly three miles to the inch, prepared under the direction of the Military Information Division, is the special feature of the *National Geographic Magazine* (Washington) for June. Com. H. Webster, U. S. N., contributes a readable account of the Samoans, accompanied by illustrations, in which, referring to their singular hospitality, he says that "traveling parties can go from end to end of the group without expense for food or lodging, and the official 'Large House,' maintained by each village, is seldom vacant. This peculiar institution is provided by contributions from every family in the place. One of the results of this type of hospitality is that the Samoan has become a great traveller. Large parties, resembling our 'tourists,' band together and go from town to town and from island to island." The Samoan is fond of games of skill, especially of a kind of quoits and of cricket. So strong a hold has the latter game taken upon the natives that it was no uncommon experience to find a village "utterly deserted by its inhabitants, for the entire population would be in a neighboring clearing, watching or taking part" in the game. It is not surprising to learn from another writer that the Samoan is averse to labor, and that those who have attempted agricultural pursuits in the islands have been compelled to import laborers. The rates of wages are "\$1 per day for laborers, or \$10 per month with food; mechanics from \$3 to \$5 per day; clerks, \$50 per month and board, and bookkeepers \$100 per month and board. There are now constantly from 1,000 to 1,500 foreign laborers in the islands." The editor makes a short statement in regard to the work of the National Geographic Society and its organ, which has afforded an opportunity for the publication, in a popular form, of information that might otherwise have lain buried in voluminous reports. The Society has now 1,100 active and 500 corresponding members, and a special effort is being made to increase its membership, in order, among other things, to enlarge the magazine and to add to its attractiveness and value.

The *Annales de Géographie* for May contains an interesting description of a type of a primitive house as shown in the stone structures of southern Italy, known locally as *trulli*, *caselle*, and *specchie*. The trullo, or bee-hive house, is a small hut built of "dried" stones laid without cement, covered with a cupola of the same material. The casella consists of several trulli joined together. The specchie are large truncated stone cones, and were no doubt originally intended for watch towers. Few of these buildings, except possibly some of the third class, are of great antiquity, the peasant of this district to-day regarding the trullo not only as the most economical, but also the driest and healthiest of habitations. There are several illustrations,

and a map showing the distribution of the different classes of these buildings, born of a land known in classic days as "*petrosa Apulia*." There is also an illustrated description of the irrigation works now in process of construction at Assuan and Assiut on the Nile. At the former place at the time of the writer's visit (February, 1899) there were 6,000 laborers employed, of whom 500 were Italians, the remainder natives. Referring to the common idea that in Egypt all things are immovable and unchangeable, he says that "it seems to us, on the contrary, that in few countries are modifications, economic, geographic, and historic, at the present time so profound and so rapid." Pure science is represented in this number by an article on the geography of plants, founded on a recently published work, by A. F. W. Schimper, on 'Plant Geography on a Physiological Basis.'

In *Petermann's Mittheilungen*, number four, is the first part of an elaborate study, by Paul Langhans, of the distribution of Germans and Czechs in northern Bohemia. In eight districts examined, a comparison of the census of 1880 with that of 1890 shows that in two districts the Germans, in six the Czechs, have increased. A. Gaederts continues his account of his preliminary survey in the province of Shantung in the interests of the proposed German railway. He gives some figures showing the great commercial activity which prevails, and the present cost of transportation of the principal products, raw silk, cotton, coal, plaited straw, tobacco, vegetables, and fruit "in great quantities and of good quality."

"You may make a canal or a railway without the consent of a people, but you cannot make a system of justice," said Sir John Scott in a recent address in which he explained the methods whereby he, as judicial adviser to the Khedive, obtained this consent. Acting on the principle that, in judicial reform, "better men, not new measures," were demanded, he began by making provision for the education of Egyptians in Occidental law. Succeeding steps were the removal of hopelessly incompetent and corrupt judges, and the replacing the seven tribunals in which several judges sat, with numerous single-judge courts placed in all parts of the country, over which a strict supervision is held. The result is that cheap and prompt justice is brought within easy reach of every peasant. "There are fewer crimes in Egypt than there are in England in proportion to the population"; but when they are committed, the criminals, whatever their rank or position, are tried by the native judges, who show an independence amazing from the Oriental point of view. "One of the richest and most influential men in Lower Egypt" and a prince, cousin of the Khedive, have been sentenced recently by native judges to a convict prison, the one for forgery, the other for assault. Sir John sums up his work in these closing words: "I found in 1890 a set of native tribunals that were struggling for existence. I leave behind me a set of national tribunals which will, I trust, be the backbone of the country for all time."

The proverbial excellence of the Prussian system of popular education is once more disproved by recent debates in the Landtag. The scarcity of agricultural labor during certain seasons has led the landowners of the Eastern provinces to urge the passage of a law by which the time and duration of school sessions shall be made to depend more large-

ly than heretofore upon "local conditions." In the course of the debate it was shown that there are large districts in Pomerania where the children attend school only during the early morning hours between 5:30 and 9:30. Half-day schools are common in other places. In the province of Posen the dearth of teachers is such that a thousand positions are vacant, and there are schools in which two hundred children, or more, are under the charge of a single teacher! Elsewhere, children under nine years of age are not admitted to school for lack of room. (See the *Pädagogische Zeitung*, May 11, 1899.) It is surprising that in Mecklenburg, which in political matters is so far behind Prussia, the number of pupils entrusted to one teacher does not exceed fifty, about one-half of the average in Prussia, while even in Saxony, probably the most advanced of all German States in matters of popular education, the average number of children to one teacher is seventy-three. It is evident that the efficiency of the school depends largely upon this proportion.

—The report of Mr. Douglas Brymner on the Canadian Archives (Ottawa) once more calls attention to our Government's neglect of the manuscript sources of American history in Europe. The Library of Congress, where transcripts should be found, has never expended a dollar to obtain them. The Pennsylvania Historical Society, under Mr. Stone's direction, has done more than any other society in this good work. The field is practically unworked, however many partial attempts to make an impression may be pointed out. Mr. Brymner has not only systematically taken transcripts of all that the Records Office in England could afford, but he now announces the arrival of copies made in Paris, extending from 1575 to 1767. Instead of Washington being the centre of historical research in the British and French records, Ottawa offers a far richer opportunity, and one that cannot be offset by the Library of Congress for many years. The existence of these deposits serves to attract original material, as the deposit with Mr. Brymner of papers relating to Bougainville proves. The expense of obtaining the transcripts is not heavy; and were a few of the larger libraries to combine, it would be one of the best undertakings for advancing the study of history at a very low cost. No one who has had occasion to write of colonial matters has failed to feel the need of such records. The delay and expense of applying direct to London are prohibitory to individual effort; but a coöperative plan would be simple and effective.

—In his report for 1899, Mr. Brymner covers the records of Upper and Lower Canada during the Dalhousie and Maitland régimes. Certain documents, of especial interest, are printed in full as an introduction, among them being a hitherto unknown letter of Gen. Wolfe. He wrote, in June, 1759, in a tone of irritation at being ordered to Halifax to serve under the orders of one who had just been promoted over his head: "Rather than receive orders from the government of an officer younger than myself (though a very worthy man) I should certainly have desired leave to resign my commission; for as I neither ask nor expect any favor, so I never intend to submit to any ill usage whatsoever." The disputes between Lord Dalhousie and the Assembly are noticed, and some remarkable examples of methods of criticising the actions of the ruling party cited. Whether the question was one of salaries or of a mo-

nopoly of offices by a few families, there was always an opportunity for recrimination. The social and political vicissitudes of Judge Willis are touched upon—a disturbing influence as marked as the matter of Mrs. Eaton in Jackson's day. One woman's differences with another woman threatened the very policy of the state. The history of the land companies in Lower Canada is very interesting, as they repeated some of the earlier experiences of our States in dealing with their Western lands; while the "naturalization question" arising from the election to the Assembly and rejection by the Crown of Barnabas Bidwell, an alien, fitly brings the report to a close. This resulted in an alteration in the law, but not in a satisfactory settlement of the question. Mr. Brymner's editing shows care, and this new volume is one more excellent product of his office.

—Mr. A. H. Garland's legal reminiscences ('Experience in the Supreme Court of the United States, with some Reflections and Suggestions as to that Tribunal,' Washington: John Byrne & Co.) are chiefly remarkable for their modesty. Most people of his distinction would have made a couple of octavo volumes out of himself, while here we have only a hundred small pages. They are readable, and here and there the author makes a good point, as where he observes, of the late Justice Bradley, that it is doubtful if any man ever sat on the bench of the Supreme Court who knew "more law and more sorts of law than he." A good story of Roscoe Conkling and "Matt" Carpenter is given. Conkling, with a record of a case coming on at once in court in his hands, applies to Carpenter for light on a point about which he says he is "troubled," and asks what he, Carpenter, would do about it. Carpenter's reply is, "Why, I would employ a good lawyer." Mr. Garland gives a long list of cases in which he was engaged in the Supreme Court, but the one which will perhaps cause his name to be longest remembered was *Ex parte Garland*, in which, as he somewhat grotesquely puts it, "the right of lawyers against legislative encroachments" was vindicated. So conspicuous at the time did this judgment make him that *Ex parte* became a sort of Christian name for him, as *Ad interim* did for another character of the Reconstruction period.

—The apotheosis of wood-engraving appears in 'The Portfolio of National Portraits,' just issued by R. H. Russell of this city. These portraits (India proofs, signed by the artist) are all on the grand scale, and are all from the same graver; but this latter circumstance would, we venture to say, never be inferred by one ignorant of the fact. It is a point of greatness on which we have had more than once occasion to insist in the case of Mr. Gustav Kruell's work (for it is his which is in question), that it is absolutely devoid of technical mannerism; varying partly with the subject and partly with the artist's growth in mastery. The Sherman and the Grant are illustrations of the first, the two Lincolns of the second cause of this individual treatment. On the whole, the development has been towards a richer coloring, and this seems to have been attained even in mere impression—in the Lowell, for instance, as compared with the earlier prints. Mr. Royal Cortissoz, who supplies an introduction, and a judicious comment on each print, rightly dwells on the immense qualities of the Sherman portrait, surpassed by no other of the eight as interpretation of character,

or as a *tour de force* of the graver, which in the background simulates painting and in the general relief the plastic art. Of all, this portrait seems to us most alive. Besides those already enumerated are heads of Webster, Garrison, and Lee—the marvellous Webster substantially finished in seven days, and calculated to stand the test of seven centuries; the Lee, the latest in the line, and nobly treated, with a sort of arboreal background contrasting with the repose of the person. These seven characters belong to a storm-and-stress period almost forgotten were it not for the pension-budget, and are felicitously grouped. The proofs and letter-press are enclosed in a noticeably elegant carton, and may be so preserved, or the portraits may be framed by the happy possessor.

—The second volume of Prof. Friedrich's 'Ignaz von Döllinger' (Munich: Beck) describes Döllinger's eventful career from the beginning of the reactionary régime of the Bavarian Minister Abel in 1837 to the dissolution of the revolutionary Frankfort Parliament in 1849. A queer occurrence, as viewed in the light of later events, was the removal of Prof. Kaiser from the theological faculty of the Munich University in 1841, because he taught the doctrine of papal infallibility, declaring the Pope to be the source from which Holy Writ derives its authority, and the absolute sovereign of the reasoning faculties and the laws of thought. He even stated that the successor of St. Peter might be "personally an unbeliever, a blasphemer, and a heretic," yet in his official capacity, as "the organ of Jesus Christ," he would be, in all his utterances and decisions, unerring and inerrable. This idea was then denounced by the highest dignitaries of the Church as "a crazy notion" and "an abominable heresy," and the genial and tolerant Görres tried to excuse it by characterizing Kaiser as "somewhat crack-brained" (*etwas rappe- lig im Gehirn*). Thirty years later this tenet, which had been censured by the bishop as the centre of a "whole snarl of false doctrines," was made a "dogma of the Church," which all good Catholics were bound to accept on pain of excommunication. It is no wonder that a serious scholar like Döllinger, who had seen the evolution of the system and its culmination in the Vatican decrees, should refuse to turn a somersault in the arena of dogmatics at the command of the master of the ring. He was honest even in his errors, and intellectual high-vaulting either for place or pelf was not in his line. One of the most interesting chapters is that on the Tractarian Movement in England and Döllinger's relations to it. As a Catholic, he naturally rejoiced in the conversion of prominent Englishmen, and each case of this kind was celebrated with enthusiasm by the Görresverein in Munich. Subsequently these conversions were a matter of deep regret to him, since they served to strengthen the specifically Romish and Jesuitical element in the Catholic Church and contributed essentially to the victory of "curialism" in 1870. Indeed, Manning began to inveigh against Döllinger even before the Vatican Council, and afterwards denounced him with extreme bitterness because he failed to recognize an "impulse of supernatural grace" in the decree of papal infallibility. The account of the Lola Montez episode, and of the row which "her foot of marvellous beauty of form" kicked up in church and state as well as in academic circles, is only another contribution to the history of the foibles and follies of the

house of Wittelsbach. As a member of the Frankfort Parliament, Döllinger was far more liberal than the majority of the Conservatives, with whom he naturally associated, and never sacrificed his personal convictions to party fealty. He was an ardent advocate of German unity and a German national church, but soon saw that the time had not come for the realization of these ideals.

THAYER ON EVIDENCE.

A Preliminary Treatise on Evidence at the Common Law. By James Bradley Thayer. Boston: Little, Brown & Co. 1898.

When a book covers so much ground as this, and is the result of so many years' patient research, it is often difficult to review it at all. Not only must many of its interesting features be passed over in silence for want of space, but as to those selected for discussion, the candid critic must disavow competency to do much more than to give a slight idea of the scheme of the book, and to recommend careful study and comparison of it with the work of the author's predecessors. Prof. Thayer's studies have already attracted wide attention, and promise to attract more; his book is the only investigation of the subject by a lawyer and writer on law of the first rank since the appearance of Stephen's Digest, and it deals with the law of evidence in a manner to most American and English lawyers wholly new—a treatment which may be said to combine the historical, the rationalistic, and the legal methods. As to the authority of the author, it is so thoroughly recognized on both sides of the Atlantic that it is only necessary to say that he has made the subject his own. To our generation he speaks as the master of it.

The idea which underlies the whole book is that what we call the "Law of Evidence" is an historical product of jury trial, or, at any rate, a product of causes of which the development of jury trial was among the effects. Hence, the first four chapters deal with jury trial and its predecessors; *e. g.*, trial by oath, ordeal, and battle. These chapters were published two years ago, in advance of the rest of the book, and reviewed by us at the time. (See the *Nation*, No. 1624.) It is unnecessary here to do more than call attention to the fact of this historical foundation; the remaining chapters now published are most important for their bringing prominently into view the rationalistic aspect of the law of evidence. In reading them, one of the things which force themselves continually upon the attention is the opposition between the probative system adopted by the common law and the logical laws of proof, which, being laws of the human mind, not only underlie, but continually come into conflict with it. Among the matters which are discussed by Mr. Thayer in a way to arouse the liveliest interest, are "Law and Fact in Jury Trials," "Legal Reasoning" as applied to the ascertainment of facts, "Judicial Notice," "Presumptions," "The Burden of Proof," the "Parol Evidence" and the "Best Evidence" rules.

A superstition which the author's researches tend to destroy is one embodied in the maxim, *Ad questionem facti non respondent iudices, Ad questionem juris non respondent juratores*. This lies at the very threshold of the subject, for all matters of evidence are matters of fact; and if it be really true that

all matters of fact must be passed upon by the jury, and all matters of law by the court, we have at least an important guide to the Law of Evidence. But research shows not merely that there is no hard-and-fast line to-day, but that there never was one. Not only do all general verdicts of a jury, such as the very common one of "Not guilty," involve a conclusion of law (p. 253), but the courts settle and always have settled many questions of fact for themselves.

"Was the deed that was put forward 'raised' or not? If a party claimed the right to defend himself as a maimed person, was it really mayhem? Was a person who presented himself and claimed to be a minor, really under age? A stream of questions as to the reality, the *rei veritas*, the fact, of what was alleged before the justices was constantly pouring in. A prisoner, for example, had confessed; on being brought into court, he declared that it was by duress of his jailer. Was this so? To find this out, the justice took the short cut of sending for several of the fellow-prisoners and the jailer, and questioning them all in the prisoner's presence, and he found that it was not true. This, again, is just as it is to-day. Courts pass upon a vast number of questions of fact that do not get on the record or form any part of the issue. Courts existed before juries; juries only came in to perform their own special office; and the courts have always continued to retain a multitude of functions which they exercised before ever juries were heard of, in ascertaining whether disputed things be true. In other words, there is not, and never was, any such thing in jury trials as an allotment of all questions of fact to the jury." (P. 184.)

A conspicuous illustration of questions of fact disposed of habitually by courts is found in the construction of writings (p. 203). *Rules of construction and interpretation* which a court lays down to a jury are, of course, matters of law; but when a judge tells the jury that a particular clause in a contract has a particular meaning, he is disposing of what is in reality a question of fact. If every question of fact went to the jury, what the parties meant by the words they have used would certainly go to them, yet in many cases the court takes it upon itself to say what they meant, and will not tolerate the introduction of evidence as to intention, even though the result be to give the contract a meaning very different from what the parties are likely to have intended. We are consequently driven to the conclusion that when it is said that such and such a question is a question of "law," it may merely mean that it is a question which the court will dispose of, even though it be a question of fact. In other words, any question disposed of by the court is a question of law, though it be really a matter of fact; any question disposed of by the jury is a matter of fact, though it really involve a question of law. But, unless our aim is to perpetuate a gross confusion of language, we ought rather to speak of "questions for the court" and "questions for the jury." The superstition that all questions of fact must go to the jury, and that all questions of law are for the court, crossing the Atlantic, attracted the attention of those pseudo-law-reformers who were engaged for a whole generation in undermining the authority of judges, as an anti-popular branch of government. In their minds it became converted into the doctrine that the judge ought to have no right to indicate to the jury even his own view of the facts, and, as a result, statutes have been widely passed in our States prohibiting judges from expressing any opinion as to the facts, and confining their function to a mere statement of the

testimony and the law. This is not trial by jury at all, but a new and bastard species unknown to our ancestors, and, fortunately, still repudiated by the Federal Courts, in which the judge retains much more than in State Courts his ancient power and influence (p. 188, note 2).

What is the "Law of Evidence"? The answer to this question, according to the author's view, is contained in four very interesting chapters, on "Legal Reasoning," "Judicial Notice," "Presumptions," and "The Burden of Proof." If they do not answer the question finally to the satisfaction of all, they certainly throw a flood of light upon it. To the practising lawyer, the law of evidence at any time means only the sum of rules governing the admission and exclusion of evidence in courts of justice. In our system, wherever jury trial exists, nothing is evidence which the court of last resort decides it was error to admit as such; anything is evidence which (admitted by the trial court) is held by the court of last resort to have been properly submitted to the jury. The main question here is perhaps less what is the law of evidence than what are the principles which have governed, and do govern, the development of our law of evidence. At any rate, in these chapters the author shows in a striking way that a great part of what our text-writers are forced to discuss under the head of Evidence should logically come under that of legal reasoning. For instance, there is the subject of judicial notice. Not all matters of fact need to be proved. Of matters of common notoriety, courts take notice without proof. That the sun rises in the east, that night succeeds day, that alcoholic liquors, taken in excess, produce intoxication, that ice is frozen water, that fire burns and that cold freezes, are matters which no court requires to be proved. Yet all this is given as part of the "Law of Evidence." According to Mr. Thayer, the doctrine of judicial notice has no special connection with evidence, but belongs "wherever the process of reasoning has a place, and that is everywhere." A very great proportion of the cases involving judicial notice arise upon some question of pleading, or the construction of a written instrument, or the interpretation of conduct. In short, the function of "taking judicial notice" of notorious facts is a part of the process of reasoning *ad hoc*.

Then why, it may be asked, not agree at once that it is so? Probably because it may come up as a question of evidence. In the course of a trial, it may become a question whether a fact is notorious or must be proved. The judge decides that it is notorious, and an exception is taken. The court of last resort decides that the trial judge is right, and we have at once a new so-called "rule of evidence," that the particular matter in question is notorious, and that courts must take judicial notice of it. This rule is now part of the law of evidence, no matter how absurd it may seem, and in future editions of Greenleaf the case must be cited. Such is one of the results of our system; but it is nevertheless unquestionably true that the law of judicial notice pervades the whole *corpus juris*, existed long before the common law or jury trial was ever heard of, and would even survive our law of evidence itself.

In the same way Prof. Thayer shows that presumptions and the burden of proof belong rather to the domain of legal reasoning than

to that of the Law of Evidence. Presumptions are only probabilities resting on experience, or public policy, invoked to supply a lack of facts; the burden of proof is only either (a) the principle that the actor must sustain his case by a preponderance of proof, or (b) the burden which rests on one side or the other, at a given stage in the case, of going forward with evidence. All this has nothing to do with the Law of Evidence. It is part of the ratiocinative machinery of judicial inquiry.

In a correct view, then, the Law of Evidence means something much more restricted than it does in the ordinary textbook. It relates merely to "matter of fact offered to a judicial tribunal as the basis of inference to another matter of fact" (page 388). It "prescribes the manner of presenting evidence," *e. g.*, by requiring that it be given in open court, by deposition, etc.; it "fixes the qualifications and the privileges of witnesses, and the mode of examining them," and chiefly it determines, as among probative matters, "what classes of things shall not be received" at all—this function of exclusion from the consideration of the jury being the characteristic one of our Law of Evidence (p. 264).

The distinction which Mr. Thayer has drawn between the principles of legal reasoning and the Law of Evidence is destined to have very wide-reaching effects on the study and development of the whole subject. As will be perceived, it is in some important respects at variance with the system of Stephen. That author made the foundation of his Digest the canon of relevancy—the principle that all the facts in issue, and relevant to the issue, and no others, may be proved. Now, relevancy, in a rational system, has no special relation to evidence. It is a matter of logic. We do not introduce evidence irrelevant to the issue, for the same reason that a judge does not introduce irrelevant remarks in an opinion—because it has no bearing on the matter in hand; and hence the canon of relevancy is not a test, especially as we know, as a matter of fact, that numerous relevant things are every day excluded, such as hearsay, *res inter alios acta*, opinions, and evidence of character. Outside of the domain of jury trial these things may all be relevant and probative; how can their being ruled out be reconciled with Stephen's canon of relevancy? On looking into his Digest it will be found that he has effected a reconciliation by a very extraordinary and characteristic legal *tour de force*: he introduces two kinds of relevancy—logical and legal relevancy. When he finds that evidence, though logically relevant, is, by a rule of law, excluded from the consideration of the jury, he says it is "deemed to be irrelevant." When something is admitted which is logically irrelevant, he says that it is "deemed to be relevant to the issue, whether it is or is not relevant thereto."

What was needed to disentangle this metaphysical juggle (which, by the way, was quite unnecessary as a philosophical basis for Stephen's work) was the application of the historical combined with the analytical method. The history of trial by jury shows that the reasons why certain evidence is excluded had no connection whatever with relevancy, or any mental acrobatics by which what is irrelevant is "deemed to be relevant," and vice versa; while analysis shows plainly that

relevancy is a logical matter lying at the foundation of any system of trial, or proof, or reasoning. It is a law of the human mind, not of the common law. The true way to state the matter is therefore this: Apart from legal rule, anything which is relevant to the object of the inquiry—*i. e.*, to guilt, ownership, liability for breach of contract—would be admissible, provided it had a probative character. To be probative, however, as to a particular issue, it must be relevant to that issue. A fact, to be probative, must have a tendency to induce a belief in some other fact. A fall in the mercury proves a fall in temperature. Evidence of the fall in the mercury, at sea, is relevant to an inquiry as to whether we are approaching an iceberg, but not to an inquiry as to our rate of speed. Now, in a judicial inquiry in which the decision of the matter at issue is submitted to a jury, numerous things naturally probative and relevant are excluded, for reasons which are connected with the historical development of jury trial, just as other things are excluded on grounds of public policy; *e. g.*, cumulative evidence is excluded after a time *ut sit finis litium*. But it is these rules of exclusion which constitute the bulk of our Law of Evidence.

Yet, as jury trial becomes for ordinary business less and less important, these artificial rules are gradually encroached upon by exceptions, and we seem to be slowly getting away from the mechanical system of the past two hundred years (the Law of Evidence is mainly the product of the present century, as may be seen by turning to Blackstone, who devotes only a page or two to it), and there is a tendency to admit more and more all proof logically bearing on the matter in hand for what it is worth. Our Law of Evidence grows, mainly, as Mr. Thayer shows, because the bill of exceptions and writ of error enable a litigant to carry up to the tribunal of last resort, after a trial by jury, almost any sort of question which may suggest itself in the guise of a question as to the admissibility of evidence. This, however, is no essential part of our common-law probative system, and has been done away with to an enormous extent in England. In a final chapter the author discusses "The Present and Future of the Law of Evidence," showing that he thinks that, as a rule, the decision of the trial court as to the admission of evidence ought to be final, unless a clear case of abuse or denial of justice can be made out. At present the object of the system seems to be as nearly as possible to make more and more complex a piece of machinery for the multiplication of unnecessary trials, in order that the Law of Evidence may increase in volume and incomprehensibility.

In our effort to explain we have said too little about the interest of the book, which to a lawyer, or student of the law, may fairly be called absorbing. No one can master its contents without feeling that he has been admitted to a share in a profound and original learning, which has pervaded and transfused an old subject with new light. A change seems to have taken place both in ourselves and in what we have been examining. The mystery is a mystery no longer; we have the key at last.

LETTERS OF DEAN SWIFT.

Unpublished Letters of Dean Swift. Edited

by George Birkbeck Hill, D.C.L., LL.D.
New York: Frederick A. Stokes Co.

These letters of Swift to Knightley Chetwode were formerly placed in the hands of John Forster, to be used in his biography of the Dean; but Forster's untimely death before he had reached the period which they cover prevented their publication. Forster, in his preface, refers to them as "the richest addition to the correspondence of the most masterly of English letter-writers"; but, though certainly interesting, they hardly justify that description. Still, there is so much that is mysterious and enigmatical about Swift, and so much in these letters that is characteristic of the man, that their publication is very welcome. The editor has affixed to each letter copious notes explanatory of the circumstances and allusions, which are a model of intelligent and faithful editing.

Knightley Chetwode was an Irish gentleman of ancient family and good estate, whose acquaintance Swift made soon after his retirement to Ireland; and as they agreed in profound discontent with the existing state of things, and in hatred of the Whigs, they soon became great friends, and so continued for about seventeen years (1714-1731), when they squabbled and the correspondence seems to have come to an end. Swift, unfortunately for himself, and for others besides himself, had been poisoned by his residence in London and the flattery of the great. His natural arrogance and self-esteem had been pampered almost to the verge of insanity. In his mind's eye he saw himself a bishop, perhaps a primate, moulding the councils of cabinets and guiding the affairs of a nation. The Whigs having failed to reward him as he thought he deserved, he went over to the Tories, who flattered him to the top of his bent; and the foot of the rainbow seemed but a few paces ahead when the death of the Queen and accession of the house of Brunswick shattered all his hopes, and sent him to his Irish deanery to rage against the Whigs and his ill fortunes, to hate Walpole and the Government, to hate Ireland, its climate, and its people, and gradually to stretch his very energetic powers of hatred and scorn until they included the whole human race.

The earlier of these letters deal mostly with troubles with his choristers, his horses, and his servants. It has taken him six weeks to get rid of "a great cat" left behind by his predecessor, an animal of such unexampled noisomeness that he believes her to be a Whig. He is also afflicted with an ugly old housekeeper, whom "the ladies" (Stella and Mrs. Dingley), on the score of the proprieties, will not let him exchange for a good-looking one. Moreover, he is bothered with debt, having to pay £1,000 for the residence, the first fruits, and the patent. The pressure of these debts and other heavy expenses no doubt increased his natural bent towards parsimony, so that in his later years we note a singular conflict between stinginess and generosity.

In 1715 he writes more about public affairs. He is suspected of Jacobitism, and there are rumors of proceedings against him. He is evidently uneasy, and at one time seems to have been thinking of the possible expediency of flight. Though he kept clear of downright treason, yet he had much sympathy with the Jacobite party, and had many friends in its ranks. Of the Duke of Ormond, who was impeached, he wrote to Pope, "You

know . . . how dear the Duke of Ormond is to me. Do you imagine I can be easy while their enemies are endeavoring to take off their heads?" Yet this affection does not hinder him from writing to Chetwode: "Yesterday's post brought us an account that the Duke of Ormond is voted to be impeached for high treason. You see the plot thickens. I know not the present disposition of the people of England; but I do not find myself disposed to be sorry at this news."

He solves a case of conscience for his correspondent, who was a Jacobite in heart, and who did not see how he could remain faithful to his principles, and yet abjure the Pretender and swear that he held George I. to be the lawful sovereign. Swift tells him, first, that private men are not to decide upon titles to crowns; secondly, that "lawful" means "according to the law that now is," and, "as the law stands, none has title to the crown but the present possessor." Therefore, the most irreconcilable Jacobite could take the oaths with an easy conscience, for, *as the law stood*, George was the lawful King and James an unlawful pretender. The Vicar of Bray could have been no more dexterous casuist.

There are no letters between 1715 and 1718, and but two in the latter year. There is also a wide gap in Swift's collected correspondence at this time. Probably this was due to the bad state of his health, as he has been complaining of deafness and vertigo. The correspondence is resumed in 1721. He is troubling himself little about public affairs, but is planting elms in the cathedral churchyard, and exasperating his flock by removing ancient tombstones. His deafness is increasing, and he can converse with none but "trebles and counter-tenors," whose high voices he can hear. His partly genuine and partly assumed cynicism and hardness of heart are so predominant in much of his work that it is pleasant to come across a touch of tenderness. He writes on March 13, 1721-2, "I have the best servant in the world dying in the house, which quite disconcerts me. He was the first good one I ever had, and I am sure will be the last. I know few greater losses in life." This faithful servant was buried in the cathedral, and "his grateful master" commemorated his modest worth in an epitaph.

In 1730 Swift had laid aside the indifference with which he had for years professed to regard all matters of state policy, and had come out in the new part of a champion of the Irish people. But by the Irish people Swift always means the Protestant Irish and those of English descent. For the Catholic Irish population he had not the slightest sympathy, and indeed regarded them chiefly as vermin. The Protestant Irish, however, were at least worthy of his contempt. But in Irish affairs he now saw an opportunity for attacking the Whigs and the Whig ministry. The oppression of Ireland by iniquitous legislation had been a grievance of long standing, and it had been steadily aggravated during Anne's reign by a succession of laws expressly designed to destroy Irish manufactures. But of late years a policy had been adopted of building up an English party in Ireland, whose persistent endeavor should be to make Ireland more completely subservient, and to destroy every vestige of national feeling. This policy met with strong opposition among the Protestants themselves; old enemies were reconciled in the sight of a common danger, and there was a movement tending to the formation of an Irish party. Swift seized the opportu-

nity to deal a blow at the Whigs, and entered the arena as an Irish patriot in his anonymous 'Proposal for the Universal Use of Irish Manufactures,' in which he urged union in hostility to England and a rigid non-importation policy.

In the fall of 1724 Swift, after writing about pears, peaches, and cherry-brandy, drops in a casual way the remark, "There is a Draper very popular, but what is that to me?" This is of course an allusion to the famous "Draper's Letters," which had begun to make a stir. The affair of Wood's patent was the very fulcrum he needed for the lever which was to shake the ministry. The injury to Irish manufactures was an old grievance; but here was something entirely new which might be invested with any terrors. Ireland was suffering from a scarcity of small coinage, which lack entailed great hardship and loss upon the poor. A certain Wood had undertaken to furnish a supply of copper coin, if given a patent. The profit which a token coinage always yields would in this case go to Wood, and not to the English exchequer; but to the Irish people this could make no particle of difference. Nor did it make any difference to them how fine the copper in the coinage was, so long as the issue was limited to a reasonable quantity, and the coins not a legal-tender for large sums. It is true that Wood bought his patent with a bribe to the Duchess of Kendall; but that was a loss to Wood or to the English exchequer, not to Ireland. In fact, as we can now see, Wood's coinage would really have been of advantage to Ireland, and no doubt Swift knew that very well.

It would be out of place here to comment at length on the Draper's Letters, which ought to be republished as the perfect *cademum* of a demagogue. All the arts of the sophist, all the devices by which a credulous people can be deluded, are here displayed in perfection, from insinuations, suppressions, assumptions of false premises, bold denials of fact, down to downright lying and self-contradiction. The Draper declared that the coins were of vile metal; that while twelve English pence contained eleven-pence worth of pure copper, twenty-four of Wood's half-pence contained only one penny's worth—both extravagant falsehoods. Sir Isaac Newton, Master of the Mint, testified that Wood's coinage was as fine as the English; but Swift contemptuously ignores this, goes on assuring the people that it is mere dross, and then makes the amazing assertion that Wood purposely makes his half-pence bad, so that he can counterfeit them himself! Why he should want to do this, and how he could do it if he wanted, Swift (knowing his public) does not trouble himself to explain. He over and over warns the shopkeepers that they will all be ruined, as they will be forced to exchange their good wares for this worthless trash; and then, turning to the workingmen, coolly tells them that they will be ruined also, as their wages will be paid in worthless trash which no shopkeeper will take! It took the audacity of a Swift to put forward such an argument, and the genius of a Swift to see that the people would believe both statements. He triumphed; the ministry yielded, the patent was withdrawn, and Swift was the most popular man in Ireland.

The letters following are much occupied with Swift's increasing infirmities, and with the domestic troubles of Chetwode, who is about to separate from his wife. In one

of 1786, in answer to some inquiry his correspondent had made about the poem "Cadenus and Vanessa," Swift says that he "forgets what is in it," that "it was a task performed on a frolic among some ladies," and "a private humorous thing," and adds: "She it was addressed to died some time ago." He is annoyed that people talk about "such a trifle," but their conduct "only gives me the ungrateful task of reflecting on the baseness of mankind." Many besides Swift have reflected on human baseness when they have read the piteous story of Vanessa.

In 1731 ill-feeling sprang up between Swift and Chetwode, it is not clear from what cause, as some of the letters of this period have been suppressed or destroyed. Swift writes with supercilious contempt, to which Chetwode sharply replies, and thus "the friendly correspondence which had spread over so many years, is brought to a close with mocks and gibes." Such is the editor's conclusion, but the present reviewer will venture to express a doubt whether this was really the close, and whether the quarrel was not made up after all. In the letter on p. 247, which is inserted in 1731, just before the quarrel, Chetwode deplors Swift's long and severe lameness, and gives him advice about it. Now Swift, we know from the published correspondence, was lame from a severe strain during almost the whole year 1732, but not, so far as we know, in 1731; and the editor confesses that he does not know how to account for the discrepancy. But this letter of Chetwode's is *undated*, nor is there a word in it which might not have been written in 1732. Where, then, is the difficulty of supposing that, after the falling-out of 1731, there was some sort of a reconciliation, and that then this letter was written? Indeed, there is a sort of guarded politeness in it, and apparent fear of being misunderstood, which would be natural under those circumstances.

On the vexed question of Swift's marriage, these letters throw no light. When he has occasion to speak of marriage, it is in the character of a bachelor, as in Letter 53, where he says, "Those who have been married may form juster ideas of that estate than I can pretend to do." The editor seems to be one of those who (rightly, the present reviewer thinks) disbelieve it. He calls attention to the fact that, in Swift's written prayers for Stella's recovery, no word seems to indicate any closer relation than that of strong friendship and regard. This fact would have great weight if we could accept these prayers as the spontaneous outpourings of the writer's heart, and not as manuscripts to be printed some day.

The book is enriched with interesting portraits and views, and is almost wholly free from typographical errors, though "Pemsall" for "Perusall" on p. 1, may puzzle some readers.

Pitt: Some Chapters of his Life and Times.
By the Right Hon. Edward Gibson, Lord Ashbourne. With portraits. Longmans, Green & Co. 1898.

We know that in some quarters disappointment has been caused by the scope of this work. It was hoped that Lord Ashbourne was preparing a connected and extensive biography, something which should be more interesting than the wooden narra-

tive of Bishop Tomline and more detailed than Lord Rosebery's sketch—something, even, which should prove more generally adequate than Lord Stanhope's 'Life.' But now, on its publication, the new book is seen to be little more than a series of loosely connected chapters, with large gaps between, and not in the least comprehensive. Thus Pitt still remains without his long-expected and final biography, much to the regret of Tories and other ardent admirers. With this view we feel a certain degree of sympathy, for Lord Ashbourne could have rendered useful service by going thoroughly over the whole ground, and by reason of his personal connections he was in an excellent position to do so. Still, there is no just reason why he should be assailed for the ill performance of a task which apparently he never undertook. He produces a large number of new documents—family and political letters in the main—and illustrates certain phases of Pitt's career more fully than has been done before. He cannot be said to have wrought anything monumental; but within the self-appointed limits he is reasonably successful, and should not be pounced upon for failure to execute what was no part of his design.

The papers hitherto unpublished which Lord Ashbourne now brings forward are derived from private muniment rooms rather than from the national archives, and, as being less accessible than public property, lend a special value to the volume wherein they are contained. During twenty-five years Pitt was in close and constant correspondence with the chief families of England, and, owing to his official eminence, the letters would be carefully preserved. Perhaps the most important collection of Pitt holographs which still remains in private hands belongs to Mr. Ernest Pretyman, M.P., a great-grandson of Pitt's tutor at Cambridge. Dr. Pretyman is better known under his later name of Tomline. Pitt appointed him Bishop of Lincoln, and was deterred only by the royal negative—after a serious correspondence—from making him Archbishop of Canterbury. Perhaps no one stood closer to the Prime Minister than Tomline, and although his own account of Pitt is a failure, he possessed and handed down a splendid set of documents. The late Lord Bolton and the present Lord Stanhope also furnished Lord Ashbourne with important and unpublished MSS.

The proportion of documents to comment is so great that Lord Ashbourne stands midway between the independent historian and the editor. He begins with a sketch of Pitt's early years (which is chiefly significant as illustrating the devotion of both his parents) and then plunges into the midst of Irish affairs—the theme which gives these scattered "chapters" whatever unity they possess. The scene opens with the Duke of Rutland's appointment to the Viceroyalty in 1784, a date when commercial relations between the two countries were causing much difficulty. The longest and most independent contribution of Lord Ashbourne's own is a review of Irish society and economic life at the moment of Rutland's arrival in Dublin. Some information about the Viceroy is given, and more about his Chief Secretary, Thomas Orde; then, after the Commercial Resolutions have been introduced and discussed, the action shifts back to England, where for a while it centres around Pitt's intercourse with his mother and elder brother. Presently Irish politics are resumed and carried forward to

the period of the Union, the thread of development running through the vice-royalties of Fitzwilliam and Cornwallis.

Those who are at all familiar with Lord Ashbourne's political leanings will expect him to praise Pitt's share in effecting the Union, and his encomium is indeed a strong one.

"The Union was a great measure—the most important of Pitt's life and policy. Opinions may differ as to the time selected for its enactment, as to the means employed, as to the measure itself, but no one can deny its importance or the largeness of its conceptions. Its author's motives and aims have been impugned; but impartial history will not deny that he was influenced by true and generous motives of public spirit, and that he himself believed he was acting for the best interests of the Empire and of Ireland."

This passage refers to the Union as a legislative conception, which took form and found its way into the statute-book. When the controversies arising from the execution of the measure are broached, Lord Ashbourne drops into a subdued strain, and admits that Pitt's "warmest admirer, in considering his career after the Union, has to use much more the language of explanation than of eulogy."

The last sixty-six pages form an epilogue dealing with the increase of cares and the falling health which weighed Pitt down in his last days. Of his career as a peace minister and reformer before 1793 nothing is said, nor of his part in the Revolutionary and Napoleonic contest. His relations with Ireland, his family ties, and his personal friendships are the sole subjects which Lord Ashbourne cares to consider.

Beyond any doubt whatever, the rarest and most striking chapter of the book is that entitled "Pitt's One Love Story." Pitt was systematically prepared by his father for political life. He regularly subordinated personal pleasures to the public service, whether in Parliament or in the Cabinet; never in modern times has a man belonged more exclusively to the state. Accordingly, when an authentic version of his fondness for Eleanor Eden is for the first time given, it cannot fail to awaken curiosity. Rumors and fragments of the story have been given before. On the word of Lady Hester Stanhope, the affair nearly broke Pitt's heart, but most readers will agree with Lord Rosebery—"Lady Hester's statements do not impress me with conviction." Putting by the question of sincerity, she cannot rank as an authoritative witness: she was too romantic, effusive, and fond of telling a good story. Lord Ashbourne has the advantage of Pitt's favorite niece, in that he can show important letters which disclose how far—externally at least—the matter went.

Eleanor Eden was the daughter of Lord Auckland, a man whom Pitt trusted, employed, and raised to the peerage. Although she was by eighteen years the younger of the two, Pitt had not reached forty in 1796, the year when their reported engagement became a matter of public gossip. She had good looks, intellectual quickness, and a suitable social position. Furthermore, Pitt was strongly attached to her. It was during the Christmas holidays of 1796 that marriage seriously entered his thoughts. He then visited the Aucklands at Eden Farm, and went too far for his own comfort, though doubtless without committing himself so far that retraction was necessarily dishonorable. On his return to Downing Street in the early

part of January, he considered the matter from every point of view, and decided that he must not marry. Having painfully reached this conclusion, he conveyed it to Lord Auckland in clear-cut and irrevocable words. Auckland in reply urged him to wait till he was quite sure, but Pitt had settled his course of action past hope of alteration, and in a second letter, January 22, 1797, closed the subject, using words which concealed, under the studied formality of a state-paper style, a good deal of emotion:

"Indeed, my dear lord, I did not bring myself to the step I have taken without having, as far as I am able, again and again considered every point which must finally govern my conduct. I should deceive you and every one concerned, as well as myself, if I flattered myself with the hope that such an interval as you suggest would remove the obstacles I have felt or vary the ground of my opinion."

In all the mechanical respects of paper, binding, and illustration, this volume is worthy of its distinguished subject.

History of the Pennsylvania Railroad Company. With Plan of Organization, Portraits of Officials, and Biographical Sketches. By William Bender Wilson. Illustrated. 2 vols., 8vo, pp. 418, 321. Philadelphia: H. T. Coates & Co.

The history of the Pennsylvania Railroad Company includes the interesting story of the transition from canals to railways. Everybody knows that canals were generally built and operated by the State, and were pre-eminently the "public works" during the twenty years following the completion of De Witt Clinton's great achievement in New York. Few are aware that Pennsylvania, in her enterprising effort to maintain the commercial supremacy which Philadelphia then held, not only built her canal as far as possible up both slopes of the Alleghenies, on the head-waters of the Juniata and the Conemaugh, and completed her communication from Pittsburgh to the sea by a portage over the mountain pass, but also seized upon the improved tramway with strap rails and horse power to supplement the waterways by the iron road. In 1834 such a road was completed by the Board of Canal Commissioners from Philadelphia through Lancaster to Columbia, and the new steam locomotive was tried upon it with partial success. The State at first retained the control of both methods of transportation between Philadelphia and Harrisburg, but in 1846 incorporated the Pennsylvania Railroad Company to build a continuous railroad from Harrisburg to Pittsburgh. The general route of the canal was also that of the road, the portage over the Allegheny crest was improved by inclined planes with stationary engines drawing the trucks by cables (first of hemp and then of wire), and by these for a time the railway cars as well as the canal-boats in sections were passed over the mountain summit. In 1853 the first through train passed between Philadelphia and Pittsburgh by this cooperation between the State and the Company in the portage and the line east of Harrisburg.

Then followed a rivalry and contest between State management and private corporation which practically ended in favor of the latter, when in 1864 the railroad company opened its own line from Altoona to Johnstown through a tunnel at the summit, and withdrew its business from the portage inclined planes. The sale of the State interest

in railways soon followed, and the Pennsylvania trunk line was an accomplished fact.

In the piping times of the war between Andrew Jackson and Nicholas Biddle and the boom which collapsed in the panic of 1837-'38, the political management of canal and railroad building quickly developed all the methods of plunder which have ever since marked such control. Favoritism in contracts, political appointments of incompetent and corrupt officers, unthrifty and dishonest conduct of business, a special bag at the paymaster's table in which the political assessments of employees were openly placed—all were in full operation, and make it easy to understand why State control stood no chance in competition with the discipline, energy, economy, and wisdom which the private corporation brought to its task.

For several years the railroads, both State and private, allowed the use of the track to shippers and transportation companies who furnished their own cars and horse-power, as canal shippers had their own boats and horses; tonnage tolls and passenger tolls being the only revenue of the road itself. Then the Company put on its locomotives as the increasing business demanded unity of control and power of carrying out complicated schedules for running trains. Last came the ownership of all rolling-stock by the Company, with the exception of sleeping-cars and coöperative fast-freight lines. It is both curious and instructive that, in the later contests between railroads and the "Granger" laws in the West, the effort was made to force the renewal of the crude methods of the canal and horse tramway, and to allow any shipper to furnish his own car and demand its hauling at a fixed rate.

The writer of the book before us is the son of Thomas L. Wilson, who was Secretary of the old Board of Canal Commissioners, and has received from his father a valuable store of information and anecdotes concerning the experimental period of railway management, with incidents relating to the early surveys and construction. He himself entered the service of the Company in 1855 as a telegraph operator. The simple narrative of facts in the extension of the Pennsylvania system and the absorption of one small road after another, under the business principle that unity in the management of natural branches and feeders is a condition of success for the trunk line, is a most telling lesson in railway policy. The power and profit of union, the loss and bankruptcy coming of multiplicity of small and rival lines, are developed, not by argument but by history, and the history should be studied carefully by everybody who would form intelligent opinions on railway problems in their relation to the State.

Mr. Wilson's second volume is made up of biographical sketches of the men who have had leading parts in the building, management, direction, and administration of the system and its divisions. Though written to interest the officers and employees of the railroad primarily, the brief story of the rise of so many men to eminence in their profession, their preliminary education, their development in power as shown by their advancement, their very general continuance in the Company's service during a long career, will make the book a useful study for the sociologist or for aspiring young men, as well as an attractive one to the general reader.

The printing and binding are well done, and the illustrations combine numerous old-

time woodcuts of towns and scenes in the early forties, compared with recent photographs. Picturesque scenery on the line is reproduced in half-tone, as is the large gallery of portraits in the second volume.

The Book of Golf and Golfers. By Horace G. Hutchinson. Longmans, Green & Co. 1899.

The object of this book is not exactly to give elementary instruction. This has already been done by Mr. Hutchinson and many others, to so great an extent that it seems impossible that anything can remain to be said that can be of service to man, woman, or child. The author's idea is to call in the aid of modern photography, and, by presenting pictures of a number of leading experts caught in the act of making strokes, assist inferior players to imitate the methods of the masters. The result is a book that cannot fail to be interesting to golfers because of the personal element to be found in the descriptions of the players photographed, but we are entirely sceptical as to its educational value. In fact, it is a question whether the standard of play has been improved in the very slightest degree by the recent extraordinary production of golf literature. That the standard is constantly advancing, both here and elsewhere, is beyond doubt, and is proved conclusively by the marked improvement in scores; but we believe that this improvement is due to the increasing number of players rather than to the teachings of the books. However this may be, the subject of golf has become one of absorbing interest to a great number of readers, and in the present volume these readers will find the conclusions of experts based on last year's tournaments, and will note that in some respects these differ from the earlier wisdom of the Badminton book.

The most obvious inference to be drawn from an examination of this gallery of portraits is against teaching golf by books, for the reason that in golf all rules of procedure must yield to individual peculiarities. The individual is everything and "orthodoxy" nothing. Take, for instance, the vital question of the stance for driving. Most of the books agree that the player should stand with the ball about midway between his feet. But what do we find to be the actual practice of the best players as shown by their photographs? Mr. Graham has the ball almost opposite the right foot, while Mr. Tait and most of the longest drivers place the ball close to the left foot. The fact is, that no two individuals are built exactly alike, and, as success at golf is the result of nice adjustments of hands and feet and club, every player must find out for himself how to make these adjustments, and it is absurd to lay down the law and claim the merit of "orthodoxy" for any particular method.

The chapter on "Golf in the United States," contributed by Mr. Whigham, refers to one point which is of great importance in considering the future of the game in this country. In England and Scotland it is the "poor man's game," but here it is a very expensive amusement. The cost of obtaining and laying out a course is very great, and necessitates heavy subscriptions from those who make use of it; and the additional cost of clubs, balls, and caddies is quite considerable. The next few years will show whether the present universal interest is merely temporary, or is sufficiently strong to overcome various difficulties, among which this

matter of expense is one of the most serious.

Idylls of the Sea. By Frank T. Bullen. D. Appleton & Co. 1899.

An American or British deep-water sailor-man of the old school had attained to the limit of fearlessness. Training and association made him self-reliant and resourceful, and the imminent perils and privations that he was called upon to face at sea taught him to meet with philosophical equanimity the vicissitudes of fortune. Moreover, it was impossible for him to take himself seriously, for speech and fist were vigorously employed to impress upon him the quality of complete insignificance. Mr. Bullen, the author of *'Idylls of the Sea,'* was trained in this school, for he commenced his nautical career as a sailor before the mast in square-rigged ships. In launching, however, his two volumes that treat of ocean life, he betrays singular timidity; for each is prefaced with a letter of praise and commendation by a writer of distinction (the *'Cruise of the Cachalot'* by one from Rudyard Kipling, and the book under notice by another from J. St. Loe Strachey). These entirely unnecessary documents convey the impression that Mr. Bullen, under their shield, is seeking protection from adverse criticism. There is no need of this, for Mr. Bullen is strong enough to stand upon his own merits, especially in his latest venture, which is a distinct advance upon its predecessor. In *'Idylls of the Sea'* he avoids the snares of geographical inaccuracy and "Yankee" vernacular, in which he became hopelessly entangled in his first volume, and confines himself with success to short, condensed tales of various phases of life upon the sea. Some of them have a quality reminiscent of Maupassant; notably that one called "The Passing of Peter."

The author is weak when he endows inhabitants of the waters of the ocean with the power of speech. The "Idyll" called "A True Shark Story" opens with the soliloquy of a mother shark who deploras a temporary scarcity of provisions for herself and the young to which she is giving transportation in her gullet. In this emergency a pilot-fish, who addresses her as "partner," informs her in colloquial English that "there's a lump of fat pork almost as big as your head hanging over that ship's stern." This is welcome news, and, under guidance of the pilot, the shark approaches, turns on her back, and swallows the bait along with a hook attached to a line by which she is hauled to the deck of the vessel. The Captain, who is a humane man, gives orders that she shall not be taken aboard. "Just sprit'sle yard him 'n let him go agen," he pleasantly remarks; whereupon a piece of scantling, pointed at both ends and about four feet long, is got from the carpenter. This the sailors drive through her jaws from side to side. Another wedge-shaped piece is driven through her snout; the wide pectoral fins are amputated, and the shark is cut loose from the hook and returned to the sea. The result of the "sprit'sle" treatment was that the fish was unable to control its movements, or to get its head below the surface of the water; consequently it died slowly of exhaustion. One of the passengers on the ship, described as a "gentle-faced man," was moved by the performance "to mutter" "What abominable cruelty!" The assembled mariners regarded him with pity and wondered "at his lack of sporting instincts."

All of Mr. Bullen's "Idylls" must not be judged by the specimen quoted. Most of them are fine examples of dramatic and descriptive writing. "The Cruise of the Daisy" is distinguished in that particular. All of them, with the exception of "A True Shark Story," are worthy of high commendation. "Studies on Marine Natural History" form the second part of the "Idylls." They are full of interest. The third section is made up of a collection called "Other Sketches," one of which, entitled "Truth about the Merchant Service," is opportune in these days when the manning of the ever-growing fleets of battle-ships in England by native seamen is a matter that is giving considerable concern to the naval authorities. The "Truth" applies with equal force to a deficiency that confronts our own service.

Jean-Jacques Rousseau and the Cosmopolitan Spirit in Literature. By Joseph Texte. Translated by J. W. Matthews. London: Duckworth & Co.; New York: Macmillan.

Among the many recent works of comparative literary criticism, few hold so high a place as this volume by M. Joseph Texte, in so far as fulness of treatment, breadth and accuracy of insight, and sustained interest are concerned. Its purpose is to set forth the literary relations established between the two leading productive nations of the last century by their respective representative writers, and, while demonstrating the steady growth of the cosmopolitan idea, to suggest criteria which assist one in the difficult task of distinguishing between cheap or direct borrowing on the one hand, and that form of literary indebtedness produced by generous international sympathies or the subtler influence of affinity in genius. According to M. Texte, the initial process in this vital transformation of literary conceptions was the direct outcome of the revocation of the Edict of Nantes, which dispersed no less than four hundred thousand French exiles, chiefly over northern Europe, and transferred energy and independence of thought to more favorable conditions of activity. Several international reviews, published for the most part in Holland, transmitted to France the foreign impressions of the refugees, thus preparing the way for active propagandism by Prévoist and Voltaire. But it is to Rousseau, who combined the genius of the Latin and the Germanic race, that we must ascribe the principal share in this broadening of literary interest aroused in himself by the tendencies and products of English thought; for with him, as with others, the conception of world-literature began with the realization that other nations besides his own had written worthily and well. Tracing Rousseau's sympathies to their origin in the widespread Anglo-mania of his age and to the initial impulse of Muralt, the critic dwells at much greater length on the immediately telling results of Richardson's work upon the author of *'La Nouvelle Héloïse.'* The chapter dealing with Richardson's novels is an admirable model of comprehensive, yet minute, criticism. In measuring the weight of influence of *'Clarissa Harlowe'* upon *'Héloïse,'* there might perhaps be opportunity for further insistence on the community of bourgeois sentiment which runs through the work of both the English and the French novelist; in the one it takes the form of strictures on social superiors (Lovelace) or of adulation (Grandison), while in the other the same feeling

displays itself in angry and rebellious contempt. For precisely the same reason, we may well doubt whether Rousseau could ever have been brought to understand the enduring worth of Fielding, whom, as M. Texte significantly admits, he nowhere mentions (p. 228).

As to the causes contributing to the rapid diffusion of Rousseauism—that is, of vaguely defined cosmopolitanism, and the exaltation of middle-class virtues—the principal one is undoubtedly to be found in the more than apostolic vehemence with which Jean Jacques never failed to express himself on the subject of the moment; in verification of which we need but turn to the amazing success of *'Emile,'* with its violent paradoxes, and the ready acceptance, even by those whose interests it attacked, of the hazy humanitarianism of the *'Contrat Social.'* Is it not because of this power of passionately insisting on what he feels for the time being that Rousseau, like Burke, looms up so large in the history of eighteenth-century thought?

M. Texte proceeds to show how Rousseau's defiance of restrictive literary canons affected the method of criticism by directing attention not to standards, but to feeling, thus insuring the ultimate triumph of lyrical impulse and expression by the Romantic school led off by Chateaubriand. But the more direct inheritor of the "exotic" spirit, the transmitter of cosmopolitan influence, was unquestionably Mme. de Staël, who thus shares with her great fellow-countryman the credit of stirring up the lethargic provinciality which the survivors of French classicism vainly strove to preserve. With this *denationalizing* of the literary point of view M. Texte is obviously in hearty sympathy, though in no part of his treatise does he attempt a full discussion of the æsthetic postulates involved. His readers will, without exception, hope that he may at some time take up this great task. Of his present truly admirable work a reviewer can hardly speak with only moderate praise. It is true that the principal positions and conclusions contained in this volume are for the most part granted without much dispute by competent authorities on French literature, notably by M. Brunetière, the effect of whose comparative teaching is clearly discernible, as well as amply acknowledged by his erstwhile pupil; but it seldom happens that studies in international literary criticism reveal researches at once so wide, so exact, and so systematically applied. We trust that neither M. Texte nor his translator will be displeased to learn that, but for the indications of title-page and preface, the work might easily be taken for an English original.

Islam in Africa: Its Effects—Religious, Ethical, and Social—upon the People of the Country. By Anson P. Atterbury. G. P. Putnam's Sons. 1899. Pp. xxiv, 308, 8vo.

The nature and extent of the influence of Mohammedanism upon the native African of our day, and its preponderant quality, whether good or evil, form a subject which presents many and serious difficulties, arising chiefly from our comparative ignorance of the facts. With this limitation, Dr. Atterbury's treatment of it is as satisfactory as could be expected in a book of 300 pages. A brief sketch of Mohammed and his re-

ligious system, which errs, if at all, on the side of charity, and a short account of the native races, introduce his main theme, the missionary, political, moral, and religious character of the recent Mohammedan conquests. Some observations follow on the change wrought in the African by his conversion as shown by a few typical examples, with a forecast of the future, in which the author contends that Islam as a civilizing agency in Central Africa and the Sudan must inevitably yield to Christianity and commerce as represented by the potent railway. With his general conclusion that whatever good Mohammedanism may have accomplished in elevating the native has been far outweighed by the frightful evil which has accompanied its progress, we are in complete and hearty accord. But with some of his statements we find it difficult wholly to agree; as, for instance, when, in reference to the claim made by some writers that Mohammedanism is the "great total-abstinence society of Central Africa," he says that "the Arabs themselves are the chief importers of intoxicating spirits into Africa." Is this true on the West Coast, where the liquor traffic is at its height? We doubt if it is just to say that the principal occupation of the Arab is slave-trading. He was first and always a trader, and obtained slaves because they were necessary to carry his wares, chiefly ivory, to market. With the advent of the railway he will cease to be either slave-trader or slave-holder, but he will remain a zealous follower of the Prophet.

Dr. Atterbury, in his reliance on the statements of older travellers, seems to lose sight of the changed conditions of the present time, when an Egyptian pasha can be tried for having a recently captured slave in his household. He looks forward to the "inevitable conflict of Christianity with Is-

lam," but to us it seems more probable that the day is not far distant when, as in India, so in Africa, under a strong and righteous government, pagan, Mohammedan, and Christian will live in peace together.

A Texas Ranger. By N. A. Jennings. Scribners.

In the days of Reconstruction, the Texas Rangers were divided into six companies, and to them was intrusted the task of clearing the western part of the State of the swarm of bandits who made a comfortable livelihood by plunder and incidental murder on both sides of the border. As some three thousand of them had actually been outlawed by the State, there was work in plenty to be done. The Rangers were equal to it. With absolute indifference to death, they attacked the ruffians wherever and whenever they met them. After a series of bloody encounters, the organized bands were disrupted, and the Rangers ran the thieves to earth or drove them from the State. Their method of procedure was as summary as that of a vigilance committee. If the outlaws were in force, their pursuers would shoot at sight; if there were but few of them, a Ranger's first duty was to "get the drop" on his man, his next to lodge him in the nearest jail. The pursued habitually attempted to save themselves by escaping to Mexico, and the Rio Grande became the despair of the Rangers. Mr. Jennings tells how his troop of thirty men, vexed past endurance, and hoping that the United States troops would back them up, actually crossed the river on one occasion, and attacked ten times their number of cattle-thieves at a Mexican rancho. Unhappily for the Rangers, and very fortunately for the United States, the military autho-

rities refused to risk a war with Mexico.

Throughout his lively narrative Mr. Jennings has many pretty "tall" stories to tell, but, like a judicious historian, he tells the "tallest" of them on the authority of others.

NEW YORK, THURSDAY, JUNE 23, 1899.

The Week.

That "the hardest battle of the war" should have been fought just when we were positively assured that the fighting in the Philippines was all over, cannot overcome the average man like a summer cloud without his special wonder. He had been led to believe from Gen. Otis's dispatches that there was nothing left of the Filipino army but scattered guerilla bands, and now he reads of "the largest and best-organized body of men which has met the American troops." We do not say there has been deception. Otis has been referring to the forces in the north with Aguinaldo, and all the while the Filipinos to the south have been practically unmolested. They apparently grew so confident of their strength that they were about to attack our lines in force, and it seems to have been Otis's thought that he could not possibly allow such a blow to his military prestige. So he himself took the aggressive, and bloody work it was. Even the American accounts agree that the natives fought with astonishing courage and tenacity. It was said of Tennyson that men went to see him expecting to find a lion and really finding a bear. If our soldiers went out to hunt Filipinos expecting to find rabbits, they have evidently found something more like tigers. Brave men fighting against tyrants for their liberty could not display finer valor.

The War Department's announcement of its retention at home of one battalion of each of the colored regiments ordered to Manila, marks the adoption of the English system of a home-depot battalion. It is the first sign we have had that Messrs. Alger and Corbin are looking into the future in army matters. As such, and as the evidence of a desire to make foreign service as comfortable as possible for our troops, it calls for praise. But if Mr. Alger had read some recent debates in Parliament upon this subject, he would have learned that the "linked-battalion" system, as it is known in England, has come in for much fault-finding and criticism, its shortcomings being a potent cause of the latest increase in the Queen's land forces. Long years of experience have shown that a single battalion is able to keep another in tropical foreign service supplied with officers and men only by constantly stripping itself of its best material, to its grave detriment. Mr. Alger's plan is that our home battalions, besides being recruiting and training depots, shall be the refuge of officers and men invalided from the

tropics. But how can invalids become good drill masters, and what doctors would order fever-stricken men to the winter snows of Alaska and the Dakotas, or to the unbearable heat of our South-western and Texas posts? And how can sufficient officers be found for the home battalions if West Point is to have its quota of instructors, and if the many recruiting details and staff places are to be filled?

Even should a way be found out of these difficulties, it must not be forgotten that, after seven years, the English regiments abroad are recalled to a like period of home service. This cannot be done in our army (if we are to keep permanent garrisons in Cuba, Porto Rico, and the Philippines) by merely sending the one home battalion to take the place of the other two. It means that the country must have at least twenty more regiments to provide proper relief for those on foreign service. Not only is this necessary as a matter of humanity, but because it would probably be no easy matter to obtain officers and men willing to spend practically indefinite periods away from all the attractions of civilized life. The fact that, since January 1, sixteen field officers have voluntarily gone on the retired list rather than continue to serve with their regiments in the Philippines or Cuba, must not be overlooked. We do not believe that any one can begin to estimate what the actual military cost of holding these islands will be, since time alone can give an idea of the pension increase we are surely in for, and neither Destiny nor Duty nor any other guide has yet informed McKinley how many of the 1,200 islands we are to garrison. Fifty men to an island would make 60,000, but Luzon alone, Gen. Otis thinks, will call for 28,000 in time of peace. The situation demands deeper thought and more extensive plans than any that have yet come from White House or War Department.

No other man can speak with such authority about the situation in Cuba as Gen. Wood, who has been Military Governor of the province of Santiago since the close of the war. It is most reassuring, therefore, when he tells inquirers everywhere, during his present brief visit to this country, that the situation and the outlook are full of promise. We knew before of the marvellous improvement in sanitary conditions which has been brought about, and which Gen. Wood says has within a year reduced the death-rate of the province from appalling dimensions to a proportion below that of New York city. What we chiefly wanted to learn was whether there has

also been progress in other directions; whether the people are taking to work; and whether it looks as though they would some time be able to govern themselves. On all these points Gen. Wood speaks frankly, fully, and encouragingly. Brigandage has been stamped out, order prevails, the people are at work and contented, schools have been opened, and "the great cry among them is for more schools"; and while they are not yet fit for self-government, "they are on the road to it."

The extraordinarily involved and almost incoherent line of argument by which Attorney-General Griggs interpreted the anti-canteen legislation of Congress to mean that the sale of liquor in canteens was really legalized by the act in question, was calculated to make the reader doubt whether the author of that opinion was capable of clear reasoning. But the reply which Mr. Griggs has just made to an inquiry from the War Department as to the rights of cable companies in Cuba is a straightforward and cogent piece of writing, which applies sound principles to the case in hand, and incidentally states fairly the proper relation of our Government to affairs in that island at the present time. Many years ago the Western Union Company established cable communication between the United States and Cuba, under a concession from Spain that it should enjoy an exclusive right for forty years. The Commercial Cable Company recently sought authority to establish a line, claiming that the Western Union enjoys a monopoly which one company ought not to have, and also that its grant is void, because it was obtained by fraud practised on the Spanish Government. The Attorney-General points out that all governments have granted concessions which amounted to monopolies, and that such grants are legal, while he maintains that the allegation of fraud is essentially a question for judicial examination and decision. Mr. Griggs concludes by expressing the quite justifiable opinion that controversies as to grants and franchises taken from Spain, but exercisable within the island of Cuba or other islands derived by the United States from Spain, ought not to be precipitated to a decision in the present unsettled condition that prevails in those islands.

Mr. Henry C. Payne of Wisconsin is authority for the statement that the Senate committee on finance, or the Republican members thereof, at their recent meeting in this city, agreed informally to recommend the passage of a bill declaring all the obligations of the Gov-

ernment payable in gold. There are other reasons for believing that Mr. Payne's information is correct. Leading Republican newspapers are advocating that policy in a way which indicates a common understanding that this is soon to be one of the tenets of the party. It would not be a great step to take, but it would be a very desirable one. Such a bill, once passed, would anchor the country on a gold basis until a Senate, a House, and a President should concur in repealing it. Even this would not be the chief benefit to flow from it. Such a law would influence the thought of the nation. The gold standard would be a part of the people's daily walk and conversation, and would develop an unquestioned national policy. It is doubtful if any party would have the hardihood to deny or controvert it after it was once placed on the statute-book. It may be affirmed that the existing law makes gold the standard of value, and hence that the proposed new law would be superfluous. Weak-kneed, backboneless Republicans will very probably urge this as a reason for doing nothing. To all such we commend a prayerful reading of their last national platform, which says:

"All our silver and paper currency must be maintained at parity with gold, and we favor all measures designed to maintain inviolable the obligations of the United States, and all our money, whether coin or paper, at the present standard, the standard of the most enlightened nations of the earth."

This resolution was adopted at the St. Louis convention June 18, 1896, but no step has been taken by Congress to carry out the declared purpose of the convention. It might be awkward for the party to go into the next campaign without having put upon the statute-book a single word on the subject.

The death of Richard P. Bland calls to mind once more the Bland bill, and all the strife over it, and all the consequences of it. Mr. Bland did a great deal of mischief during the twenty-five years that he was in public life, but it is probably true that if he had not taken the lead in the silver agitation, some other ambitious politician would have done so. The money question was at the front in 1872, when Bland was first elected to Congress. It was then a dispute over fiat money, inflation, paying the bonds in greenbacks, and similar crudities growing out of war-financiering. The decline in the price of silver happened in the course of that dispute and just as the fiat-money men had been "knocked out," by the defeat of Butler in the Republican party and of Pendleton in the Democratic. The decline in silver was one of the most baleful accidents that ever befell the financial affairs of any nation. It took the victory that had been won, after hard fighting, by the friends of sound money, out of their hands, and plunged

the nation into a controversy of more than twenty years' duration, and led to the useless expenditure of \$464,000,000 gold by the Government in the purchase of silver bullion, without any benefit whatever to the owners of silver mines or to any human being. This expenditure was useless and worse than useless, because the production of silver was artificially stimulated, and the accumulation now hangs over the silver market of the world, depressing the price unduly, because the buyers believe that it will some day come upon the market like the discarded silver of Germany.

Four hundred and sixty-four million dollars is a pretty large sum to pay for one lesson in the science of finance, but that was not all that it cost us. The panic of 1893 was one of its consequences, and that panic cost more than the Government paid for its silver bullion, but the loss was distributed among individuals instead of being entered in the Treasury ledger. Now the cloud that lowered above us so long is passing away, and Mr. Bland passes away with it. His political career was a failure in every sense. He failed to carry the measure to which he devoted all his public life. The bill which bears his name was not his, but Senator Allison's. Bland himself opposed it bitterly, and voted for it only after it had become plain that he must take that or nothing. He not only failed to carry his own measure, but he failed to secure a nomination for President when the Democratic party finally put itself on his platform. It is generally conceded that Mr. Bland was sincere in his beliefs. We do not call his sincerity in question, but his career is a fresh illustration of the truth that a little learning is a dangerous thing. Mr. Bland knew just enough about finance to put him in the wrong, and he had sufficient ability and perseverance to drag a large unthinking multitude after him.

The spoilsman have no doubt about what the President's recent civil-service order signifies. They have never shown such evidence of hopefulness in their warfare against the reform since the passage of the law of 1883 as they now manifest in view of President McKinley's recent "backward step." The new comes from Washington that "prominent Republican workers," who are disgusted with "the hollow sham of civil service," have organized a league, with stanch support of McKinley's administration and bitter opposition to "civil service" as its chief objects, between which no antagonism is recognized. There have been such organizations before, but they never had so much to encourage them as now. One of the aims is to keep "the hollow sham" out of the next Republican platform, as

here, too, Mr. McKinley has helped their purpose. What, indeed, can the party say in 1900? In 1896 it "pointed with pride" to the placing of the civil-service law on the statute-book by the Republican party, and declared that "we renew our repeated declarations that it shall be thoroughly and honestly enforced and extended wherever practicable." But it would be ridiculous to make such a pledge next year, after what a Republican President has done this year.

Attorney-General Griggs is as confident as Senator Hanna is, that President McKinley will be renominated and re-elected without difficulty and almost without opposition. Will imperialism be an issue in the campaign? Mr. Griggs, sitting serenely upon his own "glory-crowned heights," thinks it "will not figure as a distinct issue." The Republican platform will "refer to it approvingly," but the Democrats "will not deem it prudent to make it a party issue." The reason why imperialism will thus play no part in the campaign is because maintaining authority in the Philippines and elsewhere in our new possessions has become "not a question of party politics, but of national duty, and must be approached and considered by our citizens from their sense of duty to this country." That is the McKinley theory, undoubtedly. Ask no questions, indulge in no criticism, but stand by me, William McKinley, in everything I do. That is duty to your country, for I, aided by Mr. Hanna and Mr. Griggs and other faithful and unwearying eulogists of my greatness and goodness, am the country in the new era upon which I have launched it.

The movement toward the election of United States Senators by popular vote has met a set-back in Virginia. As the nearest approach to such a choice possible under the constitutional rule which requires election by the Legislature, the advocates of a change in that State have sought to secure either the calling of a Democratic State convention or the ordering of party primaries this year, for the express purpose of nominating a candidate who shall be supported by the legislators next winter. The question

is deemed necessary. It ought to be added that personal issues have played a large part in the decision of this question; those who favor the reelection of Senator Martin opposing any change in the method of choice now, because they think it might hurt his chances, although some of them have in the past favored the popular election of Senators on general principles.

The Michigan Legislature has passed an anti-Trust law more sweeping, if possible, than that of Texas. It forfeits the charters of all corporations of the State that join together to create restrictions in trade, or to limit or reduce the production of any article of merchandise, or to control the market-price of the same, or to prevent competition. It prohibits the corporations of other States which come within these categories from doing business in the State. It subjects to fine, or imprisonment, or both, any person who aids or abets the combinations prohibited by the act, and declares void all contracts in violation of the act, and gives to any person injured in his business by the operation of a Trust the right of action against the offender for double the amount of damages sustained. Looking at this enactment, and at those which have preceded it, and at those still pending in other States, we apprehend that it will be useless to contend against the public feeling which prompts them. The battle must be fought out in the courts, and more especially in the markets of the country. It is very likely that the courts will sustain the anti-Trust laws wherever they can do so, as they sustained the Granger legislation in the seventies. The crucial test of the anti-Trust laws will be found, however, in the experience of society. Probably they will be found unworkable in some particulars and injurious in others; that is, injurious to the community. Time only can answer these questions. Probably Congress will not remain unaffected by the anti-Trust excitement now sweeping over the country. The saying of Mr. Havemeyer that "the mother of all Trusts is the protective tariff bill" has awakened many echoes in the country press, and the more it is talked of and the oftener it is printed, the wider is the belief that Mr. Havemeyer spoke the truth.

The strike which has just broken out in the State of Colorado is one which is without a precedent in the history of such struggles. It is among the men employed in smelter works, but it affects all mining operations, and, beyond them, other allied industries, as well as the business of the railroads. Thirty thousand is considered a reasonable estimate of the number of men who will immediately be thrown out of work, while 5,000 railroad employees will lose

their jobs if the mines of the State are generally closed. The employees in the smelter works have hitherto worked ten or twelve hours a day. Last winter they appealed to the Populist Legislature to pass a law for a shorter day, and that body enacted a statute which provides that "the period of employment of workmen in smelters and in all other institutions for the reduction or refining of ores or metals shall be eight hours per day, except in cases of emergency where life or property is in imminent danger." But the owners and operators generally claim that they could not operate their works profitably if they should pay as much hereafter for a day of eight hours as they have heretofore paid for one of ten or twelve; and, with few exceptions, they proposed to substitute a system of payment by the hour, under which the men would earn considerably less than before. It is not unlikely that the trouble may soon be ended by a judicial decision that the law is unconstitutional as class legislation. The question whether such a statute would stand was submitted to the Supreme Court of Colorado in 1895, and it declared that "it is not competent for the Legislature to single out the mining, manufacturing, and smelting industries of the State and impose upon them restrictions with reference to the hours of their employees, from which other employers of labor are exempt."

Has the Mazet inquiry, which has been adjourned till August, really accomplished anything? This is the question which one hears oftenest about the investigation, and it is usually answered in the negative. There is no disputing the fact that, in the estimation of most people, the inquiry has been a failure. Yet Mr. Moss, as we look back over his labors, has set forth very clearly certain facts in our condition which we only suspected before he began. He has made Croker admit under oath that he controls and runs the government of the city for his personal benefit. He has shown by the evidence of Croker's sons and family relations that the departments are used for the purpose of extorting blackmail from contractors and others for the benefit of the Croker family. He has made Devery and Price and the Police Board confess that the police power of the city is exerted, not for the suppression of vice and crime, but for their protection, stimulating their growth in order that the revenue from them may be made as large as possible. The portraits which he has induced the police authorities to draw of themselves on the witness-stand—those of Hess, Sexton, York, Devery, and Price—have been invaluable revelations of the Croker system of government. Nothing equal to them has ever before been exhibited in a civilized community. One after another, these agents and ad-

ministrators of our laws, the supposed servants of the people, have declared their contempt for both laws and morals, have defied and insulted both the committee and the respectable sentiment of the community, have shown themselves too ignorant and uneducated to be able to speak in ordinarily correct language, and too coarse and brutal to have any proper sense of the disgraceful revelations they were making of their own characters.

The general belief is that when Platt started the inquiry, he intended it to be only a little one, just enough to alarm Croker into giving him a larger share of police patronage. Croker was not easily scared, and the employment of Mr. Moss as counsel made it impossible to restrict the inquiry after it was ordered. The net result has been quite different from what Platt intended. Croker has been "shown up," it is true, but so has Platt. He has been exhibited as a boss of precisely the same type as Croker, and Croker's insistence on the witness-stand upon the calling of Platt, if the inquiry was to be impartial and thorough, deprived the inquiry at the outset of most of its moral force. As a sort of stereopticon show of the evils of boss rule, the inquiry has been an interesting and useful exhibition, but beyond that it has not accomplished much that will leave a lasting impression.

Only a languid interest attaches to the Venezuelan arbitration, so far as relates to the matter in dispute, but the proceedings will be watched with close attention, as they may throw new light on the subject of international arbitration. Lawyers will also watch the proceedings as a tournament of the best legal minds of England and America. Probably we shall add something also to our stock of knowledge from the rulings of the court and the umpire on questions of precedents and on the law of evidence. The spectacle which the tribunal itself presents is an object-lesson to The Hague conference, to which it must serve in some degree as a stimulant, and all the more since Martens, the Russian jurist, holds the foremost place in both. Every precaution seems to have been taken to secure, not only an absolute decision of the question at issue, but one which shall command the assent of the parties to the controversy. In his opening speech on Thursday Sir Richard Webster, speaking of the fifty-year-title clause, suggested that where a case of fifty years' occupation was found to be beyond the line of the true boundary of the government whose subjects were there settled, the boundary should be deflected, with territorial compensation elsewhere, or with pecuniary compensation. As this rule would work both ways, it could not be considered as favoring one party more than the other.

INTERNATIONAL UNITY.

The proposals of the Czar of Russia, which have occasioned the Conference now sitting at The Hague, have been compared with the scheme of the "Holy Alliance" brought forward by Alexander I. Such a comparison shows how much civilization has advanced during the century. The Holy Alliance was a secret agreement among despots. They were perhaps unusually benevolent despots, but they intended to suppress liberty, and they carried out their intention. The minute supervision of Government officers rendered free speech and even free thought impossible for subjects, and made international trade and travel very difficult. In a recent tour undertaken for the purpose of learning European sentiment concerning the Czar's rescript, an English journalist travelled everywhere, talked to every one, and wrote everything without hindrance. A few centuries ago such a tour would have been physically impossible; even a century ago it would have been impracticable. Its purpose would have been inquired into, and probably condemned. The tourist would have found the barriers of the custom-house almost insurmountable. He would have met with the greatest difficulty in obtaining a passport, and even if he bore one made out with the utmost precision, he would have been subjected to frequent detentions. His apartments would have been visited by the police, his letters would have been opened and perhaps refused transmission by the post, and he would not have been able to go for a walk without being followed by spies.

These intentional hindrances to freedom of communication have practically disappeared. The passport is still required in Russia and in Turkey, but throughout the civilized parts of Europe it is no longer thought of. The nuisance of custom-houses is unabated, but the inconvenience is generally reduced to a minimum, and so long as taxes on imports are maintained, the inspection of travellers' luggage must take place. With this exception, it may be said that the barriers between the different countries of Europe have been broken down. The traveller may pass without interruption from the North Cape to Sicily. Letters are sent by the post to any part of Europe without governmental interference, and merchandise, once committed to the carrier, goes steadily on to its destination without further care to the consignor. The International Postal Union has quietly, almost imperceptibly, melted away the obstacles to the diffusion of knowledge which despotism had studiously interposed, and now, when a letter is once dropped into the box, it goes almost automatically to the person to whom it is addressed. Mail-bags, at least, are carried from country to country without custom-house examination. The International Railway Bureau is

seldom spoken of, and is perhaps unknown to most of those who are benefited by its work, but it is one of the most effective agencies in bringing about the unity of Europe. It practically makes all the railways of Europe one system for many purposes, and manages, in spite of tariffs and custom-houses, to deliver goods with remarkable expedition.

Besides the Railway Bureau there are the Telegraphic Union, the unions for the protection of patents, of trade-marks, and of copyrights, and others. As M. Droz, the head of the Railway Bureau, says, trade asks little of the state, and the state rather hinders than helps it. Only grant it legal security and it will take care of itself. It will do more; it will gradually make the rulers of the state submit to its requirements. In spite of all endeavors to keep up national jealousies, the expansive and pervasive force of commerce overcomes in the end. Even the French and Italian Governments have been forced to admit the folly of their tariff wars by the arguments taken from trade statistics. Trade is sometimes regarded as a sordid affair; it does not strike the imagination of mankind as the uniform of a soldier does. But when we see what has been done by these commercial agencies in building up rights, they do not seem sordid. The Railway Bureau, for example, has made all the managing departments of the railways of Europe severally answerable, so that a suit for damages may be brought against either the sending or receiving agent. The Telegraphic Bureau has established the right of every one to send a dispatch, the right of secrecy, even the right to send messages in cipher, the right to a fixed and reasonable tariff. People think little of these things, but they make, collectively, a very great addition to the list of rights formerly enjoyed by the common people.

Under the constant prodding of trade, the governments themselves have had to recognize European unity. One of the notable instances of this result is the Commission for the Regulation of the Danube. It would be hard to say whether the perversity of nature or of man more impeded the navigation of that stream. But the governments of the countries interested finally consented to act together for the relief of commerce, and the commission established by this agreement, although clumsily enough constituted, has gradually accomplished very important results. These steps towards the "federation of the world" should encourage us to hope that we may be nearing the end of the military régime. The common people everywhere detest it; the educated people very generally condemn it; but the rulers of the nations maintain it. They, however, are not insensible to public opinion, and Europe is in so many ways now united

that armies will seem more and more an anachronism. When we consider what has been accomplished within a comparatively short time, we can take heart. The more the world talks about peace and disarmament, the more desirable will they appear and the harder will it be for rulers to oppose them.

A BIPARTISAN CENSUS.

By this time it must be plain to every one that Merriam will make as bad a mess of the twelfth census as Porter did of the eleventh. The longer he goes on, the more the wonder grows why the President should have appointed him Director, instead of reappointing Porter. It is true, Porter had brought discredit upon the Harrison Administration; but some lessons of experience had been so drilled into him that he could hardly have done worse, and might have done better, if he had tried his hand again. Merriam's first act in office was to emphasize the President's distrust of Porter by searching the record to find out what Porter did, and then taking care to do something else. It is the pursuit of this delicate policy which has got him into most of his trouble.

At the outset he admitted that he knew nothing about statistics, and, as he had never studied census methods, no technical scheme of administration had shaped itself in his mind; but in his political career he had taken a hand in carving up salaried jobs and passing the slices around, so he gave his whole mind to that branch of his duties. First, what had Porter done about appointments? He had pooh-poohed the idea of putting his bureau under the civil-service rules, and had set up instead a sliding-scale test for the sons and nephews, poor relations, and other dependents of the men who stood by him in Congress. If an incompetent could not pass an examination of the highest grade, perhaps he could pass an easier one; if that still was too hard for him, he could come in any way, figuring on the pay-roll as a laborer and doing the work of a clerk. None of this for Merriam, if you please. He took pains to explain that he would not have objected, personally, to letting the Civil-Service Commission sift his applicants and give him only the best; but there was the law, which provided that "these persons shall be appointed," not from the classified service, but "by the Director of the Census," and this, of course, left him no discretion. But he did intend to make his own examination rigid. He would hire merciless examiners to put the most searching questions. If an applicant was turned away at the front door, he would find no back door open, as in Porter's day; still, if he passed, it would do him no harm to have some "influence."

Has this plan gratified the spoliemen

who engineered the census law through Congress? No more than it has satisfied the good citizens who want a census force worth the money spent upon it. The spoilsmen say: "If you are going to have an examination as severe as the Civil-Service Commission requires, we might as well have left the whole business in the hands of the Commission." And they are right. That would have saved time, expense, and irritation without end. There is not an applicant able to pass a Census Bureau examination as rigid as Director Merriam proposes, who would not more willingly have taken the Commission's examination, because an appointment made through this agency would have been to the classified service, with a fair assurance of permanent tenure. Even with the law as it is, if the Director sought only competency in his clerks, he could obtain the addresses of thousands from the Commission without any formal process of certification. The law does not tell him where he must look for his help, and the Commission's eligible lists are continually drawn upon by private employers in search of skilled clerks.

This much for the office force; now, what had Porter done in the field? He had turned the enumeration into a mere machine for rewarding faithful Republicans. Well, Merriam must look out not to fall into such a mistake—at least, not in the South. To keep alive the era of good feeling there, was a mission of the McKinley Administration, and Merriam, as one of its prophets, must not ignore his share of the work. Hence the advertisement that in the Southern States a part of the patronage would be distributed through the Democratic Senators. At once arose a protest from two sources. The Republican bosses objected to these dispensing agents because they were Democrats, and the Democratic Representatives because they were Senators. The only persons pleased were the Senators themselves, and they were just two citizens in each State.

As usual, the plan devised to suit everybody suits almost nobody. The general verdict is that, if there is anything more foolish than Merriam's examination comedy, it is his bipartisan farce. The new Director doubtless understood vaguely that partisan censuses were bad things, but he could not reason from this that a bipartisan census is only a partisan census, with its vicious qualities doubled. He has made the old blunder of confounding bipartisanship with non-partisanship. The late Francis A. Walker knew the difference. He was forced to take the ninth census with partisan machinery, because the law gave him only United States Marshals for lieutenants in the field. Ten years later he was obliged to condemn his own population statistics for the South as untrustworthy; but he cherished no illusion that two parties were better than one in

such a case. A letter to a friend who had just been appointed a public statistician contained a warning which today has a prophetic ring: "If any mistake is more likely than others to be committed in such a critical position, it is to undertake to recognize both parties as parties, and to award so much in due turn to each. This course almost inevitably leads to jealousy and dissatisfaction."

Gen. Walker might have gone more into detail and explained that where two parties divide such an enterprise between them, they either quarrel or they enter into a treaty. If they quarrel, each party will always denounce the work done by the other as worthless. If they agree, it is only to make common cause against all criticism, and defend bad work and good alike. Either alternative is bound to discredit the result, and the public has simply a big bill to pay for a pig in a poke.

THE RATIONALE OF TRUSTS.

Mr. H. O. Havemeyer gave rather more testimony before the Industrial Commission last week than was wanted. In fact, he rather turned the tables on his interrogators, for, although he did not question them, he confounded them and brought their questions to naught. He first plumped at them the general statement that "the mother of all Trusts is the customs-tariff bill." Then he proceeded to show how it has worked. "The existing bill and the preceding ones," he said, "have been the occasion of the formation of all the large Trusts, with very few exceptions, inasmuch as they provide for an inordinate protection to all the interests of the country—sugar-refining excepted." Probably Mr. Havemeyer meant all the special interests or all the favored interests, not "all the interests"; for if all were inordinately protected, none would have any advantage over the others. Whether the refining of sugar has been omitted in the distribution of tariff favors is a moot question. It was much disputed when the Dingley bill was pending, and it was observed that, after the bill passed, there was a sharp and permanent rise in the quotations of Sugar Refining stock. The question is so extremely technical that only the best experts can form an opinion as to the amount of protection which the existing tariff affords, but probably the quotations in the market are the best test, and these would indicate more than the 3½ per cent. which Mr. Havemeyer says is the true figure.

The relative amount of protection afforded by the tariff to the sugar refiners, the sugar-growers, the Hawaiian Island planters (foreigners mostly, says Mr. Havemeyer), and other industries, is not, however, the chief point of interest in his testimony. It is probably true that if all customs duties except those for

revenue were repealed so that each tub should stand on its own bottom, the sugar-refining industry would be benefited rather than harmed. The whole drift of Mr. Havemeyer's argument runs that way. However that may be, Mr. Havemeyer uttered some plain truths which will bear frequent repetition; among them these:

"The tariff bill clutches the people by the throat, and then the Governors and the Attorney-Generals of the several States take action, not against the cause, but against the machinery which the people employ to rifle the public's pockets.

"There appears to be in the public mind a distinction between robbery by an individual and that by a corporation. What is commendable in an individual appears to be dishonest in a corporation.

"I maintain that it is immaterial to the public in what form business is done—whether by an individual, firm, corporation, or even a Trust. These are merely forms of conducting business, or, in other words, machinery for the operation of business. It is the duty of the Government to see that, under the tariff laws they enact, this machinery cannot in its actions result to the detriment or impoverishment of the public.

"It is the Government, through its tariff laws, which plunders the people, and the Trusts, etc., are merely the machinery for doing it."

We have pointed out from time to time since the McKinley tariff first went into effect nine years ago, the *modus operandi* of the tariff in inducing the formation of Trusts. A Trust is a combination of the producing machinery of the country in a particular line of industry to stop competition and enable the producers of the particular article to sell it at a higher price than they could otherwise get. Such a combination is not possible, however, if the article in question can be imported from abroad. If Congress now steps in and performs the job of excluding the imported article or putting on duties which raise the price in the home market, not only is there an opportunity afforded, but an inducement or bonus is offered, to form the Trust. No wonder it was availed of as soon as the duties were raised to the inordinate and tempting height of the McKinley bill. Trusts multiplied on the heels of that measure—a measure so monstrous that such veterans of the tariff as Senator Morrill and Senator Sherman stood aghast at its provisions.

Senator Sherman took an early occasion after its passage to say that if advantage were taken of the tariff to form Trusts or combinations under the shelter of it, he would vote to put on the free list any article produced by such Trust or combination. He might as well have whistled against the wind. The promoters of Trusts laughed at him, or rather they gave no heed to his words. The only thing they gave attention to was the plum that he and McKinley and Aldrich and the rest had dangled before their eyes. The Republican party offered a premium for the formation of as many Trusts as there were separate articles in the bill, and when the Trusts came forward to take what was offered them, it began to pass other laws to

punish them for taking the plunder. Senator Sherman was the first one in line to adopt this illogical course. The Sherman anti-Trust bill was the outcome; a measure which has never led to a conviction, we believe—at all events has never stopped or hindered a single Trust.

It is true, as Mr. Havemeyer acknowledges, that there are some Trusts which are not founded on the tariff. Whether these few are good, bad, or indifferent, there seems to be no way to get rid of them. We have little confidence in the efficiency of laws like the one recently passed by the State of Texas to prevent the selling of articles produced by Trusts, or to keep their agents out of the State. We apprehend that the citizens of Texas will suffer more from that deprivation than the Trusts themselves, and that the law will be repealed when the pinch becomes severe. That there is an easy and sure remedy in the hands of Congress for all the evils caused by the tariff-protected Trusts is plain enough. It is only necessary to remove the artificial barrier that Congress itself created for them. It is only necessary to do what Senator Sherman, in the days of his intellectual acumen, said that he would do—repeal every scrap of duty on every article which has been made the subject of a Trust or combine; or, if the revenue is needed, to levy an internal tax equal to the duty on every such article.

AT SEA FOR AN ISSUE.

The Democrats of Pennsylvania held their State convention at Harrisburg last week, to nominate candidates for two judges of the courts and for State Treasurer. This is an "off year," with no Federal officials to be elected, and the canvass ought to turn exclusively on State issues. The framers of the platform recognized the proper supremacy of such issues, and fourteen of the fifteen planks which they presented deal with questions of this sort. Republican newspapers concede that it is a good platform in this respect. The *Philadelphia Press* says that, "to most of the declarations, no honest man can take exception," and that the Republicans ought to second the demand for an amendment to the Constitution that will provide for an effective registration of voters. It even goes so far as to declare that "if the convention of the Republicans chooses to take issue with the ugly truths set forth by the Democrats, and writes an endorsement across the backs of all the questionable acts of Gov. Stone and the Quay machine and Mr. Quay himself, it will drive away thousands of voters now anxious to stay with their party, and will give the ticket nominated at Harrisburg yesterday a hopeful chance of winning, even in this overwhelming Republican State."

But the platform-makers at Harris-

burg were not prepared to omit all reference to national politics in a deliverance upon which three candidates for State offices were to run in an "off year." The question was how this outside matter ought to be treated. Should the convention endorse the free coinage of silver specifically? Should it endorse generally the Chicago platform of 1896, of which the free-coinage resolution was the most important plank? Should it try to "keep in line" with the position assumed by the party three years ago without making the Chicago platform unduly prominent?

The policy of evasion was decided upon by the committee and was accepted by the convention. The first resolution, which was the only one referring to national politics, reads as follows:

The Democracy of Pennsylvania in convention assembled, again renewing our pledges of fidelity and devotion to the sacred rights of the people, true to the faith and principles of our party as declared in the platforms of our several national conventions, and proud of our matchless leader, William Jennings Bryan, realize that the issues involved in the coming campaign in Pennsylvania are honest government, clean politics, and the redemption of our State from Republican misrule and corruption.

This covers equally the financial plank upon which Bryan was defeated in 1896 and that upon which Cleveland was elected in 1892. For that matter, it covers equally the platform upon which Seymour ran as the Democratic candidate in 1868, declaring that "we regard the reconstruction acts (so-called) of Congress, as such, as usurpations, and unconstitutional, revolutionary, and void"; and that upon which Greeley was supported by the same party in 1872, with the "pledge to oppose any reopening of the questions settled by the thirteenth, fourteenth, and fifteenth amendments to the Constitution." In short, the position now taken by the Pennsylvania Democracy leaves them open to support any policy in the national convention of their party next year, whether such policy harmonizes with the platform of 1896, or be as inconsistent with that deliverance as was the platform of 1896 with the one of 1892, or that of 1872 with the one of 1868.

The uncertainty of mind as to the best course for the future of the party which was manifested at Harrisburg characterizes the leaders of the organization as a rule throughout the country. The *Chicago Times-Herald* has been asking members of the Democratic national committee what they think ought to be the battle-cry in 1900, and their replies show a growing disposition not to make the silver question again the dominant one. Most would "reaffirm the Chicago platform of 1896," but some of these could doubtless be induced to compromise on endorsing "the faith and principles of our party as declared in the platforms of our several national conventions." A number of committeemen favor laying most stress on opposition

to Trusts, and treating "the money Trust" as only one feature of a broad problem. "Imperialism" or "militarism" is suggested by some as likely to become a prominent issue next year.

But there is no approach to unanimity in opposing the present policy of the Republican Administration, so far as anybody can make out what that policy is. "As to the question of imperialism, expansion, or by whatever other name it may be called," says the member of the committee from Georgia, "I am inclined to think it would be very unwise for the party to commit itself now to any declaration, pending the changing conditions which, as readjustment proceeds, will give the people of the whole country better data from which to reach a satisfactory conclusion as to the national duty." Further illustration of the difference of opinion now existing is furnished by contrasting the "flat-footed" declaration of the Tennessee committeeman that "the Democratic platform should denounce in unmeasured terms the acquisition of territory by force of arms," with this equally positive statement by his colleague from the State of Washington: "No fault can or should be found with the administration of President McKinley in dealing with the Philippines as he has. Atkinson, Hoar, and Cleveland should not be permitted to frame the policy of the Democratic party with reference to the Philippines."

On the whole, such developments as those of the Harrisburg convention and of the canvass of the Democratic national committee are encouraging. The first step towards getting away from the advocacy of a hopeless policy is to cease to have any positive convictions about it, and there is evidently a considerable element in the Democracy which is now in this frame of mind regarding free coinage. It is far better to have a party at sea for an issue than to have it embark again on a voyage straight to the rocks on which it has once been wrecked.

CONDITIONS IN CRETE.

ATHENS, May, 1899.

The question now uppermost in people's minds in this part of the world is not so much when and how the four Powers are going to leave the Island of Crete to her own devices, but what these devices will be. There is talk of the complete withdrawal of the foreign troops and officials within a few weeks, but this does not seem probable, and, whether it take place to-day or next year, the main question of Moslem versus Christian will remain to be solved. Well-instructed opinion differs as to which of these two parties is the worse, but various officials of foreign governments in Italy, Turkey, and Greece with whom I have spoken all concur in the belief that anything done which may alienate the Moslem inhabitants, even in sympathy, from the island will be most unfortunate for its future well-being. While the Turkish flag that now floats on a small rock in Suda Bay is the only visible sign of the sovereignty of the Sultan, the num-

ber of Moslems still left in the island is, notwithstanding emigrations to Smyrna and other ports during the last year, very considerable, and their wealth is large in proportion to that of the Christians. So far as the Christians are concerned, it would be a pleasant solution of difficulties were all the Moslems to emigrate; and the desire of many of them to depart is shown by the price for which they to-day will sell their farms—oftentimes scarcely more than the passage money to one of the ports of Asia Minor. But all the Moslems will not emigrate; in the main, only those from the interior will do so, and the larger part of the Moslem population is settled in Candia and other cities.

At present, owing to the presence of European officials, affairs for the most part run smoothly, and the country is safe for foreigners, and almost equally so for its own inhabitants. It is quite possible, however, that, on the withdrawal of the Europeans, this happy condition will no longer endure. This fear is aroused by observing the general course of action of the temporary government which, until lately, has had charge of affairs. Two weeks ago, the first true autonomous ministry was chosen. It is composed of five members, four Christians, and one Moslem, who hold office subject to the will of Prince George. While the forms of the government exercised by this body may be slightly different from those practised during the past months, it is scarcely to be supposed that its general tone will be greatly altered; so, with little question, a fair idea of the future can be derived from study of the past. It is worth noting that the five officials are not true ministers, but merely councillors in charge of the Departments of Education and Public Worship, Justice, Interior, Finance, Public Works, and Agriculture. The presidency of this board, although the Constitution provides for no such office, will, in all probability, be held by M. Sphakianakis, who has charge of the Department of Education and Public Worship, and is ex-President of the Assembly.

To render justice to the Moslems will be one of the most difficult duties of this or any Christian government in Crete. Personal safety seems now to be, in the main, assured, but there is no certainty for the Moslem of meeting with just treatment in the courts, and no assurance that laws will not be promulgated pressing harder on him than on the Christian. The conditions in the Province of Candia (the English "sphere of influence") are excellent. Smuggling has been suppressed, the revenues doubled during the past six months. The natives, however, do not possess the same aptitude as the English for running affairs with mechanical impartiality and accuracy, and it is hardly to be doubted that before the island becomes self-supporting and orderly, the Moslems will have to suffer much. Instances of the sort of tyranny to which they will be subjected are already numerous. A few weeks ago a notice appeared in the official Gazette, saying that, Prince George having given his sanction to the measure, it was decreed that henceforth there should be an amnesty regarding all political crimes committed before November 4, 1898. By choosing this date, the Assembly provided for the pardon of all Christians; but, as it was after this date that the attack on the British troops and the consequent riot took place, a large number of Moslems would be exposed to trial. Naturally this decree created much ill-feeling, for,

as far as murder goes, the "Christians" showed themselves at Sitia and elsewhere apt imitators of the Moslem. The Moslems did not demand free pardon, but merely that they should be treated in the same way as their enemies. The English sense of justice was strong enough to secure this for them, and, after some dispute between the Cretan and British authorities, the edict was repealed.

A similar spirit in the action of the Christian toward the Moslem is shown in the regulation passed that the official language of the island shall in all cases be Greek. Considering that Greek is the language spoken in Crete, the harshness of this enactment is not at once manifest, but, in consequence of its bearing on one at least of the Moslem religious institutions, it is hard for the Turks to endure. In giving over the island to Greece, the Powers guaranteed that Moslem institutions should in no way be interfered with. The system of church property throughout the Ottoman empire is peculiar and complicated. It is a branch of public affairs. All books of record and accounts pertaining to it are in Turkish. The English found it in Cyprus, and, although English was made the official language, they did not attempt to enforce its use in this department. The Cretan Administration seems not to be wise enough to follow this example, but is apparently bent on compelling the use of Greek in this as in other branches of governmental business. This policy is likely to be a constant source of irritation to the Moslem community.

To insure a civilized government, Prince George will, during his three years of office, have to solve two difficult problems—first, the allaying of fanatical ill-feeling of the two religions towards one another; second, the agricultural question. So long as a country whose main source of wealth lies in her agricultural products, and which used to have a considerable export trade, provides less than enough of the primitive products for her own consumption, she cannot be regarded as prospering. There is scarcely a village in Greece so poor or so secluded that a traveler could not get in it enough to eat, while it is a commonplace of travel in Crete that you must carry your food with you or go hungry. Crete is, agriculturally speaking, as rich a land as Sicily. You may have fresh grapes there from June to January—the first vintage is in July. Oranges, lemons, and figs grow to perfection. No oil is better than Cretan olive oil. The coast-line is most favorable for trading purposes, and for these the position of the island itself could not be improved. The fact is, that the country is even now vastly underpopulated. While it would not conduce to the advance of the country for the Moslems to be in control, it would be a suicidal policy to drive away peaceable and able-bodied laborers.

Another great, but as yet undeveloped, source of wealth lies in the unexplored archaeological riches of the island. A partially satisfactory law in regard to these is about to be passed, and money for investigations will, for years to come, pour into the island as it does into Greece. It will come mainly, at least at first, from Europe, for American archaeologists have not yet taken advantage of an opportunity that has brought European students into eager competition. The excavations of the next few years in Crete are likely to teach us more in regard to the early history of Greece and of the

ancient currents of human life and endeavor in the Mediterranean basin than we have ever known.

If the Cretan Government should insure justice to all the people, the island might soon become one of the pleasantest corners of the earth.

RICHARD NORTON.

THE ENGLISH RIVIERA.

WEST BOURNEMOUTH, May 30, 1899.

Health-seekers who wander for their quest need hardly take their tickets for the Nile, or even for Italy, if all they want is a mild climate for the winter and freedom from the danger of sudden changes of temperature; for the south of England, at least in certain sections, offers the most equable winter that I have ever had experience of, except, perhaps, Florida. The sun and the thermometer do not determine with full powers the degree of comfort which is necessary to the maintenance of health and good spirits, or which is to be obtained from any locality. Indoor conditions may be as fatal, or the reverse, as those of the open weather, and I have heard from friends wintering in Egypt as bitter complaints of discomfort from cold as those I had formulated in my Italian home, with its oscillating mercury; for, in that land of the sub-tropics, no preparation for the modern perturbation of the temperature seems necessary, and we all know that what the Italian landlord tells of the exposure of his apartment, "that there is so much sunshine here that you never need a fire," turns out to be a bitter delusion, and you are obliged to come to a stove with its pipe thrust through a window, to eke out your winter. There are many things to be considered when you go to test the proverb, "Cœlum, non animum, mutant qui trans mare currunt," and the things which most change the soul are the things of the household, for one finds that the skies of Italy do not console when one shivers by the mockery of a hearthstone, and warms one's chilblained fingers by a *scaldino*, hieroglyph of the fire-side of our home. I hear, as I write, of a young friend, proud of his ability to endure hardships, who has just been sent to an English health resort after a winter on the Nile, overdone by the rigors of a climate to which he had gone as a cure from the severity of the English winters.

I have tried wintering in many and widely different climates, and when, at the end of a term of twelve years' continuous residence in Rome, following several years in Florence, I decided to try the south of England for the winter, most of my friends, even in England, predicted the failure of the experiment. We are now in the flush of early summer, and I may consider the trial as at an end and the judgment in order, and it is that the winter in this part of England offers the most favorable conditions of existence for cases of persistent tendency to diseases of the throat and bronchitis of all that I know by experience. In the latest years spent in Rome, and consequently those in which my condition was the most nearly that of this winter, I had the advantage, not given to temporary residents, of living in my hired house, fitted with such heating apparatus as can be supplied where it is not arranged, as it rarely is, in the construction of the house, and meeting with more than usual satisfaction the demands of the climate. Yet whereas in Rome I rarely passed a week without a cold, dur-

ing at least five months of the year, I have had here only one or two attacks which required treatment, or compelled me to keep the house for a day during the past winter. The difference between the climate of Rome and that of the south of England is not one of latitude or longitude—it is in the local conditions; and though one winter in this locality probably does not warrant a decision, it is even more probable that the late season has been rather worse than better than the average. The early part of it has been milder, the latter part—the early spring, liable always to be treacherous—has been colder and more unseasonable than the average; the spring is several weeks "behind time." By going further west, into Devon and Cornwall, the conditions are found to be still more favorable than here, in the southern borders of Hampshire.

The characteristic difference between the Roman winter and that we experience here is not, as most people imagine, in the greater or less tendency to malarial fevers, which the most elementary prudence will always avoid in Rome, but in the sudden and treacherous changes of temperature there at all seasons. The past winter here has probably had less than the average amount of snow and frost, for we have seen none of the former and only two or three short spells of cold sufficient to freeze the water in the gutters; but the difference cannot have been great, for plants of delicate constitution like the rhododendrons thrive here in the wild state in the greatest profusion, and the fuchsia flourishes, while the magnolia requires little protection. The great differences between the temperatures of morning and evening, or shade and sunshine, which constitute the gravest inconvenience of the Roman climate, do not exist here, and it is not unsafe to go out here on a warm winter day without an overcoat on your arm, as it is in Rome or any other place in southern Italy. Then, for the inevitable differences and changes of temperature which affect the indoor life, the English civilization has prepared its protection in the shape of fireplaces in every room—a convenience which Italian conservatism will not face. In fact, the greater part of the inconveniences of winter life in Italy consist in the obstinate refusal of the Italian to adapt his house to the requirements of the stranger. He seems to say always, "What is good enough for me is good enough for you, and if you want anything better, go elsewhere to find it." It has happened to me, in visiting some of the attractive and picturesque towns in the interior of Italy, to find the only inn so filthy as to be offensive to the nose, and quite unfit for a lady to enter it. On remonstrating with the landlord, that the filthiness of his house prevented foreigners from coming to the place, he has replied, "But the foreigners do not come; when they do, I will make the house clean." To this indolent indifference to his own advantage of the Italian host, the Englishman offers the sharpest contrast. His house is scrupulously clean, and he is extremely desirous to consult the tastes of his guest. The inns of the small towns are always comfortable, always clean, and provided with the conveniences of the locality in which they are. They are generally dear as compared with the same class of houses on the Continent, and the general system of separate living at the inn, due primarily to the Englishman's exclusiveness, makes it impossible to ad-

minister the business of inn-keeping economically; but wherever and whenever the attractions of a locality become evident, the system of lodgings and the letting of furnished houses come in to establish a large liberty in this respect. In this quality of liberty and its consequent bettering of life for mankind at large, England is at the head of civilization.

To come from such an abstract statement to the concrete example, I will put my own case. Dr. Lauder-Brunton, a high authority in such matters, advised me, on studying my case, which is an ordinary one of chronic bronchial troubles of a slight and intermittent character, exaggerated by my life in Rome, to look for a residence somewhere "in the tract of sunshiny country which extends from Dorking to Bournemouth"; and after certain vain explorations in the intervening sections I took the bull by this horn, and hired here what can be found only in England in a satisfactory condition, a furnished cottage. The owner, a widow lady, leaves all her household gods to my care, goes away so completely that we have never seen her since we came, and I am as completely at home as if I were in my own house. We have five bedrooms and two sitting-rooms, water and gas laid on, a hot bath always ready, and the tradesmen come to the door for orders. A large lawn enables us to invite all the birds of the vicinity to meet on it three times a day for such food as we can provide, and we enjoy their visits greatly, and just now the gardens around are vocal with their songs. I hate cities, and can never reconcile myself to live in one, but this is, so far as the thing is practicable to people of little means, a *res in urbe*. We pay for it two pounds a week, with no taxes beyond the water and gas bills.

The municipality of Bournemouth, like most other small municipalities in England, is stupid and behindhand in all that goes to make a town attractive and convenient for a stranger, but it has not been able to destroy the natural charm of the place. We have the sea at our back door, and a vast pine woods which was capable of being made a paradise, on the other side. The former has been left outside the enterprise of the Town Council, and the latter is so ravaged by the roughs and ruffians that you may wander in it for days and never see a sign of life—every bird's nest is stolen and every squirrel stoned to death, though both survive the brutal lower classes in the grounds of some of the houses, and exist as a testimony to the potential attractions of the country. The vast pine woods which once covered the site where Bournemouth now stands, extend back to, and mainly through, the New Forest, which is not what we understand by forest at all, but is simply wild and uncultivated land, the greater part covered by heather and gorse without a tree. Here and there are tracts of woodland and other areas of cultivated land, which, like the private lands in our Adirondacks, were squatted on or bought from the Government before the importance of keeping a national park had become evident, and these cultivated sections probably comprise all the arable land in the district. The greater part of the woodland is pine, on a soil so poor and thin that nothing but the various species of pine (or fir), which are found on it, will grow. This causes a peculiar state of climate, or rather atmosphere, which is the secret of the extreme healthfulness of

the region, the purity of the air. There are almost no flowers in the greater part of the district, consequently no birds, except where they can live by the food provided by the inhabited sections, and swallows and insect feeders in general are rare or unknown. I have not seen a single swallow in the country round about Bournemouth since I came, though twenty miles westward they are as abundant as in other countries. The effect on the air is peculiar, and such as I have seen in only one other region, Nocera of Umbria, where the same conditions of flora and fauna obtain, and the air has a lightness I never felt, so far as I can remember, elsewhere until I came here. The nurseries of germs and microbes do not exist as in regions where the flora and accompanying air-fauna are exuberant.

Yet we have a great deal of pleasure from the birds. The class of people who inhabit the villas and cottages in this district are of the English people who sympathize with the animal world, and the birds nest in their gardens as undisturbed as in an aviary, and on my lawn there come, at the hours of feeding, scores of thrushes, blackbirds, finches of various species, starlings, tomtits, and others I do not recognize, and, dearest of all, two pairs of robins, so friendly and familiar that they come to the edge of the lawn at feeding-time and look into the window to see if we are not coming with their food. It would be hard to find a country where man and nature are so amiably interdependent as here, though the cruelty of the lower classes in England towards all wild creatures is far greater than in the advanced sections of the United States, and the influence of the sporting classes is of the very worst and most brutalizing on the common people. But where you can escape the extremes, English life is humane and practically religious to a degree unsurpassed if not unequalled in any country of which I have experience.

W. J. STILLMAN.

ITALIAN FICTION OF THE TWELVE-MONTH.

ALASSIO, May, 1899.

Neither Verga, D'Annunzio, Fogazzaro, De Roberto, nor Rovetta contributed to the novels of the year, nor yet did Matilde Serao nor Neera. *Hamlet* has been left out with a vengeance, and we have had either to amuse ourselves with *Rosenkrans* and *Guildestern* or to seek our pleasure from a new set of entertainers. I may confess that it was in a sort of desperation that I accepted the latter alternative. I did not like reading unknown authors—the chances were strong against their being good; and still, however unlikely, there was always the possibility that something of value might be found among them. As for *Rosenkrans* and *Guildestern* unrelieved—"troppa grazia, Sant' Antonio!"

When the case was once presented in this way, there was no doubt as to the choice to be made. Only, before giving an account of its results, it may be noted that Fogazzaro has published a volume of lectures under the title of 'Ascensioni Umane'; that De Roberto has given us a biography of Leopardi, Rovetta two plays, "Il Ramo d'Ulivo" and "Il Poeta," that make very agreeable reading, though, I believe, they were not particularly fortunate upon the stage, and D'Annunzio has followed up the "Città Morta" and "Sogno d'un Mattino di Primavera" of 1897 by a "Sogno d'un Tramonto d'Autunno"

and "La Gioconda," of such importance that I cannot help giving a few words to them here.

These two plays show a great advance upon those of the previous year. They have, to be sure, some of the same defects. The author intrudes himself upon the action, making narrative of the stage directions, so that in the representation much of his intention would be missed by the spectator who did not follow the play with book in hand. And then, in the dialogue, the style is the same for all; there is no attempt to differentiate the personages by their manner of speech. They all talk D'Annunzian, than which, it must be confessed, no prose could be more exquisite. I have tried on former occasions to do justice to its quality, and it was never more flowing, more musical, more perfectly finished than here. And, after all, harmonious prose does not necessarily stifle movement and passion: D'Annunzio gives another proof of this in one and the other of these plays. The "Sogno d'un Mattino di Primavera" was only a dream, lovely in its shadowiness, but too utterly impalpable to awaken any deep sympathy. The "Sogno d'un Tramonto d'Autunno," though "of the stuff that dreams are made of," is yet animated by a breath of passionate life. It is also remarkable in that there are two actions, one before the eyes of the spectator, and the other concealed, but, by an ingenious artifice, both are made to move together to a united catastrophe. "La Gioconda" is a yet finer work. There is in it, especially in the first and third acts, evidence of dramatic power of no common order. Unhappily, the second act is not of equal force, and, from the point of view of the theatre, the fourth is useless. Needless to say that in itself it contains rare beauties. A remarkable picturesqueness characterizes all these plays. The "Mattino di Primavera" is like a modern picture in which willowy and pallid damsels are set in a harmony of tender greens, forming a scene of romantic loveliness. Other readers than myself will probably be reminded by it of Rossetti and Burne-Jones. A hot light and a parched land are the image left in the memory by the "Città Morta." The riches of a Venetian palette are expended upon the "Tramonto d'Autunno," while the "Gioconda" has all the delicacy and distinction of the Tuscan landscape and art.

And, coming finally to the novels, I must begin with a work that can be called a novel only by courtesy; but I cannot omit all mention of a book that has given me so much pleasure. Indeed, "La Carrozza di Tutti" of the veteran Edmondo De Amicis is capable of giving honest enjoyment to many. The sale of it is a proof of this; the works of no other Italian are disseminated so widely, and the thousands of "La Carrozza di Tutti" already make a respectable figure in the advertised lists of the author's successes. The book is occupied with the observations made month by month throughout an entire year on the different tramway lines of Turin. "The eye sees what it carries with it the power of seeing," and De Amicis is above all an amiable optimist, with facile smile and equally facile tear. But he is not blind, for all that; the little romances he follows, with his notes and comments on them, make up an excellent bedside book; and the delicate naïveté of the following passage shows that the pervading optimism is by no means of the stu-

pid sort. It relates to a spectacle of cruelty to animals:

"'What a child is man!' I said to him, directing his attention to the sight. And he, pointing out to me the three poor horses that the carters kept on whipping pitilessly, answered with his usual sneer, 'Child and wild beast'; then added, in a tone of irritation, 'You never see but the one half of human nature!' Strange! at those words I experienced a case of two-fold consciousness: the man was pleased with them—thinking, 'And so much the better!'—but the writer was offended, and, alas! the pleasure faded away after a moment; the resentment is not yet dead."

The opportunity has been good for making acquaintance with the younger writers, and with some of those who have hitherto passed unobserved behind the brilliant phalanx to the fore. There are plenty under both categories, the days being past when Italians read only French fiction, and the demand being sufficient to stimulate a brisk home production. It would be hard to say whether the average of it be higher or lower than that of other countries, but I may own that the ordinary reading—that of the rank and file—seems to me a trifle more dreary than usual. These young Italians take themselves too seriously, and their touch is rarely light. They are not quite so Zolaist as their predecessors, but the psychological analysis is still in fashion, and two at least of the cleverest works are among its victims.

"Il Vecchio" of Ugo Ojetti is one of these. The author, a young man, was sent by the *Corriere della Sera* as special correspondent to America during the late war. His letters, since published in book form, showed more than ordinary abilities. He no doubt left a pleasant memory of himself with many Americans, who probably did not suspect what a fund of gloom he had in him to lavish on his first novel. The subject is an old man of sixty-three years (when Sig. Ojetti shall have reached that age himself, he may find that he should have made his *Vecchio* some years older), who, having lost his wife, broods upon his own approaching death until, by indulgence in the one idea, he precipitates the catastrophe he fears. Of course, as the subject is outside of the possible experience of youth, the study is to be taken as a mere *tour de force*. Still, the novel is a remarkable one, and may be accepted especially as a promise of future (let us hope less dismal) good things.

The other victim is "L'Ecca" of Ottorino Novati, also a young man. This book, like the preceding, is, notwithstanding its rivulet of action coursing through broad meadows of verbiage (description and analysis), perfectly readable. Its worst defect is a note of romantic exaggeration that is repeated from beginning to end. With "L'Ecca" one should not fail to read "L'Anello" of Ugo Fleres, which, by an odd fatality, is occupied with the same subject, by no means a common one. In each a man of mediocre abilities, through the death of a friend of unrecognized genius, is left with an opera in his hands. This he gets represented as his own (in neither case quite intentionally), and gains sudden fame and consequent chastisement. Notwithstanding thus much of identity, the two novels are very different one from another, and both can be read with interest.

The besetting difficulty of these psychological novels is, naturally, that the life of the characters gets lost under the accumulated

mass of descriptive touches. You have an encyclopædic knowledge of the personages, but they remain for all that little better than mere abstractions. This is perhaps less the case with the "Anello" than with the other two books, but, even after that, it is refreshing to take up a volume by one of the older and well-known writers, Luigi Capuana, and live for awhile in an atmosphere of clearness and brightness. In the "Nuove 'Paesane,'" a collection of stories of men and women in a small Sicilian town, it is wonderful what vivacity and relief is given to the figures by the light touch and abundant humor of the author. The work of Sig. Capuana has not always been so much to my taste, but such stories as these, and those in a former volume also entitled "Paesane," more than atone for such greivous feats as his two principal novels, "Giacinta" and "La Sfinge."

And at the last moment, since I began writing these lines, has come into my hands "La Bufera" of Edoardo Calandra, a story of Piedmontese life at the end of the eighteenth century, but so fresh, so true, so living that it has nothing of the air of an historical novel. We all know in our weariness those studio models, dressed in the costumes of another age, and posturing in something like what Alice would have called "Anglo-Saxon attitudes." Sig. Calandra's story of this particular sequel of the French Revolution seems recounted by one of the actors. The success is such that I have no hesitation not only in assigning it a place at the head of the year's production, but in ranking it high among contemporary Italian novels.

And while we are engaged with such good things as "La Bufera" and the *novelle* of Sig. Capuana, it is well to mention a story, "Le Tentazioni," by Grasia Deledda, which appeared in the last number for the year of the *Nuove Antologie*. If one may judge from her name, the author would seem to be a Sardinian, and she paints the world in which she lives with an almost classical breadth and simplicity of touch. "Le Tentazioni" is said to be the first of a series of nine stories, all having their scene laid in Sardinia. With the author's pleasant manner of narration and the advantage of a field well-nigh unexplored, it will be strange if the series be not rich in entertainment for us.

The stories of Lieutenant A. Olivieri Sangiacomo bear the martial stamp. Written somewhat *alla buona*, and of an intellectual order that does not exclude the commonplace, they are still very interesting when they are concerned with the soldier's life in the barracks and in the world outside. The soldier is a good fellow, who loves amusement and good cheer, and gets a fair share of both in the face of untoward circumstances; his affairs of the heart are mostly of an irregular order. The Italian officer of to-day is a less noisy if not more exemplary person than his Irish colleague of fifty years ago, and offers perhaps a less brilliant figure for light literature, but he is not bad company, for all that, and his acquaintance is worth making. Some earlier performances of Sig. Sangiacomo show that he does well to stick to the regiment; in the volume of last year, "La Vita nell'Esercito," the chapters devoted to a mere description of soldierly ways and doings are far more interesting than the prepared stories. Hitherto the Lieutenant has given us booklets in size, but he has recently come out with an imposing novel of 569 pages, entitled "Il 101° Fanteria."

The story of the 101st of the Line is the best thing he has yet done.

Angelo Silvio Novaro, already author of several volumes, published last year a new edition of a former tale, 'Il Libro della Pietà,' which in its simplicity seems so like a bit of autobiography that it might well deceive even an old novel-reader into thinking it one. Towards the end, however, little evidences of arrangement reveal it as fiction.

In all these novels, excepting the martial ones of Sangiacomo—where, however, the not infrequent dalliance with Venus is so much a thing by the way, a thing inherent in garrison life, that you pass it over as inevitable and therefore to be borne with—there is a cheering absence of insistence on the relations of the heroine with a man who is not, and never can be, her husband. Hence a variety of themes (there are ten commandments, and only one of them is the seventh) that goes far to lighten the task of the reader. Fancy having to wade through consecutively a score of French novels of a certain period and a certain school! It was much experience of such things that led me, when I found in the preface of 'Gente di Chiesa,' by Carlo Del Balzo, that he warns the reader not to mistake the writer's purpose, which is highly moral, to brace myself to the perusal. Of course I was introduced to a world that needed a good deal of scourging. One cannot say that such a world does not exist—indeed, the component parts of it may all be allowed; it is only, as in *pot-bouille*, upon the combination of them upon one scene that one throws doubt. The book belongs to a series of studies of contemporary manners called 'I Devianti.' Granting the point of view of these studies, the purpose to depict the sheep which have gone astray, the present showing is far from uninteresting. I would gladly say as much for 'La Verginità' of Enrico Corradini, exclusively occupied as it is with infractions of that most abused of commandments, but differing from many of its sort in that the author's purpose is not so much to inculcate a lofty morality as to produce a work of art. The gain in amusement is not perceptible.

S. K.

Correspondence.

"YOU-UNS."

TO THE EDITOR OF THE NATION:

SIR: In your issue of June 8 Miss Earle asks:

"Where do the two expressions come from? 'You-uns,' as I have already said, is heard among people of pure English descent who use many archaic expressions dating back to Shakspeare and the earlier English writers; but has any one ever seen 'you-uns' in early English?"

An example of its literary use, as I have pointed out elsewhere, may be seen in an early English classic, Tyndale's Translation of the New Testament (1526), Matt. III., 9: "And se that *ye ons* thinke not to say in yourselves, We have Abraham to oure father" (Bosworth and Waring).

A lady who lived several years in Lancaster County, Va., tells me that "we-dem" and "you-dem" are very common expressions among the people there, but that the better educated, who affect to be more "proper," say, "we-them" and "you-them."

I am familiar with the language of the people in southeast Virginia, where I was

born and reared, but I never heard in my life "we-uns" and "you-uns" there or in any other part of the State; nor have I ever heard "you-all" used with reference to one person.

EDWARD A. ALLEN.

UNIVERSITY OF MISSOURI, June 12, 1899.

"YOUSE."

TO THE EDITOR OF THE NATION:

SIR: Akin to the use of "you-all" and "you-uns" discussed in your columns is the use in northern New Hampshire, by native New Englanders, of "youse" in the sense of yours. I have observed this more commonly in the country than in the villages, from sturdy, substantial, though not educated, farmers. I have also heard it used in the plural, as "I am glad yous are here."

G.

CHICAGO.

"DONE."

TO THE EDITOR OF THE NATION:

SIR: The interesting correspondence in the *Nation* concerning the use of "you-all" and "you-uns," emboldens me to call attention to the use of another form of the Afro-English tongue, occasionally found in dialect stories. I refer to the word "done." I have sometimes seen the expression, "I's gwine done," meaning "I am going to do," whereas, in real life, I believe, the negro never uses the word "done" except to express completed action. One frequently hears "I's done did it," and "I's done done it," but, during a residence of many years in Louisiana, I have never heard "I's gwine done do it."

Possibly the usage may vary in different localities, but such unfamiliar forms inspire one with the feeling once expressed, in my hearing, by a person who said, "I don't like dialect stories, because I'm always afraid the writer is 'playing it low' on me."

Very respectfully yours,

CLARA BOISE BUSH.

NEW ORLEANS, June 13, 1899.

Notes.

A well-printed volume by William Scott, entitled 'Rock Villages of the Riviera' (London: Adam & Charles Black; New York: Macmillan), is an account of a number of villages in the mountain valleys back of Bordighera. Compared with the French Riviera, the Italian is but scantily represented in literature, and any contribution towards supplying a need is welcome. The obvious criticism to be made on the present book, which is pleasantly written and prettily illustrated with reproductions of sketches by the author, is that, in the great number of similar villages scattered along the Riviera, a wider choice, and more of history than is to be found in the municipal records of expenses, would give far greater value to the work. As the author himself sees how much he has left undone, he may yet publish the result of further researches. Would it be vain to wish that he may furnish for this coast a companion book to Lenthéric's 'Providence Maritime'?

A very elaborate study of 'Local Variations in Wages,' in England, has been made by Mr. F. W. Lawrence, and is published by Longmans, Green & Co. in the series issued by the London School of Economics and Politi-

cal Science. The investigation undertaken was confined to certain parts of England and Wales, and limited to industries in which the time-work system prevails. From the figures procured, however, only the meagrest generalizations are attainable. We find that wages are higher in large towns, where industries are active and diversified, than in small and decaying communities. We see that when a high rate of wages prevails in one trade in a certain town, a high rate prevails in the other trades in that town. We observe that where wages are high, house rents are high; that common laborers' wages vary like those of artisans; that there is much difference between the rate of wages in the east of England and that in the north. These conclusions are not new: Adam Smith stated them a century ago, and his explanations of the phenomena are still satisfactory. Mr. Lawrence's industry is certainly commendable, and the figures that he has collected may be of service to those interested in economic speculations; but, for the practical purposes of the statesman, his labors will hardly be of much value.

Among recent publications relating to international law, the second edition of a valuable official manual issued from the Government Printing-Office should not be overlooked. It is described as a Manual "based upon lectures delivered at the Naval War College by Freeman Snow," and is "prepared and arranged for publication, by the direction of the Navy Department," by Commander C. H. Stockton. A course of lectures by Dr. Snow had been arranged for and partly delivered in 1894, but was brought to an end by the unexpected death of the lecturer before the termination of the course. With the aid of the manuscript and notes left by Dr. Snow, Commander Stockton prepared the present manual, the first edition of which was rapidly exhausted. It is arranged by subjects, the original divisions by lectures having been abandoned. The three parts come under the familiar heads of Peace, War, Belligerency and Neutrality. The book is designed mainly as a hand-book for naval officers in the discharge of their duties, and for this purpose is extremely well adapted. It also contains so much discussion as is necessary of the general principles of international law. It is a standard work, of the highest authority, and a model of compactness.

Since the decision by the Supreme Court at Washington of the railroad "anti-trust" cases, the commerce clause of the Federal Constitution has attracted more and more the attention of legal writers. It has been made the subject of an elaborate treatise by E. Parmelee Prentice and John G. Egan (Chicago: Callaghan & Co.), in which the recent decisions are carefully reviewed. If the authors have not been enabled to reach any satisfactory conclusions as to the principles of law formulated by our highest tribunal, the fault must not be laid at their door. They say—and we have said the same thing ourselves—that "if the statement of the doctrine given by the courts be accepted literally, and every contract which in any degree restricts interstate commerce be illegal, it would seem that the formation of partnerships or corporations would be forbidden"; and they add, "As a practical matter no such application of the statute is possible."

The authorship of the 'Text-book of Anatomy by American Authors' (Lea Brothers

& Co.) represents the anatomical departments of six medical colleges. The bones and veins are treated by Woolsey (Cornell); the nerves, eye, nose, and skin by Keiller (Texas); embryology by McMurrich (Michigan); the arteries by Bevan (Rush, affiliated with the University of Chicago); the reproductive organs by Stewart (University and Bellevue); while Gerrish (Medical School of Maine) has edited the whole and contributed the remaining articles, viz., elementary tissues, muscles, heart, lymphatics, central nervous system, tongue, organs of digestion and respiration, urinary system, ductless glands, regional anatomy and practical anatomy; likewise, a twenty-page "Introduction," which, in substance and style, merits independent publication. The book is not so much for the investigator as for the student and practitioner; they will find what they want stated clearly and accurately, and illuminated by figures unusual in number and quality, many of them colored. The nomenclature is remarkably consistent, and exemplifies the current tendency towards simplification. In short, the veteran anatomists who hailed the first edition of "Gray" as students forty years ago, can best appreciate the welcome their pupils of to-day will give to "Gerrish."

The fourth volume of the 'Geschiedenis van het Nederlandsche Volk' (History of the Netherlands People), by Prof. P. J. Blok of Leyden, from the press of J. B. Wolters of Groningen, is to hand. As an English translation is in progress, we need make no further mention of the Dutch text, except to state that the years covered in this volume are those of the Great Truce, between the Netherlands and Spain, from 1609 to 1619, and also the time of Prince Frederick Henry, closing with the Peace of Münster and the end of the Eighty Years' War in 1648. Besides text and notes, are the usual excellent map, index, and appended chapter on the sources of Dutch history. The time of the Great Truce is one worthy of the examination of the student of the Pilgrim Fathers of New England and of all students of federal government. The cool and luminous treatment by Prof. Blok of the duel between Maurice and Barneveldt, and the real questions at issue between the Remonstrants and Contra-Remonstrants, contrasts strongly with the heat and partisanship of Motley. The time of Prince Henry was that of "our golden lion," as the Dutch say. Besides other interesting features, we have much light thrown on the beginnings of Dutch enterprise in the Far East and the later expansion of Holland's commerce. Prof. Blok does not forget to notice the energy and goodness of the women of the House of Orange, especially of Amalia von Solms, whose memorial to her husband is that House in the Woods in which, to-day, representatives of many nations are meeting in the spirit of that stadholder, Frederick Henry, whose ambitions were almost wholly peaceful.

The Association of Collegiate Alumni proposes to secure annual subscriptions from its members and friends to the amount of \$5,000, which sum is to be devoted to the "systematic collection and serviceable arrangement" of various kinds of information in regard to educational matters, especially such as bear upon the immediate interests of college women. Among the ways in which it is designed to use this fund are the preparation of lists of fellowships and scholarships open to women, a continuation of the

study of the health of woman college graduates, the keeping up to date of the bibliography of the higher education of woman already published, and others which naturally group themselves about these. There are two topics which, it would seem, should be of special interest in this connection: the scientific and literary work actually accomplished by the college graduate, and the disappointing character of the remuneration received by her as a teacher.

Much space is well and deservedly devoted, in the *Harvard Graduates' Magazine* for June, to President Eliot, on occasion of the thirtieth anniversary of his incumbency—the longest but one in the history of the University. It appears, from a reprinted article by the late Judge Richardson, that Mr. Eliot, while still teaching at Harvard, was tempted with an offer to become superintendent of the mills of the Merrimack Manufacturing Co. He wisely declined, in favor, as fate would have it, of a chance to preside over what Lowell called "the Muses' factories" of his alma mater. Next in interest is the sketch of the life of the late Edward Austin, one of Harvard's most liberal recent benefactors, though himself not a graduate nor a college man. Mr. Austin's portrait accompanies the account of him. Noticeable is the scheme for retiring and pensioning instructors to go into effect on September 1; and so is the action of the Board of Overseers recommending that history be not dropped as one of the requirements for admission. The present month witnesses the publication of the first number of the *Radcliffe Magazine*, founded primarily "to publish the best written work" of actual and former students, so far as discoverable. It will be a quarterly.

In the *American Journal of Archaeology* for November-December, 1898, one observes in the report of Prof. Clement L. Smith, Director of the American School in Rome, how the world moves. The women were an obstacle to obtaining permits to the Vatican and Lateran museums for the students of the School, but the hesitation of the pontifical authorities was overcome "through the good offices of Monsignor O'Connell, Rector of the American College." However, the women, by exception, were at first cut off from the Galleria Lapidaria on certain days when it regularly becomes a thoroughfare to the Borgia rooms; but this restriction quickly disappeared. The Germans first tested the question of the admissibility of women to the Vatican Library for the collating of manuscripts, a settlement being reached by placing these students in a large and less convenient ante-room.

Close upon the appearance of the Proceedings of the American Antiquarian Society at Worcester in October, 1898, in which Dr. Edward Everett Hale reports upon the approaching publication of the late Dr. J. Hammond Trumbull's dictionaries of the language of the Massachusetts Indians, comes a re-issue of Montague Chamberlain's 'Maliseet Vocabulary' (Cambridge, Mass.: Harvard Co-operative Society), with an introduction by Prof. Ganong of Smith College. The Maliseets, to be sure, were not strictly a Massachusetts tribe even in the larger sense that embraced Maine; but they were akin to Passamaquoddies, Penobscots, and Kennebecs. From the Micmacs to the east of their habitat, the St. John River valley, they were separated by linguistic differences, and in fact owe to them their derisive name of Maliseets (Stammerers, Broken-Speech). This

name includes a liquid *l* which, with *r*, is unused by them, though they have sometimes been called also Marasheetas. They still exist and are slightly increasing in numbers, but mixture with the Acadians has destroyed their purity of blood. Mr. Chamberlain's vocabulary, one of three extant, is very interesting, especially for the section of place names, and that of words adopted from contact with the whites. As, in Revolutionary days, Americans were in France called Bostonians, so the Maliseets made Pas-tan'-ki, United States, Pas-ta'-ni, an American, from Pas'-tan, Boston.

In the article "Les Paysans aux Salons de 1899" in the *Revue des Deux Mondes* for May 15, M. de La Sizeranne, after speaking discriminatingly of the peasants of Millet, Jules Breton, and Lhermitte, indulges in a digression to show that the peasant is a fit subject for the painter's brush rather than the novelist's pen. The best French writers have either lent to their peasants traits of sentimental idealism, or represented them under the aspect of a grotesque and vulgar realism. Not so those artists of the brush who have devoted themselves to the study of rural life. Love of woman is the *leitmotif* of the French novel, but the French peasant's great passion is the "passion of the soil"; the novel thrives on adventure, while no life is more monotonous than the peasant's, partaking as it does of the immovability, the unchangeableness of the picture. The novelist, to convince us of the charms of his shepherdess, makes her speak in "fine grammatical phrases with plenty of subjunctives, while the painter needs but a ray of sunshine." In short, it is the limitation of the two arts of poetry and painting which, in the case of peasant life, favors the pictorial artist: "The poet's means of expression is a succession of images, the painter's, their simultaneousness." These words, quoted from Delacroix, are really to be traced to Lessing, and we doubt not that the author of the Essay on the Laocöon would gladly have admitted M. de La Sizeranne's remarks among his own illustrations of that thesis.

The discontinuance of the Woman's Medical College in this city marks an important moment in the progress of civilization. In 1847 the first woman, Dr. Elizabeth Blackwell, was admitted to a medical school; in 1857 she, with her sister, Emily, and Dr. Zackrzewska, a young Polish lady, whose talent as a teacher of midwifery in Berlin had led to her coming to this country to study medicine, opened a medical school for women; that is, they rented a house, No. 64 Bleeker Street, and fitted it up as a hospital "where both patients and young assistant physicians could be received." Less than fifty years later the opposition to women studying medicine in the same colleges with men has been so completely overcome, and the Johns Hopkins Medical School and that of Cornell offer such admirable instruction, that there is no longer occasion to provide separate opportunities for women. So hard a struggle as this was in the beginning has seldom met with such rapid and such complete success.

A notable publication of the Boston Public Library is 'A Selected Bibliography of the Anthropology and Ethnology of Europe,' by Prof. William Z. Ripley, whose 'Races of Europe' is the consummation of researches leading up to the Bibliography. The list is broader than its title implies, for Western Asia and Northern Africa have been in-

cluded, along with the Finns and Mongols of the Russian Empire; and while it reveals the richness of the Boston Library in this literature, it is not confined to that collection. The arrangement is by authors, and under each his works are displayed chronologically, with obvious convenience of reference and of criterion. Prof. Ripley's index is partly analytic, and gives such help as, under Greece, against the several authors' names, the leading topic—anthropology, color, crania, language, archaeology, Pelasgians, Tyrrhenians.

Attention should be drawn to the topographic maps of New York and New England which the United States Geological Survey at Washington places within everybody's reach. Upwards of 70 of New York and 134 of New England (the three Southern States complete) have been issued, each an atlas-sheet 16½x20 inches, covering one-sixteenth of a "square degree," or about 220 square miles, and designated from the principal town or other features. The hill features are shown by contour lines. The cost per sheet is five cents, or (in quantity of 100 or upwards) two cents. A revised map of New York and vicinity is also ready, costing fifty cents. The price should be sent to the Director in exact cash or by postal order. A map index to the completed sheets will be furnished on application.

—Mr. Augustus Peabody Loring of the Boston bar is the author of a 'Trustee's Handbook,' published in convenient form by Little, Brown & Co., Boston. In two hundred pages he has stated, simply and concisely, the rules which govern the management of trust estates, and the relationship existing between the trustee and beneficiary. The arrangement of the book is somewhat peculiar, Part I. being devoted to "The Trustee as an Individual," and Part II. to "The Individual as Trustee," Part III. to "The Beneficiary," and Part IV. to "Interstate Law"; but wherever we have examined it, we have found it full of valuable and condensed information, such as a trustee needs to have within easy reach. Trusts are and always have been one of the most difficult branches of the law, and there is no sign of their becoming simpler as time goes on. Yet, curiously enough, the compensation of trustees seems to be gradually becoming smaller and smaller, partly through statutory rules and partly through the competition of corporations, such as trust companies, which can afford to discharge the duties of trusts at a much lower rate than individuals can. Perhaps in time we shall find out that the best rule for family trusts is the old English one—that trustees should be paid nothing at all. The effect of this is that family trusts are taken care of by the immediate relatives or the beneficiary for love and affection, and that only attorneys, men of business, agents, and brokers are paid fees and commissions. The great advantage of this system, where it is practicable, is that unnecessary expenses are saved, and our practice of screwing down trustees to the lowest market rate avoided. Trustees who take charge of a trust from some disinterested motive are usually far better than trustees who undertake it at the lowest living wage.

—The dawn of the sociological era in Christian missions has been welcomed by many who are not friends of the propaganda of the Christian (or, indeed, of any) faith in its merely dogmatic form. Probably the

most important literary monument in proof of this change of trend, both in the propagandists and in the active supporters of them, is seen in Dr. James S. Dennis's book, 'Christian Missions and Social Progress,' of which the second volume is now out (Fleming H. Revell Co.). With the usual reinforcement and illumination of the text by abundant reproduction of photographs, the proofs of social improvements under alien assistance and industrial stimulus seem very real. Another volume is to deal with statistics of every sort. Dr. Dennis treats in volume II. of that which is the first task of missions—the creation of a new type of personal character, and the inspiration of the individual for the benefit of the mass, as the true genesis of the social conscience. He shows also the work of Christian missionaries in the making of a new public opinion, the promotion of education and the intellectual life of non-Christian races, and in awakening not only the philanthropic spirit, but new national aspirations and higher conceptions of government. He treats of temperance reform, deliverance from the opium habit and other forms of slavery to drugs, and with such themes as gambling, personal purity, self-mutilation, the arrest of pessimistic and suicidal tendencies, and the cultivation of habits of industry and frugality. He deals strongly and clearly with reforms affecting family life, the abolition of slavery, cannibalism, human sacrifices, ordeals, foot-binding, and the mitigation of the brutalities of war. A careful examination of this volume reveals few if any signs of haste, while the method, arrangement, and abundant notes and references keep it fully up to the standard set in the first. Yet, even with the prospectus of the third volume before us, there is one important omission. From observation in the mission field and after long reflection, we are persuaded that one of the very best of the good things which Christian missions can and ought to do is to stimulate the native or ethnic religions—often intellectually stagnant or indurated in priestcraft—to philanthropic activity. In Turkey, Japan, and India this has been done, in calling for deeper intellectual apprehension and clearer statement, with purging and rejection of hurtful or offensive features, and the creation or development of active charity and benevolence. These excellent fruits are visible, and are worthy of treatment in a work devoted to social progress through the improvement of men's nobler powers. Unless all signs fail, the old religions must work with the newer one in the bettering of the world; while traditional Christianity, overlaid with European and mediæval accretions, must itself revert wholesomely to the standard set by the Founder.

—'Odysseus als Afrikaumsegler und Amerikaentdecker' (Leipzig: Kock) a seventy-page pamphlet with plates and map, is a recent addition to the literature of the Homeric poems. The author, who writes under the name of "Eumaios der göttliche Bauhirt und exacte Altertumsforscher," complains that the accepted idea of the wisdom and resourcefulness of Ulysses precludes the possibility of thinking that that hero wandered for ten years in a sea so small as the Mediterranean. He accordingly strikes out a new course, which takes the much-wandering man through the straits of Gibraltar and thence along Africa to the Lotus-eaters in Gambia,

to the Cyclopes, whose dwelling-place he puts by the Bight of Biafra, to the Laestrygonians in Patagonia, "where some inventive Yankee may yet raise his sunken fleet." The Isle of Circe he identifies with the Cape of Good Hope. Hence, along Trinacria, which must be Madagascar, to the land of the Phæacians, which is no other than Aden, through the Red Sea, he makes his way home to Ithaca, which lies in Sicily. Each place the author identifies by a comparison of Homer's description and that of some modern writer, usually Ratzel or Darwin. His etymologies of place-names in support of his theory are not unlike some others that are met with in soberer works of learning. The travesty upon the methods of certain scholarly investigators is evident, and falls in with other examples of theoretical works on Homer. Some, as we know, have found in the poems an allegory of the fall of Jericho, while others have made Homer identical with Solomon simply by reading the letters OMHPOI from right to left. Even the carved sarcophagus of Homer was found about 1770 in the island Ios and carried to St. Petersburg. Le Chevalier is at once called to mind by this work of "Eumaios." In 1829 this French scholar, under the name Constantine Kollades, brought out his 'Ulysses-Homer,' in which he identified the localities of the poems, and argued that Ulysses and Homer were one and the same, the husband of Penelope. It also proposed the erection of a monument at Ithaca, with the inscription, ΟΔΥΣΣΕΥΣ. ΟΜ. ΗΡΟΞ, to be interpreted as "Odysseus, Hero and likewise Poet." This book created great excitement among scholars at the time, and was vigorously refuted by Latronne in the *Journal des Savants*, evidently so much to the author's gratification that he at once, in 1832, published a supplement, which Latronne again attempted to refute. So one Kephala, pretending to be a sailor, published in Constantinople about 1830 a book of more than 200 pages, aiming to show that Homer's fatherland was Ithaca. Samuel Butler's argument (London, 1897) that Nausicaa was the author of the 'Odyssey' might also be mentioned. As "Eumaios" well says: "There is a point in the investigation of the past where theories become merely a question of taste."

—The *Frankfurter-Zeitung* recently published some interesting facts regarding the extent to which the anti-German tendencies prevailing in dominant political circles are working to the serious detriment of the Austrian universities. There had been all along an exchange and interchange of teaching-faculty between the German faculties of these universities and those of Germany, but ever since the ministry of Count Taaffe the Austrian authorities have frowned on this custom, and have tried to keep German professors out of Austria. Thus, when the Vienna faculty lately proposed the names of three Germans as candidates for the professorship of German law, after the only really worthy representative of this department to be found in all Austria had declined, the Minister of Education rejected all three, and, without further consultation with the faculty, appointed to this position the Roman Catholic Baron Schwind of Innsbruck, generally regarded as unworthy of a chair in the university of the capital of the Empire, but who is the special favorite of the clerical Leo Society. Some years ago the authorities began to withhold a certain amount of the lecture fees from the professors, in order to use the fund thus collected as a means of

securing the services of specially brilliant men from Germany, but the Finance Minister now emphatically vetoes the use of the money for such a purpose, and the University is accordingly impotent. On the other hand, the Government is exerting a pressure on the Germans already in the Austrian faculties and showing its willingness to have them go. Not long ago the famous philologist Marx received a call to the University of Leipzig, and, in accordance with an old academic custom, desired to lay this invitation before the Minister for final decision. The latter, however, flatly refused to receive him in this matter, and as the Saxon Minister had in person gone to Vienna to see Prof. Marx, the latter at once decided to go to Leipzig. Shortly afterwards the professor of Roman law in Vienna, Dr. Mittels, also received a call to Leipzig, and, having learned wisdom by the experience of his colleague, at once, and without consulting the Austrian authorities, accepted. The Germans, on the other hand, have not been slow to see which way the wind is blowing in the university government of Austria, and, if called, simply refuse to accept. In this way Prof. Crusius of Heidelberg promptly declined the call to the chair made vacant by the departure of Prof. Marx. The *Beilage* of the *Allgemeine Zeitung* of Munich, while giving a slightly but not materially different report of the Mittels affair, draws attention to a number of other cases in which Germans in Austrian university faculties have been practically driven from their positions.

—In the Shakesperian progress at Smith College the "senior dramatics" last week embraced "A Winter's Tale," for the first time. The merits and the shortcomings of the performance did not differ materially from those observable in former years, and to some extent inseparable from the work of amateurs. As usual, the female parts were better done than the male, and those of *Hermione* and *Perdita* are so lovely in themselves that, when adequately presented, as they were with slight exception in this case, they atoned for all deficiencies, and made the total impression most pleasurable. It was once more demonstrated that native breeding and refinement such as we expect to find in women's colleges, may challenge comparison on the stage with the art of professional actors. This was manifest especially in the scene of *Hermione's* yielding to the order for her arrest and sequestration, with its pathetic tableaux. Bodily grace and charm, again, had their customary triumph in the pastoral drama of which *Perdita* was the delightful central figure. Comedy took second place with a clever *Antiochus*, and this too we are used to look for. It would be idle to weigh this representation against the "Much Ado About Nothing" of last year, or "The Merchant of Venice," or "A Midsummer Night's Dream." There will, we trust, be repetitions hereafter (as the list of available plays comes to an end), before the tradition of past successes fades, and while it is possible to improve upon the memory of them. It is enough, with each new effort, to answer affirmatively and emphatically the question, Was it worth while?—as they must who witnessed the latest "senior dramatics."

RECENT ENGLISH POETRY.

A sad doom of incompleteness and insufficiency appears to haunt the English

poets of to-day. It has left nothing of Oscar Wilde's early promise but a hideous jail scene, it has turned Thomas Hardy's cheery Wessex life into a gloomy hymn, and it has perhaps reached its culmination in Watson's "Collected Poems" (Lane). This book is, unlike that called "Poems" (Macmillan, 1893), a deliberately collected reprint of what the author wishes to keep before the public. He has excluded, wisely enough, the whole of the "Prince's Quest" and "The Eloping Angels," and most of his "Epigrams"; and has included most of the contents of his later volumes except the "Year of Shame," here represented, strangely, by what he calls "a small selection"—namely, nine poems, and these by no means the strongest, out of the original twenty-six. He also gives but about half of the "Sonnets" published in 1885 under the title of "Ver Tenebrosum," and of these he says guardedly "that they need not be taken as in each case accurately reflecting his present opinions upon events of that year, but are retained for the sake of such purely literary interest for certain of his readers." It is needless, after this, for him to add that he "can lay claim to no obstinate consistency of view" (p. viii). His readers will require no further evidence of this disavowal. If any English poet since Southey has more distinctly struck the flag of early independence it is Mr. William Watson; and when we consider the ordinary mediocrity of his verse, and that his temporary attitude of political protest was all on which his prestige really rested, there seems no reason why he should not take rank henceforth by the side of Mr. Alfred Austin, and even succeed him in office.

This short "Prelude" perhaps writes his epitaph better than any one else could have phrased it (p. 55):

The mighty poets from their flowing store
Dispense like casual alms the careless ore;
Through throngs of men their lonely way they go,
Let fall their costly thoughts, nor seem to know.—
Not mine the rich and showering hand, that strews
The facile largess of a stilted Muse.
A fitful presence, seldom tarrying long,
Capriciously she touches me to song—
Then leaves me to lament her flight in vain,
And wonder will she ever come again.

The volume is fitly enough dedicated to Lord Rosebery, who among English statesmen comes nearest to what Mr. Watson has at last proved himself to be in literature, a voice without a hand.

The book attributed to Oscar Wilde, as already mentioned, "The Ballad of Reading Gaol," by C.3.3. (Tucker), is so essentially powerful that it bids fair to secure a distressing immortality. Next to it, or beyond it, in haunting and tragic painfulness is "Saint Sebastian," in Mr. Thomas Hardy's "Wessex Poems, and Other Verses" (Harper's). The poem addressed to a lady offended by the writings of the author (p. 161) will have a special interest for his admirers as showing him not unconscious of criticism. Nothing weak could ever come from Mr. Hardy, but it is needless to say that the book needs a glossary for such words as *barton*, *church-kay*, *coll*, *covecase*, *knap*, *lumped*, *lynchets*, *tallet*, *tardle*, *thirtover*, and the like. The rough drawings will have fascination for many, and the closing poem may possibly let us farther into the author's heart than anything else in the book:

I look into my glass,
And view my wasting skin,
And say, "Would God it came to pass
My heart had shrunk as this!"

For then, I, undistressed
By hearts grown cold to me,
Could lonely wait my endless rest
With equanimity.

But Time, to make me grieve,
Part steals, lets part abide;
And shakes this fragile frame at eve
With throbbings of noontide.

Few bibliographers have ever demonstrated so thoroughly that a preface may be better than a book, as this has been done by Mr. Richard Garnett (lately of the British Museum) in the case of Shelley's juvenile volume, "Original Poetry by Victor and Cazire." This book, first published in 1810, was vainly looked for during thirty-eight years until brought to light by Mr. John Lane, who possesses the only known copy of the original and now issues a reprint of it. The poems by "Cazire" were probably by Elizabeth Shelley. The verses at the worst are better than those to be found in Shelley's early novels. The poems addressed to Harriet Grove certainly confirm the impression that he really loved her—a fact which has been doubted by some biographers. "The Irishman's Song" shows that Shelley's liberal opinions set in early; and the editor's summing up may on the whole be considered reasonable, as follows: "It [the volume] is therefore of considerable interest apart from the romantic history which constitutes its chief claim to celebrity, and the rarity which gives it a unique place among Shelley's extant writings. Fervently as we hoped that a copy might one day be found, we must now hope with equal fervor that no one will ever find another." (P. 25.)

In any group of new English poetry one naturally turns first to any volume bearing the name of William B. Yeats, and the only disappointment in "The Wind Among the Reeds" (Lane) is, first, that it is a very small book, secondly, that some of the poems have been previously printed, and thirdly, that nearly half of it is in prose notes. Yet these last, it must be said, are so fascinating and so impregnated with Celtic visions that it is really hard to tell where the verse ends and the prose begins. Irish tradition is full of the spirits of the air, who journey in winds which set the leaves whirling on the road and make the country people bless themselves. The very mention of these will recall the author's previously published poems, "The Host of the Air" and "The Dream of O'Driscoll" beside the drear Hart Lake; but he tells his prose legends also so much like a poet, and so little like a folk-lorist, that one hardly misses the rhyme; while in his verses the lovers woo so romantically that, while they wish for the cloths of heaven to place beneath the feet of their darlings, they are ready to substitute their own dreams—and their dreams are just as good (p. 60).

AEDH WISHES FOR THE CLOTHS OF HEAVEN.

Had I the heavens' embroidered cloths,
Enwrought with golden and silver light,
The blue and the dim and the dark cloths
Of night and light and the half light,
I would spread the cloths under your feet;
But I, being poor, have only my dreams;
I have spread my dreams under your feet;
Tread softly because you tread on my dreams.

The "Poems" of A. Bernard Miall are not unfamiliar to the readers of the *Pall Mall Gazette*, and once at least the author has shown vivid descriptive power, and reproduces, perhaps for the first time in literature, one of the most marked and peculiar sounds to be heard through the heat of summer (p. 124):

THE CIRCULAR SAW.

Because the high, long, dreary London wall
Vexed us, when we came to the open gate
Idly we turned aside, and suddenly stopped,

With eyes enchanted, with voices ready to call
One to the other for wonder: "Wait, O wait!"
Deep in a covered alley the hot sun dropped,
Slant, fierce, and mellow, between high stacks
Of yellow timber sweet: an alley where
Brown-muscled men bore upon balks of pine,
Urging them on to the saw, where they severed
like wax.

With a rising muffled scream, a triumphant blare,
Thrilling the throat and the bosom; and rich as a
wise

The scent of the spouting sawdust invaded the
place,

The soul of the magical forest, resinous, sweet,
Subtly invaded the desolate, sordid street.
But O, the wonder! for all the overshadowed space
Was thick with the floating dust, a haze there
grew,

A haze green-golden, full of the fire of the sun;
From a fountain of creamy fire that o'erbrimmed
it with gold

It gushed, in a lift of eddies, so shot through
With the further gloom that shadow and light in
one,

Like the ghost of a glorious opal famous of old,
Like the depths of a flickering ocean of sombre
green.

Curled and eddied, melted and licked and lapped,
Enwrapping the phantom workers, their faces
bright

In the liquid light so marvellously entrapped,
In the odorless whirling water imprisoned between
The resinous piles, a hive of fantastic light,
Dancing within itself and over the ground,
While ever the screaming, rending, blaring saw
spun round.

"The Silence of Love," by Edmond Holmes
(Lane), is the perhaps inappropriate title
of a volume containing fifty sonnets on the
subject indicated. They are in the Shaksperian
form, to which the later English son-
netters seem reverting, since Rossetti left
us—a tendency which we regret, especially
where they are, as here, to be grouped in
large numbers within a single volume. In
this collection however, there is much deep
feeling and some fine analysis of emotion, as
in the following (iv.):

"I may not love thee." "May not!" but I do:
This is my title to the crown of love,—
A title which each heart-beat doth renew,—
A title ancient as the stars above.
"I may not love thee." "May not!" but I must:
When Nature's mightiest forces are at play,
The ship, o'er-mastered by the whirling gust,
Forgets its course and wanders far astray.
"I may not love thee." "May not!" but I will:
My soul leaves thine and glories in love's name—
Itself its arbiter of good and ill—
Itself the well-spring of its ardent flame.
I may not love thee, my Beloved! but still
Love thee I do, I must, I ever will.

The sententious and serious mood of Mr.
F. B. Money-Coutts shows itself anew in
"The Alhambra, and Other Poems" (Lane),
but the want of the fluid and lyrical element
continues to make itself felt. The nearest
approach to this musical abandonment is to
be found in the closing verses, in which the
final words of Goethe's "Faust" are once
more interpreted (p. 76):

Follow the Woman Spirit! Onward and onward
soar,
Far from the chasing Demons! Hark to their baff-
led roar!
Follow the Woman Spirit, through the noxious
night,
Follow her, like the swallow, seeking for love and
light!

Let not the World entice thee! Push all its hands
aside!
Let this alone suffice thee; follow thy destined
bride!
There is none other guidance, there is none other
goal;
Follow her still-receding, heavenly-leading Soul!

Foulness and Folly pursue thee; fiercer than ei-
ther, Fame!
Envy, Hatred, and Malice—this is thy triple
name!
Flee, flee away for ever. Thorough the noxious
night,
Follow the Woman Spirit, seeking for Love and
Light!

The tendency of young English poets, as
of novelists, to put their work into a dra-
matic form is doubtless mainly due to the
vastly greater profit of the stage. As Mr.
Caine can easily set aside all literary cri-
ticisms upon "The Christian" in view of the

flattering returns of the box-office, so Mr.
John Davidson needs to care little for
other opinions on his "Godfrida" (Lane) pro-
vided he can bring down the house by such
a climax as this (p. 121):

Steward. Not in this region was my conqueror born.

[*He drives LAMBERT towards the window.*]

Lambert. Now! For Godfrida! Now! Help me, my
heart!

[*He is driven over the window mortally wounded, the
word "heart" being prolonged into a despairing shriek.*
Steward crosses quickly to the right and listens intently.
*GODFRIDA looks fearfully over the window, and then
runs to STWARD.*]

Mr. Davidson states in a prologue that
his primary object in writing this play was
"to give delight"; but his success in this
direction seems doubtful.

A far more interesting transfer of poetic
energies in the direction of the drama is to
be found in "Pan and the Young Shepherd,"
by Maurice Hewlett (Lane). Mr. Hewlett was
previously known as a pleasing semi-pastoral
poet, with a touch of George Darley about
him; we now have him transposed into a
writer of poetic drama with all the names
Greek or Latin, half the characters creatures
of the air and the other half of the raciest
mould of modern English peasant. How he
justified the combination to his conscience is
his affair, and if he is a conscious and de-
liberate imitator of Mr. Hardy, it detracts
from his merit; but certainly no one except
Hardy has given such a Shaksperian flavor to
his rustics. Here, for instance, is the auto-
biography of Geron, sheep-farmer of eighty,
laying down the rules of life to his grand-
son (p. 3):

"See here: I've made my own beer since I
could drink it; paid the size; size o' bread and
ale; multure o' mill; heartstead on the
Stinted Ground—that's solid, boy! That's
the free Commoner of Champney Valtort;
that's the respected man. Eight times Reeve;
Pinder for life! Churchwarden, moreover,
with a clear mind till the parson ups and
bids me turn to God. Turn to God! says I,
'tis for Him to turn to me, as the Testament
doth prove; and I never went near his church
from Hocktide unto Candlemas. That learned
him, likely; and no judgment yet for all my
eighty years. No, no, cleave to the sheep, boy,
and the sheep will cleave to you. . . .
And when your day comes, as come mine
must, take to your bed, boy, and face the
wall like a stolid Christian man."

The point where Mr. Hewlett goes beyond
Mr. Hardy is in painting the cowerdness of
corresponding vigor, Merla, who thus draws
her own portrait when in love (p. 50):

"I love him, shadow him, think day and
night upon him. Do I do a wrong, Mistress
Balkis, in speaking of this? I am lusty as
a steer; I could carry him up the fell on my
back; I have forty gold sovereigns in my
mother's broken tea-pot; I look better when
I'm drest for church; I can kill a pig; I
would lay down my life for him! Oh, oh,
oh! Speak to me for Heaven's pity."

It is a satisfaction that, after losing the
lover, she marries the god Pan and gets the
upper hand of him. "Merla doth not square
her jaw for nothing," as another admirer
says. A good Hardy passage is the remark
of one of the rustics caught out late at night:
"Sir, I stand avouched for a common narum-
scarum, overstreuous for years and station.
Yet the errand was good; 'fore the Lord, it
was honestly begun" (p. 121). Had this ap-
peared in America, the scene of the remark
might be suspected of being laid at Albany.

Alma Strettell, dear to many through her
previous book of translations, "The Bard
of the Dimbovitza," has brought a new Bel-
gian poet within English reach in "Poems by
Emile Verhaeren" (Lane). The earlier verses

are too sombre and pessimistic, perhaps, for
enjoyment, but they gradually rise into
strains of exquisite refinement and spiritual
beauty, reaching a climax in the closing
poem (p. 33):

SHE OF THE GARDEN.

In such a spot, with radiant flowers for halo,
I saw the Guardian Angel sit her down;
Vine-branches fashioned a green shrine about her,
And sun-flowers rose behind her like a crown.

Her fingers, their white slenderness encircled
With humble, fragile rings of coral round.
Held, ranged in couples, sprays of faithful roses
Sealed with a clasp, with threads of woollen
bound.

A shimmering air the golden calm was weaving.
All fligree'd with dawn, that like a braid
Surmounted her pure brow, which still was hidden
Half in the shade.

Woven of linen were her veil and sandals,
But, twined 'mid boughs of foliage, on their hem
The theologic Virtues Three were painted;
Hearts set about with gold encompassed them.

Her silken hair, slow rippling, from her shoulder,
Down to the mosses of the sward did reach;
The childhood of her eyes disclosed a silence
More sweet than speech.

My arms outstretched, and all my soul upstraining,
Then did I rise,
With haggard yearning, towards the soul suspended
There in her eyes.

Those eyes, they shone so vivid with remembrance
That they confessed days lived alike with me:
Oh, in the grave inviolate can it change, then,
The Long Ago, and live in the To Be?

Sure, she was one who, being dead, yet brought me,
Miraculous, a strength that comforteth,
And the Viatum of her survival
Guiding me from the further side of Death.

Another book of extremely interesting
translations is "Legends of the Saints," by the
Rev. G. R. Woodward of S. Barnabas Pimlico
(London: Kegan Paul). These are all trans-
lated from German sources generally unfam-
iliar, though one is from the "Knaben
Wunderhorn" and one from Chamisso. Most
of them are quaint, some fresh and sweet,
none being more so than the following, by
Helmine Von Chezy (p. 48):

JESUS AND THE MOSS.

Deep in the hollow of a wood
A moss-bed, green and spongy, stood,
Like velvet-carpet soft:
To outward view, though scant and slight,
This nook contained a seemly sight
Of leaves and boughs aloft.

To greenwood tree and rose o'erhead
The moss looked up and whispered,
"Such bloom God gave me ne'er:
But trodden under foot of men
No worship my poor shrine doth ken,
Mankind love light and glare."

But lo! there came that eventide
Christ, roaming through the forest wide,
With visage pale and wan:
Though footsore he would further go,
'Twas ease to feel the moss below
His feet, the Son of Man.

Come o'er the plain in heat and thirst,
In sand and sun, 'twas here that first
The moss 'gan cool His feet.
Then spake the Lord, "My Father's hand
Such love in thee hath surely planned,
And made thee soft and sweet.

"What eye so blind as not to see
E'en here in this thy low degree
God's power and grace and care?
Thou comely herb, if set at naught,
Of thee too thy Creator thought;
Thy lot serenely bear."

Jesus had scarcely spoken so
When from the moss began to grow
A rose, of wondrous hue:
Moss-rose 'twas called in little time,
It bloometh now in every clime,
Of meekness emblem true.

We have kept for the last the "Poems"
translated by A. M. von Blomberg into Eng-
lish from the Italian of Ada Negri (Boston:
Copeland), because in them alone, of all
these, we have genuine poetry of the people.
It does not appear whether the translation
itself is made in England or America, but we
should be glad to think it a home product.
It is as if we had Browning's Pippa singing

her own song. Here is a girl who has never beheld the sea, the mountains, the lakes; who has never until lately spent even two days in the city; who walks daily in her wooden shoes to teach spelling to seventy or eighty noisy children; and yet who in her poems touches the human heart at every step, who sings her very love songs as "One of the People," and who sums up the silent drama enacted in a thousand mills, the world over, in this poem, "The Working Mother" (p. 56):

Among the shrieking wheels of the great mill
Where, 'mid the din that shaketh the wide hall,
A thousand women all
Their vigour spend, she too is working still.

For many a lustre, since she was a child,
She has been here.—Deftly her nervous hands
Guide thread and spool. She stands
And does not heed the noise, the tumult wild

That rages all around. But sometimes now
She is so tired and weary, oh, so tired!
And yet, as if inspired,
Raising her head, she smoothes her careworn brow.

She seems to say: "On, ever onward still!"—
Oh, misery, if one day her strength should fall,
If she began to all
And could no more return her place to fill!

She must not and she cannot.—For her joy,
Her one ambition, her one son, behind
Whose brow she has divined
The lofty flight of genius—he, her boy,

Is studying.—She will, at any price.
For his necessities toll on all day,
Waste drop by drop away,
Offer herself a living sacrifice.

As once her youth, her old age too, God knows,
Trembling and frosty, she will give, her health
That was her only wealth—
Oh, saintly worker!—sweetness of repose,

All she will give. Her son shall study.—Grand
The future time shall see him, world renowned
And feared, his dark head crowned
With gold and laurel wreaths at fortune's hand!

Son of the people, study, silent sit
In the low but that in the shadow lies,
Thou in whose ardent eyes
The mystic words of genius high are writ,

In thy proud muscles, in each fibre feel
The buoyant energy, the health that grace
A bold, undaunted race
Aspire to the heights with fearless zeal.

Thy mother for thy sake some day will die;
To her intrepid, fallen body throw
A kiss, a greeting, go
To meet the hostile host that draweth nigh,

And with thy voice, thy pen, go forth to fight
And point out to the tottering century
The glorious radiance
Of vast horizons bathed in a new light.

True, steadfast, honest in the noble strife
Awaiting thee, remember evermore:
Amid the great mill's roar
For this thy mother sacrificed her life.

JAMES'S TALKS TO TEACHERS.

Talks to Teachers on Psychology; and to Students on Some of Life's Ideals. By William James. Henry Holt & Co. 1899. Pp. xi-301.

The "Talks to Teachers" in the present volume comprise the substance of a course of lectures given by Prof. James in 1892 to the Cambridge teachers. The "Talks to Students" "were written in response to invitations to deliver 'addresses' to students at women's colleges."

"I have found by experience," he says of the earlier papers, "that what my hearers seem least to relish is analytical technicality, and what they most care for is concrete practical application. So I have gradually weeded out the former and left the latter unreduced; and now that I have at last written out the lectures, they contain a minimum of what is deemed 'scientific' in psychology."

The whole volume, in effect, may be taken as a partial answer to a question repeatedly asked by teachers and students in the pre-

sent vogue of the study of mind: "Of what use, after all, in practice is psychology to us?" The book is, as the author says, "practical in the extreme," and, because a capital example of Prof. James's literary method in exposition, in which the phrase is an argument and the illustration a proof, is "popular" in the extreme. Much of it is of necessity half-familiar (the art of teaching does not belong wholly to the end of the century)—the "maxims of habit," for example: "We must take care to launch ourselves with as strong an initiative as possible"; "Never suffer an exception to occur till the new habit is securely rooted in your life"; "Seize the first possible opportunity to act on every resolution you make," and "Keep the faculty of effort alive in you by a little gratuitous exercise every day." Yet even these are given a new freshness by the concept which they are brought forward to serve, of man as "a stereotyped creature, an imitator and copier of his past self, whose aim is to make his nervous system his ally instead of his enemy—to fund and capitalize his acquisitions, and live at ease upon the interest." And side by side with what the new psychology but confirms and rationalizes, there is much that it has to say which is revolutionary; notably its exposure of the futile attempt to train the "general memory," to make the pupil study one thing in hopes that he may remember everything else; its condemnation of the practice of "breaking the balky will"; its "gospel of relaxation"; the stress it lays on almost verbal apperception, on "finding the right name," in moral deliberation.

"To think, in short," Prof. James puts it, "is the secret of will, just as it is the secret of memory. . . . The hackneyed example of moral deliberation is the case of an habitual drunkard under temptation. . . . His moral triumph or failure literally consists in his finding the right name for the case. If he says that it is a case of not wasting good liquor already poured out, or a case of not being churlish and uncoachable when in the midst of friends, or a case of learning something at last about a brand of whiskey which he never met before, or a case of celebrating a public holiday, or a case of stimulating himself to a more energetic resolve in favor of abstinence than any he had ever yet made, then he is lost. His choice of the wrong name seals his doom. But if, in spite of all the plausible good names with which his thrifty fancy so copiously furnishes him, he unwaveringly clings to the truer bad name, and apperceives the case as that of 'being a drunkard, being a drunkard, being a drunkard,' his feet are planted on the road to salvation. He saves himself by thinking rightly."

Of the three essays composing the second division of the book, Prof. James regards the first, "The Gospel of Relaxation," as a continuation of the "Talks to Teachers." The remaining two, "On a Certain Blindness in Human Beings" and "What Makes a Life Significant," belong together, he says, and follow another line of thought. There is, however, a fundamental unity in the two lines of thought, which is of especial interest at the present time to the student of the drift of philosophic thought. Prof. James himself expresses the principle of continuity early in the "Talks to Teachers":

"Popular belief has always tended to estimate the worth of a man's mental processes by their effects upon his practical life. But philosophers have usually cherished a different view. 'Man's supreme glory,' they have said, 'is to be a rational being, to know absolute and eternal truth. The uses of his intellect for practical affairs are therefore subordinate matters. The theoretic life is his soul's genuine concern.' Nothing can be more different in its results for our personal

attitude than to take sides with one or the other of these views, and emphasize the practical or the theoretic ideal."

Prof. James frankly takes sides against the philosophers. The whole of his "Talks to Teachers" are based on his notion of what education means—the organization of the "resources" in the human being, of the powers of conduct, which shall fit him to his social and physical world. An "uneducated" person is one who is nonplussed by all but the most habitual situations."

The "Gospel of Relaxation" is but an extension of the same principle. *Ἀσχολούμεθα ἢ σχολάζομεν*, wrote Aristotle in the strange Orientalism which he had learned from Plato, and which philosophy, with its care for the inner life, and Christianity, with its scorn of outer things and its care for blamelessness rather than efficiency, for well-being rather than well-doing, have been at one in seeking to impose on the restless, eager Western world, with its incurable sense of outer fact and love of things, its innate sheer fascinated horror of death and annihilation, its distrust of ecstasy that stimulates death and ends in debility. *Σχολάζομεν ἢ ἀσχολούμεθα ἀνὰ κράτος*—"with all our might"—Prof. James writes, between the lines, in his "Gospel of Relaxation." The gospel of relaxation is preached in the name of strenuousness; the aim of life is not impassioned contemplation, but wise achievement; not ecstasy, but action; and the essays "On a Certain Blindness," and on "What Makes a Life Significant" but carry the same line of thought to the end. What makes a life significant is the service of an ideal, yet not the mere emotional service of it, but the vigorous and effective service; not the worship of an ideal for the sake of the ideal, nor even for the sake of worshipping it, but for the sake of the unity and dignity and power that a single-minded worship lends a man's energies. "Any old ideal" almost will do; absolutely any is better than none, or than a multitude of incompatible ideals.

"The more ideals a man has, the more contemptible on the whole do you continue to deem him if the matter ends there for him, and if none of the laboring-man's virtues are called into action on his part—no courage shown, no privations undergone, no dirt and scars contracted in the attempt to get them realized."

And the blindness in human beings, which is a blindness to each other's ideals, is lamentable because precisely we do not see that other people's ideals are a source of strength to them, such as to them at least our own could not be.

"We are but finite, and each one of us has some single specialized vocation of his own; and it seems as if energy in the service of its particular duties might be got only by hardening the heart toward everything unlike them. Our deadness toward everything but one particular kind of joy would thus be the price we inevitably have to pay for being practical creatures. Only in some pitiful dreamer, some philosopher, poet, or romancer, or when the common practical man becomes a lover, does the hard externality give way, and a gleam of insight into the effective world, as Clifford called it, the vast world of inner life beyond us, illuminate our mind. Then the whole scheme of our customary values gets confounded; then our self is riven, and its narrow interests fly to pieces; then a new centre and a new perspective must be found."

Prof. James's own reading of "On a Certain Blindness" and "What Makes a Life Significant" is that they are chapters in his defence of individualism. "Hands off: nei-

ther the whole truth nor the whole of good is revealed to any single observer." But the reason for non-interference is not a speculative reason, but the deeper, practical reason, that to attempt to make another like one's self is to destroy him. He cannot be like anybody but himself; and it is especially absurd for him to try to become so, for, wanton cruelty and violence apart, his own ideal, certainly the best for him, is probably as good as to a man of his power anybody else's could be.

"In this solid and tridimensional sense, so to call it, those philosophers are right who contend that the world is a standing thing, with no progress, no real history. The changing conditions of history touch only the surface of the show. The altered equilibriums and redistributions only diversify our opportunities, and open chances to us for new ideals. But, with each new ideal that comes into life, the chance for a life based on some old ideal will vanish; and he would need be a presumptuous calculator who should with confidence say that the total sum of significances is positively and absolutely greater at one epoch than at any other of the world."

The vividness of many of Prof. James's phrases—the "stolid cheek," the "codfish eye," the "balky will," the "bottled-lightning girl"—has drawn attention away from a quality in his style which in his last two books has become especially marked, the quality of a communicable fervor, a clear, grave passion of sincerity and conviction, from which some vibration detaches itself and passes into the reader, and forms him to the writer's mood. We have all of us made the acquaintance of the still-born counsel of perfection that mutely begs the life it is sent to give; and have learned to value a communicable fervor, in the rare cases in which it is found, more highly than any degree of picturesqueness. It would, of course, be ridiculous to try to present the indwelling spirit of a book gagged and bound within the limits of an "elegant extract," and we shall not make the attempt.

With Kitchener to Khartum. By G. W. Steevens. With maps and plans. Dodd, Mead & Co. 12mo, pp. 326.

The story of the reconquest of the Sudan is worthy of a more quiet and business-like history than Mr. Steevens has given, and in time we shall get it. For the present we are thankful for any authentic details of Kitchener's campaign, even if marred by a verbosity and rhetoric often extravagant and tiresome. In his 'Conquering Turk' Mr. Steevens held himself better in hand, and was, besides, in a position of much greater impartiality between the combatants. Here we have not only torrents of words, but so thick a covering of praise for everybody in the expedition, from Kitchener downward, that confidence is shaken by what was meant to make it undoubting. Through all this, however, we get salient points from which a fairly satisfactory idea of means and ends may be gained when we sift what our witness tells us.

First, we can see that the policy of leaving the Sudan to its own fermentation for a dozen years was a wise one. Mahdism went through the period of fanatical faith which made every dervish a hero, and the devotion of his followers weakened when the Mahdi was seen to be a selfish and sensual tyrant, when triumphs and conquests ceased, and when the dullest had to ask whether the exploiting of the land after his death for the

benefit of the Khalifa and his greedy favorites was the reign of the promised Messiah of their faith. The terrible hordes which had broken British squares, and which annihilated Hicks's army at Shekan, had degenerated so that we are at a loss whether to call their destruction at Atbara and Omdurman battles or mere massacres.

Second, the work of systematic education of the fellaheen and the Nubian blacks into trustworthy soldiers was a long but necessary task. They had time not only to acquire the discipline and drill which are the foundation of good tactical handling in the field, but, by contact with the enemy on the frontiers of Egypt proper, in the skirmishes and smaller battles of successive seasons, they lost the fear of the dervishes, and gained confidence in themselves and their officers.

Again, the time to resume the aggressive was well chosen. We must credit the English Government, as well as Lord Cromer and the Sirdar in Egypt, with keeping a watchful eye upon the schemes of France in central Africa; for the Fashoda incident, abortive when Kitchener was already at Khartum, might well have had much graver consequences if the Anglo-Egyptian army had still been below the second cataract of the Nile. The singular conjuncture was too fortunate for mere luck.

Fourth. Limiting the advance by the progressive construction of the Military Railway from Wady Halfa across the Nubian desert to Abu Hamed, and thence along the east bank of the Nile to Berber and the Atbara River, was wise prudence. Former experience has shown the uncertainty of reliance upon the Nile as a means of communication and supply above the cataracts, and our civil war had taught how long lines of railway could be made secure for heavy columns dependent upon depots far in the rear. The Khalifa and his emirs had sense enough to know that the locomotive whistle was a more portentous sound than that of heavy guns, for it swept away their visions of the hostile army starving in the desert when checked and made timid by the precarious means of getting food and ammunition. It meant also that British rule was coming to stay.

When at last it came to the assault of the Mahdist entrenched camp at the Atbara and the field fight in front of Omdurman, we asked, Can these be the redoubtable warriors that destroyed Hicks, captured Gordon, besieged Suakim, and rolled back the Anglo-Egyptian armies a thousand miles? At the Atbara it is said that nearly twenty thousand dervishes, under the Emirs Osman Digna and Mahmud, in trenches with abattis in front, were assaulted and exterminated by some twelve thousand under Kitchener, with a total loss to the latter of 81 killed and 493 wounded. Almost no prisoners, wounded or whole, are reported. Steevens says: "Mahmud's army was as if it had never been. These two short hours of shell and bullet and bayonet had erased it from the face of the earth."

Some two hundred or two hundred and fifty miles of desert marching followed, and Kitchener's forces were at the Kerreri hills, a few miles only from Omdurman and Khartum, and here the Khalifa Abdullahi fought for his capital, attacking the Sirdar's lines. The dervishes are said to be over thirty thousand strong; Kitchener, by reinforcements, has been brought up to twenty-two thousand. This time, four thousand

prisoners are accounted for, but they are mainly a band which held together after the rout, and were allowed to surrender. In the fighting, 11,000 of the dervishes are said to have been killed and 16,000 wounded; but as the prisoners are only the 4,000 already mentioned, we must conclude that that whole 27,000 perished, first and last. "With all the deductions that moderation can suggest," says Steevens, "it was a most appalling slaughter. The dervish army was killed out as hardly an army has been killed out in the history of war." Five hundred casualties, killed and wounded, was all it cost the Sirdar's army!

No more decisive proof could be given of the total change in the character of the dervishes as soldiers. None of the old desperation of fanatical courage appears in such results. Instead of forming squares, Kitchener's men advanced in line. The dervishes seem nowhere to have made a really vigorous charge. They advanced again and again, but are everywhere described as melting away under the fire of the Lee-Metford rifles and the Maxim guns, by the time they were within two hundred yards of the Anglo-Egyptian lines. There are some of the old assertions of the dangerous enemy a wounded dervish is, but it does not stand to reason that the astonishing change in the quality of their fighting in ranks left them individually still determined, one and all, to die fighting and to accept no quarter. It is not strange that debate has arisen in England over the assertions made that the wounded were massacred without pity. If the figures given by Steevens are anywhere near correct, they amount in themselves to an indictment.

The description Mr. Steevens gives of the transformation of the little Egyptian village of Wady Halfa, long the advanced post at the second cataract, into a railway base and depot on a large scale, is interesting and instructive. We get also some realistic views of the desert and its withering heats, its smothering dust storms, and the parching thirst of the soldiers marching through it. The characteristics of the men, white, yellow, and black, are shrewdly noted. The diminution of population in the districts which have been under Mahdist rule is said to be appalling, and to indicate that the old-time trade of the country will have to await a new generation of inhabitants. The funeral services at the spot where Gordon fell were solemn, and full of pathetic reminiscences, made deeper by contrast with the inevitable but long deferred triumph. A significant step in Egyptian and African history has been taken.

Stars and Telescopes: A Hand-Book of Popular Astronomy. Founded on the Ninth Edition of Lynn's Celestial Motions. By David P. Todd. Boston: Little, Brown & Co. 1899. 8vo, pp. 419.

Mr. Lynn's original text, to judge of it as well as we can from this volume, seems to be a very popular treatise on astronomy, not at all confined to the subject of "celestial motions," but characterized by a severe avoidance of two things, first, of all that relates to research as research, which constitutes the life of science, as well as of everything in the least degree mathematical, as all celestial motions are; and, second, not only of all that approaches the sensational, but also of all that relates to philosophy or to matters of general human in-

terest. We can understand how such a book should have gone through nine editions in England, for it meets the popular English delusion that what is "plain and substantial," or, in other words, is stolid and positive, is all that is essentially valuable. But the qualities which recommend a book to English readers may not find equal success here. It may be doubted whether Americans will see any particular appropriateness, for instance, in printing very prominently before a book like this a sentence from St. Augustine's chapter on the "Spiritual Creation of the Virtues," set up in English black-letter like a text on a wall of a church. Its inconsistency with the purpose of the volume makes it all the more charmingly English; but that charm may escape the people of the great West. This Latin paraphrase of the opening of a great psalm is put second to a specimen of Wilhelm Herschel's English diction and German nebulosity. In place of Mr. Lynn's "Et pulchra sunt omnia, faciente te, et ecce tu inenerrabiliter pulchrior, qui fecisti omnia," St. Augustine would have supplied many another quotation not wandering clear away from astronomy, and more consonant with the main virtue (such as it is) of Mr. Lynn's book, *c. g.*, "Interrogavi celum, solem, lunam, et stellas; Neque nos sumus Deus, quem queris, inquit" (Confessions, x. 6).

The volume affords no precise indications of what is Mr. Lynn's and what Prof. Todd's; but the work of the latter seems to have consisted in adapting the text here and there to American readers, to adding half-a-dozen important chapters, as well as long notes throughout giving additional facts, to select references to the literature, especially of the popular kind, at the end of every chapter, to a list of asteroids, a full index, and a great many illustrations of celestial objects, instruments, observatories, and portraits of astronomers—all of which is of a rarely painstaking quality. In this way the book has been converted into a veritable hand-book—not a mere digest of facts, but a copious selection of those that are most important. It is hardly possible for a hand-book to be what we generally mean by "popular," nor does this work, perhaps, profess exactly to be a popular hand-book. It is a "hand-book of popular astronomy"—that is, a compendium of facts interesting to the astronomical amateur—that extremely variable species which ranges all the way from the idlers and semi-idlers through the Ulugh Begs, the Dembowskis, the Rutherfords, through the Lowells, the Pickerings, the Lockyers, to the glorious company of Tycho Brahe and William Herschel.

To many persons, the most interesting part of the book, which is well got up, will be the illustrations, of which there are nearly three hundred. The author seems to have made it a rule to give no portrait of a living man—a practice which apparently tacitly reflects upon the susceptibilities of astronomers to a degree that we hope is unwarranted. Some of the likenesses are quite admirable, as those of Alvan and George Clark. A few seem needlessly blurred, as are some of the star-clusters. Some of the figures of instruments, etc., are confused and dark. Only the professional astronomer can at all appreciate or understand a great part of the illustrations, which illustrate nothing in the text.

The work will deservedly enjoy a high degree of secondary authority among amateurs,

owing to the good judgment and care which have presided over its compilation. Yet here and there we come across statements and reasonings which are not quite clear. For instance, on p. 219 we read, "Meteors, then, belonged originally to comets," and this conclusion is extended to "all meteoric bodies." But the only reason which is offered for this belief is that four comets have been known to break up under the influence of tidal forces into small fragments, forming meteors—an inference hardly parodied by the following: The 'Visible World' of Comenius, 'Nature Displayed,' by Duffet, Ollendorff, and Prendergast's 'Mastery' books, are all known to have produced many fluent speakers of different languages; hence, we may infer that all speaking of languages had its origin in phrase-books and the like. Such reasoning violates a logical rule of all induction, namely, that the sample by which the whole class is to be judged ought to be drawn at random from the whole of that class. This sample of meteors is, on the contrary, drawn exclusively from a part of the whole class which, owing to the mode of its limitation, cannot but possess that character which is inferentially, but unreasonably, extended to all other individuals of the class. What is a meteor? It is nothing but a cometary body which enters the earth's atmosphere. Why should all such bodies, without exception, be supposed to be broken from larger cometary bodies? In our present ignorance of the origin of things, it is not unlikely that of all the masses which wander through space a large proportion are very small. In such small bodies tidal forces would be very feeble, while their cohesion would be relatively powerful. It may be that Prof. Todd is in possession of some good reasons for thinking that no such bodies ever impinge upon our atmosphere; but if he is, they must be different from the premise he advances.

England in the Age of Wycliffe. By George Macaulay Trevelyan. Longmans, Green & Co. 1899.

Mr. George Macaulay Trevelyan here offers to the public an essay first presented in competition for a fellowship at Trinity College, Cambridge. It is an attempt to bring together into one point of view the several aspects of an age fertile beyond any other in the great ideas which have made modern England what it is. The several chapters are almost independent studies, but the impression of them taken together is a fairly consistent one. Three interests have been made especially prominent: politics, society, and religion. The political field is limited to the decade from the death of the Black Prince in 1376 to the establishment of Richard II's power in 1385—a period too short to serve much purpose except, as the author puts it, that of a prologue to the "Tragedy of King Richard the Second." Socially, the central position is given to the peasant uprising of 1381, with its astounding revelation of the passion and force of the English common man, and its permanent lesson for the governing classes. From the side of religion we are given a picture of the rise of English Lollardy, or, again to use the author's word, of an "indigenous Protestantism."

The narrative of political events is not and could not be very interesting. Its detail is a dreary record of petty family quarrels, through which it is impossible to discern

any real principle. The ignoble ending of a glorious reign, the strife for the control of an undisciplined youth, who was to break through restraint by an unexpected display of spasmodic energy, and the failure of John of Gaunt, the most capable person in an unattractive group, to direct the policy of government, are not very enticing subjects for a thoughtful historian. They acquire interest only as they are brought into relation with the really great moving forces of the nation, with its social unrest and its religious aspiration. This connection Mr. Trevelyan succeeds in making, not precisely in any formal or systematic fashion, but in the final impression of his book as a whole.

Where the author's sympathies lie, it is not difficult to discover. He has no respect whatever for the spirit of Froissart, who, writing of the social upheaval in England, treats it as a disagreeable but unimportant break in the natural course of things. Mr. Trevelyan has abundant room in his thought for the great meaning of this blind, passionate struggle in the work of human progress. He does not regret it. "It was a sign of national energy, it was a sign of independence and self-respect in the mediæval peasants, from whom three-quarters of our race, of all classes and in every continent, are descended." Yet he is equally far from extravagant eulogy: "Though as a protest it was perhaps useful, as a revolution it could only have led to anarchy."

So in the matter of religion. Mr. Trevelyan brings out very clearly the inevitable effect of Wycliffe's teaching in rousing men to higher ideals of personal liberty and public justice. He shows us that Wycliffe himself, while deprecating disorder and sedition, had, especially in his earlier teaching, supplied a religious basis for social revolt, just as surely as Luther, four generations later, was to do the same thing for the restless peasants of Germany. His picture of the attempts at repression of Lollardy is eminently fair to the persecuting side. He gives to the individual leaders of persecution all due credit for purity of motive, and softens his judgment, even of renegades, with every consideration for the pressure they had to bear. Yet here, too, one feels the note of true sympathy in his description of the fate of the Oxford University in this religious and intellectual struggle. There at least was one place where the honest thought of good men ought to have been safe from any form of public violence; yet nowhere was the "purification" of the country more complete or more effective. The University, as a bulwark of learning and of the liberty that ought to go with it, was ruined by the same state which had broken the peasant revolt and striven to make heavier yet the burden that had produced it.

We owe Mr. Trevelyan especial thanks for the concluding chapter on the later history of Lollardy. It carries him far beyond the limits of his title, but it helps to answer a problem of vital interest to the student of the English Reformation. It goes far to establish the proposition that Protestantism in England is indeed an indigenous product—not a mere importation from Germany, but a long-gathered and deeply rooted sentiment. Mr. Trevelyan's judgment is summed up in the last sentence of his book: "But those who still believe that liberty of thought has proved not a curse but a blessing to England and to the peo-

ples that have sprung from her, will regard with thankfulness and pride the work which the speculations of Wycliffe set on foot, and the valor of his devoted successors accomplished."

We have tried to judge this book upon its merits, but it has an added interest as the maiden effort of a very young man who represents some of the greatest traditions of English historical writing. A nephew of Macaulay might have been pardoned if he had tried to give to his book something of the literary and dramatic charm ever to be associated with Macaulay's name. It is a tribute to his sound sense and good taste that he has done nothing of the kind. His style is admirable for simplicity and force, quite free from the affectations of cleverness that have marred the work of some recent English historians. He produces his effects by the intrinsic interest of his point of view, and by the conviction he creates in the reader that he has done honest work of investigation and thought. We venture to predict for him a notable future.

A Guide to the Wild Flowers. By Alice Lounsberry. With sixty-four colored and one hundred black-and-white plates, and fifty-four diagrams, by Mrs. Ellis Rowan. Frederick A. Stokes Co. Pp. 347.

On page 65, the keynote of the text of this volume is clearly struck: "It sometimes seems that we hardly know what to say about a flower." Let us see how true this is. On page 38, of Arrow-head it is said: "It hardly seems possible that these little under flowers would ever have the courage to call out boldly, 'Joseph, thou art keeping the sunshine from falling upon my head.'" Again, page 130: "The Jewel-weed and a bright, running stream have come to be about as closely associated in the mind as the dear old white horse and the red-haired girl." Once more, page 128:

"Something preliminary is almost necessary before venturing to speak of the Fringed Gentian, and even then it should be done with bated breath, for is it not the flower that has inspired poets and statesmen to such an extent that they have barely been able to write soberly about it? And, truly, it is a heavenly flower. But to those that are a bit worldly, and have not the poetical soul, it must always suggest that it has been gown'd by nature's Worth; it is so *chausée à venir*. The beautiful fringe is but the latest conceit of fashion; and the soft green of its calyx, blending with its incomparable blue, is an example of the most ravishing taste. If we could indulge in such levity, we would almost look up its sleeves for *hors de combat*."

We never knew before where to look for *hors de combat*. Let us keep on with the Fringed Gentian and note: "It is fond of wandering, too, and though we mark the spot where it grows, we may seek in vain for it in the same place the next year. This characteristic, however, it owes to being a biennial." In an excellent work, largely due to the botanist who has prepared an introduction to this 'Guide to the Wild Flowers,' we read that the Fringed Gentian is an annual. And so it is.

It is, however, as a guide that the volume should be judged. On page 69, we are told this of the Rose Mallow: "Although at a great distance the large flowers of our plant can be seen, it is often difficult of approach. Positive terror seizes hold of the timorous, and their ardor for it is often tossed in the balance with the fear of snakes." Page 164

gives us an idea that the guidance is not confined to our own country, for we there read:

"The sweetest sight that Liverpool has to show to the unsteady traveller from over the sea is the rhododendrons that there grow so luxuriously [etc]. A feeling of pride inevitably takes possession of him, and he is sure to inform the first person with whom he comes in contact that they are from his own country, America."

Although the "unsteady," in the foregoing, suggests more snakes, it perhaps is all right, and may account for the failure of the traveller to discriminate between the Himalayan and other rhododendrons which greet him in Liverpool. The American *Catawbiense* is there with its offspring, but it is hardly fair to claim all the Liverpool rhododendrons as springing from this and from the species *Rhododendron maximum*.

But enough has been quoted to indicate the disappointment which one feels at the emptiness of the text. The authoress has a facile pen, and could well employ it in the society columns of a smart Sunday paper, but it has not been put to a good use in these attempts to construct a serious guide. In fact, the reader feels that she may all the time be making fun of the matter, and may be wondering how much such trash can be patiently read by the students of Thoreau, and Mathews, and Gibson. We cannot imagine these writers putting forth such a statement as the following concerning the skunk cabbage:

"The pistil also matures long before the stamens. These facts would favor the theory of its being visited by insects. On the other hand, we have to remember that insects have not the indomitable courage of the skunk cabbage, and do not venture out at so early a season of the year. Flies abound the first warm days of spring, so perhaps they or others of which we know nothing are their secret ambassadors."

The sharp line of demarcation between flies and insects would never have occurred to Gibson, or, in fact, to any other American. But is the authoress American? On page 104, we find the following, in regard to Monkshood (*Aconitum*): "Our own Indians call it *ativishá*." By a curious coincidence, which is commended to the attention of ethnologists, the natives of the East Indies are said by Mr. Watt and Mr. Dymock to call *Aconitum heterophyllum* by the name *ativishá* or *ativish*. The question arises whether the "Indians" referred to by the authoress are "our own Indians."

The colored sketches in the work are interesting. One or two of them are somewhat inaccurate, notably the golden rod, but all are striking illustrations, full of spirit. Mrs. Rowan is especially happy in her management of distance and atmosphere, and has given in this volume many extremely beautiful and effective compositions. The black-and-white drawings are unworthy of their companions; some of them, like the twin-flower and the tall meadow rue, are coarse in outline and inexpressive. The drawing of the leaves of the tall meadow rue represents a form which is not known to descriptive botanists. Exactitude is the essential in all scientific drawings, however wide the latitude may be which is allowed to popular descriptions. It is difficult to believe that Mrs. Rowan could have had a hand in the preparation of the black-and-white sketches. She is so generally accurate, where good material is provided for her work, that these sketches do not appear to be hers. While regretting that the present volume cannot be

accepted as a helpful guide to our wild flowers, we acknowledge with pleasure the possibilities suggested by Mrs. Rowan's successful treatment of some of her plants, for instance, larger blue flag and sourwood. The brush that can give us such beautiful effects ought to be supplied with well-selected specimens to illustrate our flora.

The History of South America from its Discovery to the Present Time. By an American. London: Swan Sonnenschein & Co.; New York: The Macmillan Co. 1899.

In these days of Pan-America and pan-expansion, a work dealing fully with the history of the South American republics, collectively and individually, ought to receive a hearty welcome. Such a book apparently is the volume before us, a portly octavo of 345 pages. The author's initials are "R. C.," and the work is translated, presumably from the Spanish, by Adnah D. Jones. The title-page bears the date 1899, but a little glancing through the well-printed pages of the volume reveals the fact that it was written nearly a quarter of a century ago. Brazil has not yet shaken off her imperial ruler, and the fraternal relations between Chili and Peru have not been disturbed by the thunder of the *Huascar*, while the map of South America prefixed to the volume still shows the Pacific bathing the shores of poor pent-up Bolivia. There is absolutely nothing in the preface to disabuse the eager purchaser who thinks he is getting the latest information concerning our sister continent. Perhaps the publishers can explain.

The work is to a considerable extent descriptive, dealing largely with the physical and ethnographic features, the material resources, and the prospects of the individual countries. The treatment of these subjects is, to say the least, amateurish, but the historical portions are much better. The preface informs us that the book is "written with the most rigid impartiality, and pervaded throughout by a judiciously democratic and ardently American spirit." We are not disposed to refute the author's professions. He writes from the patriotic standpoint of the Pan-American, and believes in the future of the South American states. We should imagine, however, that his creed is a kind of optimism tempered by pessimistic spells when we read of Peru (page 286) that "complicated plot, treachery, intrigue, stabbing—nothing is wanting in this history of half a century, not even the disguised gentleman and the veiled lady of the old comedies"; or when the author tells us, with reference to a bloody tragedy enacted in Argentina, that "it can only make us reflect that in time ultramontaniam might become the plague of the South American republics." How far his optimism would have been affected by the sight of the fratricidal war on the Pacific or the convulsions evoked by Balma-ceda and Mello, we shall not venture to conjecture.

The account of the Spanish conquest is told in a vigorous and attractive manner, and presents an eloquent picture of the devilishness of those heroic champions of Mammon and the Church. The proclamation with which the Roman pontiff equipped the Conquistadores, and which was to serve as an announcement to the poor natives (who could not understand a word of it) that they must submit to assimilation under pain of having their wives and children sold as slaves, is reproduced here, and deep nat-

make altogether pleasant reading for some among us. The following passage, on page 22, ought to come home to some of our Jingo journalists: "In this unequal war, in which all the advantages were on the side of the invaders, the aborigines were treated, not as men who were fighting in defence of their liberty and the independence of their

country, but as slaves who had rebelled against their masters."

The translator has performed his task creditably.

Alaska.

Its History and Resources, Gold-Fields, Routes,
and Scenery. By Miner Bruce. Second
edition, revised and enlarged.

With 60 Illustrations and 6 folding Maps.
8vo, 250 pages, \$2.50.

Mr. Bruce's volume includes a brief history of the territory, together with detailed information concerning its resources, these comprising, among other things, minerals, fur, timber, and fish. The work also contains a full description of the various mining camps and the routes thither. Practical suggestions are given which will prove of great value to those who may be planning to engage in prospecting, and also to those who may wish to visit Alaska in order to enjoy the marvellous scenery offered by its mountains, rivers, glaciers, and lakes.

GOLFERS IN JULY at Mount Pleasant, WHITE MOUNTAINS.

The Links have been put in the finest condition for season of 1899. Few Golf Courses in the world exceed the Mount Pleasant in natural interest or in perfection of improvement. A feature is the caddy service supplied by a force of active, intelligent academy and college boys.

Dark room, with complete outfit for use of amateur or professional photographers.

Mount Pleasant House is luxurious in every appointment, and has special Post-office, Telegraph, Log-distance Telephone, and Railroad Ticket offices in the hotel.

Through Parlor or Sleeping-Car service from Boston, Portland, New York, Chicago, Burlington, and Montreal to hotel grounds.

Trains leave the grounds twice daily for ascent of Mt. Washington, directly in front of the hotel.

THE OPEN OBSERVATION-CARS again run through the Pass of the White Mountains. Passengers to Mount Pleasant House from Portland and from Boston, via North Conway, will enjoy this unique rail ride from Bartlett to Mount Pleasant, 8 miles of it from Bemis to Crawford Notch, being high up on the Mountain-side, with the valley far below, and three miles from the Notch to Mount Pleasant, commanding the grandest view of the Presidential Peaks just across the valley Ammonoosuc. No rail ride in America, east of the Rocky Mountains, compares with this.

Bicycle Path to Crawford Notch.

Bridle Trail to the Summit of the Rosebrook Range.

Daily Concerts in the Big Music Hall.

Birch Rock Spring Water.

Mount Pleasant Dairy Milk.

White Mountain Air.

NEW YORK, THURSDAY, JUNE 29, 1899.

The Week.

The opportunists of the McKinley Administration will receive a severe shock from the picture of the situation in the Philippines which Dr. McQueston, of Gen. Otis's staff, brings home with him. He says it will require a force of 100,000 to 150,000 soldiers to subdue and hold the islands; that unless thousands of troops be sent at once to the aid of those now there, our forces will be driven back into Manila during the next few months; that our men simply cannot stand the climate during the rainy season; that fifty per cent. of them will be incapacitated by sickness; that the territory hitherto overrun will have to be abandoned, and that Manila will be in a state of siege again. As to the temper and feeling of our soldiers, he says: "The volunteers all want to return home, and I hardly think that the plan to enlist three skeleton regiments from the volunteers now in the Philippines will be a success. The men enlisted to fight for their country, and they are not the kind of men who want to stay and fight an insurrection for money or for the fun of fighting." These are not the words of a despised private soldier, or of a non-patriotic anti-imperialist, but of a member of the staff of the Commanding General, who has served as the Health Officer at Manila. It is barely possible that they may even cause Alger and Corbin to think that the situation in the Philippines is serious.

There is talk in Washington of a new department of the Government and a new member of the cabinet, to be called the Secretary of the Colonies. It is said that Cuba, Porto Rico, and the Philippines cannot always remain under charge of army officers, that the War Department is overburdened already, that the mere financial administration of the islands is sufficient to engross the whole time of a cabinet officer, and, finally, that if a Department of the Colonies is created, it is probable that R. P. Porter will be made the first Secretary of it. All this reads very much like a plan to introduce the spoils system into the islands at the earliest possible moment. Certainly nobody could be found better fitted for carrying out that scheme than the ex-Director of the Census. The discussion of a Department of the Colonies must be considered premature, however, until Congress decides whether we are to have colonies, or only Territories. A colony is a subject country to be ruled by the mother or mistress country by her appointees, her governors, pro-

consuls, harabots, satraps, or whatever they may be called. A Territory is for the most part a self-governing district, which may look forward to a time, near or remote, when it will become an equal partner, and help to govern the mother country, in proportion to its numbers. Congress must decide which of these two forms of government is to be first applied to the "colonies." If they are to be reckoned as Territories, we shall need no new cabinet officer to look after them, or to see that the spoils of office are properly apportioned to our most reliable "heelers," as the census patronage is and has been. Meanwhile, the duty of counting and taking care of the revenue of the islands will remain in charge of army officers, and will, no doubt, be well and honestly discharged, even though Alger continues in charge of the War Department.

From the entire indifference with which the public has treated Commissioner R. P. Porter's contention that exposure of commissary scandals is spoiling our foreign trade, we should infer either that the public does not believe in condoning a flagrant wrong for a pecuniary advantage, or else that it does not trust Mr. Porter's statements about the exports. In either case, we suspect that the public's judgment would be warranted. Mr. Porter's allegation was that "the various meat investigations, and the political capital which has been made out of them by American newspapers, have done our interests more injury" in European eyes than all foreign influences put together. This was an assertion as to what has actually happened. But Mr. Porter grew somewhat more cautious as he approached nearer to official statistics, finally contenting himself with predicting a possible loss to the meat-export trade of "\$20,000,000 to \$25,000,000 per annum." This caution was well advised, for the detailed returns of the Federal Bureau of Statistics for May inform the American public that our export of canned beef last month increased 647,000 pounds over 1898, and our export of fresh beef 6,032,000 pounds, and that the total preserved beef exports in May were the largest for any corresponding period in our history. It is possible that even the foreign consumer may have grasped the fact that the "Eagan brand" of contract army beef was something contrived exclusively for the army, and not available in the export market.

Senator Foraker is much of the time in a frame of mind towards the McKinley Administration which enables him to say what he thinks without any hesitation or reserve. He is particularly

ready to do this just now, because the old factional troubles among the Republicans of Ohio, in which he has so long been involved, are raging afresh, and the dominant Hanna wing is doing its best to "down" him. It is not surprising, therefore, that Mr. Foraker should have told an interviewer on Thursday that "we seem to have a harder job on our hands in the Philippines than we anticipated"; and that, although Congress will provide the means if more men and money are wanted, "the war is not popular." The truly loyal organs of the Administration will, as in duty bound, sneer at the Ohio Senator for talking in this strain; but we doubt if even the most ardent advocate of the expansion policy will venture to controvert his position by trying to prove that the war really is popular.

One remark of Senator Foraker's expresses a feeling which is steadily growing among close observers. "I don't believe," he says, "the newspapers are getting all the news received at the War Department, but I know nothing of it personally." There is no doubt that our imitation of the Spanish system of suppressing facts, through a censorship of the press, is constantly being carried further. Nearly two months ago the Hong Kong *Daily Press* contained a statement from the *American*, published at Manila, saying that its readers had complained because it did not give more news, and explaining that "many cablegrams are received from the United States, but are suppressed by the press censor," these two illustrations being cited: "On Friday a portion of one of our cablegrams was suppressed, and yesterday one entire dispatch was censored, this office receiving nothing but the words: 'American, Manila, from Hong Kong; text suppressed by press censor.'" A fortnight ago the Philadelphia *Times* published a special dispatch from Hong Kong, saying that the censorship at Manila had become so strict that a meeting of the correspondents there had been called to protest against the action of the United States military authorities. The representative of the *Times* reported that "nothing is allowed to be sent out on matters which affect the Administration at Washington; and unless dispatches are rosy and optimistic, they are not allowed to go." He further declared that, although there was great anxiety on the part of the volunteers to return home, the censor suppresses every mention of the fact, and that he also forbids any reference to the terrible sufferings from the heat, while "our men drop like sheep from the overpowering influence of the sun's rays." It is an interesting question how long the Am-

rican people will endure the same policy of suppression and deceit which they used to pity the Spaniards for tolerating a year and a half ago.

A more impudent performance than the appearance of Gen. Russell A. Alger as a candidate for the United States Senate from Michigan on a platform of opposition to Trusts could not be imagined. He was himself one of the chief organizers of a most odious Trust, and the Supreme Court of his own State held that the enterprise in which he thus engaged was unlawful and against public policy. About seventeen years ago the Diamond Match Company was organized by Gen. Alger and some other business men, with a view to controlling the manufacture and sale of friction-matches in the United States and Canada. The object sought to be attained was boldly avowed. The articles of agreement provided for the aggregation of an enormous amount of capital, sufficient to buy up and absorb all of that kind of business done in this country and in the Dominion, and to prevent any other person or corporation from engaging in or carrying on the business, thereby preventing all competition in the sale of matches. Not only did this object plainly appear in the organization of the Trust, but it was openly admitted by Gen. Alger himself. A law-suit grew out of the proceedings taken, to which he was a party, and here is his confession, in response to a question from his counsel:

"Question. It appears that during the years 1881 and 1883 large sums of money were expended to keep men out of the match business, remove competition, buy machinery and patents, and in some instances purchase other match factories. I will ask you to state the reasons, if there are any, why these sums should not be treated as an expense of the business and charged off from this account?

"Answer. Because the prices of matches were kept up to correspond, so as to pay these expenses and make large dividends above what could have been made had those factories been in the market to compete with the business."

The case finally reached the Supreme Court of Michigan, and its decision was filed on the 15th of November, 1889. The judgment of the court went to the heart of the matter. Chief Justice Sherwood, who wrote the decision, began by saying that no one could read the contract in question and fail to discover that considerations of public policy were largely involved. He then set forth the facts regarding the organization and operation of the Diamond Match Company, declaring that "the sole object of the corporation is to make money by having it in its power to raise the price of the article, or diminish the quantity to be made and used, at its pleasure." Both the supply of the article and its price were made to depend upon the action of about a half-dozen individuals, "to satisfy their

cupidity and avarice." The article thus brought under the control of a few avaricious men is one in necessary and daily use by almost every individual in the country. "It is difficult," said the Chief Justice, "to conceive of a monopoly which can affect a greater number of people, or one more extensive in its effect on the country, than that of the Diamond Match Company." The contract in the case then pending was to aid that company in carrying out its purposes, and the court was asked to enforce the contract. This it flatly refused to do, for the reasons quoted above.

Director Merriam of the Census Bureau has been trying to delude the public by the pretence that all applicants for places must undergo an examination which will test their ability as fully as any inquiry into their qualifications which the Civil-Service Commission would have made, if these positions had been brought under the rules. But only a very simple person could be taken in by such a pretence. If the spoilsmen had desired the honest application of the competitive system, they would have turned over this work to the Commission; whereas long experience of the "pass" examination has shown that it is always a delusion and a snare. This old truth is now being freshly demonstrated again. A sample illustration of the way that a spoilsman's examination works is given by the *Baltimore News*. An applicant whose home is not a thousand miles from Baltimore, after having passed what he was told by the officials was a highly creditable examination for one of the higher positions in the bureau, was advised by them to go and see his Congressman, who in turn referred him to the "executive" (the Baltimore equivalent of the New York "district leader") of the applicant's ward!

One of the worst effects of the President's recent "backward step" in the matter of civil-service reform is the encouragement which it has given to the revival of the spoils spirit everywhere. During the first two years of his administration Mr. McKinley reappointed efficient Democratic postmasters, upon the expiration of their terms, in more than one Massachusetts town, and the feeling was growing throughout the State that, when the incumbent of such an office had served to the general satisfaction of the community, politics should not stand in the way of his retention. Easthampton, a business and educational centre in one of the western counties, should have been added to the list of places where this sound principle had been accepted. Four years ago Mr. Cleveland appointed a postmaster who has proved so efficient that his reappointment was asked for in a very strong petition, representing a large majority of

the voters, and nearly all the business interests, including all the manufactories, Williston Seminary, the banks, and almost all of the merchants. But, since the bars have been taken down in the classified service by the President's recent order, the Republican politicians apparently feel that it will not do to let a Democrat stay in any place from which he can be ousted, and word has reached Easthampton that a Republican must be picked out for an office which nine-tenths of those most concerned prefer to see the Democratic incumbent retain.

A striking illustration of the folly of the rule that there must be a change in the postmastership of every town whenever there is a change of parties in the national administration at Washington, was afforded by a recent incident in the United States District Court for Connecticut. At East Hartland a man named Hayes had been arrested for the embezzlement of about \$345 while he was postmaster of that town, and was indicted by the grand jury. A lawyer appeared in his defence, but all that he could do was to plead for a mitigation of punishment, on this ground: "It was a great mistake that the man was ever appointed, but as Hayes was about the only one who had voted the Democratic ticket in Hartland for some time, he supposed that some one had to be appointed postmaster there, when the change of administration came, but he considered it a misfortune for Hayes that he had ever been selected." The District Attorney conceded that Hayes was a very ignorant man, and Judge Townsend said that he felt sorry for him, as he sentenced him to six months' imprisonment.

The Bourbon Democracy of Kentucky have adopted a pro-silver and anti-imperialist platform, and have nominated William J. Bryan for President. Neither the head nor the tail of the platform is very energetic in tone. The plea for silver is almost apologetic. The war with Spain is commended and endorsed, but the Administration's course in the Philippines is declared to be contrary to the spirit of republican institutions. The convention finally nominated J. C. S. Blackburn for Senator of the United States in place of Mr. Lindsay, the present member. Mr. Lindsay was a supporter of Palmer and Buckner in the campaign of 1896. Kentucky, under normal conditions, is overwhelmingly Democratic, and will no doubt prove to be such at the coming election. Her influence upon the Democracy of other States has never been great, and is not likely to be important this year.

The Silver Republican party of Iowa has given up the ghost. The attack

which destroyed what little life remained, was dealt by a provision in the new ballot law which will prevent so weak an organization from placing a ticket on the ballot next fall; but it would have been almost impossible to keep any breath in its body if there had been no such difficulty. The Silver Republicans counted for so little in the campaign of 1896 that the other elements in the opposition to the dominant party have not thought it worth while to pay much attention to them since then. The Populists in some States will find it almost as hard to keep up their separate organization, since the Bryanized Democracy has so generally accepted their principles. Bryanism has become so close an approach to Populism that there is not much excuse for keeping up the fiction of a difference. Indeed, the chief reason in most cases why anybody tries to maintain the separate organization is the hope of the men who run it that they may fare better, in the way of nominations, when the two parties "fuse" on a ticket than if they fell in behind the regular Democrats.

Prof. McVey of the University of Minnesota, in a note contributed to the *Journal of Political Economy* on the subject of Trusts and the tariff, says that there are some combinations so dependent on the tariff that the repeal of the protective duties would destroy both the combination and the industry. He instances the Tin-Plate combine as one of this sort, and gives figures to show how the tariff works in this case. The Tin-Plate Trust was formed last December with a capital of \$50,000,000. The selling price of tin-plate in Liverpool is \$2.30 per box. The cost of production in this country is \$2.75, and the tariff is \$1.62 per box, or 70 per cent. ad valorem. Since the formation of the Trust the price has been raised to \$3.80 per box, which is about the Liverpool price with the duty added. In other words, the Trust prevents the consumer from getting the benefit of domestic competition in the manufacture of tin-plate, and the tariff enables the Trust to accomplish this object. There has been considerable chuckling among the high-tariff gentry over the success of the tin-plate industry in this country, but in the presence of these facts and figures the less we hear from them the better. There never was any doubt that by paying 70 per cent. more for tin-plate than it is worth in a free market we could have it produced at home. Nor was there much doubt that the makers would combine to prevent domestic competition just as soon as the consumers began to derive any benefit from it.

The reported placing of orders for 180,000 tons of steel rails for Russia at the Carnegie works, to be delivered during

the next twenty-six months, is fresh evidence of the fact that the United States has become the centre of the world's iron and steel production. It may be worth mentioning that nine years ago Mr. Edward Atkinson contributed to the *Manufacturers' Record* of Baltimore a paper predicting this result as something to be looked for at an early date, i. e., that the United States would soon distance all other countries in the production of iron. He also quoted an earlier prediction of the same tenor from Abram S. Hewitt, dated as far back as 1855. Both were true prophets, and their words have come true sooner, perhaps, than they expected. Great Britain, hitherto the largest producer of iron and steel among the nations, is now handicapped by the growing cost of her raw material. She is compelled to import the best qualities of iron ore from Spain and Sweden, and, what is still more serious, she has reached her maximum output of coal; that is, she has reached the point where a larger demand for coal cannot be supplied without a material advance in price. This is a critical situation for her iron industry, if not for all of her industries that depend upon coal. At present the world's demand for iron and steel has outrun the supply, and while this condition lasts the competition of the United States will be little felt. But when the situation changes, the advantages which we possess in raw material will begin to tell against the English furnaces, and can be met only by economies of detail or by the sad alternative of lower wages to laborers.

The outward movement of gold ought not to attract any attention, and does not, except among those who deal in foreign exchange and those who have bills to pay abroad. It is easily explained by a number of patent facts, which are commonly overlooked. One of these is the gold production of the United States, which is going on all the time at the rate of \$5,000,000 per month. In addition to this is the production of the Klondike mines, nearly all of which comes to our refineries and assay offices. The amount of Klondike gold coming in is not known, but it is a pretty large sum, and is evidently increasing. It is not to be supposed that we can find use for all that we produce, plus all that we take in from the North. It is neither possible nor desirable that we should retain an excess of gold, any more than of grain, or cotton, or pig-iron. Moreover, the outward movement has not yet reached the amount of the payment made to Spain for the Philippines. Still another line of drainage not usually observed is the war in the Philippines, which is costing about \$3,000,000 per month. This works against our balance of trade just like the payment of the \$20,000,000 to Spain. Several months of the war

will cost us more than the original price of the islands. The \$3,000,000 sent to pay the Cuban army must be taken into the reckoning, also, together with the support of our own military forces there and in Porto Rico. Altogether the wonder is that the gold-export movement did not begin sooner and reach a larger amount.

The establishment of Australian federation is a matter of world-wide concern, and the result of the vote on this question in New South Wales on June 20 is therefore of the first importance. The idea of such a union among the British colonies in that part of the world has been discussed for a dozen years, but New South Wales, the coöperation of which was most essential, seemed disposed for some time to hang back. The late election, however, resulted in an overwhelming majority in favor of federation. South Australia has previously voted the same way; Victoria will certainly follow suit at its election next month, and Tasmania whenever the vote shall be taken; while Queensland, which has been hostile to the scheme, is not likely to stay out alone very long. Even if the latter colony shall vote against it next September, the other four will go ahead and start the Federation, under a Constitution which bears some strong resemblances to that of the United States. Such a Federation is a sign of healthy progress in the unification of interests among colonies which have much to gain from closer ties.

The arrival of the bubonic plague in Egypt in the course of its westwardly advance from China towards Europe is a disquieting fact, inasmuch as the latest scientific testimony is to the effect that the disease, having once obtained a foothold, cannot be stamped out by summary measures, but will prevail so long as it has material to feed upon. Alexandria is much cleaner now than it was before the days of the English occupation, but it is still an Oriental city, and, with the plague within its borders, more or less of a menace to all ports with which it is in communication. That the pest can be prevented from spreading to Europe is most improbable, that it may cross the Atlantic or Pacific is quite within the limits of possibility; but fortunately it is now practically certain that it can be controlled and defeated by proper sanitary precautions. This seems to be about the only point in connection with it upon which all the scientists are agreed, after several years of anxious observation in China and in India. As to the cure of the malady, Science has not advanced yet much beyond the experimental stage. The Russian Dr. Haffkin claims a certain degree of success for preliminary inoculation by his process.

AID AND COMFORT TO THE ENEMY.

The speech made by Mr. Barrett, late Minister from the United States to Siam, at the Chamber of Commerce in Boston, was in some respects commendable. So far as it dealt with the commerce of the East, it was at least more moderate in its estimates than some others that have been made. Mr. Barrett, however, assigned no substantial reason for the great increase of trade which he expected, and his estimates must be regarded as largely conjectural. It is not his figures that appear to us deserving of attention, but the political principles that he enunciates. He thinks that the only hope of this country, so far as gaining the trade of the Far East is concerned, is in our maintaining our sovereignty perpetually over the Philippine Islands, and he implies that those who protest against our subjugating their inhabitants are traitors. He declared that all our generals and most of our privates agree that the anti-imperialist movement has given unlimited aid, comfort, and encouragement to the forces of the Filipinos. More specifically, he stated that "the most encouraging influence for the Filipinos in fighting us, and hence the most unfortunate one for our soldiers and sailors to combat against, was the spreading of the sentiment and ideas through the ranks of the Filipino army and among the masses of the natives that our occupation of the islands was unwarranted, the war unprovoked, our army and navy unsupported by our people, and our country about to demand the withdrawal of our forces from the islands, the hauling down of the flag, and our complete and ignominious withdrawal from our responsibilities."

Mr. Barrett further declared that Senator Hoar's speech roused great hopes of freedom among the Filipinos, and that he did all that he could to prevent copies of the speech from being distributed among them. This is in accordance with the principles of the censorship which has been established under our military rule, and Mr. Barrett's whole speech is based on the assumption that it is the duty of Americans who believe that we are engaged in a war of "criminal aggression" to deny their belief, or at least hold their tongues. This assumption has no place in the theory of free government. It belongs to despotism, and the naïveté with which Mr. Barrett adopts it shows how extensive is the demoralization produced by war.

But how consistent is his own practice with his censure of those who will not be silent at this time? We find in the July number of the *Review of Reviews* an article from his pen on the Philippine situation, in which he represents Aguinaldo as the idolized popular leader, who had returned to his country "under the protection of the ships of a nation called America, which had gone to war with

Spain and would give them freedom and independence at once." The "impression went abroad among the masses of the people that Aguinaldo had arrived to establish an independent government, and that the Americans would assist him." The people flocked to him in such numbers that he had contributions of large sums of money, unlimited supplies of food, and more soldiers than he could arm. The "people were educated to believe that they were to have absolute independence." Within a few months, Aguinaldo organized a government which "developed into a much more elaborate affair than its most ardent supporters had originally expected." By the middle of October, 1898, says Mr. Barrett,

"He had assembled at Malolos a congress of 100 men who would compare in behavior, manner, dress, and education with the average men of the better classes of other Asiatic nations, possibly including the Japanese. These men, whose sessions I repeatedly attended, conducted themselves with great decorum, and showed a knowledge of debate and parliamentary law that would not compare unfavorably with the Japanese Parliament. The executive portion of the Government was made up of a ministry of bright men who seemed to understand their respective positions. Each general division was subdivided with reference to practical work. There was a large force of under-secretaries and clerks, who appeared to be kept very busy with routine labor."

Does that sound like the description of an assemblage of savages, or of an assemblage of intelligent men, who knew what they wanted—knew their rights, and were bound to maintain them? And now read what Mr. Barrett says of the army which Aguinaldo collected:

"The army, however, of Aguinaldo was the marvel of his achievements. He had over twenty regiments of comparatively well-organized, well-drilled, and well-dressed soldiers, carrying modern rifles and ammunition. I saw many of these regiments executing not only regimental, but battalion and company drill, with a precision that astonished me. Certainly as far as dress was concerned, the comparison with the uniform of our soldiers was favorable to the Filipinos. They were officered largely, except in the higher positions, with young men who were ambitious to win honors and were not merely show fighters. The people in all the different towns took great pride in this army. Nearly every family had a father, son, or cousin in it. Wherever they went, they roused enthusiasm for the Filipino cause. The impression made upon the inhabitants of the interior by such displays can be readily appreciated. Aguinaldo and his principal lieutenants also made frequent visits to the principal towns, and were received with the same earnestness that we show in greeting a successful President."

We submit that when Mr. Barrett publishes facts like these, he does more to discredit the war which we are carrying forward in the Philippines than all the utterances of the anti-imperialists, and all the soldiers' letters combined, can do. He makes an effort to show that Aguinaldo is culpable because, when he found that the Americans were not going to withdraw and leave the Filipinos to rule their own country, he concealed the fact from his followers. He also endeavors to show that while our forces maintained "most agreeable relations"

with Aguinaldo when he first returned, Admiral Dewey was "careful to avoid formal recognition." But Mr. Barrett knows very well that there is other evidence on this point which establishes beyond dispute that Aguinaldo and his followers were led to believe that they would be helped by the Americans to establish their own independence. There is the official dispatch of Admiral Dewey himself, sent to the Secretary of the Navy on June 27, 1898:

"Aguinaldo, insurgent leader, with thirteen of his staff, arrived May 19, by permission, on the *Nashua*. . . . I have given him to understand that I consider insurgents as friends, being opposed to a common enemy. He has gone to attend a meeting of insurgent leaders for the purpose of forming civil government. . . . In my opinion, these people are far superior in their intelligence and more capable of self-government than the natives of Cuba, and I am familiar with both races."

A few weeks later, Gen. Thomas M. Anderson, commanding the United States troops at Cavité, wrote to Aguinaldo: "I would like to have your Excellency's advice and coöperation, as you are best acquainted with the resources of the country." Three weeks later, still in supreme command, he asked Aguinaldo for assistance in transportation of American troops, "as it is to fight in the cause of your people." That previous to this time our consular officials, Wildman, Consul-General at Hong Kong, Pratt, Consul-General at Singapore, and Williams, Consul at Manila, gave Aguinaldo the strongest reasons for believing that the American Government would help him to secure the independence of the Filipinos, is an established fact, the details of which are too familiar to need repetition. But what matters it how he and his fellow-patriots got the idea that we were to help them to fight for their independence? If they are fighting for it, what kind of an American is he who cannot sympathize with them? And if our sympathy depends upon their condition of savagery or the reverse, is not Mr. Barrett fostering the very "treason" he deprecates?

HONEST POLITICS.

It would be interesting to learn exactly who is meant to be influenced by the defences of the recent civil-service order which have been put forth. We know what the Civil-Service Commission thinks of it; we know what every one who has struggled for the reform thinks of it. They have no doubt concerning the purpose of the order, nor concerning its construction, nor concerning its operation. The assertion that the order is really calculated to promote the cause of reform, in the opinion of all these persons, merely adds the sin of hypocrisy to the guilt of bad faith. It is certainly improbable, on its face, that an order devised by men who have never interested themselves in reforming the service should be meant to advance the reform,

when no one who has been interested in the reform suggested or desired such an order. We may lay it down quite positively that whoever was grieved or disgusted or angered by the issuing of the order has not had his feeling altered by the defences offered for it.

There is abundant evidence, also, that these defences are equally worthless in the view of those who are opposed to reform. The Ohio politicians may have exulted a little prematurely, and perhaps injudiciously; but they exulted sincerely and they show no signs of disappointment. They are doubtless indifferent to explanations of the new order, provided they get the offices, and they have no doubt that they will get them. The editor of a New Hampshire journal, the *Mirror and Farmer*, of Manchester, perhaps as influential a Republican organ as any in Northern New England, dismisses all the talk of the President's being in favor of keeping the offices out of the hands of the politicians as cant. He says very frankly that it is wasting space to contend that the President's order "taking from 5,000 to 10,000 Federal offices out of the classified service and putting them in the list of spoils squares with the St. Louis platform, or with the President's letter of acceptance, because every intelligent person who is interested in the subject knows to the contrary." The order, he maintains, is right, because it restores to the politicians a large number of offices that should never have been taken away from them, and he concludes with the pointed question: "Why not stand up and say so, instead of asking people to believe what they all know it is not?"

This honest politician takes the ground that as the Democratic officeholders are performing their duties faithfully and satisfactorily, it would be an outrage to remove them "for cause." There is no cause for removing them, except that they opposed McKinley's election in 1896 and will oppose his reelection in 1900. Barring their politics, they are well enough; but there are plenty of Republicans who can step into their places and perform their duties just as efficiently. No doubt President McKinley declared that he stood on the St. Louis platform, and that platform promised to defend and extend the merit system. But, in the first place, "the adoption of the civil-service plank at St. Louis was a perfunctory performance, intended, like the declaration in favor of international bimetalism, to catch or hold a few votes of which it was supposed there would be great need." The promise was a bad one, and is better broken than kept. The President "has become convinced that the Republicans did not mean what they said when, at St. Louis, they parroted the usual promise to defend and extend the civil-service rules, in accordance with the wishes of the professional

reformers, and he has corrected the mistake. He has made it possible to bounce several thousand Democrats who are doing well enough, and give their places to as many Republicans who will do just as well. This is the plain truth, and nothing is to be gained by having it misstated by cabinet officers or any one else."

It is difficult not to be convinced by these statements. They are evidently sincere, they express the feeling of most of the Republican politicians, and they are intrinsically probable. No one can deny that there are thousands of offices in which the pay is more than the services are worth—in which, indeed, the services are of no market value, and as has often been pointed out, in which a child could do all that is required of a man. Such offices are created by politicians for the purpose of filling them with politicians, and to suppose that they will relinquish them without the most desperate resistance is to suppose that they are willing to commit political suicide. Such offices are created to be made "spoils," and it is time for reformers to enlarge their scheme, so as to provide for the abolition of useless offices and the compensation of employees on business principles, as well as for examinations and permanent tenure. Until this is done, the ordinary citizen will cling to the traditional view that a public office is one in which the pay is much higher, in proportion to the work done, than a private position; and while that view prevails, the "spoils" theory will endure. The New Hampshire editor has stated the case fairly and honestly. The Republican politicians talked of civil-service reform only to gain votes, and now that they think they do not need these votes, they cease their pretences. That may be called dishonest politics from one point of view, but it is honest politics as showing reformers just how they have been treated, and just what they may expect from the Republican party.

POLITICAL ISSUES CHANGING.

Mr. S. E. Morss, editor of the Indianapolis *Sentinel*, is credited with holding the view that the financial plank in the Democratic platform of 1896 ought not to form the dominant issue in the campaign of next year, and that if it does the party will be beaten. According to an interview which has been published in some of the Western newspapers, Mr. Morss thinks that the issues will be "anti-Trust, anti-militarism, expansion, and tariff reform." With these he thinks that the Democrats would have good prospects of success. It is reported that the ancient and moss-grown Democracy of Indiana are much agitated by this outgiving, and that some of the more venerable members of the party talk of starting a new paper in opposi-

tion to the *Sentinel*—a project which may be carried into effect when the United States adopts free coinage at the ratio of 16 to 1 without the consent of any other nation, but not before.

Undoubtedly Mr. Morss, in the interview attributed to him, represents the present drift and tendency of the Democratic party. On the other hand, we observe a tendency among the Republicans to put the financial issue forward as the chief one of the next campaign. Such must be the meaning of the sudden and praiseworthy zeal of their leading organs in favor of a law declaring all Government obligations payable in gold, and the reported determination of the Senate Finance Committee to promote the passage of such a measure next winter. If such a bill is reported at the next session, it will constitute a challenge to the Democrats to make the campaign on the issues of 1896. It will serve the twofold purpose of putting the Democrats in a dilemma, and of sidetracking the issues of imperialism and civil-service debauchery which now becloud the Republican horizon not a little.

The question, what shall be the issues of next year, cannot be determined *ex cathedra* this year. Whatever shall prove to be the subjects of most immediate national concern then—whatever be the questions making the sharpest divisions in the public conscience—will be the political issues. Neither Mr. McKinley nor Mr. Bryan, neither editor Morss nor Senator Hanna, can stop the flowing of the tide of opinion. The tide will carry the platform-makers along with it, and they will be studying, when the time comes, not how they may stem it, but how they can make the best use of it and derive the most advantage from it. It is easy to say what will not be the uppermost consideration next year. Mr. Morss is right in saying that it will be useless to expect to change our monetary standard while the Republicans control the Senate. As they have secured a majority for at least six years to come, it will be simply a waste of powder for the Democrats to put the silver issue in front. All that they could expect in the most favorable event would be a change to bimetalism of some kind, national or international, about the year 1907. That is too distant and too problematical to engage present effort. No enthusiasm can be enlisted in a contingency so remote.

The situation is greatly changed since the fight for free coinage was going on in the seventies and eighties. Then the Republicans professed to be as good silver men as the Democrats. If the Democrats fathered the Bland bill, the Republicans fathered the Sherman bill, which "did more for silver" than the former measure. If the Democrats were for free coinage by separate action of the United States, the Republi-

cans favored the same end by international agreement, which was safer. And so the *ignis fatuus* was always dancing in front of us, apparently within reach, but just beyond our grasp. Now, however, the situation is wholly different. The Republicans are no longer pretending to favor silver. They no longer favor an international conference to "rehabilitate" it, although they would join one if it were called by some other nation of the first rank, as it will not be.

The prospect being as it is for six years to come, the most sanguine bimetalist must be under depression of spirits. The inspiration of hope is wanting. Even Mr. A. J. Warner, who may be called, since the death of Mr. Bland, the veteran of fiat money, is said to take a despairing view of the bimetallic future. It is certain that Mr. Bryan is not upholding the cause with his usual vigor. He has two words to say about Trusts where he says one about silver. He has said that he considers the money question only one branch of the Trust question. Very likely Mr. Morss did not give utterance to his views without some assurance that they would be agreeable, or not disagreeable, to Mr. Bryan. All that can be said now is that the Democratic party is drifting away from the financial plank of the Chicago platform, and that the campaign of next year will most probably be fought on the other issues which Mr. Morss has indicated.

THE INTEROCEANIC CANAL.

The problems of an interoceanic canal form the text of an instructive article in the June number of the *Political Science Quarterly*, by George L. Rives. Mr. Rives considers all the questions involved, but gives most attention to an exposition of the legal ones which are raised by the demand for "a canal under American control." This phrase has been repeated so often that it has come to be accepted by many as a self-evident proposition, yet it ignores several important considerations, and among others these: (1) the Clayton-Bulwer treaty with England, in which we agreed that we would never acquire or exercise such control; (2) the consent of Nicaragua, Costa Rica, Colombia, or whatever countries the canal passes through; (3) the means necessary to make such control permanent and effective, and the cost of the same.

What is meant by "American control" of an interoceanic canal? It does not mean exclusive right to use the canal. Nobody has ever suggested that idea. Every calculation that has ever been made respecting the cost and the revenue of the canal has been based upon the largest possible traffic. It has been assumed that all nations will use it on equal terms, and that the tolls will be made low enough to attract not only the

commerce that now goes around the Horn, but a large share of that which crosses the continent by rail, and some part of that which now goes via Suez. Neither Great Britain nor any other country could consent to discriminating tolls on an interoceanic canal. The Clayton-Bulwer treaty was framed primarily to prevent such discrimination. Moreover, Nicaragua has treaties with most of the nations of the Old World guaranteeing them equal rights of passage through any canal that may be made through its territory. Great Britain may consent to the abrogation of the Clayton-Bulwer treaty, but only on condition that the canal tolls shall be as low to her ships, her subjects, and her goods as to those of any competitor. Neither France nor Germany could consent to be put at a disadvantage commercially in respect of tolls, since discrimination against them would be tantamount to exclusion from the canal altogether. If the Suez Canal had never been neutralized by treaty, if it belonged solely to England in such a way that she could do what she liked with it, she could never adopt discriminating tolls on it without finding herself at war with the whole world.

We may assume, then, that "American control" does not mean the exclusive right to use the canal commercially, nor the right to give our own people an advantage over others. There is only one other thing that it can mean, and that is the right to pass our war-ships through it in time of war, and to prevent the enemy from doing so. Obviously, these rights can be exercised in time of war only on condition that we are strong enough on the line of the canal, and at both ends of it, to fight off the adversary. The right to pass the *Oregon* through the canal last year (if there had been a canal) would have been of no worth unless we had been able to guarantee that no harm would be done to her or to the canal itself while she was making the transit, and that she would not meet a superior enemy when she emerged from it. Mr. Rives thinks that without such guarantee Capt. Clark would have preferred to take his chances by the Straits of Magellan. A very small amount of dynamite would suffice to disable a lock and to imprison any and all ships that might be passing through. Of course the enemy would make the utmost efforts to cripple the canal unless he were restrained by treaty from doing so.

Therefore, American control, in Mr. Rives's opinion, requires continuous military occupation of the country through which the canal passes, supplemented and sustained by paramount naval strength, situated in close proximity to the Atlantic terminus. This is mainly a question of cost, but it is not without its moral aspects. How are we to acquire the right to occupy the country

in question? Such occupation is not likely to be granted peacefully. It is not likely that Nicaragua, for example, will surrender her sovereignty unless compelled by arms. Are we to invade her if she declines to do so? Would any large number of the American people justify such a step? There may be some persons so addled by the catchwords "American control," "Monroe Doctrine," etc., that they would see nothing wrong in our seizing any Central American country that denies or questions Mr. Olney's doctrine that our fiat has the force of law on this continent; but it is not probable that we shall resort to such measures unless we have better reasons for doing so than have been advanced as yet.

The conclusion that the readers of Mr. Rives's article will draw from it is that an international guarantee of the neutrality of the canal is much better and a great deal cheaper than any guarantee of our own. With an international guarantee, the only protection needed would be that of an ordinary police force, whereas our sole guarantee would require effective military control of the entire line, and effective naval control of the termini. The former would probably imply 30,000 men either on the isthmus or within hailing distance. The latter would be an indeterminate quantity. It might require us to have the largest navy in the world as a permanent addition to the national budget. It might involve us in a larger expense than all the saving which the canal could bring to our commerce.

Mr. Rives takes the Panama Canal into his reckoning, and holds it to be the President's duty to give that enterprise the same impartial consideration as the Nicaragua. His article is interesting in all its phases, and, while his treatment of the subject cannot be considered exactly novel, it is so clear and complete that it must have considerable influence on current opinion and discussion.

AN INTERESTING EXHIBITION.

LONDON, June, 1899.

The International Society of Painters, Sculptors, and Gravers, as it calls itself, having its headquarters at Knightsbridge, began its career a year ago, and yet already it is felt that if it will but persevere, if the small public that can appreciate it will but give it the necessary support, it must prove a more formidable power for the Royal Academy to reckon with than any number of Royal Commissions and big books of denunciation. Not that it was started in opposition. The object of the Grosvenor Gallery was, practically, to rival the Academy, to represent all the outside forces, to provide a shelter (and a befitting one) for distinguished, or interesting, or promising artists who found the doors of Burlington House shut against them. But the International was formed by a little group of men, with Mr. Whistler as their President, not to revolutionize or reform or represent or rival anything, but simply because it was

amusing to try, by means of discriminate invitation and selection, of intelligent hanging and arranging, to make a show that would prove a pleasure, and not a torture, to all who visited it. And it so happens that nothing is so badly needed at the present moment as just such a show. The necessity of covering an enormous wall space has put a premium on incompetency. The lowering of the exhibition standard has encouraged the amateurs. And in the dreadful medley that is the result, good work is lost sight of. It gradually disappears, for the self-respecting artist hesitates to dishonor his pictures by submitting them to so humiliating a test.

Against this evil the International Exhibition proves a triumphant protest, and it is because I think the evil so serious, though not half well enough realized, that I dwell on the general character of the show rather than on individual contributions to it. All the pictures hung may not be masterpieces, to be sure, but at least they are treated as if each were worthy of consideration—and, indeed, if it were not, why should it have been accepted? The walls, of a good gray-green, make a pleasant neutral background, the light is tempered by a canopy, and the pictures, instead of being jumbled up into a mere mosaic of frames, hang never more than two deep, while around each is the little space as important to a painting as the margin of white paper is to a page of text. If the result is that room can be spared for not quite two hundred and fifty pictures, so much the more reason have we to be thankful. It is quality that counts, not quantity. Another advantage is that these comparatively few are, more or less, in sympathy; at all events, different methods and styles are never allowed to conflict, to kill each other. When discord is thus avoided, when every canvas is duly respected, genius does not run the danger of disappearing for the moment, or of suffering from its neighbors; the honest endeavor or experiment is seen at its very best. Such careful arrangement immediately gives dignity and harmony to the walls. The collection can be looked at, not only comfortably, but with absolute enjoyment. Of course, it may be said that the system of inviting contributors must lead to injustice, that the most perfect committee is sure to have its prejudices and preferences, that some good men are bound to be left out. But still, in the end, the system, no matter how much abused, would be productive of less evil than the Academy's plan of considering any and everything any and every man, woman, or child may choose to submit. The more difficulty there is in obtaining admission into an exhibition, the better it must be for that exhibition.

But it is not necessary to theorize when we have the International as a practical example of how the system works. I do not count the New Gallery, where the same rule is supposed to prevail, for there, though there is a committee made up partly of artists, I doubt very much if they are the ruling force. Besides, they are mostly Academicians, with, presumably, Academical axes to grind. The comparison may be made more reasonably between the International and the Academy. It is a very few weeks since I wrote that the successes at this year's Academy could be reduced to two small pictures—a portrait and a landscape. And now, if I turn to the younger

institution? At once, I am confronted by a difficulty. I find in the four or five rooms—there are sixteen galleries at Burlington House—more good, more interesting work than I can mention without my letter dwindling into a mere catalogue, and I find also some extremely distinguished work. Here you have a President who not only is useful as a figurehead, but is a painter accepted by all other painters as a master. It would matter little at the Academy, one way or the other, if Sir Edward Poynter did or did not exhibit. Mr. Whistler's appearance at the International is an event of the greatest artistic importance—especially as three of the six paintings he contributes have never been shown to the public before. One is a little nude, the other two are portraits—small ovals: "Violet and Rose, Carmen qui rit," and "Rose and Gold, the Little Lady Sophie of Soho"—both very lovely harmonies of color, full of the elegance and reticence which always make so many of the canvases hung near Mr. Whistler's seem but tentative, experimental, uncertain. It is to be noted, too, that Mr. Whistler's influence develops an appreciation of these very qualities in his pupils. Not very far from his group of pictures is a study of a head, "Étude de la Semaine," by Miss Inez Bate, who, the catalogue explains, is "Maître de l'Académie Carmen, Élève de Whistler," and its sober restraint, its dignity, lend it a distinction you do not look for in a student's work. How often, I wonder, would one's attention be called to the "Week's Study" by an Academy student, if it were hung at Burlington House?

The same difference that exists between the presidents of the two institutions is as striking when it comes to the rank and file. At the International the trouble is to discover, not the successes, but the failures. But let me quote Mr. R. A. M. Stevenson on the subject:

"While the first impression at the Academy is appalling, the first sight of this place is inviting and delightful; while one takes some time to find out that there are good works at Burlington House, one admits only slowly and reluctantly that there are bad pictures at the International."

And he adds that "perhaps bad may be a rather strong word, since the International does not go as far down as the Academy." But, really, it has been amusing, in reading the criticisms in the London papers, to see how the various critics have disposed of this majority of good work, to which the usual London show has not accustomed them. One or two have been content to consider only the pictures of the group represented by Renoir, Pissarro, Monet, Sisley, who, it has been said, must be discounted in reckoning the actual forces and prospects of the Society, though I cannot understand why, since they are unquestionably among the forces that have made a large proportion of the exhibitors what they are. In some cases interest has been concentrated chiefly upon the Glasgow men; very naturally, as this is the one gallery in London where Mr. Guthrie, Mr. Walton, Mr. Lavery, Mr. Paterson, and the others are received and recognized and honored. I cannot help feeling that their accomplishment has not yet justified the great expectations they aroused several years since, but their work is never commonplace, and their continual endeavor to develop style above all else prevents their tumbling into the trivialities of the Academy or wrecking themselves on the sham re-

vivals and archaic affectations of the mere notoriety-seeker. Nor have they ceased to concern themselves with the decorative quality of a canvas, so that you may be sure of some definite design, some well-thought-out arrangement of color, even in the portrait or landscape in which you are most keenly conscious of their indifference to tones and values.

Then, again, the important fact may be the presence of Miss Beaux, who made such a sensation last year, and Mr. Chase, who, in London, has hitherto been known only by reputation, and I think he might have sent pictures that would sustain that reputation more brilliantly. Or, the chief attraction is the work of the Scandinavians, Kroyer and Thaulow; of the Germans, Stuck and Klimt; of the Italians, Mancini and Fragiaco; of the Dutchman, James Maris, or of the individual painters independent of any group—Muhman, Mark Fisher, McLure Hamilton, for too many years resident in England to be identified entirely with the Americans—or Couture, or Sandys, or Walter Crane, or Greiffenhagen; and so I might go on through a long list. But I have said enough to give an idea of what manner of painting, or painter, is to be looked for at the International.

The prints and drawings are still more distinguished as a collection, and they are as admirably hung as the black-and-white work at the Academy is chucked carelessly together. The men of the sixties are given a place, and for me this mingling of the older with the younger generations is immensely helpful. There are studies by the English Alfred Stevens, the designer of the Wellington Monument at St. Paul's, and by the German Menzel. A room—a white room—is set apart for Mr. Whistler's etchings, among them two beautiful little impressions of the Jubilee Naval Review, now seen for the first time. There are several of Mr. Cole's wood engravings after the English masters, already published in the *Century*; color prints by Mr. Oppler and Mr. Nicholson; etchings by Herr Klinger, Mr. Pennell, Mr. Strang; Mr. Sullivan's series of drawings to illustrate "Sartor Resartus." But, again, I am in danger of cataloguing. All I have space to say is that the average in the black-and-white section is higher than in any other, and that the sculpture, if there is not much of it, is excellent, while it includes one of M. Rodin's most perfect little groups. Altogether, the radicals, who are so eager to put a stop to all exhibitions because both Salon and Academy have failed the artist, could not do better than visit the International, and from it borrow a far simpler solution for the most serious artistic problem of the day. N. N.

SAN GIMIGNANO.

FLORENCE, May, 1899.

Now if it were not for the recent fleeting gleam of popular interest in which the little Tuscan town of San Gimignano has been basking on account of the Dante celebration there, I should probably never set down for publication a word about the place. Nor do I intend to describe the goings on at the aforesaid celebration, firstly, because I was not present, and, secondly, because, as near as I can make out, it was like most celebrations—speeches, dinners, processions, and band-concerts. Neither can I speak learnedly of the surprisingly numerous and interesting frescoes in the local churches, by Benozzo Gozzoli, Ghirlandajo, and other worth-

ies. What, indeed, remains to be mentioned? Little, it is true; but there is always a pleasure in chronicling the obscure, if worthy, and bringing to light hidden treasures of even small price. The town, up to the present time, has been known to the elect only, and from the elect did I get my cue to go and stay there. So, as a mere matter of *noblesse oblige*, I should be extremely shy of "giving away a good thing" were it not for the celebration above mentioned, which has attracted such comparatively general attention to the town among tourists that I might as well raise my voice to tell them what San Gimignano is like when they are not there, and when no band-concerts are in progress.

What, then, is the mystic attraction of San Gimignano? Well, it is a mediæval town. Here, in seething modern Italy, only seven miles from the railroad, under the shadow of Florence, that great cradle of the new life of which the ending century has been so gloriously full, San Gimignano stands stolidly unmoved, essentially as it stood before that new life was conceived of. It was more on account of the local color of the place than of its somewhat slender connection with Dante—he spoke here in favor of the Tuscan League in 1390, not, as erroneously calculated, in 1299—that the town was selected as the stage for the recent cavalcades, speechifications, and so on. And as a stage, the setting is certainly appropriate. The centre is occupied most properly among a sober and cleanly folk by the town-wall, which, with that perversity almost proverbial in wells, occupies nearly the highest land in town. If you will stand on the steps and peer over the curb into the capacious depths, you will get the keynote of the town; for the inner edge of that solid stone curb is like nothing so much as a blunt-toothed comb. Unaccounted generations of bucket-ropes sliding over its surface have worn there a continuous fringe of grooves, so deep that in some you can hide two fingers. Turn and walk around the square, being careful not to step on the crockery and other small wares laid on the pavement for sale. The houses, you see, have rarely remained true to their original intentions. Doors have been made into windows, arches bricked up, and then other arches opened under them, to be perhaps superseded after all by a modern lintel. There are bits of fine old Siena brick and terracotta work over some of the more pretentious windows; a sturdy Romanesque chapel front of the eleventh century serves as a wall to the stable-yard; and dozens of other tracks of the whirling of time are obvious. Indeed, it is said that the town is mentioned as far back as 921. In the middle part of the town plentiful traces exist of a wall of the twelfth century.

In the sixteenth century a much more extensive wall was constructed, and this wall, with its round bastions, its machicolated gates, and its embrasures for the primitive cannon with which it was at intervals defended, still remains in almost perfect preservation. Outside of it the town, with true mediæval caution, has steadfastly refused to expand. Within it the highest point is occupied by the Rocca, or citadel, now for the most part a blooming garden. In the aimless streets that plough through the solid masonry of the town like deep crooked stone gutters, the pack-horse is still the characteristic beast of burden. The mail comes up from Poggibonsi, when it does come, in a shambling old curriole. Fur-

ther than the telegraph office, electricity in any form has never penetrated. I think at "Il Leon Bianco" I once saw a newspaper, but I forget of how many weeks back. The policeman sleeps undisturbed on the café bench. A bicycle tourist is a seven days' wonder. In fact, I am ready to back my thesis against all comers, that San Gimignano is a thoroughgoing mediæval town.

And what of the inhabitants in a mediæval town? I wish I could truthfully say that mediæval costume is still worn. But, alas, to return to our stage metaphor, instead of the "legitimate" doublet and hose, cuff and farthingale, a distressingly low-comedy style is prevalent; loud checked suit, pancake derby, and baggy green umbrella being proper festive attire. Since their disastrous playing at politics in the Middle Ages, resulting in loss of independence, dismantling of the fortifications, and a forced fealty to Florence, the inhabitants have to a remarkable degree minded their own business and cultivated self-dependence. Only once was I approached by a beggar (and this, mind you, in Italy) during my stay—of course, saving and excepting the children, who follow a visitor as if he were a kind of modern Midas. Almost every trade is practised in this isolated little community. The women twirl the distaff in the streets, and on the grass outside the walls bleach the narrow linen web that comes from the hand-loom clapping in the doorways. Dyed yarn hangs on the walls to dry. The cobbler, the harness-maker, the mason, the carpenter, the painter, the coppersmith, the potter, and all the rest of them can be seen intermittently at work. For nobody works very hard at San Gimignano. Why should they? Things were pretty well finished up there some time ago. Only the very old men and women are really active. Most of the able-bodied men lounge on the piazza and hold deep self-communings as to the advisability of doing anything to-day. It seems to take till about sixty-five to learn the value of time here. The types of face are not unpleasant—the women round-cheeked and cheery, brown-haired, taller and more attractive than the Senese; the men spare, keen-faced, taciturn, pipe in mouth, and hands in pockets, looking not unlike New England fishermen ashore.

Until the olive-picking and wine-making season comes round, life is almost stationary. What need to go far for anything? Following her self-centred policy, the town is well provided, not only with trades, but with public buildings. There is the cathedral, a stone barn without, within miserably painted above its uncouth capitals in imitation of Senese striped marble, yet enshrining the famous chapel of Fina, the invalid girl saint, whose simple death at the age of fifteen is beautifully illustrated on the walls by Ghirlandajo in some of his finest frescoes. There are the inevitable barracks, where a fresh section of that national scorpion, the Italian army, is quartered every six months. There is the hotel (as it loves to style itself), in an ancient "palace," where the infrequent visitor may watch the antics of his coming dinner as the geese chase the rabbits round the courtyard, or admire the sign-board, the ancient coat-of-arms of the town, a white lion on a shield half red, half gold. There is a mysterious factory that makes something very noisily in the sleepy late afternoon. There is even a theatre, shamelessly converted out of the ancient and venerable

hall of the Council. There is a collection of pictures from suppressed monasteries and the like, in the upper chamber of the town-hall. There is a monastery, not suppressed, among towering cypresses in the valley. There is an orphan school that is always open, and a public library that is always shut. There are parish churches, bald and early, but full of mural work by Benozzo Gozzoli and other great names. There is a large hospital and a small penitentiary. What would you? Are we not a complete little community at San Gimignano?

But above all there are the towers. Concerning them it appears, as nearly as I can make out, that at some misty date in the early struggles between Guelph and Ghibelline, or the two local families of Ardingelli and Salvucci, one of the haughty nobles built him a large square tower some three stories high, lighted by graceful arched windows and finished with a corbelled parapet. This was altogether too much for the leader of the opposition, who promptly built a taller tower and capped it with a belfry. "Unbearable!" cried every one, and forthwith the tower-building fever seized the town. Towers sprang up in all directions, all on the same square plan and with the same characteristics. Height being the sole consideration, any stone was used, mostly an ugly gray slate; no time or money was wasted on decoration, or even windows, save a few light-slits; there was no attempt at finishing the top—you merely stopped construction with a certain course, ready to go on again if the tower across the street grew taller than yours. One builder was so thoughtless as to run a set of corbels round the top of his tower; but behold, a neighbor's overtopped him, and he had to add another story, leaving the corbels foolishly sticking out below it. Church and state became equally infected. The town hall had been finished, a fine piece of early Gothic, but the Council built a large tower next it, thereby blocking the side street, which had to be led through an arch in the base. The cathedral chapter laid their heads together, and, under the name of a campanile, ran up a perfect monstrosity. One desperate slave to family pride erected twin towers only a few yards apart. Man without a tower was but a thing of naught indeed. At last affairs got to such a pitch that the authorities interfered. A maximum height of towers, a sort of early building law, was fixed, beyond which no private person could go. Then the craze subsided and the town came to its senses again. But what a looking town! Everywhere within the limits of the early walls, in the heart of the town, ugly tall towers and ugly short towers and ugly stumps of towers gibber senselessly at the firmament above them. Viewed from a distance, the town resembles some manufacturing centre, bristling with great chimneys of odd shapes. Only recently one of the loftiest towers was pulled down as dangerous, and similar precautions seem to have been often taken before. And they are now little more than ruins.

Just when this craze occurred I don't think any one quite knows, but it is alluded to in a proverb of highly respectable antiquity; and in the town hall you may see Gozzoli's picture of Saint Gimignano himself, painted years before Columbus was heard of, holding a model of the town, of which the towers form about nine-tenths of the buildings. Similarly, in Domenico Ghirlandajo's fres-

coes in the cathedral, groups of towers are used for unmistakable local "color"; and on the top of one we see a large bush already grown, as on an ancient ruin. By day they slowly splinter and crumble away under sun and wind and frost, of no more use now than they were to their pride-devoured builders. By night, from their pinnacles, the owls hoot derisively at each other, like haunting spirits of the disdainful nobles of the murky old days that saw their rise, and the moon plays strange mocking tricks with them. And as you end your stay in this corner of the Old World, and drive back to the New again, through the vineyards of the valley, you will turn for a last glimpse of the strange forgotten town, crawling uncertainly along its hilltop like some Rip Van Winkle who has lost his way, and all the poetry within you will be drowned in a flood of laughter at the inexpressibly futile and ludicrous appearance of the towers of San Gimignano.

S. F. B.

Correspondence.

FOREIGNERS AT THE UNIVERSITY OF PARIS.

TO THE EDITOR OF THE NATION:

SIR: Will you please allow me to rectify an omission in my letter on Americans at the University of Paris? Besides the Comité de Patronage des Étudiants Étrangers, I should have mentioned another information-giving body, created especially to supply the needs of American students, namely, the Comité Franco-Américain, whose secretary, M. Henry Bréal, No. 70 Rue d'Assas, Paris, holds himself ready to answer all questions that may be addressed to him regarding studies in any of the French universities. American students, before or after arriving in Paris, may obtain from him information not merely on academic subjects, but also on the practical questions of expenses, lodgings, etc.

M. Bréal has just published, in the name of the Comité Franco-Américain, a pamphlet (in English), of about 140 pages, 8vo, entitled 'The Universities of France: A Guide for American Students,' containing very full information regarding organization, requirements for admission and graduation, and courses of study. This pamphlet may be had gratis on application either to him or to W. T. Harris, Esq., U. S. Commissioner of Education, Washington, D. C.—Yours very truly, W. S.
PARIS, June 15, 1899.

Notes.

Henry Holt & Co. announce Krausse's 'Russia in Asia,' and 'Adrian Rome: a Contemporary Portrait,' by Ernest Dowson and Arthur Moore.

'Thirty Years of New York Politics—Up to Date,' by Matthew P. Breen, will shortly be published by the author, at No. 71 Broadway, New York.

Macmillan Co. will publish 'Insects, their Structure and Life,' a primer of entomology, by Prof. George H. Carpenter; 'State Trials, Political and Social,' in two volumes, by H. L. Stephen of the Inner Temple; and, somewhat later, 'The Govern-

ment of Municipalities,' by Dorman B. Eaton.

The Scientific Publishing Co. of this city have nearly ready the seventh issue of 'The Mineral Industry: Its Statistics, Technology and Trade in the United States and Other Countries to the End of 1898,' edited by Richard P. Rothwell.

The Hudson-Kimberley Co. of Kansas City will publish immediately 'The House of Dreams, and Other Poems,' by William Griffith.

In August, Brown & Co., Boston, will have ready 'A Kipling Primer,' a bibliography by Frederick Lawrence Knowles, with a critical appreciation of Kipling's works and an alphabetical index to the plots of all the stories and ballads; and 'The King and Queen of Mollebusch, or, The Indispensables,' translated from the German of Georg Ebers by Mary J. Safford, with full-page illustrations.

The third volume of the Clarke papers, edited for the Royal Historical Society by Mr. Charles H. Firth, who, with Mr. Rawson Gardiner, shares the seventeenth century as his own, in matters historical, is in the press. It will contain many important papers relating to the West Indies. A facsimile will also be given in this volume of a very curious colored caricature of Richard Cromwell, on horseback, with the head of an owl.

Mr. Rodway, author of 'In the Guiana Forest,' of the 'History of British Guiana,' and of 'The West Indies and the Spanish Main,' in the 'Story of the Nations' series, is now on a visit to England, having obtained leave of absence for six months from his duties of librarian and assistant secretary to the Royal Agricultural and Commercial Society of British Guiana. From the more serious subjects of history and natural science Mr. Rodway has recently turned to novel-writing. His 'In the Wilds of Guiana,' just out, forms one of Mr. Fisher Unwin's 'Over-Sea' series. Mr. Rodway took to England manuscripts which will no doubt find their way into the publishers' hands.

Dr. Telting, sub-director of Archives at The Hague, is at present in the West Indies on official business. The West Indian Records preserved at The Hague having all been properly arranged, catalogued, and indexed, the Dutch Government has decided that the Records remaining in Dutch Guiana and in Curaçoa shall be similarly treated. It is on this mission that Dr. Telting is now engaged. He arrived in Paramaribo, the capital of Dutch Guiana, early in May, and, assisted by a staff of clerks from the several departments, he took in hand the documents preserved in the law courts, in the Treasury, and in the office of the Secretary of the Colony. Thinking he might learn something from the officials of British Guiana as to the preservation of documents from the ravages of insects, Dr. Telting paid a short visit to Georgetown, Demerara, where every facility for inquiry was given him by Governor Sir Walter Sendall. Neither in British nor in Dutch Guiana, however, has science yet disclosed the vermifuge that will preserve papers from the various pests that destroy books and manuscripts alike. After completing his labors in Dutch Guiana, Dr. Telting will proceed to Curaçoa, to arrange the Public Records of that historical island, of which Stuyvesant, the famous Governor of New York, was at one time Lieutenant

Governor. Returning to Europe by way of New York, Dr. Telting will renew acquaintance with Prof. Burr of Cornell, with whom he formed agreeable associations at the time the latter was working at The Hague in connection with President Cleveland's Venezuelan Boundary Commission.

The Messrs. Putnam have become the publishers of the second edition of Miner Bruce's 'Alaska,' which we noticed on its appearance three years ago, and have much improved its dress. The author has revised and enlarged his work, and given it a needed index. There is a chapter on the boundary dispute, one for tourists in search of the picturesque, and one of practical suggestions to prospectors in the Klondike. The illustrations are numerous and serviceable, and there are several maps.

Macmillan's taking little 'Pocket English Classics' proceed with 'Milton's Comus, Lycidas, and Other Poems,' and Byron's 'Childe Harold,' both edited by Andrew J. George.

FitzGerald's Omar is for a third time given the imprint of Thomas B. Mosher, Portland, Me., now in a "Vest-Pocket Edition," long and narrow as befits the designation. The binding is very dainty, and the printing to match. Mr. Dole, never weary of his subject, furnishes a brief preface.

Volumes ix. and x. of Mr. Charles F. Lummis's monthly *Land of Sunshine* are replete with information and entertainment not wholly confined to California. In 'The Bones of Mitla' the editor presents some of the architectural marvels of early Mexican civilization, and there are short illustrated articles on Hawaii and Manila, while Joaquin Miller describes 'Life in a Klondike Cabin,' from personal experience. In volume ix. is related by several hands the memorable ascent of the Enchanted Mesa by Mr. Lummis, his little daughter, President Jordan and wife, and others, who easily discovered proofs of former aboriginal occupancy. The pictures of scenery, population, natural products (e. g., the largest tree in the world), private and public dwellings and the like, will interest any one. Those who go deeper will be most struck by the bold and independent tone of the editorial writing, especially on public topics. This is not a common characteristic of the press, on the Pacific Coast or elsewhere; but courage has a permanent berth in the office of the *Land of Sunshine*.

A short but admirable preface, containing a brief biography of Amalie Skram, the author of 'Professor Hieronimus' (John Lane), and statement of her position among Scandinavian realists of to-day, arouses further interest in the story to succeed it by means of the following quotation from Björnson: "It is," he says, "the first time that a great author, in full possession of her mental powers, has had the opportunity of making such a study. Seeking quiet and treatment for a nervous affection, Fru Skram, of her own free will, became an inmate of a lunatic asylum. Thus she had a chance of studying one of those specialists in mental disease who are too apt to mistake rebelliousness for a sign of mental derangement. Of this doctor, of the patients, the nurses, her whole environment, she gives a picture so vivid, of such absorbing interest, that it can vie with the most thrilling romance." Vivid and absorbing it certainly is. We follow the fate of the heroine with feverish solicitude, and pity the husband hypnotized into the general be-

lief in her insanity, but it is the horror, and not the romance, of the situation which thrills us. A mixture of domineering conceit, untruthfulness, and subtle cruelty enables the professor to secure and retain his patients; nurses and doctors alike come under his spell. The treatment and hopeless struggles of the sane to escape are portrayed in ghastly detail; and this dramatic piece of writing of a high order will doubtless serve as a weapon for those who distrust the despotic power of asylums.

Baker, Voorhis & Co. of this city are the publishers of a valuable compendium of the 'United States Internal-Revenue Laws Now in Force,' by Mark Ash and William Ash. The volume is accompanied by notes indicating the derivatory statutes, references to judicial decisions, regulations, rules, and circulars of departments, and is supplemented by a voluminous appendix containing laws of a general nature and miscellaneous provisions applicable to the administration of the internal-revenue laws. The book is made necessary by the enactment of the war-revenue law of 1898, and is intended to cover everything. Taking as a basis the last official compilation of the Commissioner of Internal Revenue in 1894, the authors have endeavored to "comprehend in one volume all the *express* law." The compilation is conveniently arranged for purposes of reference.

'Cases on American Constitutional Law,' edited by Carl Evans Boyd (Chicago: Callaghan & Co.), is a compilation of some hundred and fifty or more abridged cases. The author, in his preface, disclaims any intention of attempting to rival the well-known collection of Prof. J. B. Thayer, but has aimed at bringing together within the compass of a single volume a sufficient number of the leading decisions of the Supreme Court of the United States to form the basis of a university course on Constitutional Law. The cases are taken from the reporters verbatim, except that "certain parts, particularly statements of facts, have been shortened, and matter not necessary to the elucidation of the constitutional question involved has been omitted."

'The Conflict of Laws in the Province of Quebec' is the title of a little book by Prof. E. Lafleur of McGill University (Montreal: C. Thoret). This is, it seems, the first attempt made "to collect and systematize the rules for solving conflicts of laws derivable from our codes, statutes, and jurisprudence." Many circumstances contribute to make the study of the conflict of laws in Quebec specially interesting—among others the fact that the province, while retaining French law as the foundation of its jurisprudence, has not (following the modern French rule) made civil status and the law of persons dependent on nationality, but has, on the contrary, adhered to the rule of the old French law, which is the same as that of the English law—that such questions must be decided with reference to *domicile*. The volume is a convenient handbook, and has a good collection of cases.

The Weidmann publishing-house of Berlin has commenced a series of translations of Greek tragedies by the well-known professor, Ulrich von Wilamowitz-Moellendorf, of the University of Berlin. These translations have already been published in the learned editions of this scholar, and are here repro-

duced in the hope of reaching readers who would not naturally turn to a critical and more costly edition of an Attic tragedian. Besides the translation, which is invariably a masterpiece of literary art, each volume is furnished with an introduction of which it is the highest praise to say that it is characteristic of the author. Taken all in all, these volumes form no inconsiderable contribution not only to the literature of the classics, but also to German literature. The tragedies thus far published are the "Œdipus Rex" of Sophocles and the "Hippolytus," "Hercules Furens," and "Supplikes" of Euripides.

American teachers of the classics, both in secondary schools and in colleges, will find much that is interesting and profitable in Dr. P. Dettweiler's articles on Latin and Greek instruction ("Didaktik und Methodik des griechischen und des lateinischen Unterrichts") which originally formed a part of Baumeister's recent 'Handbuch der Erziehungs- und Unterrichtslehre' (Munich: Beck), and are now obtainable in separate editions. Dr. Dettweiler, who is an Oberschulrat in Darmstadt, writes from long experience as a teacher, and from thorough knowledge of the extant literature of the subject to which his notes furnish an excellent bibliographical guide. The general portions of each treatise, dealing with the development, value, and principles of classical instruction, are, of course, of as great value here as in Germany; on the other hand, the particular considerations of teaching in the higher classes of the Gymnasias, while not at once and *in toto* applicable to our system, contain much that is of very great worth in regard to choice of authors to be read and methods of instruction.

Lippincott's Magazine will, in its July number, make a new departure in outward dress, and in collaboration, and announces the sole literary remains of the author of 'David Harum,' "a long short-story, entitled 'The Teller.'"

In the June number of the *Library Journal*, Mr. John Thomson, of the Free Library of Philadelphia, reports on his endeavor "to procure a hand list of incunabula (limiting the date to books printed prior to 1501) owned by colleges, libraries, and private owners in America"—this by way of contribution to the Gutenberg quinqucentenary celebration at Mainz. Already, he says, from five sources only he has got track of more than 1,500 volumes. He desires from any possessor of "fifteeners" a description embracing author, full title, date of publication and place (or press), and bibliographical reference (as to Hain or Panzer). In the same number may be found Mr. J. P. Edmond's account of his simple method of cataloguing fifteenth-century books.

We read in the Florence *Nazione* that on June 3 the Duchess Enrichetta Caetani di Sermoneta contributed \$5,000 towards the fund for the perpetual Dante lectureship in Florence. This fund, by the resolve of the local executive committee of the Italian Dante Society, had been named for Duke Michelangelo di Sermoneta of Rome, her late husband, a devoted student of Dante and eminent commentator. The Dante Hall in Or San Michele is to be furnished up and restored to its original condition by November next; and for the seating of it the Duchess offered 600 lire, and our countryman, Prof. Willard Fluke, 200. The same paper contains the subscription-list for the scholastic foundation to ce-

lebrate the fortieth year of Prof. Pasquale Villari's "fecondo e glorioso" instruction.

The twenty-first annual report of Mr. W. E. Foster of the Providence Public Library dwells largely on the new building now approaching completion. An interesting feature of the work of the year is the establishment of a system of "home libraries," consisting of "little cabinets, of attractive design," filled with good reading, and placed in the needy portions of the city. The decrease in the number of books circulated is amply accounted for by the increase of newspaper and periodical reading occasioned by the war with Spain. It is interesting to note that the percentage of fiction circulated was 60.60, history coming next. The total number of books in the library at the end of the year was 86,235.

From the annual report of the Suez Canal Company it appears that the receipts for 1898 were \$17,581,200, or nearly two and a half millions more than the previous year, and the largest on record, though the number of vessels (8,503 of 9,238,000 tons burden) was slightly less than in 1893, when the ships numbered 8,552. England sent 2,395 vessels, Germany 356, France 231, Holland 193, Austria 85, Italy 74, Turkey 54, Spain 49, Russia 48, Norway 47, Japan 46, Egypt 10, Denmark 8, America 4 (there were 3 last year), China 4, Portugal 3, Sweden 2, Greece 2, Rumania 1, and Argentina 1. Of the 212,000 passengers, a considerable majority were soldiers—English 34,000, Russian 28,000, Turkish 23,000, French 14,000, Spanish 10,000, Italian 5,000, and Dutch 3,000—figures of much historical significance.

At the last congress of the Sociétés Savantes, the Abbé Marsan read before the historical geography section a paper upon a project for communication between the Atlantic and Pacific Oceans by Nicaragua lake presented in 1785-1786 to Florida-Bianca, Minister of Foreign Affairs to Charles III. of Spain, by Count Louis Hector de Ségur, commandant of the castle of Péronne. The route suggested was "by the channel of the San Juan and Lakes Nicaragua and Lindiri." The manuscript of this memoir has been found in the archives of the château of Arreau.

Dr. Horace Howard Furness was given the honorary degree of Doctor in Letters by Cambridge (Eng.) University on June 13. The Public Orator, Dr. Sandys, had his word of praise for Dr. Furness's eminent Shaksperian labors—"virum et nobis et Britannorum poetæ summo conjunctissimum"—but also did not forget his father, that sound abolitionist, the late Rev. William H. Furness, D.D., "rerum divinarum interpretis humanissimi, Afrorum libertatis per vitam longam vindicis acerrimi."

—A return to the British Parliament of proceedings in county courts under the Workmen's Compensation Act of 1897 covers only three full months of the law's activity, but gives some interesting figures. The act provides that the amount of compensation may be settled by agreement, in which case it does not necessarily become a matter of court record. Failing agreement, two forms of arbitration are provided—first, an informal arbitration by a single arbitrator chosen by the parties; or, second, a formal arbitration before a county court judge, or an arbitrator appointed by the judge and acting under court rules. The number of cases recorded was 130, of which 104 were settled by the judge's award, 8 by an arbi-

trators' award, and 18 by acceptance of money paid into court. The plaintiff won in 161 suits and lost in 29. In 38 cases compensation was given on account of death, the average award being £200. There were 53 cases of injury in which a weekly sum was granted—16 for total and 37 for partial incapacity. The average sum for partial incapacity was 12s. 10d. a week; for total, 11s. 4d. "It appears somewhat remarkable that the average payment for total incapacity should be less than that for partial incapacity. Probably the explanation is that partial incapacity usually means temporary incapacity, and that, in cases of temporary incapacity, even where the employer disputes his liability, he does not object, if he pays at all, to pay the full amount allowed under the act, i. e., half wages. On the other hand, the cases of total incapacity include a larger proportion of cases of permanent disablement in which a smaller allowance than the maximum under the act is awarded."

—These figures present a strong contrast to the returns under the Employers' Liability Act of 1880. Of the 681 cases treated under this act in 1898, 596 were in employments to which the Workmen's Compensation Act now applies. The average amount of damages in case of death was, under the act of 1880, only £85 6s., compared with £200 under the act of 1897. Solicitors' costs under the earlier law averaged £22 14s., and under the later only £11 1s. It is known that only a small part of the claims come before the courts, as damages are usually given without question. If the rate of injury and death in Germany held for England and Wales, the number of cases would number at least 120,000, and probably more. Considerably less than one per cent. of the cases, therefore, come before the judge or arbitrator, and the larger share of those do not arise from a disputed payment, but are to settle the question of the person to whom the payment should be made. "In some of the largest and most populous industrial districts, where numerous accidents must certainly have occurred in the employments coming within the act, not a single litigated case under the new act had, up to the 31st of December, been taken to the county court and decided, either by the judge or arbitrators. Thus, there was not one case from the mining districts of Durham, Consett, and Bishop Auckland, with a population of 312,000, nor from South Staffordshire, with a population of 575,000, nor from Plymouth and South Devon, with a population of 480,000, nor from Cornwall, with a population of 314,000. In Bristol, with a population of 355,000, there was only one case, and only two in the circuit which includes Halifax, Huddersfield, and Dewsbury, and has a population of 583,000."

—The contributors to Prof. Petit de Julleville's seventh volume of the *Histoire de la Langue et de la Littérature Françaises* (Paris: Colin) have kept the tacit promise of their work on the eighteenth century by giving, in their treatment of the Romantic period (1800-1850), a very generous attention to writers of clerical and reactionary opinions, namely, Chateaubriand, Joseph de Maistre—and even Ballanche, Lammenais, Guisot, and Henri Martin hardly come off so well, although their respective writings are fully and fairly analyzed. As regards the principles of the Romantic school in poetry, one is pleased at finding neither violence nor

paradox in the exposition of them given here; but many readers will doubtless be surprised at the systematic disparagement of Hugo's tragedies, which have been contemptuously lumped with the work of Dumas père, and summarily disposed of as "melodramas." By following a similar line of argument, it would not be difficult to squeeze 'Le Cid' into the same category. Among the novelists, George Sand and Balzac naturally hold the foremost places. In the case of the latter, however, certain details of criticism leave something to be desired. If the great novelist's predilection for the Quartier Saint-Germain is indicative of a somewhat "snobbish" turn of mind (from which some of his successors have not remained entirely free), is it also true that his portraits of aristocratic society in the thirties are alone wanting in delicacy and tact? Surely, not here only is Balzac's representation of human character deficient. Much the most interesting chapters are those devoted to a review of criticism (Émile Faguet), to the literary relations between France and her neighbors (Joseph Texte), and to the interdependence of letters and art (Samuel Rocheblave), during the singularly active period covered by this volume. M. Faguet, treating his subject in more academic style than is his wont, appears at his best in estimating the value and influence of Sainte-Beuve's criticism; and in view of the sly underrating which the memory of the inimitable *causeur* has of late years experienced, M. Faguet's judicious discussion produces the effect of a rehabilitation. The most serious lack of this issue is in the matter of bibliography, to which but very superficial attention has been given. It is enough to state that the division on Musset contains no reference whatever to Paul Lindau's deservedly popular monograph.

—The unsettling of time-honored customs and old lines of demarcation of educational institutions, in consequence of the development of new domains of knowledge into full-grown sciences, has been experienced everywhere. Just now, the universities and higher technical schools of Germany are engaged in a serious intellectual boundary dispute, which is complicated by such side issues as the graduates' status in society and the State. The distinction attaching to the Doctor's title has led the modern technical Hochschule to covet the right to confer this degree, hitherto reserved to the university alone. If the degree of "Doctor of natural sciences" is granted by certain universities, why should not a four years' course at a technical Hochschule, followed by a *rigorosum* and a thesis, lead to a *doctor rerum technicarum*? Champions of the older institutions do not object to the title, but, they contend, it ought to emanate from the only genuine source of doctors' diplomas, i. e., the university. Others, however, hold that the titles of architect, engineer, etc., if properly guarded by law, would render the new species of doctor unnecessary. The grave question is under debate, and, to judge by the amount of thought bestowed upon it by the press and other authorities, is in no danger of being settled with unbecoming haste.

GORHAM'S STANTON.

Life and Public Services of Edwin M. Stanton. By George C. Gorham. With portraits, maps, and facsimiles of important

letters. 2 vols., 8vo, pp. 456, 502. Boston: Houghton, Mifflin & Co.

There has long been a good deal of curiosity to know whether Stanton's private papers contained much material which would throw new light upon the history of the civil war and the reconstruction period that followed. The publication of the *Life* by Mr. Gorham seems to prove that his career was public in a more complete sense than that of most men, and that there were, with him, almost none of those private intimacies in which statesmen take confidential friends behind the scenes and reveal their inmost opinions of the men with whom they are acting, and the hidden springs of events in which they have a part. The man and his work were one; and he may be said to have had very little life outside of his official duties. With this impression, at least, we close these volumes, in the preparation of which the author is supposed to have had fullest use of whatever private papers Mr. Stanton left.

This air of complete absorption impressed all who met him during the years when he was at the head of the War Department. His face rarely changed from the fixed seriousness, tinged with sadness, which was its habitual expression. His eyes gazed abstractedly beyond his visitor, and his words were uttered in a quiet monotone, with very little motion of lips or facial expression. This might be varied by flashes of intensity or of imperiousness, but almost never by relaxation into ease of manner or the genial trifles of conversation which smooth the flow of public business. Even his approval came as a kind of official benediction, through which might break at any moment a notice to quit. The portrait in Mr. Gorham's second volume gives with faithfulness the expression of his countenance habitual in his periods of best health, but it was intensified too often by lines which marked a morbid condition of his nerves, and the look of weariness in the eyes as of those who are overdone by watching. As a lawyer the same quality of intensity had marked his work, making him a vehement advocate who saw his case in the light of partisanship for his client. To take sides and to be militant in doing so was a necessity of his nature. It was easy for Lincoln to be judicial and to rid himself absolutely of partiality and predilection; but for Stanton this was not possible—at least not until the heat of the fray had plenty of time to cool.

Stanton, although stoutly for the Union, had been fierce in his opposition to the Republican party, and continued denunciatory of Lincoln and all his works down to the very day of his own appointment to the War Department. Mr. Gorham says that no man of note had been "more lavish of expressions of dislike for the President himself than had Mr. Stanton." There seems to be no good reason for doubting that McClellan's assertions and illustrations in his *'Own Story'* regarding the violent contemptuousness of Mr. Stanton's language in conversations with himself in the fall of 1861, are substantially true. Mr. Gorham makes no effort to explain the incongruousness in the sudden transition from this attitude to that of cordial and harmonious work under the President. The great desire to be of use to the country is hardly a sufficient solution. As Secretary he must work in strict and confidential subordination to Lincoln, while violent repulsion and contempt would destroy the necessary basis of successful cooperation.

There is evidence that Stanton underwent a conversion scarcely less sudden and striking than the most marked of religious transformations.

Mr. Lincoln's biographers agree in stating that a feeling of strong personal dislike had followed the association of Lincoln and Stanton as lawyers in the McCormick and Manny reaper case tried in the United States Circuit Court at Cincinnati in 1857. They, with Mr. Harding of Philadelphia, a leading lawyer in patent cases, were counsel for Manny. By common consent Mr. Harding was to present the arguments upon the mechanical questions, but, in the arrangement of the arguments upon the law, Mr. Lincoln was made to feel that he had been ridden over roughshod by Stanton and discourteously crowded out of his place in the argument. There are differences in the stories as to the details, but Mr. Herndon seems to be conclusive authority for the fact that, on Lincoln's return home, he felt the ill-treatment keenly. Accident had, besides, made him aware of rude personal expressions by Stanton, such as men meeting Lincoln for the first time were apt to use and smart with shame afterward when they learned what manner of man they had tried to look down upon. As the one in the wrong, Stanton's dislike naturally became vindictive and even violent when, in so short a time, Lincoln became a great figure in the nation and was made President, Stanton opposing with might and main.

Mr. Harding, being often in Cincinnati after the civil war, told the sequel to Channing Richards, late the United States Attorney there, who is the authority for it, and an indisputable authority to all who knew him. Harding had been admitted to Mr. Lincoln's friendship, and the latter knew his chagrin at being in any degree connected with the painful incident. He was in Washington at the time President Lincoln was considering the appointment of a new Secretary of War, and, with a tact amounting to genius, Mr. Lincoln made him the messenger to Mr. Stanton, to say that he was invited, as an earnest War Democrat, whose ability and honesty were well known, to take the War Department, and give the country confidence in the integrity and intelligence of its vast expenditures and in the unpartisan aims of the Administration in its conduct. The choice of the messenger made personal explanations superfluous. That Mr. Harding came with the invitation told the story without a word more. Stanton received it as a man stunned and incredulous. After a long pause, in which the tumult of his feelings could be seen in his face, he broke out, "Do you tell me, Harding, that Mr. Lincoln sent this message to me?" Assured that it was so, with streaming eyes he said, "Tell him that such magnanimity will make me work with him as man was never served!" It goes without saying that so impetuous a nature would become radical in the struggle, once he was committed to it, and that whoever else might complain of arrogance in dealing with him, after such a renewal of relations Mr. Lincoln's leadership was easily safe, though it was sure to be kind and considerate.

In dealing with Mr. Stanton's change of attitude toward General McClellan, Mr. Gorham makes a very full analysis of the dispatches and letters which passed between the War Department and the headquarters

of the Army of the Potomac. First came the rectification of Stanton's former supposition that there had been niggardliness in supplying the army and in fitting it out for a campaign. Next was the disproof of the General's imaginary obstacles, and of delays by reason of any hostility to him personally, or desire on the part of President or Congress to thwart him. This was inevitably followed by Stanton's discovery that the constitutional irresolution of McClellan was the sole cause of his tardiness in marching against the enemy, prompting him to exaggerate the forces opposed to him, and making a vigorously aggressive campaign an impossibility for him. The conviction that the General was a failure as a field-commander naturally led such a Secretary to vigorous efforts to remove him from command. The biographer shows that Stanton was quick and ardent in recognition and praise of all who struck hard at the enemy, and was intolerant only of timidity and inaction. McClellan had to take the same judgment as the rest, and the vindication of Lincoln and his Secretary is found in the earnest and unswerving approbation they gave to the officers who were finally developed, and who proved their ability to lead our armies to victory.

With Lincoln's death began a series of complications in our history which showed that the balance-wheel was gone and the engine racing in a way that threatened wreck and ruin. In the treatment of the convention between Generals Sherman and Johnston for the surrender of the Confederate armies, Stanton's impulsiveness ran away with his judgment. It is impossible to think of Mr. Lincoln as permitting the course taken by the Secretary, had he been living. The panic following the assassination and the attempt to murder Mr. Seward also is the best excuse for the total misjudgment of Sherman's real meaning and of the situation created by the negotiations. It was a matter to be handled delicately and thoughtfully, not coarsely and impulsively. Silence and confidential instructions to the General would have brought accord, and saved public excitement at a time when the calming of the public mind was the plainest dictate of prudence. Yet the manifesto published was of the class which provoke and accompany revolutions. Sherman felt it to be a travesty of what he had done, and was made to believe that it was published with intent to destroy his reputation. Mr. Gorham, however, writes of it as an advocate holding a brief for Mr. Stanton, and is able to see no flaw in his judgment or conduct. He rings the changes on the General's "admission of his 'folly in embracing in a military convention any civil matters,'" when the folly, as Sherman viewed it, was in failing to assume that the politicians would refuse consent to any plan not conceived by themselves. In the very letter quoted, he said, "I still believe the Government of the United States has made a mistake." In like manner, Mr. Gorham's denial that Stanton's manifesto implied that Sherman was violating known instructions given by Lincoln to Grant, is contrary to the natural meaning of the document, and that which was, in fact, given it at the time. So, the influence on Sherman of his recent conference with Lincoln himself is ignored, as is the extraordinary change in circumstances when Johnston declared he had power to surrender at once all the scattered forces of

the Confederacy, and prevent that lingering guerilla warfare which had been the great apprehension of our military men when the larger armies should be surrendered. Scarcely ingenuous is Mr. Gorham's use of John Sherman's letter to Stanton as "testimony that he was sure Mr. Stanton would not allow his brother, the General, to be unjustly dealt with," when the whole letter was a diplomatic effort to soften Stanton's antagonism, and was based on his feeling that "gross injustice has been done General Sherman." The armistice had been expressly made pending the submission of proposals to the Government, and to publish violent condemnation of them at the very moment the rejection was sent, days in advance of its reaching Sherman, is so gross a breach of established rules in civilized administration that nothing but an existing panic can palliate it, and it was inevitable that Sherman should feel outraged. The only fair treatment of the subject at this distance in time is to admit, on the one hand, that Sherman's sketch of terms was defective and could not be accepted as it stood, and, on the other, that Stanton's course was under the impulse of undue excitement, and his publication a grave mistake.

The same fault of temperament marks the whole of Stanton's dealings with President Johnson after he had determined to side with Congress in the deplorable quarrel over the reconstruction question. That one of the President's cabinet should stay in his confidential office for the very purpose of thwarting the Administration, and should make his knowledge, thus confidentially obtained, the means of drafting a bill to be passed by Congress to prevent the President, as Commander-in-Chief, from directing his generals in their administration of what the bill itself declared to be a military government in the conquered territory, shocks intelligent people now by the mere statement. That the same officer, after condemning the Tenure-of-office Act as unjustifiable invasion of the executive rights and responsibilities, should himself use its provisions to defy the executive, when his resignation was requested, and afterward his removal announced, is a gross inconsistency accounted for only by the blindness created by passion. Mr. Gorham makes elaborate argument in defence of Stanton, forgetting that those who then approved his action because it furthered their partisan aims learned, with so hot a partisan as Mr. Blaine, to say at last, "If it had been President Johnson's good fortune to go down to posterity on this single issue with Congress, he might confidently have anticipated the verdict of history in his favor." The quotations which the biographer makes from letters of approval by distinguished men to Mr. Stanton at the time, need to be supplemented by the votes of Congress repealing the act almost as soon as Mr. Johnson left the President's chair. Its character as a revolutionary measure was thus confessed, and judicious friends of Mr. Stanton wish he had followed the example of Mr. Dennison, Mr. Speed, and Mr. Harlan, in quietly retiring when they found themselves out of harmony with their chief, as all other cabinet officers have done before and since.

Mr. Stanton's final official act was as inconsequent as the others of this irrational period of our politics. His party was nearly solid in favor of the impeachment of Mr. Johnson, and was still unanimous in condemnation of what was understood to be the

Administration policy. That the impeachment lacked one vote of a two-thirds majority in the Senate did not affect the existing antagonism between the departments of the government, or the duty (if duty it was) of Mr. Stanton to stick to the War Office as a partisan of Congress. Yet he immediately resigned, giving as his reason that the failure to impeach was a failure to sustain the former resolution of the Senate that the President had no power to remove him and designate a Secretary ad interim. It is, however, a curious fact that the vote for impeachment was exactly the same as the vote for the resolution against removal, namely, thirty-five. In this latest step, as in the others, the biographer presents with great fulness what was the current party defence of Mr. Stanton at the time, but does not indicate the calmer judgment of the same party, which came with the sober second thought when the intoxication of partisan zeal had passed off. Here again Mr. Gorham would have done well to reflect upon Mr. Blaine's conclusion that "the sober reflection of later years has persuaded many who favored impeachment, that it was not justifiable on the charges made, and that its success would have resulted in greater injury to free institutions than Andrew Johnson in his utmost endeavor was able to inflict."

The true view of Mr. Stanton's character seems to be, that, with great intellectual abilities and high ideals, his impulsive nature made him exceptionally liable to the mistakes of intense partisanship. So long as he was under the influence of Lincoln's calmly practical and eminently sane judgment, his honesty and his great powers made him one of the most useful of public officers; but when left without that leadership, his eccentricities led him into many and great errors. The two large volumes of this biography come short of being historically valuable because they do not get beyond the limits of the thought and action of the period of political storm and stress, and give us no help in correcting the misjudgments inseparable from such a time.

MARSHALL'S INSTINCT AND REASON.

Instinct and Reason. By Henry Rutgers Marshall. The Macmillan Co. 1898.

Under this title Mr. Marshall essays to furnish us with a psychology of religion. Its last words, printed in capitals, are, "Be religious." Why? Because analysis shows it is in the highest degree desirable. Very well; most of us already feel that keenly enough. The difficulty is that the first step towards being religious is to believe; and not only do the minds of most men nowadays not readily believe, but, bad as it is to be deprived of religion, it is unquestionably still worse to cook up a factitious, unfounded, and consequently unstable belief. True, Mr. Marshall persuades us that religion is an instinct, and, therefore, not a faith. But, like other instincts, the moment it is broken down in the particular form in which it has taken root in us, it is apt to evaporate altogether, or, at any rate, to retain little vitality. Thus, the book, in its practical upshot, leaves us just where the majority of thinking men are already. Those who deem religion to be altogether baneful, had better avoid it if they do not want to change their minds. There are not many sentences in the volume as pro-religious as the following, which serves at once to illustrate Mr. Mar-

shall's attitude and his way of constructing a period:

"We note also the existence of a continuous and partially effective opposition to rationalism by the established Christian Church; an opposition which seemed exceedingly perverse to the Church's opponents at the time, which appears extremely reprehensible to the body of thinkers to-day, but which, I am convinced, will not seem nearly so ill-timed nor so disgraceful to those who look back from the standpoint which will be attained in the future, however much they may deplore, as we all must do, the form which this opposition took and the methods employed to attain its ends."

It is certainly true that rationalism has been slowly declining. Since nineteenth-century science has taught us how truth becomes established, since Darwinian ideas have been applied to the history of mind, since Hegel's analysis of self-consciousness has been illustrated in studies of childhood, and since the phenomena of sub-conscious mind have become known, the pretensions of individual reason to solve the great problems have been at a discount. Yet, after all, it is our nature to reason, and we have to make the best of it. Progress never has come from the religious spirit, and never will, as Mr. Marshall acknowledges; so that the whole question is how far we are to carry rationalism, and at what point to check it. Mr. Marshall's doctrinaire anti-rationalism is rather amusing, considering that his whole book is rationalism undiluted with one single word dictated by authority or prejudice, or even instinct, as such. All that he contributes to the solution of that question is an argument to show that it is rational to pay great respect to our instincts, especially those of the broader kinds. We fancy one J. J. Rousseau said something like this, without being looked upon as the champion of unreason.

The author's method of philosophizing is heartily in the spirit of the times. He relies implicitly and utterly upon a line of evolutionary argument which may be sound and is decidedly fashionable. He assumes as unquestionable that every instinct must subserve, or have formerly subserved, some important need, and even sometimes seems to speak as if every tendency to reaction must benefit, or have benefited, the single cell as well as the whole organism. While he risks everything on such reasonings, he makes considerable general admissions as to the insufficiency of the evolutionary philosophy, going in some respects further than there was any need of doing. Thus, he grants to Mr. B. I. Gilman that "Darwinism" leaves the whole question of origins untouched. Darwinism, in the proper sense of the word, of course does so; but that a purely evolutionary philosophy can trace its way from a starting-point that logically demands no explanation back of it, is shown by the instances of Aristotelianism and Hegelianism, both of which philosophies are evolutionary and set out (or may set out) from complete actual indeterminacy. Equally needless and still more important is the confession that the idea of "progress" is purely relative to our own ideals. If there be in nature a universal tendency in any definite direction, no matter what, that universal tendency will determine ideals; and therefore any such tendency would be a progress purely objective.

For reasons that appear decidedly feeble, Mr. Marshall concludes that there is something psychical—in his phrase a "psychic

somewhat"—to which he gives the name of mentality, in all action whatsoever. The reasons for believing that the rudiments of mind are much more widely distributed than we can positively make them out are strong enough; but to select "action" (whatever that may mean) from among all the objective elements of the universe of phenomena as defining the limits of mind, is a very different inference. It may be doubted whether a concept so vague and confused as a "psychic somewhat" can be of any service at all in philosophy. It would seem to be the business of the metaphysician to discriminate between the radically unlike elements of psychoses, and to find good reasons, as soon as he is able, for identifying these with different elements of phenomena objectively observed. One of the psychic somewhats would appear to be immediate consciousness, or feeling; but there is little or no reason to opine that this is at all proportionate to the amount of motion of its subject, or to anything else of that sort which the word "action" may denote. Consciousness is defined by Mr. Marshall as "the field of inattention." We may grant that this remark is founded on a true psychological observation, without admitting that attention and inattention differ otherwise than in degree, or that there is any threshold, or *Schwelle*, between them. Considered as a definition of consciousness, the proposition simply restricts that word to a particular kind of self-consciousness. Consequently, when the author applies the definition to the criticism of James and others, he simply misses their meaning.

Mr. Marshall reposes too confidently upon what he calls "mental and physical parallelism"—a monistic theory familiar enough in its outlines, though somewhat modified by the author—as against the traditional doctrine of a soul. To hold to a substantial soul is neither more nor less than to hold that mind and body really react. Action cannot take place without reaction, even if it can be so conceived, which may be doubted; for what would "action" mean without reaction? Yet the only considerable objections that Mr. Marshall brings against the theory of the soul are, first, that the action cannot be exclusively of mind on matter, and secondly, that it cannot be exclusively of matter on mind. The whole question is one of fact, and must await positive scientific observations for its settlement. Comparing it with other mysteries which have eventually been cleared up in that way—with that of the chemical constitution of the stars, that of the Trojan War, that of whether diseases are entities, that of meteorites, etc.—we remark that in those cases the facts were found to have little regard for the fine negative theories; and the simple idea of a soul seems to be rather more like nature's habitual answers to experimental questions than is any highly metaphysical hypothesis of mind-stuff and the like. Perhaps we may ultimately find that mind and matter are of the same general nature, and yet that there is a real mutual reaction between body and soul.

We could not undertake to do justice here to Mr. Marshall's very elaborate main argument. It seems to be essential to his position to maintain a natural classification of instincts into those which conduce to the preservation of the individual, those which go to the propagation of offspring, those which support social life, and finally religion, which checks the tendency to reason—or to

eccentricity, which is much the same thing, from Mr. Marshall's standpoint. Reason he holds to be continuous with choice, and as broad as our psychic life, and not at all restricted to the more superficial consciousness. Here, of course, he must expect strong dissent. The work concludes with two strong chapters, antagonizing hedonistic and utilitarian ethics.

RATZEL'S HISTORY OF MANKIND.

The History of Mankind. By Prof. Friedrich Ratzel. Translated by A. J. Butler, M.A. With introduction by E. B. Tylor, F.R.S. Colored plates, maps and illustrations. Vol. III., pp. 599. The Macmillan Co. 1898.

In this the concluding volume of a most comprehensive work, we have a description of the manners and customs, arts and industries, religion, form of government and personal appearance of the tribes that live in the western and central parts of Africa, together with a short and satisfactory account of "the cultured races of the Old World," under which head are included the Egyptians, Berbers, etc., of Africa and the Mongols, Arabs, etc., of Asia. In a separate chapter the racial history of the modern Europeans is briefly told.

Of course in an investigation of this character, ranging as it does from people in a low stage of barbarism to those that may be justly termed civilized, all attempts at generalizations except upon the broadest possible lines are futile. Great similarity, no doubt, runs through each one of the several groups, just as it exists everywhere between peoples in the same stage of development; but the differences in bodily conformation and in almost every other aspect of life are so numerous and so marked that no scale of progress hitherto invented seems elastic enough to include them all. Even among tribes and nations belonging to the same generic stock, and living in close proximity to each other, apparently upon the same plane of culture, this statement is believed to hold good; and it is this fact which makes it incumbent upon any one engaging in an investigation of the present nature to deal with each people separately and in more or less detail. Such a method of treatment, no doubt, has disadvantages, in so far as it involves an amount of repetition that soon becomes wearisome, and yet, on the other hand, it gives promise of greater accuracy, and, when based on competent authorities and accompanied by a suitable index, it makes the work invaluable for purposes of reference. This fact our author recognizes, and accordingly he has spared no labor in the preparation of a history in which, as people after people pass before us, we can study their characteristics and note the points in which they agree or disagree, be it in physique or culture.

Naturally enough, in a panorama of this kind, it is the differences that are chiefly in evidence. They are sometimes individual, oftener, perhaps, tribal, but in either event they are not infrequently of such a nature as to call for an explanation; and it is in answer to this demand that our author is led to ascribe them, in part, to the admixture that has everywhere taken place between people who not only lead different lives, but who may belong to different races and be in different stages of development. From the earliest antiquity, and all along

the line of contact between the light and dark races, or "between herdsmen and tillers of the soil," as our author more accurately describes them, this process has been going on; and so numerous are these crosses, and so varied the elements of which they are composed, that it is probably safe to assert that to-day there is no such thing known as a pure race, or a civilization untouched by outside influences. In Asia, for example, the southward march of Aryans, Mongols, etc., has made a hotch-potch of the peoples of India and their culture; while in Africa the Arabs and other Semites, in the course of successive invasions, have left their impress everywhere. Even in the heart of the Sudan and among the negroes of the Congo basin, the evidence of this is seen in the spread of Islam, in the prevalence of certain industries, especially the manufacture of iron, as well as in the agriculture and in the physical peculiarities of different tribes. Only in comparatively recent times and within certain limits has a stop been put to these wholesale irruptions and their long line of consequences. The Mongols, for instance, instead of hanging like a cloud over Eastern Europe, have been so effectually bridled by Russia and China that they are no longer a menace to their neighbors; and in Africa the same is true of the tribes that have suddenly, and much to their surprise, found themselves within the "sphere of influence" of some European Power. Only in the west-central portion of the continent, and outside of these "spheres," does the progress of the Fulbe warn us of the existence of regions in which the contest still rages much as it has always done.

Of the effects of this admixture it is impossible to speak in general terms with any degree of accuracy, for the reason that they are not uniform. The pastoral races were not always successful in their invasions; and even when they were, they not only did not always destroy the civilization they found in existence, or absorb the people whom they subjected, but sometimes, as in the case of Rome, they ended by adopting the civilization they are supposed to have destroyed, and were themselves absorbed by the people whom they subdued. Moreover, it is possible that those of us who hold that man is largely the creature of his environment, may ascribe the retrogression that has followed hard upon the irruption of a tribe of nomads upon their settled neighbors, to natural causes, rather than to the deteriorating effect of any admixture of races. Certainly, if we are to judge from the progress made in southern Spain during the seven or eight centuries that it was under Moslem rule, we should be justified in concluding that the relapse into pastoral life in portions of western Asia and northern Africa was due to the destruction of the forests, the exhaustion of the soil, or the drying up of the water supply, quite as much as it was to anything that the Arab may have done or left undone.

But enough of such generalizations. They contain nothing new, and our excuse for indulging in them is to be found in the fact that they embody, in an indefinite sort of way, conclusions which it would be impossible otherwise to set forth without trespassing upon the reader's patience. As a rule, these conclusions may be said to be unobjectionable, though there are times when they are believed to be premature. Thus, for

example, while there can be no doubt of the existence of Semitic influence in Africa from the date of the Hyksos invasion (some 2000 B. C.) down to present times, and from the Mediterranean to the southern extremity of the continent, yet it is by no means sure (pp. 161 *et seq.*) that the earliest Egyptian civilization followed that in western Asia, and was borrowed from it. All that can be safely asserted is that the case is still undecided. We may also add, though the matter is hardly germane, that the proof of "the derivation of the old American civilizations from Asia," which was to be forthcoming in Ratzel's second volume, is not satisfactory. Resemblances there are—any number of them—in the manners and customs of the people of the two continents, just as there are between our Indians and the barbarous tribes of Africa, or the people of Great Britain in the time of Caesar; but this does not prove derivation. And if it did, there is no reason why the argument is not as applicable in the one case as in the other, unless the facility of intercommunication via Bering Strait should be taken as the determining factor in the problem. Indeed, it is so regarded by our author, and if the configuration of the earth is the same to-day that it was ages ago, he may be right. It is a bad rule, however, that will not work both ways, and we must not forget that, leaving out of consideration the continent which, it is said, once united Europe, Iceland, and America, there can be no doubt that the Northmen were in Greenland, and, in all probability, upon the mainland of North America, some hundreds of years before "Columbus sailed the waters blue."

In conclusion, there are one or two considerations that have such a direct bearing upon the political conditions prevailing in our country to-day, that we bespeak for them careful attention. And, first of all, we have the statement, p. 558, based upon an investigation into the origin and distribution of the Aryan races, that "the fair Aryans," from whom we are graciously supposed to have descended, "do not acclimatize themselves in hot countries." This, it is said, is the "teaching of history"; it is endorsed by one who speaks with authority, and while it is not new, it contains a truth which should "give us pause" before we are enticed any further in a career that not only leads to the extension of our rule over tropical regions, but includes the assimilation, benevolent or otherwise, of alien races. Turning now to the ever present negro problem, we are told (I., p. 18) that it would be possible to forecast "the effect of culture upon race distinctions if we could say to-day, with approximate certainty, what will become, in the course of generations, of the 12,000,000 of negro slaves who have within the last thirty years been freed in America, and who will, in the enjoyment of freedom and the most modern acquisitions of culture, have multiplied to 100,000,000." Of the probability of such an increase there cannot, we imagine, be much doubt in view of the statement (II., p. 326) that "their numbers in North America increase faster than those of the most prosperous white population." Moreover, it is borne out by the fact that (II., p. 357) "whole islands, as San Domingo and Jamaica, have fallen to the share of the negroes; several States of the Union, as well as Nicaragua, show negro majorities, and in Brazil all classes are permeated by the negro element." To some of us this outlook

is not very encouraging, and yet, in spite of it, and of the "harm that has resulted, and is still, no doubt, in a yet greater measure in reserve for future ages, owing to the presence of 8,000,000 of negroes in the United States," our author is hopeful, for the reason that experience has shown that "culture is not injurious to the negroes," and because "they have not wholly unlearned the work which they had learnt." Regarded from an economic point of view, this opinion is well founded, for it is admitted (II., p. 322) that "the Southern States, in which those who were formerly slaves form 50 per cent. of the inhabitants," have been less injured than was feared by the abolition of slavery. Further than this our author does not venture in his effort to forecast the future; and we are accordingly left with the political portion of the problem unsolved, unless, perchance, the story, as here told, of the Turks (p. 552) in Europe, the Arabs (vols. II. and III. *passim*) in Africa, and the Russians and Chinese (III., pp. 150, etc., etc.) in Asia, should be taken as an indication that they have not been any more successful than we appear to have been in finding a way by which a higher and a lower race can be made to live together upon terms of political equality.

Longinus on the Sublime. By W. Rhys Roberts. Cambridge (Eng.): University Press; New York: Macmillan. 1899.

The author of the tract "On the Sublime" is, in a sense, the Matthew Arnold of Greek Literature. Matthew Arnold, however, lived in a period that was singularly productive of masterpieces of English, and as he wrote for an audience that was eager to appreciate and echo his definitions, he could seldom sincerely pose as one crying aloud in the desert.

"When I reflect on the age in which Longinus lived," wrote Gibbon in his "Journal," "an age which produced scarcely any other writer worthy of the attention of posterity; when real learning was almost extinct, philosophy sunk down to the quibbles of grammarians and the tricks of mountebanks, and the Empire desolated by every calamity, I am amazed that at such a period, in the heart of Syria, and at the court of an Eastern monarch, Longinus should produce a work worthy of the best and freest days of Athens."

It was not till nearly half a century after this entry that the traditional ascription of the treatise to Longinus was fairly challenged by scholars. In 1808 the learned world, which had taken for granted that all the MSS. attributed the book to Dionysius Longinus, was mortified by the discovery by the Italian scholar Amati that a Vatican MS. indicated "Dionysius or Longinus" as the author. Last of all it was found that a MS. at Florence had the frank title "Anonymous." Without entering into the arguments, which are chiefly negative and of slender weight one way or the other, we may sum up the controversy by saying that the question at issue is whether the work was written by a third-century writer, presumably Longinus, or by a first-century critic of the Augustan period, possibly one Dionysius. Mr. Roberts has stated both cases with great fairness, and leaves the matter in the obscurity that must darken it until the discovery of a new MS. furnishes less dubious evidence.

The historical Longinus does not depend altogether, for his historical interest, on his alleged authorship. He was that famous

minister of Zenobia, the Queen of Solomon's city, Palmyra, her instructor in Greek letters, and her chief adviser in the heroic resistance she made to the Emperor Aurelian. Aurelian, when he took Palmyra, put Longinus to death. Longinus is known to have been an excellent critic, and we have some fragments of his writings—hardly enough, however, to make a comparison with the present treatise of much value for the question of authorship. But Longinus owes his true lustre to the long-undisputed authorship of the work "On the Sublime," and, unless new evidence comes to back his claims, a generation hence, when the modern phrase "auctor *supra* *omnes*" shall have completely ousted the old title, the name and repute of Longinus will have very slight significance for literature. For the sake of brevity, we shall ourselves refer here to the author of the treatise under his traditional name.

The English word "sublime" is, of course, a wholly inadequate rendering of the Greek *υψος*. It is to be regretted that Mr. Roberts did not take the opportunity of this new and important edition to introduce a more satisfactory rendering. "*Υψος* is easier to describe than to define, and probably there is no single English word that would reproduce it. John Hall's seventeenth-century translation was entitled "Of the Height of Eloquence," which comes nearer the original than the unhappy "Gallicism," as Dr. Johnson would have called it, now in use. But perhaps there is no phrase current in modern criticism that so nearly represents Longinus's idea of the word *υψος* as Matthew Arnold's "the grand style." For both critics, the secret of a grand or elevated style is ethical; in both, the study of literature is closely allied to the study of morals.

"What fact," wrote Longinus, "was before the eyes of those superhuman writers who, aiming at everything that was highest in composition, condemned an all-pervading accuracy? This besides many other things, that Nature has appointed us men to be no base nor ignoble animals; but when she ushers us into life and into the vast universe as into some great assembly, to be, as it were, spectators of the mighty whole and the keenest aspirants for honour, forthwith she implants in our souls the unconquerable love of whatever is elevated and more divine than we."

"*Υψος* is, in short, the "high seriousness that comes from absolute sincerity." As Matthew Arnold relied on illustration rather than on definition to convey his idea of a "tonic" passage, so Longinus, with the unerring good taste that has made his criticisms of permanent value, illustrates his maxims from the whole range of Greek literature. He was a Greco-Roman sophist in the technical sense, but he never yielded to the Sophistic weakness of treating of minor and inferior authors on the same plane as the heroes of poetry. Like a nineteenth-century critic encouraging a reaction against the eighteenth-century manner, Longinus insists that the faultless productions of a Lysias or of an Alexandrian poet are not to be preferred to the work of a truly great writer like Homer whom it is possible to catch nodding.

Greek literature in its decadence produced two critics of importance, Dionysius of Halicarnassus and Longinus. The latter ranks with Plato and Aristotle as the third of the three greatest critics of Greece. Longinus has not the rigidly analytical spirit of Aristotle; he is a critic of the intuitive type of Plato, with an enthusiasm that was troubled

by no philosophical *arrière pensée*. He has the enormous advantage over his predecessors of not being confined to a single literature. We possess only a third of his treatise; but no century, from the earliest times to the beginning of our era, is unrepresented in his quotations. It is a catholic taste that can draw on Sappho, Moses, and Cicero in a breath. After illustrating from literature the loftiest expressions of the divinity of the gods, Longinus adds: "Similarly, the legislator of the Jews, no ordinary man, having formed and expressed a worthy conception of the might of the godhead, writes at the very beginning of his laws, 'God said'—what? 'Let there be light, and there was light; let there be land, and there was land.'" Mommsen, who thought that the treatise was written in the early days of the Empire by an unknown author, was led by this passage to suggest that he was a Hellenized Jew. Here is a Greek critic, then, who has some acquaintance with Latin, and even with Hebrew literature. We owe to his wide range of quotation several passages from Greek literature that are nowhere else preserved, and, most important of all, that famous ode of Sappho—"not one passion but a congress of passions"—which Catullus translated. As Mr. Roberts points out, Longinus has not given us any of those great classical definitions that light up the "Poetics" of Aristotle, yet if we had to judge of all the glory that was Greek literature from only one or the other, it is the enthusiast Longinus from whom we should gain the clearer and wider conception.

The treatise has been much neglected by English editors. Mr. Havell's translation, published in 1890, did much to encourage the study of Longinus among general students of the history of criticism. Mr. Roberts has now given us a critical edition of the text with a parallel translation, a valuable introduction and appendices, which, if they do not embody any new matter, present with admirable clearness all the previous work done on the essay. We wish he had included the fragments of the historical Longinus for the convenience of those who wish to compare the styles. The post-classical Greek of Longinus has no great beauty to lose in translation—a fact which greatly simplifies the translator's task. Mr. Roberts's version is in excellent English, and, generally speaking, his renderings of the quotations are good; it is unfortunate that, of all the bad translations of the Sappho ode, he should have chosen that of the late John Addington Symonds; he might, however, have taken Gladstone's, which is one degree worse.

A Literary History of Ireland from the Earliest Times to the Present Day. By Douglas Hyde, LL.D., M.R.I.A. London: T. Fisher Unwin; New York: Scribners. 1899. Pp. xviii, 654.

After all that has been said and done, there are few less sentimental people than the Irish. There are few more inclined to *mauvaise honte*, more apt to be moved by the sneers of those above them; few less disposed to let a ray of sentiment (on all but the religious question) stand in the way of their individual progress. They conserved through the penal and ascendancy days sufficient national peculiarities in language, dress, and music through which to exhibit distinctive national traits and customs as honorable as those so jealously guarded by the Scotch and Welsh.

Their object has been to obliterate rather than to conserve distinctive national life, and of late years Irishmen have had to deplore the peasantry beating their children who lisped Irish in districts to which came Continental savants to study the Irish branch, purely preserved and philologically most important of the tongue once common over Western Europe and the British Isles. In 1835 a German who travelled in Ireland calculated that out of a population of seven millions, four millions spoke Irish "als ihre Muttersprache." The census of 1891 showed that while 750,000 were still bilingual, but 66,000 spoke Irish only. There has of late years been a vigorous effort, likely to be attended with some measure of success, to preserve and extend the use of Irish, not to the exclusion of English, but as educational and enlightening, tending to self-respect and breadth of mind among the Irish people.

Dr. Hyde, fully qualified as a scholar and philologist, has been foremost in this movement. In the work before us we have the outcome of his deeper studies in the history of the language and its literature. The last chapter is an appeal for its preservation as a spoken tongue. The appearance of this book has been long looked forward to. In breadth of view and erudition anticipations have been justified. The style is, however, somewhat ponderous. While no collection of books relating to Ireland will be complete without it, it will be kept rather for reference than for reading. Most of the old cycles of story related, are familiar to those conversant with the subject and who are likely to purchase the book. For such they might have been curtailed. For those fresh to the subject they are not made sufficiently interesting. Dr. Hyde has not Dr. Joyce's faculty for popularizing knowledge on Gaelic subjects. This does not, however, take from the great and essential value of the book. We only regret that our space will not permit of a full exposition of the contents. Dr. Hyde cites the authority of German and French scholars for the belief that there are still in existence 133 Irish MSS. copied before 1600, and that the total literature produced by the Irish before the seventeenth century and still existing would fill 1,000 octavo volumes. There is in the Royal Irish Academy alone a large body of MS. "pieces," from quatrains to long poems and epic sagas. Dr. Hyde refers to the correspondence of genealogies and the correct noting of eclipses: "The Annals of Ulster, annals which treat of Ireland and Irish history from about the year 444, but of which the written copy dates only from the fifteenth century, contain from the year 496 to 884 as many as eighteen records of eclipses and comets which agree exactly, even to the day and hour, with the calculations of modern astronomers." Again: "We may, then, take it, without any credulity on our part, that Irish history as drawn from native sources may be very well relied upon from about the middle of the fourth century."

The Irish alphabet, still in use, was no doubt borrowed from the Romanized Britons. The general use of letters is to be attributed to the early Christian missionaries. Ogham is essentially an Irish system of writing to be found only where Irish settlements or Irish influence extended. Some of the Ogham pillars "are gravestones of people who died so late as the year 600, but what proportion of them, if any, date from before the Christian era, it is yet

impossible to tell." We have no specimens of Irish manuscript written in Irish before the eighth century; we have Latin probably of the fifth or sixth. The extent to which the Irish people, up to the catastrophe of the famine, and before the anti-Gaelic influence of the Government schools had worked, and even since and still, have preserved a taste for and recollection of the old literature, bears out Dr. Hyde's insistence concerning the extent of literary culture among the native Irish. Concerning the effective beneficial influence of that literature and of the great Irish schools upon national apart from individual character we retain our doubts. After all the bombast and glories of the ancient Sagas, Ireland was helpless to prevent the Danish and Norman invasions. She cherished no national ideal. The contests between the heroes and the clans of Ulster and Leinster and Meath and Connaught and Munster that form the staple of so much of Dr. Hyde's narratives, are sickeningly reproduced in the factions and rivalries of the present day. Literary interest there is, but circumscribed. Large admission is made by Dr. Hyde when, discussing the curious and involved Irish metres, concerning which he gives us so much interesting information, he says: "This . . . may help to place much of our poetry in another light, for its beauty depends less upon the intrinsic substance of the thought than the external elegance of the framework." To all but a comparatively narrow circle, ancient Irish poetry can be known but through translations. If through such, that is lost upon which its beauty mainly depends, it cannot be expected that it will arouse much general enthusiasm.

Seeing that Dr. Hyde appreciates the Irish alphabet as a "peculiarly beautiful" modification of the Roman, he gives no reason for not using it in this volume. The language is difficult enough of pronunciation in its own dress—doubly so in the cumbrousness of Roman lettering. The peculiar pronunciation of the dotted consonants in Irish is not fully expressed by the alternative addition, where Roman letters are used, of the letter *h* after the consonant. This valuable work is the outcome of Dr. Hyde's enthusiasm for the preservation of Irish as a spoken language. We do not understand why in its pages he thinks well to present it to his readers in foreign garb.

The dominant thought with which we lay aside this 'Literary History' is of the solace which native literature and song must have been to the Irish through ages when bereft of almost everything else.

Bibliography of Eighteenth-Century Art and Illustrated Books: Being a Guide to Collectors of Illustrated Works in English and French of the Period. By J. Lewine. With thirty-five plates giving specimens of the work of the artists of the time. London: Sampson Low, Marston & Co.; New York: Charles Scribner's Sons. \$25.00.

The title of this book is to be understood as the bibliography of art books and illustrated books. It would not be strictly accurate to say that it is a bibliography of eighteenth-century art, in view of the fact that it does not deal with books which treat of that art. Where no mention is made of the very numerous French writers of our own time who have devoted themselves largely to elucidating the art of the eighteenth century, the title should, perhaps, suggest as much.

Even if it did offer such suggestion, it would be hard to understand the phrases of the preface. It appears that our author thinks that the record is almost barren of bibliography devoted to "books with embellishments," which, as he truly says, are "now so much in vogue and so deservedly coveted by the amateur." There is one book devoted to "books with embellishments" concerning which the students of that important and curious branch of art are unanimous in praise. That book is Henry Cohen's 'Guide de l'Amateur,' which, whether in its fourth edition, now fifteen years old, or in its fifth edition as revised and enlarged by Baron Portalis, is as useful and as satisfactory as a book of the kind can be. This one bibliography covers nearly all the French half (which is really more than half) of Mr. Lewine's work, and to this has been added a very great number of monographs on different artists, also of the French school, together with the general treatises of the brothers De Goncourt, celebrated for their thoroughness and their complete presentation of the subject. The bibliography by Cohen and Portalis is devoted as strictly to books with illustrations as is Mr. Lewine's; and, as suggested above, there was little for the English author to do but to copy or restate what was contained therein; but the other works referred to above are, of course, treatises on the painter, the engraver, the decorator, the sculptor, the adorning of palaces and churches, as well as the beautifier of books.

On the other hand, the English compiler has gone a little farther afield than have the Frenchmen in that he has added to his list certain books which could not properly be called *livres d'ornement*, namely, such as certain collections of costumes, and a book on garden architecture, which, though books on kindred subjects are certainly included in Cohen and Portalis, are not to be found there. Still, it is for the English part of the collection that one will eagerly buy the present volume. There were very few books published in England and illustrated in the dainty French way with prints from delicately engraved plates, but there were the vigorous caricatures of Rowlandson and the realistic grotesques of Hogarth. There were the half-English publications known under the name of Count Hamilton. There were numberless volumes with a portrait or two in each, and there were the archaeological books which, from the beginning of the century to its close, were produced in England in some abundance. It would be an interesting task to make a classified list of the different subjects covered by the books named in this volume. One would be glad to know how many were French and how many English, how many are illustrated books proper—that is to say, with the text to which the illustrations are serviceable; how many are collections of unrelated plates held together by a thread of common location, as in the numerous "Galleries" of Dresden, Florence, and the like; and how many are books of archaeological study. The maker of such a list will be amused by the different departments which he has to create for himself, and into which his list has to be divided. It was a surprise, when page 510 of this book was reached, to see that the heading "Songs," beginning at the foot of that page, was carried on and continually repeated for three pages more. There are actually forty separate titles of song-books, all illustrated sufficiently to become the sub-

jects of Mr. Lewine's studies. Our student will find, also, in this book about English and French books some works which are neither English nor French, such as Treitzsaurwein's 'Weis Kunig,' which seems to be entered in its original form because there was to be entered a French issue of it, and Geesner's writings in five volumes, needed apparently for the same reason.

The eighteenth century deserves especial attention from those who would know how much of good and valuable art is possible to times which are admittedly less strenuous, less significant, less in earnest about their fine art. The exact value of such art as that of Watteau and that of Reynolds, when compared with the more serious and, therefore, greater art of earlier times, is difficult to fix even in one's mind; and of proportionate difficulty is the appraisal of the minor arts of the same epoch—the prints in these illustrated books, as well as the delicately modelled and exquisitely chased metal work of ornamental design, and the charming paintings above door, window, and mantel. The curious mixture of reality and stagey affectation which marks the figure-drawing of the period, and the defects in the drawing itself—not so much defects in knowledge as in care and serious purpose, and mingled with a singular dexterity and swiftness of execution—all this is worthy of the most serious observation of the student of fine art, and the explanation of it is a fit task for the wisest and most perspicacious critic. The books we already have, have opened up the French side of this art very thoroughly and admirably, and we have to expect more and yet more of the present generation of students; but the English side of it has hardly been done as yet; so far as that is concerned, the statements of Mr. Lewine's preface are correct.

Volcanoes: Their Structure and Significance.
By T. G. Bonney, D.Sc., LL.D., F.R.S.,
Professor of Geology at University College, London. G. P. Putnam's Sons. 1898.
8vo, pp. xiv, 322.

Volcanoes were among the first natural phenomena to be attentively observed by civilized man. The existence of Vesuvius, Vulcano, and other active or extinct eruptive centres in the midst of the Roman Empire led to continuous and minute observations upon many characteristics of volcanoes. Numerous excellent treatises have been written describing various phases of volcanic activity and decay, and discussing the problems as to the origin of the volcanic forces. In the English language the great work of Scrope, and the later one by his pupil, Prof. Judd, are well known to all students.

In the last few years some tremendous volcanic eruptions have occurred in distant parts of the world—New Zealand, Japan, and the East Indies; but while these great outbursts have been more fully described, and, through the newspaper and the magazine, have become known to a far larger number of people than older eruptions of the same character, it must be confessed that no great addition has been made to our understanding of the character or the cause of volcanic action. If this is true, a new general discussion of volcanoes must justify itself by its treatment of the later eruptions, or by a specially attractive or novel presentation of the older facts and theories. This idea seems to have

forced itself upon Prof. Bonney, the author of the work now before us, for in his preface he remarks: "Were it not that Nature sometimes supplies new materials, there would be little excuse for another book on Volcanoes." It seems, then, perfectly fair to examine his book upon this basis.

The plan of it, as expressed in its chapter headings, sounds very fair, and seems to promise a well-thought-out scheme for the presentation of the subject. "The Life History of Volcanoes," "The Dissection of Volcanoes," and the like, convey the idea of a very systematic treatment of the materials, but examination proves that the system is not followed out to any great extent. The book is very largely a compilation of long quotations, descriptive of certain volcanoes, and thrown together without much regard for the scheme of its table of contents.

In the first chapter, on the Life History, we find presented sketches of various kinds of volcanoes, with bits of the history of many vents; and, altogether, the reader will gain some idea of what is considered the normal sequence of events about a volcanic centre, but it will be in spite of, rather than owing to, the order of presentation. Under the "Dissection of Volcanoes" one encounters a jumble of descriptions of volcanic mountains in all stages of decay. A long discussion of crater lakes appears here, and shorter ones of fissure eruptions and laccolithic intrusions. It is much more the internal structure of volcanoes than the dissection which is dwelt upon in this chapter. It is, no doubt, a difficult task to explain the chemical and mineralogical classification of igneous rocks to a lay reader, but no good can result from attempts to make the matter simple by misstatement. Prof. Bonney gives a crude explanation of some of the principal rock groups—omitting others equally important—and then indicates the nomenclature of each group after this style: "Then the holocrystalline forms are called Diorite; the semicrystalline, Porphyrite; the glassy, Andesite." It is true that he explains that he does not use these adjectives in their natural sense and as they are used by petrographers, but he leaves it very obscure what he does wish to express. The description of the structural forms of lavas, including all their physical aspects, is clear and comprehensive.

The chapter on "The Geological History of Volcanoes" is not a general discussion of the subject indicated, but a kind of abstract of the works of Sir Archibald Geikie and Prof. Judd upon the extinct volcanoes of Great Britain, with many points concerning which there is still a marked difference of opinion. In the following chapter, on "The Distribution of Volcanoes," there is a brief statement in regard to the active or not long extinct volcanoes of the world, outside of Great Britain. This enumeration and concise characterization of known volcanoes is one of the most valuable portions of the book.

The final chapter, on "The Theories of Volcanoes," vividly illustrates the difficulty of analysing such an abstruse subject for the untechnical reader when it must be admitted at every turn that we are ignorant as to essential facts, and have but little basis for assumptions. The conclusion reached is the one familiar from earlier summaries, that we understand the physics and the chemistry of surface volcanic phenomena fairly well, but have little real knowledge of the deep-seated causes of volcanic action, including the ori-

gin of the magma and the force propelling it to the surface.

It seems, then, that Prof. Bonney's treatment of the older materials is not conspicuously successful. He has rearranged the descriptions of many well-known volcanoes to be found in earlier treatises, but without much reference to the apparent plan of his own work. As to the new materials supplied him by nature, it is probable that the greater number of those who take up this volume will already have read the same or much fuller accounts of Krakatoa, Bandaisan, etc.; at least that is true of America's readers.

The style of the work seems somewhat open to criticism. The attempt to popularize leads in many places to a rather colloquial form, often mistakenly thought to be the same thing as simplicity and directness of statement. The latter is far more difficult, and correspondingly more effective, as a rule.

History of the World: From the Earliest Historical Time to the Year 1898. By Edgar Sanderson, M.A. With Maps. (The Concise Knowledge Library.) D. Appleton & Co. 1898.

A publisher's note concerning the American edition of this book faces the title-page, and in it attention is called to the fact that Mr. Sanderson's 'History of the World,' as prepared for the United States, reaches the close of the war with Spain. This apparently incidental statement may be used to bring out the character of the volume. A history of the Spanish war, using that term in any proper sense, cannot yet be written, but much knowledge about the late contest is easily available, and that is all which is required for the purposes of the present series. Indeed, had Mr. Sanderson written his account of the Peloponnesian War in 404 B. C., or his account of the Lutheran Reformation in 1546, his pages on those subjects might well have borne a strong resemblance to the ones which we have just been reading. His comments and deductions would have been somewhat different, but the proportion of these to hard relentless facts is so small that the general appearance of the work would not have been profoundly affected thereby.

Comparing Mr. Sanderson's outlines of universal history with other similar sketches which have recently appeared, we find its chief value in the portions relating to the obscurer regions of the world—to those, we mean, which have had a relatively small share in the progress of civilization, and are, therefore, passed over by most writers as too insignificant for mention. Thus, for instance, in the case of the ancient world, Lydia, Phrygia, and Bactria appear; and in that of the modern, Siam, Burmah, the Sudan, Abyssinia, Central America, and Australasia. Roughly speaking, a fifth of the contents is occupied with information which, besides being ordinarily omitted from manuals, is likely to render intelligent readers of the newspapers direct assistance. On the whole, Mr. Sanderson has made his choice of topics judiciously, and shows that he has a competent store of historical information. There are a few standard authors to whom he is rather amusingly indebted, for example, Macaulay and Bryce. Besides quoting from and referring to them often, he more than once paraphrases their words without ex-

press recognition, *e. g.*, from Macaulay on p. 431, and from Bryce on p. 214. In one or two other respects he is decidedly amusing. What the sentences are like in which he gives the modern student mnemonic assistance by coupling some matter of contemporary note with an ancient fact or circumstance, may be gathered from the following illustrations: P. 209, "A seven days' desperate battle at the place, north of Cadiz, called Xeres de la Frontera, familiar to us from the district's wine called 'sherry,' ended in the total defeat of the Goths." P. 332, "We must now relate the origin of one of the most flourishing minor states of the world, the Swiss republic, which, in the nineteenth century, became a chief resort for European and American tourists and derives therefrom a large increase of wealth for her people." Another diverting feature is the shower of adjectives which, doubtless for the sake of conciseness, Mr. Sanderson lets fall upon rulers and other great personages, *e. g.*, p. 476, "The worthless, witty, clever Charles II. reigned from 1660-1685." And facing this, at the beginning of the next paragraph, p. 477, "James II. (1685-1688), cruel, faithless, stupid, hard-hearted despot as he was, had a short term of power, according to the prediction of his shrewd brother Charles." Finally, we doubt whether such an ex-parte statement as the following is appropriate in a "concise knowledge" series. Referring to the Anglo-Russian difficulty of 1885 in Afghanistan, Mr. Sanderson says: "The act was a deliberate insult to Great Britain, and should have been followed by an immediate declaration of war. Mr. Gladstone, however, was Prime Minister, and Lord Grenville was Foreign Secretary, and the matter was settled by 'explanations.'"

Some slips must always occur in an extensive work of reference, and we have noted a considerable number here, though not enough, by any means, to fix a stigma of incorrectness upon the whole narrative. We mention some of them partly because they are typical and partly that they may be placed upon the list of corrigenda. P. 168: The impression is conveyed that Declus decisively repelled the Goths. On the contrary, he was slain in the battle of Forum Treborril, where the Goths overwhelmed his legions. P. 182: Pope Leo the Great had not been concerned in meeting any Vandal invasion before 449. P. 183: The leader of the Franks to whom Pope Gregory III. appealed against the Lombards was Charles Martel, not Pepin the Short. P. 190: Clovis's victory over the Alamanni (Zülpich) was fought near Strassburg, not Cologne. P. 217: Roger Guiscard, rather than Robert, should be credited with achievements in Sicily against the Saracens. P. 245: Besides some doubtful statements regarding the early condition of Florence, the minting of the florin is ascribed to the eleventh century instead of to 1252. P. 274: 1166 is not the date of Strongbow's first victories in Ireland. P. 279: The essence of the communes (Cambrai, Beauvais, Noyon, etc.) is missed in the sentence, "Former serfs who had been hereditary owners of portions of land had, in like manner, organized communes or parishes." P. 289: It is implied wrongly that in 1158 Milan yielded to Barbarossa without a struggle. P. 296: The Cathedral of Florence was not a Medicean work. P. 330: There is no good evidence to show that the Emperor Henry VII. was poisoned in 1313, although the assertion

is often repeated on weak authority. P. 334: The battle of Nâfels was fought in canton Glarus, not Schwyz. P. 424: The notice of St. Bartholomew hardly represents the best recent investigations. P. 523: Admiral Jarvis was not "victor over the French" in the battle of Cape St. Vincent. P. 720: The first Canadian printing-press was established in 1769, not 1764.

Despite these strictures, we must term Mr. Sanderson's book a useful, and in the main a very correct, one.

Under the African Sun: A Description of Native Races in Uganda, Sporting Adventures, and Other Experiences. By W. J. Anson. With 134 illustrations from photographs by the author, and two colored plates. Longmans, Green & Co. 1899. 8vo, pp. xiv, 355.

Uganda is the most interesting of tropical African countries. Its unique position makes it the true heart of the continent. Situated at the sources of the Nile, exactly half way between the Cape and the Mediterranean and the proposed meeting-point of the Nile and Bechuana railways, it is in close touch with the Indian Ocean by a railway nearly completed. Before another decade closes, it may be in direct communication with the Atlantic by a railway bridging the two or three hundred miles to the navigable waters of the Congo. Though apparently possessed of no mineral wealth, its soil is extraordinarily fertile—cotton and sugar growing wild—and it has an equable climate in which neither the heat nor the cold is excessive. The inhabitants, more than any other pure negroes, resemble the Japanese in their intelligence and their feudal form of government, while their eagerness to learn is shown by their nascent literature and native press. Their strength of character and self-reliance are attested by their history since Stanley's memorable visit in 1875; and though wars, religious persecutions, and rebellions have devastated the land and reduced its population, yet now it is confidently hoped that an era of peace and prosperity has dawned, and that there is an approaching near fulfilment of the prophecy that Uganda will become a second India.

The author of this latest contribution to the literature of the country, as Government medical officer during the last four years, was stationed in different parts of the Protectorate, thereby gaining an exceptional knowledge of the country and the people. His book is not a connected narrative, but a series of detached sketches and descriptions of incidents and personal experiences with men and beasts. It seems almost as if Dr. Anson had first arranged his pictures according to subjects, and then in writing followed their suggestions. There is an advantage in this method in that each picture becomes individual and significant, and the impression of much which is described in the text is heightened. Beginning with Zanzibar and the caravan road to the lake, our author tells something of each district through which he passed or in which he was stationed, and of the different tribes with which he had dealings, closing with stories of his hunting adventures with big game, and brief accounts of some of the smaller mammals, reptiles, and insects. His most enjoyable station, if not the most interesting, was at Fovira on the Nile, where,

amid lovely scenery, surrounded by timid and peaceable natives, he led an almost idyllic life. Far different were his experiences at another post at the outbreak of the Sudanese mutiny. Fortunately his men remained loyal, not, however, without making some alarming demonstrations. He commends the Sudanese for their soldierly qualities of obedience and courage, and for their excellent service up to this time in guarding the frontiers of the Protectorate. Of their intelligence he gives this illustration:

"The men have to be their own tailors, and it is astonishing what neat white uniforms they can produce. The thread they obtain by unravelling a long, narrow strip of 'american' cotton-cloth, or, more economically, by spinning it for themselves out of cotton from the nearest cotton plant."

He tells little of the deplorable, because preventable, mutiny beyond his personal experiences, but he hints at one of the causes, insufficient pay, in the remark that its outcome is "that a more liberal allowance has been granted to meet Government expenditure, and that the British nation has a firmer hold than ever of the Uganda Protectorate."

Dr. Anson is an interested and careful observer, and scattered through his books are numerous descriptions, illustrated frequently by well-chosen pictures, of characteristic native types, customs, and dwellings. These differ sometimes in an extraordinary and inexplicable way: for instance, the traveller passes immediately from the absolutely nude savages in Kavirondo into Usoga, "where not even the youngest walk about uncovered." The children show at a very early age an intelligence and capacity which seem of great promise for the ultimate elevation of the race. On the northwest shore of Lake Albert, among the Lurs, a magnificent black bull, becoming excited, put a whole village, including Dr. Anson's followers, to flight, and was on the point of charging him:

"Fortunately some one had hurriedly sent for the bull's keeper, a six-year-old naked little urchin. He came on the scene, and before the bull was aware—switch!—gave the brute a whack across the flank with a long lithe reed wand. The effect was magical. The bull became most humble, . . . and it fairly galloped off, amid the jeers and laughter of the hundreds who, a few minutes before, had fled helter-skelter in every direction."

The author's hunting was done mainly to provide food, or, as in the case of the lions and hippopotami, for the protection of the people. On the Nile and on the western shore of Lake Albert, the latter were so numerous and destructive to the corn and sweet-potato crops that there was a scarcity of food. "In such a struggle for existence," he says, "the hippo is locally exterminated, or the villagers must migrate to a region not favored by these animals." He is an enthusiastic student of natural history, and in the description of his various collections by different authorities inserted at the end of his book, it appears that of the 216 species of birds, some are new to science, and of some only one or two other specimens are known, and of butterflies, moths, and beetles he has "succeeded in adding more than fifty new species to science." The illustrations, which are reproductions of his own photographs, are exceptionally good, and add much to the interest and value of the work. It is, we regret to say, however, without either map or index.

The Race Problem in the United States. By
BOOKER T. WASHINGTON.

Gives the mature views of one of the leading representatives of the negro race on the causes of the present unhappy relations between the whites and blacks in the South, and offers suggestions as to methods of education and social intercourse which will aid in doing away with the mutual antagonism.

Thoughts about Universities. By WILLIAM KEITH BROOKS.

Especially with reference to the true value of the university and the way in which the university graduate can do the most both for society at large and the advancement of his alma mater.

Scientific Method and its Application to the Bible. By the Rev. DAVID SPRAGUE.

An essay on the higher criticism, pointing out its entire propriety and great value when conducted in a truly scientific spirit.

The Geology of the Klondike Gold Fields. By Professor ANGELO HEILPRIN. Illustrated.

An account of the physical geography and geology of the Klondike by a thoroughly equipped scientist, accompanied by a number of illustrations and a new map of the gold regions, showing the position of the most profitable of the stake claims.

The Use of Acetylene. By EDWARD REMOUP. Illustrated.

A comprehensive article describing the new illuminant both scientifically and commercially. Of special value to the country householder or hotel-keeper who is looking about with reference to lighting methods, and who naturally wants a little information other than that furnished by the selling agents of the various appliances.

The Antiquity of Man in North America. By CHARLES C. ABBOTT. Illustrated.

A discussion as to the probable date at which man first appeared in North America. Dr. Abbott takes the position that this period is much more remote than many of our geologists at present believe. A number of illustrations add interest to the article.

Other articles: The Little Brook; White Whales in Confinement; Some Things unusual with Plants; Malay Literature; Colors of Flowers; Folklore of the Alleghenies; Origin of Ancient Hindu Astronomy; and sketch (with frontispiece portrait) of William Keith Brooks.

Editor's Table; Scientific Books; Fragments.
